THE

UNIVERSAL TRAVELLER:

OR, A

COMPLETE ACCOUNT

Of the moſt REMARKABLE

VOYAGES and TRAVELS

OF

Eminent Men of our own, and other Nations, to the preſent Time.

CONTAINING

A RELATION of the SUCCESSES or MISFORTUNES that attended them in their various Attempts;

Intermixed with

Many entertaining DESCRIPTIONS of the CURIOSITIES in ART and NATURE;

Together with the

MANNERS, CUSTOMS, *&c.* obſervable in the COUNTRIES they viſited.

Collected from the beſt Authorities, Printed or Manuſcript.

By *PATRICK BARCLAY*, D. D.

LONDON:

Printed for J. PURSER, and T. READ, in White-fryars; and S. HESTER, in Fleet-ſtreet.

TO THE

WORTHY MERCHANTS

OF THE

City of LONDON.

GENTLEMEN,

THE *following Sheets treating of a Subject, in which* YOU *have ſo conſiderable an Intereſt, (as they give a Detail of the* Beginning, Progreſs, *and* Settlement *of the* TRADE *to both the* INDIES, *which your Predeceſſors,* MERCHANTS *of the* CITY *of LONDON, ſo glorioufly carried on, at the Expence of their* Blood *and* Treaſure) *I could not chuſe fitter* PATRONS *for my* TRAVELLER *than* YOU, *who not only follow the noble Pattern ſet you by them, in venturing your Fortunes, and, many of you, your Lives, to promote that* TRADE, *and, conſequently, the* Riches *of the Nation; but, with a Courage, becoming a Society of* GENTLEMEN, *and* FREE-BORN *Subjects, dare make a* BRAVE STAND *for* LIBERTY, *and for the* FREEDOM *of* COMMERCE, *whenever you apprehend*

prehend any Encroachment like to be made upon them; of which, without Doubt, You are the best Judges.

To YOU, *therefore,* GENTLEMEN, *I dedicate this* first Volume *of my* TRAVELLER; *which, however defective it may be, was design'd for* instructing, *as well as for* entertaining *the Publick. And I shall think myself sufficiently honour'd, if such a Body of* WORTHY PATRIOTS *vouchsafe to patronize this* Collection of Travels: *It will encourage me chearfully to pursue my intended Course thro'* Africa *and* Europe, *if I may be allowed to boast, that the* RENOWNED CITY *of* LONDON *did not disdain to take my* America *and* Asia *into* HER PROTECTION.

That YOU *may always prosper in your honest Endeavours for the* TRUE INTEREST *of* GREAT BRITAIN; *and that the* TRADE *and* COMMERCE *of the* CITY *of* LONDON *may ever flourish, in Spite of all Attempts,* FOREIGN *or* DOMESTICK, *to cramp or obstruct it, is the sincere and hearty Prayer of,*

GENTLEMEN,

Your most devoted

and most obedient Servant,

London, Feb. 3, 1734-5.

P. BARCLAY.

THE

THE PREFACE.

WHEN I first undertook this work, I was much a stranger to the subject. And had I sufficiently known the difficulty of the task, before I engag'd in it, perhaps, I should not have appear'd in print under the character of a TRAVELLER.

The small encouragement, now given, for publishing books upon any divine subject, (except it be to expose *religion*) together with some private reasons, (not necessary to be mention'd, at present) hinder'd me from prosecuting my design of publishing a second *Letter to the people of* Scotland, *endeavouring to remove their prejudices to the* Book *of* Common Prayer, as I promised in the first letter, which bore that title, as I had it printed by Mr. *William Bowyer*, in 1713. I was not apprized of the *second impression*; nor was I in the kingdom when it came out; for, if I had, I should have made some amendments in several passages in it, as it now stands, under the title of *A* Perswasive *to the people of* Scotland, &c. And, altho' I do not complain of any unfair dealing in Mr. *Jonah Bowyer*, to whom I transfer'd my right to the copy, yet I am sorry I had not an opportunity of making such alteration in it, as I had still a right to have made in a piece which bore my name in both impressions.

Several incidents happen'd, in my life, (from the time of publishing the first edition of that *Letter*) which hinder'd me from prosecuting that subject, as I then intended, and as I may yet, by the blessing of GOD, perform, when I shall be at leisure to put the materials together, which I have by me for that purpose. In the mean time, I hope the candid readers, either of that *Letter*, or of the present book, will believe me, when I assure them, that I had substantial reasons for deferring the sequel of the first, and for engaging in the latter, altho' less agreeable to my own inclination, and to the course of my studies.

I beg pardon for this digression. But this being the only opportunity I have had to do justice to myself, with regard to the *Letter*, I hope I shall be indulg'd in it.

As to the TRAVELLER, I am very sensible that there are many defects in it. All that I can say for them is, that it had been better, if I had been allow'd more time: And however easy for readers, and the less rich purchasers of books, the modern way of publishing (at so many sheets a week or month) may be, I cannot but observe, that it is a great hardship upon an author, or compiler, to be hurried, to keep the press going.

I shall not take upon me to explode this way of writing: I know I have a great number of *fellow-labourers*, who, perhaps, for reasons little different from mine, are concern'd in this way of publishing books of different kinds. I wish both them and myself good success, and that we may be employ'd in the different ways which our genius and education have fitted us for, and be useful to our country, according to the different talents which are entrusted with us. But to return to the TRAVELLER.

As I have brought no lies of my own into it, so I have taken care to keep those of others out of it, as much as I could: And where I found things related, which seem to shock probability, and yet are told by authors of credit, I have taken the liberty to make such remarks upon them, as I thought necessary. If any reader shall take amiss

amiſs the liberties of this kind, which I have taken, or any other obſervations I have made in the following books, all the apology I ſhall make is, to deſire him to conſider, that, *as a clergy man*, I have a right to *defend truth*, and to give my teſtimony againſt *falſe doctrine*; *as a gentleman*, I ought to declare againſt *ill manners*; and, *as a Briton*, I am oblig'd to oppoſe, to the utmoſt of my power, what I think is contrary to the *intereſt* of my *country*; which, next to a good conſcience, ſhall always be my *primum mobile*, if we can ſuppoſe that theſe two can be ſeparated. And, among thoſe unhappy ſenſeleſs diſtinctions of parties, which have ſo long troubled this iſland, he who promotes the *true intereſt* of BRITAIN, ſhall be my friend, whatever *ugly name* his enemies may brand him with, for doing ſo. And I am convinced, that if we were all TRUE BRITONS, this iſland would ſoon, *by the bleſſing of* GOD, have all we wiſh and all we want.

As to the method of the following ſheets, it was not practicable to make it of a piece, in ſuch variety of authors, and with ſuch ſcarcity of time. I have endeavour'd to make it as perſpicuous and intelligible as I could, but was often tied down to the method of my authors, which were as different as the countries they treated of. And as to the ſtile, I had not time to be ſolicitous about it, any farther than to make myſelf underſtood, which, if I have done, as I hope I have, the candid *Engliſh* reader will allow one who was born and bred in *Scotland*, now and then, to ſhew the *Sibboleth*, in writing, as well as in ſpeaking.

As to the errors of the preſs, many of them crept in, before I was aware, eſpecially in the beginning of the firſt book; I took care to get the moſt material advertis'd in the laſt page of the *appendix* to that book, and they are now more fully taken notice of and corrected in the beginning.

But there are more material faults, for which I am accountable, and have no other excuſe to make for them, but my being a freſh water ſeaman; who having never turn'd my thoughts to navigation, had not ſtudied the philoſophy of what belong'd to that art; but took things upon truſt, and had not occaſion to find out my miſtake, 'till it was too late to prevent it.

The moſt flagrant error of this kind is in p. 6, where, truſting to Mr. *Purchas*, and the introduction to Mr. *Churchill*'s collection, (which laſt being a modern book, I ſuſpected the leſs of a blunder of that kind) I have aſſerted, that *the variation of the compaſs is always the ſame in the ſame place*: Nor did I know my miſtake, (having had no intention to meddle with the philoſophy of the *loadſtone*, which I do not pretend to underſtand) 'till I found it in *Varenius*, whom I conſulted upon another occaſion, and afterwards in Mr. *Harris*'s introduction to his *Bibliotheca*, neither of which I had read, when I printed that ſheet.

I take this opportunity publickly to acknowledge my ignorance, and to retract my error; and as the beſt ſatisfaction I can make to the readers of the TRAVELLER, for having led ſuch of them into this miſtake as knew no better than myſelf the properties of the ſeaman's compaſs, I ſhall, as plainly and ſuccinctly as I can, ſhew them the meaning of the *variation*, and then Dr. *Halley*'s opinion about the reaſon of it.

I ſhall take it for granted, that all my readers know, that the *ſeaman's compaſs* has a needle touch'd with the *loadſtone*, which is commonly ſaid, and was (for ſome time after the diſcovery of that quality in it) believ'd to point due north; and, in ſome places of the globe, certainly does ſo.

But it was found, by obſervation, almoſt as ſoon as this uſeful inſtrument was applied to navigation, that, in ſeveral places of the globe, both by ſea and land, the needle, which was at firſt ſuppos'd to point ſouth and north, declines ſeveral points or degrees towards eaſt or weſt. This is what is call'd *the variation of the compaſs*; and which I imagin'd to have been ſtill the ſame in the ſame place.

But, in the beginning of the laſt century, it was found, by comparing new obſervations with old, that the needle, which, at one time, varied 10 or 11 degrees from due north, in certain places, at other times varied only 6, 4, 3, or 2, in the ſame places. Thus, for inſtance, at *London*, in the year 1580, the magnetick needle was obſerv'd to vary from the true meridian 11 deg. 15 min. towards the eaſt. In the year 1622, the variation was only 6 deg. In the year 1634, it was but 4 deg. 5 min. but ſtill eaſt: Whereas, in the year 1672, the variation from the meridian was 2 deg. 30 min. weſterly. Like variations have been obſerv'd, in other places; as at *Paris*, between 1583 and 1681, the variation was twice weſterly, once eaſterly, and, at one time, *viz.* in 1666, the needle pointed due north. *

Not to trouble the readers with the reaſons offer'd by different philoſophers, which Dr. *Halley* ſhews, not to be ſufficient, ſome of them being contrary to plain obſervation, and others founded upon wrong principles, I ſhall here give the doctor's own opinion, which he does not give as certain, but as a conjecture liable to fewer objections than the others, and anſwering better to the obſervations made of the variations

* *See* Dr. *Halley*'s table of variations in the phil. tranſact. No. 148 or Dr. *Harris*'s introd. p. lxiv.

tions in different parts of the world. But, before he gives his conjecture, he lays down the following propoſitions, as certain by obſervation.

1. That in 1683, the variation was weſterly thro' all *Europe*, but more in the eaſtern parts than in the weſtern.

2. That the ſame variation (tho' different in degrees) holds upon the coaſt of *America*, from *Virginia* northward, ſtill encreaſing to *Hudſon's* ſtreights, and *Baffin's* bay, where it is 57 deg. But eaſt from *Virginia*, the weſterly variation diminiſhes; ſo that about the *Tercera* iſlands, there is no variation at all.

3. That at *Brazil* in ſouth *America*, the variation is eaſterly, which encreaſes, the farther ſouth one goes to that; at *Cape Frio* it is 12 deg. at *Rio della Plata*, 20 deg. and declining ſouthweſt to *Magellan's* ſtreights, it falls to 17. And at the entrance into the *South Sea*, it is not above 14.

4. The eaſterly variation decreaſes in ſailing from *Brazil* towards the cape of *Good Hope*; ſo that, at St. *Helena* and *Aſcenſion* iſlands, it is ſcarce perceptible: And at 18 deg. or 360 leagues, weſt of the cape, the needle points to the north.

5. After you paſs this longitude, the variation turns to the weſt, and ſo continues weſterly, thro' the whole *Indian Ocean*; being 18 degrees in the meridian of *Madagaſcar*, where the line cuts it. And directly ſouth from that, in the ſame meridian, (in 39 deg. ſ. lat.) the variation is 27 deg. and an half. From whence to *Cape Comorin*, it falls to 8 deg. and to 3, near *Java*, and then, at the *Molucca's*, the needle points north again.

6. That eaſt from the *Molucca's*, begins the eaſterly variation, but leſs than the former in extent and degree, being ſenſibly leſs at *Rotterdam Iſland* than at *New Guinea*: And from the proportionable decreaſe of it there, he ſuppoſes the weſterly variation to begin again, about 20 degrees farther eaſt, (or 225 deg. from the meridian of *London*) at which place he computes the needle to point to the pole of the world.

7. The variation at *Baldivia* in the *South Sea*, and at the ſtreights of *Magellan*, ſhew, that the eaſt variation, mention'd No. 3, decreaſes apace, and muſt vaniſh a few degrees weſt of the coaſt of *Chili* and *Peru*, and that a new weſt variation takes place between *Chili* and *New Zealand*.

8. That in ſailing northward from St. *Helena*, by *Aſcenſion* iſland, the variation is very ſmall to the line, and ſtill much the ſame. So that in this part of the world, the variation does not keep in any certain meridian, but rather inclines northweſt.

9. That, altho' the entry to *Hudſon's Bay*, in north *America*, and the mouth of the *River of Plate*, in ſouth *America*, are nearly under the ſame meridian; yet, in the one, there is a weſterly variation of 29 deg. and an half, and, in the other 20 and an half eaſterly.

Having laid down theſe propoſitions, and ſhew'd the inconſiſtency of other hypotheſes, he propoſes his own conjecture, *viz.*

That the earth is one great loadſtone, having four poles, two of which are near the north pole of the world, and the other two near the ſouth pole; and that the needle is attracted by one or other of theſe four poles, to which it happens to be the neareſt; the vertue of the neareſt being likely to predominate over the more remote. But, as this is only conjecture, as I obſerv'd before, ſo he places his poles by ſuppoſition.

The 1ſt northern magnetic pole, he ſuppoſes to be 7 degrees from the north pole of the world, eaſterly, and near the meridian of the *Land's End* of *England*. By this magnetic pole, he thinks, the variations in *Europe*, *Tartary*, and the *North Sea*, to be govern'd.

The 2d northern magnetic pole he places at 15 degrees from the north pole of the world, weſterly, ſo that it runs thro' the middle of *Caliphornia*. By this pole the needle is govern'd in all *North America*, and in the ſea on both ſides of it, as far as the *Azores*, on one ſide, and the meridian of *Japan* on the other.

The 3d magnetic pole is, by the doctor's ſuppoſition, 16 degrees from the ſouth pole of the world, towards the weſt, and falls in a meridian 20 deg. weſt of *Magellan's* ſtreights, 95 degrees weſt of the meridian of *London*. By this pole is regulated the variation in all the ſouth of *America*, both on the eaſt and weſt of it, that is in the *Ethiopic* and *Pacific* oceans.

The 4th pole, which, he ſays, ſeems to be the moſt powerful, is, in his ſcheme, 20 degrees from the ſouth pole of the world, in a meridian which paſſes thro' *New Holland*, and the *Celebes*, 120 deg. eaſt of the meridian of *London*. This pole the doctor ſuppoſes to predominate in the ſouth of *Africa*, in *Arabia*, the *Red Sea*, *Perſia*, *India*, and over all the *Indian Ocean*, from the cape of *Good Hope*, eaſtward, to the middle of the great *South Sea* between *Aſia* and *America*.

From theſe ſuppos'd poles, he ſhews the variations, as they were firſt obſerv'd. For, if there is a magnetic pole in the north part of the earth, anſwering to a line to be drawn thro' the meridian of the *Land's End* in *England*, it follows, that all the places in the ocean, or upon the continent of *Europe*, which lie eaſt from that meridian, muſt have that line to the weſt of them, and conſequently the needle attracted by that pole, muſt decline from the pole of the world towards the weſt, according to their eaſterly diſtance from that pole, ſuppos'd to be in this meridian, which the doctor thinks will go as far as ſome part of *Ruſſia*, and there decreaſe.

Thus *Breſt* in *France*, which, by our maps, is not one degree and an half farther eaſt than the *Land's End*, is obſerv'd to have a variation from due north of 1 deg. 45 min. *London*, which is, from the meridian of the *Land's End*, 5 deg. 45 min. varies 4 deg. 30 min. But *Dantzick*, which is 24 degrees eaſt of the meridian of *Land's End*, has 7 degrees of variation.

By the ſame reaſon, all parts to the weſtward of this meridian laſt mention'd (that is, all that are within the power of this firſt magnetic pole) ought to have eaſterly variation, as having the needle attracted the contrary way. But (as the doctor ſuppoſes) the 2d magnetic pole (which he makes to govern *North America*) being more powerful than the firſt, as being farther remov'd from the pole of the world, ballances the force of the *European* pole, and keeps the variation ſtill eaſterly, altho' not much, in the eaſtern parts of the *Atlantic Sea*, near the coaſts of *Ireland France*, *Spain*, and *Barbary*.

But to the weſtward of the *Azores*, or *Tercera Iſlands*, (which lie between 17 and 26 degrees farther weſt than the meridian of *Land's End*) the power of the *American* pole overcoming the influence of the *European*, the needle is entirely guided by it; and the farther weſt one goes, it is ſtill the ſtronger. So that the variation is weſtward upon all the coaſt of *North America*; but leſs at *Virginia*, and the places thereabouts, than in *New-found-land*, and *Hudſon's Streights*, the latter being ſuppos'd to be nearer this 2d pole, and conſequently more influenc'd by it.

Croſſing *America*, the weſterly variation decreaſes, and about the middle of *California*, the needle points to the pole of the world. And from thence weſtward, towards *Yedſo* and *Japan*, the variation muſt be eaſterly, 'till you come to ſome meridian croſſing a part of *China*, where the firſt magnetic *European* pole gets the better of the 2d, or *American*.

The doctor's 3d magnetic pole, or 1ſt ſouth one, being, as we have ſaid, to be ſituated 20 degrees weſt of the ſtreights of *Magellan*, makes the variation, about *Brazil*, and the ſouth coaſt of *America*, to be eaſterly, with reſpect to the north point of the needle; for it muſt be obſerv'd, that, in ſouth latitude, it is the ſouth point of the needle that is attracted, as the north point is on our ſide the line. And this eaſterly variation (with reſpect to the north point of the needle) obtains in the greater part of the *Ethiopic* ſea, or between *America* and *Africa* beyond the line, reaching to mid way between the cape of *Good Hope*, and the iſles of *Triſtan d'Acunha*, where it is encounter'd by

The 4th pole, or the 2d ſouth magnetic pole, which the doctor calls the *Aſiatic* ſouth pole: Which, attracting the ſouth point of the needle to the eaſt, makes the variation weſterly in the *Indian Ocean*. (with reſpect to the north point of the needle, by which all the variations are computed) And this pole has the greateſt force of any of the 4, by reaſon of its diſtance from the pole of the world. About the meridian of the iſland of *Celebes*, where, as we ſaid before, this pole is ſuppoſed to be ſituated, the variation ceaſes, and, eaſt of that meridian, the eaſterly variation begins, by the ſouth point of the needle's being attracted towards the weſt; and this eaſterly variation reaches to the middle of the *South Sea*.

But there is a difference to be made between the places without the *Tropicks*, and thoſe within the *Torrid Zone*, eſpecially near the Line. For, beyond the 23d degree of latitude, either north or ſouth, the compaſs is only influenced by the two magnetic poles, on the ſide where it is. But in the torrid zone, and eſpecially near the line, regard muſt be had to all the four poles at once, and their poſitions conſidered. For, altho' the neareſt pole is the ſtrongeſt, yet its force is ballanced by the united force of the two more remote: As appears from the 8th obſervation, mention'd above; where, altho' the variation is principally govern'd (from St. *Helena* to the line northward) by the ſouth *American* pole, which is neareſt to that courſe, yet it is temper'd by the contrary attraction of the north *American* and and the ſouth *Aſiatic* poles, each of which, ſingly, is weaker than the ſouth *American* pole in that courſe; but both together ſufficient to render the variation leſs than it is in places farther remov'd from their influence. And the ſame may be ſaid of other places of the globe between the *Tropicks*.

By

By this ſuppoſition, this great man has given a moſt probable, and, perhaps, very true reaſon for the variation of the ſeaman's compaſs. But, as he himſelf obſerves, this hypotheſis does not anſwer the variation's being different, in the ſame place, at different times. For, if theſe 4 poles (as he ſuppoſes) are fix'd in the earth, and move as the globe does, the variation muſt be perpetually the ſame, in the ſame place, however different from that of other places. And this, the doctor owns, was ſo great a difficulty to him, that he, for ſome time, gave over the purſuit of it, as impoſſible to be accounted for, for two reaſons. 1. That no magnet, or loadſtone, was ever known to have more than two poles; and 2. That the fixing thoſe four poles in the earth muſt make the variation conſtant at all times, in the ſame place. But, as he ſays, he accidentally fell upon a hypotheſis, which ſolves both theſe difficulties, and which, for that reaſon, he propos'd to the *Royal Society*. The ſubſtance of which is as follows.

By comparing the obſervations made, (upon the variation of the variation) he found that, whatever is the cauſe of them, they move. 1. From eaſt to weſt. 2. That the motion is not looſe and deſultory, but gradual and regular, as he demonſtrates, from the different variations at ſeveral places. 3. That it muſt be ſomething of great force, that can influence ſo many diſtant regions of the earth. 4. That it is not conceivable to be a fluid, lodg'd in the cavities of the earth, becauſe none ſuch is known to have attraction. 5. A conſiderable part of the terraqueous globe cannot be conceived to move within, round the centre of the earth, without changing the centre of gravity of the globe itſelf, ſhifting the axis of it's diurnal motion, and making great alterations upon its ſurface, by inundations, &c.

Theſe things being premis'd, he ſuppoſes the earth, upon which we live, to be a a ſort of *ſhell* or *cruſt*, within which is a *kernel*, detach'd from the globe, having a fluid medium between them, in which this *nucleus* or kernel moves. But, being ſeparated from the outward ſhell, may have its motion diſtinct from the daily motion of the earth, and may be either ſwifter or ſlower than that is. This difference of celerity, muſt neceſſarily occaſion the different poſition of the internal parts, with reſpect to the external; according as they accede to, or recede from one another.

Now ſuppoſing the outward ſhell, or the earth we live upon, to be one magnet, whoſe two poles are different from the poles of the world; and that the kernel, here ſuppos'd, is another magnet, whoſe two poles are different, both from the poles of the world and from thoſe of the outward ſhell; and that theſe four poles change their poſition, with regard to one another, according to their different motions. This will fairly account for the difference of variation, at the ſame place at different times. And as that motion of the *Nucleus*, (be what it will) muſt be ſtated and regular; without doubt the variation of the variation, (which depends upon it) muſt be fix'd and regular; altho' the ſhortneſs of the time ſince the thing was firſt obſerv'd, has hindred the learned from being ſufficiently inſtructed in it; Dr. *Halley* being of opinion that leſs than 700 years cannot finiſh the revolutions of theſe two ſpheres, ſo as to bring them exactly to the ſame poſition.

Whether this ingenious ſpeculation be true or not, I ſhall not take upon me to gueſs. But as the *Italians* ſay, *Se non è vero, ben trovato. If it is not true, 'tis pity.*

I ſhould not have copied ſo much of this ingenious Gentleman's ſcheme, but for the ſake of ſuch of our ſubſcribers as perhaps, have not the *Philoſophical Tranſactions*; nor *Harris* or *Varenius* by them. This much will be ſufficient to give the Reader a notion of the variation of the compaſs, and apologize, I hope, for the blunder p. 6. of the following ſheets.

Another thing which may, perhaps, be objected to the TRAVELLER, is the little notice taken of the *Longitude* thro' the whole Book. As to this, I freely own, that the reaſon was, the confounding the longitude, by an affectation in ſome of our modern authors, of beginning from the meridian of different places, and as our maps are not over exact, it muſt have required a continued calculation, and repetition of cautions, about underſtanding the different authors I had to collect from, moſt of whom take their Longitude from ſuch places, as the firſt meridian, as they lik'd beſt. Thus the modern *Engliſh* call *London* the *firſt Meridian*, and both in their maps, and voyages, reckon the longitude from the diſtance of any place, from the meridian of *London*. The *French*, eſpecially in the laſt century, make *Ferro*, one of the *Canary* iſles, the firſt meridian. The *Dutch* chuſe *Teneriff*; and other nations, other places.

It is very true, that there is really in nature no ſuch thing as a *firſt Meridian*; but one would think that the readieſt way to find the longitude of places in the voyages of different nations, and in the geographical works of the ſeveral authors, would have been, to have had *one certain, fix'd Place*, agreed upon, *as the*

And,
obſerv
place,
This
to the readers of geography
the following collection; eſpecially ſince we had not determined what maps were to be given with our TRAVELLER: For I thought it very prepoſterous to aſſign the longitude from *one Meredian*, in deſcribing any place, and that the reader, who perhaps may not underſtand the different practice, ſhould be ſent a *Wild Gooſe Chaſe* after that place, in the map, where it might happen to be taken from *another Meridian*.

What other defects may be found in the following ſheets, I am not a judge of, they depend upon the different *Taſte* and *Humour* of the reader: And as I never had the vanity to imagine that I ſhould be able to pleaſe all readers, ſo I likewiſe thought it beneath my character, as it has always been below my ſpirit, to diſguiſe my ſentiments in matters of truth and juſtice, eſpecially where the intereſt of *Britain* is any way concern'd. And therefore, I would not have the reader believe me an *ill natur'd, revengeful perſon*, becauſe I have made ſome ſharp (but juſt) remarks, upon the behaviour of ſome of our neighbours; and becauſe I cannot bring my ſelf to think, that any thing they ever did for *Britain*, (if it be true that they ever did us any ſervice with a view to any thing but their own intereſt more than to ours) can ballance the many miſchiefs they have done, in exchange for repeated ſervices they have receiv'd from *England*. I thank GOD I forgive all my own enemies of all ſorts and ſizes, nor would I revenge the injuries they have done me, if it were in my power: But I have no authority to give abſolution to the enemies of my country, and ſhould be ſorry other people ſhould forgive them, without reparation. But as I am not like to be concern'd in the adminiſtration, I ſhall leave that to wiſer heads.

If I knew any other material faults in the TRAVELLER, I ſhould, with the ſame frankneſs own them, as I have retracted the error abovemention'd. And as to defects of little Conſequence, I hope, the candid reader will paſs them by as ſlips of the pen, or preſs. And I promiſe all the ſubſcribers to this book, that if GOD ſhall ſpare me life and health, I ſhall take all the care I can to make *Africa* and *Europe* as compleat as poſſible. I ſhall not detain the reader any longer, but to wiſh him profit and pleaſure in the reading the following ſheets, proportionable to the trouble I have had in collecting them.

Errata in the Firſt Book.

THE

INTRODUCTION.

TRAVELING is not only the moſt agreeable, but may be made the moſt uſeful, and improving buſineſs of a man's life: For, as it is with great pleaſure that one in a good ſtate of health, and with a competent fortune, ſees foreign countries, and converſes with People of different cuſtoms, and languages; ſo a man of judgment may render a progreſs, thro' the ſeveral parts of the world, very uſeful to himſelf and others, if he is careful, and accurate in obſerving wherein other countries differ from his own, and on which ſide the balance lies; without being partial, to his native country, through national pride, or to a foreign nation from a natural levity, or affected novelty; either of which equally retard improvement. For,

THO' the love of one's own country is not only a natural, but commendable paſſion, yet to have ſuch a blind affection for our native ſoil as to allow nothing valuable in any other; to be ſo wedded to our own cuſtoms and manners, as to ridicule all that differ from us; when, perhaps, their doing ſo is founded on good reaſon; ſuch a love of our country is a falſe one: and to travel through foreign parts with this prepoſſeſſion, is to loſe all the advantage it would otherwiſe produce.

ON the other hand; tho' civility and complaiſance are neceſſary qualifications in a traveller, and it is good manners to ſeem pleaſed, and even to applaud the beauties of other countries, when we can do it without inſincerity; yet to be ſo fond of every thing we find abroad, as to deſpiſe all that we ſee at home; to be ſo much FRENCH, ITALIAN, or GERMAN, after having ſpent ſome ſhort time in thoſe countries, as to think nothing at home worth our notice; and not only to mimick their dreſs, in the worſt parts of it, but their geſtures, phraſes, and even humours, (which, tho' they may become thoſe they are natural to, ſit but very awkwardly on an ENGLISHMAN) is ſuch an affectation, as muſt expoſe a traveller to contempt, and make judicious people conclude there is no truſting to the repreſentation ſuch gentlemen give of the places they have ſeen; ſince they appear to have been ſo ill judges of the end of travelling, as to bring home nothing but the trifles of foreign nations; and ſeem to have been induſtrious for no other advantage than that of making themſelves ridiculous.

BUT as it is not our preſent buſineſs to give rules for travellers, nor to preſcribe to thoſe who have the direction of our young Nobility and Gentry, who go abroad, (for which province we know ſome well qualify'd, and 'tis pity they are not all ſo;) and as reflections of this nature principally regard EUROPE, which will be the ſubject of the laſt part of the following work, we ſhall here inſiſt no farther on this topick, but proceed to our deſign in general.

NOTHING we are capable of ſaying can ſo well recommend and ſhew the uſe of travelling, as the practice, and example of almoſt every great and eminent man that the world ever produc'd, either in the field, cabinet, or ſciences; it being the beſt method to eradicate natural prejudices, enlarge our ideas, enrich our minds, and make us capable of judging rightly of men and things.

AND as every gentleman does not travel, either for want of health, which ſowrs the pleaſure of travelling; or for want of a ſufficient fortune to render it agree-

able and uſeful; or for being hinder'd by affairs that require his attendance at home; or, finally, from want of inclination, which is the worſt reaſon of any; the only way to ſupply that want, is to improve our taſte and underſtanding by the written Travels of others, and to learn from them the nature, manners, and curioſities of thoſe countries which we have no hopes of ſeeing ourſelves. And tho' it is impoſſible to form ſo clear and diſtinct an idea by the beſt written deſcription of any place, as a man of obſervation can have by ſeeing it; yet if the account of a voyage or journey be written with accuracy and judgment, it cannot fail being of real uſe, as well as entertainment, to the reader: And ſuch relations are not only uſeful to ſuch as have never been abroad, and have no intention to travel; but to thoſe likewiſe who have travell'd, or ſuch as deſign it; becauſe they refreſh the memories of the one, by repreſenting to them what they have already ſeen; and prepare the minds of the other, by giving them a taſte of the beauties, and cautioning them of the defects of what they intend to ſee.

BUT as the great number and inaccuracy of books on this ſubject, render the ſtudying of it tedious and diſguſting to moſt readers, we judg'd it might be an acceptable ſervice to the publick, to chuſe out the beſt printed authors on this head, and from thence, with ſome manuſcript helps, to compoſe ſuch a work as may, in one view, repreſent to the reader the whole ſubſtance of what is diffus'd thro' many volumes, ſtripp'd of all that ſhall appear not worth collecting; and likewiſe of the miſtakes in the older authors which have been rectified by more modern Writers.----How we have ſucceeded in this attempt, muſt be left to the judgment of the publick; we can only ſay, that no endeavours have been wanting to render the Work deſerving of the notice which the world has already taken of the Deſign.

WE ſhall now only detain the reader to give him a ſhort ſketch of our plan, which he will find purſu'd in the following work.

WE ſhall begin with the diſcovery of, and moſt remarkable voyages to, AMERICA, as being the moſt ſurpriſing, and, to ENGLAND, the moſt important, of any that were ever made: under which head we ſhall include the Circum-navigators, or voyages round the world, their chief adventures happening in this part of the globe; and ſhall alſo give the diſcovery of ſuch iſlands or parts of AFRICA as were the gradual ſteps to it; intending to be much more particular in the firſt diſcovery of any part, than in the voyages to a place after it is known. In collecting the many famous voyages to this large diviſion of the globe, we ſhall endeavour to keep the regular ſeries of the diſcovery of its ſeveral parts as entire as the nature of the work will poſſibly admit; and conſtantly give ſo much of the hiſtory, geography, natural-hiſtory, and preſent ſtate of each part, as the diſcoveries made at this day enable us.

IN treating of the other three parts of the globe, *viz.* AFRICA, ASIA, and EUROPE, we ſhall generally diſtinguiſh them into their different Empires and Kingdoms, and ſhew their various governments, laws, hiſtory, manners, products, *&c.* from the beſt authors, by way of introduction to the voyages or travels to each country; by which we propoſe to furniſh our readers with a general view of every part we treat of, and make him the better underſtand the particular relations of thoſe travellers who viſited them, who are ſeldom ſo ſatisfactory in thoſe particulars as could be wiſh'd: In all which we ſhall carefully avoid trifles, and never caſtrate a curious or remarkable deſcription or adventure, when we meet with it in an author of judgment and veracity.

THE

THE UNIVERSAL TRAVELLER.

BOOK I.

AMERICA.

HAVING propos'd to begin our work with AMERICA, it may be expectedwe ſhould give ſome account how this vaſt tract of earth, which is probably as large as all the other three parts of the World put together, came to be firſt peopled: But as there is nothing of certainty in the conjectures made by the ſeveral authors who have treated this ſubject; and as objections not eaſily anſwer'd, may be made to every one of them; we ſhall leave the reader to his choice, whether he will believe with ſome, that there is a communication, tho' not yet diſcover'd, between *America* and ſome part of *Aſia*, on the one hand; or of *Europe*, on the other: or, at leaſt, that there are iſlands ſo near the one or other, which may have been ſteps towards peopling this new world, when the poſterity of *Noah* diſpers'd; and that a colony of them ſettled there, and diffuſed themſelves over *America*, as they did over the other parts of the globe. Or, if any one diſlikes this account of it, let him ſuppoſe, that long after the reſt of the world was peopled, and when ſhips were in uſe; ſome ſhip's crew, given over for loſt in a ſtorm, was accidentally driven to *America*, and not knowing how to get back, were forced to ſtay there; and having had ſome women in their company, multiplied to the degrée the *Europeans* found them in, about two Ages ago.

Whether of theſe is the true account; or if that Country was peopled in a way different from both, we ſhall leave to be diſcuſs'd by others.

Why this part of the earth was ſo long unknown to *Europe*, ſeems eaſy to be accounted for, by the great tract of ſea that lies between them; where it had been the greateſt madneſs to have ventur'd, before navigation was brought upon a better footing, than to truſt entirely to the ſun and ſtars, without the help of that noble invention of the Compaſs, ſo lately found out. It ſeems therefore to be a greater wonder that *America* was ever diſcover'd, than that it was ſo lately known; and they who made the diſcovery at the peril of their lives, and with ſo much labour, ought to be remember'd with honour by all the world, but eſpecially by thoſe nations, who have reap'd ſo many advantages by their toil.

That navigation has been long in uſe in the world, eſpecially in the eaſtern parts of it, cannot be diſputed by any who gives credit to hiſtory, either ſacred or profane. The holy Scripture gives us the account of the firſt ſhip that we have any reaſon to believe was ever made; I mean,

able and useful; or for being hinder'd by affairs that require his attendance at home; or, finally, from want of inclination, which is the worst reason of any; the only way to supply that want, is to improve our taste and understanding by the written Travels of others, and to learn from them the nature, manners, and curiosities of those countries which we have no hopes of seeing ourselves. And tho' it is impossible to form so clear and distinct an idea by the best written description of any place, as a man of observation can have by seeing it; yet if the account of a voyage or journey be written with accuracy and judgment, it cannot fail being of real use, as well as entertainment, to the reader: And such relations are not only useful to such as have never been abroad, and have no intention to travel; but to those likewise who have travell'd, or such as design it; because they refresh the memories of the one, by representing to them what they have already seen; and prepare the minds of the other, by giving them a taste of the beauties, and cautioning them of the defects of what they intend to see.

But as the great number and inaccuracy of books on this subject, render the studying of it tedious and disgusting to most readers, we judg'd it might be an acceptable service to the publick, to chuse out the best printed authors on this head, and from thence, with some manuscript helps, to compose such a work as may, in one view, represent to the reader the whole substance of what is diffus'd thro' many volumes, stripp'd of all that shall appear not worth collecting; and likewise of the mistakes in the older authors which have been rectified by more modern Writers. ----How we have succeeded in this attempt, must be left to the judgment of the publick; we can only say, that no endeavours have been wanting to render the Work deserving of the notice which the world has already taken of the Design.

We shall now only detain the reader to give him a short sketch of our plan, which he will find pursu'd in the following work.

We shall begin with the discovery of, and most remarkable voyages to, America, as being the most surprising, and, to England, the most important, of any that were ever made: under which head we shall include the Circum-navigators, or voyages round the world, their chief adventures happening in this part of the globe; and shall also give the discovery of such islands or patts of Africa as were the gradual steps to it; intending to be much more particular in the first discovery of any part, than in the voyages to a place after it is known. In collecting the many famous voyages to this large division of the globe, we shall endeavour to keep the regular series of the discovery of its several parts as entire as the nature of the work will possibly admit; and constantly give so much of the history, geography, natural-history, and present state of each part, as the discoveries made at this day enable us.

In treating of the other three parts of the globe, *viz.* Africa, Asia, and Europe, we shall generally distinguish them into their different Empires and Kingdoms, and shew their various governments, laws, history, manners, products, *&c.* from the best authors, by way of introduction to the voyages or travels to each country; by which we propose to furnish our readers with a general view of every part we treat of, and make him the better understand the particular relations of those travellers who visited them, who are seldom so satisfactory in those particulars as could be wish'd: In all which we shall carefully avoid trifles, and never castrate a curious or remarkable description or adventure, when we meet with it in an author of judgment and veracity.

THE

THE UNIVERSAL TRAVELLER.

BOOK I.

AMERICA.

HAVING propos'd to begin our work with AMERICA, it may be expectedwe ſhould give ſome account how this vaſt tract of earth, which is probably as large as all the other three parts of the World put together, came to be firſt peopled: But as there is nothing of certainty in the conjectures made by the ſeveral authors who have treated this ſubject; and as objections not eaſily anſwer'd, may be made to every one of them; we ſhall leave the reader to his choice, whether he will believe with ſome, that there is a communication, tho' not yet diſcover'd, between *America* and ſome part of *Aſia*, on the one hand; or of *Europe*, on the other: or, at leaſt, that there are iſlands ſo near the one or other, which may have been ſteps towards peopling this new world, when the poſterity of *Noah* diſpers'd; and that a colony of them ſettled there, and diffuſed themſelves over *America*, as they did over the other parts of the globe. Or, if any one diſlikes this account of it, let him ſuppoſe, that long after the reſt of the world was peopled, and when ſhips were in uſe; ſome ſhip's crew, given over for loſt in a ſtorm, was accidentally driven to *America*, and not knowing how to get back, were forced to ſtay there; and having had ſome women in their company, multiplied to the degree the *Europeans* found them in, about two Ages ago.

Whether of theſe is the true account; or if that Country was peopled in a way different from both, we ſhall leave to be diſcuſs'd by others.

Why this part of the earth was ſo long unknown to *Europe*, ſeems eaſy to be accounted for, by the great tract of ſea that lies between them; where it had been the greateſt madneſs to have ventur'd, before navigation was brought upon a better footing, than to truſt entirely to the ſun and ſtars, without the help of that noble invention of the Compaſs, ſo lately found out. It ſeems therefore to be a greater wonder that *America* was ever diſcover'd, than that it was ſo lately known; and they who made the diſcovery at the peril of their lives, and with ſo much labour, ought to be remember'd with honour by all the world, but eſpecially by thoſe nations, who have reap'd ſo many advantages by their toil.

That navigation has been long in uſe in the world, eſpecially in the eaſtern parts of it, cannot be diſputed by any who gives credit to hiſtory, either ſacred or profane. The holy Scripture gives us the account of the firſt ſhip that we have any reaſon to believe was ever made; I mean,

mean, *Noah*'s Ark, which was built by divine command. The ſame inſpir'd writings tell us of *Solomon*'s trafficking from *Ezion-Gebar*, a port in the *Red Sea*, to *Ophir*, by the united fleets of that great Monarch, and of *Hiram* king of *Tyre*; which *Ophir* was certainly ſome port of the *Eaſt-Indies*; but not exactly known, by the changes of names in that country ſince that time.

But if the Bible is of ſmall authority, in this our refin'd age, where people *profeſſing themſelves wiſe, are become fools*, I hope they will not reject the authority of heathen writers; who, though they ſometimes mix'd a good deal of fable in their relations, yet put the art of navigation beyond diſpute.

Not to inſiſt upon the poetical deſcription of the *Argonauts*, rejected by ſome as a fiction, nor of the fleet ſaid to have been ſet out by *Semiramis*, long before that time, of no leſs than 2000 ſail (if they made uſe of ſails ſo early) with which her general defeated 4000 boats made of cane, belonging to *Staurobates* king of *India*; altho' thoſe *Babylonian* ſhips were of no great bulk as we may eaſily imagine, from their being carried on camels backs to the river *Indus*; if any credit is to be given to the ſtory. Yet

HOMER's accounts of the *Grecian* fleet which came to beſiege *Troy*; and of the wandering of *Ulyſſes* thro' the ſea, tho' they are full of poetical invention, are a plain demonſtration of the progreſs of navigation before his time.

But the *Tyrians* or *Phœnicians* were the firſt great improvers of NAVIGATION, and conſequently of TRADE and COMMERCE: They were the firſt who ventur'd out of their own ſeas, and ſettled colonies in *Africk* and *Europe*: for I reckon the *Carthaginians*, who ſettled in *Spain*, to have been *Tyrians*, as they always allow'd themſelves to be, and ſent the tythes of the ſpoils taken in a ſucceſsful war, to their Mother-City. As the *Carthaginians* improv'd in navigation, ſo their deſire of wealth encreas'd; and the *Mediterranean* grew too narrow for their attempts; ſo that they ventur'd out of the ſtreights, now called *Gibraltar*, and carried on a trade in *Gaul*; from whence they came over to *Britain*, as our own hiſtories tell us, and for many years drove a commerce in the ſouth-weſt parts of *England* for Tin. But if we may credit *Pliny*, they ventut'd out of the ſtreights, and, ſailing round *Africk*, came to the *Red Sea*, under the conduct of *Hanno*, and made a conſiderable progreſs towards the North, under *Kimulco*. Altho' this may not be exactly true, as to the extent of thoſe voyages, either North or South; yet it is not to be doubted but they made a conſiderable progreſs both ways.

See Church. *Introd. p.* x. *Ed.* Lond. 1704.

See *Hiſt. of* Egypt *and* Carthage.

Church. *Introd. p.* xi. Purch. Pilg. *B. 1. ch.* 17.

From the *Phœnicians*, the *Greeks* learn'd the art of navigation; which, by their skill in the mathematicks, they improv'd to a great degree, as to the ſtructure of their veſſels; but the chief deſign of their fleets being only for war, they ſoon outſtrip'd their maſters in managing their ſhips in battles; inſomuch, that at the battle of *Salamis*, the *Athenians* beat the *Perſian* fleet, where the ſeamen were all *Phœnicians*, and three times their number.

The *Romans* were, for a long time, wholly ignorant of the art of navigation; nor had they occaſion for it, while they had war only with the little kings of *Italy*, and their neighbours of *Greece*. But when they came to have to do with the *Carthaginians*, who were maſters of the ſea, and were then intent upon the conqueſt of *Sicily*, they found themſelves at a great loſs by their ignorance in maritime affairs, and were frequently baffled by the *Carthaginians* landing their forces in places which they could not foreſee. The *Romans* therefore, whoſe courage and induſtry overcame all difficulties, acquir'd the art of navigation, after a very odd manner; of which, tho' it is a ſtory univerſally known; as being atteſted by all who have written the *Roman* Hiſtory, we ſhall give a ſhort account in this place.

In the firſt war between *Rome* and *Carthage*, one of the *Carthaginian* Gallies, a *Quinquereme*, having been ſtranded, fell into the hands of the *Romans*, who immediately ſet about building a hundred after that model; which they ſoon effected; but, as they were entire ſtrangers to the managing of them; while they were building, they choſe out ſo many men as they thought neceſſary, and placing them, at land, upon banks, like thoſe they found in the gally they had taken, they there taught them to handle the oars after the manner they had often obſerv'd their enemies to do at ſea; with one man before the reſt, to give ſigns for the beginning their ſtroakes all together, and for giving over at once, to avoid confuſion, and the claſhing of the oars upon one another. A ſufficient number being thus inſtructed, and, by frequent uſe, become maſters of the art at land, with an undaunted bravery, peculiar to that people, they ventur'd to ſea in their new fleet: but being ſufficiently aware that the *Carthaginians*, by long practice, muſt underſtand the managing their gallies, and keeping themſelves firm in them, much better than they; and believing, juſtly, that their own force conſiſted chiefly in their valour and ſtrength in cloſe fight; they contriv'd

contriv'd a machine, to grapple the enemies gallies when they they came within their reach, ſo as to put it out of their power to row off, or to attack them in *poop*. This machine was made of a ſtrong piece of timber, ſet perpendicularly in the *prow* of the galley; to which was fixed, with iron hinges, another frame of ſeveral pieces of wood, bound with iron joints, long enough to reach a good way over the galley to which it belong'd, to that of the enemy. At the extremity of this jointed frame, were fix'd two large ſpikes of iron, ſharp-pointed. This frame being chain'd to the baſe of the perpendicular timber, the extremity, in which the ſpikes were, could be rais'd by a pully thro' a hole in the upright piece, to any proper heighth; ſo that upon the approach of the enemy's ſhip, they rais'd the machine, (which they called *Corvus*, or *The Crow*) and when they were *board on board*, ſlipping the cord at once, the wood where the ſpikes were, falling, with its own weight, ſtuck ſo faſt in the enemy's galley, that the *Romans* could fight as firmly as at land: for the jointed planks ſerved for a bridge to board the enemy.

Having thus ventur'd to ſea, with their hundred gallies, their admiral, *Duillius*, beat the *Carthaginians*; perhaps by ſurpriſing them, who little expected ſuch a fleet from an enemy entirely ignorant of navigation but a very ſhort time before. Yet a few years after, they ſo improv'd themſelves in this art, and had built ſo many gallies of different ſizes, that they had on board 140000 men, with which fleet they fought and beat their rivals the *Cartaginians*, who had ten thouſand men more than they on board. The various ſucceſſes of the *Romans* by ſea afterwards, is not our preſent buſineſs; they remaining maſters of the ſea after the deſtruction of *Carthage*, only being moleſted by pyrates in particular ſeas, who were from time to time deſtroyed, when the *Roman* Conſuls, and afterwards the Emperors, had leiſure to ſend fleets after them.

After the diſſolution of the *Roman* ſtate, the *Saracens*, and after them the *Northern* nations, maintain'd the art; and became very troubleſome to their neighbours, and likewiſe to diſtant nations, by their fleets.

To them ſucceeded the *Venetians* and *Genoeſe*, both once great Maſters of navigation, and for a long time rivals in power at ſea; which occaſion'd much blood, till the *Venetians*, at laſt, got the better.

But ſtill, notwithſtanding the antiquity of this art, and the ſeveral improvements made in it by the different nations who practiſed it, we may juſtly ſay, that navigation was ſtill in its infancy, till about three hundred years ago; and never got out of its leading-ſtrings before the noble invention of the COMPASS, in the beginning of the xivth century. For, tho' the *Phœnicians* were proficients in aſtronomy, which is of great uſe in navigation, yet they were not, by that, fitted for making diſcoveries over large ſeas; having nothing but the ſun or ſtars to direct their courſe: and tho' they are ſaid to have ſail'd round *Africk*, their voyages were only coaſting; ſo that this large extent of earth, ſo lately found out, muſt, in all probability, have remain'd undiſcover'd to this day; and, perhaps, to the day of judgment, without the aſſiſtance of the Compaſs.

That the Loadſtone attracted iron, was, without doubt, known to the ancients; but that this knowledge was applicable to navigation, we may fairly conclude they were ignorant of; becauſe it never was ſo applied. For, had they been appriz'd that the Loadſtone could communicate a vertue to a piece of iron rubb'd upon it, ſo as that piece of iron, hanging horizontally, and at liberty to move, muſt always point to the north pole, (which muſt ſoon have appeared to be of of vaſt uſe to direct ſhips at ſea, even in ſhort voyages, in a fog, or a cloudy night) it is not agreeable to common ſenſe to imagine, that ſo many great men, to whoſe writings the world has been obliged for valuable diſcoveries in mathematicks and natural philoſophy, ſhould not tranſmit ſo uſeful a ſecret to poſtery. Nay, had ſuch a diſcovery as this been once made, it had been morally impoſſible it ſhould ever have been loſt in thoſe countries which had ſuch conſtant uſe for it: nor could all the wars, revolutions, and deveſtations that ever happen'd in trading nations, have made them forget the uſe of an invention ſo neceſſary for preſerving the lives of many thouſands, and for enriching their countries. And therefore, we may without heſitation conclude, that the uſe of the Compaſs, as we have it in our time, is the invention of theſe latter ages.

The loadſtone itſelf, from which this wonderful vertue to the needle is deriv'd, is commonly known by the name of the *Magnet*, either as being found in *Magneſia*, a country of *Lybia* in *Aſia*; or becauſe its attracting iron was firſt diſcover'd by that people. But the loadſtone's communicating that vertue of a needle's turning to the pole, by being touch'd upon the pole of the *Magnet*, was owing, as is commonly ſaid, to *John* or *Flavius Givia*, of *Amalphi*, a city of *Naples*. But ſo little notice is taken of this firſt Inventer of ſo valuable an inſtrument, that nothing more is known of

him than his name and city; and even his christian name is doubtful; and a *Latin* verse is all we have for the place of his birth, or abode.

Prima dedit nautis usum magnetis Amalphis.

Amalphi *taught the Magnet's secret force,*
To guide the wand'ring pilot in his course.

To give the philosophy of the needle's turning to the pole of the earth, is what we do not pretend to; but that it does so, is certain, till it is carried to so such a latitude; and there, by as unknown a quality in it, varies some points towards *East*, or *West*, according to the places it happens to be in; and is so constant in this variation, that there never is any sensible difference between its moving from the pole either to the *East* or *West* in the same place, at one time more than at another. For instance, in the *Azores*, the needle has no apparent variation, but after you pass the cape of *Good Hope*, if upon the coast of *Guinea*, it inclines eastward, or towards the *African* continent; on the other hand, near the *American* coast, the needle inclines westward.

Purch. Pilg. Book 2. ch. 1. sect. 1.

When this most useful help to navigation was once discover'd, one would wonder that there should not have appear'd adventures immediately to make discoveries of places not before known: but whether it was that people would not believe their own eyes as to the vertue of the compass; or that they were afraid it might lose its vertue by being long at sea; or that they did not think there was any Chart of the earth undiscover'd: whatever was the reason, a good part of the xivth century pass'd, without any attempt made of new discoveries.

The several discoveries, after the invention of the compass, are generally divided into three classes; 1. the *European* northern discoveries, as being the first in order of time; 2. of *Africa*, found out in the way to the *East-Indies*, or *Asia*; and 3dly, those to the *West-Indies*, or *America*: We shall give a just mention these, before we enter upon our chief design; reserving the fuller relation of them to their proper places.

In the year 1360, *Nicholas de Linn*, a friar of *Oxford*, a good astronomer, made five voyages into the northern islands, and made draughts of the places he had seen; but they seem to be of no great consequence, few writers taking any notice of them.

In 1553, Sir *Hugh Wiloughby* sail'd northward with three ships, touching upon the coast of *Denmark*; about the middle of *September* he lost company of the other two ships, and putting into *Arzina* in *Lapland*, where were no inhabitants, he and his crew were frozen to death. *Chancellor*, who commanded the 2d ship, call'd the *Edward*, touching at *Wardhouse* in *Norway*, the place of rendezvous, arriv'd in the bay of *St. Nicolas*, on the coast of *Muscovy*: he himself went to the *Czar*'s court, and was the first who settled commerce between *England* and *Russia*.

In 1556, *Steven Burroughs*, in a small ship, went to discover the River *Ob*: In *July* he arrived at *Nova Zembla*, proceeded by directions from thence to the straits of *Weygates*, but finding no passage, return'd by way of *Muscovy*, and wintering there, was recall'd.

In 1558, Capt. *Jenkinson* sail'd to *Muscovy*, with four ships, where landing himself, he travell'd to *Musco*, and from thence, with the *Czar*'s pass, thro' *Muscovy*, crossing the kingdoms of *Casan*, and *Astracan*, he embark'd on the *Volga*, 600 miles from *Musco*, and sail'd down the *Caspian* Sea, for 27 days, and then landing, proceeded with a caravan of 1000 Camels, five Days Journey by land, among the wild *Tartars*, till he came to the *Caspian* sea again, at the place where the river *Oxus* us'd to fall into it; which, according to his account, falls now into another river near it, call'd *Ardock*, and runs 500 miles under ground, and then rising, disembogues itself in the lake of *Kitay*. *Jenkinson* proceeded to *Boghar* in *Bactria*, and return'd to *Musco*.

In 1561, the same person, carrying letters from Queen *Elizabeth* to the *Czar*, cross'd the *Caspian* Sea, into *Hircania*, and from thence to the Court of *Persia* at *Casbin*, where he obtain'd several Privileges for the *English*; and return'd the same way.

In 1580, *Pet* and *Jackman* sail'd from *Harwich* to make discoveries towards the north-east. But *Jackman*'s ship being in a bad condition, *Pet* left him in the bay of *Petzora*, and sailed to *Nova Zembla*, where, in the month of *July*, he met with so much ice, that he had great difficulty to get through it as far as *Weygates* streights; but when he attempted to pass them, the water was so shallow, that his boat could not float, so that he gave over thoughts of it. In his return, he met *Jackman* in distress; who being refitted, they set sail together, and made another attempt upon the *Streights*, but to no purpose; so that, the ice increasing, they sailed southward, and *Pet* arrived safe in the *Thames* in *December*; but *Jackman* wintered in *Norway*; and setting out northward next year, was never

never more heard of. This made an end of the *Engliſh* endeavours after northern diſcoveries; at leaſt for that century.

The *Engliſh* being thus unſucceſsful, the *Dutch* reſolv'd next to try their fortune in the northern Seas; to which intent, the ſtates fitted out three ſhips, under the command of *Barentz*, *Corneiliſſen*, and *Hugens*. *Barentz* went to 78 degrees n. latitude, and found much ice there in *Auguſt*, with abundance of ſea monſters. The other two (as they pretended) diſcovered ſome iſlands; and at laſt a ſtreight capable of the largeſt ſhips, which they paſſed, and got into an open warm ſea, upon the coaſt of *Tartary*, near the river *Ob*, where they diſcovered a large fruitful country: this ſtreight they called *Naſſau*. But being, as they ſaid, in want of proviſions, (notwithſtanding the pretended fruitfulneſs of the country) they were forced to return to *Holland* the ſame way they went; but neither ſome of themſelves, who were ſent back two years after, nor any body elſe, could ever find the ſtraits of *Naſſau* ſince. —— *Travellers have a Licenſe.*

In the year 1676, captain *Wood* attempted the ſame diſcovery in the *Speedwell* man of war, with a pink for a tender: but loſt his ſhip about *Nova Zembla*, and returned to *England* in the pink.

Thus were all our expectations of trading to *Cathay*, *China*, *Japan*, &c. by a ſhort paſſage to the northeaſt, entirely fruſtrated; and no advantage got by ſo much labour and loſs, except the *Ruſſia* trade.

We ſhall now follow our author to the diſcoveries made on the coaſt of *Africk*, and ſo to the *Eaſt Indies*; ſome of the places then found out, having been alſo ſcaffolds to reach *America*.

Southward Diſcoveries on the African Coaſt.

Altho' moſt of the modern writers ſeem to be doubtful of the truth of our Countryman *Macham*'s diſcovery of the iſland *Madera*, in 32 degrees n. latitude; yet ſince they both relate it from *Hakluyt*, and other authors; and as there is nothing in the ſtory which ſeems improbable, it will not be amiſs to give it in ſhort; ſince if it was true, it accounts very well for putting others upon farther diſcoveries that way.

It is ſaid, that in the year 1344, one *Macham*, an *Engliſhman*, being in love with a lady; whom, it ſeems, he could not obtain for his wife; (but whether from her own want of inclination to him, or the difficulty of getting the conſent of her parents or friends, does not appear;) he being reſolved to enjoy her, ſtole her away; and not finding it ſafe to ſtay with her in *England*, ſhip'd her for *Spain*, whether he intended to carry her. But being by ſtorm, or by miſtaking the courſe, put by that coaſt, they probably ſaw no land, before they arrived at the *Madera* iſland. *Macham* landed with his miſtreſs or ſpouſe, to refreſh her after the toil ſhe had undergone: the wind chopping about, the ſhip ſet ſail, leaving him, and the Lady, with ſome others who had gone aſhoar with them, upon that deſolate iſland; the ſeamen, it ſeems, having gone back with the boat in which they came aſhoar. The lady died ſoon after, of grief for her preſent Condition; and *Macham*, with his companions, ſtay'd there long enough to erect a little chapel and hermitage for her burying-place. After which, they hollow'd out a tree for a boat, to convey them to the *African* coaſt, where they were taken by the *Moors*, and preſented to their king; who, for the rarity of the accident, ſent them to the King of *Caſtile*, to whom *Macham* telling his ſtory, mov'd ſeveral people to attempt the diſcovery of this Iſland, unknown before to the *Europeans*.

In 1348, the King of *Caſtile*, *John* II. gave a commiſſion and grant to *Betancourt*, a *Frenchman*, to conquer the *Canary* iſlands, (diſcover'd before, but after what manner is not ſaid; *Purchas* ſays it was by chance, either by an *Engliſh*, or a *Frenchman*.)

The *Ganary* iſlands are ſeven in number, viz. *Canaria*, *Teneriff*, *Palma*, *Gomeria*, *Herro*, *Lanſarotte*, and *Fuerte Ventura*. They lie between 28 and 29 degrees n. latitude.

Betancourt ſubdued five of theſe iſlands, but the two largeſt were too ſtrong for him; but we hear of no farther diſcoveries made that way, till the year 1417, that prince *Henry*, the fifth ſon of king *John* of *Portugal*, after his return from the taking of *Ceuta*, being a good mathematician, was very intent upon new diſcoveries.

To this end, he went himſelf to reſide at cape *St. Vincent*, for the freer ſtudy of mathematicks, and clearer obſervations: and that he might improve his countrymen in the art of navigation, he brought one *James* from *Majorca* to *Portugal*, to erect an academy for that purpoſe: this *James* was very expert in making ſea charts, and mathematical inſtruments. Purchas, B. 2.

This Prince ſent out two ſhips to double cape *Nao*, or *Non*, about 30 degrees of latitude, which was at that time the *ne plus ultra* of *European* diſcoveries; nor did any ſeaman attempt to paſs it, becauſe of the furious breaking of the ſea, which made it appear dangerous to attempt, unleſs they ſtood out a great way towards the *Weſt*; which till then they were ignorant of.

Thoſe ſhips, now ſent by the Prince, made good the deſign they went for; and

and making towards the *Weſt*, double the cape, and then proceed towards the *South*, about 180 miles, till they were ſtopp'd by another cape, which, for its running 40 leagues into the ſea weſtward, they call'd cape *Bojador*. But they went no farther, becauſe of the great ſurges beating upon the rocks.

In 1418, prince *Henry*, having new diſcoveries ſtill at heart, ſent out two ſhips more, commanded by *Gonſalvo Zarco*, and *Vaz*, to paſs *Bojador*; which they did, unknown to themſelves: for meeting with a ſtorm before they came near that cape, they were hurried to the weſtward of it, whether they would or not, and by chance fell in with an iſland, to which, for the good providence of being ſav'd from the ſtorm, they gave the name of *Porto Santo*, or *Holy Haven*. This iſland is one of the *Azores*, in the latitude of 38 degrees. The maſters being ſatisfy'd with this diſcovery, return'd home. Upon their report, the Prince ſent *Pereſtrello* to the new iſland, to people it, and made him take along with him ſeeds to ſow the ground, and cattel for the uſe of the new inhabitants. Among the other animals he carried thither, he had one couple of rabbets, which in a ſhort time ſo multiplied, that the iſland was made in a manner uſeleſs; for they eat up every thing that was ſow'd; ſo that they were forc'd to deſtroy them.

But this young Prince did not neglect farther diſcoveries; for, in 1419, he ſent *Zarco* and *Vaz*, a ſecond time, to proceed ſtill farther *South*; which they did with ſuch ſucceſs, that in the latitude of 32 degrees, they diſcover'd another iſland, which, for the great quantity of wood upon it, they call'd the *Madera* iſland: This is the iſland ſaid to have been diſcover'd by *Macham*, above-mention'd. Upon their return, the Prince procur'd from his father a grant of the *Madera* for the two diſcoverers, and their heirs; which they divided between them. The Prince ſending for ſugar-canes from *Sicily*, had them ſoon after planted in the iſland, which prov'd of great advantage to *Portugal*.

Gonſalvo taking poſſeſſion of his part of the iſland, ſet fire to the wood, which, they ſay, was ſeven years in burning, and wood is ſtill the ſcarceſt commodity they have in it.

In 1433, or 1434, the Prince ſent *Gillianez* to proceed ſtill farther *South* beyond cape *Bojador*; which he did, ſailing about 30 leagues farther in a bay, to which he gave the name of *Angria de Ruyvas*, from the multitude of *Gurnets* with which it abounded. The ſame year *Anthony Gonſalvo* ſail'd 12 leagues farther, and diſcovered people on the *African* coaſt, who, upon the approach of the *Portugueſe*, fled. Paſſing 12 leagues ſtill ſouthward, they kill'd ſeveral ſea Wolves, and brought home their skins.

In 1440, or 1441, the ſame *Gonſalvo*, or *Triſtan*, or both together, went as far as *Cabo Blanco*, or *White-Cape*, where the *Portugueſe* landed, and brought off ſome priſoners. This cape is in 20 deg. n. latitude. Purchas, *ubi ſupra*. Church. *Introd.*

The year following, *Gonſalvo* went again to cape *Blanco*, where he exchang'd the priſoners taken the year before, for *Guinea* ſlaves, and gold duſt; from which gold duſt, being the firſt brought from thoſe parts, they called the river they found it in, *Rio del Oro*, *The Golden River*.

About this time, the King of *Portugal*, having already made many diſcoveries, and hoping ſtill to make more, procur'd a donation from pope *Martin* V. of all that ſhould be made from cape *Bojador* to the *Eaſt-Indies*; which was granted in ample form; and confirm'd by three ſucceeding Popes, in favour of the Crown of *Portugal*.

In 1443, *Nunho Triſtan* ſail'd beyond the *Rio del Oro*, and diſcovered one of the *Angruim* iſlands, called *Adiget*; and another which he named *De las Garzas*, from the great number of *Herons* which he found there.

The next year, prince *Henry* erected a Company, who ſent ſix *Caravels*, or ſhips, to the places already diſcovered: theſe took 200 ſlaves among the *Angruim* iſlands, and brought them to *Portugal*, where they ſold well.

But in 1445, *Gonzalo de Cintra*, going to the ſame iſlands, and having landed with ſome of his Men; and neglecting to keep his boat afloat, at the ebb water two hundred *Moors* fell upon him, and kill'd him, and ſeven of his crew. From him this place was call'd, *Angra de Gonzalo de Cintra*. It is about 14 leagues ſouth of *Rio del Oro*.

The ſame year, or the next following, *Denis Fernandez* ſailed beyond the river *Sanaga*, and diſcover'd *Cabo Verde*, or the *Green Cape*, in the latit. of 15 deg. and in 1447, *Nunho Triſtan* went 60 leagues farther; and, anchoring at the mouth of the *Great River*, went up in his boat; but was kill'd, with moſt of his boat's crew, by the *Blacks*, with poiſon'd arrows from the land.

In 1449, *Gonzalo Vello* made a farther diſcovery of the *Azores*, or *Iſlands of Hawks*, which are eight in number, and about the ſame latitude with *Lisbon*. In one of theſe iſlands was found an equeſtrian ſtatue, of a man with a cloak, but no hat; his left hand on his horſe's mane,

and

and the right hand pointing to the *West*. Some characters were cut in the rock under it, but not understood.

In 1460, *Antonio Nola*, a *Genoese*, discovered the islands of cape *Verde*, about 100 leagues to the westward of the Cape; as also those of *Maia*, *St. Philippo*, and *St. Jago*.

About this time died prince *Henry* of *Portugal*, the great encourager and promoter of discoveries upon the *African* coast, and the islands near it; the *Portuguese* having, thro' his means, gone almost to the Equinoxial line: his nephew *Alphonso*, then King of *Portugal*, taking the patronage of navigation upon him; under whom,

An. 1460, *Peter Cintra*, and *Costa*, sail'd as far as *Serra Leon*, in the latit. of 8 deg. Nor have we any account of proceeding farther, till the year 1471, and then

Santareen, and *Escobar*, sail'd as far as *Mina*, or the *Gold Mines*, and pass'd the Equinoxial line, to *St. Catherine*'s cape, in 2 deg. 30 min. south latitude, 37 leagues beyond cape *Lope Gonsalez*. And *Ferdinand Po*, much about the same time, following the course of the *African* coast, discover'd an island in 3 deg. n. latitude, which he called *Hermosa*, or *beautiful*. But is now mark'd in the Maps by the name of *Ferdinand Po*. The other islands, *Del Prencipe*, *St. Thomas*, and *Bom*, were now likewise found out.

John II. succeeding his father *Alphonso* in the Kingdom of *Portugal*, order'd a fort to be built at *Mina*, and settled a colony there upon the coast of *Guinea*.

In the year 1480, *James Cam* advanc'd to the river *Congo*, or *Zaira*; and from thence sail'd as far as 22 deg. south. lat.

Six years after, an ambassador from the King of *Benin*, near the Line, having inform'd king *John*, that his master received the investiture of his kingdom from another potent prince, who liv'd 250 leagues from *Benin*; *John*, believing that prince to be the *Abyssine*, or *Prester John*, so much talk'd of, sent *Peter de Covillian*, and *Alonzo de Payva*, to find him out. These two sailed up the *Mediterranean* as far as *Grand Cairo*, and from thence to *Tor* on the coast of *Arabia*, where they parted, and went, *Covillian* for *India*, and *Payva* towards *Ethiopia*; appointing *Grand Cairo* for the place of rendezvous, at their return. *Covillian* went to *Cananor*, *Calicut*, and *Goa*, and from thence to *Zofala* in *Africa*, to the eastward of the cape of *Good-Hope*, and so to the *Red Sea*, on the *Arabian* side; and returning to *Grand Cairo*, he heard of *Payva*'s death in that city. From *Cairo* he sent an account to the king of *Portugal* of his journey, by a *Jew*; and, with another *Jew*, pursu'd his journey to *Ormuz*, and so to *Ethiopia*; where he was well treated, but never suffer'd to return home.

During this Expedition by land, *Barth. Diaz* pursu'd the discovery of the coast of *Africa* beyond the Line, sailing to the very south point of that coast, which he call'd *Cabo Tormentoso*, the *Troublesome Cape*. But at his rerurn, the King being inform'd of it, and hoping by it to reach the *East-Indies*, changed its name to *Buena Esperanza*, the Cape of *Good Hope*; under which name it is famous at at this day. 'Tis in the southern latit. of 35 deg.

Emanuel King of *Portugal* being flush'd with this last discovery, fitted out three ships, and a Tender, under the command of *Vasco de Gama*, a bold, daring Captain, in order to find a passage to the *East-Indies*, where never *European* had been before, except by a land journey thro' *msia* or *Africa*. With him went his brother *Paul*, and the two *Nunez's*. After a voyage of five months, they came to the bay of *St. Helena*, an island in the *Ethiopick* ocean, in 15 deg. s. latit. about 300 leagues westward of the *African* coast; where they took some *Blacks*. Setting sail from *St. Helena*, (now well known, and of great use to the *East-India* traders) they made the best of their way to the cape of *Good-Hope*, so lately discovered; having doubled which, they arrived at the bay of *St. Blas*, in an easterly course, about 60 leagues from the *Cape*; and from thence, upon *Christmas-Day*, they arrived, in a *North-east* course, (as the coast lies) to a more distant country of *Africa*; which, out of regard to the day, they call'd *Terra de Natal*, the *Birth-Day Land*, in 30 deg. and discovering a river on *Twelfth-day*, they call'd it *De los Reys*, or the *River of the Kings*.

Proceeding farther along that coast, they passed 50 leagues beyond *Zofalo*, without seeing it; where they went some way up a river, to which *Gama* gave the name of *Bonos Synays*, *Good Tokens*; because he there found boats, with sails made of Palm-tree leaves, and met with people who understood the *Arabic*, and told him, that farther to the *East* there were ships like those of *Portugal*. So that pursuing his course, still north-east, he came to the island of *St. George*, opposite to *Mozambeque*, and then to the city of *Mozambeque*, in 14 deg. s. latit. From thence he sail'd to *Quiloa*, and *Monbaza*; the one in 9, and the other in 4 deg. s. latit. Holding on his voyage, he arriv'd at *Melinda*, within one deg. of the Line; and there made peace between that Kingdom and *Portugal*. Then, ta-

king a *Guzarat* Pilot on board, he ſet ſail for *India*, and arrived at *Calicut*, the chief city of the kingdom of *Malabar*, in that tract of ground which the ancients called *India within the river Ganges*, upon the weſt coaſt of *India*, over againſt *Arabia Fœlix*; having in this voyage diſcovered about 1200 leagues in a ſtrait line, more than ever was known before; but, if you allow for the windings of the coaſt, a great deal more.

In his return home, he fell in with the *Anchediva* iſlands; ſo called in the *Indian* language from their number, *five*. From thence he croſs'd over to the *African* coaſt, (having ſeen *Goa* at a diſtance) and anchor'd at *Magadoxa*, in 3 deg. n. latit. and croſſing the Line for the third time during this voyage, he came to *Melinda*, where he was received with much kindneſs by the King. But as he was leaving that place, one of his ſhips, the *St. Raphael*, was driven a-ſhore upon the ſands, and loſt; the men being taken into the other two; the Tender he had burnt, as an incumbrance, before he went to *India*. Thus, in two years, he performed this expedition, which had been ſo often attempted with ſmall ſucceſs before.

In the year 1500, the King of *Portugal* equipp'd thirteen ſail for the ſame ſervice, under the command of admiral *Alvarez Cabral*. This fleet, having been put out of their courſe by a tedious ſtorm, (which kept them ſtill to the weſtward,) upon *Eaſter-Eve*, they came to a ſafe bay: This land happened to be a part of the ſouth continent of *America*, never till then heard of by any inhabitant of *Europe*. For the joy of finding themſelves ſafe after their paſt toil, they nam'd the place *Puerto Seguro*, the *Safe Haven*; and the country *Santa Cruz*, or *Holy Croſs*.

Having ſtaid ſome time here, the admiral ſent a ſhip home, to give an account of the accidental diſcovery of this new land, and ſeting ſail for the cape of *Good-Hope*, arriv'd with only ſix ſhips at *Zofala*, (four having founder'd at ſea, and two more being ſeparated from the fleet;) from this place he held on his courſe to *Mozambeque*, where he ſtop'd to careen; and then ſail'd to *Quiloa*, and *Melinda*; and ſo took the neareſt ſtretch over to *India*, and arriv'd at the *Anchedivian* iſlands upon the 24th of *Auguſt*; and then at *Calicut*, on the *Malabar* coaſt. Here he enter'd into a treaty with the King of that country, which, tho' it was concluded, was but of ſhort duration: but he made a ſtrict amity with the Kings of *Cananor* and *Cochin*, and having laded his ſhips, return'd to *Portugal*.

The next year, *John de Nova*, being ſent upon the ſame deſign, with four ſhips, arriv'd at the iſland of the *Conception*, on the *Eaſt* coaſt of *Africa*, in about 8 deg. ſouth latit. Holding on his Courſe to *Cananar* and *Cochin*, he deſtroy'd all the ſhips he found belonging to *Calicut*; and having laded at the two former places, ſet ſail for *Europe*, and touched at *St. Helena* in his way home.

In 1503, the two *Albuquerques*, and *Saldana*, ſet out with three ſhips each, for *India*. The *Albequerques* arriving at *Cochin*, built a fort there, with the *Indian* King's conſent; and in the mean time they took ſeveral ſhips, and burnt ſome towns in the territories of *Calicut*; and being richly laden, ſet ſail for *Portugal*, where *Alonzo Albuquerque* arrived ſafely; but *Franceſco*, and his three ſhips, were never heard of. *Saldana* ſtopp'd at *Monbaza*, near the Line, and forc'd that King to accept of peace with *Portugal*, and then kept on his courſe to the *Red Sea*, at the mouth of which his orders were to cruiſe.

The year following, *Lope Soarez* was ſent with a fleet of 13 ſail, who made no new diſcovery; but only concluded a peace with *Zamira*, and then return'd, richly laden.

In 1505, Don *Franceſco d'Almeyda* went in quality of *Vice-Roy*, to the *Eaſt-Indies*, with 22 ſhips, and 1500 men. Having paſſed the cape of *Good-Hope*, and ſail'd to 8 deg. ſ. latit. on the coaſt of *Africa*, he attacked *Quiloa*, took it, and built a fort there; and the peace between the King of *Monbaza* and the *Portugueſe*, being broken, he burnt the capital city, of the ſame name: and, proceeding in his voyage to *India*; built a fort at *Anchediva*, and another at *Cananor*, on the coaſt of *Malabar*.

In the year 1506, *Fernandez Pereyra*, diſcovered the iſland *Socatara*, near the entry to the *Red Sea*; which having made known at his arrival at *Lisbon*, the King ſent *Alonzo d'Albuquerque*, and *Triſtan de Cunha*, with 13 ſail; the firſt of which was to guard the trading ſhips, and the other to cruiſe upon the coaſt of *Arabia*. In this expedition, *Madagaſcar* was diſcover'd, a large iſland upon the eaſt ſide of the *African* coaſt, between 11 and 35 degrees ſouth latitude, ſince that time very famous. The fleet purſuing their courſe, arrived at *Socatara*, of which the *Portugueſe* made themſelves maſters, and ſoon after parted, accordiug to order; *Albuquerque* ſtaying upon the coaſt of *Arabia*, and *de Cunha* ſailing to *India*.

Socatara *diſcover'd.*

Mada-gaſcar.

Albuquerque having taken ſome towns on the *Arabian* coaſt, ſet ſail for *Ormuz*, being the firſt *European* who had gone ſo far. This is a city in the iſland *Gerum*, near the mouth of the *Perſian Gulf*: The whole iſland is famous for nothing but abun-

Ormuz.

abundance of salt and sulphur. After this discovery, *Albuquerque* likewise sail'd to *India*, and served under the *Vice-Roy Almeyda* for some years; and at last, in 1510, he was made governor of all the *Portuguese* conquests in the *East*. There he settled trade and commerce with the severel nations, built forts, and erected factories, along the whole coast of *Africa*, *Arabia*, *Persia*, *Guzarat*, *Camboia*, *Decan*, *Canaria*, and *Malabar*.

This same year, 1510, *Lopes de Sequiera*, having doubled the cape of *Good-Hope*, and leaving the coast of *Africa* near the Line, sail'd east-ward, passed by *Sumatra*, an island which crosses the Line,
Malacca. and arrived at *Malacca*, a city in the ancient *Aurea Chersonesus*, in 3 deg. n. lat. northeast of *Sumatra*. Here the *Moors* conspir'd to murder *Sequeira*, at an entertainment to which they invited him; but being disappointed by some accident which hinder'd his coming, they fell upon 30 of his men, who had come a-shore; and at the same time, attacked his ships: eight of his people were killed, and 60 made prisoners; but he got his ships clear of them, and left the coast.

In the mean time, *Albuquerque* took
Goa. *Goa*, on the coast of *Malabar*, but it was soon retaken; and a year after, it being a second time recovered by him, became the residence of their Vice-Roy, the metropolis of all their dominions in *Asia*, and an archbishoprick. After this success at *Goa*, *Albuquerque* sail'd to *Malacca*: in this voyage he took five ships, in one of which he found one *Nichoada Beeguea*, of whom they tell a ridiculous story of an enchanted *Bracelet* of bone, which hinder'd him from bleeding, tho' mortally wounded, till it was taken from his arm, and then he bled to death. This story might have pass'd at that time of day; but this age will hardly believe miracles, better vouch'd than this. However, *Albuquerque* arriving at *Malacca*, got the *Portuguese* prisoners deliver'd to him, and soon after took the city, and banish'd all the *Moors* out of it; and then return'd to *Arabia*, and a few years after he sailed up the *Red Sea*.

In 1513, *Soarez d'Albergoria*, with 7
Ceylan. gallies, two large ships, and 8 small ones, sailed to *Ceylan*, an island south-east of *India*, within the *Ganges*, from 6 to 10 deg. n. latit. where he built a fort; and afterwards the *Portuguese* became masters of all the Ports of this island, which was of great use to them, for the riches of it.

Maldivian Islands. The *Maldivian* islands, very numerous, lying on both sides of the Line, were found out about this time; but being of no great consequence, there is no occasion to insist upon the discovery of them. *John de Silveria*, who made the discovery, soon after sailed to *Bengala*, Bengala. upon the river *Ganges*, on the east side of the *India* last mentioned, in 20 deg. n. lat. on the south part of the *Mogul*'s country, and north-west from *Astracan*.

About four years after, *Perez d'Andrade*, going into those seas, without troubling himself with any places discovered before, sailing between *Malacca* and *Sumatra*, proceeded to the coast of *Camboia*, thence to *Ciampa*, and so to Camboia, Ciampa. *Patena*; all upon the eastern coast of *India* without the *Ganges*: in the last of Patena. which places he made peace with its governor, and return'd to careen at *Malacca*; which done, he took the course of *Quantung*, on the south coast of *China*, where Quantung. he settled a commerce. But the next *Portuguese* growing insolent, their ships were attack'd by the *Chinese* fleet, and were glad to get off: and their ambassador, whom *d'Andrade* had sent to *Pekin*, was, by the Emperor of *China*'s order, sent back to *Quantung*, where he was put to death. Yet, some years after, they had leave to build *Macao*, on a little Mocao built. island opposite to *Quantung*, in dependance on the *Chinese* Emperor.

James Lopez de Sequiera, being made governor of *India*, sailed to the *Red Sea*, Red Sea. in 1520, with a fleet of 24 sail; having no board (half *Portuguese*, and half *Malabars* and *Canarines*) about 3600 men; and arriving at *Mezua*, an island in that sea, Mezua. he found no inhabitants, they having fled to *Arquico*, a port on the *Ethiopian* side, which was now, for the first time, discover'd at sea.

This place, together with an extent of coast of the *Red Sea*, above 120 leagues, belong'd at that time to the *Ethiopean* Emperor, (commonly called *Prester John*) whose dominions were then of a vast bulk; but most of the coast of this sea has since been taken by the *Turks*.

In 1521, *Ant. de Brito* sailed from *Malacca*, cros the Line, south-east, to the islands now called the small islands of *Molucca*, which are five; *viz. Ternate*, Molucca Islands. *Tidor*, *Machian*, *Moter*, and *Bachian*: the large ones *Celebes*, *Gilolo*, *Terra Papous*, and *Ceram*, not being then discovered. There was afterwards great contention between the *Portuguese* and *Dutch*, for these *Molucca* islands, till the *Dutch* got possession, who keep them at this day.

For some time after this, there was no new attempt made, till the year 1540, when a private pique occasion'd greater discoveries east-ward, than ever had been made before. It happened thus:

Peter de Faria, governor of *Malacca*, dispatch'd a relation of his own name, *Antony de Faria y Sousa*, to *Patena*, to secure the peace already made with the

King

King of that country. *Antony* carried goods with him to the value of 1200 ducats; but finding no vent for them at *Patena*, he sent *Borallo* with them to *Lugor*, in the kingdom of *Siam*, to the north of *Malacca*, on the east coast, about 12 deg. n. latit. *Borallo* being at anchor in that river, was surpriz'd by a *Guzarat* pyrate, *Coje Hazem*. *Borallo* sav'd himself by swimming a-shore, and making the best of his way to *Patena*, gave *Antony de Faria* an account of his misfortune; who vowing revenge, fitted out a small ship, with 50 men, and sailed towards *Ciampa*, to the east-ward, in search of the pyrate. A little east of *Siam* bay, is the island of *Pulo Candor*, and north from that, the kingdom of *Camboia*, whither he directed his course; and coasting along, arrived at the mouth of the river *Toobasoy*, where he took two of the pyrate *Simalau*'s ships, and burnt others. This booty was rich, and the ships being of force, was a great addition to him. Holding on his course, he came to *Varola*, where the *Siam* and *Molucca* Merchants barter their goods for gold, calomba wood, and ivory; and from thence pass'd in sight of *Champilou*, to the entry of the bay of *Cochinchina*, in 13 deg. and spying a ship in a river west of the cape *Pulocampas*; and believing it might be *Coje Hazem*, he attack'd and carry'd it: it belong'd to another pyrate, *Quiay Tayjam*. This prize was valued at 60000 crowns, there being on board 70000 quintils of pepper, besides other goods, with some pieces of cannon, and some plate. After this, coasting along the island *Ainan*, about 18 deg. n. latitude. on the south coast of *China*, he was attacked in the mouth of the river *Tanaquir*, by two large vessels, but took them both, and burnt one of them for want of hands to man her. At cape *Tilaur*, he took four small ships; and, going to *Mutipinam*, sold all his prizes for 200000 crowns, in silver bullion. In the port of *Madel*, in the island of *Ainan*, he defeated the pyrate *Himilan*, and used the same cruelty towards him, as he had exercis'd on Christians. From thence he cruis'd along the coast, and discovered many unknown places.

Pulo Candor.

Varola.

Faria's men becoming weary of chasing the pyrate, press'd to have a dividend of the spoil, which he agreed to; and bending his course back towards *Siam*, where the division was to be made, being attacked by a furious storm, they were all cast away upon the *Thieves Island*, *De las Ladrones*.

But surely there must be some mistake as to the place of this ship-wreck: for the *Ladron* islands are above 1300 miles east-ward of *Ainan*. One would therefore conjecture, that they must have been cast away upon some of the little islands lying to the north-east of *Formosa*. However this be, by this misfortune, he sav'd but 86 men out of 500. They staid 15 days in the island, with little or nothing to sustain them; and, when they were reduced to the last extremity; by good fortune, they perceived a small vessel anchor near the shore; from which about 30 men came to the island for wood and water. The *Portugueſe*, to the number of 28, having concerted matters beforehand, possessed themselves of the boat, and by that means surpriz'd the ship, which belonged to the *Chineſe*, and set sail for *Liampo*, the most eastern cape of all the continent of *China*. In this course they met with a friendly *Chineſe* pyrate, who had 30 *Portugueſe* on board, and so came to the river *Anay*, where they refitted, and held their course to *Chincheo*; and there *Faria* hir'd 35 *Portugueſe*, and sailing from thence, took in eight more, whom he found naked in a boat, their ship having been taken from them by the very pyrate of whom he had been in search. *Faria*, glad of this intelligence, went in pursuit of him, having now got four ships, and 500 men, of which 95 were *Portugueſe*. He found him at last, in the river *Tinlau*, where engaging him, he slew *Hazem*, and 400 of his men; taking all his ships, except one richly laden, which sunk: but the night after, *Faria*'s own ship, and another, were cast away; and the ships which weather'd the storm, were forc'd to throw over-board most of their goods. Here he lost 111 men, but escap'd himself, by getting on board another ship: and, taking a rich prize, he wintered at *Liampo*, built by the *Portugueſe*, in the province of *Chequiang*, in *China*.

Liampo.

Having staid there five months, he set out for the island of *Catempluy*, with design to rob the monuments of the old *Chineſe* Kings, said to have been buried there; and, after many days sail, thro' unknown seas, he arrived at *Nankin*, in 32 deg. n. latit. upon the east coast of *China*; but finding 3000 sail at anchor near that place, he did not stop; but some *Chineſe* he had on board, having been ill treated, deserted him. However, he pursu'd his voyage, and came to the island, which was not far from *Nankin*: the old Keepers having given the alarm, he was oblig'd to go to sea; and, in a month's time, was cast away; and all his people, but 14, were lost. *Liampo* was soon after demolish'd by the governor of *Chequiang*, for the robberies committed by the *Portugueſe*. Thus ended *Faria*'s expedition; which, tho' it was nothing but Pyracy, discover'd many places unknown

Catempluy.

Nankin.

known to the *Europeans* before, and of great advantage ſince their diſcovery.

In the year 1542, *De Mota*, *Zeimoto*, and *Peixoto*, ſailed for *China*; and being driven off the coaſt by a ſtorm, fell Japan. in with the iſlands of *Japan*, or *Gipon*, as the *Chineſe* call them. Theſe lie eaſt of *China*, between 30 and 40 deg. n. lat. In the chief of theſe iſlands, call'd *Nifongi*, now *Japan*, the Emperor has his reſidence, at the city *Meaco*. Here the *Portugueſe* were kindly receiv'd, being the firſt *Europeans* who went thither, and that by chance.

Thus the *Portugueſe* were the firſt diſcoverers, not only of the coaſt of *Afric*, but likewiſe of all thoſe places in *Aſia*, to which the trade, before this century, was only carried on by land to *Europe*, at a vaſt expence, and with great trouble as well as danger.

We think it needleſs, in this Summary, to give any account of the diſcoveries of places in this part of the world, made by the *Engliſh*, *French*, and *Dutch*; becauſe the *Portugueſe*, as they had all the trouble, ought in juſtice, to have all the honour of having ſhew'd to *Europe* the way to the riches and trade of the *Eaſt-Indies*; for under that name is generally comprehended all the diſcoveries we have yet mentioned.

And indeed, conſidering the vaſt tract of ſea they travell'd thro', and the immenſe compaſs of coaſt they diſcover'd, from the year 1417, to the year 1521, almoſt in 100 years; when there was not the leaſt veſtige of any one place to point out their way, but what they traced out with much hazard, and *Roman* conſtany; it may truly be ſaid, that any one who ſhall be ſo unjuſt as to leſſen their glory in attempting and atchieving the diſcoveries of the *Eaſtern* world, as far as *Japan*, by a road unknown to *Europe* before they ſhew'd it, ought to be anſwer'd, as they ſay *Columbus* did thoſe who ſlighted his diſcovering *America*, as a thing of no difficulty: for after he had ask'd them, if they could make an Egg ſtand upon its ſmall end, and they could not; he broke the end of it, and ſet it upright; which they eaſily did, after he had taught them.

Of what conſequence thoſe diſcoveries have been to *Europe*, appears by the vaſt traffick, which moſt trading nations have carried on, to the ſeveral ports in the *Eaſt*, for above a century paſt; and how laborious and difficult a matter it was, will, in ſome meaſure, be evident from a general ſurvey of the prodigious number of leagues they ſailed in one of theſe voyages; ſuppoſing them to have proceeded in a ſtrait line to the great Capes, (where there was a neceſſity of altering their courſe) without ſtopping at any places upon the ſeveral coaſts, in their route to the country they intended to viſit. For,

Extent of the Portugueſe Diſcoveries.

From cape *Non*, in 28 deg. n. litit. in a ſtrait line, to the cape of *Good-Hope*, which lies in 35 deg. ſ. latit. allowing 60 miles to a degree, it makes 3780 miles. But if we take the courſe the firſt diſcoverers were obliged to hold, in order to make the *African* coaſt, without making allowance for doubling ſmall capes, (which yet they muſt have done) it will augment the number not a little: for, ſuppoſing them to have ſailed directly ſouth from cape *Non*, till they came to the latitude of 7 degrees; that makes 1200 miles: then, changing their courſe eaſtward, as the coaſt lies, makes 1200 more: and from thence ſouth-ward again, to the cape of *Good-Hope*, is 38 degrees, or 2280: which, in all, makes 4680 miles. Thus we have above 1560 leagues of new coaſt diſcovered; and in that tract, the farther *Lybia*, the country of *Blacks*, *Guinea*, *Benin*, *Congo*, *Angola*, and the weſt coaſt of the *Cafres*; in all which places, on the weſt coaſt of *Africa*, the natives are inclining to black.

The commodities brought from thence are, Gold-Duſt, Ivory, and Slaves: for the *Blacks* make no bones of ſelling one another, which has been of great uſe to all the *American* plantations. The country of the *Cafres*, towards the cape of *Good-Hope*, abounds in cattle, which the firſt traders uſed to buy for toys, ſuch as Knives, Looking glaſſes, and Bells. The *Portugueſe* have the greateſt ſhare of this coaſt under their dominion, of any *European* nation, eſpecially in *Congo* and *Angola*. The *Engliſh* and *Dutch* have ſome ſmall forts on the coaſt of *Guinea*; but the latter have a ſtrong town, with all conveniencies, at the cape of *Good-Hope*.

From this cape, to that of *Gardafu*, at the entry of the *Red Sea*, we may reckon in a ſtrait line, moderately ſpeaking, 3000 miles: from *Gardafu* to the *Red Sea*, 300; and to the head of the *Red Sea*, north-weſt, 1200 miles; in all 4500: but more, if we allow for the windings of the coaſt. This contains, as far as *Gardafu*, the eaſt *Cafres*, and *Zanguebar*, with all its ſub-diviſions, (viz. *Mozambeque*, *Pemba*, *Quiloa*, *Monbaza*, *Melinde*, *Magadoxa*, and *Adel*. All this eaſtern coaſt of *Africk*, is now in the hands of the *Moors*, except *Mozambeque*, which is ſtill poſſeſs'd by the *Portugueſe*; *Monbaza* having been recover'd by the natives of late years. The product of this country is much the ſame with that of the weſtern coaſt, *viz.* Gold, Ivory, and Slaves.

The *Red Sea* includes *Aben* and *Egypt*, towards the weſt; and on the eaſtern coaſt the two *Arabia's*; that which is called Stony, and the Deſert *Arabia*; which are all in the *Turk*'s poſſeſſion, and not now frequented by any *European* nation.

From the *Red Sea* to the *Perſian* Gulph, along the ſouth coaſt of *Arabia* the Happy, to cape *Reſalgate*, at the entry of the bay of *Ormuz*, are about 1200 miles, partly ſubject to the *Turks*, and partly to ſome *Arabian* Princes. The commodities of this country are, Coral, Pearls, Onyx-ſtone, Balm, Myrrh, Incenſe, Gums, Caſſia, with other Spices and Drugs.

Turning the cape *Reſalgate*, in a courſe north-weſt, thro' the bay of *Ormuz*, you enter the *Perſian* Gulph, paſſing by *Maſcate*, once poſſeſſed by the *Portugueſe*, but now by the *Arabs*. This coaſt comprehends, including the Gulph itſelf, about 600 miles. At the entrance of this Gulph is the city of *Ormuz*, long poſſeſſed by the *Portugueſe*, who were at laſt driven out by the *Perſians*, with the aſſiſtance of the *Engliſh*. Within the *Perſian* Gulph is the iſland *Baharim*, where was a great pearl fiſhery.

From the mouth of the Gulph, to the *India* within the *Ganges*, along the coaſt of *Perſia*, are above 900 miles. All that country, under the dominion of the *Sophi*, abounds in raw and wrought Silk, Carpets, Cottons, Rhubarb, and Wormwood.

From the mouth of the *Indus*, to cape *Comori*, the very ſouthmoſt promontary of this *India*, may be reckoned, including the bays of *Guzarat*, *Camboia*, *Decan*, *Canara*, and *Malabar*, 1200 miles. *Guzarat*, *Camboia*, and part of *Decan*, are ſubject to the Great *Mogul*; the reſt are under *Indian* princes; yet the *Portugueſe* have forts in the firſt two, and the great city *Goa* in *Decan*, with ſome ſmaller forts in other places: the *Engliſh* have the iſland of *Bombay*, and the *Dutch* ſome forts.

From cape *Comori* to the head of the bay of *Bengal*, in a north-eaſt courſe, is about 1200 miles; and from thence, in a ſouth-eaſt run down to *Malacca*, the ſouthmoſt point of the *Aurea Cherſoneſe*, or *India beyond the Ganges*, are, at leaſt, 1200 more. Theſe two coaſts contain *Coromandel*, *Biſnagar*, *Golconda*, *Orixa*, *Bengala*, *Aracan*, *Pegu*, *Martaban*, and *Malacca*.

From *Malacca* to the ſouth point of *Japan*, allowing for the bays of *Siam* and *Cochinchina*, make 3700 miles, including in this tract of coaſt the eaſt ſide of *Aurea Cherſoneſe*, the Kingdoms of *Siam*, *Camboia*, *Chiampia*, and *Cochinchina*, together with the vaſt Empire of *China*. All which, from *Perſia* eaſtward, are commonly, tho' improperly, called by the general name of the *Eaſt Indies*.

The Produce of this vaſt extent of land, as far as relates to trade, is, Diamonds, Silk, and Cotton, wrought, and unwrought, ſweet and rich Woods, Gums, Drugs, and Dyes, fine Plants, and rich Perfumes, beſides the Spices got from the ſeveral iſlands. So that it appears by this computation, that in little more than a hundred years, the *Portugueſe* alone diſcovered about 18000 miles of coaſt; and conſequently the countries included in that coaſt, unknown to *Europe* before.

The Iſlands.

As to the iſlands diſcovered by the voyages from *Lisbon*, upon the *Aſian* coaſt, both the number and value of them are very conſiderable. The *Maldivia* iſlands, of which we have already given the ſituation, are the firſt in courſe; but, tho' they are very fruitful, yet there is little trade with them from *Europe*: So that they are more remarkable for their number, than for any uſe we make of them.

The next to theſe is the iſland of *Ceylan*, a place of great trade, which ſupplies all *Europe* with the beſt Cinnamon in the world. Here alſo are found the fineſt Rubies, and other precious ſtones: and the Elephants of this iſland are ſo eſteem'd, that the eaſtern princes, who have herds of thoſe aninals in their own dominions, give great prices for thoſe of *Ceylan*. Moſt of the coaſt of this iſland was ſubdu'd by the *Portugueſe*, till they were diſpoſſeſs'd by the *Dutch*, who ſtill keep them; tho' they could never make themſelves maſters of the iſland. The Air is very temperate in *Ceylan*, notwithſtanding its nearneſs to the Line; inſomuch, that the *Indians* call it *Temariſin*, or, *The land of pleaſure*.

Gord. *Geogr. Gramm.* p. 300.

Sunda Iſlands.

The *Sunda* iſlands are the next of any account in this courſe, viz. *Sumatra*, *Borneo*, and *Java*; which take this name from the ſtreights between the firſt and laſt, called the *Sund*, or *Sound*. *Sumatra* is about 900 miles long, and 90 broad in the ſouth part: the equinoxial Line paſſing through the middle, makes it extremely hot; as is alſo *Borneo*, for the ſame reaſon: but *Sumatra* is reckon'd unwholeſome, from the multitude of Lakes which it contains. *Borneo* is as long as *Sumatra*, and about 600 broad. *Java* is 600 long, and 120 broad. The ſoil of theſe iſlands is fruitful, and they abound with all ſorts of ſpices. Their chief produce for trade, are Gold, Spices of different kinds, Wax, Honey, Silks, Cottons, procious-ſtones, and fine Braſs. There are ſeveral other leſſer iſlands near theſe,

Ibid. p. 298.

these, such as *Celebas*, *Gilolo*, &c. all which are places of great trade; not only from *Europe*, but from *India*. The *Dutch* have several forts in *Sumatra*; but their chief metropolis is at *Java*, where they have built the great city of *Batavia*, the residence of their *East-India* Stadtholder. The *English* had a considerable trade and factory at *Bantam*, in the same island, but let the *Dutch* turn them out of both, in 1682.

Not far distant from the *Sunda*, are the *Molucca* islands, towards the east: they are five in number, as we observ'd at their discovery. The trade of these islands are much the same with the others; only that the greatest quantity of Cloves is found here. From these islands the *Dutch* expell'd the *Portuguese*, as they did the *English* from *Amboyna*, very near, if not one of the *Molucca's*, by a barbarity never to be forgotten by any but the generous *English* nation: the story is so well known that I need not repeat it. That industrious Republick have likewise got possession of *Banda*, a large island contiguous to those of *Molucca*; whence they drive a *fine* trade for Maces and Nutmegs, which grow in great plenty in those islands.

The *Philippine* islands are not far from the *Molucca*, to the north: but they not being discover'd till some time after; and and then only by the *American* voyagers, we shall take notice of them in another place.

Of the island of *Japan*, we shall have occasion to treat largely hereafter; and therefore shall not detain the reader with any account of it in this place; what has been said, being sufficient to shew what a vast progress in navigation the *Portugueſe* made, almost before any other nation of *Europe* thought of finding out unknown coasts.

Having thus given a succinct account of the first discoveries of the *African* and *Asian* coasts; leaving the more particular accounts of those parts to their proper places, we shall proceed to the discovery of AMERICA.

CHAP. I.

CHRISTOPHER COLUMBUS's *Discoveries in the* West-Indies.

SECT. I.

His first VOYAGE, *in search of unknown Land.*

TOWARDS the end of the xvth Century, *Christopher Columbus*, a native of the Republick of *Genoa*, of a good family, having been from his youth bred to navigation, and traded several years in the *Levant*, and from thence into *Syria*, and other parts of *Asia*, gave himself to the composing of sea charts of all the coasts, at that time known by the *Mediterranean* seamen. But hearing that the *Portuguese* had lately made considerable discoveries upon the western coast of *Africk*, he went to *Lisbon*, not only to correct his charts, but to enlarge and improve them. Having a competent knowledge in mathematicks, and a head turn'd for navigation, he made it his business to inform himself at *Lisbon*; where he was marry'd and settled, of all that was necessary to be known with regard to the discoveries already made; and likewise gave his thoughts a loose towards new ones.

It has been reported, that the rise of his design upon the *Western* voyage, was occasion'd by a certain pilot's lodging in his house; who having been, by stress of weather, driven off the *African* course, first found out the land of *America*; of which having given *Columbus* a distinct account, he could not rest till he had try'd the experiment. Whether this was true, (nor would it be any disgrace to *Columbus* if it were;) or whether the *Spaniards* or *Portuguese* gave it out afterwards, thereby to lessen the merit of this *Italian*, does not appear: but it seems to have been a fiction, because it looks a little odd, that the pilot should never make this secret known to any body else; nay, that his name should not have been transmitted to posterity. However it be, *Columbus*, finding by the discoveries made towards the south and east, far beyond the equinoxial Line, that the notion the ancients had entertain'd, that there was no living in the Torrid Zone, was an error; and concluding, by his knowledge of cosmography, that, in all probability, there must be a great tract of earth to the west-ward of *Spain*; and that by the very figure of the earth, which by

Eclipses

Eclipſes he knew to be a globe, it was not to be imagin'd, that the ſun, when ſet in our horizon, gave light to no body, reſolved to make an attempt to diſcover what land was towards the weſt-ward: but not being in circumſtances to carry on a project of that kind at his own charge, he, like a good Patriot, firſt offer'd his ſervice to the *Genoeſe*, his countrymen; which being ſlighted by them, he propos'd it to the King of *Portugal:* but whether that court thought they had land enough upon their hands in the new eaſtern diſcoveries; or look'd upon *Columbus*'s project as an idle dream, he found no encouragement from thence. This did not make him give up his deſign; in which he was ſtill more confirm'd by ſeveral ſeamen; eſpecially one *Vincent*, who told him, that having been carried about 450 leagues to the weſtward of cape *St. Vincent*, they had found pieces of wood, carv'd with art, but not, in all appearance, with any inſtrument made of iron; and ſome told him of having ſeen land on the weſt part of the ocean. He therefore ſent his brother to *England*, to offer his ſervice to King *Henry* VII. But he bringing no return, having been taken by pyrates, in his voyage thither, *Columbus* left *Portugal*, and went into *Spain*.

This happen'd in the time of the famous war, and ſiege of *Granada*, carried on againſt the *Moors* of that country by *Ferdinand* and *Iſabella*, who had united the kingdoms of *Caſtile* and *Arragon:* But their treaſury was ſo exhauſted by the war, that *Columbus*'s repreſentation met with as little encouragement from them, as it had done from other princes. This prov'd a great mortification to him; but he too intent on his deſign to leave any probable means untry'd; and at laſt getting himſelf well recommended by a friar, to the Queen's confeſſor, and being ſeconded by *Mendoza*, the cardinal archbiſhop of *Toledo*, he was admitted to an audience of their catholick Majeſties; where he gain'd ſo much influence, that the Queen would have pledg'd ſome of her jewels for 2000 ducats to carry on the expedition; but *St. Angelo*, the treaſurer, lent the money, and 16000 ducats were advanced for that purpoſe: and ſo confident was he of ſucceſs, that he procur'd a commiſſion as Admiral of all the ſeas, and Vice-roy of all the countries he ſhould diſcover, and add to the *Spaniſh* dominions. This commiſſion was ſign'd by their Majeſties in the camp before *Granada*, on the 17th of *April*, 1492. He likewiſe obtain'd for himſelf and his heirs, the tythe of all that ſhould be brought from the countries to be diſcovered; and that he might be an eighth part of all fleets that ſhould afterwards ſail thither.

Purch. Pilg. B. 2. p. 10.

Columbus having thus obtain'd the ſummit of his wiſhes, ſet ſail in *September*, 1492, on board a deck ſhip, attended by two ſmaller veſſels, called *Caravels*, commanded by the two *Pinſon's*; their whole force conſiſting of 90 men, tho' ſome ſay 200. He firſt bent his courſe towards the *Canary* iſlands, known before to the *Spaniards*, and now in their poſſeſſion; *Betancourt*'s ſon having ſold his property in his father's conqueſts to them. Here *Columbus* water'd, and ſtaid ſome days; and then put to ſea in a courſe directly weſt, continuing that courſe 33 days.

Columbus *ſets out.*

See Peter Martyr's Decads, *tranſlated by* Eden.

Upon the 18th day after his departure from the *Canaries*, he obſerv'd the needle of his compaſs decline from the north pole, two points towards the weſt. Some days after this, they obſerv'd weeds ſcatter'd over the ſurface of the ſea, as if they had been newly torn off ſome land, which gave them great hopes; but when they had ſailed many days after that, without ſeeing land, his men began to murmur, at firſt, and then mutiny; ſaying, openly, that this *Italian* had, by his Chymera, brought them from their own country, to purſue an impracticable deſign: at laſt they threaten'd to throw him over-board, unleſs he would return homeward.

Variation of the Compaſs.

The Admiral ſometimes gave them good words, bidding them take courage, for that, in a few days, he would ſhew them a country, whoſe riches would amply reward their labour; but when that did not avail, he repreſented to them the danger of being proſecuted for high treaſon, in diſobeying the king their maſter's commiſſion. Thus, by promiſes and threatnings, he made them ſilent, tho' not content.

Having held this courſe about 24 days, he and his pilot compared notes, as to the leagues they had ſail'd from *Ferro*, the moſt weſtern iſland of the *Canaries*: the pilot's reckoning was 581; and tho' *Columbus*'s was 707, he gave out only 584. And two days after, the other two pilot's gave theirs, one of which was 634, the other 650. When the *Spaniards* began again to mutiny, they were a little appeas'd by ſeeing great flocks of birds flying round them, eſpecially ſparrows: ſoon after they found a branch of thorn with the berries upon it, floating on the water, and other ſigns of their being near ſome land; and having ſounded, they found ground, and the wind became more variable than they had perceiv'd it during the whole voyage.

Upon theſe ſigns, the Admiral order'd to ſlacken their courſe, leſt, in the dark, they ſhould run foul of ſome land; and, about

about 10 a-clock, he ſaw light at a diſtance, which he ſhewed to his men, to their great joy: and early in the morning the *Pinta*, one of the caravals, which was fartheſt a-head, gave the ſignal of land; which at clear day they plainly ſaw. It was one of the *Bahama* iſlands, about 15 leagues long, in the n. latit. of 15 deg.

St. Salvadore *diſcover'd.*

Thus, in 33 days, *Columbus* ſailed from the *Canaries* to this new diſcover'd iſland; and going aſhore, took poſſeſſion of it in the name of their catholick Majeſties, and call'd it *St. Salvadore*: its ancient name being *Guanahani*. The inhabitants were amaz'd at the ſight of the *Spaniſh* ſhips; but the *Spaniards* making ſigns to them, they ventur'd to ſtay: they were all naked, both men and women; being of a middle ſtature, well ſhap'd, and of tolerable good features: their ſhort hair was ty'd with a cotton ſtring, and their bodies painted of different colours; with little plates of gold hanging at their ears and noſes. The Admiral gave them ſome trifles, ſuch as red caps, glaſs beads, and bells; which they were ſo pleas'd with, that when the *Spaniards* went aboard, they followed them, ſome in Cano's (ſo they call their boats) and others ſwiming. *Columbus* asking them, by ſigns, whence they had the Gold they wore, they pointed to the ſouth; on which he reſolv'd to attempt farther diſcoveries that way: and, taking ſeven of the natives along with him, to ſerve for interpreters (as ſoon as they were taught *Spaniſh*) after a few days ſtay at *St. Salvadore*, he ſailed to another iſland, which he called the iſland of the *Conception*; probably, from their having there celebrated the feaſt of the Bleſſed Virgin's Conception, *December* 8. From thence he touch'd at another, which he called *Fernandino*; and a fourth, to which he gave the name of *Iſabella*.

But finding nothing in thoſe ſmall iſlands to anſwer his expectation, he ſail'd farther ſouth, and fell in with the iſland of *Cuba*, which he took for the Continent. But having ſent two men a-ſhore, and ſeeing no appearance of what he ſought for, he gave the name of *Juana* to this iſland, and coaſting it near 180 leagues, he arrived at another iſland, which he called *Hiſpaniola*, where his own ſhip ſtriking upon a hidden rock, on the north coaſt of the iſland, he and his crew were taken on board the caraval.

Cuba.

Hiſpaniola.

On *Columbus*'s landing here, the natives fled from him; but taking one of their women, treating her well, and ſetting her aſhore, ſhe brought numbers to traffick with him, who ſeem'd very peaceable; and finding there were Gold-mines in the iſland, he reſolv'd to build a Fort; which, by the aſſiſtance of the *Indians*, he finiſh'd in ten days, and gave it the name of the *Nativity*; perhaps from its being built at the *Chriſtmas* time. In this Fort he left 39 men, with a year's proviſions; with ſeeds to ſow, and trinkets to truck with the natives.

Sailing from thence, in *January* 1493, he ſteer'd along the coaſt eaſt-ward, and came up with the *Pinta* caravel; which had left him ſome days before, in expectation of getting Gold by themſelves. Having diſcover'd a good part of the north and eaſt coaſt of *Hiſpaniola*, and traded with the *Indians* in ſeveral places, he bent his courſe for *Europe*; but in his return met with a violent ſtorm, which very near founder'd him, and made him loſe ſight of the *Pinta*. However, after long fatigue, he arriv'd in the river of *Lisbon*; and upon the report of his arrival, the king of *Portugal* was adviſ'd to put him to death, for having made diſcoveries for the *Spaniards*: but the King ſending for him, asking him concerning his voyage, and expoſtulating with him about it, (tho' it is ſaid that *Columbus* reproach'd the King for not accepting his offer at firſt) his Majeſty treated him kindly, and gave him leave to purſue his courſe to *Spain*: ſo that on the 15th of *March*, he landed at *Patos de Moguer*, upon the river *Tinio*, in *Andaluſia*; from whence he had ſet out about ſix months before.

Dangers in his return.

The court being then at *Barcelona*, *Columbus* went thither; carrying with him his *Indians*, ſome Gold, and other things, brought from *Hiſpaniola*, and the other places he had diſcover'd. He was receiv'd with great reſpect by the King and Queen, being allow'd to ſit in their preſence; which is a high mark of favour in *Spain*. When he had given an account of his voyage, with all the material circumſtances, he begg'd to be equip'd according to the dignity of his character of Admiral and Vice-roy (now again confirm'd to him) that he might plant colonies in the new diſcover'd places; which was readily granted.

SECT. II.

COLUMBUS's *ſecond* VOYAGE *to* America.

A Fleet of 17 ſail, whereof three were large ſhips, two of a ſmaller ſize, and 12 caravels, being equipp'd at *Cadiz*, or thereabouts, by the King of *Spain*'s order, well ſtor'd with ammunition and proviſions; having on board 1200 men, and 40 horſe, and all inſtruments and ſeeds neceſſary for agriculture, with men

expert in husbandry, gardening, and all handy-crafts, *Columbus* ſet ſail on board the admiral-ſhip, the *Marigalante*, on the 15th of *September*, or as ſome ſay, the 24th; and holding the ſame courſe as the year before, arrived at the *Canaries* on *October* 1. where he ſtaid ſome days, taking in wood and water; as alſo cattle, and ſheep, with other things proper for the expedition.

P. Mart. Dec. 1. B. 1.

Sailing from the *Canaries*, he directed his courſe more towards the ſouth than he had done in his firſt voyage, and in 21 days diſcover'd land, which happen'd to be one of the *Caribee* iſlands, which he called *Dominica*, from being diſcover'd on a *Sunday:* but making no ſtay there, he ſaw ſeveral others, from whence came fragrant odours of Gums and Spices; and ſending ſome of his men a-ſhore, they ſaw no ſigns of inhabitants, nor of any other creatures, except Lizards of a great ſize. One of theſe iſlands the Admiral called by the name of his own ſhip, *Marigallant*, another *Montſerrat*, a third *Guadaloup*. This laſt, being the firſt in which they found inhabitants, during this voyage from the *Canaries*, the *Indians* whom he had taken from *Hiſpaniola* the year before, and had now on board, told him was an iſland of the *Canibils*, or Man-eaters. Here the Admiral ſent ſome of his people aſhore, well arm'd, to ſearch the iſland; wherein they found a great number of villages, ſome of twenty, ſome thirty houſes, all plac'd in a circle, with a void ſpace in the middle, like a market-place. The houſes were likewiſe round, being made of tall trees, ſet cloſe together in a circle, with their tops bent down, to join in a ſmall point, where they were ty'd with ropes of tough roots, or of cotton; and covered with leaves of date trees: they alſo tye ropes of this cotton, (which the *Spaniards* call *Algodon*, and the *Italians*, *Bombaſine*) croſs the houſe on the inſide, pretty cloſe, over which they lay matreſſes, made of the ſame, but not twiſted, in which hanging beds they ſleep. In thoſe houſes the *Spaniards* found ſeveral earthen veſſels; but, to their great horror, they diſcover'd in one pot, man's fleſh, mix'd with that of geeſe and ducks; and ſome of the ſame ſort on wooden ſpits, ready for roaſting, and faggots of men's bones, which their *Indians* told them they us'd for heading their arrows, not knowing the uſe of iron. In ſome of their villages, they have in the market-place a large hall, made after the manner of their houſes, where the people of the village come, at certain times, for exerciſe.

Caribee *Iſlands.*

Guadalupe *inhabited by* Canibals.

Their Houſes.

Their Food.

Upon the *Spaniards* landing, the inhabitants fled; ſo that they found none to contend with, or to give any farther account of the place, than what they had diſcover'd themſelves, or learn'd from their *Hiſpaniola Indians*. In this iſland they reliev'd 30 captives, who were in expectation of being eaten by thoſe Savages, as it came to their turns: they likewiſe found in it ſeveral pleaſant rivers, and, thro' the whole, great flocks of *Popinjays*, of different and beautiful colours, ſeveral of which they brought a-board. At their leaving this iſland, they broke or burnt all the boats or canoe's belonging to it.

Thirty Captives releas'd.

Columbus, being deſirous to ſee his old acquaintances at *Hiſpaniola*, weigh'd anchor from *Guadalupe* on the 10th of *November*; and, ſlighting all the ſmall iſlands he ſaw by the way, bent his courſe directly thither.

In this courſe they ſaw a large iſland towards the north-weſt, which the *Indians* on board called *Matinino*, and ſaid was inhabited only by women, who liv'd like the old *Amazons*, and had communication with the *Canibals* at one certain ſeaſon of the year only: and if any men landed at other times, they retir'd to caves, and defended themſelves from thence with their arrows. The *Spaniards* durſt not board this iſland, becauſe of wind: ſo that paſſing it, and many others of leſs note, they came to *St. Maria rotunda*, *St. Martini*, and *St. Maria antiqua*, all which names were given by them: leaving thoſe, they ſtopp'd at one larger, to take in freſh water. Here the Admiral ſent 30 men a-ſhore, who found only four dogs in the iſland: but the next day, as they were going aboard, they ſpy'd a canoe at a diſtance, making towards them, with eight men and the ſame number of women, all arm'd with bows and arrows: when they came near, they attack'd the *Spaniards* without any appearance of fear, notwithſtanding the inequality of their numbers, and hurt ſome of them with their poiſon'd arrows. One of the women ſeem'd, by the reſpect ſhew'd her by the reſt, to be one of their Queens: ſhe was attended by her ſon, a youth of a ſtrong make, and terrible aſpect. The *Spaniards*, to prevent being hurt by their poiſon'd arrows, which they ſhot at a diſtance, made what haſte they could to board them, and coming full force upon the canoe, overſet her: but the *Indians*, not at all diſconcerted by this ſhock, ſwiming round the boat, ply'd them with darts on all ſides; and at laſt, getting together upon a rock, fought whilſt their ſtrength laſted, and at laſt were taken; one having been kill'd, and the Queen's ſon ſorely wounded. They were brought on board the Admiral, without loſing one bit of their natural fierceneſs, and afterwards

A bold attempt of the Canibals.

wards carried to *Spain*. Leaving this Iſland, which they nam'd *Inſula Crucis*, they ſail'd in a weſtern courſe, through a multitude of Iſlands, which they durſt not approach for the Rocks, till they arriv'd at a large Iſland, call'd by the *Indians*, *Bariquen*; to which *Columbus* gave the name of St. *John Baptiſt*'s Iſland, and is ſince known by that of *Porto Ricco*. Several of the Captives whom they had deliver'd from the *Canibals*, ſaid they were natives of this Iſland, and that it was a fruitful Country, but much infeſted by the *Canibals* who came there, in their Canoes, a Man-hunting; and that the natives had conſtant war with them: But the Admiral making no ſtay at this place, purſued his Courſe, and arriv'd at *Hiſpaniola* on the 22d of *November*, having ſail'd above 500 leagues north-weſt from the firſt *Caribbee* Iſland he diſcover'd.

Upon his arrival at *Hiſpaniola*, he found the fort he had built the year before, demoliſh'd; nor could he hear any news of the *Spaniards* he had left there.

This was no ſmall mortification to the Admiral; but, tho' he had great ſuſpicion of *Guaccanarillus*, the King of *Xamana*, with whom he had contracted friendſhip in his former Voyage; yet ſince he had no poſitive proof of his treachery, he wiſely diſſembled his reſentment. This King, at *Columbus*'s return, pretended to be as much his friend as ever, and ſent his brother aboard the Admiral, attended only by one ſervant, to pay his compliments. He brought with him two images of gold, in the King's name, and told a ſtory of the miſcarriage of the *Spaniards*, which, by the after behaviour of thoſe *Indians*, appear'd to have been forged; nor, indeed, did they well underſtand him; for their *Indian* Interpreters, who had ſurviv'd the fatigues of the ſea, and the change of climate and air, as ſoon as they came upon the coaſt of *Hiſpaniola*, deſerted the *Spaniards*.

Peter Martyr.

Here our very ingenious author, who was, at the time he wrote this account, counſellor to the King of *Spain*, and proto-notory to the pope, and conſequently a man of reputation and figure; makes a modeſt apology for the *Indians* endeavouring to make their eſcape, from the conſideration of the natural love that all creatures have to liberty; and gives an encomium upon the life which the *Indians* led in their native ſimplicity: but I beg leave to differ from him in ſome things; for, whereas he ſeems to envy thoſe natives in their way of living, as being contented with going naked, and living without the enforcement of laws; I, for my part, can have no notion of liberty without the obligation of laws.

For, as Mankind muſt be conſider'd as a ſociety, without which, I think, the world would not be worth living in; liberty, without reſtraint of laws, in the corrupted ſtate of human nature, would only be a licence to do miſchief; and every individual muſt be an *Iſhmael*, *whoſe hand is againſt every man, and every man's hand againſt him*. As to cloaths, tho', I believe, they are only acceſſaries, and appendages of human life, and cuſtom has mad them becoming, or unbecoming; yet regard ought always to be had to decency, which I look upon to be a perfection of nature, and congenial to that modeſty which is born with us, and which nothing can get the better of, but bad cuſtoms. But, without running farther into a digreſſion of this kind, I muſt beg pardon of our author, and of the *Spaniſh* nation in general (tho' neither *Martyr*, nor *Columbus*, were of that nation, but, at this time, under their direction and influence) if I ſay, that I am afraid the ill uſage the poor *Indians* met with from the *Spaniards*, was a greater infringement of their liberty, than their being out of their native Soil. For, had the *Indians* been treated, as people in their circumſtances ought to have been (in policy, as well as chriſtianity) I can ſcarcely believe they would have left the fleet, without taking leave; eſpecially, when they fonnd they were brought back to their own country, and might, by the help of the *Spaniards*, have made a more conſiderable figure there, than, in all probability, they could have propos'd at their firſt ſetting out.

But, to return to the Admiral. After he had been ſome time at *Hiſpaniola*, he ſent to the King *Guaccanerillus* to come to him, which he did, and was civilly entertain'd; tho' ſome adviſ'd the Admiral to make him priſoner, till ſuch time as he had made a farther enquiry into the deſtruction of the garriſon he had left, but *Columbus* wiſely declin'd it. Before he was diſmiſs'd, he ſaw the *Indians* whom the *Spaniards* had reſcu'd from the *Canibals*; and fixing his Eyes upon one of the Women, to whom the *Spaniards* had given the name of *Katherine*, he had ſome Converſation with her, and ſo went aſhore. The next day the King's brother came on board, and finiſh'd the concert with *Katherine* which the King had begun; for that very night ſhe, with ſeven more of the captive Women, got privately over-board, and tho' the ſea was none of the calmeſt, attempted to ſwim to the iſland, which was three miles diſtant from the fleet; and four of them made the ſhore, with *Kathe-*

India Women make their Eſcape from Columbus.

Katherine; the other three were taken and brought back by the *Spaniards*; who having miſs'd them, purſu'd them in their boats. In this ſearch, the *Spaniards* were directed by the lights from the ſhore, which they concluded were made to guide the women in their paſſage.

300 *men ſent in ſearch of* K. Guaccanarillus.

This attempt made *Columbus* more than ſuſpect the treachery of *Guaccanarillus*; and therefore he ſent 300 men aſhore the next day, under the command of *Melchior*, in ſearch of him. This party traverſed ſeveral parts of the Iſland to no purpoſe, for the King and all his People were fled, and they found no body to give an account of them. They coaſted the Iſland in ſmall veſſels, and enter'd the mouth of ſeveral rivers. At laſt ſeeing a high houſe at a diſtance, *Melchior* march'd his men to it, and was met in the way by about 100 natives, led by a man of a ſtern aſpect; they were all arm'd with bows and arrows, or javelins, with ſharp points, harden'd in the fire. At the *Spaniards* approach, they called out that they were *Taini*, and not *Canibals*; *Taini*, in their language, ſignifying, Noble. Upon the *Spaniards* making ſigns of peace, the *Indians* laid aſide their arms; and being ask'd news of *Guaccanarillus*, they anſwer'd, that this part of the Iſland was not ſubject to him, but to another king, who was in their party. *Melchior* made them a preſent of Hawk's-Bells, with which they were ſo well pleas'd, that they deſir'd to enter into Friendſhip with them, and, without any apprehenſion, went with them to their ſhips. They told *Melchior*, that the King he ask'd for, was probably retir'd to the mountains, whither it would neither be eaſy, nor ſafe to purſue him.

Melchior, returning to the Admiral, gave him an account of what he had done. *Columbus* ſent out two other captains, with ſeparate bodies, to make farther diſcoveries; theſe two, dividing themſelves, took two different routs, according as they obſerv'd the ſeveral mountains at a diſtance; making it their buſineſs to ſearch the rivers which fell from the Hills. Some of the natives, who came to them, preſenting them with Gold, told them, they had gather'd it out of the ſand about the rivers; and ſhew'd the *Spaniards*, without any ſcruple, how they came by it; which was only by digging in the ſand, about the depth of eighteen inches, and taking up in one hand as much as they could hold of the ſand, pick'd the gold out of it with the other; and our Author ſays, he ſaw a piece of gold taken up by one of thoſe *Spaniſh* captains, at that time, which weigh'd nine ounces. The officers who were ſent out on this expedition, being limited to diſcoveries only, came back to the Fleet, and made report of the golden rivers, and ſome pieces which they brought with them.

The way the natives found gold.

Upon this report, the Admiral thought fit to remove to a part of the Iſland, more commodious for a new city, than the place where he had built his fort the year before; and therefore, he bent his courſe towards the rivers, the captains had ſpoken of; and finding a convenient harbour for ſhipping, he began to build: But, thinking himſelf oblig'd to ſend an account to *Spain* of all that had happen'd, he diſpatch'd his 12 caravels, as not being neceſſary; reſolving, with the other five, to purſue farther diſcoveries.

Columbus *builds* Iſabella.

After the departure of the caravels, he proceeded in building his new city, which he call'd *Iſabella*, in honour of the Queen of *Spain*. It was built on a hill, in the north coaſt of the iſland; and below it was a large pleaſant valley, fit for planting of all kinds, thro' which flow'd ſeveral rivers. But one great inducement, to make choice of this place for his city, was, a quarry of ſtones, which had been found out contiguous to it, which ſerv'd both for ſtone and lime. One large navigable river run at the foot of the hill where the city was built; upon the Banks of which, he enclos'd a conſiderable ſpot of ground for gardens and orchards; all which they planted and ſowed with the plants and ſeeds they had brought with them.

Cibava, *or* Cipango *diſcover'd.*

Whilſt the building went on, *Columbus* ſent out 30 men to enquire for the kingdom of *Cipango*, or *Cibava*; having been inform'd that that country abounded in gold mines. At their return, they talk'd ſo much of the riches of the country they had ſeen, that the Admiral himſelf, with all his horſe, and 400 foot, march'd, as they were guided by thoſe who had been there before, to the ſouth ſide of this golden region. He paſs'd ſeveral mountains with large valleys between them, in which were conſiderable rivers, all abounding with gold, which they ſuppos'd had been waſh'd out of the mountains by the floods, and ſo mix'd with the ſand in the rivers. Having march'd about 80 miles from *Iſabella*, he gave orders for building a Fort, upon the top of a hill near one of the rivers; which he called St. *Thomas*'s; in building which he was aſſiſted by the natives, who came to him with gold, and were much delighted with the Hawk's-Bells which they got in exchange; and, at the deſire of the *Spaniards*, they went often to the river, and in a ſhort time brought great quantities of gold out of

of it: And one old man bringing two pieces of the ſame mettal of about an ounce weight, when he ſaw the *Spaniards* wonder at the bigneſs of them, took four ſtones in his hand, and told them, that in his country, which was not above half a day's journey from thence, they often found pieces of gold as big as all the four put together.

From fort *St. Thomas*, he ſent one *Luxanus*, a young gentleman, with a party, farther into the country; who at his return, told him ſurprizing things of the riches of it; but *Columbus* enjoin'd him ſecrecy. This country, tho' it abounds with ſtones, and is therefore called *Cibava*, which ſignifies *ſtone*; yet it is very fruitful; and aſtoniſhing things are ſaid of the quickneſs of the growth of graſs, and other produce of the earth.

Columbus having made theſe diſcoveries, and finiſh'd the fort, return'd to *Iſabella*, and reſolv'd to proceed to other places not yet found out; becauſe he knew it was the king of *Spain*'s intention, he ſhould take poſſeſſion of as much of this new world as he could, leſt other princes of *Europe* ſhould get the ſtart of him, and eſpecially the king of *Portugal*, who ſent fleets frequently to the *Eaſt-Indies*, and had made great diſcoveries there before this time; tho' to guard againſt any attempt of that nature, he had procur'd from pope *Alexander* VI. a Bull, dated the 4th day of *May*, 1493. inveſting him and his Queen *Iſabella*, their heirs and ſucceſſors for ever, in all the lands diſcover'd, or to be diſcover'd, weſtward from a line drawn from north to ſouth, a hundred leagues to the weſt of cape *Verde*, (by which his holineſs ſecur'd the eaſtern diſcoveries to the king of *Portugal*, as was indeed his due.)

The Pope's Bull.

Purch. *Pilg.* B. 2.

The Admiral therefore, leaving the government of *Hiſpaniola* in the hands of deputies, ſet ſail for *Juana* or *Cuba*, with three ſhips; but he now coaſted the ſouth ſide of this iſland; and getting ſight of another lying, as it were, between it and *Hiſpaniola*, but neareſt the latter, he attempted to land in ſeveral places; but the inhabitants aſſembling in great numbers on the ſhore, oppos'd him: till at laſt, *Columbus*, being reſolv'd to view that iſland, well known ſince by the name of *Jamaica*, landed in ſpite of the natives, whom he conquer'd, and then enter'd into a league with them: and, having ſtaid ſome little time there, he bent his courſe directly weſt, along the coaſt of *Cuba*, that he might diſcover whether it were contenent, or an iſland; of which he was yet uncertain. In this courſe he met with very tempeſtuous ſeas, occaſion'd by the multitude of ſmall iſlands, to many of which he gave names: But finding a moſt convenient place for anchoring on the ſouth coaſt of *Cuba*, he ſtop'd there, and ſent boats a-ſhore to ſome cottages which he obſerv'd, and, by the ſmoke that proceeded from them, believ'd to be inhabited; but they found nothing in them, except fires made of wood, with a great deal of roaſted fiſh, upon ſpits lying by the fire; and two ſerpents of eight feet long each: having ſearch'd in vain for the proprietors, they fell to eating the fiſh, which they found very good, but did not venture upon the ſerpents. After they had refreſh'd themſelves, they went to a wood hard by, where they found ſeveral ſerpents hanging upon boughs of trees, ſome of which had their mouths ty'd with ſtrings, and others their teeth pull'd out. Going about ſtill in ſearch of the inhabitants, they ſpy'd a great number of people upon a hill at a diſtance, who began to flee as they made towards them; the Admiral therefore, being advertis'd of it, ſent one of the *Hiſpaniola Indians* to them alone; who, ſpeaking in their own language, diſſipated their fears; ſo that he brought 70 of them to the fleet. *Columbus* treated them kindly, and gave them ſuch trifles as the *Indians* are fond of. *Dydacus*, the interpreter, who had perſuaded them to come on board, told the Admiral, that they were the king's fiſhers, ſent to that place to prepare fiſh for an entertainment which their lord was to give to a neighbouring king. They ſeem'd pleas'd that the *Spaniards* had not eaten the ſerpents, which are held in ſuch eſteem in that country, that they are thought too good food for the inferior ſort of people. Theſe fiſhers, joining hands with the *Spaniards* in token of friendſhip, went to catch more in the place of what had been eaten; and the Admiral purſu'd his voyage.

Jamaica *diſcover'd.*

Sailing farther weſt upon the ſame coaſt of *Cuba*, they found the inhabitants more civiliz'd; for, at their going a-ſhore, the natives did not abſcond, as at other places, but came down to them, bringing ſome of their bread, and water in gourdes, or pumkins, which they offer'd to the *Spaniards*; and invited the reſt to come a-ſhore. Some days after, they came to a navigable river, the water whereof was too hot to bear ones hand in it for any time. *A hot river.*

Upon this coaſt they found ſome *Indians* in a canoe, fiſhing in a very curious manner. They had a fiſh ty'd by the ſide of the canoe with a cord, long enough to let the fiſh lie along the ſide of the keel, becauſe it can not endure

the air: when they ſee any other fiſh, eſpecially *Tortoiſes*, (which are there in great plenty, and very large) they ſlacken the cord, and the fiſh, finding itſelf at liberty, darts itſelf againſt its prey like an arrow; and when it ſeizes a *Tortoiſe*, or other fiſh, it throws a ſort of a purſe, which grows on the back part of its head, over the prey, which contracts itſelf ſo cloſe, that no man could diſengage any thing it ſeizes, but by bringing both of them above water, where the hunter-fiſh immediately lets go her hold; and the *Indians* are ready in the water to catch what ſhe brought up. Then they let her down again to her poſt, tying a piece of the fiſh to a line for her to eat. This fiſh the *Indians* call'd *Guaicanum*, but the *Spaniards* gave it the name of *Reverſum*. They gave the *Spaniards* four *Tortoiſes* thus caught, which were ſo large, that they almoſt fill'd their boat; and receiv'd from them other things in recompence. Thoſe fiſhers ſaid, that country had no end towards the weſt. They preſs'd the *Spaniards* to land, telling them, that their king would make them great preſents; but the Admiral would not, at that time, ſtay to try the experiment, being earneſt to find the end of *Cuba*, if it was an iſland, or to be aſſur'd of its being a part of the continent. Yet even in this he was baulk'd of his expectation; for having got into ſuch ſtraights among a number of iſlands, and often ſuch ſhallow water, that the keels of his large ſhips graz'd often upon ſand or rocks; the ſhips ſuffer'd much, and their ropes and cables were in a bad condition; ſo that he was forced to change his courſe eaſtward; having call'd the moſt weſtern point of *Cuba*, which he ſaw, *Evangeliſta*.

A fiſh-hunter.

In his return he viſited ſome other iſlands; but, not willing to truſt his ſhips in thoſe ſhallow ſeas, he ſteer'd for *Cuba*, deſigning to go back the ſame courſe he came. Having landed on one part of this great iſland, as he was one day at maſs upon the ſhore, it is ſaid that an old naked gentleman, attended by a great many others, came to the place where the Admiral was; and waiting very gravely till maſs was over, accoſted *Columbus* by the *Hiſpaniola* interpreter, telling him that, "Having been inform'd, that he "was a great prince, who had con-"quer'd many unknown countries by "his valour; he had ventur'd to come "to him, to put him in mind of the "the two different journeys which men "have to travel when they die: that "the ſouls of the good and benevolent, "have an eaſy and delightful journey; "but, on the contrary, the ſouls of op-"preſſors, and wicked diſturbers of the "peace of others, have a dark and "gloomy road to go. If therefore he "knew he was mortal, he ought not to "behave himſelf with cruelty towards "thoſe who had done him no harm, leſt "the miſchief he ſhould do to others in "his life, ſhould be requir'd of him at "his death."

Remarkable Speech of an Indian.

The Admiral, ſays our author, was agreeably ſurpriz'd at this ſpeech of the old man, and bad the interpreter tell him, "That he was extreamly pleas'd "to find that he talk'd ſo well of the "ſtate of the ſoul after death; which "he thought he had not known. That "as to his own part, he was come into "thoſe (before unknown) parts, only "for the ſervice of the natives, to teach "them knowledge; and to protect them "from their enemies, eſpecially the *Ca-"nibals*. And therefore, he was ſo far "from having any intention of doing "any hurt to ſuch as were peaceably "inclin'd, that if he, or any of his "friends, the natives of that country, "had any enemies who were too hard "for them, he would willingly revenge "their quarrel. And finally, that he "himſelf was ſubject to a great king, "who had ſent him to aſſiſt people in "diſtreſs." Pet. Martyr, Dec. 1. B. 3.

The old gentleman was no leſs charmed with this diſcourſe, than *Columbus* was ſurprized at his; and would have left his country to have follow'd him, but that his wife and children, proſtrate at his feet, beg'd he would not abandon them to miſery. Natural affection and ſound reaſon prevail'd, ſo they parted, with a great eſteem of each other; and *Columbus* keeping his intended courſe, without any farther diſcovery, came a ſecond time to *Jamaica*, and from thence to *Hiſpaniola*, but upon that ſide of it oppoſite to *Iſabella*; at a port which he call'd *St. Nicholas*'s haven, where he deſign'd to careen, and then to go in purſuit of the *Canibals*. But he was diſappointed of that generous deſign by a diſtemper he had contracted by fatigue, and want of reſt; ſo that he was forced to let himſelf be carried to his own new city, where he met with his brother, lately come from *Spain*, and ſoon after he recovered his health; but not his good-humour, being involv'd in ſome difficulties by an unlucky miſunderſtanding amongſt the *Spaniards*, and, as it were, in conſequence of that, a formed deſign of the native kings of the iſland to extirpate them.

Columbus arrives at Hiſpaniola.

Upon his arrival in *Hiſpaniola*, which was the beginning of *September*, 1494. he found that they, whom he had left governors of the iſland in his abſence, had

had fitted out the two ſhips which he had left them, and were ſail'd for *Spain*, with intent to miſrepreſent him, and his conduct, to the court. This intelligence made him think his preſence there neceſſary for his own vindication. But, on the other hand, the ill-management of the government, and the licentious conduct of the *Spaniards* at *Hiſpaniola*, during his abſence, who committed the groſſeſt abuſes and inſults upon the liberties of the natives, raviſhing their wives and daughters before their faces, and taking from them whatever they lik'd, without any retribution, had ſo alarm'd the kings of the iſland, who had liv'd quietly and friendly with them, whilſt the Admiral himſelf was among them, that they were reſolv'd to put the *Spaniards* to death, and ſo rid their country of them. To effect this, where-ever they found any of them alone, or in ſmall numbers, they murder'd them without mercy. In order, therefore, to prevent this miſchief, *Columbus*, being now pretty well recover'd of his diſtemper, ſent for the King of the *Golden-Houſe*, whom the natives call'd *Cacicus Caunaboa: Cacicus* being, in their language, king, or lord; *Boa*, a houſe; and *Cauna*, gold. The other kings his neighbours perſuaded him not to go, telling him, that he ought not to take notice of any meſſage from a ſtranger, who came to bring kings under ſubjection; and at the ſame time they threaten'd, that if he ſubmitted himſelf to the *Spaniards*, they would diſpoſſeſs him of his kingdom, with their united forces. But in oppoſition to this advice, *Hoieda*, the governor of fort *St. Thomas*, in the *Caunaboa*'s kingdom, repreſented to him, the danger of refuſing to go to the Admiral; that *Columbus*'s only aim was his friendſhip and alliance; but if he refus'd that, he would inevitably plunge himſelf and country into ſlavery. The poor king was in great perplexity of mind, what courſe to take. He was afraid to appear, becauſe he had, at one time, kill'd 20 *Spaniards* in time of peace; but at laſt, having, in his own imagination, laid a ſcheme for the deſtruction of the Admiral and all his people, he began his journey to *Iſabella*, with a great retinue in arms; and being ask'd, why he came in that warlike manner? He anſwer'd, that it did not ſuit with the dignity of ſo great a prince as he was, to travel without attendance.

The outrages of the Spaniards *in the Admiral's abſence.*

King Caunaboa *goes to* Columbus.

Upon his arrival at *Iſabella*, he was immediately confin'd, with all his people; and *Columbus* reſolv'd to make a progreſs thro' the iſland, and to bring it intirely under ſubjection; but he was inform'd that there was an univerſal famine in it, occaſion'd by the natives having wilfully neglected to ſow any ſeeds this year, in order to ſtarve the *Spaniards* out of their country; eſpecially in the region of *Cibava*, they had not only deſiſted from ſowing or planting, but had pull'd up by the roots any thing, which could ſerve for food; becauſe they ſaw that the gold of that country was the great bait which took with the *Spaniards*. However, he ſent out one captain with a party to croſs the country ſouthward, who, at his return, confirm'd the account of the famine; telling him, that he and his men had been oblig'd to live, ſixteen days together, upon the roots of herbs, and young date trees, and ſome wild fruit.

Is put in priſon.

The Admiral, finding things pretty quiet in the country, to prevent any inſurrection for the future, built another fort between *Iſabella*, and *St. Thomas*, that travelling might be more ſafe for the *Spaniards*; to this fort he gave the name of the *Conception*; it was in the precinct of *Cibava*, upon the frontiers of the kingdom of *Guarionexius*, who ſeem'd to have a mind to live in peace with *Columbus*; and, to cultivate his friendſhip, gave his ſiſter in marriage to *Didacus*, who was bred by the Admiral, and had been his interpreter in all places of the *Indies*.

Fort Conception *built.*

The garriſon placed at the new tower, or fort of *Conception*, ſent out a party to ſearch, in their diſtrict; who got, from a neighbouring king, a piece of rough gold as big as one's fiſt, weighing 20 ounces, which had been found in a heap of dry earth. This was ſent to *Spain*, and our author ſaw it, as alſo a piece of *Electrum*, or a mixture of gold and ſilver, ſo large and heavy, that he ſays, he was not able to move it with both his hands. This laſt, he tells us, was found in the houſe of one of the *Indian* princes; but the *Spaniards*, after much ado, found the Mine; but he does not ſay in what place.

Pet. Mar. Dec. 1. B. 4.

In the mountains near this new fort, they found great plenty of *Amber*; and a yellow ſubſtance fit for painting, diſtill'd from the rocks; there are alſo, near thoſe hills, great woods of *Brazile*. From the produce of this iſland alone, they might have ſent great riches to *Spain*; but for the lazineſs of the *Spaniards*, and likewiſe from their tyrannical conduct towards the natives, and their ſeditious behaviour towards the Admiral, which put it out of his power to keep the natives in peace with him: however, in two months time, this year, 1494, they gather'd together in this iſland 1200 pound weight of gold. But this only by the bye, reſerving the produce

duce and trade of the ſeveral parts of this new world, to another time, and a more proper place.

The Indian kings offer to pay tribute.

The *Indian* kings, finding their countries almoſt ruin'd by the famine, ſent to the Admiral, to offer ſo much yearly tribute; which he accepted of, and promis'd them all eaſe and peace, upon their performing conditions.

In the mean time, the *Caunaboan* king, fretting at his captivity, deſir'd *Columbus* to ſend ſome of his forces to his country (which the Admiral now might call his own) to ſave it from the incurſions of his old enemies. This the crafty *Indian* propos'd, in expectation that his brother, and others of his dependants in *Cipango*, would be able to get as many *Spaniards* in their power, as ſhould be a ranſom for him and his family. But *Columbus*, ſmelling his deſign, diſpatch'd *Hoieda* thither, with a force equal to all that they could raiſe againſt him. Upon the *Spaniards* arrival in *Cipango*, the king's brother, as he believ'd he would, march againſt them with 5000 men, thinking to attack them unprepar'd; and therefore dividing his men into five little armies, order'd them to give the aſſault at five different places; but the *Spaniards*, being upon their guard, fell in with their horſe, upon his main battle, now divided from the reſt, and treading the naked *Indians* under their horſes feet, gave them a total rout before the others could come to their relief; and when the other ſeperate bodies came to the field, and found their main army defeated, they fled to the mountains, from whence they beſought the *Spaniards* to ſpare their lives; promiſing all ſorts of obedience for the future. Many of them were kill'd, and their general, the king of *Caunaboa*'s brother, was taken priſoner; with many others, whom *Columbus* diſmiſs'd, only keeping the two brothers, with deſign to ſend them to *Spain*.

About this time, a dreadful hurricane ſwallow'd up the Admiral's three ſhips, which lay at anchor in the bay, whirling them two or three times round, and driving them to the bottom, ſo that having now no ſhips left, he ſet about building two caravels, having carpenters and other artificers neceſſary for that work, in his new city. Whilſt theſe were building, he ſent his brother *Bartholomy*, his lieutenant, to *Hiſpaniola*, to ſearch other gold mines, which he found (by ſome *Indian* guides) about 60 leagues from *Iſabella*; and going into them, he perceiv'd that there had been pits dug in them in ancient times. This made *Columbus* believe that this iſland was *Solomon*'s ophir; and that they had been dug up in his time. A weak conjecture to found ſo incredible a ſtory upon!

Columbus ſails for Spain.

The ſhips being finiſh'd, and fitted for the ſea, the Admiral leaving the government of the whole iſland in the hands of his brother, and taking his priſoners with him, ſet ſail on the 11th of *March*, 1495. for *Spain*.

Bart. Columbus, lieutenant of Hiſpaniola, builds the Golden-Tower.

After his departure, the new lieutenant ſet to work to fortify the iſland againſt any attempts of the natives; and to that end, he built a new fort, which he call'd the *Golden-Tower*, near the new-diſcover'd gold-mines; and then put people to work to prepare inſtruments for digging, waſhing, trying and melting the gold. While theſe were carrying on, he took a ſmall party, and went about to exact the tribute, but more eſpecially to gather in proviſions for his garriſons.

About the beginning of *July*, three caravels arriv'd from *Spain*, which reliev'd the neceſſities of the *Spaniards*, in a very ſeaſonable time; for they brought wheat, wine, oyl, and bacon; with other things, of which they ſtood very much in need. The people, who came in theſe ſhips, brought him an account of the Admiral's arrival in *Spain*, but that his two captives, the king of *Caunaboa*, and his brother, had dy'd in the paſſage. They alſo brought orders to him, from the King, and the Admiral, to remove with his forces to the ſouth-ſide of the iſland, near the gold-mines, and that he ſhould make diligent enquiry into the occaſion of the ſlaughter of the *Spaniards*, the years paſt, and to ſecure the Kings who had been concern'd in any of thoſe murders, with their confederates, and ſend them all to *Spain*: which he perform'd, ſending three kings, with 300 captives, by the firſt ſhips bound thither.

Having ſearch'd the ſouth part of the iſland, the lieutenant remov'd from *Iſabella*, and march'd to the top of a hill, near a commodious harbour, at the mouth of a pleaſant river; where he built a fort by the name of *St. Dominic*; having left, at *Iſabella*, only the ſick people, and the ſhip-carpenters, who were employ'd in making caravels. When *St. Dominic*'s fort was finiſh'd, he left 20 of his men in it, and went, with the reſt, to view the inland parts of the iſland, towards the weſt ſide. He divided his men into 25 parties, ten in each party, two of which he ſent into the regions of *Brazile* woods, who having found them out, were the firſt that ever put an ax into that (now ſo much eſteem'd) timber, of which they fell'd great quantities; each company filling ſome of the iſland houſes with logs, to be

St. Dominic built.

Firſt cutters of Brazile-wood.

be taken off by the next ſhips that were bound homewards.

The lieutenant himſelf, marching towards the banks of the river *Naiba*, which comes from the mountains of *Cibava*, about the middle of the iſland, found a certain king, *Beuchius Anacauchoa*, encamp'd againſt the people of *Naiba*, in order to bring them under ſubjection, as he had ſeveral other of his neighbours. This king, ſeeing the *Spaniards*, laid down his arms; and coming up to the lieutenant, in civil terms, ask'd what they wanted? to which he reply'd, that he ſhould pay tribute to his brother the Admiral, in the name of the catholick king of *Spain*. The king ask'd, why he ſhould demand that of him, ſince there was no gold in any region under his dominion? The lieutenant anſwer'd again, that if they had not gold, they had cotton, hemp, and ſuch other things as were uſeful for them. The king ſaid, ſmiling, they ſhould have as much of thoſe as they would. This king, ſending meſſengers home to ſignify his return, took the *Spaniards* with him to his houſe, about 30 leagues off, paſſing thro' the provinces of ſeveral little kings, his vaſſals; ſome of which preſented the lieutenant with hemp, which prov'd very good for ropes; others brought cotton, and other things.

The lieutenant's reception at Xaragua.

When they arriv'd at *Xaragua*, which was the king's houſe, they were met without doors by 30 women, who were naked, ſave only cotton breeches, which came down mid-thigh; theſe were the king's wives and concubines: after them came a company of virgins, who, (not being yet entitled to wear the breeches) were ſtark naked, and their hair flowing looſe about their ſhoulders. The *Spaniards* affirm'd that their faces, necks, breaſts and hands appear'd very ſmooth, and their complexion of an agreeable brown. They had branches of date-trees in their hands, which, with a chearful, but modeſt air, they preſented to the Lieutenant. Thus they enter'd the king's houſe, where they were well entertain'd, and, according to their rank, had their apartments aſſign'd them by the officers of the court; and repos'd in the hanging-beds, little different from hammocks at ſea. The next day they were entertain'd with a fight between two armies; which, tho' it was deſign'd for diverſion, was likely to have been a bloody one, if the lieutenant, ſeeing four men kill'd at the firſt encounter, had not beg'd of the King to diſmiſs them.

Having thus ſtaid ſome days at *Xaragua*, the Lieutenant, parting in a very friendly manner from the king, return'd to *Iſabella*; where, to his great mortification, he found that 30 of his men, whom he had left there, were dead of ſickneſs, having had no medicines, and but little ſuſtenance. He therefore order'd ſeveral other towers to be built at convenient diſtances, about 20 miles aſunder, along the ſouth part of the iſland; to which towers he deſign'd to tranſport his ſick men, for change of air. Having perform'd this, he went himſelf to *St. Dominic*, deſigning to receive his tribute, as he went along. Here he had intelligence, that all the kings, bordering upon the tower of *Conception*, intended to make an inſurrection; and that they had, as it were, forced *Guarianexius* to be their captain-general againſt the *Spaniards*. This intelligence prov'd true, for there aſſembled no leſs than 15000 *Indians*. But before their kings had left their own houſes to go to the camp, (for which they had appointed a certain day) the lieutenant calling a council of war, it was there determin'd to ſend parties to ſeize thoſe kings in their houſes, in the night; which was accordingly done; fourteen of them being made priſoners in one night, and brought to the *Conception* fort. The lieutenant himſelf ſeiz'd *Guarianexius*, for whom he had great regard, as being the moſt worthy man of all the kings, his neighbours. They put two of theſe kings to death; and having admoniſh'd the others, diſmiſs'd them, to the great joy of the *Indians*, who flock'd about the fort, without arms, making great ſupplication for their ſafety. *Guarianexius*, being releas'd, made a ſpeech to the natives, ſetting forth the juſtice and clemency of the *Spaniards*, and exhorted his countrymen to live peaceably. Thus ended the ſtorm for the preſent.

Soon after this, meſſengers came from *Xaragua*, that *Beuchius*, and 32 of the neighbouring kingdoms, were ready to pay their tribute. The lieutenant march'd towards *Xaragua*, where he found them all aſſembled, and where he was moſt agreeably entertain'd by the king, and eſpecially by *Anacaona*, the king's ſiſter, the widow of the king of *Caunaboa*, who dy'd in his paſſage to *Spain*; and being a woman of more than ordinary underſtanding, govern'd as much as her brother did. She perſuaded the lieutenant to eat of the ſame kind of ſerpents as the *Spaniards* had ſeen in *Cuba*, but never had ventur'd to taſte; which they found the moſt delicate food they had ever eaten; being ſtew'd in a pot with a little water, and ſome of the ſpices of the iſland.

Here he receiv'd as much cotton, from the Kings, as fill'd one of the houſes of the iſland; and they having, of their own accord, offer'd him great quantities of bread, and other proviſions, he ſent an expreſs to *Iſabella* for one of the caravels newly built there, with a deſign to ſend it back with a lading of bread, which was ſcarce in that city. The ſeamen joyfully brought the ſhip along the coaſt. Upon the arrival of the caravel, within ſix miles of *Xaragua*, *Anacaona* perſuaded her brother to go to ſee it. By the way ſhe ſhew'd the lieutenant her treaſury (at a village upon the road) conſiſting of chairs, ſtools, diſhes, pottingers, *&c.* all of Ebony, curiouſly wrought at *Guanabba*, an iſland on the weſt-coaſt of *Hiſpaniola*, without the help of iron or ſteel, in a moſt ſurprizing manner, all perform'd with ſharp ſtones. This lady made the lieutenant a preſent of fourteen ſtools and chairs, and threeſcore veſſels for the table and kitchen, ſome of Ebony, and ſome of Earth; as alſo four great bottoms (of great weight) of cotton ready ſpun.

The lieutenant carries the king and his ſiſter aboard his caravel.

Being come to the haven, where the ſhip lay at anchor; the lieutenant made a ſignal for the boat to come a-ſhore. The King had two painted canoes for himſelf and his ſiſter; but ſhe choſe to go in the boat with the lieutenant. Upon a ſignal given by the lieutenant, during their paſſage, the ſhip fir'd ſome guns, the noiſe and ſmoke of which ſo ſurpriz'd the *Indians*, that they look'd pale for fear; but *Anacaona* perceiving the lieutenant ſmile, took courage; and they all went aboard, where they wonder'd at every thing they ſaw; but much more, when the lieutenant, ordering the anchors to be taken up, and the ſails to be ſpread, they perceiv'd the ſhip to move without the help of oars; and to ſail, ſometimes one courſe, ſometimes another, without any change of wind; which they could not comprehend. Thus having diverted them for ſome time, and entertain'd them as well as he could, making them and their company ſuch preſents as he had in the ſhip, he brought them a-ſhore, and diſmiſs'd them, much to their ſatisfaction and aſtoniſhment; and having laded the ſhip with bread, he himſelf went to *Iſabella* by land.

Roldan Ximenes *revolts.*

Upon his arrival in the city, he was inform'd that one *Roldanus Ximenes*, (whom, from being his ſervant, he had prefer'd to be a captain, and over-ſeer of the miners) had committed ſuch outrages in the kingdom of *Guarianexius*, that were deteſted even by thoſe poor people, who are only govern'd by the law of nature; and had made the *Spaniſh* name ſo odious, that this King had abandon'd his country, and fled to the mountains of *Ciguaios*, where he had made application to *Maiobanexius*, chief of all the mountain Kings, or, as we may call him, *head of the clans*, complaining of the villanies of the chriſtians, and beging his aſſiſtance; which he readily promis'd him. Upon this intelligence, the lieutenant march'd with all expedition to the fort of the *Conception*, and immediately ſent for *Roldan*, who, with ſuch as follow'd him, and had been accomplices in his wickedneſs, lay in ſome villages about 12 miles diſtant from the fort. When he came before the lieutenant, and was ask'd of his behaviour, he boldly and inſolently anſwer'd, "That the Admiral was accountable for "it, which both he and the lieutenant "ſhould anſwer for, before the king "their maſter; becauſe they had abus'd "their power, and left the King's ſub-"jects to ſtarve in a deſart; that as to "himſelf, he had been left, by the Ad-"miral, joint governor of the iſland "with the lieutenant; but ſince he had "taken no notice of him, as his col-"league, after his brother's departure, "he thought himſelf under no obliga-"tion of obeying his orders."

Upon hearing this impudent ſpeech, the lieutenant endeavour'd to ſeize *Ximenes*; but he made his eſcape, and, with about 70 as profligate fellows as himſelf, retir'd towards the weſtward of the region of *Xaragua*, where he liv'd by robbery and plunder, and raviſh'd both wives and virgins where-ever he came. In the mean time, king *Guarianexius*, making incurſions from the mountains upon all the adjacent valleys, where either the *Spaniards* or their friends were, ſpared neither the one, nor the other, when they came in his way.

About this time, Admiral *Columbus* was preparing for another expedition from *Spain*, which we come now to treat of.

SECT. III.

COLUMBUS's *third* VOYAGE *to the* Weſt-Indies.

HAVING, in the preceding Section, given a ſuccinct account of what paſt in *Hiſpaniola*, during the adminiſtration of the lieutenant, as having been tranſacted under the Admiral's direction, and properly belonging to his regnecy, by whoſe commiſſion his brother govern'd the iſland; we now return to the Admiral himſelf.

He had ſtaid now ſome years in *Spain*, and having juſtify'd his conduct in his two former voyages, from the miſrepreſentations

ſentations made of him at court; he was order'd upon a third expedition to the *Weſt-Indies*, for which he ſet out from *Barramede*, not far from *Cadiz*, on the 30th of *May*, 1498. with eight ſhips laden with proviſions. But having had intelligence that ſeveral *French* pyrates had ſail'd towards the *Canaries*, on purpoſe to wait for him, he reſolv'd to take another courſe this voyage, and therefore, ſailing more weſterly than at other times, he arriv'd at *Madera*, from whence he ſent five of his ſhips directly for *Hiſpaniola*, intending to make ſome new diſcoveries before he went thither himſelf.

Columbus ſails to Madera.

Having ſtaid at *Madera* ſome days, he bent his courſe to the ſouthward; and leaving the *Canaries* to the eaſt, he came in with the cape *Verde* iſlands; but being inform'd that there was a contagion there, he made no ſtay, but ſail'd ſouth-weſt, to the 5th degree of north latitude, which he repented very heartily; for keeping in that latitude about eight days, he found the heat ſo intollerable, that their very ſhips were like to take fire, and the barrels in which their water was, open'd with the drought, and both he and his men were almoſt dead. However, in two or three days after, they found the air more temperate; and the laſt day of *June* they ſpy'd land, but could not get near enough for the ſhallows; ſo that coaſting along a day or two, they perceiv'd the country was inhabited, for they ſaw all the marks of agriculture at a diſtance. This was an iſland in about 5 or 6 deg. n. lat. and is call'd by our author *Puta*, upon the north-weſt of the *Terra-Firma*.

The iſland Puta diſcover'd.

Sailing along the coaſt of this iſland, they ſaw a canoe, in which was 24 well-made handſome young men, whoſe long lank hair was cut on the forehead, much after the *Spaniſh* manner; but they were all naked, except a covering of cotton before: they were arm'd with bows and targets. The Admiral, to entice them to come on board, made his people ſhew them looking-glaſſes, hawk's bells, and the like toys; but, tho' they ſeem'd to admire thoſe things, yet they kept their diſtance, having their oars ſtill ready to row off; which *Columbus* ſeeing, order'd his muſick to ſtrike up, to ſee if that would allure them. The muſick no ſooner began, but the *Indians*, throwing aſide their oars, in a moment had their targets upon their arms, and their arrows in their bows; thinking, as the *Spaniards* conjectur'd, that the muſick was a ſignal of battle. They kept at a diſtance from the Admiral's ſhip, becauſe of her bulk; but coming near one of the caravels, they made ſigns to the maſter to come a-ſhore, which he deſign'd to have done; and to that intent went to the Admiral to get leave, which the *Indians* perceiving, fled from them with ſuch haſte, that it was impoſſible to reach them.

In this courſe he perceiv'd a prodigious tide run weſtward, which put him in great fear: this gulph he call'd *Os Draconis*, the dragon's mouth, which is over-againſt the iſland of *Margarita*; ſo nam'd by him, in the latitude of 5 deg. n. After they enter'd this gulph, they ſail'd above 100 miles weſt, in freſh water. At laſt they caſt anchor in a large river, upon the north coaſt of what is now call'd the *Terra-Firma*. The people, who liv'd near the ſhore, came in multitudes to ſee the ſhips, not ſhewing the leaſt ſign of fear. By them the Admiral found out that the region where he was at that time, was call'd *Paria*, and that it was very large towards the weſt.

The iſland Margarita.

Paria.

Taking four *Indians* on board, he coaſted along in a moſt temperate air, and upon the ſhore ſaw many pleaſant and fruitful fields. Early one morning, being allur'd by the fragrant ſmell from the land, they went a-ſhore; where they found abundance of people; and ſoon after, meſſengers came from ſeveral of the *Indian* kings, to invite the ſtrangers to their houſes. The Admiral thank'd them, and excus'd himſelf for that time. After he was gone aboard, great numbers of the natives flock'd to the ſhips in their canoes. The moſt of them had chains about their necks, garlands on their heads, and bracelets of pearls on their arms, in great numbers; which they ſaid they got upon the banks of the adjacent ſhore; and taking up ſome baskets, which they found in the ſhips, they made ſigns that they would fill them with pearls in a ſhort time. The Admiral ſent two boats a ſhore with toys, to purchaſe pearl garlands, and to try the temper of the natives. The *Spaniards* were receiv'd by the *Indians* with great civility; particularly one grave perſon, accompanied with a young man, who the *Spaniards* believ'd was ſon to the other, attended by a great multitude of *Indians*, came up to them in a friendly manner, and conducted them to a houſe built round, where were ſet a great many chairs and ſtools of wood like Ebony, finely carved. When the father and ſon had made the *Spaniards* ſit down, as they themſelves likewiſe did, the attendants brought in a collation of different kinds of fruit, which were unknown to them, and likewiſe wine made of the juice of ſeveral fruits, and very pleaſant to the taſte.

Hoſpitable people.

After

After they had been thus entertain'd in the old gentleman's houſe, the young man carried them to his; where were a great many, both men and women, but the one ſeperate from the other. They were as white as the *Europeans*, and of the moſt civiliz'd behaviour to ſtrangers: but all naked, except a little cotton, wrought of ſeveral colours, upon the lower part of their belly; every one had either collar, chain, or bracelet, and ſome all three, of gold and pearls. The *Spaniards* asking, where they had the gold, they pointed to the mountains, ſouthward; but at the ſame time made ſigns as if there were man-eaters there, or elſe wild beaſts, which made it dangerous to go thither. When the *Spaniards* had ſtaid ſome hours a-ſhore, and had gotten a good number of garlands, they left the *Indians* with much civility on both ſides; and went back to their ſhips.

The Admiral having in his ſhips ſome grain for the colony of *Hiſpaniola*, would not ſtay longer in this country, however pleaſant it was; deſigning to return to it as ſoon as he had ſettled his affairs in that iſland. But he was diſappointed in this; for before he could return to this country, another had made the diſcovery, and deprived *Columbus* of the glory of having found out the continent, tho' nothing can leſſen his honour in being the firſt that attempted it, and ſhew'd others the way.

He coaſted along ſtill weſtward, much about the ſame latitude, above 230 miles; but, as in the laſt voyage he was not ſure whether *Cuba* was an iſland, ſo now he was as uncertain if *Paria* was part of the continent; of both which later diſcoveries have given us full aſſurance. But having view'd a great part of the north coaſt, and finding it to bend more ſoutherly, he turn'd his courſe backward the ſame way, till he found himſelf pretty near the longitude of *Hiſpaniola*, and then made the beſt of his way to it; where he arriv'd the 30th of *Auguſt*.

Roldan *accuſes the two brothers of treaſon.*

Columbus, at his landing in the iſland, was inform'd by his brother, of all the villanies of *Roldan Ximenes*; and of his having not only ſhaken off all obedience to the two brothers, but of his ſending accuſations againſt them both to *Spain*, as if they had acted in ſo tyrannical and arbitrary a manner in the *Weſt-Indies*, as that the *Spaniards* could not live under them; and farther, that they deſign'd to make a monopoly of the gold-mines to themſelves; for which purpoſe they would ſuffer none but their own confidents to enter them. Upon this information, the Admiral diſpatch'd a caravel to *Spain*, repreſenting *Roldan*, and his accomplices, as a ſet of profligate ruffians, who would ſubmit to no government; and, by their outragious conduct, had alienated the minds of the beſt affected *Indians*, and been the occaſion of ſeveral rebellions of the natives.

The Admiral retaliates the impeachment

Whilſt the partiſans of both ſides were managing the different intereſts at the court of *Spain*; the Admiral ſent his brother, with a party of fourſcore foot, and a few horſe of his own people, together with 3000 natives, who were enemies to the *Ciguavians*, againſt *Guarianexius*, who had lately come from the mountains with an army of *Maiobanexius*'s ſubjects, to infeſt the country. In their march, they ſpy'd two of the enemies men lurking in a buſh, one of which leap'd into a great river headlong, and eſcap'd; the other being ſeiz'd, told them, that about 6000 *Ciguavians* were in ambuſh in the woods beyond the river, in order to cut them off, if they ſhould paſs it. Notwithſtanding this intelligence, the lieutenant made his little army croſs at the neareſt ford; and as they paſs'd, the enemy came ruſhing out of the neighbouring woods, and fell upon them with a hideous cry, ſhooting their arrows at them whilſt they were in the river. But the lieutenant's people oppoſing their bucklers to the arrows, ſav'd themſelves; tho' ſeveral were wounded. Having thus paſs'd the river, they prepar'd to attack the enemy, who all fled towards the mountains, and were purſu'd by the lieutenrnt; he having been advis'd by the natives of his party, to march directly to *Maiobanexius*'s houſe; upon his way, they catch'd two *Indians* of that country, who told them there were ten *Caici*, or kings, and 8000 men, with *Maiobanexius*.

The lieutenant marches againſt the Ciguavians

The lieutenant continu'd his march, and the enemy coming to the field in parties, he drew up his little army, and engag'd; but rather by way of skirmiſh, or pickeering, than a ſet battle: however, many of the *Ciguavians* were kill'd, and a good number taken priſoners; one of whom he ſent, accompany'd by an *Indian* of his own, with a meſſage to *Maiobanexius*, ſignifying, that the lieutenant was not come into the mountains to make war upon him, but that he rather courted his friendſhip, and would protect and aſſiſt him againſt any enemy; his deſign was to get *Guarianexius* into his hands, that he might be puniſh'd as the common diſturber of the peace of the country, and the author of all the tumults. If therefore the king would give him up, the *Spaniards* were ready to enter into a league with him; but, if not,

Offers of peace ſent to Maiobanexius

not, they would deſtroy his country with fire and ſword. To this, *Maiobanexius* made anſwer, that *Guarianexius* was a man of approv'd probity, that he had come to him for ſhelter againſt the cruelties and licentiouſneſs of thoſe ſtrangers, who made it their buſineſs to invade other men's properties; and therefore he would make no league with them, but would defend his neighbour King to the utmoſt of his power.

The meſſengers being return'd with this ſhort anſwer, the lieutenant ſet fire to ſaveral villages, and march'd on to that where *Maiobanexius* lay; but before he would commit any more hoſtilities, he thought fit to ſend another meſſage to the king, deſiring him to let ſome of his moſt faithful friends come and treat with him. Upon this, the King ſent one of his chief miniſters, with two officers to attend him. The lieutenant us'd many arguments to convince him of the reaſonableneſs of delivering up *Guarianexius*; but could get him brought to nothing farther, than to promiſe to lay the matter before his maſter. When he return'd, *Maiobanexius* call'd the chiefs of his people together, and laid the caſe before them; whereupon they unanimouſly preſs'd the delivering up *Guarianexius*; but the king ſaid, he was a good man, and had taught him and his wife to *ſing* and *dance*; but his chief conſideration was, his having come to him for ſhelter, which he had promis'd, and therefore would undergo any hardſhip rather than betray him. With this declaration he diſmiſs'd the people, with heavy hearts; and, calling for *Guarianexius*, he gave him new aſſurances of protection; and that he might not be farther ſolicited, he ſent orders to an officer to guard the paſs between him and the lieutenant's camp, that no meſſenger might have acceſs to him: this officer executed his orders ſo well, that two new ambaſſadors, one a captive *Ciguavian*, and the other an *Indian* of the lieutenant's army, were taken and put to death. This ſo incens'd the lieutenant, that he march'd with all his forces to *Capronum*, the chief palace of *Maiobanexius*. At the news of his approach, all the kings fled; which *Maiobanexius* ſeeing, was forc'd to retire (with all his family) to the mountains. *Guarianexius*, being afraid to truſt himſelf in the hands of the *Ciguavians* (many of whom ſought an opportunity of delivering him, as the cauſe of their unneceſſary war) fled to the rocks, where he led a miſerable life.

He refuſes to deliver up Guarianexius.

The kings flee upon the lieutenant's approach.

In the mean time, the lieutenant's men deſir'd leave to return to the fort of *Conception*, where they had plantations, which requir'd their preſence; this he agreed to, and ſent them all home, except 30, with whom he deſign'd to ſearch for the two kings. Some of this ſmall party going abroad to find ſome creatures not unlike rabbets, of which there was abundance in that country, chanced to meet with two of *Maiobanexius*'s people; and forcing them to diſcover where he lay conceal'd, 12 of the Lieutenant's ſoldiers, guided by thoſe two *Ciguavians*, fell upon him unawares, and made him and his whole family priſoners, and ſent them to the tower of *Conception*. Soon after this, *Guarianexius*, being forced to get out of his lurking places to provide himſelf with food, was betray'd by ſome of the *Ciguavians*, and taken by the Lieutenant's men. The apprehending theſe two Princes brought peace and tranquility to the whole country.

Maiobanexius *taken.*

Guarianexius *taken.*

One of the neighbouring Kings, whoſe kingdom was not touch'd by the *Spaniards*, had the moſt beautiful woman of the iſland to his wife; this lady was a near relation of *Maiobanexius*, and having follow'd him in his flight, was taken priſoner with his family. Her husband, who lov'd her paſſionately, came to the Lieutenant, and offer'd to ſubmit his kingdom to him, in ranſom for his wife; which he accepted, and releas'd her, with ſeveral others. This King, in gratitude to the Lieutenant for this favour, of his own accord, without being deſir'd, brought 5000 men, with all inſtruments of tillage, and ſeeds of different kinds; and planted and ſow'd the fields near the Tower of *Conception*, to the great advantage of the garriſon; for which the Lieutenant rewarded him much to his ſatisfaction, and diſmiſs'd him.

An Indian *King enſlaves his Kingdom to redeem his* Wife.

His farther gratitude for her releaſe.

The *Ciguavians* hearing of the *Spaniard*'s clemency to this King, perſuaded their Kings to apply to him in the ſame manner; which they did, and by that means obtain'd the releaſe of *Maiobanexius*'s wife and family; but himſelf was ſtill kept priſoner.

But while the Admiral and his brother were thus, by degrees, ſubduing the Iſlanders to the power of *Spain*, their enemies at court ſo manag'd matters againſt them, that they got a new governor ſent over to *Hiſpaniola*; who being arriv'd about the time that the Lieutenant had made peace with the *Ciguavian* Kings, ſeiz'd both the brothers, and ſent them bound to *Spain*, alledging treaſonable things againſt them. But when the King of *Spain* heard of their arrival at *Cadiz*, he order'd them to be loos'd from their chains, and to come to him without any mark of captivity.

Columbus *and his brother ſent bound to* Spain.

Tho' *Columbus*'s enemies could prove nothing materal againſt him, yet he was not reſtor'd to his government of *Hiſpaniola*; but was acquitted of what he was charg'd with, and continu'd in favour with the King; and ſoon after had the command of four ſhips for a new voyage to the *Weſt-Indies*; of which we ſhall give a ſhort account, being unwilling to mention any other diſcoverer (of which we ſhall treat hereafter) before we had finiſh'd his attempts, to whom the world is oblig'd for having firſt pav'd the way.

SECT. IV.

COLUMBUS's *fourth, and laſt, Expedition to the* Weſt-Indies.

IN the year 1502, Admiral *Columbus*, having four ſmall ſhips fitted out for him, and 170 men on board, ſet ſail from the coaſt of *Cadiz* on the 10th of *May*, and in five days arriv'd at the *Canaries*; but making no ſtay there, before the end of *June* he arriv'd at *St. Dominic* in *Hiſpaniola*; where ſome tell us, from the authority of *Herera*, that the Governor forbad his landing upon the iſland. However that was, it is certain that he was not long there; for about the 14th of *July*, he ſet ſail weſtward, leaving *Jamaica* and *Cuba* both north of him. In this courſe he fell in with a ſmall iſland to the north of cape *Hunduras*. This iſland the natives call'd *Guanaſſa*, or *Guanaja*. Here *Bartholomy* went a-ſhore, when they ſaw a number of ſlaves drawing a canoe againſt the tide; in this canoe, which was very large, was a perſon of diſtinction, with all his family; the Lieutenant brought them aboard his brother's ſhip, finding in their canoe a great quantity of cotton work'd with ſeveral colours, wooden ſwords edg'd with flint, and utenſils for the kitchen, which made the *Spaniards* take the chief man to be a ſort of a merchant, who came to that iſland to barter for other goods. After they had kept him aboard for ſome time, the Admiral diſmiſs'd him, with his people and goods. There was one old man in this company, who, when the Admiral enquir'd for gold, pointed eaſtward, which made him change his reſolution of going farther to the weſt.

Iſland Guanaja.

Therefore, weighing anchor, he ſail'd eaſterly, and diſcover'd a cape on the coaſt of *Hunduras*, which he call'd *Ciamba*, and ſince that, *Caſinas*; they ſaid it had the name of *Quiriquetana* before, and is a part of the continent, in about 17 deg. n. lat. Here he went a-ſhore, and found the natives very civil, for they brought them meat and freſh water, ſhewing the *Spaniards* great reſpect by their geſtures. From this he ſail'd along the coaſt, till he found it incline ſouthward; he therefore call'd that cape *Gracias à Dios*, Thanks to God, becauſe he had the benefit of the eaſterly winds, which are moſt frequent there. In this ſoutherly courſe he found many fine rivers, and ſending his brother often a-ſhore, they ſaw great quantities of gold in ſeveral places, which they got by digging upon the ſides of the rivers, as the natives ſhew'd them. Thus he coaſted along, trading with the *Indians*, and touch'd at *Porto-Bello*, *Nombre de Dios*, *Belen*, and *Varagua*. Near this laſt place, he reſolved to ſettle his brother, finding abundance of gold; and therefore, having frighted the natives by his his great guns, which he had cauſed to be fired over their heads, and then treated them civilly, he began to build houſes for the people he intended to leave there; but the natives, as ſoon as they perceiv'd their deſign, aſſembled in multitudes, and fell upon the *Spaniards* with the utmoſt reſolution, without ſeeming concern'd at the playing of the guns from the ſhips; inſomuch, that having had two or three skirmiſhes with them, and finding their numbers ſtill increaſe, the Admiral gave over his deſign, and left the country.

Cape Caſinas.

Gracias a Dios.

Much gold.

Columbus reſolves to ſettle at Varagua.

But is hinder'd by the obſtinacy of the natives.

But upon this coaſt, their ſhips were imperceptably deſtroy'd with worms, which made them ſo full of holes, that the water came in faſter than they could poſſibly pump it out, tho' they had quite fatigu'd themſelves with pumping: which when the Admiral perceiv'd, and knowing that he was much nearer *Jamaica* than *Hiſpaniola*, believing it impracticable to reach the latter, he determin'd to ſtand in for the former; which he did, and run his ſhips a-ſhore cloſe by one another; and, becauſe the water was up to the very decks, he made huts upon the deck, for the men to live in; going a-ſhore in the day-time, to look for proviſions.

Their ſhips eaten with worms.

In this manner they liv'd for ten months; but ſeeing no relief like to come, and have no means of leaving the iſland in their preſent circumſtances; they prevail'd with *Diego Mendez*, the Lieutenant's ſteward, with two *Indians*, whom they enticed by large promiſes, to undertake a voyage to *Hiſpaniola* in a canoe, which is above 20 leagues diſtant from *Jamaica*; beſides the round they were to take from the part of the that iſland which they had been oblig'd to run into. This voyage they undertook, and happily perform'd; and

ſome

ſome time after *Mendez* return'd with two ſhips, on board which the two brothers embark'd, and all their men, and having ſtaid ſome time at *Hiſpaniola*, return'd to *Spain*; where, ſoon after, the Admiral dy'd; having paſs'd thro' many viciſſitudes of fortune, and left a great reputation, and the honour of having been the firſt diſcoverer of the greateſt and richeſt part of the world.

In giving this account of *Columbus*, tho' we have conſulted ſeveral authors, yet we have, for the moſt part, followed *Peter Martyr*, [illegible]g the moſt likely to be well inform'd of the facts; becauſe, as he was counſellor to the King of *Spain*, and Protonotary-Apoſtolic, he could not miſs of knowing all the accounts that came to the Court, with regard to the *Weſt-India* affairs; and having been perſonally acquainted with *Columbus*, and the principal perſons concern'd in the diſcoveries of this new world, and a curious man himſelf, he ſeems to deſerve credit more than any later author.

CHAP. II.

Farther DISCOVERIES *of the* Weſt-Indies, *by* CABOT, OJEDA, NINO, PINSON, *&c.*

THE fame of the diſcovery of the new World (for ſo it was indeed) by Admiral *Columbus*, and of the rich cargoes brought to *Spain*, at ſeveral times, being ſpread thro' other nations, gave ſeveral others an itch to try their fortune in thoſe ſeas; and, as if the *Italians* had been deſtin'd to diſcover that country to *Europe*, the next attempt was made by a *Venetian*.

Sebaſtion Cabotti, commonly call'd *Cabot*, having come to *England* in his youth, with his father, who was a merchant; after his father's death, being much addicted to the ſtudy of Navigation, and well skill'd in Coſmography, he believ'd there might be a paſſage found out, by the north-weſt, to the *Eaſt-Indies*; which muſt be much ſhorter than that by the cape of *Good-Hope*, ſo lately diſcover'd. He therefore found means to have his propoſal laid before *Henry* VII. then King of *England*, who approving of it, gave orders for fitting out two ſhips, with all things neceſſary for ſuch an Expedition.

In the year 1497, *Cabot* ſail'd from *Briſtol*, in the beginning of Summer; and taking his courſe north-weſt, came up with land about 60 deg. n. lat. ſuppos'd to have been *Greenland*. But perceiving the land to run ſtill farther towards the North, he changed his courſe, in hopes of finding a paſſage in leſs latitude. About the 50th degree he ſaw that which is now well known by the name of *Newfound-Land*. In this country he obſerv'd a ſort of ſavages, clad in skins of beaſts, and arm'd with bows and arrows; here alſo they found bears and ſtags, with great plenty of fiſh; but the ſoil did not appear to be very fruitful. He took three of the natives, and brought them with him; they liv'd in *England* a long time. He coaſted along ſouthward, till he came to the latitude of 38 deg. which is about *Maryland*; but his proviſions beginning to be ſcarce, and no ſupplies to be expected among ſuch Barbarians, he return'd to *England*; where at his coming, finding no notice taken of his voyage, nor any thing minded but a war with *Scotland*, he left the Kingdom, and went to *Spain*, where he was entertain'd, and afterwards employ'd to the *Weſt-Indies*.

Cabot *diſcovers* Newfound-Land.

In 1499, *Alonzo d'Ojeda*, having obtain'd leave of the King of *Spain*, fitted out four ſhips at private charge, and having with him *John de la Coſa*, and *Americus Veſputius*, ſet ſail upon the 20th of *May*, and in 27 days weſt ſailing, came in with land, in 11 deg. n. lat. now known by the name of *New Andaluſia*, on the north-coaſt of *Terra-Firma*, to the weſtward of the river *Oroonoko*. Here was a town built upon the water, like *Venice*; for which reaſon *d'Ojeda* gave it the name of *Venezuola*.

Alonzo d'Ojeda's voyages.

Leaving this place, he proceeded in diſcoveries weſtward; and doubling the north point of this part of the Continent, ſail'd ſouth-weſt to the cape *de la Vela*, oppoſite to the river *Oroonoko*, on the weſt ſide of *Terra-Firma*. From thence they return'd along the ſame coaſt to the iſland *Margarita*, where they careen'd, and then ſet ſail for *Hiſpaniola*.

Tho' there ſeems to have been little or no new land diſcover'd in this voyage, nor any thing of conſequence, that we hear of, perform'd by any of theſe undertakers; yet this whole Continent, from that time, took the name of *America*,

The Weſt-Indies called America.

rica, which it ſtill retains, from the Merchant *Americus Veſputius*, a *Florentine*. Thus, tho' *Italy* had no advantage in the partition of the new World, the *Italians* had the honour of beating the buſh (as *Purchas* expreſſes it) till the *Spaniards* firſt, and then other nations, ſeiz'd the game.

Alonzo Nino's diſcoveries.

This ſame year, 1499. *Peter Alonzo Nino*, getting a licenſe from the King of *Spain*, ſet out with one ſhip, at his own charge, and arrived on the coaſt of *Paria*, or *Terra-Firma*; and ſailing towards the ſouth, he came to a country, call'd by the natives *Curiana*, which I ſuppoſe is what is now call'd in the maps *Curatini*, about 7 deg. n. latit. Along this coaſt, he ſaw ſeveral villages, and being cloſe by the ſhore, about 50 naked men, with a man of ſome authority at their head, made ſigns to him to land; but he, ſeeing great numbers of people, did not think it adviſable to truſt himſelf with them; and ſhewing them Hawk's-Bells, Looking-glaſſes, *&c.* invited them aboard, and there, as faſt as they could hand thoſe trifles to them, they exchanged them for 15 ounces of pearls, which thoſe who came to the ſhips had about their necks and arms.

Finding this people of a peaceable temper, he traded with them ſome time, getting from them all ſort of proviſions which the country afforded; ſuch as deer, wild boars, conies, peacocks, and doves; all which the natives ſhot with their arrows; at which they were ſo dexterous, that they ſeldom miſs'd what they aim'd at. And here the ſimplicity of this people is worth taking notice of, or rather the general bent of human nature to things curious and unknown: for, tho' one would think pins had been a very uſeleſs commodity for people who went naked; yet, *four* pins was the price of a peacock, and *one* purchas'd a dove. Indeed, ſome of them made the objection of their being of no uſe; but the *Spaniards*, abuſing their ſimplicity, ſhew'd them, that the pins were good for picking their teeth, and taking thorns out of their Feet; which paſs'd very well, and the barter continued: but the hawk-bells were a purchaſe for the beſt pearls they had.

The manner of trading with the natives.

The *Spaniards*, after being a little acquainted with theſe people, ventur'd to go a ſhore, and lay all night in their houſes, which were built after the manner already deſcrib'd. Sometimes they were alarm'd, in the night, with the roarings of wild beaſts; but the natives allay'd that fear, by letting them know, no man had ever been hurt by any of them. *Algonzo* judg'd, by thoſe wild beaſts, which was not to be found in any of the iſlands, that this country was part of the continent; but he was confirm'd in that opinion, by ſailing above 1000 leagues along the coaſt, without ſeeing any end of the land.

Alonzo ſails near the Line.

From this place they ſail'd farther ſouth, till they loſt ſight of the great Bear, and other Stars about the north Pole; which ſhews they were near the Equinox, tho' there is no account given of the latitude; only, they ſaid, the natives call'd the country *Canchietta*, or *Cauchietta*; with theſe they traded as with the *Curians*; but going a little farther, about 2000 of the *Indians* came to the coaſt, arm'd with bows and arrows, to hinder their landing; ſo that, not being able to ſubdue them, nor yet to make friends of them, they chang'd their courſe, and ſail'd back to *Curiana*; where having ſtopp'd about 20 days, they bent their courſe for *Paria*. Near the entry into the *Parian* Gulph, or *Os Draconis*, they were ſet upon by 18 canoes of *Canibals*; but the Savages being frighten'd by the *Spaniards* Guns, made off; ſo that the *Spaniards* purſu'd, and took one of the canoes; in which they found only one *Canibal*, and a poor *Indian* lying bound, who, by ſigns, made them underſtand that ſix of his companions had been eaten by the Savages; and that he was reſerv'd only to the next day: the Captain gave him leave to treat his enemy as he pleas'd; ſo that being loos'd from his bonds, he took the Savage's own club, which lay in the canoe, and, by many ſtrokes, beat out his brains, with that eagerneſs and fury, as if he could not ſufficiently revenge the death of his companions.

A skirmiſh with Canibals.

At laſt, ſetting ſail from this continent, on the 5th of *February*, they return'd to *Spain*; having on board 76 pound weight of pearls, which they had purchas'd for goods to the value of five Shillings: many of the pearls they brought home were as big as hazle nuts, and as bright as thoſe of the Eaſt.

The Pinſons *diſcover* Brazile.

In the year 1500, the two *Pinſons*, uncle and nephew, who had accompanied *Columbus* in his firſt voyage, fitted out four Ships at their own charge; and, having obtain'd their King's licenſe, ſail'd directly to cape *Verde* iſlands, and from thence, in a ſouth-weſt courſe, croſs'd the Equinoctial Line, and came in ſight of land. This was the north coaſt of ſouth *America*, now known by the name of *Brazile*, within 5 deg. ſ. lat. Here they found the natives very wild, and could not perſuade them to have any commerce with them; ſo that having loſt ſome of their men in ſcuffles with thoſe people, they chang'd their courſe; and croſſing the Line, ſail'd along the coaſt

coaſt of *Coribana*, in *Terra-Firma*; all which was call'd *Paria*. In this voyage they met with a river 30 leagues broad, which makes the water freſh a great many leagues out at ſea, being a gather'd flood of many rivers from the land; this was the river of *Maranon*: They likewiſe touch'd at many iſlands, but uninhabited (as they ſuppoſed) becauſe of the *Canibals*. In ſome of thoſe iſlands they found *Caſſia*, and large woods of *Brazile* trees.

In this courſe they ſail'd 600 leagues of coaſt; but, at laſt, a ſtorm coming unexpectedly upon them, two of their Ships were founder'd in view of the others, and a third driven quite out of ſight; the fourth ſo ſhatter'd, that they were forc'd to run her aſhore; and when they were in great perplexity how to get away, their third ſhip, which had been forc'd away by the tempeſt, came back again, and by her help they ſav'd the ſhip which they had run aground. Having refitted her, the beſt they could, they ſet ſail for *Spain*; bringing with them a ſtrange monſtruous wild beaſt, having a head like a Fox, a tail like a Monkey, ears like a Batt, feet like an Ape, and hands like a Man: but what was moſt remarkable in this creature, was, that ſhe carried her whelps in an outward belly, like a great bag or purſe, which ſhe open'd and ſhut at pleaſure; there the young ones lay, except when ſhe let them out to play, or ſuck. The young ones dy'd ſoon after they were taken, but the dam liv'd ſome part of the voyage homeward; and dying at ſea, they brought the ſkin with them, which our author ſaw. They had alſo with them a good number of *Topaz*'s; with all which they arriv'd ſafe in *Spain*.

P. Mar. Dec. 1. B. 9.

Alvarez Cabral goes to Brazile by chance.

Whilſt the *Spaniards* were thus buſy in their Diſcoveries on this ſide of the Line, (having ſtaid but a very ſhort time on the ſouth part of *America*) the *Portugueſe*, with a fleet of 13 ſail, under the command of *Alvarez Cabral*, deſign'd for the *Eaſt-Indies*, were driven by ſtorm to *Brazile* (very ſoon after the *Pinſons* had left it) coming in with land, about 20 deg. ſ. lat. Having ſail'd along the coaſt one day, they went a-ſhore, where they found the people of a tawny complexion. They held their courſe ſeven degrees farther ſouth, to a Port, which they call'd *Puerto Seguro*. Here they landed again, and ſet up a croſs in token of poſſeſſion; for which reaſon, they gave the name of *Santa-Cruz* to that part of the Continent; which that particular place retains to this day; tho' the name of *Brazile* has prevail'd for the country, becauſe of the great number of trees of that ſort of wood found in it. From this place *Alvarez* ſent one of his ſhips back to *Lisbon*, with an account of this diſcovery; and, with the reſt, proſecuted his intended voyage to the *Weſt-Indies*.

At the ſame time, *Gaſpar de Cortereal*, another *Portugueſe*, viſited north *America*, which had been diſcover'd by *Cabot* before; he run along ſome part of that coaſt, and gave his own name to ſome ſmall iſlands about *Newfound-Land*, and brought home 60 natives: ſome time after, he undertook another voyage, but never return'd to give an account of it.

Cortereal ſails to N. America.

The year following, 1501. *Rodric de Baſtidas*, with two ſhips, ſail'd from *Cadiz*, having on board *John de la Coſa*, accounted the beſt pilot in *Spain* for the weſtern ſeas. He kept the ſame courſe which *Columbus* had done, when he diſcover'd *Paria*; and traded with the *Indians* in all the places then known to the *Spaniards* upon that coaſt: and then, having a mind to make farther diſcoveries, he ſail'd 100 leagues weſtward, and diſcover'd *S. Marta*, *Carthagena*, and *Nombre de Dios*, all upon the north-weſt coaſt of *Terra-Firma*, towards the Gulph of *Darien*; all which *Columbus* ſaw the year following, as has been ſaid in his laſt voyage. But having got a conſiderable cargo of gold and pearls, and finding his ſhips miſerably worm-eaten, he made the beſt of his way to *Hiſpaniola*, and, with great difficulty arriv'd at *Xaragua*; where, after he had landed his treaſure, the ſhips ſunk. How this Captain came to be impriſon'd in *Hiſpaniola*, is of no conſequence to the diſcovery of new parts of *America*; and therefore we ſhall only add, as to *Baſtidas*, that having recover'd his liberty, and procur'd ſhipping, he return'd with his riches to *Spain*.

Baſtida's voyage.

All the diſcoveries hitherto mention'd, were made during the life of the great *Columbus*; and ſuch of them as were not made by himſelf, were under the direction of thoſe who had ſail'd with him: ſo that before his death, which happen'd in 1506. there were above 1500 leagues of the coaſt upon the continent of *America* diſcover'd, *viz.* between cape *Hunduras*, in 17 deg. n. lat. and *Porto Seguro*, in the the ſame deg. ſ. lat. beſides a great number of iſlands, ſome of which are very large, and immenſely rich.

In the year 1506, *John Diaz de Solis*, and *Vincent Yanez Pinſon*, the uncle, already mention'd, undertook another voyage; ſailing to the iſland of *Guanaja*, formerly ſpoken of; and, inſtead of turning eaſtward, as *Columbus* had done, they held their couſe weſt, and

De Solis and Pinſon.

then ſouth-weſt, to the head of *Hunduras* Gulph, which at that time, they call'd *Baia di Navidad*. Then, turning north-eaſt, as the coaſt runs, they ſurvey'd a good part of *Jucatan*; but this laſt country was but little known, till *New-Spain* was diſcover'd, ſome years after.

By this time the Colony of *Spaniards* in *Hiſpaniola* made a conſiderable figure; ſo that the Vice-Roy of that iſland was in a condition to ſend out diſcoverers from thence. The firſt of theſe was *Sebaſtian d'Ocampo*, who was ſent, in 1507, to diſcover whether *Cuba* was an iſland, or part of the continent. He ſail'd along the north ſide of it, and ſtop'd at ſeveral places on the coaſt; coming to the port (ſince well known by the name of *Havana*) by him call'd *de Carenas*; he ſtaid there to careen. Sailing from thence, he doubled the weſt cape, now call'd *St. Anton*; and returning in an eaſterly courſe, he coaſted along the ſouth ſide of the iſland, and put into the port of *Xagua*, which is ſo large, as to be able to contain 1000 ſhips. Here he was receiv'd in a very friendly manner, and ſupply'd with partridges and good fiſh; and ſetting out from thence, came in a ſtraight courſe to *Hiſpaniola*, with the certain account that *Cuba* was an iſland.

Cuba *found to be an iſland.*

The year following, *John Ponce de Leon*, ſet out from *Hiſpaniola* to the iſland of *Boriguen*, ſince call'd *Porto-Ricco*, eaſtward of *Hiſpaniola*, about 15 leagues. This iſland abounds in gold, and has a good harbour, from which it takes its name of *Rich Haven*.

Porto Ricco *iſland.*

About the ſame time, *De Solis*, and *Pinſon*, ſet out again for *America*, upon the King of *Spain*'s account, with two caravels. The firſt land they touch'd on that continent, was *St. Auguſtin*, upon the coaſt of *Brazile*, in 9 deg. ſ. lat. from whence they coaſted toward the ſouth, trading with the natives where they could be receiv'd, till they arriv'd at the latitude of 40 degrees, on the *Magellanic* coaſt; from whence they return'd to *Spain*.

South America.

In 1609, *James Columbus*, ſon of *Chriſtopher*, inheriting now his father's poſt of admiral, ſent a colony from *Hiſpaniola*, to people *Jamaica*; *Eſquibel* ſailed thither with 70 men.

A colony ſent to Jamaica.

And now, ſo many countries being diſcover'd, and ſo many encomiums made upon the riches of them, many proofs of which, and the advantages accruing from them, the King of *Spain* had ſufficiently been appris'd of; he therefore began to think of peopling the moſt remarkable places, with his own ſubjects. In order to this, he iſſu'd Letters Patents to any that would undertake to ſettle in *America*, with large privileges to the adventurers.

Amongſt the firſt that undertook to people that country, directly from *Spain*, were *Alonzo d'Ojeda*, or (as *Martyr* calls him) *Alphonſus Fogeda*, and *Diego Nicueſſa*. Theſe two, having obtain'd, ſeperately, Letters Patents from the King, ſet out in different fleets for the continent. *Ojeda* touch'd at *Hiſpaniola*, and was there join'd by *De la Coſa*, who, with one ſhip had follow'd him from *Spain*; and they ſail'd from that iſland, with 300 men well arm'd, to *Carthagena*, (ſo nam'd by *Columbus*) upon the north-weſt coaſt of *Paria*, towards *Darien* Bay.

Letters patents granted to Ojeda, *and* Nicueſſa.

Upon his firſt landing, he fell upon the *Indians*, and deſtroy'd all that came in his way, upon pretence that his letters from the King authoriz'd him to that cruelty, in revenge of the oppoſition the natives of *America* had made againſt the Chriſtians before. Having had ſucceſs againſt the firſt that he encounter'd, he march'd with his little army farther into the country; and having taken ſome of the naked men, he ſpar'd their lives to be guides for him to murder their countrymen: but the *Indians* getting together to a conſiderable number, gave him ſuch a warm reception with their bows and arrows, and their wooden ſwords and javelins, that they kill'd *De la Coſa*, and about 50 *Spaniards*; *Ojeda* and the reſt being glad to retire to their ſhips.

The Spaniards *beaten at* Carthagena.

Whilſt things were in this melancholy ſituation with him, *Nicueſſa* arriv'd with five ſhips upon the ſame deſign of ſettling on the continent; having with him about 800 men. Upon their firſt meeting they were like to quarrel about territory; tho' neither of them had, as yet, a foot of earth he could call his own, in all *America*; but at laſt, they agreed that *Darien* ſhould be the bounds between them. When the agreement was made, they both reſolv'd, that the firſt thing to be done, was to revenge the ſlaughter of their countrymen. With this intention they join'd their forces, and uſing more caution than at firſt, they ſurrounded a village where the bulk of the *Indian* army was lodg'd; and ſetting fire to it, either kill'd or burnt all that were in it, except ſix children, whom they kept for interpreters, and ſome few who forced their way thro', or eſcap'd privately.

But getting new aſſiſtance revenge the loſs.

Having thus reveng'd *Coſa*'s death, *Ojeda* ſail'd farther up the coaſt of *Uraba*, in the *Terra-Firma*, and built a fort call'd *St. Sebaſtian*. But ſoon after, going into the inland country with a party, in ſearch

Ojeda *builds* St. Sebaſtian, *on the coaſt of* Uraba.

ſeach of gold-mines, of which he had an account, he was ſhot in the thigh with a poiſon'd arrow; which oblig'd him to leave his new garriſon, under the guard of an officer, and to ſail to *Hiſpaniola*, both to get his wound cur'd, and to procure more force; promiſing to return, or to ſend them recruits and proviſions in 15 days; which if he did not, they were at liberty to abandon the fort; as they did accordingly, at the time fix'd, being in ſcarcity of every thing. However, meeting at ſea with *Anciſus*, a friend of *Ojeda*'s, who was coming from *Hiſpaniola* to him with recruits of all things neceſſary, he perſuaded them to return to *Uraba*; but whether by chance, or deſign, they came to a convenient harbour, not far from the place where *Ojeda* and *Nicueſſa* had ſlaughter'd the *Indians*. Here they got a-ſhore, and found the *Indians* in arms. But one of *Anciſus*'s men, who had learn'd the language of the country from ſome captives he had known at *Hiſpaniola*, went to the natives; and being inform'd, that they were aſſembled to revenge the death of their countrymen, told them, that theſe were ſtrangers come upon their coaſt by chance; but that they belong'd to a nation which was able to deſtroy their whole country, if they us'd theſe people ill; for which cauſe, he adviſed them to lay aſide their arms, and make peace with them. This had the deſir'd effect; the *Indians* were quieted, and furniſhed the *Spaniards* with ſuch proviſions as they had.

He is wounded with a poiſon'd arrow.

The fort deſerted.

Anciſus, *newly arriv'd with proviſions, loſes them and his ſhip.*

After they had ſtay'd here ſome little time, they ſet ſail for *St. Sebaſtian*'s; but, unfortunately, *Anciſus*'s ſhip ſtruck upon a bank of ſand in the mouth of the harbour, and was loſt, together with all the proviſions, artilery, cattle, and other neceſſaries brought from *Hiſpaniola*; ſo that, of the whole cargo, they only ſav'd about twelve barrels of meal, and ſome few cheeſes and Biskets; the men got a-ſhore in the brigantine, and ſhip's boat; but when they landed, they found their fort demoliſh'd, and moſt of their houſes burn'd; ſo that finding no comfort in this place, they reſolv'd to go farther weſt; which they forthwith put in execution, and landed in the river of *Darien*, which is now reckon'd the Iſthmus that divides ſouth and north *America*; where the *Scotch* ſent a colony in 1698, at a great expence, for them; which was diſappointed, in a manner not very reputable for the authors; and which, I believe, moſt people now think ill judg'd; but this by the bye. Here the *Spaniards* had an encounter with the natives, and put them to flight, reſolving to ſettle their new colony on the banks of this river, being in 8 or 9 deg. n. lat.

They ſettle at Darien.

Whilſt theſe misfortunes befel the planters at *Uraba*, *Nicueſſa* had no better luck towards the weſt; for, having himſelf gone aboard a brigantine, for expedition, and order'd the large ſhips to follow him, he paſs'd *Veragua*, where he intended to ſettle; and having loſt the company of all his fleet in the night, ſail'd on weſtward, without knowing his error. The large ſhips, and the other caravels, enquiring of the inhabitants, as they coaſted along, arriv'd at the river *Veragua*, where they came to an anchor, impatiently expecting the return of the governor *Nicueſſa:* at laſt, his ſhip's boat came up to them, with three men in it, who had ſtole away from the captain; theſe men inform'd them, that *Nicueſſa* had loſt his ſhip, and was now in a miſerable condition, wand'ring a-foot, with a ſmall number of men, in want of every thing, hoping to find out *Veragua*, which he had gone to the north-weſt of, as far as cape *Gracias a Dios*, above 100 leagues in a ſtrait line, not allowing for the turn of the coaſt. Upon this intelligence, they ſent the three *Spaniards* back with one of the brigantines, to bring the governor, which they perform'd: but, upon his arrival, he did not like the place, and therefore ſail'd eaſtward, as far as *Porto-Bello*, over-againſt *Panama*; but his men being ſo fatigu'd with hardſhips, and want of good feeding, that they durſt not engage with the natives who appear'd againſt them; they coaſted ſome leagues farther eaſt, where he erected a ſmall tower, which he call'd *Nombre de Dios*, the *Name of God*, almoſt over-againſt *Carthagena*, on the oppoſite ſide of the Gulph of *Darien*. But famine, fatigue, and the *Indian* arrows, had now reduc'd his 800 men to 100.

Nicueſſa's *misfortunes.*

He builds the fort Nombre de Dios.

In the mean time the colony at *Darien*, went to pieces, in diſputing about its government; one *Nunez* ſetting up againſt *Anciſus*; and many expreſs'd a deſire to find out, and join *Nicueſſa*. Whilſt they were in this diſconcerted ſtate, and at the ſame time in want of all neceſſaries, *Roderic Colmenaris* arriv'd at *St. Sebaſtian*'s from *Hiſpaniola*; but finding neither fort nor countrymen, he order'd all his guns to be fir'd, and beacons to be lighted on the tops of the rocks. The guns being heard at *Darien*, were anſwer'd by Fires from thence; which being a guide to *Colmenaris*, he ſail'd thither, to the great joy of the colony. To him they communicated their deſign of ſending to *Nicueſſa*; and he, from the friendſhip he had for him, willingly came into it, and went with one of his own ſhips, and part of the proviſions he had, to look for him. After ſearching in ſeveral pla-

Diſcord among the Spaniards *at* Darien.

ces,

ces, he found him at his new fort, in a moſt miſerable condition, his men being reduc'd to ſixty; and both he and they little better than dead. They all embark'd together; but whether his temper was ſowr'd by his misfortunes, or that he was naturally haughty, he began to be ſo imperious at *Darien*, that the old colony forced him out; and, with 17, the only now ſurvivors of all that he brought to *America* with him, he ſet ſail from *Darien* about *March*, and was never more heard of.

Diſcord at Darien.

But after his departure, the contentions encreas'd among the *Spaniards* who remain'd; ſo that *Anciſus*, who had a deputation from *Ojeda* to command the garriſon in his abſence, was impriſon'd by *Nunez*; but being releas'd, would ſtay no longer among them; and therefore, refuſing the ſolicitations of many, who preſs'd him to ſtay, he ſet ſail for *Hiſpaniola*. The *Spaniards* of the garriſon finding him reſolute, ſent *Valdivia* and *Zamudius* to the Admiral, (young *Columbus*) to give him a true account of their affairs, and to beg relief; giving inſtructions to *Valdivia* to return from *Hiſpaniola* with proviſions; but that *Zamudius* ſhould go to *Spain*, to give the King an account of what had paſt, leſt *Anciſus* ſhould raiſe his majeſty's anger againſt them.

Theſe three ſail'd from *Darien* at the ſame time; and *Nunez*, together with *Colmenaris*, being in great want of proviſions, releas'd King *Careta*, whom they had taken priſoner without reaſon, and enter'd into a league with him againſt the other kings his neighbours. With their joint forces they march'd into *Poncha*'s dominions, and arrived at his palace; which they found abandon'd, but well ſtor'd with proviſions, and ſome gold wrought and engrav'd after their manner. From thence they proceeded to *Comogra*; the king of which they made peace with, by means of a relation of *Careta*'s, who was then with him. This King had a ſon of good underſtanding, who perceiving the *Spaniards* inſatiable thirſt for gold, gave them 4000 ounces of it carved; which, with a good quantity they got from other places, they weigh'd, in order to lay bye the King of *Spain*'s tax, and divide the reſt.

Great virtue in an Indian.

But the King of *Comogra*'s ſon, who was preſent, perceiving them to quarrel about the partition of it, ſtruck the ſcale with his foot, and ſcatter'd the gold abroad; telling them, that it was a ſhame for people to value gold above their own peace and quiet; and to make themſelves exiles from their own country, and endure ſo many hardſhips and inconveniencies, for traſh. But if they had ſuch a deſire of it, he would conduct them to a place where they might have as much as they pleas'd; but there was need of a greater force than they had, to ſubdue the great King *Tumanama*, diſtant from *Comogra* only ſix Suns, or ſix days journey. He affirm'd, that the King he had nam'd had all his furniture of gold; and, pointing towards the hills, he told them there was another ſea at the back of thoſe hills, with ſhips like their caravels.

The *Spaniards* liſten'd attentively to the ſpeech of the young *Indian*, which had been interpreted to them by three of their own number, who had learn'd the language at *Careta*'s court. They ask'd him, what certainty he had for what he affirm'd, and what courſe he would adviſe them to take, in order to conquer that country? To this the young man reply'd, that having had continual war with the kings on the other ſide of the mountains, they had often made ſome of their men priſoners, and likewiſe been captives to them; ſo that he had been certainly inform'd, both by his fathers ſubjects, who had either been priſoners, and eſcaped, or had been ſent on embaſſies upon ſafe-conduct; and likewiſe by his converſation with the people of that country, who had, from time to time, been priſoners at his father's court, of the truth of what he had ſaid; and he was ſo confident that his information was good, that he offer'd to be their guide, and was willing to have his hands tied during the march, and to be hang'd up on the next tree, if they ſhould find themſelves deceived by his words. But he told them, they muſt have 1000 men of their own nation, arm'd as themſelves were, whom his father's army ſhould accompany; and all the advantage he propos'd to himſelf was, the freeing his country from the oppreſſion of tyrants, and the invaſion of foreigners: a more noble end than getting gold, or enlarging dominions.

When they had ſtaid ſome time at *Comogra*, and promiſed the young gentleman to return with the 1000 men, they went back to *Darien*, where ſoon after *Valdivia* arriv'd with a ſmall caravel of proviſions from *Hiſpaniola*, (there having been no larger veſſel there) but he aſſur'd them, from the Admiral, that they ſhould ſoon be well ſupplied.

After they had ſpent the ſupply brought from *Hiſpaniola*, they ſent *Valdivia* back thither, with the King's tax of gold, amounting to 300 pound weight. And, the garriſon dividing themſelves, 100 went with *Nunez* in a brigantine and canoes, coaſting along weſtward in ſearch of food; and 60 went with *Colminaris* into the country; but the inhabitants

fled

fled before them every where, leaving gold and furniture, but no provisions, of which they were in great want. *Colminaris* came to one kingdom, whose king had his palace in the top of an high tree, who refusing to come down, the *Spaniards* began to cut the tree with axes, which making the chips fly about, the King and his two sons came down in a friendly manner, and promis'd to send people to gather gold for them; because they had none ready, it being in no esteem with them. Here they were entertain'd, and drank wine made of fruits of different kinds, which they kept in cellars at the foot of the tree. But when they were gone, the King descended from his palace, and retir'd to the mountains, with his whole family; not thinking any more of the gold he had promis'd.

A King's palace in the top of a tree.

Nunez and *Colminaris*, having spent some time in these excursions, return'd to *Darien*, taking what care they could of some plantations they had made there, by the assistance of such natives as they had taken prisoners, or else were sent by the Kings; who, to curry favour with them, made their people labour their ground. About this time they escap'd a dangerous conspiracy; which, had it not been discover'd, would have ended their labours and lives together.

The Kings their neighbours, who had fled their countries upon the *Spaniards* approach, happening to meet in the mountains, enter'd into a league together against the common enemy; and agreed upon a certain day, that all of them should meet, and fall upon the *Spaniards*; and in the mean time, they privately sent in good store of provisions for their army, to a village call'd *Tichiri*, not far from *Darien*. This Plot was discover'd by a gentleman, belonging to one of the Kings, to a sister of his, one of the most beautiful women of the country, who was *Nunez*'s prisoner, but well us'd. The brother's design in revealing it (at a private visit he made her) was, that she might get out of the way at the time appointed, for fear of danger. This woman, either from a love for *Nunez*, or out of fear, reveal'd the whole Plot. *Nunez* bid her send for her brother, which she did; who, being examin'd, readily confess'd the whole design. *Nunez*, upon this discovery, march'd immediately with 70 men to the palace of one of the chief confederates; but missing himself, he took his family; and, at the same time, *Colminaris* sail'd up the river with four of the largest canoes and 60 men, with the maid's brother for his guide, to *Tichiri*, where he hang'd the Governor of the place, and seiz'd all the provisions; and finding four more of the chief persons employ'd in the management of the design, he order'd them to be shot with arrows. These executions made the *Indians* quietly submit to the power of the *Spaniards*.

When they had thus luckily escap'd the danger, they resolv'd to send some of their number to solicite the 1000 men propos'd by the young *Comogrian*; and, after some debate, they pitch'd upon *Colminaris*, and *Quicedus*; who undertaking it, sail'd for *Hispaniola*; and touching at *Cuba*, found *Valdivia*'s vessel broken in pieces; and were inform'd by two *Indians*, that the whole crew had been destroy'd by the natives; but *Colminaris*, finding himself unable to revenge their death, departed from *Cuba*; and, after a tedious and dangerous voyage, arriv'd at *Hispaniola*, where he was inform'd of *Ojeda*'s death. They made no stay in that island, but having inform'd the Admiral of the state of their colony at *Darien*, set out for *Spain*, where they landed in *April*, 1513.

Some time after *Colminaris* and *Quicedus* left *Darien*, *Nunez*, being under some apprehension of the success of *Anciſus*'s accusation; as he was conscious that he had got himself into power at *Darien* by indirect means, he began to be afraid of the King's resentment; and, as the least that could happen upon that, his being superseded by a new Governor sent from *Spain*; he therefore resolv'd to attempt something that might make him considerable, and perhaps ingratiate him with the King, if he succeeded in his design. Being a man of an enterprizing genius, and romantic courage, he intended to try with 200 men, what was believ'd to be a dangerous undertaking with a 1000. And in order to this, he set out in *Sept.* 1513, with one brigantine, and ten canoes, and sail'd up the river to *Poncha*'s territory, who fled as formerly, upon the approach of the *Spaniards*. But *Nunez* having no mind to leave an enemy behind him so near *Darien*, sent messengers to him, chosen out of *Careta*'s subjects, offering him his friendship; which the other accepting, came to him, enter'd into an alliance, and gave him guides to conduct him over the mountains.

Nunez's bold attempt.

In his march he had the Kingdom of *Quarequa* to pass thro', where he was oppos'd by the King, with a number of his people in arms. The *Spaniards* stood the assault, and discharging their guns upon the enemy, so astonish'd them with the noise and smell of the powder, (a great many *Indians* being kill'd with the first fire) that they all turn'd their

backs and fled, not thinking their numbers sufficient to stand against people who carried thunder and light'ning about them. The *Spaniards* pursuing them, kill'd above 600 of them, together with their King; who indeed deserv'd this fate more justly than any of those whom they sacrificed hitherto; for he was a monster for unnatural lust, as they were inform'd, and saw evident signs of it at his house, which they rifled. There they found his own brother, and many other youths, the horrid subjects of his brutality, dress'd in such attire as the better sort of women wore in that country; about 40 of whom *Nunez* gave to a set of dogs, (which he made use of in the war against the naked *Indians*) who devour'd them, to the great joy of the meaner sort; who finding such exemplary punishment inflicted upon those wretches, came to him from all quarters, dragging along with them all such as they knew to have been corrupted by the sad example of the King's family, desiring him to give them for a prey to his dogs.

He punishes Sodomy.

Nunez proceeding on his march, with some guides of this country, on the 24th of *September* reach'd the top of the mountains, from whence, to their infinite joy, they had a view of the South-Sea; at which all the *Spaniards*, falling upon their knees, gave Thanks to God Almighty, and pray'd for success. Here they carved the King of *Spain*'s name on several trees, and put several heaps of stones together; that in case they should miscarry, there might remain a monument of their having been there. This done, they march'd down the hills towards the South-Sea; and coming to *Chiapes*, a kingdom on the side of the mountain, they were stop'd by the *Indians* assembled in arms; but this army was put to flight by the terrour of their guns; *Nunez* forbad any slaughter without necessity; so that there were only five kill'd, but many made prisoners; several of whom he releas'd in a friendly manner, and sent them in search of their King, whom he invited to come to him; which he did, and they enter'd into a league, and made presents to one another; the King giving the *Spaniards* gold, as the other Kings had done, and he, on the other hand, making the King a present of looking-glasses, hawk's-bells, *&c.*

They come in sight of the South-Sea.

Nunez being now near the coast of the South-Sea, whither the King of *Chiapes* offer'd to be his guide, sent for the guides, which he had from the north-side of the hills, and rewarding them for their trouble, dismiss'd them. In four days he arriv'd upon the shore, with his new Ally, and took possession of that ocean, in the King of *Spain*'s name; and passing a large river, in the gulph of *St. Michael*, and Bay of *Panama*, he beat the King of *Coquira*; and, after several messages, made peace with him, receiving from him 650 pound weight of gold. Here he would needs visit some of the islands, much against the inclination of the King of *Chiapes*, who told him the danger of going upon that sea, at that season of the year. After some difficulty, and being only able to land in one island, he was forced to come to land; when he marched to the Kingdom of *Tumaccus*, who coming against him with his army, shar'd the same fate with the other *Indians*; and, with great difficulty, was persuaded to come to *Nunez*; but coming at last, and making peace, he sent him 614 pound weight of gold, and 240 large pearls; and finding that the *Spaniards* were fond of the pearls, he sent some of his people to fish, who, in four days, brought 12 pound weight of such as they call orient pearls.

From hence *Nunez* would have gladly gone to the pearl island, which they told him was about 30 miles from the coast; but the Kings dissuaded him from it, upon the account of the season; so that he left the coast, and dismiss'd the King of *Chiapes*, intending to return to *Darien* by another route.

He had so good fortune in this expedition, that tho' he had many skirmishes with the *Indians*, he had not lost one man, nor receiv'd the least hurt himself. And the like good fortune attended him in his return, except his falling ill of a fever towards the end of his march. He visited several Kingdoms, and receiv'd the submissions of all the Kings as he pass'd, and had presents of gold from all; only he surpriz'd *Tumanama* (of whom the young *Comogrian* had given them an account); when he was made prisoner, *Nunez* pretended that he would put him to death; but, upon his humble submission, he releas'd him. Thus, in about six months, he came back to *Darien*; having pass'd thro' many rich countries, and discover'd the South-Sea, never seen by any *European* before. These discoveries reconcil'd him to the King of *Spain*; and tho' he was but of mean extraction, and had but an indifferent character before, his prudent conduct and courage so recommended him at the court of *Spain*, that he was made the King's Lieutenant in all that part of the continent.

Whilst *Nunez* was on the south side of the mountains, above *Darien*, preparations were making in *Spain* for a fleet, to convey *Peter Arias*, or, (as he

was

was call'd corruptedly) *Pedrarias*, to *Darien*, with the King's commiſſion, as Lieutenant and Commander in chief of that colony; and accordingly,

Peter Arias *ſent governor of* Darien.

In the beginning of *April*, 1514, *Pedrarias* ſet ſail with 17 ſhips, and 1500 men, from *Guadalquiver*, on the coaſt of *Andaluſia*; and having ſtop'd at the *Canaries* to water, held his courſe to the continent of *America*; and coming to the coaſt of *Paria*, he was attack'd, even in the bay, by the natives (whom they ſuppos'd to be of the race of the *Canibals*.) Theſe Savages ſeem'd to have no apprehenſion of the bulk or number of the ſhips; nor would they have been hindred from ſhooting their poiſon'd arrows; but by diſcharging the great guns, loaded with cartridge-ſhot; which, doing great execution, they took for thunder and light'ning, (of which they are much afraid) and made to the ſhore. The *Spaniards* purſu'd them in their boats, and landed 500 of their men, who march'd after the Barbarians, a good way into the country, and had ſome skirmiſhes with them; but they ſtill made off, and ſeem'd confounded at the report of the guns. The Governor cauſing the ſignal of retreat to be made, his men return'd, bringing ſome of the ſpoil of the country with them, which they had taken out of their houſes; ſuch as bracelets, collars, feathers of different colours, made into cloaks, and ſeveral odd trinkets. Having coaſted a great way to the weſt and ſouth-weſt, and touch'd at ſeveral places, they arriv'd at *Darien* the 18th of *June*; where they were receiv'd by the garriſon three miles out of town.

After ſome time had been ſpent in careſſing one another, the new Governor call'd an Aſſembly of the old garriſon, and of the officers he had brought with him; where having caus'd his commiſſion to be read, he told them of ſeveral articles, concerning which he had inſtructions to enquire; and, particularly with regard to *Nunez*. But, having heard of his behaviour in the ſouthern expedition, the diſcovery of the ſouth-ſea, and of the ſeveral places upon that coaſt; and that he had ſent a particular account to *Spain*, of the whole affair, he made no farther ſearch into his conduct otherwiſe; not doubting but that the importance of that ſervice would cancel any former errors; and he judg'd right: for, upon the King's being apprized of what he had done, and his being ſufficiently certified of the truth of his letters, his Majeſty immediately ſent him a commiſſion to be Admiral of the ſouth-ſea, with full power to build forts, and plant colonies, upon ſuch places on that coaſt as he ſhould think moſt proper; over all which he was made Governor.

Nunez *gets the government of the ſouth ſide.*

This happening ſoon after *Arias*'s arrival, *Nunez* gave him no trouble in the government of *Darien*; but, in concert with him, took the old ſoldiers of that garriſon, recruited with as many of thoſe of *Arias*, as made his whole army 400; and with thoſe ſail'd up the river, as far he could, paſs'd through the kingdoms of his former friends, to the coaſt of the ſouth-ſea, where he had been before; and there began to build forts, from place to place, as he found it moſt commodious; getting gold, by way of tribute, from all his neighbour regions, and employing the ſubjects of his confederates to aſſiſt his own men in building, and gathering gold.

In the mean time, the Governor of *Darien* did not behave with that prudence, and care, which were requiſite in a ſtrange country, and after a new conqueſt: for, he ſuffer'd his Lieutenant, *John Aiora*, (who was the moſt covetous man alive) to uſe the *Indians* moſt barbarouſly; exacting gold of them in ſuch a manner, as diſoblig'd all the Kings north of the mountains; ſo, that what they before brought of their own accord, as tribute, or exchang'd willingly for trifles, was, in a ſhort time, not to be purchaſed but by ſtrokes. In this the Governor acted very unpolitically, as well as unjuſtly; for, thoſe Kings being exaſperated, omitted no opportunity of cutting off the *Spaniards*, when they came in their way. The Lieutenant having amaſs'd a great treaſure to himſelf, by uſing the natives tyrannically, made an elopement from *Darien*, in a ſhip which he ſtole, as ſome believe, with the Governor's connivance; becauſe of the ſtrict friendſhip between him and *Gonſalvo Aiora*, the Lieutenant's Brother.

Arias's *Lieutenant diſobliges the* Indians.

Nunez *builds ſhips in the bay of* Panama.

Nunez having ſettled upon the coaſt of *Panama*, on the ſouth-ſea; and having occaſion for ſome brigantines, to ſcour the ſeas, and to viſit the iſlands thereabouts, for making farther diſcoveries, ſent to the north-ſide of the mountains, and had ſome timber fell'd there, which, with a vaſt fatigue, he brought over, drawn by his own men, with the help of the natives, together with iron, cordage, and all other neceſſaries brought from *Spain*; wherewith he built two ſmall veſſels to cruiſe along the coaſt.

Arias *and* Nunez *fall out.*

But theſe two Governors, notwithſtanding the mountains between them, were too near one another to be long friends: whether it was, that *Pedrarias* was willing to ſubject *Nunez* to his command, or, that he had no mind to let him govern alone, in a country ſo rich of gold

gold and peals; or, if there was any ground for *Arias*'s accuſing *Nunez* of a deſign to rebel, and to ſet up for himſelf, does not ſufficiently appear: but there being a plot laid to ruin him, *Arias* decoy'd him, upon ſome pretence or other, to *Darien*, where he clapp'd him up; and bringing an indictment againſt him, before a court of juſtice eſtabliſh'd there, it was ſworn, that he had propos'd to deſert the colonies already ſettled on the coaſt of *Panama*, and ſet up, independent of King or Government, in ſome place diſtant from thoſe already diſcovered; which being atteſted, and *Arias* bent upon his deſtruction, though *Nunez* poſitively denied the whole charge, he was condemn'd, and executed: a fate not deſerv'd by a perſon who had, in the latter part of his life, behav'd with ſo much prudence and bravery.

Nunez put to Death.

But *Arias* having it in his inſtructions from *Spain*, to make what diſcoveries he could on the continent, ſent *Badaiocius* with 80 men towards the weſt, who ſailed as far as *Gracias a Dios:* but, by the account our author gives of it, I ſhould rather think it was the port of *Conception*, or, *Porto-Bello:* for he ſays it is 180 miles from *Darien*, and, that there is a ſhort tract of land between that and the ſouth-ſea, not above 17 leagues: neither of which will agree to *Gracias a Dios*, which, in a ſtrait line, is above 350 miles from *Darien*, and 35 leagues from the neareſt part of the ſouth-ſea. Here *Badaiocius* was join'd by *Mercado*, who had been ſent out with 50 men, to diſcover the inland country, towards the weſt. They agreed to march over the mountains, towards the ſouth-ſea; which they did, plundering the Kings that fled, and receiving good quantities of gold from thoſe who receiv'd them friendly; ſo that they were laden with riches, and had got about 20 ſlaves to carry the gold, which they could not carry themſelves. But being too ſecure in their march, King *Pariza*, not far from the *Panama* coaſt, fell unexpectedly upon them, and almoſt cut them all off. The few that eſcap'd, got to *Darien*; but had neither gold nor ſlaves.

Badaiocius defeated.

The Governor, to revenge the ſlaughter of his men, ſent *Spinoſa* with a good force towards *Panama* Bay; who defeated *Pariza*, and kill'd as many as reſiſted; and getting ſome gold, he left *Ponce de Leon* with a ſmall force at *Panama*, and return'd to *Darien*: from whence he was ſent, two years afterwards, by the Governor, and built the city of *Panama*. *De Leon*, with the few forces which he had, and bad ſhipping, having only ſmall barks, coaſted toward the weſtern parts of the South-Sea, as far as *Nicoya*, in the province of *Nicaragua*, 140 leagues to the north-weſt of *Panama* Bay. But not having force ſufficient to ſubdue the people, whom he found in arms, he return'd to his poſt.

And reveng'd.

About this time, or a little before it, 1515, the King of *Spain* ſent *John de Solis* to diſcover more of ſouth *America*. He ſet ſail on the 8th of *October*; and, paſſing the Line, came up with *Rio de Janeiro*, on the coaſt of *Brazile*, under the Tropic of *Capricorn*; and from thence held his courſe ſouthward to cape *St. Mary*, about 36 deg. ſ. lat. where he landed, and took poſſeſſion in the King's name. From thence he turn'd up the *River of Plate*, with only one caravel; and, the people from the ſhore inviting him, landed with as many men as his boat could carry; where being decoy'd by the natives from the ſhore, they were ſet upon, and every one kill'd, notwithſtanding firing of the guns from the ſhip, to frighten them. After this ſlaughter, the barbarous people cut off their heads, arms, and legs, and roaſted the trunks of their bodies, and eat them, in ſight of their companions aboard. After this horrid ſight, the caravel ſail'd down the river, and joining the other ſhip, they both bore down to cape *St. Auguſtine*; where lading with *Brazile* wood, they return'd to *Spain*.

John de Solis ſails to ſouth America.

Is kill'd and eaten.

In 1517, *Hernandez de Corduba* was ſent by *Velaſquez*, then Governor of *Cuba*, to make new diſcoveries farther weſt. Having ſail'd 21 days, they came near land, and perceiv'd a large town; and immediately ſome canoes coming out to them, about 30 of the natives came aboard, wearing ſhort jackets without ſleeves, and a ſort of looſe breeches. The *Spaniards* treated them very civilly, and diſmiſs'd them. The next day 12 canoes came from the ſhore to them, on board one of which was one of their Kings; who invited the Captain, with theſe words, *Conez Cotoche*, which the *Spaniards* taking for the name of the place, gave that cape the name of *Cotoche*, being the north cape of *Jucatan*, over-againſt the weſt point of *Cuba*, in 22 deg. n. lat. The *Spaniards* going a-ſhore, were ſet upon by the natives, who lay in ambuſh for them; but they ſoon put them to flight. Here they ſaw temples of ſtone and lime, with idols in them. But finding no encouragement to ſtay, they return'd to their ſhips, and held on their courſe towards the weſt, as far as *Campeche*, on the weſt-coaſt of *Jucatan*, in 19 deg. Coaſting ſtill along, they landed to water at *Pontnochan*, where, the natives ſetting upon them, they loſt 50 men; the reſt eſcap'd, but were

Hernandez de Corduba.

Jucatan.

were much wounded. From hence they
Florida. ſtood northward for the coaſt of *Florida*, having burnt one of their ſhips for want of hands; going a-ſhore there for water, five men more were kill'd by the natives; but the *Spaniards* got the better, and brought off their water, ſailing
Herriera. directly to *Cuba*, where the Captain died of his wounds.

The Governor *Velaſquez*, liking the account they gave of the country, fitted out three ſhips, and a brigantine, with 250 men, under the command of *John de Griſalva*, with orders to make the ſame voyage; and, to that end, the ſame pilot was aſſign'd them: the Captain ſet ſail from *Cuba* on the 9th of *April*, and following the currents ſouth-weſt, came up with the iſland *Cozumel*, about 40 leagues ſouth of *Cotoche*, mentioned in the voyage of *Hernandez*: this iſland, *Griſalva* called *Santa-Cruz*; becauſe he arriv'd there the 3d of *May*, the feaſt of the invention of the croſs; but in our maps it retains the old name. Having ſtaid there three days, and receiv'd the civilities of the King of the iſland, they kept on their courſe weſtward to *Jucatan*; and coaſting on the north-ſide of it, they came to *Campeche*, where, at firſt, they were invited to land; but when thoſe that went aſhore, were near the town, the natives chang'd their minds, and bid them ſtop, with an imperious tone; but upon diſcharging ſome guns from the ſhips, the *Indians* fled; and the Captain hindering the *Spaniards* to purſue them, they went on board, and held their courſe ſouthward to a river on the ſouth part of the bay of *Campeche*, which they call'd the river of *Griſalva*. Here the natives came in great numbers to the ſhore, with breaſt-plates and targets of gold; and bows and arrows of heavy wood. Soon after, 100 canoes ſurrounded the ſhips, full of armed men; but upon hearing, by the *Cuba* interpreters, that the *Spaniards* wanted only to trade for gold, and deſign'd no violence, they retir'd; and their Cacique came on board, and arm'd *Griſalva*, with his own hands, *Cap-a-Pie*, with armour of beaten gold, curiouſly wrought; and was preſented in return of it, with cloth, linnen, and other things. Sailing from thence, and coming to three ſmall iſlands in the ſame Bay, they ſtop'd at the largeſt of them, which they call'd the Iſland of *Sacrifice*, becauſe they found the natives ſacrific'd Children to their Idols. There they were told, that ſome of the adjacent iſlands were peopled only with women, who admitted men to come to them once a year. Coaſting along, they came to *Pontonchon*, which borders upon *Mexico*. Here the capital city conſiſted of 15000 houſes. Adultery and Fornication was ſcarce known among theſe people; but when a man is married he may have concubines, or (which ſeems much the ſame) plurality of wives; but, if a marry'd woman is taken in adultery, her husband may ſell her, to the Prince only; from whom her relations may redeem her. The manners and behaviour of theſe people, and the country itſelf, were ſo agreeable, that the *Spaniards* ſpent many days in it, with pleaſure; but being bent upon farther diſcoveries, they left them, and coaſted along the whole great and rich Kingdom of *Mexico*, under the dominion of the famous *Montezuma*; in moſt places of which they were well receiv'd, and got abundance of gold; but when they approach'd one large City, they were forbidden to enter it, by an army of *Indians*; who fled at the *Spaniards* firing their guns. *Griſalva* having ſail'd almoſt round the Bay of *Mexico*, return'd to *Cuba*.

CHAP. III.

HERNANDO CORTEZ's *Expedition to* Mexico.

Extracted from Don ANTONIO DE SOLIS.

PERHAPS the Actions of *Cortez* may, by ſome, be thought of a nature too hiſtorical to find a place here; as being a ſort of digreſſion from our proper deſign: but there is ſomething ſo very entertaining in the relation, and of ſuch dependance upon what we have laſt treated of, that we judg'd we could not better pleaſe the Reader, than by giving a ſhort account of it in this place.

Tho' the *Spaniards* had made conſiderable diſcoveries upon the coaſt of *America*, as has been ſhewn; yet they had, hitherto, but very little of the country in poſſeſſion; for, tho' they had now conſiderable colonies in *Hiſpaniola*, *Cuba*, *Porto-Ricco*, and *Jamaica*; the ſmall

garriſon at *Darien* (which about this time ventur'd over the mountains to the South-Sea) was all they could boaſt of in the whole *American* Continent. Nor can it be ſaid that they had, as yet, try'd the force of any potent *Indian* Monarch, having only encounter'd with little Kings, whom they call'd *Caciques*.

But by the laſt accounts (brought to *Cuba* by *Griſalva*, or *Grijalva*) *Velaſquez*, Governor of that large Iſland, was reſolv'd to purſue the diſcovery of the great dominions of *Montezuma*, the powerful Emperor of *Mexico*. But as he was an ambitious, as well as a covetous man, he determin'd to have that diſcovery made in his own name, that he might have both the honour and profit, if it ſucceeded. He was, therefore, in great doubt who to truſt with the execution of the deſign; for tho' *Griſalva* was his relation, he pretended to be very angry with him for not having made a ſettlement in that part of the Continent, notwithſtanding his own poſitive orders to the contrary; ſo that upon *Griſalva*'s return to *Cuba*, he reprimanded him publickly for that pretended neglect; and declar'd he would make choice of another perſon for a new voyage to *Mexico*.

There were, at that time, in *Cuba*, many perſons of diſtinction of the *Spaniſh* Nation, both for birth and valour. Many of theſe ſet up as candidates for this poſt; but the Governor's ambition making him jealous, he was afraid that ſuch as he knew qualify'd for the undertaking, might rob him of the credit and advantage.

Whilſt he was unreſolv'd whom he ſhould truſt, two of his moſt intimate confidents, the King's treaſurer, and the ſecretary, propos'd *Hernando Cortez*; but ſo artfully, that they did not give any great encomium of him; but ſpoke of him only as a perſon of courage, and one who had behavd well in inferior ſtations.

Cortez was a man of a good family, who having a natural inclination to arms, had come with good recommendations to *Hiſpaniola*, in the year 1504; but finding that iſland not to anſwer his warlike genius, becauſe the *Spaniards* were, in a manner, peaceable poſſeſſors of it, he took the firſt opportunity of going to *Cuba*, where he got great reputation; and after ſome ill uſage from the Governor *Velaſquez*, he was promoted by him to be *Alcade*, or chief Magiſtrate, of *St. Jago*, where the Governor had his reſidence: and they were then very good friends; ſo that the recommendation was well receiv'd, and an ample commiſſion (drawn by the ſecretary) was ſign'd by the Governor, to the great mortification of the other pretenders; who endeavour'd, but in vain, to divert *Velaſquez* from it. *Cortez choſen to ſend to Mexico.*

All things being prepared by the Governor, and *Cortez*'s own vigilence and intereſt, and his ſoldiers being embark'd, he took leave of *Velaſquez*, with great appearance of eſteem and friendſhip on both ſides; and going on board the *Capitana*, or Admiral-ſhip, he ſet ſail, with many perſons of diſtinction, for *La Trinidad*, another Garriſon of *Spaniards* in the ſame iſland. Many of his friends in this place, as ſoon as he had declared his deſign, offered to accompany him, which he accepted; and was here joined by 100 ſoldiers, beſides many gentlemen, who went as voluntiers.

But before he left this port, *Velaſquez* (having ſuffer'd his jealous temper to be enflam'd by thoſe who envy'd *Cortez* the honour of this command) ſent an expreſs to a kinſman of his, at that time *Alcade* of the place, to degrade him of his poſt of Captain-general, in a judicial way, by declaring that the governor had recall'd his commiſſion. But *Cortez*, having ſounded the inclinations of his ſoldiers, and finding they were reſolved to ſtand by him, went to the Alcade, and repreſenting the diſhonour that was put upon him, ſaid, that he could not anſwer for what his ſoldiers might do, if he ſhould attempt to affront him, by putting *Velaſquez*'s orders in execution. The Alcade, either from fear or generoſity, not only neglected the governor's meſſage, but wrote to him, deſiring him to deſiſt from his reſolution, it being both unjuſt and impracticable. *Endeavours us'd to ſtop him.*

Having thus warded the Blow, *Cortez* ſail'd with his fleet to the *Havana*, on the weſt part of the iſland. In this voyage, his own ſhip being ſeparated from the reſt, had like to have been loſt upon a rock; but by Providence, and his own management, he got clear, and arrived at *Havana*; where ſeveral other gentlemen liſted themſelves for the expedition. Here again, *Velaſquez* ſent orders to get him diſpoſſeſs'd of his command, and ſent back priſoner. This ſo provok'd *Cortez*, that he reſolv'd to bid him defiance, whatever was the event. In order to this, he ſent off (without diſguſting him) *Diego de Ordaz*, whom he ſuſpected, as being a relation to the governor, under pretence of taking in proviſions at a port near cape *St. Antonio*; and after he was gone, complaining to the ſoldiers of this repeated affront, they clamour'd ſo loudly, that the Alcade of the garriſon thought it the wiſeſt courſe to give them aſſurance that he would act nothing againſt their General; *He ſails to the Havana.*

ral, coming in Perſon to ſhew how much he reſpected him; and having thus made all things quiet, *Cortez* went on board the fleet, which, with the ſhip ſent off with *Ordaz*, conſiſted of eleven ſail; having diſtributed his ſoldiers into as many companies; putting a company, with their proper officers, on board each ſhip.

Arrives at Cozumel.

Thus, upon the 10th of *February*, 1519, he ſet ſail from the *Havana*, having given orders to the whole Fleet, that, in caſe of a ſeparation, they ſhould rendezvous at *Cozumel*, formerly mention'd, an iſland eaſtward of the coaſt of *Jucatan*, or *Yucatan*; and having likewiſe diſpatch'd advice to *De Ordaz* to join him, upon his arrival at *Cozumel*, he landed all his forces, which amounted to 508 foot, and 16 horſe; beſides 109 ſeamen and mechanicks, and two chaplains. Upon their going a-ſhore, the natives ſtood at a diſtance in companies, but without any act of hoſtility; and at laſt, ſome of the boldeſt among them came nearer; and finding that the *Spaniards* did not offer them any hurt, they enter'd the camp, and began, in a ſhort time, to be familiar with the ſoldiers: and the next day the *Cacique* came to viſit the General, who receiv'd him kindly.

In this interview a ſlight incident became of great uſe to the General afterwards; for, happ'ning to hear an *Indian* of the *Cacique*'s train pronounce the word *Caſtilla*, *Cortez* enquir'd what he meant by it? The *Indian* ſaid, by the interpreter, that the *Spaniards* reſembled ſome priſoners who were in *Jucatan*, from a far country call'd *Caſtilla*; but could inform him nothing farther; ſo that applying himſelf to the *Cacique*, and telling him he would ſend to reſcue them, he was by him rather adviſ'd to do it by way of ranſom, than by force; leſt ſuch an attempt might be fatal to the priſoners. *Cortez* took his advice, and diſpatch'd *De Ordaz* with his ſhip to *Jucatan*, with ſome of the *Cacique*'s people, who were to land, and carry a letter to any of the priſoners they could find; with inſtructions to *Ordaz* to return in eight days. But *De Ordaz* hearing nothing either of the priſoners, or of the *Indians* (whom he ſet a-ſhore) in the limited time, return'd without them.

In this iſland, *Cortez* made a bold ſtep, in letting his ſoldiers deſtroy the images of the idols he found in ſome of their temples; at which the *Cacique* and his people were confounded: but finding no extraordinary vengeance from Heaven upon the ſtrangers, for this diſreſpect to their Gods, they began to think meanly of their Deities, who could bear ſuch an affront. The General endeavour'd to give them ſome notion of the *Chriſtian* Religion, but did not ſtay long enough, nor was he well enough underſtood to make any conſiderable progreſs.

After ſome time ſpent in *Cozumel*, he purſued his voyage; but one of the ſhips firing a gun, and tacking about, ſtood in for the iſland; the reſt, by *Cortez*'s order, follow'd her; and coming to ſhore, they found the ſhip almoſt full of water: this ſtopp'd the fleet till ſhe was careen'd, which prov'd a lucky hindrance to *Cortez*; for juſt as they were ready to embark, they ſpy'd a canoe coming from the coaſt of *Jucatan*, in which was one of the *Spaniards* who was ſaid to be priſoner there, together with the *Cozumelians*, whom *Ordaz* had carried over. This *Spaniard*'s name was *Aguilar*, who had been eight years in ſlavery; having been, probably, one of *Nicueſſa*'s people, who had been upon that coaſt in a miſerable condition, about eight years before, as we have already obſerv'd. This *Aguilar* was of ſingular uſe to *Cortez* afterwards; becauſe he had learn'd the language of the natives: he ſaid, there was no other *Spaniard* alive in *Jucatan*, but one Sailor: who, being married to an *Indian* Woman, would not leave the place.

Aguilar, a Spaniard, who had been eight years priſoner in Jucatan, *comes to* Cortez.

Setting ſail a ſecond time, upon the 4th of *March*, they doubled cape *Catoche*, and coaſted along, till they arriv'd at *Tabaſco*, where *Griſalva* had met with friendly entertainment the year before. Here the General ſtopp'd to pleaſe the reſt, but did not deſign to ſtay long; having his head full of the dominions of *Montazuma*. However, he landed in this river (which bore the name of *Griſalva*,) tho' the *Indians* fought hard to oppoſe it; and afterwards engag'd again, to prevent the *Spaniards* taking the town of *Tabaſco*; which they did that night. The *Indians* were handled ſo roughly, that the next day there was not one to be ſeen. But *Cortez*, to be better ſatisfied, ſent out two of his captains, with 100 Men each, to ſearch the country. *Lugo*, one of the Captains, engag'd with a ſmall party, which lay in ambuſcade; but their number ſtill encreaſing, he found it difficult to keep his ground, till he was reliev'd by the other captain, *Alvaredo*; who, hearing the noiſe, came to his aſſiſtance; upon the ſurprize of which the *Indians* fled. In the *Spaniards* retreat to their quarters, they were attack'd by a freſh party of *Indians*; but *Cortez*, having had an account of their firſt engagement, remov'd towards the place with a ſtrong reinforcement; and, upon his appearing in ſight, the enemy again fled.

Cortez arrives at Tabaſco.

By

By ſome priſoners taken that day, they had intelligence, that all the neighbouring Kings had appointed to rendezvous at a certain place the next day, to fall upon the *Spaniards* at once. To be in readineſs for them, *Cortez* order'd his artillery and horſes to be brought aſhore. When he had drawn up his foot, he gave the command of them to *De Ordaz*, and himſelf, with the other captains, took horſe; and moving ſlowly with the artillery, went to the place which the priſoners had told him was to be the place of rendezvous; and about a league from their qnarters, they perceiv'd a great Army of *Indians* in full march towards them.

The arms of the Indians, and their manner of fighting.

This Army conſiſted of the natives of *Tabaſco*, and many other people of the adjacent countries, their confederates. For arms, ſome had bows and arrows, the bow-ſtrings being the ſinews of beaſts, or thongs of deer-skins twiſted; and their arrows headed with ſharp bones: others had darts, or Javelins, which they threw at a diſtance, or us'd like ſpears, as occaſion requir'd; their ſwords were long, and made of wood, with ſharp flints fix'd in them: ſome had clubs; others ſlings, out of which they threw ſtones with wonderful force and dexterity. Their defenſive arms (which were only us'd by their commanders) were coats of quilted cotton, ill-fitted breaſt-plates; targets of wood, or tortoiſe-ſhell; adorn'd with plates of ſuch metal as they could get: all the reſt were naked. They painted their bodies of different colours, and diſfigur'd their faces, to make them the more terrible; and, to add to their ſtature, they wore plumes of feathers on their heads. They uſed likewiſe, warlike inſtruments of muſick, ſuch as flutes, made of Canes; ſea-ſhells; and a ſort of drum made of the trunk of a tree, hollow'd, and cut thin; which, by being beaten with a ſtick, made a noiſe well ſuited to the ears of thoſe people. In ranging their Army for battle, they form'd their batallions in great numbers, without order; but had corps of reſerve, to make uſe of as occaſion offer'd; and in attacking, they made terrible outcries to ſtrike fear into their enemies.

This Army, to the number of 40,000, *Cortez* had now to engage; and therefore, riding chearfully amongſt his own few ſoldiers, he encourag'd them to the battle; but forgot not to take the advantage of the ground, and to place his artillery to the beſt advantage. He went aſide, with his fifteen horſe, to a wood, where he advanc'd ſo far, as to be able to flank the enemy at a proper time.

The *Indian* Army, coming within diſtance, firſt diſcharg'd their arrows, and other miſſive weapons, and then attack'd the *Spaniards* with great fury. But here great ſlaughter was made of them; for, as they advanc'd in cluſters, without due order, the artillery hew'd down whole companies at once: yet they ruſh'd on with precipitation, as being acted by rage and madneſs, rather than courage. *A battle with the Indians, who fight boldly,*

De Ordaz behaving himſelf like a valiant man, and a good ſoldier, animating his men, made havock of them; firſt with muskets and croſs-bows, and at leſs diſtance with ſwords; yet their numbers were ſo great, that it had been impoſſible to have ſtood the renew'd attack for any time, if *Cortez*, by falling upon their Rear, and treading them down with his horſe, had not ſo ſurpriz'd and diſ-ſpirited them, that they threw down their arms, to be at liberty to fly with greater ſwiftneſs. *De Ordaz* quickly perceiv'd the effect of this attack; and gueſſing the occaſion of their confuſion, purſued the advantage, and beat the fartheſt advanc'd back to the place which *Cortez* had clear'd of their companions; and the horſe and foot joining, after a ſmall reſiſtance, put the whole army to flight. *but are put to flight.*

Cortez would not let his men purſue the ſlaughter; having a mind to make peace with thoſe people, in order to proſecute his other deſigns: he therefore order'd them to take ſome priſoners, whom he might employ in the negociation of peace, and ſo ſounded a retreat. In this battle above 800 *Indians* were kill'd, aud a great number wounded; the *Spaniards* having loſt only two men, and ſeventy wounded. Tho' the *Spaniards* behav'd with a great deal of courage and bravery; yet, doubtleſs, the 15 horſe occaſion'd this ſo ſudden victory: for, the *Indians* having never ſeen horſes before, took the man and horſe to be one; and ſo believ'd that ſtrange monſters were let looſe to deſtroy them.

The next day, *Cortez* calling the priſoners, ſpoke kindly to them, made them ſome trifling preſents, and ſet them at liberty, to their infinite ſurprize and joy; for they expected to be treated as they treat their priſoners. This unexpected clemency had its deſign'd effect; many *Indians* coming, a few hours after, laden with Wheat, Fowl, and other proviſions, to make way, by that preſent, for the peace they were come to propoſe in the name of the principal *Cacique* of *Tabaſco*. Tho' the General was very deſirous of peace; yet, being inform'd by *Aguilar*, that it was the cuſtom of the country to ſend their principal people upon treaties of that kind, he refus'd to hear any propoſals from ſuch as were of the

the meaner ſort; bidding them tell their *Cacique*, that if he deſir'd his friendſhip, he muſt ſend perſons of greater account to treat with him.

The *Cacique* ſent, the next day, thirty *Indians* of quality, in their proper ornaments of plumes and jewels, to excuſe his fault, together with a preſent of the ſame kind as before. *Cortez*, with an affected gravity, receiv'd the ambaſſadors, and having reprimanded them, made peace with them; and the *Cacique* himſelf coming ſoon after, was well receiv'd. They ſent the General ſeveral preſents, but particularly one *Indian* woman of great beauty, whom *Cortez* afterwards converted to the Chriſtian Faith, and call'd her *Marina*; who did him much ſervice, by her good ſenſe, and prudent conduct: eſpecially by being able to interpret between him and the *Indians*, when ſhe came to underſtand *Spaniſh*, which ſhe ſoon acquir'd.

Cortez arrives at St. John d'Ulua.

Having quieted all things in this place, *Cortez* left his new ally, and ſet ſail for the *Mexican* dominions; paſſing by ſeveral places, where *Griſalva* in his voyages had formerly touch'd. At laſt the Fleet came to anchor at *St. Juan de Ulua*, on the ſouth coaſt of the Gulph of *Mexico*. Two canoes came immediately to them, without any ſign of fear; but, to *Cortez*'s great trouble, *Aguilar* did not underſtand the language of the *Indians* who came in them. Here the *Indian* woman (afterwards nam'd *Donna Marina*, being daughter to a *Cacique*, vaſſal to *Montezuma*) underſtanding their language perfectly well, it being her mother-tongue, told *Aguilar* in the *Jucatan* language, that the *Indians* in the canoes were *Mexicans*, and deſir'd an audience of the General, in the name of the Governor of the province. *Cortez* invited him on board; and, by his two interpreters, found that they were ſent (by *Pilpatoe* and *Teutille*, the one Governor, and the other General of that province, under *Montezuma*) to know his intentions, and to offer him aſſiſtance in the proſecution of his voyage. To this the General anſwer'd, "That he "came to that country as a friend, upon "affairs of great importance, for the "ſervice of their King, and his whole "Empire; and to that intent, he would "meet the two Governors from whom "they were ſent; and hop'd they would "treat him as well as ſome others of his "country had been treated the year be-"fore." And, entertaining them with ſome *Spaniſh* wine, and ſuch fare as he had on board, and giving them ſome trifles, he diſmiſs'd them in very good humour.

The next day, being *Good-Friday*, he landed all his ſoldiers, together with his horſes and artillery, and entrench'd himſelf; the natives, by *Teutille*'s order, bringing him proviſions, and aſſiſting the ſoldiers to make a ſort of huts, to ſhelter them from the ſun.

Upon *Eaſter-Day*, *Pilpatoe* and *Teutille* made him a viſit; and after Maſs was done, he treated them magnificently at dinner; when that was over, calling *Marina* and *Aguilar*, he told the Governors, by them, "That he belong'd "to a potent prince (naming CHARLES "of *Auſtria*) Lord of the Eaſt, who "had ſent him to their Emperor upon "an embaſſy, which was of the great-"eſt importance, not only to him, but "to all that were ſubject to him; but "that it was of ſuch a nature, that he "could not diſcloſe it to any one, till "he had an audience of the Emperor "*Montezuma* himſelf."

Has an interview with the Governors.

This ſpeech did not much pleaſe the two *Indians*; but having made their preſents to *Cortez*, which he receiv'd with a good grace, they told him, "That it "was not an eaſy matter to ſee the great "Emperor; and therefore they adviſ'd "him, as friends, to proſecute his voy-"age, and not to attempt an enterprize "which he would be diſappointed in." But *Cortez* was not to be ſo eaſily put off; and therefore, he made anſwer, (in a tone of voice a little rais'd), "That it "was not the cuſtom of Kings to refuſe "audience to the Ambaſſadors of other "Princes; nor was it the buſineſs of "Miniſters to oppoſe ſuch an interview, "without poſitive orders from their "maſter. That, for his own part, he "was determin'd not to ſuffer his Lord "to be affronted in his perſon; and "therefore, would not leave that coun-"try without ſeeing *Montezuma*; ſo "that all they had to do, was, to ac-"quaint their prince with his reſolu-"tion: for which he would allow them "ſufficient time."

When the interpreters had explain'd this reply to the two Governors, they durſt not oppoſe his intention; and therefore deſir'd him to wait the return of the meſſenger, whom they intended to ſend to *Mexico*; and, in the mean time, they would provide him with neceſſaries.

Here our author gives an account of of the *Indians* having drawn, in colours, the ſhips, ſoldiers, arms, and artillery of the *Spaniards*, interſpers'd with ſome characters, here and there, by way of explanation, which ſupply'd the place of letters, at that time unknown among them. Theſe repreſentations the Governor ſent to *Montezuma*; which ſhews that country not to have been ſo rude and free from invention, as the *Indians* had been repreſented before that time.

De Solis, B. 2. C. 1.

Cortez, being inform'd what they were doing, went to see the painters at work; and, being surpriz'd at their skill, resolv'd to give an opportunity of drawing them more to the life, by shewing them his army exercis'd. He therefore told *Teutille*, that he would entertain them with the military discipline of his country; and accordingly, mounting his horse, and drawing up his men, he made a sham fight, first discharging his fire-arms, and then his artillery; which struck a terror into the natives, and put the painters to much difficulty, to invent characters to represent what they saw.

Having thus given the Governors and People a terrible idea of the *Spanish* force; he spoke friendly to them, and made the two chiefs presents of such things as he judg'd proper: and when they were to dispatch their messengers to *Mexico*, he sent a present to *Montezuma*, consisting of several pieces of the brightest and most solid glass; a holland shirt; a cap of crimson velvet, adorn'd with a gold medal, representing St. *George*; and some tapestry chairs, much admir'd by the *Indians*.

Cortez's presents to Montezuma.

Tho' *Mexico* was 180 miles from *Vlua*, the return of the message came back in seven days; there being couriers bred to that employment, at convenient distances, thro' all the dominions of *Montezuma*. *Teutille* came to the *Spanish* General, with the answer; but first brought in a hundred *Indians*, laden with a present from the Emperor; consisting of fine cotton cloths; plumes, and other curious things, made of feathers of different colours, and shaded very artfully; bows, arrows, and targets, of fine wood of different sorts; two large plates emboss'd, the one of gold, representing the Sun; and the other of silver, in the figure of the Moon; with a considerable quantity of gold, jewels, precious stones, collars, rings, pendants, and other ornaments, of great value. Having deliver'd the present, which *Cortez* receiv'd in a suitable manner, he told him, by the interpreters, "That "his master, the great Emperor *Monte-* "*zuma*, had sent him these things, in "return for his present; and to shew "his value for the friendship of the "eastern King. But he had sent orders "to acquaint him, that it was not con- "venient, nor indeed possible, to al- "low him to go to his court, by reason "of the badness of the roads, and sa- "vage *Indians* by the way." But in a covert manner, he represented to him, that there was a secret reason, why *Montezuma* would not be seen by him at that time.

His present to Cortez.

To this *Cortez* made answer, "That "he had great regard for their Em- "peror, and should be sorry to be "oblig'd to disobey his commands; but "that he could not think of exposing "his own Sovereign to any dishonour; "and therefore found himself under a "necessity of insisting upon his first de- "mand; and should be sorry that any "unnecessary delay, or refusal, should "put him under the necessity of going "nearer *Mexico*, to solicite an audi- "ence." *Teutille*, finding him resolute, durst not contradict him; but, promising to send fresh messengers to obtain permission, he retir'd to his own post.

Whilst *Cortez* was labouring this point with the Governor and General, his own people had no small heart-burnings; for some of them, (boggling at the danger of the enterprize, of subduing such a vast Empire with a handful of men) plainly said, it was rashness to attempt it. And indeed, there seem'd to be a great deal of reason in their remonstrance: for, this large dominion was above 1500 miles in length from east to west; and, in some places, 600 broad; reaching from the north, to the south-sea: the country rich and populous; all subject to *Montezuma*, and govern'd by particular Kings, or *Caciques*, his vassals. The *Mexicans* had the reputation of being a warlike people; and *Montezuma* being of the blood-royal, (tho' not heir apparent) was, upon the death of his predecessor, chosen Emperor, from the experience and great opinion the *Mexicans* had of his valour and conduct; which had evidently appear'd in his youth.

Cortez was inform'd of these grumblings, and being resolv'd upon the conquest of *Mexico*, or losing his life; sent two ships (in which he employ'd those who were most discontented) to view the coast, under pretence of finding a more convenient harbour for his Fleet; giving them orders to return in ten days; that, in the mean time, he might have leisure to come to a resolution, what method was most proper to compass his design; and likewise confirm his own people in an entire obedience to his commands.

When the second message of *Teutille* arriv'd at *Mexico*, the Emperor was in great rage at the obstinacy of the *Spaniards*; and, in his first fury, resolv'd their destruction; but upon cooler thoughts, having consulted his council, he resolv'd to proceed with caution; being still determin'd to keep *Cortez* at a distance from him. The reason of this aversion to the *Spaniards*, is said to have been this:

Upon *Grisalva*'s arrival on the *Mexican* coast, the year before, several prodigies

digies happen'd in different parts of *Montezuma*'s dominions; (such as were said to have been seen at *Jerusalem*, before it was destroy'd by *Titus Vespasian*) Comets appear'd both by day and night; the great Lake of *Mexico* boil'd up, and overflow'd its banks, without any extraordinary Floods, or previous Rains: one of their temples took fire of itself, and burnt to ashes: voices were heard lamenting in the air, in different places; and their very idols foretold the destruction of their monarchy. All these our author (with whom F. *Joseph d'Acosta* agrees) tells us, as things believ'd and reported by the best authors. And both of them relate two more very remarkable prodigies, which happen'd to *Montezuma* himself. The first was;

Prodigies in Mexico.

D'Acosta Nat. Hist. of the Indies, translated by E. G. B. 7. c. 23.

Some Fishermen, near the lake of *Mexico*, having taken a Fowl of an extraordinary shape and size, presented it to the King, as a great novelty. It had on its head a shining plate, like a looking-glass, from which the Sun reflected a dim, melancholy light. *Montezuma* going near, to look upon it, saw, at first view of the glass, a representation of the Heavens cover'd with Stars; and, at a second view, an army of men coming from the east, killing and destroying his subjects. Many of his attendants, and some magicians, and priests, whom he sent for, saw the same; the bird standing quiet till they had seen the representation; but then it vanish'd out of their sight: leaving the Emperor and his retinue in the greatest consternation. The other prodigy was this:

A plain countryman, of an honest, good character, came to court; and, with much importunity, desir'd an audience of the Emperor; which having obtain'd, he told *Montezuma*, That he had been carried by a monstruous Eagle to a cave, (he knew not in what part of the world) where he was order'd by a voice, without seeing any body, to look upon the man who lay a-sleep on the ground; when looking about, he perceiv'd his Majesty, with a lighted torch in his hand. The voice then bid him take the perfum'd torch out of the sleeping Monarch's hand, and apply it to his thigh which was uncover'd, (*Acosta* says 'twas his face) but he being aw'd by the majesty of his king, was unwilling to obey; at which the voice, in a terrible tone, bid him do as he was commanded; which he then did. Upon which the voice said, *See how thy King sleeps, when the anger of heaven pursues him! go, and awake him, if thou can'st, and tell him, That enemies from the other part of the world are coming, to destroy his Monarchy and Religion.* After he had heard these words, the Eagle again took him, and carrying him through the air, left him where he was at first took up. "Thus, *said the man*, "I have perform'd the command of the "Gods: Awake, Sir, for your pride and "cruelty have provok'd them!"

Ibid.

Montezuma was struck with this relation; and the more, by feeling, at that instant, a stinging pain in his thigh (or face) where the man said he had apply'd the torch: and inspection being made, it had all the signs of a fresh burning.

[I own myself a mortal enemy to Superstition; and am not very credulous of prodigies; but, at the same time, am not yet arriv'd to that pitch of the *fine gentleman*, in the modern sense of our polite age, as to reject all belief of supernatural things. I know there have been tricks and cheats obtruded upon the world, both by Heathens and (nominal) Christians, with regard to pretended Revelations; but that is no more an argument against all Revelation, than one *lying* History invalidates the credit of all *true* ones. And, tho' I shall not vouch for the truth of all the circumstances in the prodigies said to have happen'd in *Mexico*, before its conquest by the *Spaniards*; yet I must own, there is nothing repugnant to my reason in believing, that a country, so long under the influence and dominion of the Devil, as that wretched people seem to have been, (from their abominable custom of human sacrifices, so plainly inconsistent with the nature of a good and benevolent GOD) should, before it was rescu'd out of the power of that enemy of mankind, have felt some strange convulsions; either as the last efforts of the devil, to retain his authority, and spirit up his old subjects, to prevent its fall by the power of Almighty GOD, who can send a good Angel to prepare people's minds for His gracious designs; or force even the Devil himself (tho' the father of lyes) to tell truth, when He pleases. —— The reader is to believe no more of it than he approves; tho' I could by no means omit taking notice of it, as being mention'd by the very best authors that have handled this subject.]

And,

Whether these Prodigies were true or false, it is certain they had great influence upon *Montezuma*'s temper and counsels: he was irresolute and changeable in his determinations; sometimes thinking to go at the head of his army, to make *Cortez* and his soldiers a prey to his own fury, and an acceptable sacrifice to his cruel Gods; at other times he was afraid that this handful of strangers were the people design'd by Fate to overturn his monarchy, and usurp his dominions; and therefore was unwilling to provoke them.

But

But his fix'd reſolution at this time was, not to ſuffer them to come to *Mexico*.

In the mean time, the two ſhips, which had ſailed to the north-weſt, return'd to *Ulua*; giving an account that they had diſcover'd *Quiabiſtan*, in a ſafe Bay, about twelve leagues off; ſo that *Cortez* had ſome thoughts of removing to it. But hearing that the meſſage was arriv'd from *Montezuma*, he ſuſpended his reſolution, till he ſhould know the import of it, which he ſoon did. For,

Teutille coming to viſit him, accompany'd with the principal officers of the *Indians*, deliver'd a new preſent from the Emperor, of the ſame kind with the former; but the orders which came along with it, were poſitive for the *Spaniards* leaving his dominions forthwith. To which *Cortez* anſwer'd, "That having "come ſo far, and from ſo powerful a "prince, he could not return without "making new inſtances for an audience; "ſince by the ſmall number of men "he had with him, it could not be ſu-"ſpected that he had any ill deſign." As ſoon as *Cortez* had thus declar'd himſelf by his interpreters, *Teutille* roſe up in the haſte, ſaying, "That hitherto "*Montezuma* had treated him as a "friend; but, if he perſiſted in his re-"ſolution of ſtaying longer in his do-"minions, contrary to his order, he "muſt expect to be treated as an ene-"my." After he had ſaid this, he left him, without ſo much as taking leave.

Montezuma orders the Spaniards to depart.

The Indians leave Cortez.

The next day, they found the cabins, where the *Indians* liv'd, all empty; and not a ſoul appear'd with proviſions, as uſual: which renew'd the complaints of the murmurers; at the head of whom was *De Ordaz*; who repreſented their diſcontents to the General in diſreſpectful terms; which he wiſely diſſembling, pretended to be willing to return to *Cuba*; and ſo gave it out; but having before prepar'd thoſe whom he truſted moſt (who had aſſur'd him the major part had no hand in the mutiny) as ſoon as they heard of this pretended reſolution, they ſtir'd up the ſoldiers, and join'd with them in a loud cry againſt it; telling *Cortez* (as had been concerted) that if his heart fail'd him, he might retire to *Cuba*; for their parts, they would ſtay, and chuſe ſome worthy man of their own number for their General. This affair was ſo well manag'd, that it ended in a declaration of ſettling on the Continent; and the mutineers, either out of ſhame or fear, made excuſes for their late behaviour.

Cortez artfully quells a mutiny.

Ambaſſadors from the Cacique of Zempoala.

After this diſorder was quieted, Ambaſſadors came from the Lord of *Zempoala*, a province not far from *Ulua*, telling the General, that their *Cacique* hearing of his great valour at *Tabaſca*, and having, for that reaſon, conceiv'd a great eſteem for him, had ſent to deſire his friendſhip. *Cortez* was glad of the propoſal, and readily accepted it; being inform'd that *Zempoala* was upon the road to *Quiabiſtan*; but he was better pleas'd, when, having ask'd, why they came no ſooner? they told him, that their *Cacique* would have nothing to do with the *Mexicans*, whoſe cruelties they deteſted. He found from theſe Ambaſſadors, that *Montezuma* was reputed a cruel tyrant; and that the obedience, which was paid by many provinces, was forc'd. Having treated theſe *Indians* courteouſly, he diſmiſs'd them; promiſing to pay the *Cacique* a viſit, to confirm their friendſhip.

Cortez makes a new Corporation.

But tho' *Cortez* deſign'd to leave this place, in order to a farther view, he call'd a council; and having prepar'd his confidents, he propos'd ſettling a corporation, and chuſing magiſtrates; which they did, appointing *Portocarrero* and *Montejo* Alcades (as he had before contriv'd) *Davila*, and the two *Alvarado*'s, together with *Sandoval*, were choſen *Regidores*, or Regents: they likewiſe made other officers, according to the cuſtom of *Spain*. This corporation afterwards ſettled at *La Vera-Cruz*. *Cortez* aſſiſted at this aſſembly as a private member of the corporation paying; all reſpect to the new Magiſtrates, for a good precedent to others.

The council of this new colony being aſſembled the next day, *Cortez* deſir'd to be admitted, to propoſe ſomething for the advantage of the community; and when he was receiv'd, making a ſet ſpeech, in which, "He ſhew'd the pre-"cariouſneſs of his own authority, as "having had it only from *Velaſquez*; "and ſince he had revok'd it, he thought "it proper to reſign it into the hands "of the council, who now repreſented "the regal authority, deſiring them to "beſtow it upon a fit perſon for the ho-"nour of the Emperor, their Sovereign; "and for the advantage and ſafety of "the corporation." When he had ended his ſpeech, he threw his commiſſion from *Velaſquez* upon the table, and kiſſing the batoon, gave it into the hands of the Alcades, and retir'd to his barrack.

Cortez reſigns his commiſſion.

This affair coſt no long debate (as he had either foreſeen, or concerted before) for, after having allow'd of his reſignation, they agreed to chuſe him General in the King's name, by their authority, till he could procure a commiſſion directly from *Spain*. But the Partiſans of *Velaſquez* grumbled unreaſonably, when it was not in their power to prevent it; inſomuch, that *Cortez*, now reſolving

And receives a new one.

to

to be obey'd, ſeiz'd *De Ordaz*, *Scudero*, and *De Leon*, and ſending them on board the Fleet, put them in irons; declaring, that he did ſo, becauſe they were diſturbers of the peace; for which, he intended to cut off their heads. But ſoon after, accepting the mediation of his friends, who had brought them to reaſon, he releas'd, and ſo reconcil'd them to him, that they continu'd faithful.

Having now ſettled all matters to his liking, he order'd the Fleet to ſail to *Quiabiſtan*; and, with his forces, himſelf went by land to *Zempoala*; where they arriv'd without any accident, and he was well receiv'd by the *Cacique*, whom he found to be a man of good underſtanding, but of an unweildy body. After the firſt ceremonies, and preſents made, *Cortez* enter'd into private converſation with him, by his interpreters; and having told him (on purpoſe to ſound his thoughts concerning *Montezuma*) that one reaſon of his coming to that country, was to redreſs wrongs, and to relieve the oppreſs'd; the *Cacique* complain'd of the tyranny of the Emperor; but withal ſaid, he did not complain to him, to engage him to eſpouſe his quarrel, againſt ſo powerful a prince; but to give him a caution not to truſt him. *Cortez* anſwer'd, that he did not fear the power of *Mexico*, having Heaven on his ſide; and therefore deſir'd him to acquaint all the *Caciques*, his neighbours, that if they were unjuſtly oppreſs'd, they might find him at *Quiabiſtan*, ready to redreſs their wrongs.

Cortez marches to Zempoala,

Having ſtaid but a ſhort time with this *Cacique*, he held on his march to meet his ſhips. Upon his arriving at *Quiabiſtan*, he found the town deſerted; but in a little time, ſome *Indians*, more bold than the reſt, appearing, and being well treated, told him, the *Cacique* had retir'd, becauſe he would not begin a war; but as ſoon as he ſhould be inform'd of the peaceable behaviour of their new gueſts, he would return, with all his people; which he did, bringing the fat *Cacique* of *Zempoala* to make his excuſe. From theſe two, *Cortez* had new complaints againſt *Montezuma*. But their converſation was interrupted by two or three *Indians*, coming in a great fright, and ſpeaking ſoftly to the two *Caciques*, they retir'd with precipitation, leaving *Cortez* alone; who immediately order'd a good guard for *Donna Marina*, to go and ſee what the matter was. He was ſoon inform'd, that ſix officers of *Montezuma*'s, who went about to gather in his tribute, were arriv'd with a great retinue; and, having ſeated themſelves in the town-houſe, had ſent for the *Caciques*, to reprimand them publickly for entertaining the ſtrangers, who were the Emperor's enemies; and had therefore demanded (beſides the ordinary tribute) twenty *Indians* for ſacrifice to their Gods.

And then to Quiabiſtan.

As ſoon as *Cortez* underſtood this, he ſent for the *Caciques*, and bid them ſeize thoſe Miniſters, and he would protect them; which, after ſome heſitation, they did, to the great joy of their own people, and put their necks in a kind of pillory, deſigning to put them to death; but *Cortez* would not ſuffer it, putting them under a guard of *Spaniards*; becauſe he had no mind to fall out with *Montezuma*, without farther provocation. In the night, he ſent for two of the priſoners, and told them, he deſign'd to ſet them at liberty; with this condition, that they ſhould tell their King, he had ſav'd them out of reſpect to him; that he would make it his buſineſs to ſave the other four, and make the *Caciques* ſenſible of their fault; and would do his Majeſty all the ſervice in his power. After this, he ſent a guard with them to his ſhips, and order'd one of the boats to land them in ſome place beyond the *Zempoala* limits. And when the *Caciques* (not knowing how far he was concern'd in it) told of their eſcape, the next day, he blam'd the negligence of the guard; and, in their preſence, order'd the other priſoners on board, for ſecurity; giving inſtructions that they ſhould be well us'd.

After this, the fame of the *Spaniards* civility, and love of liberty, together with their proweſs and courage; but above all, the report of their carrying Light'ning about them, brought about 30 *Caciques* to *Quiabiſtan*, who offer'd, all together, to bring 100,000 Men to the field, againſt *Montezuma*; and ſwore fealty to the King of *Spain*, and then return'd to their own country, to wait for orders.

Vera-Cruz built.

Near this place, the *Spaniards* choſe a place for their corporation to ſettle in; and built a city, under the name of *Vera-Cruz*, which it retains to this day, upon the ſouth-coaſt of the Bay of *Mexico*, about 19 deg. n. lat. Here, with the aſſiſtance of the *Indians*, they built a ſort of town.

A third Embaſſy from Montezuma.

When this city was finiſh'd, new Ambaſſadors came from *Montezuma*, with a freſh preſent, thanking *Cortez* for his generous deliverance of his officers; but deſiring him, at the ſame time, to leave the country of the rebels, that he might puniſh *them*, without breaking friendſhip with *him*; ſtill inſiſting, with a myſterious tediouſneſs, upon the difficulty of going to *Mexico*. To all this, *Cortez* reply'd, with great reſpect towards

Montezuma, excuſing the *Caciques*, his friends, and promiſing for their good behaviour. But withal he told them, he deſpis'd all the difficulties of his march to *Mexico*; nor could he tell his embaſſy to any but the Emperor himſelf: and then ſending for the four priſoners, he ſet them at liberty.

Theſe frequent embaſſies and preſents, from the proudeſt King in all *America*, rais'd the reputation of *Cortez* to a high degree; and, at the ſame time, leſſen'd the awe and dread formerly conceiv'd of *Montezuma*.

But here the *Zempoalans* put a trick upon him, and engag'd him to march 400 of his men, againſt ſome of their neighbours, upon pretence of their being *Mexicans*; but *Cortez* diſcovering the cheat, reprimanded the *Zempoalans*, and made peace between the contending parties.

As *Cortez* return'd from this expedition, he ſtop'd at *Zempoala*; where the *Cacique* made a ſorry excuſe for deceiving him, and offer'd him his niece in marriage; which *Cortez* declin'd, telling him, it was not lawful to marry one who was not a Chriſtian. But here his zeal for Religion prompted him to an action, which might have been of fatal conſequence. For, hearing there were human ſacrifices offer'd at one of their temples, the General, from a juſt horror to that impiety, ſent for the *Cacique*, and, ordering his men to follow him in order, went directly to the place. The prieſts, who had provided againſt any interruption, came to the gate of the temple, calling the *Indians* to protect their gods; at which a great number appear'd in arms; upon which *Cortez* made *Donna Marina* proclaim aloud, that upon ſhooting the firſt arrow, he would cut the throats of the *Cacique*, and all that were with him; and order his men to deſtroy the city with fire and ſword. The *Indians*, at their *Cacique*'s command, threw down their arms; upon which, he order'd the *Spaniards* to demoliſh the idol, and his altar; which they did, to the great conſternation of the *Indians*. But when they ſaw no judgment follow upon it, they ſaid *Cortez* was ſtronger than their gods.

Cortez deſtroys the idols at Xempoala.

Having return'd to *Vera-Cruz*, *Cortez* diſpatch'd the beſt of his ſhips to *Spain*, with all the riches he had gotten, and a particular account of what had happen'd; making the council alſo write of the injuſtice done him by the Governor of *Cuba*. Theſe diſpatches were truſted to *Portocarrero*, and *Montejo*, with particular inſtructions to keep clear of *Cuba*. This meſſage was near being diſcover'd to *Velaſquez*, by ſome of his party at *Vera-Cruz*, who had laid a plot to ſteal away, in one of the veſſels, to give him time to intercept the ſhip bound for *Spain*: but the matter being diſcover'd, two of the principal contrivers were put to death, and the reſt pardon'd. However, this attempt put him upon a thought (which he ſoon put in practice) of ſinking all the Fleet; having firſt taken out all that was valuable or neceſſary: by which means, he put his army under a neceſſity to conquer or periſh; and likewiſe augmented his number, by about 100 men, who were neceſſary to manage the Fleet.

He ſends a ſhip to Spain.

Things being thus diſpos'd, he reſolv'd upon his march towards *Mexico*; and, having left 150 men and two horſes at *Vera-Cruz*, under the command of *Juan d'Eſcalante*, a valiant man, and one he could entirely truſt; he march'd to *Zempoala*, where he muſter'd 500 foot of his own, and 15 horſe; and the *Cacique* of that place, having arm'd ſome of his forces to accompany him, he choſe out of them 400, of which number about forty were of the nobility, whom he treated like the *Spaniards*; but took them as hoſtages, for the ſecurity of the new church at *Zempaola*, and of a young *Spaniard*, his own page, whom he left with the *Cacique*, to learn the *Mexican* language, in caſe any accident ſhould befal his interpreters.

Has advice of the arrival of ſhips upon the coaſt.

When he was ready to march, *Eſcalante* ſent him an expreſs, with an account of ſome ſhips being ſeen upon the coaſt; on which, *Cortez* return'd with a ſmall party to *Vera-Cruz*; and ſeeing one ſhip at anchor, at a diſtance from the ſhore, he ſpy'd four *Spaniards*, who ſaid, they came in ſearch of them; one being a notary, and the others witneſſes, with a notification to *Cortez*, in the name of their Captain. This writing was, that *De Garay*, Governor of *Jamaica*, having obtain'd the King's Commiſſion, to diſcover and people the Continent of *America*, had ſent *Alonſo de Pineda*, who had already taken poſſeſſion of that land, on the ſide of the river *Panuco*, intending to make a ſettlement at *Naothlan*, at a ſmall diſtance from the place they were now in, had ſent him intimation, not to make any ſettlements that way. *Cortez* told them, he knew nothing of forms of law, but if their captain and he were together, they ſhould ſoon adjuſt the matter; for being ſubjects to the ſame prince, they ought to aſſiſt one another; but the notary ſtill inſiſting (with little reſpect) upon a direct anſwer to his notification, *Cortez* made them all priſoners; and making four of his men take their cloaths, and appear upon the ſhore the next day, whilſt

whilſt he, with the reſt of his company, lay conceal'd, a boat came towards the ſhore from the ſhip, with about a dozen men; and as they approach'd, the others retir'd, for fear of being known, making ſigns to them to land; but only three came aſhore; who were ſeiz'd by *Cortez*'s men; on which the boat went back to their ſhip, which ſoon weigh'd anchor, and made off.

Cortez ſeizes ſeven Spaniards.

This adventure being of too little conſequence to ſtop his march, he went ſtraight to *Zempoala*, with the addition of ſeven *Spaniards*; which he thought a ſeaſonable recruit.

Cortez marches to Zocothlan.

Upon the 16th of *Auguſt*, he began his march, and, for ſome days, met with no inconvenience, being well receiv'd where-ever he paſs'd; and tho' they found ſome trouble in paſſing the mountains, where they had no ſhelter againſt the rain, (being oblig'd to lie in the open air) yet the ſoldiers bore all with patience. After they had paſs'd the mountains, they enter'd the province of *Zocothlan*. *Cortez* ſent two *Indians* to the Cacique, who brought him back a civil meſſage; and, upon his advancing to that city, the Cacique came out to meet him; but *Cortez* ſoon perceiv'd that his civility was forc'd. In their converſation, this *Indian* extoll'd the power and greatneſs of *Montezuma*, in terms not very obliging to *Cortez*; which he, in ſome meaſure, diſſembled; yet he told him, that he knew little of the world, if he believ'd *Montezuma* to be the greateſt King of it; for that his Maſter had many Servants more potent than he was. But the greater he was, the ſtronger inclinations he had to make a league of friendſhip with him; which was the deſign of his march.

Here he ſtaid five days, and the Cacique, finding *Cortez* not at all frighted at his magnifying *Montezuma*, nor at the great number of human ſacrifices offer'd by him every year; but that he ſpoke with contempt of their gods; and declar'd, that the chief deſign of his coming, was to aboliſh that deteſtable practice of ſacrificing human blood; began to ſhew him reſpect, as ſomething more than man; and treated all his Army with more civility, and augmented their proviſions. However, this Cacique, being a tool of *Montezuma*'s, when he could not make any impreſſion upon him, by the greatneſs of that Monarch, reſolv'd to lead him into the ſnare, that was laid for him upon the road. To which intent, he adviſ'd him not to go by way of *Tlaſcala*, as being a bad road, and the inhabitants ſavage; but rather to march by *Cholula*. But the *Zempoalans*, who were with *Cortez*, warn'd him privately of the danger of that advice; telling him, that the *Tlaſcalans*, tho' a warlike people, were friends to the Caciques who hated *Montezuma*; whereas his troops were frequently quarter'd among the *Cholulans*. *Cortez* found a great deal of reaſon in what they ſaid; but concealing his deſign, left *Zocothlan*, and march'd to *Xacacingo*, thro' which he was oblig'd to paſs, which ever of the roads he took afterwards.

He ſends a meſſage to the Republick of Tlaſcala.

Having inform'd himſelf, from the *Zempoalans*, of the nature of the government of *Tlaſcala*, he found it was a ſort of Republick, made up of ſeveral States, every one of which ſent a deputy to reſide at that city; and that they had maintain'd their liberty by force of arms, with the aſſiſtance of the *Otomies*, the greateſt Barbarians of that part of the Continent. He therefore ſent four *Zempoalans* to this Republick, and, by his interpreters, gave them a meſſage, which he made them get by heart.

But has no return of it.

When the meſſengers were gone, *Cortez* ſtaid at *Xacacingo*, expecting their return; but being diſappointed of his expectation, he reſolv'd to march to *Tlaſcala*, taking the detaining his Ambaſſadors, as a ſign of war. To prevent their preparations, therefore, he immediately ſet out, with the conſent of the *Zempoalans*, whoſe advice he always deſir'd in this expedition. He had not march'd far in the territories of the Republick, till he was confirm'd in his opinion; for they encounter'd a body of 5000 *Indians* in arms, who boldly attack'd them; but the artillery being fir'd upon them, they fled; leaving about 60 dead upon the place. The next day, proceeding in their march, they diſcover'd a freſh body of the enemy, more in number than before; who, advancing with great haſte, but no order, ſhot their arrows before they came within proper diſtance, and retreated; but in ſuch a manner, that *Cortez* perceiv'd it was rather ſtratagem than flight; and therefore kept cloſe order in the purſuit; when coming to a plain, not far off, he found their Army drawn up, conſiſting of above 40,000 men: But the *Spaniards* remembring their victory at *Tabaſco*, were not diſcourag'd at their number. Therefore, marching down the hill in good order, they engag'd the *Indians*, who waited for their advancing, that they might ſurround them; which they did, by opening to the right and left, and running with fury on both ſides, and then contracting their circle, brought *Cortez*'s ſmall Army within it, and fell on with great bravery. The *Spaniards* put themſelves into a ſquare, to receive them on all

The Tlaſcalans *arm, and skirmiſh, with loſs.*

And are afterwards beaten.

all ſides, and made a moſt terrible ſlaughter.

Cortez charg'd with his few horſe, as he ſaw occaſion; and trod them down where-ever he went; and the artillery was ſo well manag'd, that not a ſhot was fir'd without doing great execution; which made them retire to ſome diſtance, ſo that *Cortez* made his forces enlarge their front; and, dividing his horſe to both wings, advanced upon them; who were ſo terrify'd at the Horſe, which they took for monſters, that they fled in great haſte, running down one another. *Pedro de Moron*, being mounted upon a ſwift mare, and purſuing too far, was ſurrounded by a company of the enemy who rally'd; and his mare being kill'd, they ſeiz'd his launce, and took him priſoner. They cut off the mare's head, and carry'd it with them; but *Moron*, who was but ſlightly wounded, was reſcu'd by ſome horſe, who came to his aſſiſtance.

They cut off a mare's head, and triumph with it, tho' beaten.

The greateſt part of the officers of the enemies Army were kill'd in the battle; ſo that their General *Xicotencal*, being afraid to engage again without officers, ſounded a retreat, after their manner, with horns, and a ſort of drums; on which they retir'd to the camp, in great triumph (notwithſtanding their loſs) with the mare's head carry'd before the General, which he ſent to *Tlaſcala*, where it was ſacrific'd to their gods; the fitteſt victim for ſuch deities, as our author well obſerves. A great number of the enemy fell in this battle, and only nine or ten *Spaniards* were wounded, and ſome *Zempoalans*, who behav'd to admiration. *Cortez* retir'd, with his forces, to an eminence, where were ſome houſes, and proviſions for that night.

The next day *Cortez* march'd out to view the country, with all his horſe, and 100 *Spaniſh* foot, and as many *Zempoalans*; having taken ſome priſoners in his march, he gave them their liberty, and ſent a civil meſſage to the *Indian* General, condoling the loſs he had ſuſtain'd, and offering peace; but threatening the deſtruction of their country, if they were obſtinate. The poor meſſengers return'd to *Cortez* wounded, and ill treated by *Xicotencal*, for having the impudence to carry him ſuch a meſſage; who bid them tell *Cortez*, that by Sun-riſing he would be with him, in order to carry him and his army alive, to make them ſacrifices to his gods.

Cortez, tho' he ſcorn'd his menaces, did not ſlight the intimation given him of the deſign'd attack; but put his men in order by break of day; and advancing half a league from his quarters, fix'd upon convenient ground, where he might fight to advantage. He plac'd his artillery in the flanks, and gave orders when, and at what diſtance to fire; keeping the horſe with himſelf, to give relief where-ever it was wanting. It was not long before the enemy appear'd, being no leſs than 50,000 ſtrong: as ſoon as they came to a convenient diſtance, the artillery began to play upon them; which made them halt a little; but, tho' many were cut off, before they came near enough to ſhoot an arrow; yet they arm'd themſelves with fury and madneſs, and attack'd the *Spaniards*; pouring in ſuch numbers upon them, that, notwithſtanding their courage and diſcipline, they were put in diſorder: But the *Indians* fell by hundreds; and when they were like to do miſchief, by breaking the ranks of *Cortez*'s Army (as if Providence had decreed their deſtruction) they fell to killing one another in the rear of the *Indian* army; which occaſion'd a general defection, and made even thoſe, who were like to have been conquerors in the front, turn their backs and fly: But *Cortez* kept his men from purſuing them. They found afterwards, that the lucky diſpute in the rear, had been occaſion'd by *Xicotencal*'s affronting a Cacique of his Army, by calling him coward; which he reſenting, engag'd the ſeveral leaders in a general quarrel.

A ſecond battle,

Wherein the Spaniards are put in diſorder.

The *Spaniards* could not learn the number of the ſlain, on the enemy's ſide; but they heard there was a vaſt multitude wounded. Of the *Spaniards*, only one was kill'd, and 20 wounded. But the accident of being diſorder'd in the action, made the *Spaniards* retire in confuſion; and ſome of the malecontents repreſenting to them what might have happen'd, had it not been for the accidental quarrel among the *Indians*, laid before them the danger they were in, by encountring with ſuch unequal numbers; ſo that a new mutiny was like to enſue.

Cortez let them ſpend their firſt reſentment without controul; but knowing the ill conſequence of murmurs, he call'd his men together, and, without upbraiding them for their fault, told them, "He had aſſembled them to have their "opinions openly, not in a clandeſtine, "and criminal manner. He ſaid, if it "was their intention to return to *Vera-Cruz*, after having defeated the *Tlaſcalans* (the only enemy between them "and *Mexico*) who, by a loſs of two "ſet battles, muſt ſue for peace, he was "ready to come into their meaſures; "and ſo give the *Zempoalans* and others, "who were their confederates, not on-

"ly

" ly a handle to deſpiſe, but to ſtarve " and deſtroy them."

This ſpeech had the deſir'd effect; for one of the principal mutineers, call'd out, " That the General had taught " them their duty, whilſt he ſeem'd to " ask their advice; and he now plainly " ſaw deſtruction in their retreat." Upon which, they all ask'd pardon, and deſir'd he would lead them to *Mexico*.

In the mean time, the people of *Tlaſcala* were in a divided ſtate; many of the chief of the Senate were for peace; but they, who obſtructed it, were the major part. They were aſtoniſh'd at the valour of the ſtrangers; and, becauſe they would not give way to the opinion of the vulgar, that they were Gods; their judgment of them was, that their valour was the effect of magick, and that the only way to conquer them, was by counter-charms. To this end, they aſſembled the Magicians and Enchanters; who, (after ſome magick performances) declar'd, with a very ſolemn air, " That " the ſtrangers being the offspring of the " Sun, all their valour lay in the influ- " ence of their father; but if they were " attack'd in the abſence of the Sun, " they would not be ſtronger than the " *Indians*." They adviſ'd the Senate, therefore, to fall upon them in the night, and make an end of them before Sunriſing. This advice was applauded by all, and neceſſary orders given for the execution of it; and ſo ridiculouſly credulous were theſe poor people, that they march'd, at the time appointed, againſt the *Spaniards*, with a full perſuaſion of finding them void, both of ſtrength and courage: *Xicotencal* bringing 10,000 men to execute this project.

The Indians, by advice of the Magicians, attack the camp by night.

Cortez had kept exact diſcipline in his ſmall camp, that he had notice, by his ſcouts, of their firſt motion, and was prepar'd to encounter them; receiving their approach in ſuch a manner, as ſhew'd they were fatally diſappointed in the expectation of finding the *Spaniards* diſ-ſpirited; the ſlaughter they made convincing them, to their coſt, that thoſe children of the Sun, could fight when their father was out of ſight, as well as when he was looking on. *Xicotencal*, tho' he ſaw himſelf cheated by the Sorcerers, yet behav'd like a gallant man: he led his men more than once to attack the ſmall works which the *Spaniards* had made to fortify themſelves, and they came on with ſuch fury, that many of them loſt their lives in the attempt; and when they had try'd, in vain, for a long time, to force the camp, their General ſounded a retreat. As ſoon as they retir'd, *Cortez* order'd out all his horſe, with a party of foot, to purſue them; which they did, till they were quite diſpers'd.

But without ſucceſs.

The city was in the utmoſt conſternation at this defeat of their forces, and hopes. The populace cry'd aloud for peace; and the Senate, aſham'd of their credulity, wreck their fury upon the Magicians, for having deceiv'd them. But when they had conſulted the preſent ſtate of their affairs; *Magiſcatzin*, who, from the beginning, had been for peace, repreſented to them, in ſuch lively terms, the miſchief that had already happen'd by their deſpiſing his counſel, and the utter deſtruction of their country, which was like to enſue: he ſhew'd, as he had hinted before, that theſe ſtrangers muſt be that cœleſtial Race, which tradition inform'd them was to alter the Government of their Country; and therefore concluded, that fighting againſt them, was flying in the face of Fate. This had ſuch an effect, that they immediately ſent orders to *Xicontencal* to make no more attempts upon the *Spaniards*, but to keep upon the defenſive; becauſe the Senate was upon a treaty of peace.

Xicotencal refus'd to obey thoſe orders, anſwering, with his uſual inſolence, *That he and his Army were the true Senate, and would take care of their country, when others abandon'd it*. His deſign was to make a ſecond effort by night; but, that he might do it to better purpoſe than formerly, knowing that the natives us'd to carry proviſions to to the *Spaniards*, which they exchang'd for baubles; he made forty of his ſoldiers, choſen for that employment, cloath themſelves like peaſants, to offer the *Spaniards* Fruit, Hens, and *Indian* Wheat; giving them orders to ſpy where their works were weakeſt. This they put in execution; but one of the *Zempoalans* having obſerv'd that they went ſlily about, taking particular notice of every part of the camp, gave information of it to *Cortez*; the pretended peaſants were ſeiz'd, and being examin'd ſeperately, confeſs'd the truth; telling him, that their General deſign'd to make an attack, that very night, with 20,000 men.

Having made this diſcovery, *Cortez* order'd ſome of the ſpies to have their hands cut off, and ſome their thumbs only, and ſo bid them go, and tell their General, that he was ready to receive him. This ſtruck a terror in the mind of *Xicotencal*; for he could not imagine that *Cortez* could have diſcover'd his deſign, but by inſpiration; and therefore was in ſuſpence how to behave. But he was ſoon determin'd; for deputies came to the Army from the Senate, with orders to him, to give up his command;

and to the officers and ſoldiers, not to obey him, upon pain of death. This broke the Army at once; and the Caciques, who were in it, return'd to their different countries.

The Senate ſend to treat with Cortez.

The Senate then ſent four of their number with a preſent to *Cortez*, to treat of peace, who were admitted to audience; and having made a ſorry excuſe for the war, and declar'd the addreſs of the Senate and People for peace; *Cortez*, putting on an air of ſeverity, gave them a doubtful anſwer, to make them more eager in their deſire; and ſent them back, with only telling them, that he would make peace with the Senate, according as their future behaviour deſerv'd it. This he did to gain time, and that he might recover of an indiſpoſition of body, under which he then labour'd.

Another Embaſſy from Montezuma.

About this time, another meſſage came from *Montezuma*, accompany'd with a preſent; his Ambaſſadors had inſtructions privately to obſtruct the peace, if they ſhould hear that it was propos'd; but the pretence of their coming was, to congratulate *Cortez* upon the victory he had obtain'd over their common enemy. *Cortez* receiv'd the Ambaſſadors, and treated them well; but delay'd to give them an anſwer, which they did not preſs for; having an inſtruction to ſtay with him, in order to break off the treaty, which they found was on foot, with the Republick; but *Cortez*'s deſign was to ſhew them how ſubmiſſive thoſe people were to him.

In the mean time, a new meſſage came from *Tlaſcala*, at the head of which was the General *Xicotencal*, attended by fifty gentlemen in decent equipage. As ſoon as he was admitted, he told *Cortez*, in a plain ſoldiery way, that he had ſtop'd the peace which the Republick had been deſirous of, when the firſt embaſſy had been ſent from *Zempoala*; and that his reaſon was, becauſe he believ'd him to be a favourer of *Montezuma*, and his tyranny; but now having a reſpect for him, as his conqueror, he was come to ſubmit himſelf, and deſire his friendſhip, for himſelf and his country; and therefore entreated him to bring his forces into the city, as if it were to his own; where he ſhould be provided with all neceſſaries, and be in as much ſafety as at home; offering to ſtay with the nobility, who were his attendants, as hoſtages for the true performance of what he promis'd. *Cortez* was pleas'd with this open, free ſpeech, and gave his word, that as ſoon as he had diſpatch'd *Montezuma*'s Ambaſſadors, he would return his viſit; refuſing to accept of any hoſtages for the word of a General.

The *Mexican* Ambaſſadors, having ſent an account to their King, of what paſt in the *Spaniſh* camp, he ſent a new preſent to *Cortez*, offering friendſhip with the King of *Spain*, upon two conditions, *viz.* that *Cortez* ſhould not make peace with *Tlaſcala*, nor pretend to go to *Mexico*. *Cortez* receiv'd the preſents, but delay'd the anſwer; and courteouſly entertain'd the Ambaſſadors.

In the mean time, the Senate being frighted at the delay of the *Spaniards*, came to the camp in a body, to ſolicite their coming to the town. *Cortez* receiv'd them as friends, and granted their requeſt, deſiring them to ſend ſome *Indians* to draw his artillery, and carry his baggage, which was done by break of day; and, raiſing his camp, he enter'd the city, to the great joy of all the people. He took *Montezuma*'s Ambaſſadors with him, and, for their ſecurity, lodg'd them near himſelf. *Cortez goes to* Tlaſcala.

Cortez had frequent converſations with the men of ſenſe among the *Tlaſcalans*, about Religion, but had no great effect; only he oblig'd them to ceaſe their human ſacrifices; ſo that, either convinc'd by his reaſons, or over-aw'd by his authority, they releas'd all the poor wretches, who had been appointed for victims.

But *Cortez* being now impatient to be gone, diſmiſs'd the Ambaſſadors of *Mexico*, after they had been witneſſes of the ſubmiſſion of the *Tlaſcalans*, whom *Montezuma* could never ſubdue; he bid them tell their prince all they had ſeen, and what intereſt he had with the Republick; which he would uſe for his Majeſty's advantage, if he would allow him an audience: which he hop'd he would not now refuſe, to one, who had behav'd with ſo much reſpect towards him. He had kept them with him ſo long, that he might not give *Montezuma* time to arm againſt him, before he began his march, which he deſign'd to do very ſoon after their departure. But before he had got every thing in order for that expedition, new meſſengers, and a new preſent came from *Mexico*, with permiſſion for *Cortez* to go thither, and deſiring him to paſs by *Cholula*, where the King had order'd quarters for him and his people. *Cortez* was pleas'd with this permiſſion, tho' he had reaſon to apprehend this quick change was not without ſome myſtery; and *Magiſcatzin*, and other wiſe *Tlaſcalans*, beg'd of him not to march by *Cholula*; aſſuring him that they were a perfidious people, and intirely in *Montezuma*'s intereſt; and when they could not prevail with him to go by another route, they order'd their Army to be ready to march for his defence;

but

but he refus'd that compliment, only he allow'd about 6000 of them to attend him.

Cortez begins his march towards Mexico, and arrives at Cholula.

Having taken leave of his friends at *Tlaſcala*, he march'd to *Cholula*, where the Cacique refuſing to receive the *Tlaſcalans*, they pitch'd their camp without the city, at *Cortez*'s deſire. He ſtaid here for ſome days, with all the appearance of friendſhip; but it was all diſſembled on the part of the *Indians* of the place; and their treachery came to *Cortez*'s knowledge in a wonderful manner.

There was a Lady in *Cholula*, who had taken a great liking to *Donna Marina*; ſhe came to her one morning, and taking her aſide, told her it was a pity that ſhe ſhould be thus a priſoner, and involv'd in the deſtruction, which *Montezuma* had prepar'd for the ſtrangers. *Marina*, believing there was myſtery hid under theſe words, pretended to lament her own captivity, and to be willing to eſcape; at which, the other told her, that if ſhe would be ſafe, ſhe muſt, that inſtant, go to her houſe; for that 6000 *Mexicans* in arms were already come into the town, at different times, and 20,000 more were at a ſmall diſtance, to ſupport them, at a time appointed; that the *Spaniards* were to be cut off, except a few, who were to be ſent to *Mexico* for ſacrifices. *Donna Marina* pretended to be pleas'd at the news, and leaving the Lady, under pretence of getting ſome neceſſary things, ſhe inform'd *Cortez* of the Plot; who ſeizing the Lady, and examining her, ſhe confeſs'd the whole affair. He immediately ſent for ſome of the Prieſts, and diſcovering all that he knew, as if he had known the deſign without being inform'd of it by any body; they taking it for granted that he had it by inſpiration, own'd the Plot; but to excuſe themſelves, they laid the blame upon *Montezuma*. *Cortez* had them confin'd privately, and ſending for the Cacique and Governor of the city, told them he would march by the break of day, and deſir'd they would provide *Indians* to carry his baggage, and furniſh proviſions for his march; as likewiſe 2000 men in arms, to accompany him; they had the ſoldiers in readineſs, but the other things came but ſlowly.

A Plot againſt Cortez diſcover'd,

Cortez having reſolv'd what to do, and giving private inſtructions to the *Tlaſcalans*, he ſent for the *Mexican* Ambaſſadors, and told them of the Plot, which he ſaid he had not only found out by his own ſpeculation and vigilance, but that the conſpirators had own'd it; for which reaſon he intended to puniſh them; but the rather, becauſe they had the impudence to accuſe the Emperor, as being privy to it, and authorizing it by his order; which was ſuch a calumny as they ought to die for. However, he kept them cloſe within their quarters, ſo that they could have no communication with the *Cholulans*.

At break of day, the ſoldiers, whom he had deſir'd, came to him, and were indeed more than the number demanded; but the proviſions and baggage-men leſs. He order'd the ſoldiers to be divided, and to retire to different places of his own quarters, where he ſhut them up; and then mounting his horſe, and drawing out his men, except ſuch as were neceſſary to guard his quarters, he appear'd in the ſtreet; and ſending for the Cacique, and principal men of the city, he told them that he had diſcover'd their Plot, and upbraided them for their treachery, and breach of hoſpitality; telling them that it was his intention to puniſh the conſpirators. The *Indians* hearing this, fled to the forces that were in the city, who came immediately to the ſtreet; but *Cortez* firſt falling upon the ſoldiers that had been ſent him in the morning, kill'd them all; and the ſignal being given, the *Tlaſcalans* enter'd, ſo that the *Spaniards* and *Zempoalans*, on the one hand, and the *Tlaſcalans* on the other, hem'd in the *Mexicans* and *Cholulans*, and made great havock. Numbers of people retir'd to the temples; whither the *Spaniards* purſu'd them, and when they refus'd to come out, they ſet one of the largeſt temples on fire, and burnt all that were in it.

And bloodily reveng'd.

Many have blam'd this day's ſlaughter, as well as many other actions of *Cortez*, as ſavouring much of cruelty; and indeed, for my part, I ſhall never be an advocate for violence and ſhedding of blood, it being as diſagreeable to my temper, as my character. But if the provocation was, as our author ſtates it, (and I have no authority to contradict him) I do not know how far men, enur'd to blood, will go when once enter'd; eſpecially if they have reaſon to believe there is no way to ſave themſelves, but by killing others. But ſtill that ſlaughter ought to ceaſe, when the reſiſtance is over. And our author ſays, that *Cortez* immediately proclaim'd a general pardon, and ſav'd even the Caciques, and chief men of the city; together with the Prieſts whom he had in confinement; tho' without doubt, all theſe were engag'd in the Plot, and, perhaps, the contrivers of it.

The next day, *Xicotencal* arriv'd at the city with 20,000 men, ſent by the faithful Senate, to *Cortez*'s aſſiſtance, upon the firſt intelligence of his danger: he receiv'd him with open arms; but perſuaded him to lead his Army back again,

again, as not having occaſion for them, and being very improper to give umbrage to *Montezuma*, with whom he was reſolv'd to continue in friendſhip, nothſtanding the provocations he had already receiv'd.

Having encourag'd the chief people of *Cholula* to bring back the inhabitants who had fled, and ſuffer'd all people from the neighbouring places to come and ſettle there; *Cortez* diſmiſs'd the *Zempoalans*, at their own deſire, making them preſents for their fidelity, and parting with them in the moſt affectionate manner. He ſent a preſent likewiſe to their Cacique, and letters to his lieutenant at *Vera-Cruz*.

Before he left *Cholula*, he had a freſh Embaſſy from *Montezuma*, congratulating his ſucceſs againſt the perfidious traitors; and repreſenting the indignation of the Monarch, for the villany of the attempt againſt him. *Cortez* diſſembled his knowledge of *Montezuma*'s being concern'd in it, and treated the Ambaſſadors well, without truſting them.

Cortez marches to Guacocingo.

At laſt, he began his march, and the Ambaſſadors with him; the firſt day he enter'd the Province of *Guacocingo*, where the chiefs of that, and the adjacent towns, came to him with proviſions; and, in private converſation, repreſented *Montezuma* as a cruel tyrant, cautioning *Cortez* to be upon his guard with him; for that he had laid an ambuſcade on the other ſide of the mountains, for his deſtruction; and that he might fall into it, had ſtop'd up the highway, leading to *Chalco*, and open'd another at the top of the hill, which was not practicable, but at the beginning, where it was ſmooth'd, in order to deceive them.

A new plot of Montezuma's *diſcover'd.*

With this caution, *Cortez* went on, and coming to the place, found it as it had been repreſented to him; the old road was barricado'd with ſtones and timber, and a new one made. He diſſembled his reſentment, and ask'd the Ambaſſadors the meaning of the two roads; who anſwer'd, that the beſt road was level'd for his march, and the other ſtop'd up, to prevent his going wrong. *Cortez*, without altering his voice or countenance, told them, they did not know his people; for they glory'd in overcoming difficulties. Then he order'd his *Tlaſcalans* to march, and clear the old road; which was done by them, and the natives of the country (who had accompany'd him), to the great confuſion and ſurprize of the Ambaſſadors, who look'd upon it as Divination. The *Mexicans*, who lay in ambuſcade on the other road, finding that *Cortez* had taken the old way, believ'd they were diſcover'd; and therefore made the beſt of their way to ſecure themſelves.

Montezuma, having intelligence of this laſt diſappointment, was quite diſſpirited; and inſtead of making uſe of his natural courage, (like *Saul* at *Endor*) had recourſe to Wizards; ſo that calling for his Magicians, and promiſing them great rewards if, by their enchantments, they deſtroy'd this new army; threaten'd them with death, if they fail'd in the undertaking. But tho' thoſe kind of people had cheated the ignorant multitude many times before, and perhaps had been deluded themſelves by the Devil, (whom Almighty GOD had permitted to exerciſe dominion over thoſe dark Heathens, for their puniſhment) could no longer keep up the cheat; but own'd that neither they, nor their Gods, could be of any uſe againſt *Montezuma*'s preſent enemies. They told him honeſtly, that their enchantments had no force; and they perceiv'd that their Gods had no longer any power. This gave the finiſhing ſtroke to *Montezuma*'s hopes; but, tho' he now gave all for loſt, the remains of his former greatneſs of mind appear'd in ſome meaſure; for he is reported to have ſaid, upon this repreſentation of his Magicians: *What can we do if our Gods forſake us? Let the Strangers come, and let the Heavens fall upon us: But it ſhall not be ſaid that we ſhall abſcond.—To turn our backs would be diſhonourable.* And added a little after, *I only lament the old men; women, and children, who cannot defend themſelves.* Theſe were ſentiments (as our author juſtly obſerves) worthy of a King, boldly to encounter calamities, which he ſaw was unavoidable; and to expreſs a compaſſion for the miſeries of his ſubjects, more than for his own.

Monte-zuma loſes all hopes.

By this time *Cortez* was near the Lake of *Mexico*, where the Prince of *Tazeuco*, nephew to *Montezuma*, came to meet him, on the part of his uncle; and brought him on his way to his own city, by the ſide of the Lake; but *Cortez* did not ſtop at *Tezeuco*, having a mind to arrive at *Mexico* the next day, in good time. The Prince therefore held on his way, to acquaint the King of the approach of the *Spaniards*; and *Cortez* proceeded to go to a place upon the Lake, three leagues beyond *Tezeuco*, marching his Army by a cawſey of 20 foot broad, of ſtone and lime; but he was ſtop'd ſhort at *Quitlavaca*, by the exceſſive civility of the Cacique of that place, who preſs'd him to lie there that night. This Cacique, tho' very near *Mexico*, was no friend to *Montezuma*, and gave *Cortez* the ſame account he had heard from others, of his tyranny

Cortez enters the Lake.

and

and luſt. He inform'd him of the prodigies that had been ſeen, which had diſ-ſpirited the King, and given great hopes to his oppreſs'd vaſſals; and bid him be of good courage, for he would undoubtedly conquer that country; he told him, the cawſey from thence to *Mexico* was much larger, and eaſier than what he had paſs'd; and he would not want friends to eſpouſe his quarrel, when he thought fit to break with *Montezuma*.

Cortez having lodg'd that night at *Quitlavaca*, march'd the next day to *Itztacpalapa*, where he ſtaid, that he might be able to enter *Mexico* in good time. Here the Cacique, who was a near relation of *Montezuma*'s, entertain'd him nobly; and ſhew'd him his gardens, which were laid out in a beautiful manner. But whether it was his relation to the King, or the nearneſs of this place to the Court, the *Spaniards* obſerv'd that the inhabitants of this place ſpoke with the utmoſt reſpect of *Montezuma*.

The next morning early, *Cortez* purſu'd his march; and approaching the famous, and long wiſh'd-for City, he was met by above 4000 of the Nobility, and officers of the court, ſent to attend him. After they had made their appearance, they all fell back on both ſides, to let him paſs between them; which he did to the end of the cauſey, where were two forts, and a draw-bridge, to defend the entrance of the city; all which he paſs'd without the leaſt oppoſition.

But here it muſt be own'd, that a ſingular Hand of Providence appear'd in favour of *Cortez*'s deſign; which infatuated *Montezuma* to that degree, that, tho' it was much againſt his inclination, to admit the *Spaniards* into *Mexico*; yet he never thought either of breaking the cawſey thro' the Lake, nor of pulling up the draw-bridge, which he could have eaſily done, and ſo have put him to a full ſtop; and by ſpoiling the cawſey behind him, have hem'd him in, and ſtarv'd him with all his people; nor did they venture, with all their force, to attack 450 *Spaniards*, and about 6000 *Indians*.

Cortez *enters* Mexico.

As ſoon as he had paſs'd the bridge, and enter'd the city, *Montezuma* came in perſon to meet him, carry'd upon the ſhoulders of his favourites, in a chair of ſolid gold, which ſhone thro' the ſeveral party-colour'd feathers, with which it was adorn'd; with a canopy over him of feathers and ſilver, held up by four of his principal nobles, and preceded by a company of 400, in a very handſome dreſs, all of one livery. As ſoon as he approach'd. *Cortez* lighted from his horſe, as the King did from his chair, and the followers of *Montezuma* ſpread a carpet upon the ground for him to tread upon. *Cortez* made him a profound reverence, which the *Mexican* King (departing from his dignity, to the aſtoniſhment of his own people) return'd, by putting his hand to the ground, and then moving it to his lips; being the ſign, by which the *Indians* expreſs their greateſt homage.

Is met by Montezuma.

This Prince was not above 40 years of age, of a middle ſize, well made as to his perſon, tho' he ſeem'd rather to be of a delicate, than robuſt Conſtitution; he had a Roman Noſe, and a Complexion fair, (for an *Indian*) with a lively Eye, and a majeſtic Preſence. He had on, a mantle of the fineſt cotton, which being ty'd on his ſhoulders, cover'd his body; the train of it ſweeping the carpet on which he walk'd. It was ſtudded with jewels of gold, pearls, and precious ſtones, to an unweildy quantity; with a crown of gold on his head, round behind, and ending in a point before, almoſt in the ſhape of a helmet. On his feet, he wore ſhoes of gold, ty'd about his ancles with ſtraps, ſtudded with the ſame mettal, almoſt after the manner of the *Roman* Buskins.

Cortez had put, over his coat of mail, a chain of glaſs, curiouſly hung together, in imitation of diamonds and emeralds; which he took off, and put upon *Montezuma*'s ſhoulder; which the nobles would have prevented, thinking it a liberty not allowable to go ſo near their King; but he check'd them, and took the preſent, ſhewing ſuch a value for it, that he put it amongſt his choiceſt jewels; and in return, he order'd a collar to be brought of crimſon ſhells, ſet together with ſuch art, that, at every one of them, hung four crabs of gold, which he himſelf put about *Cortez*'s neck; another inſtance of his great condeſcenſion. Their ſpeeches, at the firſt interview, were ſhort, and to the purpoſe; and *Montezuma*, giving orders to the two Caciques of *Tezeuco* and *Itztacpalapa*, to accompany *Cortez* to his lodging, he mounted his chair, and return'd in the ſame manner as he came.

Cortez was accordingly conducted to one of the royal palaces, where he had ſufficient accommodation for his Army; and having view'd all the avenues of it, he plac'd his guards, as he found moſt convenient; not ſhewing any appearance of diſtruſt, and yet making himſelf as ſecure as he could.

After he and his people had been magnificently ſerv'd at dinner, *Montezuma* did him the honour of a viſit; *Cortez* went to the court of the palace

to receive him, and ſtopping at the entry to his appartment, with a profound reverence, the King paſs'd by him, and took his ſeat with an air of negligence, mix'd with majeſty, ordering a chair for *Cortez*; and, at the ſame time, made a ſignal for his attendants to retire to the wall on each ſide, *Cortez* doing the like to his. When the interpreters were come, and *Cortez* was going to begin his ſpeech, *Montezuma* interrupted him, and ſpoke to this effect:

Monte-zuma's *ſpeech to* Cortez.

" That he thought proper to tell him, " (before he deliver'd his embaſſy) that " they muſt lay aſide the prejudices, " which they might probably have con- " ceiv'd of each other. That perhaps, " in his journey to *Mexico*, he might " have convers'd with ſome of his ene- " mies, who had repreſented him as a " cruel, tyrannical King; and with others " of his friends, who, to flatter him, " had made him more than mortal. He, " for his part, own'd frankly, that he " had heard many contradictory ac- " counts of him, and his army; ſome " repreſenting them as Gods, come to " that country for the benefit of man- " kind; whilſt others painted them as " cruel maſters, who had no other view " but to ſtrip them of their gold, and " to ſhew their ſuperior force by oppreſ- " ſion, and injuſtice. He ſaid, he was " now undeceiv'd; and ſaw, that there " had been a good deal of exaggeration " on each ſide. He was, on the one " hand, convinc'd that they were men, " tho' their country had communicated " a ſuperior ſtrength to them; that thoſe " large deer, which they had tam'd, and " had taught to carry them, were only " inſtances of the docility of animals; " and their arms, which ſeem'd to carry " thunder, he believ'd to be a human " invention, to compreſs the air, and " let it out with the greater noiſe; and " the fire, which was contain'd in thoſe " barrels, was only a ſecret of magic, " which they had not as yet come to " the knowledge of. On the other hand, " he found by his behaviour, and polite " manners, and by the report of his " ſervants, that they were courteous " and liberal, pious and religious; and " that their reſentments were founded " upon reaſon. As, therefore, he had " laid aſide the prejudices he had con- " ceiv'd of *them*, he adviſ'd *Cortez* to " diveſt himſelf of the wrong impreſſions " that had been given of *him*, and not " to judge of his actions, until he had " heard his reaſons; and then, perhaps, " he would make a juſt difference be- " tween due chaſtiſement of rebellious " ſubjects, and tyrannical oppreſſion of " the innocent." With regard to the deſign of his embaſſy, he told him, " That they were not ignorant, that the " great Prince, who had ſent him, was " deſcended from their ancient *Que- " zalcoal*, Lord of the ſeven Caves of " the *Navatlaques*; and lawful King of " the ſeven Nations, which gave the " beginning to the *Mexican* Empire. " That they were ſufficiently inſtruct- " ed, by Prophecy, that one of his po- " ſterity was to come from the Eaſt, " (whither he had gone to make new " conqueſts) who ſhould reform their " Government; and that their coming, " in his time, and in the manner they " appear'd, ſeem'd to agree exactly with " the tradition they had; and therefore " he deſir'd him to ſpeak his mind freely, " and that all reſpect ſhould be paid to " his maſter's propoſals."

Cortez, having matter enough ſuggeſted to him from this ſpeech, anſwer'd the King to the following purpoſe:

" That he own'd himſelf infinitely " oblig'd to his Majeſty, for the honour " he had done him; and the favourable " opinion he had conceiv'd of their na- " tion. That he was ſenſible of the " miſrepreſentations of both ſides; and " therefore had given no credit, either " to his Majeſty's enemies or flatterers. " That looking upon him as a great " Prince, and one that would liſten to " reaſon, he had been ambitious to come " into his preſence, in the name of his " Sovereign, who was the greateſt Mo- " narch of the eaſtern world, to offer " him the friendſhip of that Prince; not " to claim his dominions as his own, by " vertue of thoſe ancient rights, which " he had mention'd; but to open a cor- " reſpondence between the two Monar- " chies, and to free the *Indians* from " their errors. That whatever right " his Maſter might claim by their tra- " dition, yet he deſign'd only to make " uſe of his authority, to gain credit to " what he was to propoſe for their ad- " vantage." *His anſwer.*

Then he repreſented to him the errors of their Religion; ſhew'd that there was but one GOD, who made and governs all things. That the Gods they worſhip'd in *Mexico*, were enemies to mankind, and ſought their deſtruction; which he only hinted at, to the King, at that time, hoping to have an opportunity, at more convenient interviews, to convince his reaſon. He likewiſe ſpoke of himſelf, and the *Spaniards*, after ſuch a manner, as to keep up the notion the *Indians* had of their being invincible, without attributing immortality to them. He ſpoke of their horſes, and fire-arms, in a way which ſerv'd to keep up the terror they had conceiv'd of them, without

out saying any thing against truth. He concluded his speech by telling him, that the chief part of his embassy was, to set him and his subjects right in religious worship, as the solid foundation of friendship and alliance between the eastern and western Empires.

Montezuma reply'd, "That he accepted the offer of his Monarch's "friendship, as the descendant of *Quezalcoal*; but said, at the same time, "that all Gods were good; and that the "God, *Cortez* had mention'd, might "be as he describ'd him, without any "prejudice to his." And thus he left him, with all assurance of good treatment, without bringing himself under any obligation, as to Religion.

The day following, *Cortez* sent to desire an audience, which was readily granted; and he, with three of his chief officers, and six favourite soldiers, with their arms, were conducted to the royal palace; which (if it answer'd the description our author gives of it) was not unworthy the greatest Monarch, in a more polite part of the world. It was of such an extent, that it had thirty gates opening to as many different streets. The principal front was of Jasper, black, red, and white, curiously dispos'd, and well polish'd; and took up one whole side of a large parade. Over the gate, in a large shield, were *Montezuma*'s arms, which were a Griffin, half Eagle and half Lyon, with its wings extended, and a Tyger in his talons. They pass'd three courts (built like the front, and all square) before they came to the King's apartments; where they found the rooms large; the floors were cover'd with mats of different work, the walls with hangings of cotton, interwoven with rabbets furs; and the inner-room with hangings of feathers, beautify'd with lively colours, and diverse figures. The roofs were of Cypress, Cedar, and other fragrant wood, with different *Foliages* and *Relievo's*: and so artfully nich'd, that, without the help of nails, the planks, in the cieling, supported each other.

Montezuma's *Palace.*

They were receiv'd, in the several rooms, as they pass'd, by a number of officers, in their different posts; and, at the door of the anti-chamber, by the nobility and magistrates. Having enter'd that room, they found *Montezuma*, with all the ensigns of royalty about him. At *Cortez*'s approach, he advanced some steps, and as *Cortez* saluted him with a low reverence, he laid his hands upon his shoulders, and cast an obliging look upon the other Captains; and retir'd to his chair of state; ordering chairs for *Cortez* and his attendants.

They enter'd into a very familiar conversation; *Montezuma* asking many questions concerning the manners and polity of the eastern Countries, in which he shew'd good understanding and parts. And then turning the discourse, to the dependency of his Empire, on the descendants of their first King; he express'd great satisfaction, that the Prophecy, concerning the coming of the strangers to *reform* their Government, was fulfil'd in his reign. In this conversation, *Cortez* industriously, and dexterously brought in the Topic of Religion; and, in giving him an account of the customs of his country, he drew a short sketch of the Rites of the Christian Religion, and artfully exclaim'd against human sacrifices, as contrary to the nature of GOD, and detestable in itself.

Montezuma was in a great straight how to behave, between his regard to *Cortez*, and supporting his authority, which he believ'd depended upon his maintaining his own Religion. He seem'd to agree, that there were absurdities in some parts of it; but custom had so reconcil'd him and his subjects to it the very worst Rites, that he neither desir'd, (nor indeed did he think it safe) to make any alteration; yet he went so far, as to forbid any of the human sacrifices to be brought to his tables; but left his subjects at liberty to follow their old custom. He had frequent conversations with *Cortez*, and his first Chaplain; but continu'd still fix'd to his own Gods, without any disrespect to the Christian Religion.

Motezuma *carries* Cortez *to the great Temple.*

One day he took them along with him to the great Temple, and having consulted his Priests, whether it was lawful to suffer them to enter, he took them in, and officiously shew'd them the several parts of it, explaining the use of every thing they saw. *Cortez* was so transported with zeal for his Religion, that he desir'd leave to *set up the Cross of* CHRIST *before the Images of the Idols; and then he should judge for himself, whether his Gods deserv'd respect or contempt.* The Priests were enrag'd at this proposal, and *Montezuma* was in the utmost confusion: However, recollecting himself, he told *Cortez, That at the least, he ought to shew the Temple the respect due to his person*; and immediately went out, to oblige them to do the same; which they did, and retir'd to their own quarters: yet he was so complaisant to the *Spaniards*, as to send his own master-builders to fit up a Chapel for their worship; at which he and his Ministers were often present.

Hitherto the correspondence was kept up between the *Spaniards* and *Mexicans*, without any sign of enmity; the latter taking all imaginable pains to entertain their

their new guests, as agreeably as they could; and the former behaving themselves as friends, and living among them, with as much freedom, as if they had been at home. But now we must change the Scene, their affairs took a quite different turn; and, instead of friendship, till now kept up between them, there was nothing but diffidence and dissention; the occasion of which, we are now to relate.

[But, before I begin, I must enter my protest, and declare that, tho' I have a very good opinion of *Cortez*'s courage, and am willing to follow our Author, (as far as common sense and right reason will lead him) in excusing things, which other Authors have condemn'd; and which some of his own nation have very much blam'd him for; because I look upon them to have been done out of necessity, and only against private people, and by the publick approbation of their Sovereign, and done, in a manner, in *Cortez*'s name; yet in the part of his history we are now entering into, I can by no means approve his conduct, as having put more than one insult upon SOVEREIGN AUTHORITY, (for which I own I have a sacred regard) in the person of *Montezuma*; and as having done it, under pretence of friendship and confidence; and by the pretended authority of his Master, the King of *Spain*, who ought to have taken his head for it, notwithstanding his success; since by his behaviour, he not only expos'd his name to reproach, but obstructed the progress of the Christian Religion among the *Indians*, by giving them so abominable an instance of the hypocrisy and insincerity of the first professors of it, who had appear'd among them. I only speak my own opinion, which I don't expect every body should approve.]

Whilst *Cortez* was thus chearfully entertain'd at the Court of *Mexico*, there came Letters to him from *Vera-Cruz*, by two *Tlascalan* Soldiers, in the disguise of *Mexicans*; giving him an account, that *John d'Escalante*, his Lieutenant at that garrison, (having heard that *Qualpopoca*, the *Mexican* General, was come with an Army to harrass some of *Cortez*'s Confederates, because they refus'd to pay tribute to *Montezuma*) had sent a very civil message to him, desiring him to forbear any military execution, till he had fresh orders from *Mexico*; because it was not probable that the King would insist upon treating the friends of the *Spaniards* ill, when he treated the *Spanish* General with so much civility and generosity. *Qualpopoca* return'd a surly insolent answer to this message, *viz.* "That he knew his Master's orders sufficiently, and likewise how to put "them in execution, in spite of any "opposition that could be made against "him." *Escalante* taking this as a direct challenge, took the field with forty *Spaniards*, and 2000 mountainard *Totanaques*, against 4000 *Mexicans*, carrying two pieces of cannon with him. The Armies met, and engag'd with much resolution; but, in a little time, the enemy gave way, retiring in great disorder: *Escalante* pursu'd the victory with his forty *Spaniards*; but his *Indians* could not be prevail'd upon to follow, having all deserted him, as if they had been beaten. But he pursu'd them to the nearest towns, and set fire to them, to dislodge the *Indians*, which he did; and engag'd them afresh, till he quite broke, and forced them to take shelter in the woods. But himself, and seven of his *Spaniards*, were so wounded, that they dy'd in three days, one of them, taken in the pursuit, and kill'd by the *Mexicans*, and the rest at *Vera-Cruz*.

An engagement at Vera-Cruz,

Where Escalante is kill'd.

This intelligence coming to *Cortez*, in a Letter from the Council, made him very uneasy; which was increas'd by a secret intimation he had, some days before, that the head of a *Spaniard* had been sent to *Montezuma*, which he had order'd to be conceal'd. This making *Cortez* believe, that *Qualpopoca* had orders for what he had done, gave him great trouble. He retir'd to his apartment, and consider'd all the difficulties and dangers he was expos'd to; and when he came to a resolution in his own mind, he call'd his officers, and such as he had the greatest confidence in, representing their present situation, and bidding them speak their minds freely. They were divided in their opinions, as one may well imagine, in so critical a juncture. Some propos'd, that they should desire a passport from *Montezuma*, to return to *Vera-Cruz*; others, that they should steal away privately; others again were for staying at *Mexico*, without seeming to know of the misfortune which happen'd to their garrison, till they should either hear from *Spain*, or could be handsomely dismiss'd by *Montezuma*.

Cortez holds a council of war.

Cortez answer'd all their proposals, by shewing the inconveniencies of them: to desire a passport, was to shew their weakness, that they could not depart without the assistance of the *Indians*: to steal away, was a dishonour he could not submit to; besides, that was putting it in *Montezuma*'s power to stop the passes, and get them cut off by numbers, now the *Indians* had found by experience that they were not immortal. And to stay at *Mexico*, without taking notice of the affront they had receiv'd,

was

was the way to loſe their credit with their friends, and to oblige them (for their own ſafety) to join with the *Mexicans* againſt them. He therefore told them, "There was no way left but "one, which, tho' it might ſeem de- "ſperate, was the only ſafe one, if "it ſucceeded; which was to get *Mon-* "*tezuma* into their hands, and keep him "priſoner in their own quarters; which "would at once terrify the *Indians*, "and ſecure themſelves (by having his "perſon in their power) from any at- "tacks, which might be made upon "them, by his ſubjects." And to take off the apprehenſion of any danger, he repreſented the conſtant courſe of Providence, which had attended them in the whole conduct of the Expedition. He enlarg'd upon this Topic, with ſo much zeal and fervency, that he brought the whole council into it; it being agreed to, and the conduct of it left to his prudence.

Which concludes in determining to make Montezuma *priſoner.*

A ſtrange Reſolution! which, were not the fact ſo recent, and atteſted by all who have writ upon this ſubject, might paſs for the moſt extravagant piece of *Don Quixotiſm*, that ever fill'd a Romance. That a handful of men ſhould think of ſeizing a powerful Monarch in his own palace, ſurrounded with guards, and in ſuch a populous city as *Mexico*; where he was abſolute, and either fear'd or lov'd ſufficiently, to oblige the whole inhabitants to take arms, ~~to revenge~~ the leaſt affront offer'd to their Sovereign; and that they ſhould effect this without the leaſt oppoſition, is the moſt amazing inſtance of proſperous temerity that is related in Hiſtory.

When this bold ſtep was once concluded upon, *Cortez* was reſolv'd to put it immediately in execution. And to that end, (having given orders to all his people to be ready, without any noiſe) about the ordinary hour of viſiting the King, he himſelf, with three of his Captains, went to the palace, giving inſtructions to thirty pick'd ſoldiers to follow at a diſtance: *Montezuma* receiv'd them as uſual; and *Cortez* beginning his complaint, with a becoming reſentment, told him all he had heard from *Vera-Cruz*; at the ſame time, laying the whole blame upon the General; becauſe, he pretended, he could not bring himſelf to believe his Majeſty was any way concern'd in it.

Montezuma was ſurpriz'd at this ſpeech, but deny'd his having had any hand in it; which *Cortez* ſaid he believ'd; but added, that he could not ſatisfy his companions; nor indeed could the *Mexicans* be brought to think ſo juſtly of his Majeſty's innocence, unleſs he would, without any diſturbance, go to his quarters, as of his own accord, in the ſight of all his attendants; and there remain, till it ſhould appear evidently, that *Qualpopoca* had acted without orders. This, he told him, would not only ſtifle the juſt reſentment of the great eaſtern Monarch; but would vindicate his own honour, which, at preſent, was under ſome eclipſe: and to perſuade him to comply with this inſolent propoſal, he promis'd, upon his honour, that his Majeſty ſhould be treated in the *Spaniſh* quarters, no otherwiſe than in his own palaces.

The King was ſtruck (as he well might) at this boldneſs; and giving *Cortez* to underſtand that he knew the meaning of it, told him, "That Princes of his "rank did not uſe to go quietly to pri- "ſon; nor would his ſubjects ſuffer it, "tho' he were ſo mean as to ſubmit to "it." But *Cortez* ſtill inſiſting upon it, he offer'd to ſend for his General, and all the officers concern'd in that action, and deliver them up into the hands of the *Spaniards*, to be chaſtis'd as they ſhould think fit; and to give his own Sons to *Cortez* for hoſtages. This was a condeſcenſion, as ample as a reaſonable man could deſire; and I can not forbear ſaying, that if *Cortez* had been that man of honour, which he pretended to be, and had not had other views, than the dignity of his Maſter, and the ſafety of himſelf, and his Army; he would not have preſs'd a Sovereign, (who had treated him like an equal, rather than as an Ambaſſador) in his own dominions, and in his own palace, to do an action ſo unbecoming his royal dignity; nor have put him to the mortification of ſeeing himſelf attended by *foreign Guards* in his own houſe. Such actions may have the ſanction of power; but no unprejudiced perſon can ever think them juſtifiable.

Cortez rejected all his propoſals, being reſolv'd to carry his point; and *Velaſquez de Leon*, inſolently bawl'd out, *Let us either ſeize, or kill him.* Poor *Montezuma*, being ſurpriz'd at this indecency, which he had not been accuſtom'd to, ask'd *Donna Marina* what the Captain had ſaid; and ſhe (being artful enough of herſelf, and well inſtructed by *Cortez* before-hand) pretending to be afraid of being underſtood by the *Spaniards*, told him, that *he run a great hazard of his life, in not complying with their deſire. That he ſaw they were aſſiſted by a ſuper-natural Power; and therefore ſhe, as his dutiful and loyal ſubject, beg'd of his Majeſty to go with them, where ſhe could aſſure him of being well us'd; and added, that his life was not ſafe if he refus'd.*

The King truſting too much to one, who pretended *loyalty*, and having too great an opinion of the power of his enemies, and too low an eſteem for his faithful ſubjects, ſuffer'd himſelf to be overcome; or, perhaps, his evil Genius prompted him to ſubmit to what he then thought was unavoidable; ſo that he told *Cortez*, *He would truſt himſelf to his conduct; ſince it was the will of the Gods, he was determin'd to ſubmit to it.* Then calling for his chair, and ordinary attendance, he was carry'd in proceſſion to the *Spaniſh* quarters; giving out, that he was going thither to divert himſelf with them for ſome days; ordering every thing with a chearful air, towards his own officers, as if he had really gone of his own accord.

Which was executed.

Thus was the greateſt Monarch of this new world, diveſted of his royalty, by a deſpicable handful of men, under the influence of a bold Uſurper: and *Montezuma*, who had ſhew'd himſelf (in former times) a man of courage and reſolution, was now diſ-ſpirited ſo far, as to ſuffer himſelf to be conquer'd, without ſtriking one ſtroke for Sovereignty; tho' he had an army that would have ſtuck by him, had he given proper orders, and truſted himſelf to their protection.

When he arriv'd at the palace where *Cortez* held his quarters, he retir'd to an appartment which was immediately furniſh'd from his own wardrobe; and was allow'd his own ſervants, who us'd to be about him; and the nobility likewiſe had free acceſs to him; but (under pretence of not incommoding him) their number was limited, too many not being allow'd to be with him at once: and all the avenues to the palace were guarded by *Spaniards*.

Theſe proceedings, gave the *Mexicans* ſufficient ground to believe their King was a priſoner, tho' he took all the pains imaginable to conceal it; and the *Spaniards* ſhew'd all the outward regard to him, and behav'd with as much reſpect as they had formerly done; *Cortez* demanded an audience, with much formality, every time he went to viſit him; and the other Captains kept their diſtance as uſual. But a little time wore out the novelty of his captivity; and both he and his ſubjects made it ſo familiar to them, that tho' he was one of the ſtricteſt exacters of *punctilio* and *decorum*, (which indeed is neceſſary to ſupport royal dignity) and his ſubjects were renown'd amongſt the *Indians* for their martial temper; yet neither he, nor they, made the leaſt attempt to releaſe him, or to chaſtiſe the *Spaniards* for their inſolence.

Upon his firſt confinement, *Montezuma* had given orders to one of his Captains to bring *Qualpopoca*, and his Officers, priſoners to *Mexico*; and, in twenty days, he return'd with them, who had deliver'd themſelves without reſiſtance, upon the ſight of the royal Signet. As ſoon as they were brought before *Montezuma*, he ſent them to *Cortez*; who held a council of war upon them. They own'd that they had invaded the *Indians*, who were in confederacy with the *Spaniards*; that they had fought againſt the garriſon of *Vera-Cruz*, and kill'd a *Spaniard*, whom they had taken priſoner; and all this without ſaying one word of any commiſſion from their King. *Cortez*, and his council, condemn'd them to be burnt, for having kill'd a *Spaniard* in cool blood: and reſolving to put that rigorous, extravagant ſentence in execution, run out yet into a greater piece of barbarity, than he had ever attempted. For, *Qualpopoca*, when he ſaw the *Spaniards* in earneſt in their deſign of putting him and his companions to that cruel death, alledg'd, (or *Cortez* pretended he alledg'd) the King's Commiſſion for what he had done. And therefore *Cortez*, going to the King's appartment, with two or three of his Officers, with the uſual grimace of reſpect in accoſting him, he bid *Donna Marina* tell him, "That "he had condemn'd his General, and "other Officers, and they were now "going to execution; but ſince they "had accus'd his Majeſty, as an accom-"plice of their crime, it was but juſt "he ſhould expiate for thoſe ſtrong pre-"ſumptions, by ſome perſonal pen-"nance." And ordering Fetters to be brought, he ſtood by till they put them upon *Montezuma*, and then retir'd to his own appartment; forbidding admiſſion to any of the King's Miniſters.

Cortez condemns Qualpopoca, and his officers to death.

And puts the King in CHAINS.

Montezuma was ſo confounded at this outrage, that he could neither ſpeak nor move. His ſervants threw themſelves at his feet, bewailing his misfortune in fruitleſs tears. When he recover'd from his aſtoniſhment, he gave way, at firſt, to his rage; but ſuddenly recollecting, that it was to no purpoſe, he compos'd himſelf, and with a ſtaid Majeſty expected his Fate.

Cortez haſten'd the execution of thoſe he had condemn'd; and had it perform'd publickly, without the leaſt oppoſition; as if the *Mexicans* had been render'd inſenſible, by ſome ſuperior Power; ſo great an aſcendant the genius of *Cortez*, and the unaccountable ſucceſs of his raſh actions, had over their ſpirits, that they beheld this execution with a ſilence, which amaz'd even the *Spaniards*.

Qualpopoca, and other officers burnt alive.

As ſoon as the execution was over, *Cortez* return'd to *Montezuma*, and with

a chearful air, and courteous bow, told him, "That the traitors were puniſh'd, "who had dar'd to blemiſh his character; "and that his Majeſty himſelf had ſuf- "ficiently comply'd with his obligation, "by ſubmitting to the divine Juſtice, "in that ſhort intermiſſion of his liber- "ty." And then order'd his fetters to be taken off, for which *Montezuma* was very liberal in his acknowledgments. And now *Cortez*, by a new grimace, offer'd him his liberty, which he was well aſſur'd he would not accept of; for he had often heard him declare, that he would never return to his palace whilſt the *Spaniards* continu'd in *Mexico*. This reſolution had been artfully inſtill'd by *Cortez*, who had given inſtructions to his miſtreſs and confident *Donna Marina*, to inſinuate to the King, during his confinement, that he would loſe his character among his ſubjects, if it ſhould be known that he accepted of liberty from foreigners. This ſhe had often inculcated, with ſo much addreſs, that he continu'd fix'd in his reſolution, not to return home. However, he anſwer'd *Cortez*'s offer in a way that ſhew'd he deſerv'd better treatment, than he had hitherto met with. He thank'd him for his kind intention of giving him his liberty, but told him, "That there was "now a neceſſity for his continuing "with them, for their ſafety; becauſe "he foreſaw, that upon his return, his "nobility and miniſters, would urge "him to take up arms againſt them, to "revenge the affronts he had receiv'd." *Cortez* thank'd him for his care of them; and they both reſted ſatisfy'd in their opinion of having deceiv'd each other.

All matters being now quiet at *Mexico*, *Cortez* allow'd the King, at his own requeſt, to viſit the Temples, and the Palace where his Wives and Concubines reſided, with other houſes of pleaſure; but *Montezuma* always deſir'd ſome *Spaniards* to accompany him; whom he pitch'd upon himſelf, to prevent the ſhame of their being put upon him againſt his inclination. But before he went to the great Temple, which he viſited firſt, *Cortez* had prevail'd with him to forbid all human ſacrifices, which he did by a publick Edict. Whether that was univerſally obey'd, is not certain; but at leaſt it was comply'd with in publick.

Several Authors ſay, that, about this time, the *Spaniards* demoliſh'd all the Idols of *Mexico*, and that there was ſuch a tumult in the city, that things were like to fall into the utmoſt confuſion; but our Author (*De Solis*) thinks they were miſinform'd. I ſhall not pretend to determine whether he or they be in the right, as to the fact; but I muſt own, I think our Author's reaſon againſt it, drawn from the prudence and moderation of *Cortez*, is not ſufficient to invalidate the truth of what others affirm; for after what we have related, I can ſay but little of his moderation; and ſince he ſeems to have had an enthuſiaſtic aſſurance of ſucceſs in his whole conduct, why that ſhould have left him, in what he look'd upon as the immediate cauſe of GOD, I can not account for. The Reader may take which ſide of the queſtion he pleaſes.

Cortez *builds two brigantines.*

Cortez had nam'd *Sandoval* for his Lieutenant at *Vera-Cruz*; but not thinking it proper to part with ſo good an officer, he ſent a ſoldier there as his deputy. He likewiſe order'd to be brought from *Vera-Cruz*, ſome ſails, cordage, and other things neceſſary, for building a couple of brigantines, to command the Lake, in caſe of any accident. When they were launch'd, *Montezuma* went aboard with *Cortez*, to ſee the manner of their ſailing; the *Indians* having, before that, had no notion of ſhips moving without oars. All the King's canoes were made ready againſt the day appointed; the King himſelf thinking that his light veſſels would get the better of the *Spaniſh* heavy brigantines; but he was ſtrangely ſurpriz'd, when he ſaw them, by the help of a brisk gale of wind, leave all the canoes aſtern of them, only by ſpeading their canvas, and turning the helm a little to one ſide; which the *Indians* took for conjuration.

In the mean time *Cortez*, who was very vigilant in every thing, which contributed to his chief deſign, had, in ſeveral converſations with *Montezuma*, and his nobles (who now viſited him without reſerve, when they verily believ'd, by the freedom their King had of going where he pleas'd, that he ſtaid in the *Spaniſh* quarters by his own free inclination) inform'd himſelf of the extent of the *Mexican* Dominions; the number of the Provinces, Mountains, Rivers, and Mines; the diſtance between the Seas; the Ports and Bays; and every thing that was neceſſary to give him a diſtinct idea of the country, and the ſtrength of it. This he artfully ſeem'd to enquire into, only to gratify the curioſity of his Maſter, who lov'd to ask many queſtions concerning foreign countries. *Montezuma* was ſo far from being upon the reſerve in queſtions of this nature, that with a frankneſs void of deſign, he order'd his painters to bring him the maps of the different Provinces upon cloth; and ſent ſome of his officers along with thoſe employ'd by *Cortez*, to view the diſtant Cities or Ports commanding a free admiſſion for the *Spaniards*

niards into all places where they ſhould incline to go.

A Plot againſt Cortez diſcover'd.

About this time, a Conſpiracy broke out, by which was pretended the deſtruction of the *Spaniards* only, but, in reality, the poſſeſſion of the Kingdom. It was ſet on foot by the Cacique of *Tezeuco*, the King's Nephew; who being a youth of ſpirit, could not brook the ſupine negligence of his uncle, in letting the *Spaniards* get ſuch footing in his dominions; but, being naturally ambitious, he was in hopes, if the ſword were once drawn in earneſt, he ſhould be able to cut out his way to the Empire. In order to accompliſh this deſign, he had ſeveral interviews with the Caciques his neighbours, ſome of whom were his Relations. He repreſented to them the weakneſs of *Montezuma*, in letting himſelf be kept priſoner by *Cortez*; and the inſolence of the *Spaniards*, in treating him with ſo much indignity. He ſhew'd how eaſily they might be deſtroy'd, notwithſtanding their boaſted ſtrength, if they would all unite againſt them. This Prince ſpirited up three or four others, ſo that they agreed to bring their forces together againſt an appointed time, and to fall upon the *Spaniards* unexpectedly. The Cacique of *Matalcingo*, who was preſent, propos'd to lay the matter before *Montezuma*, leſt his life might be in danger, from making an attempt upon *Cortez*, whilſt he had the King in his power. However, this was over-rul'd, and they diſpers'd to proſecute the deſign.

This Plot was diſcover'd to the King, and to *Cortez*, almoſt at the ſame time: and they ſought out each other to diſcloſe the ſecret. *Montezuma* was the firſt who ſpoke of it, in terms of great reſentment againſt his Nephew *Cacumazin*. *Cortez* deſir'd leave to march out to *Tezeuco* to chaſtiſe him; but *Montezuma* abſolutely refus'd it, telling him, that if he would leave the matter to him, he would cruſh the Plot, without any diſturbance; and he was as good as his word: for in a ſhort time, he brought his Nephew priſoner to *Mexico*, with a deſign to proceed againſt him as a traitor; but *Cortez* adviſ'd him to keep him priſoner, and to give his Province to his brother, as the next in line; by which policy, he made the new Cacique his friend, and gain'd a vaſt reputation for clemency, among the *Mexicans*; the other Caciques, engag'd in the conſpiracy, coming to him to beg his intereſt with the King to forgive them; which he did, and thereby render'd all things eaſy and quiet in *Mexico*.

But *Montezuma*, now thinking it time to rid himſelf of the *Spaniards*, ſummon'd all the Caciques, his vaſſals, who were near *Mexico*, to come to him about an affair of the greateſt conſequence. When they arriv'd, he call'd a general council of the Caciques and Nobles, to which he invited *Cortez*, whom he had before acquainted with part of his deſign, *viz.* "The acknowledging the "King of *Spain* (as the deſcendant of "*Quezalcoal*) Sovereign of *Mexico*; "and to oblige the States of the Em- "pire, by his own example, to own "themſelves his Vaſſals; and to pay "him Tribute." This was, at once, anſwering all that *Cortez* could pretend to demand; and that being done, he reſolv'd to inſiſt upon his leaving his dominions; but this part of his deſign, the King kept ſecret in his own breaſt. *Cortez*, who was pleas'd to find him condeſcend ſo far, gave him thanks for the propoſal, and accepted of it in his Maſter's name; giving an account of it to his Captains, as a thing of the utmoſt importance for the honour and advantage of *Spain*.

Montezuma calls a meeting of the States.

When the Council was aſſembled, *Montezuma* open'd it with a ſpeech, ſetting forth. "The great affection he bore "to them, and his conſtant care to pro- "mote their intereſt; and deſired them "to depend upon his word, that he "would propoſe nothing to them, but "what was for their advantage; having "conſulted with his Gods in the affair, "for what he had now call'd them to- "gether." After this preamble, he gave a ſhort account of the origin of the *Mexican* Empire; the great actions of *Quezalcoal*, their firſt Emperor; the Prophecy he left them at his departure for the conqueſt of the Eaſt, *That a deſcendant of his ſhould be one day their Sovereign*. Then he added, as a matter paſt all doubt, "That the King of *Spain* "was the perſon ſo foretold; and there- "fore that they were oblig'd to acknow- "ledge his right by blood, which had "hitherto been exercis'd only by ele- "ction. That had that great Prince "come to *Mexico* in perſon, he would "have been the firſt that ſhould have "ſtrip'd himſelf of all the dignity he "poſſeſs'd, and have laid the Crown at "his feet; either to leave it abſolutely "to his diſpoſal, or to receive it as a "gift from his hand. But ſince he had "only ſent his Ambaſſadors, he was re- "ſolv'd to ſhew them an example of "obedience, to the will of the Gods, "by owning the authority of the heir "of *Quezalcoal*; and to that end, he "had prepar'd, as an acknowledgment, "the richeſt jewels of his treaſury; and "he hop'd they would follow his ex- "ample."

The

The King could not finiſh this ſpeech without great concern; and ſhedding ſome tears; but *Cortez* reliev'd him in ſome meaſure, by telling him, "That "it was not the intention of his Sove- "reign to diſpoſſeſs him of his royal "dignity, nor to make any innovation "in the Government: and therefore he "only deſir'd they would, in that aſ- "ſembly, ſettle the right of Succeſſion "in his Poſterity."

The whole aſſembly was confounded at *Montezuma*'s propoſal, ſo very different from his known temper and character; they continu'd in a profound ſilence, till the King's firſt Miniſter, taking upon him to ſpeak for the reſt, ſaid, "That the whole aſſembly reſpected "King *Montezuma*, as their Lord and "Sovereign; and therefore would rea- "dily follow any orders he ſhould pleaſe "to give, or any example he ſhould ſet "them; as being perſuaded that his Ma- "jeſty had well conſider'd every thing "before he propos'd it; they having no "ſurer inſtrument, than his voice, to "inform them of the will of the Gods."

The King of Spain *declar'd Sovereign of* Mexico.

The whole aſſembly agreed to this declaration; and *Cortez* procur'd this ſubmiſſion to *Don Carlos*, Emperor of the Eaſt, and King of *Spain*, to be perform'd in as authentic a manner, as was uſual in that country, for Vaſſals to their Sovereigns: ſo far did their ſuperſtitious, whimſical notion, of his being deſcended from *Quezalcoal*, prevail both with King and Council.

When this great affair was thus finiſh'd, *Montezuma* ſent his preſent, for the King of *Spain*, to *Cortez*; conſiſting of ſeveral curioſities in gold, many precious ſtones, ſome that he us'd to wear for ornament, and others kept in his treaſury for grandeur; figures of animals, birds, and fiſhes in gold, of excellent workmanſhip; a great number of ſtones, call'd *Chalcuits*, of the colour of *Emeralds*, and in vaſt eſteem among the *Mexicans*; and ſeveral pictures made of feathers, artfully put together, and imitating the life in a ſurprizing manner. The Caciques and Nobles ſent their preſents to the King, and he convey'd them to *Cortez*. Theſe conſiſted of different curioſities in gold, by which they ſhew'd, at once, their obedience, and their vanity. Theſe preſents were ſo conſiderable, that, beſide the jewels, and ſome curioſities which they would not deface, they reckon'd of melted gold 600,000 pound weight in ſubſtantial bars; out of which, they laid bye the fifth part for the King, and *Cortez* was allow'd one fifth of the remainder, to defray the publick charge; and the reſt was divided among the officers and ſoldiers at *Mexico* and *Vera-Cruz*.

But *Montezuma*, having perform'd all that he had promis'd, ſent for *Cortez*, and with a reſolution, which he had not made ſhew of for ſome time, told him, "That he had now perform'd all the "parts of his embaſſy, and had anſwer'd "his expectetion in every reſpect. He "therefore deſir'd that he would prepare "to depart; for his ſubjects began to be "uneaſy at his long ſtay." *Cortez* was ſurpriz'd at this diſcourſe, and more at the firmneſs with which the *Mexican* King deliver'd it. However, he ſoon recollected himſelf, and told *Montezuma*, "That he was reſolv'd to have in- "timated his departure to his Majeſty "in a few days; but having loſt his "ſhips (as his Majeſty had heard) before "he left *Vera-Cruz*, he was under a "neceſſity of begging permiſſion to ſtay, "till he ſhould have ſome built there, "for tranſporting him and his men to "his own country." *Montezuma* generouſly told him, "That he did not "expect, nor deſire him to go, with- "out providing the means for his de- "parture." And immediately gave orders for cutting and carrying timber to *Vlua*. But *Cortez*, wanting to protract the time, gave orders to his chief Carpenter to make no haſte in building, but to find excuſes for the delay.

Monte-zuma preſſes the departure of the Spaniards.

But now there happen'd an accident, that had like to have unhing'd his whole Scheme. *Montezuma* gave him notice, that he had intelligence from *Vlua*, that there were eighteen ſail of ſhips off that coaſt; and ſhew'd him the figure of them, painted after the *Indian* manner; telling him withal, "That he ſuppos'd they "were from his country, and he might "take the opportunity of going home "in them." *Cortez* made anſwer, "That if they were deſign'd for any "part of *Spain*, he would depart im- "mediately."

A Spaniſh Fleet appears upon the coaſt.

But in a ſhort time, he had Letters from *Vera-Cruz*, that thoſe ſhips belong'd to *Velaſquez*, the Governor of *Cuba*; that on board them were 800 men, ſent by him to oppoſe *Cortez*'s conqueſts in that country.

The Reader may remember, that *Velaſquez* had endeavour'd to ſtop *Cortez*'s expedition to the coaſt of *Mexico*, at his firſt ſetting out from *Cuba*; and when he was diſappointed of that deſign, he ſent repreſentations, much to his diſadvantage, to the Court of *Spain*; and had procur'd for himſelf the King's Commiſſion for being Lieutenant of all the Colonies to be planted in that part of *America*; and whilſt the perſon who had ſolicited this Commiſſion, waited at *Seville*, for a ſhip for *Cuba*, *Portocarrero*, and *Montejo* arriv'd there from *Cortez*.

tez. As ſoon as *Velaſquez*'s agent heard of it, he apply'd to the commiſſioners for trade at *Seville*, and claiming the ſhip and cargo, as his maſter's, procur'd an embargo to be laid upon her, only allowing their Captains to purſue their journey to court; where they attended two years without getting matters ſet in a true light.

Sent by Velaſquez againſt Cortez.

Velaſquez having obtain'd this Commiſſion, ſent out this new Fleet, with 800 *Spaniſh* foot, 80 horſe, and 10 or 12 pieces of cannon, under the command of *Narvaez*, with ſecret orders to ſend *Cortez*, and all that ſhould adhere to him, priſoners to *Cuba*. He was to take poſſeſſion, in *Velaſquez*'s name, of all that was already conquer'd. Thoſe who had the direction of the King's chamber of audience in *Hiſpaniola*, and the other iſlands in thoſe parts, ſent their Auditor *De Ayllon*, to divert *Velaſquez* from ſo unwarrantable a deſign; and if he were obſtinate, to command him, in their name, to disband his forces; and promiſe him juſtice againſt *Cortez* in a judicial way. But all his arguments and threats were loſt upon the Governor; wherefore the Auditor embar'd with the forces; as did likewiſe *Velaſquez*'s Secretary, ſo much *Cortez*'s friend. This was the Fleet of which *Montezuma*, and the Letters from *Vera-Cruz*, gave *Cortez* an account.

Narvaez arriving near *Vera-Cruz*, ſent ſome of his people aſhore, for intelligence; who happening upon one or two ſtraggling *Spaniards*, carry'd them on board. They gave the Captain a true telation of all the progreſs *Cortez* had made, and of the garriſon to which they belong'd. *Narvaez* ſent one of his Chaplains, *Ruis de Guevara*, to *Sandoval*; (whom *Cortez* had lately ſent from *Mexico*, to ſuperſede the deputy, formerly mention'd, againſt whom he had many complaints). The Chaplain took with him a Notary, and three ſoldiers for witneſſes. *Sandoval* being aſſur'd, by his centinels, that no more were landed but thoſe four, order'd the gates to be kept open. The Prieſt deliver'd his credentials; and told the Governor, "That *Narvaez* was come to chaſtiſe "*Cortez* on the behalf of *Velaſquez*; "and therefore he did not ſuppoſe that "he would oppoſe it, in the perſon of "one who came with ſufficient autho-"rity and power." The Governor made anſwer, "That *De Narvaez* was "his friend, and a man of that pru-"dence, and loyalty, that he was per-"ſuaded his chief conſideration would "be the King's intereſt. That, in the "preſent poſture of affairs, he ought "to join *Cortez* with his forces, with-"out engaging the King's ſubjects in a "civil war, upon private quarrels, to "the great diſadvantage, if not utter "ruin, of the common cauſe. But if, "contrary to his good opinion of him, "*Narvaez* ſhould go on, and make any "attempt againſt *Cortez*, he and the "garriſon, which he commanded, were "reſolv'd to die in his defence." The Prieſt, who had not that peaceable temper which his character requir'd, fell out into an indecent paſſion, calling *Cortez* rebel and traitor; and telling *Sandoval*, that he, and all who adher'd to him, deſerv'd no better title.

Sandoval deſir'd him to be a little more moderate, and to conſider what it was that made him bear ſuch language. But the other abating nothing of his fury, order'd the Notary to publiſh his orders: the Governor ſtop'd him ſhort, letting him know, "That he "would hang him up, if he publiſh'd "any orders in his garriſon, which were "not immediately from the King." This diſpute run ſo high, that *Sandoval* order'd them all into cuſtody; and, upon ſecond thoughts, ſent them under a guard to *Mexico*.

Sandoval ſends the meſſengers priſoners to Cortez.

Cortez was in great perplexity how to behave in this troubleſome affair. To think of marching againſt *Narvaez* had ſeveral inconveniencies attending it. The inequality of their forces, which was ſo much the greater, by his being oblig'd to leave a guard at *Mexico*, to defend his treaſure; and to keep *Montezuma* ſtill in dependance; beſides, he riſque'd the loſing all the fruit of his former ſucceſs. To ſtay till his enemy ſhould march to *Mexico*, was to give the *Mexicans* a pretence to arm, and then he ſhould have a ſuperior army of *Spaniards* to contend with in front, and endleſs numbers of *Indians* to attack him in the rear. To offer to make any accommodation with *Narvaez*, he found was impracticable, from the obſtinacy and churliſhneſs of his temper, incapable of being wrought upon, either by the conſideration of the intereſt of Religion, or Loyalty. Theſe reflections diſturb'd him to a great degree; however, he endeavour'd to put the beſt face upon it that he could.

They are releas'd, and well us'd by Cortez.

When the priſoners arriv'd at *Mexico*, *Cortez* having intelligence of their coming, by a Courier, went out himſelf to meet them; he immediately order'd their fetters to be taken off; and embraced them with much affection; ſeem'd to reſent the indignity offer'd to the Chaplain, whom he careſs'd after a more than ordinary manner, telling him, "He "would chaſtiſe *Sandoval*, for the little "regard he had ſhewn to his perſon and "dig-

" dignity." And bringing them to his quarters, he treated them, and eſpecially the Clergyman, with ſo much civility, and juſtify'd his conduct with ſuch plauſible reaſons, that, in four days, he diſmiſs'd them, with very different ſentiments of *him*, from thoſe they had brought with them.

And ſent back to Narvacz.

In the mean time, he told *Montezuma*, " That this new Fleet belong'd to " his King, and the Captain was come " with a new Embaſſy to his Majeſty; " but that he would endeavour to per- " ſuade him to return, and deſign'd to " go with them himſelf; having receiv'd " his full diſpatches; his Majeſty's ge- " neroſity having left no room for new " demands." He told his ſoldiers, " That *De Narvaez* was a man of ho- " nour, and his particular friend; and " tho' *Velaſquez* had acted out of re- " venge, and private pique to him; yet " he was perſuaded, the Captain would " conſult the King's intereſt; and he " did not doubt, but he ſhould have his " forces to recruit his own, to make " the Conqueſt of *Mexico* ſecure."

But, tho' he thus gloſs'd the matter to *Montezuma*, and his own ſoldiers, he ſpoke his mind freely to his Captains; laying all the difficulties before them, and asking their advice, after the uſual manner; propoſing the affair to them ſo, as he led them into his own ſcheme, without ſeeming to dictate to them. They agreed to make ſuch offers to *Narvaez*, that if they came to an open rupture, the fault ſhould appear to be his. But at the ſame time, they prepar'd for war. He ſent meſſengers to the Republick of *Tlaſcala*, to raiſe forces; and having found, by ſome of his own people, whom he had ſent to view the mines of *Chinantla*, that the *Indians* of that country had no affection for the *Mexicans*; he order'd the ſame ſoldiers back to that place, to diſpoſe the Cacique to levy 2000 men to join him, in caſe he ſhould have occaſion for them.

Cortez *ſends his Chaplain to treat with him.*

He then proceeded to put in execution, what he had concerted with his Captains; and pitch'd upon his firſt Chaplain, Friar *Bartholomeo d'Olmedo*, as his meſſenger to *Narvaez*; and writ Letters by him, not only to that Captain, but to the Auditor *d'Ayllon*, and his friend, the Secretary *Duero*. He welcom'd *Narvacz*, to that country, in very civil terms; took notice of their former friendſhip, and intimacy; told him the ſtate of his affairs at *Mexico*, the martial diſpoſition of the *Indians* there, and conſequently the danger of giving them ſo much as a hint of any miſunderſtanding between them. He deſir'd him to give him a particular account of the nature of his Commiſſion; telling him, that if he had orders from the King, he would give up his Staff to him; but if he had only a Commiſſion from *Velaſquez*, he ought to conſider well before he occaſion'd any hindrance to the King's intereſt, and the publick good, for private quarrels. He aſſur'd him, that he deſign'd to reimburſe that Governor all the expence he had been at, in the Fleet which had brought him from *Cuba*; and to divide with him, not only the Profit, but even the glory of the Conqueſt; And concluded his Letter, by telling him, " That if he would come to ſuch " reaſonable terms, as *Father Bartho-* " *lomeo* ſhould propoſe to him, he would " religiouſly obſerve them; but if he " would needs try his ſtrength, he " would endeavour to ſhew him, that " he knew as well how to defend as to " propoſe."

Narvaez was, by this time, come to *Zempoala*, where he was, at firſt, receiv'd, by the fat Cacique, with all the friendſhip, which he thought due to one whom he believ'd a friend to *Cortez*; but his behaviour ſoon undeceiv'd him; for he found that he had pillag'd the jewels and furniture, which *Cortez* had left at his houſe; and allow'd his ſoldiers to commit ſeveral acts of rapine and robbery.

In the mean time, his Chaplain *Guevara* return'd from *Mexico*, and ſpoke ſo well of *Cortez*, that *Narvaez* thruſt him from his preſence with great diſreſpect; bidding him *go back to* Mexico, *ſince the artifices of* Cortez *had ſuch an impreſſion upon him.* But the Chaplain had better ſucceſs with the officers and ſoldiers, to whom he gave ſuch an idea of the *Mexican* General, that they would gladly have chang'd maſters.

Olmedo arriv'd ſoon after *Gevara*; and with great eloquence (after having deliver'd his Letters) ſhew'd him the ill conſequences of a rupture between him and *Cortez*; and aſſur'd him, that his competitor would come into any reſonable ſcheme for carrying on the King's intereſt; which would likewiſe redound to *Velaſquez*'s advantage, as having been the firſt promoter of it. To this *Narvacz* anſwer'd, " That *Velaſquez* could " could not in honour treat with a Re- " bel, whoſe chaſtiſement was the chief " deſign of his expedition." He added, " That he knew how to do it, without " asking advice of ſuch, as being equally " guilty with him, deſerv'd to be treat- " ed as Traitors, as he was." The Friar deſir'd him, very calmly, " To think " well what he was going to attempt; " for before he could march to *Mexico*, " he would find Armies of *Indians*, " (who

" (who were *Cortez*'s Confederates) to " oppoſe his deſign; and if he ſhould " arrive there, he muſt not only fight " *Cortez*, whoſe forces were reſolv'd to " live and die with him; but likewiſe " the whole force of the *Mexican* Em- " pire."

But finding that all that he could urge had no effect upon *Narvaez*, he went to the others, for whom he had brought Letters; and then among the officers, many of whom were his acquaintances; where he had better reception; and a great number were ſo convinc'd of the reaſonableneſs of what he had propos'd, that they began to be very cool to the ſervice they were engag'd in. But *Narvaez* being inform'd of it, call'd for him, and giving him very injurious language, would have confin'd him, had not the Secretary interpos'd; however, he order'd him to depart from *Zempoala* that moment. The Auditor coming, at the ſame time, gave his opinion, " That " a general council of the officers " ſhould be call'd, to determine what " anſwer ſhould be given to *Cortez*, who " ſeem'd to be inclinable to peace." *Narvaez* heard this propoſal with much impatience; and, to cut off all hopes of peace, order'd the Cryer to proclaim *Cortez* a Traitor; offering a reward to any who ſhould bring him dead or alive. Which contempt of his advice (as being veſted with the regal authority) the Auditor *Ayllon* not being able to bear, commanded the Cryer to deſiſt; and told *Narvaez*, " That he ſhould not ſtir a " foot from *Zempoala*, upon the pe- " nalty of his head; nor employ the " forces in any expedition, without the " conſent of the whole Army." At the ſame time, he order'd the officers not to obey his orders; and enter'd his proteſt againſt all his proceedings, with ſuch authority and reſolution, that *Narvaez*, mad with rage, order'd the Auditor to be ſeiz'd, and put on board a ſhip, to be ſent, forthwith, back to *Cuba*. This inſolence, towards a perſon of *Aylan*'s character, loſt *Narvaez* the good opinion of his own people, and did *Cortez* more ſervice than all his own care and management could have done at that juncture.

Upon the return of *Friar Olmedo* to *Mexico*, the General found there was no good to be done by treaty; and therefore he prepar'd to take the field: and being encourag'd by the account the Father gave him, of the good inclinations of the officers of the other party, he went to acquaint *Montezuma* with his departure, and the reaſon of it. But the King prevented him, by letting him know, " That he had been adviſ'd from " ſeveral parts, that the new forces had " no good intentions towards him; but " ſince the two Generals headed two " diſtinct Armies of the ſame King's " Subjects, one of them muſt be a Re- " bel." *Cortez* was a little ſurpriz'd at *Montezuma*'s intelligence; but quickly recollecting himſelf (with a preſence of mind peculiar to him) he made anſwer; " That it was true, that this new Army " had come with bad intentions towards " him, and that their Commander had " very imprudently given himſelf a li- " berty in threat'ning him; but he " would not, for that, call him a Rebel; " but modeſtly ſaid, he was miſinform'd: " for, having been ſent by a Governor, " who liv'd in a very remote Province, " he was a ſtranger to the late meaſures " taken at the King's court; and there- " fore believ'd that this embaſſy, which " he had had the honour to bring to his " Majeſty, belong'd of right to him- " ſelf. But as ſoon as he ſhould be in- " form'd better, by his ſhewing his com- " miſſion, he did not doubt, but the " new General would yield his preten- " ſions, and that his Army would ſub- " mit to him. In order, therefore, to " prevent any falſe ſtep the other Ge- " neral might be apt to take, thro' ig- " norance, he deſign'd to march to " *Zempoala*, with the greater part of " his forces: but his principal deſign " was to diſpoſe them to return home, " and to prevent their marching farther " into his Majeſty's dominions; which " were now under the King of *Spain*'s " protection; and he would not ſuffer " them to be harraſs'd by troops, which " were not under ſuch diſcipline, as the " *Mexicans* had experienc'd his to be."

Montezuma, who had been adviſ'd of the irregularities committed by the *Spaniards* at *Zempoala*, approv'd of his deſign; but thought it raſhneſs in *Cortez*, to venture himſelf with ſo ſmall a force; and therefore offer'd to furniſh him with an Army, whoſe officers ſhould receive their orders from him only; which he urg'd with ſuch affection, and open-heartedneſs, that there was not the leaſt appearance of fraud in it. But *Cortez* civilly refus'd his offer; not from any ſuſpicion of the King, but from his diffidence of the *Mexicans*.

Having appointed the time for his march, he left fourſcore *Spaniards* in *Mexico*, under the command of *Alvaredo*, with ſtrict charge to ſhew the utmoſt regard to *Montezuma*; but withal, to keep him in their own quarters: and having recommended a ſtrict obedience to *Alvaredo*, and firm union amongſt themſelves, he order'd his forces to march; he himſelf going to take leave of

of the King, to whom he recommended the care of his *Spaniards*, assuring him that *Alvaredo* would have no less regard for his Majesty's service, and shew him the same respect as he had done. *Montezuma* press'd him to accept of an Army to assist him; or if he would not take them with him, at least to wait for their coming, before he engag'd with such unequal forces, as he heard the *Spaniards* of *Zempoala* were. In the mean time, he promis'd not to stir from *Alvaredo*'s quarters till he came back. And he kept his promise so religiously, that tho' he might have prevented much mischief by going to his own Palace, he would not remove. All which steps of this unhappy Prince, shew, that he deserv'd a better Fate than happen'd to him.

Cortez *leaves* Mexico.

Cortez march'd out of *Mexico*, with only 250 *Spaniards* in his Army, and took the way to *Tlascala*, where he arriv'd without any thing remarkable. The Senate came out to welcome him; and here he was join'd by *Sandoval*, and the garrison of *Vera-Cruz*, according to the instructions he had sent him. *Sandoval* brought seven of *Narvaez*'s soldiers with him, who had deserted upon the confinement of *d'Ayllon*, and told all that had past. He likewise sent two of the garrison, in disguise of *Indians*, to *Zempoala*, to reconnoitre, who brought an account of the careless manner of keeping guard there.

Notwithstanding all these accounts, *Cortez* sent *Olmedo* a second time to propose terms; and when he could not prevail, and *Velasquez de Leon* had shew'd him a Letter from *Narvaez*, inviting him to come over to him, he dispatch'd *De Leon* to use his utmost efforts for an accommodation. *Narvaez* receiv'd this last messenger (as being a Relation to the Governor of *Cuba*) very kindly; but when he found him firmly attach'd to *Cortez*'s interest, he neglected him; insomuch, that at an entertainment, to which *De Leon* was invited, several injurious expressions were made use of, which he prudently pass'd, without taking notice of them. But when some of the company utter'd reflecting words against *Cortez*, he could in honour bear it no longer; but said, with a becoming warmth, "That it was not good manners to speak ill of his General before his face: but if any one durst say, that either *Cortez*, or any of his party, were not loyal Subjects to the King of *Spain*, he wish'd they would say so before fewer witnesses; and he would undeceive them after what manner they should chuse." The company remain'd silent for some time, till a young Captain of *Velasquez*'s name, and likewise his Relation, answer'd, briskly, "That he was not worthy of "the Name or Blood of *Velasquez*, who "would take a Traitor's part." Upon which *De Leon* gave him the *Lye*, and drew his sword to chastise his insolence; but the company interposing, prevented the quarrel; and *De Leon* was desir'd to return to *Cortez*; which he did immediately, taking *Olmedo* along with him.

But to no purpose.

De Leon *sent to offer terms to* Narvaez.

Narvaez's officers exclaim'd against the treatment that had been given to *De Leon*; but chiefly that they had not so much as heard his proposals. This came to be talk'd of with so much heat, that *Narvaez* was oblig'd to send his Secretary *Duero* to *Cortez*, to excuse the rudeness offer'd to *De Leon*, and to desire to know the substance of his message. *Cortez* receiv'd his old friend with great demonstrations of kindness. They had many conferences together, and *Cortez* made such offers for peace, that *Duero* saw plainly, that nothing but the obstinacy of *Narvaez* could hinder it: he therefore propos'd an interview between them, which *Cortez* agreed to; and *Duero* return'd to *Zempoala* to dispose the other to it. After much difficulty, he was prevail'd with, and the time and place appointed; *Cortez* and *Narvaez* giving it under their hands, that they would appear with only ten friends on either side. But as *Cortez* was preparing himself for the interview, he receiv'd a secret message from *Duero*, intimating that *Narvaez* had laid an ambush, either to kill or take him; and the same intelligence he had from different quarters. This baseness so exasperated *Cortez*, that he writ to *Narvaez*, telling him, "That "he had discover'd his mean treachery, "and therefore would have no farther "correspondence with him, but by the "sword."

An ambuscade laid for Cortez

Upon this discovery, *Cortez* conceiv'd so low an opinion of his adversary, that he march'd directly towards *Zempoala*, and stop'd short within a league of it, by the River of *Canoes*; which *Narvaez* having intelligence of, took the field with precipitation, rather than diligence; where his forces were drawn up, by the care of his officers, without much regard to his orders. He march'd about half a league from the city, and made his men halt in a large field, where he might engage *Cortez* with advantage; and there he staid the whole day, foolishly expecting that an experienc'd General would, with a force so much inferior to his, attack him in such a place. Here he amus'd himself, by distributing the spoils of his enemy, not as yet conquer'd; and, in his own imagination,

diſpos'd of all the Treaſure of *Mexico*. But night coming on, and abundance of Rain falling, his ſoldiers (not accuſtom'd to fatigue) began to murmur aloud; and the officers, being, for the moſt part, but little inclin'd to the expedition, ſolicited a retreat to their quarters. *Narvaez* himſelf, who bore a ſhare in the hardſhip, not being averſe to the propoſal, return'd to *Zempoala*. However, that he might make ſome ſhow of care in his office, he made all his Army keep together, lodging them in two Temples, which were contiguous to one another; and having ſent ſome horſe to ſcour the neighbourhood, and planted two centinels at the chief avenue of the town, he laid himſelf to ſleep in great tranquility.

Duero ſent a truſty meſſenger, to give *Cortez* an account of their diſpoſition; but rather with an intention that he ſhould give his people reſt, than imagining he would make any attempt. But *Cortez*, believing this a ſeaſonable juncture for attacking them, made his little Army paſs the River, which they did, up to the middle; and then drawing them up, he told them the occaſion of his march, the careleſneſs of the enemy, and the great probability of ſucceſs, if they exerted their wonted courage. Then he told them how their forces were poſted; which, to them, who were well acquainted with the place, was of great importance. They all, with great chearfulneſs, began the march. Before they came near the city, he form'd them in three bodies, the firſt, conſiſting of 70 ſoldiers, with their officers, was commanded by *Sandoval*, for the firſt aſſault; the ſecond, of the like number, was given to *Chriſtoval d'Olid*; and the third he commanded himſelf, being accompany'd by ſome of the braveſt officers he had. He order'd *Sandoval* to attack the ſtairs of the great Temple, and ſo to make himſelf maſter of the artillery planted there. *De Olid* was to make his way to the tower, in which *Narvaez* was lodg'd; and *Cortez* himſelf was to ſupport them both, as occaſion ſhould offer. But the march was to be perform'd with the greateſt ſilence, till the aſſault was begun; and then the drums were to beat, to ſtrike the greater terror. In this manner they march'd with a ſlow pace, that they might not be tir'd when they ſhould come to action.

Cortez *marches to* Zempoala *by night.*

After he had march'd about half a league, the ſcouts came back with one of *Narvaez*'s centinels, whom they had taken; but told their General, that the other had eſcap'd: and they were inform'd afterwards, that he had made great haſte to give the allarm to his own party, which it was impoſſible to prevent. However, he arriv'd ſo little a time before *Cortez*, and was ſo little credited by *Narvaez*, (who thought it impoſſible that ſoldiers could march in ſo dark and ſtormy a night) that the allarm given was of no great uſe to them; ſo that *Cortez* was at the gates of the Temple before he found any enemies to oppoſe his paſſage; and whilſt they were diſputing within doors, whether they ſhould believe the centinel's intelligence, or not, *Sandoval* began the aſſault. Thoſe of *Narvaez*'s party, who were moſt alart, run to the defence of the ſtairs, and firing two pieces of cannon, made the reſt find that the allarm was not a falſe one. But *Sandoval*, being ſupported by *d'Olid*, and afterwards join'd by *Cortez* himſelf, carry'd on the attack with ſuch vigour, that after ſome oppoſition, they took poſſeſſion of the artillery, and mounted the ſtairs ſword in hand.

And attacks Narvaez *in his quarters.*

Narvaez being at laſt arm'd, made his appearance, and engag'd in the thickeſt of the battle, when one of *Sandoval*'s ſoldiers gave him a thruſt in the face with his pike, and ſtruck out one of his eyes, at which he fell down, ſaying, *I am a dead man.* At the fall of *Narvaez* his ſoldiers were in the utmoſt conſternation, and retiring to the towers, ſhut themſelves up, without offering to fire one ſhot. *Cortez*'s party call'd out *Victoria*, and made the names of *Don Carlos* and *Cortez* reſound thro' all. And a very ſmall accident contributed greatly towards the diſ-ſpiriting of the other party. Some of them looking over the battlements of the Temple, ſpy'd lights for a long tract of ground, and very numerous, which having ſhew'd to their companions, they concluded they were matches, which *Cortez*'s Army, not as yet arriv'd, carry'd in their hands; and ſeeing them ſo far extended, believ'd he had got a vaſt Army of *Indians* arm'd with muskets; whereas they were indeed only ſmall flies, very common in *Italy*, which, for the light they give in the night, the *Italians* call *Luccioletti*.

Narvaez *wounded and taken priſoner.*

Cortez gave orders to have *Narvaez* kept with great care; who, coming to his ſenſes in a ſhort time, found his legs in chains, and himſelf in great agony with the pain of his wound. But *Cortez*, conſidering that the approach of the day would diſcover the ſmallneſs of his party, and perhaps put his enemies upon exerting themſelves, out of mere ſhame to have been overcome by ſo few, order'd a general pardon to be proclaim'd to all who would ſurrender; and very advantageous conditions were offer'd to all who would join his Army; and freedom to return to *Cuba*, with all their effects, to ſuch as would not liſt themſelves

ſelves under him. And, at the ſame time, to give the greater force to his Proclamation, he made the artillery be turn'd againſt the towers where *Narvaez*'s people were. This had the deſir'd effect, both his friends of that party, and his enemies coming out in crowds, and delivering up their arms; which he receiv'd, even from thoſe he knew to be inclin'd to him, to prevent ſuſpicion.

His men ſurrender.

Sandoval had been very careful of *Narvaez*, and had gotten his wound dreſs'd; and, when matters were a little ſettled, *Cortez* made him a viſit, but without deſigning to make himſelf known, leſt it might put him in diſorder. But the reſpect paid him by the ſoldiers, diſcover'd him; and *Narvaez* in a churliſh manner, ſaid to him, "Be thankful, "Captain, and value yourſelf upon the "good fortune you have had, in ma- "king me your priſoner." To which *Cortez* reply'd, "Thanks be to GOD "for all things; but, without vanity, "I do aſſure you, friend, that I account "this victory, and your impriſonment, "among the leaſt conſiderable actions, "which have been tranſacted in this "country."

The only enemies now remaining unconquer'd, were the two Captains, *Salvatierra*, and *Diego Velaſquez*, who being the chief Partiſans of the Governor of *Cuba*, next to *Narvaez*, had encourag'd a party of the ſoldiers to ſtick by them, to keep out one of the towers, and refus'd to ſurrender. *Cortez* order'd two pieces of cannon to be diſcharg'd againſt the tower, but gave private inſtructions that they ſhould be directed for the top of the buildings, that they might not hurt thoſe in the tower. The firſt fire brought the greateſt part of the ſoldiers, who defended the place; and they coming to ask quarter, left the entry open; which *Velaſquez de Leon* taking the advantage of, with a ſmall party of his men made good the paſſage; and ſeiz'd the two Captains, which compleated the victory. In this ſcuffle, *Cortez* had only two men kill'd, and ſome wounded; and on the other ſide, they loſt a Captain, an Enſign, and fifteen ſoldiers; but had a greater number wounded. *Narvaez* and *Salvatierra* were ſent to *Vera-Cruz*, with a ſufficient guard; but young *Diego Velaſquez* continu'd priſoner with *Velaſquez de Leon*, who, notwithſtanding the affront he had receiv'd from him at the entertainment in *Zempoala*, treated him very honourably, and had his wounds carefully look'd to; which probably he did not ſo much from a conſideration of conſanguinity, as from his own noble and generous mind.

Cortez having a conſiderable number of true friends in *Narvaez*'s party, they now openly declar'd for him; and the reſt of the priſoners perceiving, at the appearance of day, what a ſmall number they had been vanquiſh'd by, conceiv'd a great eſteem for *Cortez*, upon the account of his courage and conduct, and the utmoſt contempt for *Narvaez*; ſo that after the example of thoſe who favour'd *Cortez* all along, they liſted themſelves under his command, and not one ſingle perſon offer'd to return to *Cuba*.

Narvaez's whole Army liſt themſelves under Cortez.

The Cavalry, who had been abroad all the night, follow'd the ſame example; ſo that *Cortez* had now all that he had wiſh'd for in this expedition. He found himſelf at the head of above 1000 *Spaniards*, with a ſquadron of horſe, and eleven ſhips, with ſeven brigantines, under his command; his enemies in his power; and the Governor of *Cuba*'s laſt effort againſt him diſappointed: ſo that he was now in a condition to purſue his deſigns at *Mexico* with more vigour than before. The *Zempoalans*, and eſpecially their Cacique, celebrated his victory, as if it had been the ſaving their State; and the Caciques of the neighbouring Provinces ſent their compliments of congratulation to the *good Teales*, or *gentle Gods*, (for ſo they call'd the *Spaniards* of *Cortez*'s Army) and preſents to the officers and ſoldiers.

Things being thus happily conducted, *Cortez* reſolv'd to begin his march for *Mexico*; but that he might not give umbrage to *Montezuma*, by taking his whole Army with him, he thought of ſending *D'Olid* and *D'Ordaz*, each of them with 200 men, upon different expeditions. But whilſt he was preparing to put this in execution, a meſſenger arriv'd from *Montezuma*, giving an account of an inſurrection at *Mexico*, in ſpite of the King, and deſiring his ſpeedy return. *Alvaredo* gave him the ſame notice by his Letters, telling him, that the King had never offer'd to remove from him; but that the ſeditious had attack'd their quarters in great numbers; and therefore preſs'd him to come, or ſend to his relief, with all expedition.

An inſurrection at Mexico.

This intelligence ſoon determin'd *Cortez*; ſo that, with all convenient haſte, he began his march, with 1000 foot, and 100 horſe; (having firſt brought his ſhips on ſhore, and depoſited the ſails and rigging at *Vera-Cruz*, where he left one *Roderigo Rangel* to command as deputy to *Sandoval*.) He was receiv'd at *Tlaſcala* with great joy, and took 2000 *Tlaſcalans* along with him to *Mexico*; where he arriv'd without any oppoſition; and was welcom'd both by *Montezuma*, and *Alvaredo*, as their deliverer. And tho'

Cortez marches to the relief of his people in that city.

tho' ſome Hiſtorians ſay that *Cortez* treated the King with great contempt at his return, I can not but approve of our Author's reaſons to the contrary: for, as *Montezuma* had religiouſly kept his word, (a noble quality in a Prince!) and as *Cortez*, for all his force, had occaſion to make uſe of his intereſt to ballance the power of the Rebels, it is not likely that the General (who certainly was a man of prudence, as well as courage) would ſhew an unſeaſonable contempt of him at this juncture.

The reaſons of the inſurrection.

But here it is neceſſary to look ſomewhat back, and give an account of the reaſon of this mutiny, of which our Author honeſtly owns, that thoſe who have related the ſtory, differ much in their repreſentations. Some writers lay the blame upon *Montezuma*, whom they tax with having, under-hand, ſpirited up the *Mexicans* to rebel, after *Cortez*'s departure, in order to releaſe him from his confinement. Others put it upon the prieſts, who, as they ſay, blew the coal, to reſcue their Religion from the danger it was in, by the intereſt the *Spaniards* had with the King; as appear'd from the diſlike they had ſhew'd to human ſacrifices, and the Edict they had procur'd againſt that practice. Our writer, tho' a *Spaniſh* Biſhop, lays it at the door of *Alvaredo*, who had juſtly provok'd the *Mexicans*, by a barbarous maſſacre of a great number of their nobility, upon a day of publick feaſting. And others are of opinion, that it was a pure inſtinct of loyalty, which induced the ſubjects of *Montezuma* to riſe againſt the *Spaniards*, in order to reſcue their King out of their hands. A noble deſign, if it was the real one! for who could bear to ſee their *lawful natural Prince* diveſted of his ſovereign authority, and ſubject to foreigners, without endeavouring to reſtore him to his juſt dignity? It is not unlikely but there may be ſome truth in every one of theſe accounts, except the firſt, (for it appears from ſeveral circumſtances of the ſtory, that *Montezuma* adher'd ſtrictly to his word, and did all that was in his power, to quiet the ſedition, even to the loſs of his life.) The prieſts were undoubtedly very active in this inſurrection; being apprehenſive, not without reaſon, of the deſtruction of their Religion, ſhould the *Spaniards* prevail. As to the maſſacre, our Author does not deny it, tho' he excuſes it, by making the *Indians* the aggreſſors; and ſays, that *Alvaredo* had diſcover'd a conſpiracy form'd to cut him off, upon that publick feſtival. But it ſeems very odd that he ſhould have conceal'd this from *Montezuma*, whom he does not once accuſe to *Cortez*, as being acceſſary to the ſedition; and it looks as ſtrange, that he ſhould not have produced the Arms, which our Author ſays he found conceal'd, to excuſe his violence, in ſome meaſure.

But whoever were the aggreſſors, it is agreed upon by all, that *Alvaredo*, with fifty of his men, fell upon the nobility at their publick feſtival, which he himſelf had conſented to let them ſolemnize; and where they were aſſembled without arms, and in ſuch a careleſs manner, for plotters, that he catch'd them half drunk, and half a-ſleep. This maſſacre, (for it can be call'd no better) without giving any reaſon for it, rous'd the ſpirits of the *Mexicans*, and made them take arms; and what made it look worſe in the *Spaniards*, was their having ſtrip'd the ſlaughter'd nobility of all their rich jewels, with which they had adorn'd themſelves for that ſolemnity; ſo that the whole city was in an uproar in a moment. *Alvaredo* retir'd to his quarters, after this execution, taking all the care he could to keep himſelf and his men ſecure; which it had been impoſſible for him to have accompliſh'd, had not the report of *Cortez*'s return oblig'd the *Mexicans* to retire, in order to concert meaſures to carry on their deſign; which they reſolv'd to proſecute, to the utter extirpation of the *Spaniards*.

An engagement with the Mexicans.

Cortez having been inform'd by *Alvaredo* of all theſe proceedings, blam'd him for his ill conduct; but not being able to help what was paſt, and finding that none of the *Mexicans* appear'd in the ſtreets; ſuſpecting that they were hatching ſome ſecret deſign; the next day he ſent out *d'Ordaz* with 400 ſoldiers (*Spaniards* and *Tlaſcalans*) to patrole thro' the principal ſtreets. When this party had march'd a good diſtance from the quarters, they perceiv'd a number of the enemy in arms,, who were ſent, as appear'd afterwards, to decoy them to a greater diſtance. *D'Ordaz* having a mind to take ſome priſoners, for farther information, purſu'd that party into a large ſtreet, where he was attack'd, of a ſudden, by a whole army of *Mexicans*; and, at the ſame time, vaſt multitudes getting together behind him, fell upon his rear, with a fury equal to that of the enemy he had in the front. The Captain immediately form'd his rear into another front, and fought both armies with great courage; but finding himſelf very uneqal to the engagement, and there being no poſſibility of ſending for aſſiſtance, he preſs'd hardeſt upon that ſide next the quarters, and retreated fighting, tho' he was much gall'd by a third enemy from the windows in the ſtreet. But the *Spaniards* fire-arms made

made great havock amongſt them, and at laſt oblig'd them to keep at ſuch a diſtance that he got back to *Cortez*, with the loſs of eight of his party, ſeven of which were *Tlaſcalans*; but he himſelf, and many of his *Spaniards* were wounded.

The Mexicans purſue the ſpaniards to their quarters. but are repuls'd.

The *Mexicans* purſu'd him to the very gates, but the firſt diſcharge of the Artillery put them to flight, with a terrible Slaughter. Yet they rallied again, but without the reach of the Cannon.

Soon after, their numbers encreaſing, they determin'd to aſſault the quarters on all ſides; which they did with ſuch undaunted reſolution, or, to ſay better, with ſuch blind rage, that, notwithſtanding their falling by hundreds, with the diſcharge of the great Guns, they preſs'd on towards the gates with intent either to force them or die. But the *Cortezians* made ſuch havock among them, without their being able to force an entrance, that, at laſt they retir'd to the croſs ſtreets, where they kept together till the night diſpers'd them; and keeping cloſe for ſome days, they afterwards appear'd at a diſtance, attempting to burn the Palace in which the *Spaniards* lodg'd, by ſhooting arrows with artificial fire faſten'd to them, which gave the beſieged ſome trouble to extinguiſh.

A new engagement.

Cortez perceiving that they kept a looſe for fear of the artillery, divided his forces into three bodies, and ſallied out upon them, falling upon them from three different ſtreets at the ſame time. The *Mexicans* ſuſtain'd the firſt charge with great bravery; but at laſt the guns and other arms of the *Spaniards* got the better of their wooden arms, and the courage and bravery of the diſciplin'd Soldiers, who were courageouſly ſupported, and nobly imitated by the *Tlaſcalans*, bore down the over-grown multitude of the ill-govern'd Mob; ſo that after ſeing the ſtreets ſtrow'd with heaps of dead *Indians*, they fled, with great precipitation: and *Cortez*, being ſatisfied with the victory, order'd his army to retreat: having loſt about ten or twelve of his men, and as many being ſlightly wounded. But he began to be uneaſy at the obſtinacy of the *Mexicans*, perceiving that they would tire them out with their numbers, and frequent skirmiſhes; which, tho' they were always attended with prodigious ſlaughter on their ſide; yet a ſmall loſs and conſtant fatigue to his little army, was of great concern to him. conſulting therefore with *Montezuma*, and his own Captains, he made a ſally ſome days after, with almoſt his whole force, thinking to have terrified them into a peace; the *Mexicans* did not avoid the encounter, but engaged with their uſual fury;

The Indians flee.

but in their behaviour that day there was more policy, and better diſcipline than formerly. They retreated often, and rallied again in the moſt advantagous places; they ſhot their arrows, and level'd their other weapons at thoſe parts of the *Spaniards* bodies which were not defended by their armour; and engaged with leſs confuſion than ordinary. *Cortez* himſelf was ſhot in the left hand with an arrow, and many of his men were likewiſe wounded, and about forty of them kill'd, moſt of which were *Tlaſcalans*. Yet they repuls'd the enemy at laſt, and retir'd to their quarters.

Cortez was in the utmoſt impatience at this laſt diſappointment; for he now ſaw, that tho' the *Mexicans* were repuls'd they were far from being ſubdu'd. Nor was *Montezuma* in better humour than he: he had ſeen the Engagement from the Battlements, and had obſerv'd the Cacique of *Itztapalapa* very induſtrious in encouraging the *Mexicans* to the attack; and was very jealous of his own authority, fearing leſt that Cacique ſhould uſurp his Crown. He therefore thought it obſolutly neceſſary to diſmiſs the *Spaniards*, that he might ſupport his dignity by going among his own ſubjects; and, in order to accompliſh his deſign, he came to *Cortez*, and repreſenting the preſent ſtate of their affairs to him, ſhew'd him how impracticable it was to ſet matters right by any other way; and therefore beg'd he would depart, and leave him to quiet the *Mexicans* by his preſence, which he could not pretend to do, whilſt they remained in the City, This agreeing with *Cortez*'s own opinion, he readily anſwer'd the King, that he would obey him, but advis'd him to ſend a meſſage to the Rebels to perſuade them firſt to lay down their arms, that he might be ſure by that ſubmiſion, that they would return to their duty.

A new aſſault

But before this conference was ended the allarm was ſounded in the Palace, and *Cortez* going to ſee what the matter was, found the *Mexicans* had made a freſh attack; which the *Spaniards* repuls'd with vigor. As ſoon as *Montezuma* was appriz'd of it' he ſent *Donna Marina* to the General, to let him know that he deſign'd to ſhew himſelf to the enemy, and endeavour to diſperſe them; which when *Cortez*, approv'd he dreſt himſelf in his robes of ſtate, and went to the Battlements; where, before he appear'd, one of his retinue call'd out loud to the *Mexicans* below, *to prepare themſelves to ſee the King with due reverence.* Upon *Montezuma's* appearance, they made a full ſtop, and many of them laying down their arms, bow'd their knees, and others fell flat to the

ground. The King making a ſign with his hand, told them "That he took the "preſent inſurrection as a token of their "loyalty and regard for him, as being "deſign'd to releaſe him from what they "reckon'd a confinement, tho' they "were miſtaken. But now, having finiſh'd "all that he had to negotiate with the "Strangers, he had determin'd to diſmiſs "them, and they had readily complied "with his Commands, and were prepar- "ing to be gone: and he hop'd he "ſhould not find leſs reſpect from his "own natural ſubjects than from the "*Spaniards*; and therefore he expected "they ſhould immediately lay down "their arms, and come into his preſence "as they ought to do: that he might "then declare the pardon which he en- "tended to pronounce to all in gene- "ral."

Montezuma appears to quiet the Mexicans

This Speech had ſuch an effect upon many of them at firſt, that they ſtood in deep ſilence; but as there was a party among them who either had choſen, or were upon the point of chuſing a new Emperor, thoſe Rebls advanced; and call- ing *Montezuma* coward, and old Wo- man, renounced his authority, and ſhot at him; and one threw a ſtone, which unluckily hitting him in the head, made him fall to the ground, without ſenſe or motion; tho' two *Spaniards*, by *Cortez*'s orders, had cover'd him with there Buclers to skreen him from the arrows of the *Mexicans*.

And is wounded.

Upon ſeing him fall, the beſiegers gave over the aſſault; either ſhocked with horror of having killed their King, as they believ'd; or elſe to conſult what was next to be done. The King was carried to his apparment, where *Cortez* with the utmoſt concern caus'd his wound to be dreſs'd. The Surgeons found the skull fractured, which they applied remedies to according to the beſt of their skill; but whether it was that the brain was hurt, or that the diſdain of being ſo us'd by his own Vaſſals, put him into a violent fury, as ſoon as he recovered the uſe of ſpeech, and knew the ſtate he was in, he tore off the bandage, and utter'd all that his rage could dictate of reſentment againſt the Rebels. Nor could all that *Cortez* could ſay to him moderate his Paſſion, but he continued in attempting every thing in his power to make an end of his life. In this frentic condition he continued three days; often calling to *Cortez* to take vengeance of his enemies, and then gave up the Ghoſt.

of which he dies.

Thus died the great *Montezuma*, Em- peror of *Mexico*; a Prince endowed with many excellent qualities, and great ver- tues, political and perſonal: and, perhaps, the vices he is charged with, in both theſe capacities, were owing rather to the cuſtoms of his country. and the pre- judice of his education, than to his na- tural temper or acquired habits. And the good underſtanding he ſhew'd upon ſeveral occaſions, inclines me to believe, that, if proper meaſures had been taken with him; had his authority been left uninvaded, and his Royal dignity pre- ſerved intire: had the *Spaniards* con- vinced him by their behaviour (as they ought to have done in good Policy, as well as in Chriſtianity) that they were more earneſt to bring him into a right way of Worſhip, and to teach him a more rational Religion, than they were to cramp his Soverignty, and to poſſeſs his treaſure; it would not have been ſo hard a task to have converted and baptiſed him. He owned many of the errors of his own Religion, and was not blind to ſome of the beauties of Chriſtianity; but he was not ſo far enlighten'd as to loſe his Em- pire for Religion; nor was it the way to propagate the Goſpel in that Country to precipitate his converſion, after they had him priſoner; and perhaps their en- croaching upon his authority, and the un- accountable ſtep of putting him in Chains, gave him a worſe opinion of the Chri- ſtian Religion, and of the profeſſors of it, than the prejudices of his education had been able to do. As to the averſion he ſhewed to Baptiſm after he had receiv'd the wound of which he died, I rather attribute it to a diſturbed brain, than to obſtinacy; and therefore, tho' I can- not ſay he was a Chriſtian, or ſaved in the covenant of grace; yet I dare not join with our author, in giving *the eter- nal poſſeſſion of his Soul to the Devil.* What allowance infinite mercy may give to ſtrong prejudices, and native Igno- rance, I do not pretend to determine; that is like to be a ſecret till the laſt Judg- ment, and as ſuch I leave it.

Cortez was much concerned at his death; and indeed he had reaſon: for he now wanted one of the greateſt ſupports he had towards bringing his deſign to bear. However, he concealed his trou- ble as well as he could; and picking out ſix of *Montezuma's* atendants he ſent them with the corps to the Rebels, together with offers of peace; at the ſame time threatning to burn the City if they conti- nued obſtinate. Upon their appearance in the ſtreet with the corps, the *Mexicans* flock'd about them; and throwing away their arms, ſhewed demonſtrations of ſorrow; tho' they they had by this time choſen another Emperor, as the *Spaniards* were afterwards informed: ſo that their grief ſeems to have been rather a re- ſpect to the Regal authority, than any affection

Cortez ſends the Body to the Mexi- cans

affection to the Perſon of *Montezuma*. They ſuſpended all Hoſtilities for ſome time; carrying the Body to the place appointed for the burying place of their Kings. He left behind him four ſons and three daughters. Two of his ſons were with *Cortez*, and were afterwards kill'd by the *Mexicans*; another of them was converted (after the entire conqueſt of *Mexico*) and baptiſed, and known by the Name of *Don Pedro de Montezuma* to whom the King of *Spain* gave an Eſtate in new *Spain*, and the title of *Count de Montezuma*, which decended to his heirs. His ſiſters likewiſe turned Chriſtians, and married *Spaniards*.

They make a new attack upon Cortez's *quarters.*

As ſoon as the *Mexicans* had performed the funeral rites, they returned to the aſſualt of the *Spaniards* quarters, by order of their new Emperor who was the Cacique of *Itztapalapa*. In order to make good their Enterprize, they took poſſeſſion of a Tower in the neareſt Temple, which was ſo high that it commanded a part of the quarters from which they diſcharged their arrows, and other miſſive weapons upon the Garriſon; whilſt the others, in great multitudes, ſtorm'd the Palace in other places. *Cortez* ſent Captain *Eſcobar* to diſlodge them from the Temple, who was more than once repuls'd by great pieces of Timber, half burnt, thrown down ſtairs, upon them. In the mean time, *Cortez*, with his troops, went thither; and finding the oppoſition made againſt *Eſcobar*, he alighted; and being obliged to have his target faſtened to his wounded Arm, joined *Eſcobar*, and led them, in ſpite of all oppoſition. up the ſtairs, putting all to the ſword who came in his way, without ſo much as loſing one man. But when he came to the top of the Battlements, where the nobles were, he run the greateſt riſque of his life that he had done during the war; for two brave youths having found that his armour was proof againſt all their weapons, reſolved to devote their lives to the ſervice of their Country; and therefore, coming up without Arms, to *Cortez*, as if they had been going to deliver themſelves priſoners, they ſeiz'd him both at once with a deſign to throw themſelves and him over the Battlement. But, with great difficulty he diſengaged himſelf, and they went over by themſelves, and periſhed by the fall. The nobles were ſo obſtinate that none of them would yield, but periſh'd every man; and *Cortez* ordered the *Tlaſcalans* to ſet fire to the Temple, and all the Towers and Houſes contiguous to his quarters. This order being given, which they executed, he mounted his horſe, and taking a launce in his hand, rode to the place where the greateſt power of the *Mexicans* where engaged againſt the *Spaniards*; there he trod them down with his horſe, and diſperſed them where-ever he came; but purſuing a little too eagerly, he found himſelf in a ſtreet alone, encompaſs'd by a great number of thoſe that fled, who now began to rally; he had the preſence of mind to turn ſhort into another ſtreet, and treading down all that oppoſed his paſſage, got thither where he found a company of the enemy dragging away his friend the Secretary *Duero*, who, by the ſtumbling of his horſe, had become their priſoner. *Cortez* attack'd them with his launce, and gave *Duero* time to draw a dagger, which they had overlook'd in diſarming him, with which having killed thoſe who were next to him, he recovered his horſe and launce; and joining *Cortez*, they cleared their paſſage to their own Party. This lucky advanture the General reckoned among the moſt fortunate accidents of his life; ſince he had ſaved a friend from ſo imminent danger,

Cortez in danger.

But defeats the enemy.

The *Mexicans*, being defeated on all hands, retir'd; and *Cortez* did not think fit to purſue his victory. He now ſaw it was impracticable, without more forces, to ſubdue the often recruited numbers of the enemy, who ſeemed to be obſtinately bent upon his diſtruction, He therefore determined to leave *Mexico* for that time. But while he was laying the Scheme for his retreat, the enemy deſired a Hearing, to which he conſented. The Deputies being come, propoſed, in the new Emperor's Name, that the *Spaniſh* forces ſhould retire to the coaſt where their great Canoes (ſo they called the ſhips) lay, and promised a ceſſation of Arms for a reaſonable time, to perform their march. *Cortez* accepted the propoſal, telling them "That he did not intend to ſtay "longer; having nothing more to do, "ſince they had murdered the great "*Montezuma*, whoſe friendſhip had kept "him ſo long in the City. That it was "not fear that made him remove; for he "knew his Arms ſufficient, not only do "diſtroy their City, but to extirpate their "whole Race, and to overturn their Em-"pire; but he had compaſſion upon them, "and was unwilling farther to chaſtiſe "them for their obſtinacy; and there-"fore he would depart as ſoon as they "had agreed to ſome articles neceſſary "fot his ſecurity in the march." This anſwer agreeing to their deſign of protracting time, the Deputies went away ſatisfied. The plot of the new Emperor being to delay the concluding the Truce, till *Cortez*'s proviſion ſhould fail; and in the mean time to block up the palace, and ſtarve the *Spaniards*.

A Treaty of peace.

deceitful on the Mexicans *ſide.*

Whilſt

Whilſt *Cortez* was deliberating about his march, he had intelligence that the enemy were making Ramparts in ſeveral Places, and breaking the bridges in the cauſey, leading towards *Tlaſcala*. This put him upon making a bridge of Beams, ſtrong enough to bear his Artillery, which he deſign'd to carry with him, and remove from place to place, as he ſhould have occaſion; and to give the enemy no time to do much miſchief, he reſolv'd to begin his march that very night, and made the diſpoſition accordingly. To amuſe the *Mexicans*, he ſent one of his priſoners, that evening, to aſſure them, that he was preparing for his march, and deſir'd only eight days to get all things ready. Before he left the Quarters, he brought out all the Gold and Jewels, and deliver'd the King's fifth part (to the Commiſſioners appointed to receive it) in what was moſt portable: and gave ſome lame horſes to carry it, and ſuch other part of their riches, as could be conveniently carry'd; adviſing the Soldiers not to overload themſelves at this juncture, promiſing to come back to recover what they ſhould now leave behind them. Notwithſtanding this caution, there being no abſolute order not to take above ſo much, many of the Soldiers, eſpecially thoſe who had been of *Narvaez*'s Army, loaded themſelves ſo, as to be render'd unable either to fight or flee; which coſt many of them their lives.

All things being now in order, about midnight, *Sandoval* march'd out, with profound ſilence, leading the Van, with his own company, and the choice of the *Tlaſcalans*; having the bridge of beams along with him, and twenty horſe. They march'd, without being diſcover'd, to the firſt bridge; and laying down the portable bridge, in the place of that the *Indians* had broken down, the Vanguard march'd over ſafely. After them he had placed the body of the Army, together with the artillery and baggage, and his *Mexican* priſoners: and the rear-guard follow'd, commanded by *Alvaredo*; *Cortez* himſelf, with 100 choice men, to be employ'd as he ſhould find it proper, march'd ſometimes in one diviſion, ſometimes in another.

Cortez marches out of Mexico.

Before the Rear-guard were all got over, the enemy had taken the allarm; and tho' the *Spaniards* march had been ſo much ſooner than they expected, yet they had laid their deſign with ſo much foreſight, that they attack'd them upon the firſt advertiſement of their retreat. The Lake, on both ſides of the cawſey, was, in a moment, full of arm'd canoes, and the body of the *Mexicans* purſu'd in the Rear of the *Spaniards* with great order, and with ſo deep ſilence, that *Cortez*'s Army felt their arrows before they heard any noiſe. *Alvaredo* fronted thoſe who purſu'd him, and a terrible battle began. The canoes landing their men upon the cawſey before the *Spaniards*, attack'd them in front, and they were ſhot at from the Lake on both flanks. At the firſt allarm, *Cortez*, who had paſs'd the firſt canal with *Sandoval*, came back to reinforce his Rear, and order'd the artillery, now uſeleſs, to be thrown into the canal, to have the paſſage free for the retreat. The *Spaniards*, both in Front and Rear, made ſuch havock of the unarm'd *Indians*, that, at the ſecond canal they threw their bodies into the water, and ſo made a bridge of them for the foot to paſs, leading the horſes by the bridles, thro' the water, to the next cawſey. *Alvaredo* made his way over one of the canals, by a deſperate leap, with the help of his ſpear, his horſe having been kill'd under him; which place is ſtill call'd *El ſalto d' Alvaredo*, *Alvaredo's Leap*. But *Cortez* was much troubled, by the noiſe of ſome *Spaniards* at a diſtance, towards the city, calling upon GOD, as in the agonies of Death: he endeavour'd to go to their aſſiſtance, but found it impracticable; for the *Mexicans* had remov'd his bridge: ſo that he had the mortification to hear their Cries, when he could not relieve them.

Is attack'd by the Mexicans,

The *Spaniards* had receiv'd the *Indians* ſo warmly on all hands, that, after a prodigious ſlaughter, they retir'd before day; at the appearance of which, the Army gain'd the firm Land. Here they reſted, and very luckily; for ſeveral Soldiers, both *Spaniards* and *Tlaſcalans*, who had been in the Rear-guard, and had thrown themſelves into the Lake, when they could not otherwiſe eſcape, came and join'd them. They gave an account of the laſt diviſion of their body's being entirely cut off, and with them *Velaſquez de Leon*, who fought bravely to bring them off, but periſh'd, without being able to effect it. He was greatly lamented by *Cortez*, and the whole Army. In this retreat, they loſt 200 *Spaniards*, 1000 *Tlaſcalans*, all the artillery, 46 horſes, and all the *Mexican* priſoners, who were kill'd in the dark, without being diſtinguiſh'd from *Spaniards*. *Cortez* lamented much the loſs of *Montezuma*'s Sons, the eldeſt of whom he deſign'd to have made uſe of as a rival to the new Emperor. But their death was, at preſent, of ſome advantage to him; for the *Mexicans* coming to ſtrip the Dead as ſoon as day appear'd, and finding the bodies of the young Princes, for whom they had a ſingular veneration,

But gets to firm land, with ſome loſs.

ſent

ſent to acquaint their Emperor with it; who, affecting a great concern, made the Army halt, and began the funeral ſolemnities, carrying the bodies to the burying-place of their Kings, with the uſual pomp; which gave *Cortez* time to breath, and refreſh his wearied men.

When they had reſted ſome hours, upon the ſide of the Lake, *Cortez* proceeded in his march towards *Tlaſcala*; but ſo ſlowly, becauſe of the wounded, that before they could arrive at any place of ſecurity, the *Mexicans*, join'd with the people of *Tacuba*, and *Eſcapuzalco*, the countries thro' which he march'd, gave a new attack to his Army. He was well aware of the fatigue they had undergone; and therefore, perceiving a large building not far off, upon an eminence, he order'd them to retreat to it; but ſo, that they retir'd fighting: this they happily effected, and found it very commodious, having a large court, ſurrounded with a wall flank'd with towers. It was a Temple built for the worſhip of the Sylvan Gods. Here they remain'd in ſafety, the enemy not daring to attack the wall, eſpecially the night coming on; at the approach of which, they drew off, and took the road to *Mexico*. In memory of this Temple's having been an *Aſilum* to them at this time, they afterwards erected a Hermitage in this place, and call'd it *Our Lady of Refuge*. Here they ſlept ſome hours; but with good care of their guards; changing their centinels often, that all might be refreſh'd.

Is purſu'd.

But *Cortez*, believing that they ſhould be purſu'd the next day by the enemy, brought his Council of War to a reſolution of marching that night, in order to fatigue the enemy by a long march the next day, before they could get up to them; this was undertaken, and executed accordingly, meeting with no oppoſition, but from ſome pickeerings of the natives, which was of no great conſequence. But having ſtaid a day at a village, which they found forſaken, but ſome proviſions left, he proceeded two other days in his march, thro' a rocky, barren country, where the Army ſuffer'd much by hunger and thirſt, having nothing to eat but herbs and roots; and ſo much they were put to it, that one of the wounded horſes dying, his fleſh was a moſt acceptable regale to thoſe who were in greateſt neceſſity. The next day, they came to a village, where the inhabitants brought them proviſions very chearfully; but, as they march'd out of it, *Donna Marina* (who, by wonderful good luck, had eſcap'd in the firſt battle) heard ſome of the *Indians*, who follow'd to gaze at them, call out aloud, *Go on Tyrants! you ſhall ſoon arrive at the place of your execution.* This hint made *Cortez* march with the greater caution; and as they march'd up a hill, which overlooks the valley of *Otumba*, they perceiv'd ſome ſtraggling companies of arm'd men at ſome diſtance. But as ſoon as they had reach'd the top of the hill, they ſaw a greater Army in the plain, than they had ever ſeen before. And indeed this was the whole force of *Mexico*; which, by a well-concerted march, in different parties, and by different roads, thro' the mountains, had got the ſtart of the *Spaniards*, being reſolv'd to cut them off, to prevent their reaching the *Tlaſcalan* territories.

This Army was compos'd of all the Nobility of *Mexico*, and of the tributary Caciques, who had been order'd to prepare their forces upon the firſt forming the deſign againſt *Cortez*, tho' they could not come together till now.

The whole Power of Mexico *take the Field againſt* Cortez.

The Royal Standard of the Empire, which never came into the field, but upon extraordinary occaſions, was now brought out; and the Captain-General, who alone was truſted to carry it, (being ſurrounded by the choiceſt men they had, and carry'd in a fine rich Litter, upon men's ſhoulders) had the charge of it, having it fix'd by his ſide. The form of this Standard was a net of maſſy gold hanging on a pike, and crown'd with a plume of party-colour'd feathers. The other Caciques had their proper Standards in their diſtinct Armies; the whole Army together, cover'd a vaſt plain. *Cortez*, ſeeing ſuch a powerful enemy before him, obſerv'd the countenances of his men, and ſeeing them chearful and lively, took it for a good Omen; ſo that he only ſaid, *Our preſent ſituation is ſuch, that we muſt conquer or die. It is the cauſe of our* GOD, *and he will fight for us.* He had no time for more; for the enemy was ſo near, that his own Soldiers were impatient for the battle. He had extended the front of his Foot as far as his ſmall number would allow, and flank'd them with ſome Horſe, keeping always a few about himſelf, to ſuccour thoſe places that had moſt need.

When the Signal was given, the *Spaniards* diſcharg'd their muſquets with ſo good an aim, that they did great execution among the *Mexicans*, who advanced in groſs, without due order; and then falling in upon them with their launces and ſwords, they hew'd them down by companies. But the *Mexicans* were ſo reſolute, notwithſtanding their want of diſcipline, that they attack'd fiercely; and when the *Spaniards* ſlew great numbers, freſh men always fill'd up the places of the ſlain; making their number

They engage.

ſupply their ignorance in the art of war. But the horſe trode down whole battallions at once; and terrify'd the enemy more than the fire-arms. *Cortez* was ſeen every where, encouraging his men, both with his words and example: for, being bravely ſeconded by his ſmall troop, he mow'd the *Mexicans* down where-ever he came. The *Tlaſcalans* fought as if they had thirſted for *Mexican* Blood; and having been now ſomewhat inur'd to the *Spaniſh* diſcipline, they bravely ſeconded their Maſters in the Battle.

But *Cortez* conſidering, that notwithſtanding the ſuperiority of the valour of his people, and the ſlaughter they made; yet their ſtrength could not hold out to kill ſuch a multitude; but that they muſt fall down of themſelves, for mere fatigue, was reſolv'd to try one experiment to ſhorten the work. He remember'd to have heard, in his converſations with *Montezuma*, that the fate of the day, in time of battle, depended much upon the Royal Standard; and therefore he form'd a deſign to make himſelf maſter of it: to this end, riding up to *Sandoval*, *Alvaredo*, *D'Olid*, and *Davila*, he bid them follow him, and ſecure his Rear; and, taking a little turn, to that part of the enemy's Army, which he judg'd, by his eye, to be the ſhorteſt road to the Standard, he fell in with his horſe upon them, with ſuch violence, that he bore down all that oppos'd him; and coming to the centre, where the Captain-General was, encompas'd with a great crowd of Nobles, who guarded the Standard (as it had been the *Palladium* of the Empire) *Cortez* ſpur'd on his horſe, and with the firſt puſh of his launce, laid him all along in the Litter; which *Juan de Salamanca*, a private Gentleman of *Cortez*'s troop, perceiving, diſmounted, and taking the Standard from the Litter, deliver'd it to *Cortez*; for which the Emperor, *Charles* V. afterwards gave him, for his Creſt, the Plume of Feathers which was on the top of the *Mexican* Standard.

Cortez takes the Royal Standard,

Cortez ſoon ſaw that he had not been miſinform'd; for no ſooner did he make his appearance with the Standard in his hand, but all the Enſigns of the whole *Mexican* Army ſtruck their Colours; and that whole Multitude, throwing down their Arms, fled with great precipitation: ſo that, of 200,000 men, of which that Army conſiſted, there was not one to be ſeen in the field of battle, in a very ſhort time, except the ſlain, which are ſaid to have been about 20,000. The *Spaniards* having made dreadful havock in the purſuit; which, tho' it might be thought cruel upon another occaſion, ſeems to have been juſtifiable, at this time; conſidering how often thoſe *Indians* had rally'd again after being defeated. It is incredible how ſuch an obſtinate Fight could have been of ſuch continuance; and yet that ſo few fell on *Cortez*'s ſide; for, except ſome *Tlaſcalans*, who were kill'd, and three *Spaniards*, who died of their wounds afterwards, there is no mention made of any ſlaughter of *Cortez*'s men. He himſelf was wounded with a ſtone, which beat his helmet into his skull, and made likewiſe a Contuſion more dangerous than the Fracture. The *Spaniards* got a rich booty, the *Mexican* Nobility having adorn'd themſelves as if they had been going to a triumph.

Which gains him the victory.

Cortez aſſembled his ſcatter'd forces, and purſu'd his march, notwithſtanding his wound, keeping his men ſtill in readineſs, and good order, for fear of the enemy; but he met with no oppoſition, and the next day enter'd the Territories of *Tlaſcala*, to the great joy of all his Army. He ſtop'd at *Gualipar*, a conſiderable Town belonging to the Republick. The inhabitants met him without the town, offering him all aſſiſtance, and deſiring he would reſt his Army, after the fatigue they had undergone; which he thankfully agreed to; and, as he was deliberating to ſend an account of his approach to the Senate, he heard that his good friend *Magiſcatzin*, and the two *Xicotencals*, were arriv'd, to welcome him in the Name of the Senate. They receiv'd each other with all the marks of ſincere friendſhip, except *Xicotencal* the General, who ſeem'd to be diſſatisfy'd. All the firſt civilities being over, *Magiſcatzin* told *Cortez*, that the Senate had decreed an Army to be rais'd for his aſſiſtance, againſt *Mexico*; and that 30,000 men were to have march'd forthwith, to have ſecur'd his retreat, when they had the agreeable news of his having defeated the enemy, by his own prodigious valour, and that of his forces.

Cortez continues his march.

The Army ſtaid three days in *Gualipar*, to take care of the wounded; nor did *Magiſcatzin* oppoſe it, that they might have time to prepare for *Cortez*'s entry into *Tlaſcala*, which they were reſolv'd to ſolemnize with a magnificence equal to their affection; and was accordingly perform'd with great pomp on both ſides; the *Spaniards* adorning themſelves with the plumes, and other ſpoils of the *Mexicans*; and the people of *Tlaſcala*, with all the finery they were maſters of; and they had nothing but feaſts and rejoicings for ſeveral days and nights; and would have continu'd them much longer, had not *Cortez*'s wound, which had been unskilfully skin'd over,

broke

broke out with bad ſymptoms; his head was much enflam'd, and a violent fever enſu'd. This accident caſt a ſudden damp over all their mirth. The *Spaniards* were under vaſt concern for their General, the Senate, (and particularly *Magiſcatzin*, in whoſe houſe he lodg'd) was inconſolable; and the people went about the ſtreets, as if the Plague, or ſome dangerous Judgment hung over them. But by the care of the *Tlaſcalan* Phyſicians, who were admirably well skill'd in the nature of Simples, which they only made uſe of; and, by the help of a good conſtitution, the inflamation was remov'd, and the fever abated; after which, applying other herbs to the wound, they heal'd it up ſo by degrees, that he had no trouble with it afterwards.

Cortez dangerouſly ill.

But recovers.

As ſoon as *Cortez* recover'd, he had Letters from *Vera-Cruz*, that all things in the garriſon were as he had left them; the priſoners in ſafe cuſtody; and the confederate Caciques ſtill faithful. But withal they inform'd him, that there was a report among the *Indians*, that the people of *Tepeaca* had murder'd a Corporal and eight *Spaniſh* Soldiers, in their march for *Mexico*; and likewiſe, that the Soldiers of *Narvaez*, who had been left wounded at *Zempoala*, and had begun their march to *Mexico*, as ſoon as they were able to travel, had been kill'd by the ſame treacherous people. Upon this intelligence, which was confirm'd by the *Tlaſcalans*, (who ſaid that both thoſe parties had quarter'd there in their march) *Cortez* reſolv'd to chaſtiſe the *Tepeacans* before he undertook any thing elſe, intending to have the aſſiſtance of the Republick's Forces; but determin'd to let them offer their men; not thinking it proper to own that he needed any aid. The matter took, as he imagin'd it would; for, upon his declaring his intention to march againſt the *Tepeacans*, the Senate order'd 30,000 men to accompany the *Spaniards*.

Ambaſſadors come from Mexico *to the Republick.*

But whilſt he was preparing for this expedition, Ambaſſadors arriv'd at *Gualipar*, from the Emperor of *Mexico* to the Republick. They ſent from that place for leave to come to *Tlaſcala*; which being granted, with *Cortez*'s conſent, the Senate aſſembled to receive them, taking it for a great piece of humility in the proud *Mexicans* to ſend Ambaſſadors to them. When they arriv'd, they were conducted to the Senate; where, with the uſual formalities in ſuch Embaſſies, they offer'd peace and friendſhip from the great Emperor of *Mexico* to the Republick, deſiring no other condition, but their making immediate war upon the *Spaniards*, and deſtroying their whole Army. This propoſal was receiv'd with ſuch abhorrence by the Senate, that ſome very harſh expreſſions drop'd from ſeveral Senators; till it was wiſely propos'd, to deſire the Ambaſſadors to remove to the place appointed for them, where they were to attend the anſwer of the Senate. They went out accordingly, and the Senate, without voting, agreed to ſend for anſwer, That they would accept the offer'd peace and alliance, if they were propos'd upon honourable terms; but as the *Tlaſcalans* had a ſacred veneration for the laws of hoſpitality, and knew no difference between what was impoſſible, and what was unjuſt; they could not admit of an alliance, the terms of which they could not comply with. But before this reſolution was agreed to, the Ambaſſadors were gone, having made a moſt precipitate flight, for fear of a harſher meſſage from the Senate.

But does not ſtay for an anſwer.

Cortez was pleas'd, and not without reaſon, with this proof of the friendſhip of the Republick; and thank'd them for it in terms which united them ſtill cloſer in his intereſt. But young *Xicotencal* was not at all ſatisfy'd with their proceeding; and, tho' he ſaid nothing againſt it in the Senate, he under-hand was caballing to make a party to agree to the propoſals of the Emperor of *Mexico:* whether it was out of ſpite to *Cortez*, as having conquer'd him, or from his foreſight of the vaſſalage of his country to the *Spaniards*, (as he pretended) is hard to determine. There were ſo few who approv'd of his conduct and reaſoning, that his deſign was ſoon diſcover'd, both to *Cortez*, and to the Senate. The Senate met to conſult about it, and ſending for the old *Xicotencal*, ask'd him, *How his Son ought to be proceeded againſt?* He reſolutely anſwer'd, *As a Traitor to the State, and he would be the firſt that ſhould condemn him to die.*

Young Xicotencal *cabals againſt* Cortez.

This frank behaviour, in the old blind Gentleman, ſoften'd the minds of the Senators; ſo that they chang'd their ſeverity into mildneſs, and only ſentenc'd him to be degraded from his honours and office; which was done in open Senate, by taking his Staff from him, and throwing him down the ſtairs aſcending to the Tribunal. This diſgrace ſo humbled him, that he went to *Cortez*, and beg'd pardon, promiſing amendment; and, at his interceſſion, he was reſtor'd; and now was very diligent in liſting an army for the war of *Tepeaca*, making ſhew (but it was no more than a ſhow) of having repented of his error.

But ſubmits in appearance.

In the mean time, *Cortez* had no ſmall difficulty to bring his own Forces to engage

gage in this Expedition. The *Spaniards* who came with *Narvaez*, oppos'd it with open mouth. But he artfully quieted this mutiny, by telling them, "That "the *Tepeacans* had already poſſeſs'd the "road to *Vera-Cruz*; ſo that there was "a neceſſity of fighting them ſome "where; and if they ſhould do it by "way of retreat to *Vera-Cruz*, beſides "the diſhonour of it, they run a great "hazard; for they would be oblig'd to "encounter a numerous Army by them-"ſelves; becauſe they ſhould be ſo far "from being aſſiſted by the *Tlaſcalans* "in the deſign, that there was danger "in making them their Enemies, which "muſt occaſion their utter deſtruction."

The Spaniards mutiny,

But are quieted.

Thus he took them in their own trap, by repreſenting greater hazard in the retreat, than in the Expedition he propos'd. And to incline them to go chearfully into his meaſures, he promis'd them, upon his honour, "That when he had cha-"ſtis'd this Province, and clear'd the "Road to *Vera-Cruz*, every man, who "was unwilling to ſhare his Fortune, "ſhould be free to depart at pleaſure.

Cortez marches againſt Tepeaca.

Having thus ſilenced the Mutineers, he gave orders for the march. He muſter'd his Army, which conſiſted of 420 *Spaniſh* Foot, arm'd with ſpears, croſs-bows, and a few fire-arms, (becauſe the powder being ſcarce, he was oblig'd to leave moſt of the muſquets under the charge of *Magiſcatzin*) ſixteen horſe, 8,000 choice *Tlaſcalans*, drawn out of *Xicotencal*'s Army, under the Officers whoſe valour he had experience of in the *Mexican* Expedition. With theſe he ſet out, leaving his new-pretended friend to bring up the reſt of the *Tlaſcalans*. The firſt day he march'd three leagues, and halted at a Village, which he found abandon'd by the inhabitants; only they took a few peaſants, who, by *Cortez*'s order, were well treated; and the next morning he diſmiſs'd them, bidding them tell the Cacique, and chief Men of *Tepeaca*, "That he was come to cha-"ſtiſe them for the barbarous murder of "his Countrymen; and likewiſe for "their Treaſon againſt his Sovereign "*Don Carlos*, to whom they had pro-"mis'd obedience, when he had paſs'd "thro' their Country, in his way to "*Mexico*. But if they would now en-"gage to arm, in conjunction with the "*Spaniards* and *Tlaſcalans*, againſt the "*Mexicans*, he would forgive all that "was paſt, and enter into a new league "of friendſhip."

The *Indians* went away, and, in a few days, came back to him, with a moſt impertinent anſwer to his meſſage; by which he found he muſt deal with them as enemies; and therefore continued his march towards *Tepeaca*; but before he arriv'd, they diſcover'd an ambuſcade of the enemy, in ſome fields of *Maez*, which grew very thick in that fruitful Country; and might have conceal'd them, if their impatience had not prompted them to ſhew themſelves too ſoon. *Cortez* drew up his Army in an inſtant; the *Tlaſcalan* Officers being very expert in the *Spaniſh* diſcipline. The enemy, finding themſelves diſcover'd, appear'd in great numbers, made up of *Mexicans* and *Tepeacans*. The *Mexicans* led the Van, and charg'd the *Spaniards* and *Tlaſcalans* firſt with their arrows; but they did little execution, having loſt their force among the Canes of *Maez*. But the *Spaniards* cloſing with them, made a terrible ſlaughter among them with their Pikes and Swords; and were ſo well ſeconded by the *Tlaſcalans*, that, upon a ſecond attack, the *Mexicans* turn'd their backs, and quitting the field, retir'd. The *Tepeacans* ſoon follow'd their example, and fled with great precipitation, leaving the victory entire to *Cortez*.

Fights a battle,

And gains a victory.

In this battle the enemy loſt the greateſt part of their Army, many were made priſoners, and the booty was conſiderable; few were kill'd of the *Tlaſcalans*, and the *Spaniards* loſt only one horſe, and had ſome men ſlightly wounded. That very night the *Tepeacans*, being abandon'd by the *Mexicans*, ſent deputies to *Cortez*, offering to deliver up their City, and themſelves at diſcretion; ſo that, the next day, he enter'd the City; the chief perſons, both civil and military, preſented themſelves before him, in a ſuppliant poſture, without daring to lift up their eyes. *Cortez* order'd the interpreters to proclaim King *Charles*, with a loud voice, and, in his name, a general pardon; which was ſo agreeable a ſurprize to the *Indians*, that they ſhew'd extraordinary ſigns of joy; and *Cortez* found, upon enquiry, that the *Mexicans* had, in ſome meaſure, forc'd them to act the part they had done. But that they might be no more under ſuch a force, they beg'd of him to take their City into his protection. He took this opportunity to build a Fortreſs there; and, by the aſſiſtance of the inhabitants, he put the City in a poſture of defence, againſt the *Mexicans*; he left a *Spaniſh* garriſon in it, and gave it the name of *Segura della Frontiera*, the *Securer of the Frontiers*.

But here another piece of barbarity was committed, which could not but make the *Spaniſh* name odious, whatever courteſy they might pretend to: this was, the ſending all the priſoners under a guard to *Tlaſcala*, to be ſold for ſlaves.

A barbarity done by the Spaniards.

ſlaves. But the Emperor *Charles* V. put a ſtop to this inhumanity thro' all his dominions in *America*, as ſoon as he was appriz'd of it; which was good policy, as well as an argument of that Prince's piety and humanity.

The Emperor of Mexico dies, and a new one is choſen

About this time died the Emperor, who had ſucceeded *Montezuma*; and *Guatimozin*, another Nephew, and Son-in-Law to the old Emperor, was elected; a young Prince of a good Spirit, and enterprizing genius, who departing from the auſtere Majeſty of the *Mexican* Kings, made himſelf acceptable to the Nobility, by the eaſineſs of acceſs to him; and to the People, by taking off the Taxes in time of war, (*the time that other Princes are oblig'd to make them heavier*) and neglected nothing to put himſelf in a ſtate of defence againſt any enemy. To this end, he ſent an Army of about 30,000 men to the frontiers, near *Guacachula*, from whence that Cacique ſent intelligence to *Cortez*, deſiring his aſſiſtance againſt the *Mexicans*. *Xicotencal* being arriv'd with the reſt of the Army, *Cortez* order'd 30,000 *Tlaſcalans*, and 300 *Spaniards*, under the command of *D'Olid*, to march againſt them. But there being a report ſpread, that the new Emperor had taken the field with the whole Power of *Mexico*, *D'Olid*'s Army miſtook ſome forces, marching down from the mountains, for *Mexicans*; but they prov'd to be their own Confederates: however, the *Tlaſcalans* ſuſpecting them, *D'Olid* ſent to them to halt, and commanded their Caciques to come to him; which they did, and the *Spaniſh* General giving too eaſily into the jealouſy of his Army, ſent them priſoners to *Cortez*. This raſh action might have been of very ill conſequence, had not *Cortez*'s prudence remedied it; for he immediately releas'd and careſs'd the priſoners; and being ſtartled at the diffidence the *Indians* had of one another, he thought proper to go himſelf with them to the Army; where he reprimanded *D'Olid* for his raſhneſs; and having quieted all diſturbances, he join'd the new forces to his own Army, and march'd on to *Guacachula*.

The *Mexicans*, upon their approach, advanced, putting their battle in array between *Cortez* and the Town, and engag'd the *Spaniards*, and their Confederates, under cover of the place: But the Cacique of *Guacachula* making a ſally out, fell upon the Rear of the *Mexicans* with ſuch vigour, that being hard preſs'd by *Cortez*'s Army in front, they could not ſtand the ſhock of the double attack, but fled, with all the haſte they could; the *Spaniards* and *Indians*, both in Front and Rear, purſuing them with great animoſity; ſo that moſt of them were either kill'd or wounded.

Cortez beats the Mexicans at Guacachula.

After this victory, *Cortez* enter'd the City, and quarter'd his *Spaniards* in it, leaving his Confederates without, who, in a few days, increas'd to the number of 120,000. The neighbouring Provinces ſending daily their forces to aſſiſt him in the Conqueſt of *Mexico*. The Caciques, who had join'd him in this action, offer'd to follow him to *Tzucan*, a ſtrong town in the neighbourhood, where was a garriſon of 10,000 *Mexicans*, beſides thoſe who fled in the laſt battle. Thither *Cortez* march'd with the whole Army, and the *Mexicans* having cut the Bridge over a River, near the Town, *D'Olid* led the Van thro' the River, in the face of the Enemy, who at firſt made ſome reſiſtance; but when they found that the whole Army follow'd his example, they retir'd to the Town. *Cortez* order'd a general aſſault to be made, but there was no body to oppoſe them; for the Town was in a moment deſerted both of ſoldiers and inhabitants. At firſt they apprehended ſome ſtratagem, and were upon their guard; but ſeeing the *Mexicans* at a diſtance, aſcending the mountains, in confus'd multitudes, *Cortez* enter'd the Town, ſending ſome of the Confederates to take ſome priſoners, which they did. *Cortez* ſpoke kindly to the priſoners, and ſent them in ſearch of the inhabitants, promiſing them peace and liberty, upon their return. This mildneſs had the deſir'd effect, and before the next night, many, both men and women, came back to their houſes, without being moleſted, and promis'd obedience to the King of *Spain*.

And enters Yzucan.

Having reduced this place, *Cortez* return'd to *Segura della Frontiera*, where he heard, to his great ſorrow, that *Magiſcatzin*, who had always favour'd his intereſt, and done him many ſignal ſervices, was in a very languiſhing condition. He therefore diſpatch'd Father *D'Olmedo* to *Tlaſcala*, who arriv'd there in time to bring him over to the Chriſtian Faith; which he was well inclin'd to before; and he receiv'd Baptiſm before his Death; and, to the laſt, continu'd to exhort his Countrymen to follow his example, and to perſiſt in their fidelity and friendſhip to the *Spaniards*.

Magiſcatzin turns Chriſtian at his Death.

About this time, a ſhip arriv'd near *Vera-Cruz*, ſent by *Velaſquez*, Governor of *Cuba*, with ſeventeen *Spaniards*, two horſes, and ammunition and proviſions for *Narvaez*. This ſhip was commanded by *Pedro de Barba*, who was Governor of *Havana*, when *Cortez* was order'd to be ſeiz'd there, as we former-

A new supply of Spaniards arrive at the Camp.

ly mention'd. *Pedro Cavallero*, who was patroling upon the coaſt for *Cortez*, went out in a boat to reconnoitre; and coming up to the ſhip, ſaluted his Countrymen with great civility. *De Barba* enquir'd, in very civil terms, concerning *De Narvaez*; by which *Cavallero*, gueſſing at the deſign of their coming, anſwer'd, without heſitation, "That he "was perfectly well, and that the whole "Country had ſubmitted to him; *Cor-*"*tez*, and a few of his Soldiers, having "fled to the mountains." By this Lye, (which can not be juſtify'd) *De Barba* was decoy'd to *Vera-Cruz*, where he was undeceiv'd, by finding himſelf a priſoner, with all his people, to *Cortez*; which he was not much troubled at, having a true eſteem for that General, upon account of former friendſhip. The deputy Governor ſent the priſoners to *Cortez*, who receiv'd them courteouſly, and making preſents to the Soldiers, liſted them in his Army, and gave *De Barba* a company of Croſs-Bows. Soon after, another ſhip's crew were ſent to him, after the ſame manner, and follow'd the example of the firſt.

But as *Cortez*'s thoughts was bent upon the Conqueſt of *Mexico*, the greateſt difficulty he found in it was, how to paſs the Lake; for he did not fear their numbers, having his Army ſufficiently recruited from his Confederates. He therefore ſet about making a conſiderable number of Brigantines, which he reſolv'd to carry in pieces to the River near the Lake, and there putting them together, they might ſupply the place of bridges for paſſing the Cawſey: And, being in want of Powder, he ſent one of his Engineers to a *Vulcano*, or burning Mountain, at ſome diſtauce from *Tlaſcala*, which *D'Ordaz* had viſited the year before; where they found as much Sulphur, as they had occaſion for, to make Powder.

When he had thus provided for thoſe things neceſſary for the Expedition, he return'd to *Tlaſcala*, and enter'd the City in mourning, upon the acconnt of *Magiſcatzin*'s death, which made him moſt acceptable to the Senate and People; and he was the more ſo, by recommending to the Senate, the Son of his deceas'd friend, for his Father's place in their Counſels. This Son, as well as old *Xicotencal*, embrac'd the Chriſtian Faith, and were baptiz'd; which probably had influenced many others, if *Olmedo* had been ſupply'd with more Coadjutors, or had *Cortez* been at full liberty to proſecute that deſign.

Whilſt *Cortez* was going on with his preparations, a very ſeaſonable ſupply came to him unexpectedly, to counterballance the loſs of many of *Narvaez*'s Soldiers, who now claim'd the promiſe of ſuffering them to return to *Cuba*. *De Garay*, as we obſerv'd before, having left *Vera-Cruz*, had landed at *Panuco*, in the Gulph of *Mexico*; but having been repuls'd by the Natives, return'd to *Cuba*, where providing himſelf of a conſiderable force, he ſet out for the ſame place; but meeting with the like ſucceſs, his ſhips ſail'd without his orders, or any concert with one another, and whether by chance, or from the opinion which the commanders had of *Cortez*, three of them came, one after another, to *Vera-Cruz*, and deſiring guides from the garriſon, march'd at different times to *Tlaſcala*. Theſe three recruits conſiſted of 100 Soldiers, and 17 Horſes, with ſtore of Arms and Ammunition. Upon their arrival, *Cortez*, having welcom'd them with open arms, proclaim'd liberty of ſailing to *Cuba* to all who would. The greateſt part of *Narvaez*'s Soldiers accepted the offer; and which was thought very odd, the Secretary *Duero* made one among them. What was the reaſon of this change, is not told; but it is affirm'd, that, ſoon after, he made uſe of all his intereſt at the Court of *Spain*, in favour of the Governor *Velaſquez*. All theſe ſail'd to *Cuba* in one of the ſhips which came laſt.

And then another.

Moſt of Narvaez's Soldiers retire with Cortez's permiſſion, to Cuba.

Cortez thus getting rid of the Malecontents, apply'd himſelf cloſe to his main purpoſe, the Conqueſt of *Mexico*. He ſent to all his confederate Caciques, to be in readineſs to march at a ſhort warning; and haſten'd the building of his Brigantines. But that his enemies at home might not be able to do him miſchief, he drew up, in the form of a Letter to the Emperor his Maſter, a full account of his proceedings, and of his adventures, proſperous and unlucky: promiſing, with a confidence not unbecoming, to annex that new World to his Majeſty's Dominions. He gave an account of the riches and value of the country; the valour of the *Spaniards*, and the fidelity of the *Tlaſcalans*. He deſir'd juſtice againſt the miſrepreſentations of *Velaſquez*, and the injuries done him, both by that Governor, and by *Garay*; and beg'd a ſpeedy reinforcement to finiſh his Conqueſt. But above all, he repreſented the neceſſity of ſending a number of Eccleſiaſticks, in order to the Converſion of the *Indians*. Theſe Letters he ſent by *Mendoza* and *D'Ordaz*, with private inſtructions, that they ſhould find out his Father, and his former Agents *Portocarrero* and *Montejo*, before they went to Court; and govern themſelves according to the advices they ſhould receive from them. He likewiſe ſent

He ſends deputies to Spain.

ſent a Preſent to the Emperor, of the moſt valuable things which had been ſav'd in the retreat from *Mexico*. And, at the ſame time, the two Colonies of *Vera-Cruz*, and *Segura della Frontiera*, writ Letters to the Emperor.

Theſe two Deputies embark'd in another of the ſhips which had brought the late recruits; and the third he ſent to *Hiſpaniola*, with Letters to the *Audience* Royal, reſiding in that Iſland, whoſe juriſdiction at that time, reach'd not only the Iſlands, but the Continent of *America*. The Regulars of St. *Jerome*, of which that Audience was compos'd, writ back to him, that they approv'd of all he had done; promiſing to ſtand by him in *Spain*, and to iſſue out their orders, to ſtop any farther proceedings againſt him from *Cuba*; but told him, they were not in a condition to ſend him any aſſiſtance.

It was now towards the end of the year 1520, when *Cortez*, having all things in readineſs, except the Brigantines, was reſolv'd to begin with the Conqueſt of *Tezeuco*, which being upon the ſide of the Lake, he deſign'd to fortify, and there to expect the coming up of a new body of *Tlaſcalans*, with the Brigantines, in pieces, which he propos'd to put together at *Tezeuco*. But before he began his march, he had a freſh recruit of *Spaniards*. A ſhip from the *Canaries*, coming before *Vera-Cruz*, ſent to let the garriſon know, that they had arms and ammunition on board, to ſell for gold; the Governor ſent this account to *Cortez*, who immediately order'd ſome bars of gold to be carry'd with a good guard to *Vera-Cruz*. The Governor manag'd the affair with ſuch dexterity, that he not only purchas'd the fire-arms, powder, and other warlike ſtores, but he rais'd the expectations of the *Spaniards* on board, by ſhewing the gold and ſilver, the produce of that country, and by magnifying the greatneſs of the Conqueſt; that the Captain of the veſſel, and the Maſter, accompanied him to the Camp, and liſted themſelves in the Army, bringing thirteen men, and three horſes with them.

A new recruit of Spaniards.

Cortez now muſtering his forces, found them 540 Foot, 40 Horſe, and nine pieces of Cannon, which he had gotten from *Garay*'s Ships. The *Tlaſcalans*, under the command of *Xicotencal*, were 10,000; and about 50,000 other Confederate *Indians*, under their proper Caciques. And he manag'd his correſpondence with that Country ſo well, that, in the Siege of *Mexico*, which happen'd not long after, his Army conſiſted of no leſs than 200,000 men; and, which ſhew'd his prudence, there never was the leaſt jarring or miſunderſtanding among them. For, he publiſh'd orders thro' the whole Army, "That no man "ſhould preſume to draw his ſword "againſt another, either upon a march, "or in quarters. That no *Spaniard* "ſhould abuſe a confederate *Indian*, ei"ther by word or action. That no Sol"dier ſhould force, or otherwiſe abuſe "any Woman, tho' ſhe belong'd to the "enemy. That none ſhould preſume to "leave the Army, to go a pillaging, "without leave; and that a ſufficient "number ſhould go together: and final"ly, that they ſhould not ſtake their "horſes or arms at game." All theſe tranſgreſſions were to be puniſh'd with death. Tho' he prudently ſhut his eyes againſt ſome faults in the *Indians*, upon the account of their cuſtoms, which were not to be eradicated all at once.

Upon the Feaſt of the Innocents, he drew up his Army without the City, deſiring the *Indian* Chiefs, by his Interpreters, "To animate their forces to "fight for their liberty, and to ſend "home all who ſeem'd unwilling to un"dergo the fatigue of the war; and to "perſuade them to imitate the *Spaniards* "both in their valour, and moderation." After this, he made a ſpeech to his own Soldiers; in which, having commended their former behaviour, he preſs'd them earneſtly to two things, with regard to their Confederates. The firſt was, *To ſhew great friendſhip to them, and even to bear with them, as creatures of an inferior degree of reaſon*; and the ſecond was, *To ſet them a good example by all their actions*. Adding, that tho' he ſhould be ſorry to be oblig'd to puniſh any of them; yet if they tranſgreſs'd the orders given, he muſt ſhew himſelf Juſt as well as Patient. And then putting them in mind of the good Providence of GOD, that had ſtill attended their deſigns; he concluded his ſpeech with the following words, which he repeated twice, *Let us then follow him, and not diſpleaſe him*. After which he gave orders to march, with a loud *Huzza* from the whole Army.

Cortez marches for Tezeuco.

The inconveniencies they met with in this march, are not worth mentioning; the whole Army being well provided for, the firſt night, by one of the confederate Caciques, thro' whoſe country they paſs'd. The next day they enter'd the enemy's country, and ſaw an Army of *Mexicans* drawn up in a Plain, near a River; but *Cortez*'s Army appear'd ſo formidable beyond their expectation, that upon the advance of the Confederates to the River, the *Mexicans* fled, without ſtriking a ſtroke. The *Spaniſh* Army encamp'd that night at a village

village abandon'd by the inhabitants, and the next day ten unarm'd *Indians* were brought to *Cortez*, who ſaid they were Ambaſſadors from the King of *Tezeuco*, inviting him to his City, with his *Spaniards*, and promiſing to ſupply the reſt of his Army with all ſort of proviſions without the town.

This Cacique, as our Author very probably conjectures, was the ſame who had been depos'd by *Montezuma*, and was probably reſtor'd by this new Emperor, as being a mortal enemy to the *Spaniards*. This made *Cortez* ſuſpect him; however, he accepted his offer, and march'd on. At his approach to the City, he was receiv'd by ſome Nobles of the place, who inform'd him that the King was retir'd to *Mexico*, being frighted at the number of his Army, which had diſappointed the deſign he had laid, *viz.* to cajole him, till ſuch time as the Army of *Mexicans* he had agreed to introduce, ſhould arrive, to cut their throats in one night; but that, upon his nearer approach, his courage fail'd him, and he had fled. *Cortez* enter'd the City in a peaceable manner, but upon his guard, in caſe of treachery: he poſſeſs'd all the gates, and ſet guards at the heads of the principal ſtreets: and was pleas'd to have got this place under his power, without blood; becauſe he propos'd to make it the key to *Mexico*.

Cortez *enters* Tezeuco.

The next day, the body of the Nobility deſir'd admiſſion; which being granted, they appear'd in their beſt attire, having at their head a youth of an excellent aſpect, who, with a becoming grace, addreſſing himſelf to *Cortez*, told him, "That he was come to offer him "that troop of Nobles, begging that he "and they might be allow'd to liſt un- "der his enſigns, where they hop'd to "merit, by their valour, his protection "againſt their enemies." The youth made his ſhort ſpeech with ſuch a winning air, that *Cortez* took him in his arms, with much affection, and retiring with him, and ſome of the chief of the Nobility, to a more private place, he was inform'd more fully of the plot of the Cacique againſt him; but that his cowardice hinder'd him from putting it in execution. After anſwering all the queſtions *Cortez* had put to them, the oldeſt man of the party told him, "That "the Cacique, who had fled, was not "their *lawful King*, but an *Uſurper*; "and had come to the throne by mur- "dering his elder Brother; that he had "been ſupported, in the unjuſt poſſeſ- "ſion of it, by the predeceſſor of *Mon- "tezuma*; and had maintain'd his au- "thority by tyranny, and oppreſſing "the ſubjects. That the youth, who "now appear'd as their Leader, was "the Son of their *lawful King*, and "conſequently the *right Heir*; that he "had been ſav'd from the bloody hands "of the Tyrant, by his apparent con- "tempt of dignity, which made the "Tyrant ſlight him, as a perſon of low "groveling thoughts, and therefore not "to be regarded; but the Nobility, as "well as the Commons, deteſted the "*Uſurper*; and, by their interceſſion, "beg'd he would deliver them from his "unnatural Yoke."

Cortez was extremely pleas'd with this diſcovery, and with much reſpect, placed the young Prince by his ſide; and ſending for the reſt of the Nobles, he order'd his interpreters to tranſlate the following ſpeech aloud; which, for the honeſty and generoſity of it, making, in ſome meaſure, an attonement for his ill uſage of *Montezuma*, I ſhall give it in our Author's own words.

De Solis, B. v. C. xi.

"You have here before you, my "Friends, the *lawful Son* of your law- "ful King. The unjuſt Maſter, to "whoſe ill-acquir'd power, you pay a "forced obedience, ſeiz'd the Sceptre "of *Tezeuco*, with a hand dy'd in the "Blood of his elder Brother: and as "the art of preſerving dominion is un- "known to a Tyrant, he has govern'd "by the ſame violence that made him a "King; little caring how much he de- "ſerv'd the hatred of his Subjects, pro- "vided he made them fear him; and "treating thoſe like ſlaves, who bore "with his crimes. But at laſt, by baſe- "ly abandoning of you, in time of dan- "ger, and neglecting your defence, he "has, at once, ſhew'd his own want of "courage, and put it in your power to "redreſs your misfortunes. I might, if "I were not otherwiſe inclin'd, take "advantage of your defenceleſs condi- "tion; and uſe the right of war, by "ſubjecting this city, which I hold, as "you ſee, at the pleaſure of my ſword; "but it is with difficulty that the *Spa- "niards* conſent to do a hardſhip; and "as he that did us the injury, was "not really your King, you ought not "to ſuffer as his Vaſſals, nor for his of- "fence; nor ought this Prince to re- "main without the Kingdom, which "Nature beſtow'd upon him. Receive "then from my hand, the Prince whom "you before receiv'd from Heaven. "Pay him, for my ſake, that obedience "you owe him, as the ſucceſſor of his "Father, and place him on the throne "of his anceſtors. For, as I leſs re- "gard my own conveniency, than I "do equity and juſtice; I deſire his "Friendſhip more than his Kingdom,

Cortez *reſtores the Kingdom of* Tezeuco *to the right Heir.*

"and

" and your Satisfaction, rather than your " Subjection.

This Speech was receiv'd with the loud applauſe of all the Nobles. Some of them threw themſelves at *Cortez*'s feet, whilſt others made haſte to kiſs the hand of their young King, now *reſtor'd* to his own, to the general joy of the whole city; which they ſhew'd by all the demonſtrations uſual upon ſuch occaſions. He was crown'd the next day, with much ſolemnity, and *Cortez* aſſiſted at the ceremony. By this act of juſtice, the General link'd the hearts of his Cacique and his ſubjects to him, with much ſurer chains than thoſe of force and armies. He had now a firm friend in poſſeſſion of the key to *Mexico*, and a ſure retreat, whatever ſhould happen. And this generous action of reſtoring this prince to his throne, gave *Cortez* ſuch intereſt in him, that, in a very ſhort time, he influenc'd him to turn chriſtian, and had him baptiz'd by the name of *Hernando*, being himſelf his Godfather.

Having thus ſecur'd *Tezeuco*, *Cortez* determin'd to attack *Iztapalapa*, ſituated upon the ſame cawſey, by which he formerly march'd to *Mexico*, that having that city in his power, he might prevent any diſturbance to himſelf, or his confederates, by a powerful enemy behind him. To this end, he choſe 300 *Spaniards*, and 10,000 *Tlaſcalans*, and march'd with them himſelf, leaving the new King of *Tezeuco* to ſettle his authority over his ſubjects; and *Sandoval* to keep the reſt of his army in order. Upon his approach to that city, he was met by 8,000 *Indians*, who appear'd in defence of it, and having ſtood his aſſault with much bravery, retir'd to the town, without offering to defend the entrance to it; ſo that *Cortez* met with no farther oppoſition; which made him ſuſpect a ſtratagem; however, he march'd his army into it, and finding that part of it, which ſtood upon the cawſey, quite abandon'd, and all the inhabitants retir'd to the other part of the town, which, (as it had been a different city) ſtood upon the lake; this encreas'd his ſuſpicion; but he was quickly out of doubt, when he perceiv'd the water to riſe in the ſtreets, from the overflowing of the canals; and all that part of the town in danger of being drown'd, by opening the ſluices of the great lake. This being a danger, againſt which there was no remedy, he gave ſudden orders to leave the place, fretting that he had not foreſeen, and prevented that inconvenience. He lodg'd his army that night on a riſing-gronnd, by the town, where they ſuffer'd much cold from their wet feet: In the morning he began his retreat to *Tezuco*, and repuls'd the enemy who purſued him; defeating them, with great ſlaughter, in three different attacks; being more vex'd at the diſappoinment, than afraid of their force. This ſtratagem of the *Iztapalapans* was ſo well carried on, that it ſufficiently ſhews the *Mexicans* were not thoſe ſtupid Brutes, which ſome people would repreſent them to have been, in order to leſſen the glory of *Cortez*. And whoever conſiders this action, and ſeveral other artifices of theirs, during this war, muſt allow *Cortez* to have had a good ſhare both of courage and conduct, to be able to conquer them; nor is it any derogation from Providence, to aſcribe that praiſe to him, which cannot be denied without envy, and departing from the truth; eſpecially, when we have ſeen greater armies of *Spaniards*, upon this very continent of *America*, defeated by ſmaller numbers of *Indians*, than he had to encounter with.

Cortez *takes poſſeſſion of* Iztapalapa.

But is forced to leave it.

After this retreat, the Caciques of *Chalco*, and *Otumbo*, ſent to *Cortez* to demand aſſiſtance againſt an army of *Mexicans*, come out againſt them; which he ſent them, under the command of *Sandoval*, and *de Lugo*, not only to ſave his confederates, but to prevent the *Mexicans* from intercepting his communication with *Tlaſcala*. As theſe two Captains drew near to *Chalco*, the *Mexican* Army made head againſt them; but the *Spaniards* and *Tlaſcalans* engag'd them with ſo much reſolution, and the Cacique of *Chalco* fell upon their rear with ſuch fury, that they were ſoon put to flight, and loſt a great part of their Army in the puſuit. Several priſoners were taken, and brought before *Cortez*; for, the Army march'd directly back after the victory, the Cacique going along with them. *Cortez* receiv'd him with great civility, and carreſs'd his own, and the *Tlaſcalan* Officers, with much joy; praiſing their courage and conduct in very obliging terms: And then, calling for the priſoners, he told them, " that he would " not follow their example, in puniſhing " ſoldiers for obeying the orders of their " Prince, and therefore he would give " them their Liberty; but he expected " they would tell their Emperor, that " he was coming to puniſh him for all " the miſchiefs of a War, of which " he had been the ſole author; but more " eſpecially, for the death of *Monte-* " *zuma*: that he might expect to ſee " him very ſpeedily in the heart of his " capital City; which he was reſolv'd " to deſtroy with Fire and Sword. But " if he had ſuch compaſſion of his Peo- " ple, as to make Peace for himſelf and " them, he would ſtill give him honour- " able terms." Then he order'd them

He ſends a Meſſage to the Indian *Emperor.*

to be releas'd, and ſent an eſcorte with them to a place of ſafety.

Soon after, arriv'd an expreſs from *Tlaſcala*, from *Lopez*, that the brigantines were ready, and that the ſenate had provided 10,000 *Tamenes*, or carriagemen, for the ſeveral pieces; together with their iron-work, rigging, &c. and 20,000 ſoldiers for an eſcorte. But, that he deſign'd to ſtop at *Gualipar*, near the confines of *Mexico*, to wait for a party from *Tezeuco*. Accordingly *Cortez* ſent 300 *Spaniards* with ſome horſe, and a party of *Tlaſcalans*, who met them at the place appointed, and all together came ſafe to *Tezeuco*. But *Lopez* telling the General, that it muſt take twenty days to put the brigantines together, he reſolv'd to employ the Army in ſome buſineſs during that time; and conſulting the Caciques, and his officers, it was thought proper to begin with reducing *Taltocan*, a conſiderable town upon one of the ſmall lakes, diſcharging itſelf into the great one, and about five leagues diſtant from *Tezeuco*. *Cortez* determin'd to head this expedition himſelf; ſo that, chuſing 250 *Spaniards*, 20 horſe, a numerous body of *Tezeucan* nobility, and 20,000 *Tlaſcalans* commanded by *Chichemecal*, who had brought the laſt Detachment, he march'd out of the city, accompanied by *Alvaredo* and *D'Olid*.

After they had march'd about four leagues, they found an Army of *Mexicans* drawn up to oppoſe them; but, charging them, firſt with their fire-arms, and croſs-bows, and then with the whole body of the confederates, the enemy turn'd their backs, and fled, ſome towards the mountains, ſome towards *Taltocan*, and others leap'd into the lake; leaving a conſiderable number dead upon the ſpot, and ſome priſoners; which laſt were ſent to *Tezeuco*. The Army reſted that night in ſome houſes not far from thence, and the next morning advanc'd to the city; but, upon their approach, found that the *Mexicans* had broken down the bridge, and made the ditch ſo deep, that there was no paſſing from the cawſey but by ſwimming over the canal. This put them to a full ſtop, 'till one of the *Tezeucans* inform'd *Cortez*, that a little higher the water was fordable. He went immediately with him to the place, and order'd fifty *Spaniards* to try the ford, which they did, and were follow'd by ſuch a number of the *Indians* as he thought ſufficient to keep the *Mexicans* in play, till he paſs'd the whole Army. This was punctually executed, and when *Cortez* attack'd them with his whole Force, they quitted the field, throwing themſelves, ſome into their canoes, and others into the lake, with great precipitation; ſo that the confederates enter'd the town without any oppoſition, which they pillag'd, and ſet fire to the temples, and ſome of the greateſt buildings; and then march'd on, having no intention to ſtop there. He found two other cities deſerted, and lodg'd a night in each of them, without ſuffering any damage to be done to them, becauſe he had met with no reſiſtance.

He was now near *Tacuba*, at the end of the cawſey leading to *Mexico*, a place very neceſſary for him to be maſter of, and where there was a ſtrong garriſon of *Mexicans*; thither he march'd: but before they arriv'd at the place, they diſcover'd a great body of *Mexicans*, who advanc'd, to ſtop his paſſage; thoſe he engag'd, and after an obſtinate reſiſtance, broke them; ſome of them retiring to the Town, and others taking different routes, as their fear led them. *Cortez* choſe the moſt advantageous poſt for his quarters that night, where he order'd all his guards, with great caution, to prevent ſurprize.

The next day, the enemy took the field again, ſeeking to retrieve the honour they had loſt the day before; but with the ſame ſucceſs; the dread of the fire-arms, and the terror of the horſe, ſtriking ſuch a damp upon them, that this ſecond victory was more eaſily obtain'd than the firſt. Upon their flight, *Cortez* purſu'd them, ſword in hand, to the city of *Tacuba*, and enter'd it with them, killing great numbers of them; but night coming on, he was not ſo much maſter of the city, as to ſtay there all night, and therefore, ſounding a retreat, he retir'd to his former lodgment: he ſtaid here five days; and every day had a freſh engagement with the enemy; but, in every one of them, he beat them back to the city with conſiderable loſs.

Having weaken'd them very much by continual ſlaughter, he reſolv'd to attack the town, and drew up his Army in order to it. A reinforcement coming, at the ſame time, to the garriſon, from *Mexico*, he attempted to defeat them before he ſhould attack the town; and not acting with his uſual foreſight, he purſu'd a ſmall body of them, ſent on purpoſe to decoy him, to the cawſey; they retiring to their Army, which made ſhew of retiring likewiſe, to bring him farther on, he raſhly purſu'd them; when ſuddenly innumerable canoes, coming out of *Mexico*, attack'd him on all ſides, and the body of the enemy's Army, that ſeem'd to retire, came back with great reſolution upon him. He was oblig'd to make his men front to both ſides of the cawſey, to make head againſt the canoes, and he, himſelf, attack'd the Army

He engages the enemys near Tacuba.

Army upon the cawſey. The action was ſo fiercely carried on by the *Mexicans*, that he run a great riſque of being defeated; and his own perſonal valour was what ſav'd his Army; for he dealt his blows with ſuch ſtrength and courage, as ſtruck a terror into all that ſaw him. But, tho' he was bravely ſeconded by his own forces, both *Spaniards* and *Indians*, and that the *Mexicans* were kill'd on all ſides, the utmoſt he could do, was to make good his retreat, and to ſave himſelf and Army, by quitting the cawſey; which he perform'd with great difficulty; and, finding it impracticable to attempt *Tacuba*, after ſo much fatigue, and with a numerous Army of the enemy ſtill in view, and the city of *Mexico* ſo near him; by the advice of his officers, he retir'd towards *Tezeuco*.

But is oblig'd to retire.

This retreat is cenſur'd, by ſome Authors, as a flight; but without any reaſon. Nor could it be a reflection upon *Cortez*, to give ſome eaſe to his weary ſoldiers, who had, for five days ſucceſſively, fought an Army much more numerous than themſelves, and daily recruited with new forces. But, to ſhew that he loſt no reputation by that retreat, ſoon after he came back to *Tezuco*, ſeveral Caciques upon the north-ſide of the lake, came thither to make their ſubmiſſion to him, and made an offer of joining him with their Forces.

But, what was more acceptable to *Cortez*, (tho' he did not reject the others) was, a new reinforcement of *Spaniards*, of conſiderable diſtinction, with good ſtore of arms and ammunition; which came by way of *Vera Cruz*, and *Tlaſcala*, without ſending word of their arrival. Theſe, our Author believes, were ſent from *Hiſpaniola*, tho' others affirm, they came directly from *Spain*. *Cortez* receiv'd them with great joy, every *Spaniard* being of more account with him, and indeed, of greater uſe, than a thouſand *Indians*.

A new Recruit of Spaniards come to the Army.

About this time meſſengers came, in all haſte, from the Caciques of *Chalco*, and *Thamanalco*, deſiring immediate aſſiſtance againſt an Army of *Mexicans*, ſent to poſſeſs their country, in order to cut off *Cortez*'s communication with *Tlaſcala*, and conſequently with *Vera-Cruz*. He immediately diſpatch'd *Sandoval* upon this expedition, with 300 *Spaniards*, and 20 horſe, together with ſuch a body of *Indians*, as he thought would be ſufficient, with the forces of thoſe Caciques, to oppoſe the enemy. *Sandoval* march'd with thoſe troops, and behav'd ſo well, that he defeated an Army of *Mexicans* near *Chalco*, tho' they had drawn up their Army in ſuch ground, as made his horſe uſeleſs to him, till they were beaten out of it; and then advancing with his horſe, he put them to flight, with great ſlaughter. But a freſh reinforcement coming to the aſſiſtance of the enemy, *Sandoval* engag'd them a-new, and putting them in diſorder with his horſe, purſu'd them to *Guaſtapeque*, killing vaſt numbers of them in the flight. The confederates enter'd the Town with them, and he gave his Soldiers leave to pillage, provided they took nothing away that was bulky, leſt that might hinder their fighting, or march. The next day, the Cacique of the place, and ſome of the principal men of the City, came without arms, and excus'd their former behaviour, as being over-aw'd by the *Mexicans*: theſe ſubmitted to the *Spaniards*, and begg'd peace, which was granted; and *Sandoval* would have march'd back to the Army, but that the Caeique of *Chalco* beg'd of him to purſue the ſcatter'd *Mexicans* to *Capiſlan*; which was but two leagues farther, and on the ſide of *Mexico*.

Sandoval defeats the Mexicans near Chalco.

This City was ſtrong by its ſituation, being built upon the top of a great Rock, very difficult of acceſs, with a rapid river on the other ſide of it. *Sandoval* taking a view of the place, found there were three ways of aſcending, but all of them dangerous, and very difficult. He order'd the *Calchians*, and *Tlaſcalans*, to advance firſt; but finding that they obey'd him but very faintly, he threw himſelf, with his *Spaniards*, into the greateſt danger, and march'd up; which ſo animated the *Indians*, that they mov'd up without any fear, and did it with more eaſe than the *Spaniards*, both, as being better accuſtom'd to ſuch roads, and, as being lighter arm'd. The greateſt danger proceeded from the ſtones which the *Mexicans* tumbled down upon them; doing more hurt by them, than with their bows and arrows: However, the *Spaniards*, with their muſquets and croſs-bows, ſoon clear'd the way, ſo that they reach'd the top of the rock, the enemy retiring into the Town, ſo diſ-ſpirited, that they took little care for the defence of it. The confederates purſu'd them, and made ſuch a terrible ſlaughter of them, that ſome *Spaniards* going to drink of the river, were ſhock'd at the colour of it, occaſion'd by the blood of the enemy. This victory was ſo entire, that very few of the enemy eſcap'd; ſo that the country being freed from the apprehenſions of more Forces from *Mexico*, *Sandoval* return'd to *Tezuco*, but by ſlow marches, having ſeveral of his people wounded.

He marches to Capiſlan.

And with great danger takes the place.

The brigantines not being yet ready, *Cortez* march'd out at the head of the 300 *Spaniards*, and a good body of *Indians*,

dians, to view the places about the lake, where he had not yet been, that he might the better judge how to make his attack upon *Mexico*. His chief design was upon *Suchimilco*, a town upon the east-side of the lake, from which there was a cawsey to *Mexico*; and being resolv'd to march at once from all the places that immediately led thither, *viz. Tacuba*, *Iztapalapa*, and *Suchimilco*, he propos'd to visit this last, as he had the other two, and to possess himself of them all when occasion should offer. He went by the way of *Chalco*, where he found the town in great fear, having been inform'd, that a great Army of *Mexicans* were in motion about *Suchimilco*. *Cortez*'s Forces were join'd by those of *Chalco*, and of the neighbouring provinces, which were of the confederacy; so that, all together, they march'd towards *Suchimilco*. The *Mexicans* had possess'd some strong passes in the mountains, upon the road, from which *Cortez* attempted to dislodge them; and put a party of his men in danger of being cut off (without striking a stroke) by great stones hurl'd down a precipice upon them; but, that perceiving the hazard, he made them retreat, after several were wounded, and four *Spaniards* kill'd. Then he continued his march to the lower ground, having some skirmishes with several parties, which, from time to time, came down upon him, or sallied from ambuscades, in the woods near him. He subdu'd easily all the towns he came to; the *Mexicans* keeping the mountains, in sight of the Army. At last he came to *Quatlavaca*, upon the south-side of the great lake, on the opposite part to *Mexico*.

Cortez marches to Quatlavaca.

This City was defended by a deep ditch on each side; and the *Mexicans*, having cut down the bridges, thought themselves secure; but *Cortez* making his Army draw up, to keep the enemy in play with their fire-arms and arrows, order'd great trees to be fell'd, which reaching to the other side of the Ditch, at a little distance from the broken bridges, where the enemy was, made three bridges of that sort, for his foot to cross the ditch; which being done, he drew off the *Spaniards*, leaving the *Indians* to shoot at the enemy, whilst they, with some difficulty, pass'd those bridges, and form'd on the other side; and were still encreas'd by the *Indians*, as fast as they could get over. The *Mexicans* perceiving their danger, hasted to attack them, and falling upon them with great fury, had like to have defeated them; when *Cortez*, filling the hollows between the trees, with stones and earth, with great hazard got over the horse; which soon reliev'd his Army, by striking such terror into the *Mexicans*, and overpowering them where-ever he came, that they soon gave ground, and then fled over the other ditch to the mountains. The confederates slew great numbers in the engagement, and in the chace; and then march'd into the Town, which they found quite deserted. But soon after, the Cacique, and some of the principal inhabitants, call'd over from the further side of the ditch, and beg'd leave to return, offering to prepare quarters for the Troops; which being granted, the Town was soon peopled, and was of use to *Cortez*, by giving him intelligence, and by their knowledge of the Country.

Beats the Mexicans.

And possesses the Town.

The next morning, the Army march'd towards *Suchimilco*; which was a Town upon the side of the lake, about four leagues from *Mexico*, half of it was built in the water, and the rest upon the firm land. There *Cortez* expected to meet with strong opposition; nor was he deceiv'd; for, as he came near a river, at some distance from *Suchimilco*, he found the further banks double-lin'd with *Mexicans*, and the bulk of their Army near the bridge, which they had not demolish'd, but barricado'd, to hinder his Army from passing it. He quickly saw the difficulty of the attempt, but resolv'd to go thro' with it; and having order'd his *Indians* to advance to the banks of the river, and to discharge their arrows at the *Mexicans*, he commanded the *Spaniards* to attack the bridge. The *Mexicans* made such stout resistance, that they repuls'd the *Spaniards* twice; but, at the third attack, they made the *Mexicans* retire, and pass'd the bridge, making the barricade a shelter for themselves; from whence they gall'd the enemy so with their fire-arms, that they fled every where; which the confederate *Indians* seeing, did not stay to pass the bridge, but swam over, that they might not lose time. They pursu'd the enemy in good order, and finding that they rallied under cover of the Town, they attack'd them again with so much vigour, that they forc'd them to retire into the City, and enter'd with them; where they began a fresh battle. But here, *Cortez*, forgetting the General, to perform the office of a bold volunteer, engag'd himself so far in the pursuit, that he was in the middle of the *Mexicans*, all alone; and had he not been spy'd by one *D'Olea*, a *Spanish* Trooper, he had, in all probability, left the conquest of *Mexico* to some other person. His horse, being tir'd with fatigue, fell under him, and, before he could recover himself, the enemy throng'd so upon him, that he was unable to defend himself. They might have kill'd him, but their eagerness to present him alive to their Emperor

Another battle near Suchimilco, *where the* Mexicans *are defeated.*

Cortez entring the City with Mexicans, *is almost taken prisoner, but reliev'd by* D'Olea.

peror, ſav'd his life; and when he was as good as priſoner, *De Olea*, having call'd ſome *Tlaſcalans* to his aſſiſtance, came to the place, and to his immortal glory, reſcu'd his General out of their hands. He was no ſooner at liberty, but he call'd ſome of his *Spaniards*, who were advancing, and making a furious puſh upon the enemy, drove them to the lake ſide of the Town; he himſelf, with his Army, being in poſſeſſion of the land ſide. He had receiv'd two ſlight wounds, and *De Olea* three ugly cuts of *Indian* ſwords, as the honourable badges of his having ſav'd his General.

Whilſt this paſs'd within the Town, that part of the Army which was left without, to guard againſt any ſuccours arriving from *Mexico*, were not without employment. For, about 10,000 choſen men came from *Mexico*, in canoes, and landed at a little diſtance from the Town, thinking to have fallen upon the Rear of *Cortez*'s Army, whom they believ'd to have been all engag'd in the ſtreets; theſe were ſo warmly receiv'd by *D'Olid*, *Alvaredo*, and *Tapia*, that after a conſiderable loſs, they were glad to take to their canoes, and return home; having behav'd with great bravery, and wounded all the three Captains, beſides a great number of their men.

Cortez having beaten the enemy quite out of the Land ſide of the Town, ſet his guards between that and the other part of it, placing a ſmall party in the Tower of the chief Temple to keep watch, both upon the Lake and the Land: which was a well-judg'd caution; for, by the centinels who had that poſt, he was advis'd, that about 14,000 men were in canoes on the Lake, advancing towards them, and they ſoon landed at ſome diſtance; but the Army was ready for them, and drawing out of town, met them in a convenient ground, choſen by *Cortez*, for the engagement. The *Mexicans*, after their uſual manner, attack'd with fury; but the great execution done by the fire-arms, ſoon quell'd their courage, ſo that they fled outright, giving the Confederates no other trouble than that of killing thoſe they could overtake.

Cortez defeats a freſh Army from Mexico.

They ſtaid four days at *Suchimilco*, *Cortez* allowing that time for the repoſe of the wounded. But as he had no intention to ſtay with a part of his Army ſo near *Mexico*, for fear of harraſſing his men before all things were ready for the ſiege of that city; he march'd his Army back to *Tezeuco*; ſatisfy'd that he had view'd *Suchimilco*, which he propos'd to make himſelf maſter of, when his Brigantines were ready.

And returns to Tezeuco.

At his return, he found every thing in great forwardneſs, the Brigantines only wanted his preſence to have them launch'd; the magazines were well ſupply'd, and all the forces of his allies only waited for orders to come to the rendezvous. But he diſcover'd a dangerous conſpiracy againſt his life, and which was more ſhocking to him, it was carry'd on by *Spaniards*. One *Villafana*, a private Soldier, was the contriver of this Plot, as *Cortez* was inform'd by one of the gang, who, of his own accord, with deep remorſe, diſclos'd the whole ſecret to the General.

Villafana, thinking the Conqueſt of *Mexico* impracticable, and finding *Cortez* bent upon it, imagin'd, that the only expedient to eſcape the dangers to which they were every day expos'd, was to kill the General, and all thoſe who were moſt in his confidence; becauſe, there was no way to get off without his leave, which he durſt not ask. For, tho' he, with ſome others, as much afraid of the war as himſelf, might eaſily have deſerted, and could have paſs'd *Tlaſcala*, under pretence of having been ſent on a meſſage to *Vera-Cruz*; yet they were ſure to be ſtop'd there, having no paſs from *Cortez*. *Villafana* had propos'd deſerting, to ſuch as he found of his own mind, and having had ſeveral conſultations at his quarters, about the means, at laſt he propos'd the death of the General, and bringing them to his opinion, a writing was drawn up, and ſign'd by all that were preſent, promiſing to follow *Villafana* in that attempt, and it was ſo ſecretly carry'd on, that, tho' great numbers were brought in to ſign it, it was not diſcover'd till it was almoſt ripe for execution. This execrable murder was to be done in the following manner. Letters were to be forg'd as from *Spain*, under a pacquet from *Vera-Cruz*, which one of them was to bring to the General, when he was at table with his friends; the other conſpirators were to come into the room, under colour of inquiring for news, and whilſt he was reading the firſt Letter, they were to perform the horrid deed, with their pon-yards; and then to proclaim *Liberty*, and declare *Verdugo* (who had marry'd *Velaſquez*'s Siſter) for their General, tho' they thought him too much a man of honour to be truſted with the conſpiracy.

A Plot againſt his life diſcover'd.

Cortez loſt no time to get to the bottom of the Plot; and taking ſome of his Captains along with him, went directly to *Villafana*'s quarters, where he ſeiz'd him, allowing three or four of his accomplices, then with him, to retire. The confuſion he ſhew'd at the General's preſence, convinc'd him that the Soldier had told him truth. He had him imme-

diately clap'd in irons, and making all to retire, under colour of examining him privately, he took out of his bosom the paper subscrib'd by all the conspirators. The General was surpriz'd, and much afflicted to find the names of some in that black list, whom he little expected; but wisely considering, that punishing all that were guilty, was depriving himself of a considerable number of Soldiers in that critical juncture; he desir'd the *Alcaldes* to try *Villafana* forthwith, without naming any other. The poor wretch, believing that his confederates had betray'd him, and knowing that the General had the original paper, with all the subscriptions, confess'd all that was laid to his charge, and receiv'd sentence of death, which (allowing him time to prepare for it) was executed that night; and the next day, he was seen hanging before his quarters, with an account publish'd of the reason of it.

And punish'd by the death of one Soldier.

After this Justice done, *Cortez* call'd all the *Spanish* Officers together, and told them, "That *Villafana* had con-"spir'd against his life, and several of "theirs; that he did not doubt but he "had accomplices; but that he was ve-"ry glad he had conceal'd them, by "tearing a paper, and eating it, in which "he suppos'd their names were written. "That he did not design to make any "farther inquiry into the matter, being "satisfy'd with punishing the contriver "of the plot. But he desir'd them to "let him know how he had disoblig'd "his Countrymen; protesting that he "would endeavour to amend his faults, "when they were made known to him." The Conspirators, believing that they were not discover'd, hug'd themselves for their escape; and finding that the General did not alter his countenance towards them, (which their own guilt would soon have found out) they gave over their design, and behav'd with double diligence to wipe out their intended wickedness. However, not trusting them too far, by the advice of his Captains, he appointed a guard for himself of twelve Soldiers, and an Officer, without altering his way of living in any other respect.

Xicotencal leaves the Army in disgust.

This Mutiny was follow'd by another, which might have been of dangerous consequence, if not speedily prevented. *Xicotencal*, either upon the old resentment against *Cortez*, or upon new disgust, resolv'd to quit the Army; and forced a part of the *Tlascalans*, under his command, to leave *Tezeuco* in the night. *Cortez* being speedily inform'd of it, sent some of the chief men of the City after him, to persuade him to return; but he was so far from complying, that he sent back a message full of insolence and contempt; which so provok'd *Cortez*, that he sent a party of *Spaniards* and *Tezcucans*, with orders to bring him back, or to kill him if he resisted; which last they perform'd, the *Tlascalans* making little resistance, as having been oblig'd to accompany him, contrary to their inclination. And the Senate of *Tlascala*, and even his own Father, approv'd of *Cortez*'s conduct in that execution; since the haughty young man had acted so contrary to his own duty, and their intention; and they declar'd, he should not have far'd better if he had come back to *Tlascala*.

And is kill'd.

All things being thus quieted, *Cortez* order'd the Brigantines to be launch'd; they were thirteen in all, to every one of which he assign'd a Captain, and five and twenty *Spaniards*, with twelve rowers; and each had on board two pieces of cannon. He then divided his Army into three bodies, with a design to possess himself of the Cawseys of *Tacuba*, *Cuioacan*, and *Itztapalapa*, neglecting *Suchimilco*, as too remote. *Pedro d'Alvaredo* commanded the *Tacuba* expedition, with 150 *Spanish* foot, thirty horse, two pieces of cannon, and 30,000 *Tlascalans*. That of *Cuioacan* was given to *Christoval d'Olid*, with 160 *Spanish* foot, thirty horse, two pieces of cannon, and 30,000 *Indians*. *Gonzalo de Sandoval* had the charge of the attack of *Itztapalapa*, with 160 *Spaniards*, 24 horse, two pieces of cannon, and 40,000 *Indians*.

The disposition of Cortez's Army.

Alvaredo and *Olid* march'd to *Tacuba* together, where they took up their quarters without opposition; all the men, capable of bearing arms, being gone to *Mexico*, and the other inhabitants fled to the mountains. Here they found, that a considerable body of *Mexicans* were assembled within half a league of the town, to cover the Aqueducts, which supply'd *Mexico* with water from the mountains of *Chapultepeque*. The two commanders march'd out of *Tacuba*, and attack'd the *Mexicans*; and, after an obstinate resistance, defeated them, and broke the pipes, and threw down the Aqueduct, in two or three places, letting the water run into the Lake. This was no small damage to the city, obliging them to get their water at a great distance; for the Lake was salt water. This being done, *D'Olid* took his way to *Cuioacan*, and possess'd it with the same ease as they had done *Tacuba*.

Alvaredo and Olid break the aqueducts, and distress the city of Mexico, by withholding the water.

Cortez, allowing *Sandoval* a competent time to reach *Itztapalapa*, went on board his small Fleet; but the greatest that ever had been seen upon that sea. He was accompany'd by *Don Hernando*, the

Cortez sails with his Brigantines.

the Cacique of *Tezeuco*, and a young brother of his, afterwards baptiz'd by the name of *Carlos*. He left a ſufficient number of forces in *Tezeuco*, to ſecure the place, and the communication. He drew up his Brigantines in a line, with flags and ſtreamers diſplay'd. His deſign was to appear before *Mexico*, and to let them ſee that he commanded the Lake; after that, he purpos'd to fall upon *Itztapalapa*, to diſlodge the *Mexicans* from that part of it, which ſtood in the water. But he was oblig'd to alter his meaſures, by the appearance of about 4000 canoes from *Mexico*, and other places, coming to attack him. He put his Fleet in the ſhape of a creſcent, and bore up to the enemy, beginning the engagement with his artillery. At the ſame time, a land-breeze coming a-ſtern of him, gave his Fleet all the force neceſſary to run down the canoes, which they did where-ever they came. The ſhock of the Brigantines, the noiſe and ſlaughter made by the guns, and the ſmoke of the powder in the faces of the *Mexicans*, put them in ſuch a terror, that they retir'd towards *Mexico*, *Cortez* purſuing, and overſetting them, until they got into the canals of the city. *Cortez* ſail'd round it, and fir'd ſome guns into it, rather out of triumph than for execution.

Cortez ſinks and deſtroys a great number of armed canoes.

Aſſiſts D'Olid with his Fleet.

Towards night he retir'd towards *Tezeuco*, near which he reſted his men; and in the morning, as he was preparing to ſail for *Itztapalapa*, he ſaw a great number of canoes rowing towards *Cuioacan*; he follow'd thoſe, and arriving ſoon after them, found *D'Olid* fighting on the cawſey againſt the *Mexicans*, and fronting to the Lake on both ſides, to make head againſt the canoes, which attack'd him every where. He was upon the point of loſing the ground he had gain'd, when *Cortez* arriv'd; but the ſight of the Brigantines ſoon diſpers'd the canoes on one ſide of the cawſey, and *Cortez* ordering ſome of the ſoldiers to widen the ditch behind them, he, with difficulty, made three or four of his Brigantines paſs to the other ſide, and by that clear'd both ſides of the Lake; and then plying the *Mexicans* upon the cawſey with his great guns, at the ſame time that *D'Olid* preſs'd upon them with vigour, they abandon'd the bridge which they were defending, and retir'd to the laſt rampart next the city. *D'Olid* lodg'd his men upon the cawſey all night, and *Cortez* lay bye in the Brigantines.

And with him attacks Mexico.

Early next morning, *D'Olid* mov'd forward to the laſt bridge, at the entry to *Mexico*; which he found barricaded, and ſtrongly guarded. *Cortez* play'd his cannon upon them with good ſucceſs, whilſt *D'Olid* labour'd in demoliſhing the barricades; and filling up the ditch with faſcines, and the timber of their works, which he had broken down. But *Cortez*, being impatient of delay, landed with thirty *Spaniards*, and leading on the attack himſelf, forced the *Mexicans* to retire, and he purſu'd them as far as the chief ſtreet of the city; but not thinking it adviſable to ſtay there till the troops were come up from the other two places, he march'd back to *Cuioacan* the next day; and ſo going on board, ſail'd with all the Brigantines to *Itztapalapa*, where *Sandoval* was hard put to it. For, that Captain having firſt taken poſſeſſion of the land part of the Town, had fill'd up the ditch towards the water part, and making his way over, had taken poſſeſſion, ſword in hand, of a great houſe; but before he was aware, a great number of canoes, coming of a ſudden, took away the faſcines, and cut off his retreat, and then beſieg'd him on all ſides. But *Cortez* arriving, the canoes diſappear'd in an inſtant, and they who attack'd him from the Town, getting into the canoes to get off, ſunk many of them with their haſte. But *Cortez*, perceiving, that without demoliſhing that part of the Town, (which would take a long time, and delay the march from the other two places) he could not prevent *Sandoval* from being attack'd by the canoes, who had good ſhelter there; gave him orders to quit that poſt, and to march, with all expedition, to *Tapeaquilla*, from whence there was a narrower cawſey to *Mexico*, and was the road by which the proviſions for the city were carry'd; which he accordingly did; and *Cortez* went on to *Tacuba* with his Fleet, where he found *Alvaredo* had attack'd the *Mexican* works upon the cawſey, as *D'Olid* had done from *Cuioacan*; but had loſt eight of his *Spaniards*. The General therefore finding this manner of attacking and retiring too tedious, ſent to ſtop all attempts till further orders.

Gets into the city, but retires to his fleet.

Sails to Itztapalapa, where he relieves Sandoval

In the mean time, he diſpatch'd meſſengers to all his allies near the Lake, to ſend all the canoes they could procure; and dividing his Brigantines into three ſquadrons, he ſent four (with a third part of the canoes ſent him) to *Alvaredo*, as many to *Sandoval*, and he himſelf with the other five, and the laſt third of the canoes join'd *D'Olid*. With theſe they clear'd thoſe parts of the Lake, from the enemy's canoes, and took ſeveral loads of proviſions, and freſh water, going to the city, which diſtreſs'd the *Mexicans* much. And the three Captains, from their ſeveral ſtations, advanced ſo far upon the ſeveral cawſeys aſſign'd

Cortez divides his Brigantines, giving four to two of his Captains, and five to the third, with a number of canoes to each.

aſſign'd them, that they demoliſh'd ſome houſes in the ſuburbs; having no enemy now in flank to contend with; but on the contrary, being well aſſiſted with the artillery, and other fire-arms from the Brigantines, and by the arrows from the canoes, which row'd on both ſides of the cawſey, keeping pace with their march.

But the *Mexicans* were not idle, and made ſuch a defence, as ſhew'd they were not only brave, but cunning in the art of war. For, having now to do with people whoſe manner of fighting was new to them, they employ'd their invention in ſtratagems; to prevent the miſchief they foreſaw from the diſpoſition of the *Spaniards*. Tho' it had not, hitherto, been their cuſtom to do any military exploit in the night-time; yet, finding that there was a neceſſity for it, they alter'd their uſual forms, and ſent canoes in the night, which took a great compaſs about, out of ſight of the Brigantines, to clear the ditches, behind the confederate armies, of the faſcines, with which they had fill'd them up, and thereby to cut off their retreat; not doubting but they ſhould be able, with their numbers in the town, to drive them back to ſeek their old quarters.

But another maſter-piece of ſtratagem they contriv'd, which ſhew'd there were good heads among them; it was this: They built thirty large veſſels, which they call'd *Piraguas*, ſtrength'ning them with ſtrong planks to receive the ſhot, and capable of containing a ſufficient number of men to be able to board a Brigantine. Theſe they convey'd, by night, behind the reeds, which grew very high and thick, in ſome places of the Lake; and thruſt ſtakes into the water, at the entries into thoſe groves of reeds, to entangle the Brigantines, as they forced themſelves in with ſails and oars. When they had prepar'd this ambuſcade, they ſent three or four canoes, laden with proviſions, to ply thereabouts, without the reeds, for a bait to decoy the Brigantines that way. This took, as they had projected it; for, the next day, two of *Sandoval*'s Brigantines, commanded by *De Barba* and *Portillo*, going out to cruize, as uſual, the *Mexicans* ſent their canoes out at ſome diſtances, which ſeem'd to fly, as being afraid of them; and the Brigantines making all the ſail they could towards them, purſu'd them into the trap, and coming into it, with all the force of ſails and oars, before they were aware, got among the ſtakes, ſo that they could neither advance nor retire; and the *Piraguas* falling upon them, they were beſet on every ſide. The *Spaniards* had no chance to get off, but by their valour, which they ſhew'd upon that occaſion; and their leaders cauſing expert ſwimmers to throw themſelves into the Lake, with hatchets, and other neceſſary inſtruments, to cut the ſtakes; they withſtood the attack of the *Piragua*'s, till the Brigantines were diſengag'd; and then turning the cannon upon the *Indians*, they ſunk ſeveral of their veſſels, and the reſt made off. The Brigantines were much damag'd by this ſhock, and many of the *Spaniards* were wounded. *Portillo* was kill'd, and *De Barba*, being mortally wounded, died in three days, to the great mortification of *Cortez*.

A ſtratagem of the Mexicans,

Tho' this ſtratagem took once, it was ill-judg'd of the *Mexicans*, to imagine they could put it in execution a ſecond time, in the ſame manner; and the attempting to do it coſt them dear. For, having refitted the *Piraguas*, and built new ones, they ſent them to the ſame place; but *Cortez*, having intelligence of it, from the ſpies he had ſet upon the Lake, ſent ſix Brigantines to another grove of reeds at ſome diſtance; and, when day appear'd, one of them ſallying forth, ſail'd different courſes, as if ſhe were cruiſing, till at laſt ſhe enter'd ſo far, but with eaſy way, among the reeds, as to ſhew the *Mexicans* that ſhe had diſcover'd them; and then pretending to fly with great precipitation, the *Paraguas* purſu'd her, till ſhe decoy'd them to the *Spaniſh* ambuſcade, when the other five coming out of the cover, gave them a broad-ſide, which did great execution; and being better manag'd than the *Mexican* veſſels, they play'd their cannon ſo faſt upon them, that they ſunk, or ſhatter'd them to pieces; by which, they not only reveng'd the late loſs, but broke the *Mexican* Fleet; and put it out of their power to make any figure by water.

Turn'd upon themſelves.

Cortez being inform'd by the priſoners, which were frequently taken, that the beſieged ſuffer'd much for want of proviſions, which occaſion'd great diſcords among them, was very diligent to increaſe thoſe diſputes, by cutting off all their ſupplies. But that he might leave nothing unattempted to prevent the effuſion of blood, he ſent another meſſage of peace to *Guatimozin*, by ſome of the priſoners, whom he releas'd for that purpoſe. He order'd them to tell him, "That he did not intend to de-
"prive him of his crown, or to ſubdue
"his kingdom, much leſs to deſtroy his
"city, or murder his ſubjects; that it
"was their own obſtinacy that had oc-
"caſion'd all the ſlaughter on both ſides.
"But if he would follow the example
"of *Montezuma*, agreeable to their own
"prophecies,

Cortez ſends offers of peace to Mexico.

" prophecies, and acknowledge the king " of *Spain* (as the ſucceſſor of *Quezal-* " *coal*) for ſovereign of the Empire, he " would march peaceably into *Mexico*, " and treat him with the ſame reſpect " he had done *Montezuma*. But if he " refus'd to agree to ſuch juſt and rea- " ſonable terms, he was determin'd to " ſet the city and palace on fire, and " treat the *Mexicans* with all the rigor " of war."

Some affirm, that *Guatimozin* himſelf was inclin'd to peace, but was biaſs'd by the prieſts, who ſpoke aloud againſt it; but however that be, the iſſue of the council held upon *Cortez*'s meſſage, was, a declaration from their Emperor to the *Mexicans*, that he would put to death any who ſhould mention peace, let the the city be reduced to whatever hardſhips it could. Which being reported to *Cortez*, he prepar'd for a general aſſault from all the three cawſeys at once; and accordingly, ſent orders to *Alvaredo* and *Sandoval* to begin the attack with all their force, both by land and water; and, at the time appointed, putting himſelf at the head of *D'Olid*'s forces, he march'd up to the laſt bridge, upon the cawſey leading from *Cuioacan*. Here he found part of the cawſey broken, and the gap open'd, ſo as to let the water of the Lake have free courſe from one ſide to the other; and on the further cawſey, towards the town, they had built a ſort of a fortification, which was defended by a great Army of *Mexicans*.

Mexico *aſſaulted in three places at once.*

Upon *Cortez*'s approach, he order'd his cannon to be level'd at the fortification, which demoliſh'd it in a very ſhort time, and kill'd a great number of the defendants by the fall of it; beſides thoſe who fell by the ſhot; and making the artillery play conſtantly, both from the cawſey, and his five brigantines; the *Mexicans*, being unable to endure the fire, retir'd to the city, after a prodigious loſs; which *Cortez* taking the advantage of, made uſe of his brigantines and canoes to land his forces on the other ſide of the ditch, taking with him his horſe, and three pieces of cannon. This they had time enough to perform, becauſe the enemy had left the ſhore free. The General left *Aldaret*, with ſome *Spaniards*, and a good number of *Indians*, to fill up the ditch, in caſe he ſhould be oblig'd to retire from the town. But he finding the Army engag'd within, haſted to the battle, leaving the task he had been entruſted with, to another; ſo that between them it was neglected; which was of very bad conſequence.

Cortez, being now within the city, had a new Army to fight with, who receiv'd him with ſuch obſtinate bravery, and were ſo well ſeconded by arrows, darts, and ſtones, from the windows and battlements, that it was impracticable to make a lodgment in the Town; ſince *Alvaredo* and *Sandoval* had not join'd him. They had attack'd the city in the ſame manner as he had done, and with the ſame ſucceſs; but the city was ſo large, and they had ſuch numbers to battle, that night coming on, they thought, on all hands, it was adviſable to retreat; eſpecially conſidering the fatigue their men had undergone, and that moſt of them were wounded. The Captains of the two cawſeys retir'd without much difficulty; but when *Cortez*'s Army came to the ditch, they found it quite clear'd, and their paſſage, by that neglect, quite ſtop'd; however, the *Indians* of his party threw themſelves into the water, and many of them got to the other ſide; and many were kill'd by the *Mexicans*, who waited them in the Lake for that purpoſe. So that when *Cortez* (who with his *Spaniards* brought up the rear) arriv'd at the ditch, he found the paſs impracticable, and himſelf only attended by his *Spaniards*, and a party of *Tlaſcalans*. In this difficulty he faced about, and charg'd the enemy with his cavalry, and made the muſqueteers, and croſs-bow-men give a brisk attack; but tho' they did great execution, yet the enemy ſo preſs'd upon him, that he was in danger of his life, having his horſe kill'd, and one of Captains, *Franciſco de Guzman*, taken priſoner, whilſt he was mounting the General on his horſe. However, with much ado, he got to his Brigantines, having, to his great affliction, loſt many *Spaniards*; and, which was worſe, about forty of them fell alive into the enemy's hands, to be a deteſtable ſacrifice to their idols; and ſcarce one *Spaniard* left unhurt; and *Cortez* himſelf wounded. He was likewiſe oblig'd to leave one piece of cannon behind him, and well that he got off ſo. So fatal a thing it is in an Army, for an officer to neglect what he is commanded to do, upon a ſuppoſition of his doing better! *Aldaret*, in vaſt concern for his fault, offer'd his head for his neglect; but tho' he deſerv'd death, *Cortez* contented himſelf with giving him a ſevere reprimand; there having been too great a loſs of *Spaniards* already, to do any more execution upon them.

Cortez *hard put to it.*

After this defeat (for ſo it may be call'd, notwithſtanding the vaſt ſlaughter they made of the enemy) *Cortez* was ſatisfy'd to blockade *Mexico*; taking care to ſtraiten the city of proviſions,

till his men and himself should be cur'd of their wounds: in the mean time, fortifying his quarters, and keeping a strict guard, and watching the motions of the enemy, in case of an attack. They were so near the city, that they could perceive fires in all the temples, and especially in that dedicated to the God of War; by which they concluded, that they were celebrating the horrid sacrifice of the *Spanish* prisoners. There were likewise great rejoicings in all parts of the city, for the victory they had obtain'd.

Guatimozin, *by false reports, occasions a desertion in* Cortez's *Army.*

In the mean time, *Guatimozin* was not idle; but, with a dexterity, which shew'd his good understanding, had like to have ruin'd *Cortez* without striking a stroke. He sent the heads of the sacrificed *Spaniards* to the cities of those Caciques, who had revolted from him, and gave out that *Cortez* had been kill'd at the last assault; and that the God of war, being appeas'd by the blood of the Strangers, who were offer'd in sacrifice to him, had now declar'd to the King, in plain words, that in eight days time the *Spaniards* should all perish, and *Mexico* should be in peace, and triumph over all her enemies. This account (all, except the death of *Cortez*) he likewise procur'd to be spread thro' the *Indians*, who were with *Cortez*; and they being so superstitiously credulous of the oracles, said to proceed from that Idol, the common soldiers of the confederates deserted in troops, not excepting those of *Tlascala* and *Tezeuco*. *Cortez* was stun'd at this accident; but being appriz'd of the ground of it, he sent their officers, and principal people to them, (for they had not retir'd home, but kept in bodies near the Lake) to assure them, that he would not desire one of them to engage in any action against the *Mexicans*, during the eight days, mention'd in the pretended Oracle. This prevail'd with them to stay where they were, to see the event; only *Don Hernando*, King of *Tezeuco*, by sending his brother to his deserters, persuaded them to come back immediately.

During the recess of the *Indians*, the *Mexicans* sally'd out of the city to attack *Cortez*, and the two Captains; but they were so gall'd with the cannon, which, having them in a line upon the cawseys, mow'd them down by companies, that they still retir'd with loss. And the eight days being expir'd, and proper messages being sent to the several provinces, by the Caciques and Nobles, (who had not left the Army) not only all the deserters return'd, but they brought with them such considerable recruits, that *Cortez*, in a few days, saw himself at the head of 200,000 *Indians*; and those who had deserted were so asham'd of their behaviour, that they resolv'd to make their future fidelity cancel the fault they had committed.

But he is recruited, and made stronger than ever.

Cortez, having divided the Confederates as formerly, to make up his three Armies, call'd a council of war, in which he propos'd to his officers, the danger of their retreats from *Mexico* after entring the town; and therefore, after little debate, they agreed upon another general assault, and that they should lodge themselves in those parts of the city, which they were to attack, till they should be able all to meet in the great square of *Tlataluco*; which was the place of rendezvous; and the day was accordingly appointed for the assault.

When that day appear'd, all the three Armies presented themselves at the last ditches; and, without great difficulty, enter'd the town, at the different places; the *Mexicans* having had so good success in the the former attacks, let them enter the city, in hopes of destroying them from the windows and battlements, and in their retreat; for which they had prepar'd themselves more particularly. But when they observ'd, that instead of continuing in the streets, to be shot at from the windows, as at the last assault, they took possession of some of the strongest buildings, and (having plenty of provisions and water along with them) barricaded their quarters, and planted their artillery, to prevent any surprize; they were in the greatest consternation. They press'd *Guatimozin* to retire to a distant part of the city. But he, who appears to have been a man of resolution, declar'd he would live and die with his subjects; and immediately gave orders to attack the *Spaniards*, at their different lodgments, at break of day. But the three Chiefs, being aware of what might happen, had planted the artillery so advantageously, at the head of the streets, where they had taken up their quarters, that, upon the first approach of the enemy, they terrify'd them so with their shot, that they durst not put their orders in execution; but retir'd to those streets, which were out of the reach of the cannon.

Another general assault.

The Confederates lodge themselves in the city.

In this way of gaining first one street, and then another, the Confederates continu'd four days, their artillery and fire-arms still making way for them; but at last they appear'd in sight of the square appointed for their general rendezvous. *Alvaredo* was the first who enter'd it, where the *Mexicans*, whom he had pursu'd, endeavour'd to form themselves, being join'd by others from different streets. But he attack'd them with such vigour,

vigour, that he kept poſſeſſion of the place. When he had time to conſider the preſent poſture of affairs, he obſerv'd a Temple near him, which was poſſeſs'd by the enemy, thither he ſent a party, who ſoon diſpoſſeſs'd them, and from thence he made ſignals to encourage the other diviſions. Soon after, *Cortez* ariv'd at the head of *D'Olid*'s forces, driving the *Mexicans* before him to the ſquare, who being engag'd by *Alvaredo* in front, and purſu'd by *Cortez*, periſh'd in a miſerable manner. The like fate happen'd to thoſe who oppos'd *Sandoval*'s attack, who likewiſe came to the ſquare in a little time.

The Confederates meet all together in the ſquare appointed.

And all unite in the great ſtreet.

When the three Armies were thus united, the *Mexicans*, believing that they were not to be overcome, retir'd to the Palace, in order to guard the perſon of their Emperor; which gave liberty to *Cortez* to put his quarters in as good a condition as he thought proper, without any oppoſition. This ſucceſs of the *Spaniards* oblig'd *Guatimozin* to retire to a corner of the city, at the greateſt diſtance from the ſquare; and the *Mexicans* had fortify'd that quarter, to which they retir'd, in ſuch a manner, with planks and trees, that they eſteem'd it impregnable. *Cortez*, now being inclin'd to give reſt to his ſoldiers, and to gain his end without more blood, ſent another offer of peace, by ſome of the moſt conſiderable priſoners; and, in the mean time, went out, with a ſmall party, to view their works, there being no appearance of armed men, in any of the ſtreets, without thoſe fortifications, as there us'd to be. When he came within ſight of them, the *Mexicans* affected a chearfulneſs more than ordinary, ſeveral of them eating, and throwing cakes of maiz among the crowd, to make oſtentation of that plenty, which *Cortez* knew they had not. And tho' they did not ſhoot one arrow from their ſtation, yet ſome of them came down, offering to fight ſingle, with any that would come out of their ranks to accept the challenge; but they immediately retir'd after that bravado. Only one (who by his ornaments ſeem'd to be of quality) advanced ſo far, as to be within hearing of *Cortez*, and challeng'd any one to fight him; he was arm'd with a *Spaniſh* ſword and buckler. *Cortez* made his interpreter tell him, "That if he would "call ten more like himſelf, he would "ſend that ſtripling, (pointing to his "page) to fight them all at once." The Boy thinking his Maſter's words authoriz'd him to accept the challenge, ſtole out of the crowd, and getting over the ditch, advanced to the *Mexican*; and receiving the firſt ſtroke, made at him, upon his ſhield, with the firſt thruſt made his enemy fall dead at his feet; and taking the ſword and buckler from him, retir'd to his own ſide, laying the ſpoils down at *Cortez*'s feet; who was ſo pleas'd at this early token of his valour, that he embraced him with much affection, and girded the ſword, which he had taken, to his ſide, with his own hands. This Page's name was *Juan Nunez de Mercado*, about ſeventeen years old. His Maſter afterwards treated him like one of his officers. Four days paſs'd without any other hoſtility on either ſide, tho' the *Spaniards* went every day to view the fortifications of the enemy.

Cortez's Page kills a Mexican in a ſingle combat.

In the mean time, the *Indian* Emperor held councils every day; and tho' the greateſt part, and the wiſeſt of his council adviſ'd him to make peace, as the only expedient for ſaving his country; yet either his own inclination, or the advice of the Prieſts, prevail'd to continue the war. But to provide for his retreat, in caſe they ſhould not ſucceed, he gave orders for all the Piragua's and canoes, to be ſent ſecretly to a bay in the Lake, the neareſt to their own quarters; which was ſoon put in execution.

Cortez had early intelligence of this motion, from his Brigantines; and gueſſing the deſign of it, order'd *Sandoval* to take the charge of the Brigantines, and to ſurround the Bay at a diſtance, and take notice of every motion of the enemy. And then he advanced with his troops near the ditch; but did not fire a ſhot, having a mind to frighten the *Mexicans* into peace: But they were ready to receive him, and, by their uſual cries and muſick, encourag'd one another to the defence of their works. But when *Cortez*, provok'd at this, order'd his artillery to be diſcharg'd, the enemy ſeeing their fortification (which they thought proof againſt any thing) level'd with the firſt fire; their hearts began to fail them; and having (as was ſuppos'd) ſent to *Guatimozin*, they made ſignals, and often repeated the word *Peace*. *Cortez* made his interpreter tell them, "That if any of them had any "inſtructions from their King, they "might freely come to him." Upon which aſſurance, three or four deputies of note, advanced to the ſide of the ditch, and, after their uſual ſalutations, ſaid, "That the ſupreme Majeſty of "*Guatimozin*, their Lord and Emperor, "had vouchſafed to ſend them to hear "what propoſals he would offer to his "Majeſty, for an accommodation." *Cortez* reply'd, "That his intention all "along had been for Peace; and tho' "they had broken the Truce, he had "ſtill

The Mexicans make ſigns of peace.

" ſtill ſuch compaſſion for them, that " he would yet come to terms with " them. But becauſe things of that na- " ture could not be carry'd on by a " third perſon, he deſir'd an interview " with *Guatimozin*; or, at leaſt, that he " would come to ſome place near, where " he might be conſulted from time to " time, in caſe any debate ſhould ariſe " about any of the conditions; giving " his word and honour for the ſafety of " his perſon and dignity."

The deputies retir'd, well ſatisfy'd with this anſwer: and return'd in the evening to the ditch, to tell *Cortez*, " That the King would the day follow- " ing, come with his Council, to be near, " while the treaty was carrying on." But when the time came, he ſent an excuſe, and put it off till next day; and ſo two or three times he made excuſes; till *Cortez* loſing patience, began to think it a ſham, as indeed it prov'd; for this promiſe of coming to the treaty, was only to gain time for his retreat by the Lake, which he had concerted.

But it proved only an amuſement.

Early in the morning, upon the laſt day aſſign'd by *Cortez* for the Emperor's appearance, *Sandoval* obſerv'd a great multitude embarking upon the Lake, in the canoes; which made him bring all the Brigantines out of the covers, where he had placed them; and ſent intelligence to *Cortez*. As ſoon as the Brigantines appear'd, the canoes in great numbers made head againſt them; but *Sandoval* obſerving ſix or ſeven *Piragua*'s, at another place, making what haſte they could to get away, concluded that *Guatimozin* was among thoſe *Piragua*'s, and that the canoes intended to keep him in play to ſecure their Emperor's retreat. He therefore order'd *Holguin* to purſue the flying Prince; but withal, to kill as few as poſſible. *Holguin* immediately tack'd about, and ſet ſail after the *Piragua*'s, and his Brigantine being an excellent ſailer, and his rowers very expert at their trade, he ſoon came up with them. But as he was going to fire, the *Mexicans* called out to ſtop, telling him that the Emperor was there in perſon; which ſome of the *Spaniards*, who had got a ſmattering of the *Indian* language, interpreting to him, the Captain, without firing a ſhot, ſeeing the *Mexicans* throw down their arms, boarded the *Piragua*, and *Guatimozin* advancing to him, ſaid, " I am your priſoner, Captain, and will " go where you think fit. But I deſire " of you, to have ſome regard to the " honour of my conſort, and the wo- " men who accompany her." And then, giving his hand to the Empreſs, he led her into the Brigantine, without any alteration viſible in his countenance:

Guatimozin, *ſtriving to eſcape, is taken.*

and perceiving the Captain at a loſs, how to manage the other *Piragua*'s, he told him with great ſedateneſs, " That he " needed not give himſelf any trouble " about his followers, for they would " all come to die at the feet of their " Prince." And indeed, upon the firſt ſignal he made them, they all threw down their arms, and follow'd the Brigantine as priſoners.

Holguin ſent a canoe expreſs to *Cortez*, with advice of his ſucceſs, but having a mind to have all the honour of it, paſs'd by *Sandoval* with his prize, only calling at a diſtance to ſome of the Brigantines, to acquaint him, that he was carrying the Emperor of *Mexico* to the General. *Cortez* was hotly engag'd in deſtroying the works of the enemy, and filling up the ditch, to attack them ſword in hand, when this meſſage reach'd him; but the *Mexicans*, who had an account of it almoſt as ſoon as he, were ſo confounded, that they could neither think of defending themſelves, nor of making conditions. So that *Cortez* had leiſure to ſend a good eſcorte of *Spaniards* to the water-ſide, to conduct the royal Priſoners to him; and leaving his Captains to manage the attack, he went himſelf to receive them. When *Guatimozin* appear'd before him, he told him, " He had defended his Country as long " as it was in his power; but now, when " he could do it no longer, he gave " himſelf up into his hands, deſiring " him ſpeedily to take his life, which " was now become a burden to him, " ſince he could no longer keep it with " honour."

Cortez was ſo mov'd with this heroic behaviour, that he accoſted the Emperor with much civility, and to comfort him in his preſent dejected ſtate, told him, " That he was not priſoner to him, but " to a Prince, who was the greateſt Man " in the World; he aſſur'd him, he " ſhould be treated by him, and by all " under his command, according to his " dignity; and that the conditions of " of peace ſhould be as advantageous to " him, as he could have expected, if " that misfortune had not befallen him." And then turning to the Empreſs, he made her a profound reverence, as being not only Empreſs of *Mexico*, but the Daughter (or Niece) of *Montezuma*. He conducted them to his quarters; but remembring in what condition he had left his Army, he retir'd in great haſte; when *Guatimozin*, judging of his intention, by his abrupt departure, and having, like a Prince worthy of a better fate, the intereſt of his ſubjects at heart, even when he had fallen from Royalty, ſent a meſſage to *Cortez*, to ſpare the

blood

blood of his people, who were only guilty by their *Loyalty*; and he offer'd to ſend one of his chief attendants, now a priſoner with him, to command them to ſubmit. *Cortez* readily accepted the propoſal, which was accordingly put in execution; and the *Mexicans* laying down their arms, were contented to abandon that part of the city, which they had defended above ninety days, reckoning from the firſt attack that had been made.

The Mexicans ſubmit.

Thus was the great City of *Mexico* intirely ſubdu'd, on the 13th day of *Auguſt*, 1521, upon St. *Hypolito*'s day, who, for that reaſon, is reckon'd the tutelar Saint of *Mexico*, by the *Spaniards*, to this day. And *Hernando Cortez* gain'd a new Diadem to *Charles* V. Emperor and King of *Spain*, by his valour and conduct, which would have been reckon'd a glorious Conqueſt, either among the *Greeks* or *Romans*. And tho' ſome things were tranſacted during this war, which I can by no means approve of, and which muſt leave a laſting blot upon the memory of that glorious Heroe; yet his bravery, conſtancy, patience, and prudence, will, and muſt tranſmit him to poſterity, with a character not at all inferior, if not above the greateſt Generals of antiquity.

As ſoon as he became peaceable poſſeſſor of *Mexico*, the whole country, formerly under that Emperor's dominion, ſubmitted to him; and he took poſſeſſion of the great Empire of *Mexico* in the Name of *Don Carlos*, as King of *Spain*; and the *Spaniſh* Nation has been in poſſeſſion of it ever ſince. Their farther progreſs in that Country; their behaviour towards the Natives; their methods us'd to bring them to Chriſtianity; with a great many other particulars, are more properly the buſineſs of an *Hiſtorian*, than a TRAVELLER. We ſhall therefore conclude this Expedition of *Cortez*, with a ſhort account of his meſſages to *Spain*, already mention'd. The firſt was by *Portocarrero* and *Montejo*, diſpatch'd from *Vera-Cruz* on the 16th of *July*, 1519. And the ſecond by *D'Ordaz* and *Mendoza*, after his retreat from *Mexico*, upon the death of *Montezuma*. Of neither of theſe he had any news, till he was in poſſeſſion of *Mexico*, which was two years after the firſt deputies were ſent.

Portocarrero and *Montejo* had gone to *Spain* by the coaſt of *Florida*, to ſhun any attack from *Velaſquez* near *Cuba*, having put into that Iſland, contrary to orders. Upon their arrival at *Sevil*, by the repreſentation of *Martin*, deputy from *Velaſquez*, (to the Board of Trade ſettled there) the Ship, which brought them over, was ſeiz'd, and they, with much to do, had liberty, upon ſufficient bail, to proſecute their journey to *Barcelona*. Bnt hearing that the Court was remov'd from thence, they went to find out *Martin Cortez*, their General's Father, who receiv'd them with great joy, having lamented his Son as dead. He went with the Deputies to the Emperor; and, what facilitated their audience, was, that the commiſſioners at *Sevil*, not daring to conceal *Cortez*'s preſent to the Emperor, which was a rich one, they had ſent it to him, before *Martin Cortez* and the Deputies appear'd at Court. The Emperor heard them patiently, and ask'd many queſtions about this new World, and ſeem'd inclin'd to favour *Cortez*'s Expedition. But his affairs in *Germany* requiring his preſence there, he was oblig'd to leave their diſpatches, as well as the other affairs of *Spain*, to the management of the Regency; at the head of which was Cardinal *Adrian*, afterwards Pope. But there being a new Council form'd for the buſineſs of the *Weſt-Indies*, and the Biſhop of *Burgos*, (who was an able Miniſter, and had ſtudied the *Indian* affairs with great application) made Preſident of it; *Cortez*'s Cauſe went but ſlowly on. For the Biſhop was a great ſtickler for *Velaſquez*, and treated *Cortez* as a Rebel; but tho' his authority had weight enough to defer the deciſion of the matter till the Emperor's return from *Germany*; yet the Cardinal (having a great opinion of *Cortez*, and perhaps finding that the Emperor favour'd him) ſtav'd off any unlucky ſtep in that Council againſt him.

Cortez's buſineſs in Spain *obſtructed by the Biſhop of* Burgos.

Things were in this ſuſpence, when *D'Ordaz* and *Mendoza* arriv'd at *Sevil*; who being advertis'd, by ſome private friends of *Cortez*'s there, of the danger of diſcovering themſelves, or their buſineſs in that place, made what haſte they could out of Town, leaving the Preſent for the King, to be deliver'd to the Council when they were gone; and travelling very privately, with their diſpatches, found out old *Cortez*, and their good acquaintances *Portocarrero* and *Montejo*. But all things being in confuſion in *Spain*, by a Rebellion on foot againſt the Emperor, eſpecially in *Caſtile*, they determin'd to keep themſelves private for ſome time; but ſoon after, the news of the Emperor's ſpeedy return, having brought the Rebels to a better mind, and the Cardinal Regent being favourable to them, they went to Court; where they complain'd of the orders given at *Sevil*, to impriſon any that ſhould come from *Cortez*; they laid

before the Regent the ſtate of affairs in *Mexico*, and of what importance that Expedition was to the King and Kingdom; begging that they might have leave, in a judicial way, to proteſt againſt being judg'd by the Biſhop of *Burgos*. To which the Cardinal, who was nettled at the Biſhop's preſuming to give ſuch orders without acquainting him, told them, he would skreen them from any danger, in attempting to get legal redreſs againſt that Prelate.

Upon this encouragement, the Deputies enter'd their Caveat in the Biſhop's own Court for *Indian* affairs, againſt their buſineſs's being try'd there; but they did it with ſuch ſtrong reaſons, and with ſo much reſpect and deference to his character, that they procur'd an appeal to be accepted by the great council of ſtate; and having brought the matter before the Cardinal, they prov'd their allegations ſo ſtrongly, that the orders given at *Sevil* were recall'd; and, upon a fair hearing, the whole controverſy was decided in favour of *Cortez*; and tho' his old friend *Duero* appear'd againſt him, his conduct was approv'd and extoll'd; and orders given to the proper Officers to diſpatch his Deputies with all convenient ſpeed, with ſuch aſſiſtance as the preſent exigence would allow. But the Cardinal being, about this time, called to *Rome* to fill St. *Peter*'s Chair, the matter was left to the Emperor, who, ſoon after his arrival, appointed new Commiſſioners to try the Cauſe between *Cortez* and *Velaſquez*, whereby the former was acquitted of any Rebellion or Diſloyalty, and the honour and advantage of the Conqueſt of *Mexico* aſcrib'd to him, in ſubordination to the Emperor only. The Emperor approv'd of all that had been done, and ſent a ſevere reprimand to *Velaſquez*, for his hot proceeding, abſolutely forbidding him to interfere, directly or indirectly, with the Country of *New-Spain*; giving him leave to ſue *Cortez* for any money he had advanced for the firſt ſhips; provided he made it appear, that it was his own Money, and not the Emperor's. He ſent *Cortez* moſt gracious Letters, and a Commiſſion as Captain-General and Governor of that Country, promiſing greater honours to him and his family. Nor is it to be wonder'd at, conſidering the great advantage which *Cortez* procur'd to the Crown of *Spain*, by adding ſo large and rich a Jewel as *Mexico* to adorn it. Theſe Letters were not ſent till the Year 1522, when *Cortez* was fully poſſeſs'd of the Sovereignty of that Country for the Emperor; and there we leave him.

[It can not be deny'd, that there are ſome things related in this account of the Conqueſt of *Mexico*, eſpecially in *Cortez*'s firſt march thither, which ſeem to exceed even probability; but as the Author I have principally follow'd, appears to me to be the moſt modeſt of any who has written upon that ſubject among the *Spaniards*, (from whom we muſt take this Narration) I have, in moſt things, ſtuck to his account of it, as to the facts. And, indeed, conſidering the ſuperſtition of the *Indians*, their ſurprize at the fire-arms and horſes, the ſwords, launces, and armour of the *Spaniards*, and even their make and aſpect; (by all which they took them for people of another ſpecies, and not inferior to their Gods, but rather ſuperior to them) and add to this the undaunted courage of *Cortez*, mix'd with a great ſtock of prudence and preſence of mind; keeping up in the *Indians* that opinion, if not of the *Spaniards* being immortal, yet that they were invincible. I ſay conſidering all theſe things, we may conclude, that ſeveral ſteps of his conduct, which, in other circumſtances, would be raſh and unjuſtifiable, were, in that light, well judg'd; and had he taken other meaſures, he had been undone. But tho' I am far from attributing all ſucceſsful changes and revolutions to the immediate Hand of GOD, aſſiſting every bold and proſperous undertaker; leſt we ſhould make him the Author of what the wickedneſs of ſome, and the weakneſs and folly of others bring upon Nations; yet I am not aſham'd to own, that there ſeem'd to have been a particular aſſiſtance of Providence in the Conqueſt of *Mexico*; and if the *Spaniards* afterwards, or even then, abus'd that protection to bad purpoſes; they were accountable for their ingratitude in their actions to that divine goodneſs, which they acknowledg'd in their words.]

CHAP.

CHAP. IV.

The CONQUEST *of* Peru, *by* PIZARRO, *&c.*

Taken from GARCILASSO DE LA VEGA's *Royal Commentaries*, HERRERA's *Decads, and other Accounts of the ſame Expedition.*

WE have already mention'd the diſcoveries of the eaſtern coaſt of the ſouth part of *America*, or *Brazil*, by the two *Pinſons* in 1500, by *Cabral*, a *Portugueſe*, who, about the ſame time, was driven thither by ſtorm; by one of the ſame *Pinſons*, in company with *John Diaz de Solis*, in 1508; and by the ſame *De Solis*, in 1515. But of the weſt-coaſt, or *South-Sea*, the *Europeans* had, hitherto, diſcover'd no part beyond the Equinoctial Line. It is true that (as we have already ſaid) the *Spaniards* had ſettled a Colony at *Panama*, but no attempts were made towards the ſouth for ſome time.

Page 32, &c.

But now, this colony having conſiderably encreas'd, by forces ſent to recruit them, both from *Darien*, and from *Cuba*, who came by way of *Darien*, *Franciſco Pizarro* (who had taken poſſeſſion of *Panama*, under *Nunez*) and *Diego d'Almagro*, (both according to *Vega* of good birth, tho' other authors are of a contrary opinion) enter'd into a league together, to make diſcoveries towards the ſouth, and ſolemnly promis'd to ſtand by one another in all events. And that they might the better carry on their enterprize, they brought *Hernando de Luque*, a ſchool-maſter at *Panama*, into their project. The parts they were ſeverally to act in this affair, were theſe. *Pizarro* and *Almagro* were to fit out a ſmall fleet, at their own charge, of ſuch ſhips as they commonly built, at that time, in the ſouth-ſea. Both theſe Captains were to ſail ſouthward, to make conqueſts where they could; and when they had 'gotten poſſeſſion of any new part of the Continent, *Pizarro* was to maintain it, whilſt *Almagro* return'd to *Panama*, to bring recruits of men and all things neceſſary for the expedition; and *De Luque* was to remain at *Panama*, as their Agent, to provide all things neceſſary for the expedition.

Pizarro and Almagro undertake the diſcovery of Peru.

Having enter'd into articles among themſelves, and obtain'd a commiſſion from *Pedrarias d'Avila*, Governor of *Panama*; *Pizarro* ſet out in the year 1525, in *November*, with one of the two ſhips they had built there, having on board 114 men, directing his courſe ſouthward about 100 leagues; where going aſhore, at Port *Pinas*, he was ſet upon by the *Indians*, who, in ſeveral ſkirmiſhes, kill'd ſome of his men, he himſelf being wounded in ſeven places; but the goodneſs of his armour ſav'd his life. However he was forced to leave that place, and retire to his ſhip. *Almagro* follow'd ſoon after, and coming to the latitude agreed upon between them, he likewiſe landed, and met with the ſame ſucceſs, only with this additional misfortune, that one of his eyes was knock'd out with a ſtone; which, with the ſlaughter of ſome of his men, oblig'd him to take to the ſea in ſearch of *Pizarro*, whom he found at *Chincama*. Here they landed, but finding the country mountainous, and the people ſavage, after ſome encounters, little to their advantage, they went aboard again, to the great diſcouragement of their men, who began to be weary of the expedition, from which they had reap'd nothing but blows. Notwithſtanding this diſſatisfaction of their men, the Captains continu'd their courſe farther ſouth, being now near the Line, and obſerving the inhabitants adorn'd with gold, and emeralds, they attempted to ſettle in that country; but the courage of the natives being equal to their riches, and their numbers formidable, the new adventurers durſt not attack them, tho' they had 250 men in their two ſhips. The two chiefs, therefore, reſolv'd to retire to a ſmall Iſland, call'd the *Cock Iſland*, in 2 deg. n. lat. where *Pizarro* was to keep poſſeſſion, at all hazards, whilſt *Almagro* went back to *Panama* for freſh forces.

Herrera, *Dec.* 3. *B.* 3.

When this reſolution came to be known, moſt of the ſoldiers, being diſſpirited by the danger of the new conqueſt intended, deſir'd they might be allow'd to return with *Almagro*; but that being deny'd, as alſo an utter prohibition of any one's carrying letters to *Panama* from any of the private men; one ſoldier found out an expedient of ſending an account of all the diſaſters they had met with, and of their confinement

in

in the Iſland, which he enclos'd in a bottom of cotton-yarn, which he ſent to a friend at *Panama*. At the end of the paper were theſe lines:

Good Maſter Governor,
We pray you conſider;
That there goes the Fetcher,
But here ſtays the Butcher.

Upon *Almagro*'s arrival at *Panama*, he found an alteration of government: the new colony there was in the hands of a new governor, *Pedro de los Rios*; to whom the ſoldier's correſpondent having carry'd the paper, which he found in the bottom of cotton, he immediately diſpatch'd one of the Judges to the *Gallo*, or *Cock Iſland*, with orders to bring back all ſuch as had a mind to return. This being divulged, ſo diſcourag'd the *Spaniards* of *Panama*, that ſeveral of thoſe who had engag'd with *Almagro*, broke their engagement, refuſing to go upon an expedition, to which thoſe, who had firſt embark'd in it, ſhew'd ſuch diſlike. But when the Governor's orders arriv'd at the Iſland where *Pizarro* was, he was in as great confuſion, as the ſoldiers had joy; yet calling them together, he endeavoured to ſpirit them up, by the proſpect of ſucceſs, which would redound to their honour and advantage; withal he told them, that he did not pretend to detain any man againſt his inclination; but drawing a line with his ſword upon the ground, he paſs'd over it, deſiring all ſuch as would venture their lives for glory and the intereſt of their country, to follow him, whilſt others, who were faint-hearted, might return to *Panama*.

Tho' *Pizarro* left no eloquence, he was maſter of, unattempted, to perſuade his people to ſtay with him; yet of all his little army, he could only prevail with thirteen of them to paſs the line he had drawn, and to enter into a new obligation of ſticking by him in proſperity and adverſity. With theſe few, he went in a boat, to the Iſland of *Gorgona*, about 11 leagues north-eaſt of the *Cock* Iſland, in 3 deg. n. lat. whilſt the reſt of his men embark'd for *Panama*. He ſtaid in this Iſland ſeveral months, and there they ſupported themſelves with the fleſh of ſerpents, and with roots and herbs, and ſuffer'd great inconveniencies from the inclemency of the air, the Iſland being very ſubject to rains, and there being no houſes to live in. But at laſt, *Almagro* ſent them proviſions, but no recruit of ſoldiers.

Pizarro's people leave him all but thirteen.

One would imagine that none but a madman would have ventur'd to make a conqueſt in any country with ſo ſmall a number, and much leſs upon a Continent, where they had been more than once repuls'd with 250; and yet all Authors agree, that *Pizarro* embark'd with his thirteen voluntiers; and after much ſtruggle, by reaſon of the ſtrong current from north to ſouth, and the conſtant ſouth wind; both which made it almoſt impracticable to weather the point, (juſt under the Equinoctial Line) now call'd *St. Francis*'s point, with indefatigable labour, he doubled the point at laſt, cruiſing along the coaſt for above a year, ſometimes landing at one place, ſometimes at another, ſupplying themſelves, as it were by ſtealth, of ſuch things as they had occaſion for; but not daring to make any ſettlement, finding the *Indians* ſtill in arms to oppoſe any attempt of that kind. 'Till, at laſt, being weary of this manner of cruiſing to no purpoſe, they arriv'd at *Tumpez*, or *Tumbez*, in the *Pacifick Sea*, in about 3 deg. ſ. lat. near the Iſland of *Puna*. They perceiv'd that this country had all the appearances of a well-inhabited land; for they ſaw abundance of people upon the ſhore, and many ſtately buildings. But the *Spaniards*, being ſo few in number, were afraid to land, and yet they knew there was nothing to be done without it. At laſt *Pedro di Candia* offer'd to go aſhore alone, to try the temper of the natives; and having arm'd himſelf *Cap-a-Pee*, he was ſet on ſhore, and marching with a ſlow and ſolemn gate, towards ſome companies of *Indians*, who had come to wonder at the ſhip, all the ſtragglers, who ſaw him walk along, ran away from him. He was a very tall, well-proportion'd man, and of approv'd courage and force. He had his target on his left arm; and ſome ſay that he had a croſs in his right hand. The alarm given, by thoſe who had ſeen him in his march, brought multitudes in arms to the field; but he, without altering his pace, made up towards them, no body offering to ſhoot an arrow, or throw a dart at him, believing, (according to the ſuperſtition, common to all the *Indians* on the whole Continent of *America*) that he was deſcended from the Sun. However, to prove the truth of that ſuperſtition, they agreed to let looſe a Lyon and a Tyger, to ſee whether they would devour him; who, upon his approach, fawn'd upon him like Spaniels, and did not offer to hurt him. The *Indians* ſeeing this, laid aſide their arms, and paid honours to *Candia*, as a child of the Sun.

Vega, *P.* 2. *B.* 1. *Ch.* 11.

But others report, that *Candia* had a muſquet inſtead of a croſs; and that at the deſire of the natives he fir'd it, which put them in great fear. However it was, they

Herrera, *Dec.* 3. *B.* 3. *C.* 1.

they ſhew'd him great reſpect, and carry'd him to ſee their famous Temple of the Sun, which was magnificently adorn'd with gold and emeralds; as were likewiſe their palaces, and a convent for virgins of the beſt quality; who, by their *Inca*, or King, were kept in that city, (like the *Roman* Veſtals) with a handſome allowance for their maintenance. In all which places, as alſo in their gardens, there were ſtatues of men, beaſts and birds of ſolid gold, and thoſe in great numbers.

Candia having been very civilly treated, and well entertain'd by the chief Lord of the place, return'd to his companions; and, by the account he gave of the immenſe riches he had ſeen, rais'd their expectations to ſuch a pitch, that, being in no condition to poſſeſs themſelves of them by force, they unanimouſly reſolv'd to return to *Panama* to raiſe men, to make good their deſign upon that country. But firſt *Pizarro* ran ſome leagues farther up the coaſt, and diſcover'd the Port of *Payta*, in 5 deg. ſ. lat. the moſt convenient harbour on the *Peruvian* coaſt. Here, as ſoon as they caſt anchor, the *Indians* came about the ſhip, with proviſions of all kinds, which the Captain receiv'd with great civility, and, in return, gave the natives combs, fiſh-hooks, and glaſs-beads, with which they went away much pleas'd. But, the ſea beginning to riſe, he was oblig'd to weigh anchor, leaving *Alphonſo de Molina* aſhore; and going ſtill farther ſouth, and trading in a friendly manner with the natives, he diſcover'd that this was not only a fine country, and full of riches, but that the inhabitants were peaceable converſible people. What pity it was that they were not treated as ſuch!

But *Pizarro*, having made himſelf acquainted with as much of the coaſt, as he thought ſufficient for a diſcoverer, his men urging the return to *Panama*, for aſſiſtance to enable them to conquer it, he turn'd his courſe homeward; and, in his way, ſtop'd at *Payta*, which he call'd *Santa-Cruz*, to take in *Molina*, who coming on board upon a float, (made uſe of in that country for canoes) told him, that he had been moſt civilly entertain'd by a Lady of great conſideration of that country, who expreſs'd a great deſire to ſee the Captain, and the reſt of their company. Whilſt he was giving him this account, ſome other floats came to the ſhip from Madam *Capillana* (for that was the Lady's name) deſiring them to land at a very ſafe harbour farther north; and withal to let the Captain know, that to prevent any ſuſpicion he might have of the natives, ſhe would venture on board his ſhip, and leave hoſtages there for his ſafety, if he would go aſhore with her. The Captain ſent *Molina*, with three others, aſhore, to return the Lady's compliment, and to invite her on board the ſhip. The Lady treated them with great civility, and gave them drink out of her own hand, for the greater reſpect. She went on board with them, where *Pizarro* entertain'd her in the beſt manner he could; but, to ſhew his confidence in her honour, he refus'd the hoſtages ſhe offer'd him, telling her, that he would wait upon her, without any other ſecurity than her own word. But the Lady would not abuſe his generoſity; for early next morning, above fifty floats came about the ſhip, upon one of which were twelve *Indians* of quality, who, notwithſtanding all the oppoſition *Pizarro* could make, ſtaid as hoſtages on board the ſhip, all the time he was aſhore. The Lady came to meet the *Spaniſh* Captain and his followers, with a great retinue, and brought them to an arbour, made on purpoſe, where they were magnificently treated at dinner; and afterwards the *Indians* danced after their manner. *Pizarro*, having given the Lady thanks for the honour ſhe had done him and his companions, took an opportunity, by his interpreters, to lament the miſtakes the *Indians* labour'd under in worſhipping the Sun, as their God, which was only a Creature ordain'd, by the great Creator of all things, for the uſe of mankind. Then he run thro' ſome of the principal points of the Chriſtian Religion, adviſing the Lady to give up her Idolatry, and to embrace the Truth; and withal, to ſubmit themſelves to the King of *Spain*, as the greateſt Lord of the Univerſe. The *Indians* had no notion of thoſe things; and tho', as to Religion, they did not underſtand it to ſay much; nor, perhaps, had *Pizarro* ſaid what might have been offer'd, to perſuade them to embrace it; yet they anſwer'd him readily, with regard to the King of *Spain*, that they knew no Lord that had a title to their allegiance, but their own Emperor (whom they ſtil'd their *Inca*) *Guayanacapa*, and in that they certainly ſpoke the truth.

She comes on board.

And entertains the Spaniards *aſhore.*

After this converſation, the *Spaniards* retir'd to their ſhips. But *Capillana*'s beauty, or her behaviour had ſo charm'd *Alcon*, one of the three who had been ſent with *Molina* to invite her on board, that he had no heart to go to the ſhip again; and therefore beg'd to be left at *Santa-Cruz:* And his being refus'd leave to ſtay, turn'd the poor Man's Head, ſo that he fancy'd himſelf the *Inca*, and call'd the *Spaniards* (his companions) *Traitors and Uſurpers, who were come*

Alcon *goes mad for Love of her.*

Herrera, *Dec.* 3. *B.* 4. *C.* 1.

The Lady Capillana *deſires to ſee their ſhip.*

to take his Kingdom from him; and run at them with his ſword, till the Pilot knock'd him down with an oar, and they were oblig'd to chain him down under deck.

Leaving this Port, they coaſted northward, calling at ſeveral places, on that part of the Continent, which then, and ever ſince was call'd *Peru*. The reaſon of which name is ſaid to have been, that upon the firſt diſcovery of this coaſt, the *Spaniards* found a native fiſhing in a canoe, in the mouth of a river; whom they ſurpriz'd, and making ſigns what the country was call'd, he, thinking they had ask'd his name, ſaid *Beru*, and afterwards *Pelu*, which ſignifies River. Theſe two words the *Spaniards* confounding, call the whole Continent, for 1400 miles, from the Equinoctial Line ſouthward, by the name of *Peru*.

Why this Country is call'd Peru.

Before *Pizarro* left this country, he took two or three *Indian* Boys with him, to ſerve for interpreters, when he ſhould return; he alſo left *Molina* and another *Spaniard* behind him; but he never heard of them more. Having procur'd ſome pieces of gold of the country, and ſome of the ſheep, (which are of great ſervice to the inhabitants, as ſupplying them with meat and cloaths, and alſo being uſeful for carriage, one of them being able to carry 140 pound weight for ſeveral leagues together) *Pizarro* return'd to *Panama* towards the latter end of the year 1527. He was receiv'd with great joy by his two Partners, who were well ſatisfy'd with the ſpecimen he had brought of the riches of the country; but believing that they could not have Intereſt enough with the Governor of *Panama*; nor indeed had they money enough to fit out a Fleet, and to raiſe men ſufficient for the Expedition; it was agreed that *Pizarro* ſhould go to *Spain*, in order to procure a Commiſſion from the King as Captain-General for himſelf; and of *Adelantado*, or Lord-Lieutenant, for *Almagro*; and the Biſhoprick of *Tumbez*, for *Luque*; and the Poſt of Chief *Alguazil*, or Chief-Juſtice, for the Pilot. With theſe Inſtructions *Pizarro* ſet out from *Nombre de Dios*, about 25 leagues to the north-weſt of *Panama*, and without any memorable adventure, arriv'd in due time at *Sevil*, and from thence went to *Toledo*, where the Emperor's Court was. His Imperial Majeſty receiv'd him graciouſly; and his *Indians*, in their proper dreſs, his *Peruvian* ſheep, but above all, the Gold of the country, recommended him to the favour of the *Spaniſh* Court: So that, with little difficulty, he obtain'd all the three Commiſſions, of General, Lieutenant, and Chief-Juſtice; but they were all center'd in his own perſon, and granted to him and his heirs, contrary to the agreement made at *Panama*. All the notice taken of *Almagro*, being a Commiſſion, as Governor of *Tumbez*, and to be made a *Don*. The Emperor engag'd to preſent *Luque* to the Pope, to be made Biſhop of *Tumbez*; and, in the mean time, he was nam'd Protector-General of the *Indians*. All the Soldiers, who had ſtuck by *Pizarro*, who were not Gentlemen before, were now made ſo; and ſuch as had that title before, were advanc'd to the dignity of Knighthood. All theſe diſpatches were made at *Toledo*, the 26th of *July*, 1528.

Pizarro is made Governor of Peru, *and General.*

Don *Franciſco Pizarro*, having obtained theſe Honours and Privileges from the Emperor, made what Preparations he could to carry on his Deſign; yet it was not poſſible for him to get his Affairs in order for his Voyage before the latter end of the Year 1529; and then he ſent a ſhip before him to *Nombre de Dios*, to encourage *Almagro* and *Luque* to make what haſte they could to raiſe Forces, and provide Shipping. But *Almagro* hearing that *Pizarro* had gotten all the Honours and Poſts ſettled upon himſelf, and had only left him the empty Title of DON, with the poor Government of one City, was in great Rage againſt his old Partner, and indeed not without reaſon. *Luque*, who had got what he aim'd at, endeavoured to pacify *Almagro*, which he did in ſome meaſure; tho' the Grudge remained in his Mind, and produced bloody Effects afterwards.

In *January* 1530, *Pizarro* ſet ſail from *Sevil*, accompanied with three of his Brothers, and 125 *Spaniſh* Soldiers, and arrived ſafe at *Nombre de Dios*, where he was met by *Almagro* and *Luque*. He made the beſt Excuſe to his Friend for having neglected him in the Partition of the Honours; and thus, half reconciled, they went to *Panama* together, where three ſhips being fitted out, and 185 Men, 37 Horſes, and Amuunition and Proviſion neceſſary being put on board, *Pizarro* ſet out for *Peru*, deſigning directly for *Tumbez*; but the Wind being commonly about that time of the Year, *viz.* in *September*) from the South, they were forced to land above 100 leagues ſhort of their intended Port, almoſt under the Line, at a Place which they called *St. Matthew's Bay*. In this Place they held a Council of War, and determined to march by Land to *Tumbez*, and either to ſend back the Ships to *Panama*, or to let them ſail as they could, along the coaſt. In this March they met with great Difficulties, eſpecially by Moraſſes, Rivers, and Mountains, in the laſt of which they ſuffered much for want of Proviſions.

He arrives at Nombre de Dios.

And ſoon after ſails for Peru.

But

Herrera *ubi supra.*

But coming to *Quaque*, or *Coaqui*, they found plenty of Provisions and good Plunder: For the People of the Place concluding, that those who had not been injured by them could not do them wrong (an honest Principle, which may shame Christians who act otherwise) did not leave their Houses, nor hide their Treasure; so that the *Spaniards*, whose thirst for Gold seemed to have been their greatest Inducement to this Expedition, pillaged above the value of 20000 Pieces of Eight, besides Emeralds to a great value; which made the *Indians* forsake their habitations, and flee to the Mountains.

Pizarro *plunders* Coaqui.

From this Place he sent away his three ships with the Treasure they had gotten, to hire more Soldiers to join them. But, whether, as some believe, the *Indians* had poisoned the Water; or, as others think, the Fish which they eat from the Rivers of this Country were unwholesome, or whatever other Reason may be assigned for it, here they contracted an odd sort of disease; their faces and bodies were of a sudden over-grown with thick Warts, which gave them great Pain, and in a little time came to hang from their Noses, Lips, Fingers, and other Parts of the Body, like Grapes upon a Vine; and when they cut them off, several Soldiers bled to death. In their march, farther south, keeping still near the Sea, they found a recruit of *Spaniards* (come from *Nicaragua*, near the Province of *Honduras*, a great way north-west of *Panama*) consisting of two Ships, under the command of *Sebastian Balalcazar*, and *Juan Fernandez*, who had left that country to view *Peru*, upon the report of its Riches, or, as others say, being hir'd by *Almagro*. These joined *Pizarro*, so that being stronger by this addition, he continued his march towards *Tumbez*.

But their behavour at *Coaqui* had lost their character with the *Indians*; so that now they no longer believed them to be Sons of their favourite God the Sun, but a cruel pestiferous Race of Vagabonds, who for filthy lucre's sake, came to oppress the innocent, and to bring free People into Slavery. And therefore they met with resistance in most places, or else the people fled from their own houses to avoid them, and hid all their gold and jewels, so that the *Spaniards* got neither provisions, nor riches, which made their march very disagreeable to them. However, with much difficulty they arrived at *Porto Viejo*, not far from *Quitu*, where they were well received, and *Pizarro* prudently forbad any Disorder to be committed. From thence they marched on till they were opposite to *Puna* island, to which the General had a mind to go, partly from a report of the riches of that island, but principally to make an alliance with the islanders against the *Tumbezians*, who were their mortal Enemies; knowing, that it was absolutely necessary for him to be master of *Tumbez*, as the Key to *Peru*.

He goes to Puna *Island.*

The islanders sending floats to the continent, invited him over, which he accepted, and after some danger landed, but finding that the Lord of the island had contrived a plot to destroy him and his men, the friendship between them broke up, and they soon came to open enmity, and several skirmishes past between them, wherein some *Spaniards* were wounded, and great numbers of *Indians* were kill'd. *Pizarro* having changed his scheme, by his discovery of the treachery of the Islanders, set his thoughts upon engratiating himself with the *Tumbezes*; and to that intent, he releas'd a great number of them, whom he found captives in *Puna*, and sent them over in floats to their own country, without any ransom, upon their promise to make a favourable report of the *Spaniards* to their countrymen. But they were not so good as their word; for they represented them as cruel and barbarous, having no regard to justice and equity, and boggling at nothing by which they might procure Gold; so that upon his return to the Continent, several of his people going upon floats, when they landed in bye places, according as the tide drove them, by two's and three's, the *Tumbezes*, being very officious in helping them ashore, convey'd them to their houses, and so murder'd them. But *Pizarro* landing with his horse, which he had brought from the Island, in two ships lately come from *Nicaragua*; his ordering a Patrole along the coast, prevented more mischief of that kind.

The inhabitants of *Tumbez*, being now quite alienated from the affection they seem'd to have had to the *Spaniards*, when they were in their country two years before, (which their own Authors attribute to their cruelty, and ill conduct) now gave them all the opposition they could, and appear'd every where in arms against them; but the *Spanish* cavalry, and their fire-arms, against which they could find no defence, so terrify'd and cow'd them, that they soon left their city, and fled to the mountains, leaving *Pizarro*, as it were, in peaceable possession of the country. He therefore planted a Colony in this place, which he call'd *St. Michael*, about twelve miles from the Sea; and this was the first that had been made in *South-America*, being St. *Michael's-Day*, 1531.

Acosta, *B. 6. Ch. 22.*

The Tombezes *quit their City.*

After this, he sent his ships back to *Panama*, and *Nicaragua*, for farther recruits;

cruits; on board theſe he ſent 30,000 Ducats in Gold, with a conſiderable quantity of Emeralds, which he had gotten in the ſeveral places he had touch'd at in the Expedition. And then he reſolv'd to march to *Caxamalca* to viſit *Atahualpa*, of whoſe riches he had heard great talk among the *Indians*.

A ſhort view of the ſtate of Peru.

But, tho' we do not propoſe to give a Hiſtory of *Peru*; yet it will be neceſſary to take ſuch a view of the ſtate of that government, at the time we are ſpeaking of, as may make *Pizarro*'s proceedings intelligible, and account for ſome events, which, without conſidering the circumſtances of that Empire, would juſtly be thought impoſſible. But in this we ſhall go no farther back than to the *Inca Guayanacapa*, who was Father to *Atahualpa*, the King of *Peru*, at the time when *Pizarro* conquer'd it; and who died after the *Spaniards* had appear'd upon the coaſt, when the diſcovery of this part of the Continent was made.

Guayanacapa was the greateſt Prince, and, by all accounts, the moſt worthy Emperor that ever fill'd the Throne of *Peru*. He was great and fortunate in war, having made ſeveral additions to the Monarchy he was born to; and no leſs to be admir'd in time of peace, for his Juſtice and good Government, which he executed with ſo eaſy, but ſteady an hand, that he was ador'd by his ſubjects as a God. It was a cuſtom among the *Inca*'s, or Kings of this country, that they marry'd their Siſters, believing that their ſucceſſion could not be kept pure in the family of the Sun, as they believ'd themſelves to be, if they had not children by women of their own blood; and therefore, tho' they were allow'd what concubines they pleas'd, no Son of theirs could ſucceed to the Throne, who was not of the blood; and that Siſter, who had the firſt Son, was Queen, call'd in their language *Coya*. If the firſt Siſter had no Son, the King marry'd the next, and ſo on, till he had a Son by one of them; and then ſhe became *Coya*. Her children only were capable of the Throne; but if he had a Concubine of his own kindred more remote, her children were legitimate, but not Heirs of the Kingdom; and the children begotten by him of all other women were Baſtards. But *Acoſta* ſays, that this wicked cuſtom was begun only by *Guayanacapa*'s Father.

Vega, *P.* 1. *B.* 8. *Ch.* 8.

Ibid. B. 4. *Ch.* 8. *Nat. Hiſt. of the* Indies, *B.* 6. *Ch.* 18.

Guayanacapa had by his Siſter, who therefore was *Coya*, a Son call'd *Huaſcar*, or *Guaſcar*, who was to inherit the Kingdom after his death; but having conquer'd *Quitu*, he marry'd the Cacique's Daughter, and had, by her, a Son, call'd *Atahualpa*, whom he lov'd ſo much, that he gave him his Mother's Kingdom, to which *Guaſcar* readily agreed. But upon the death of his Father, *Guaſcar* coming to the Throne, ſent to *Atahualpa* to do homage for his Kingdom, which he cunningly promis'd to do in form, before all the States of both Kingdoms. *Guaſcar* having no ſuſpicion of the other's deſign, agreed to his propoſal; ſo that *Atahualpa* rais'd an army, and order'd them to march towards *Coſco*, the capital City of the Empire, with *Guaſcar Inca*'s conſent. They were now within a hundred leagues of *Coſco*, being an army of 30,000, (ſome ſay, each army had 100,000 more than are here reckon'd) when the Governors of the Provinces, thro' which they paſs'd, gave the alarm to the *Inca*; who now too late began to aſſemble an army, to oppoſe his Brother's deſigns. *Atahualpa* himſelf did not come with them, but truſted the army to two of his Father's beſt Captains, who had been train'd up by him in the art of war. They met with no oppoſition till they came within three leagues of *Coſco*; where having intelligence that *Guaſcar* had taken the Field with about 100,000 men, in order to join another army of 30,000, who were marching to his aſſiſtance, they reſolv'd to attack the *Inca*, before he could join the others; but they came too late for that, for they were already united; but for the moſt part *Guaſcar*'s forces were raw undiſciplin'd men, and the enemy were veteran Soldiers, who had fought under *Guayanacapa*. The two armies join'd battle in a Plain, to the weſtward of *Coſco*. The Fight was bloody, having been maintain'd, with obſtinacy on both ſides, for the ſpace of a whole day. But *Guaſcar*'s army, at laſt, giving way, the *Quituans* purſu'd the *Inca*, knowing that the whole war depended upon his perſon; and ſetting upon his life-guard, who were either all ſlain by the enemy, or kill'd themſelves, they took *Guaſcar* priſoner, and kept him confin'd by his Brother's orders, who now openly uſurp'd his Throne.

Herrera, *Dec.* 3. *B.* 8. *C.* 1.

Things were in this ſtate when *Pizarro* arriv'd at *Tumbez*; for having had intelligence of this Revolution, and of the cruelties exercis'd by the Uſurper, (who had cut off a great number of his other Brothers, and neareſt Relations; as alſo the chief of the Nobility, by treachery) thought this the moſt convenient time to march againſt *Atahualpa*, reaſonably concluding, that ſo bloody a Tyrant could not ſit faſt upon the Throne he had ſo lately ſeiz'd, againſt the laws of that country, of which the *Indians* were very tenacious. This was the occaſion

Pizarro *marches towards* Caxamalca.

caſion of his march to *Caxamalca*, at this time, without waiting for the return of his ſhips from *Panama*. In this march, he is ſaid to have had a meſſage from *Guaſtar*, or, indeed more probably, from ſome compaſſionate Nobleman in his name, praying his aſſiſtance againſt his uſurping Brother; to which he return'd anſwer, "That he was upon his "march to ſee Juſtice done to all that "were in Diſtreſs."

The fame of his march brought *Atahualpa* to *Caxamalca*, from whence he ſent an Embaſſy to the *Spaniſh* General, with a Preſent, which ſome believe was done ſincerely by way of attonement for the inſults of the inhabitants of *Puna*, and *Tombez*, offer'd to the offſpring of the Sun; (as they thought the *Spaniards* to be, and therefore call'd them *Viracbocа*'s) and others are of opinion, that it was with a deſign to entrap him. However, the meſſage was courteous, inviting him to *Caxamalca*, and begging of him, "That "he would enter into a league of friend-"ſhip with him, as *Inca*; that he would "forgive any injury he might have re-"ceiv'd out of ignorance, or want of "conſideration; and laſtly, that he "would let the chaſtiſement, which he "had juſtly given to the *Indians* upon "the coaſt, ſuffice to appeaſe their com-"mon Father the Sun, and that he would "ſpare the *Caxamalcans*, who were rea-"dy to do him all the honours in their "power." This preſent and meſſage, *Vega* affirms to have been ſent by *Atahualpa*'s Brother, to whom *Pizarro* behav'd with great reſpect, returning for anſwer, "That he was ſent to the *Inca* "on an Embaſſy from the High Prieſt, "and the great Emperor of the Chri-"ſtians, the King of *Spain*, which he "was going to deliver to himſelf, if he "would give him an audience; and "that if he comply'd with the propo-"ſals he was to make him in their names, "he might be happy in their friendſhip." And ſo, having given the Ambaſſadors ſome *Spaniſh* trinkets, he diſmiſs'd them very well ſatisfy'd.

Vega, P. 2. B. 1. Ch. 17.

Herrera, *ubi ſupra.*

Atahualpa *ſends him a preſent, with a meſſage.*

After this *Pizarro* held on his march, meeting with no body to give him the leaſt oppoſition; which they themſelves wonder'd at; having gone thro' ſome places, where a ſmall number had been ſufficient to have ſtop'd an army, and where their horſe, wherein their chief ſtrength conſiſted, could have been of no uſe to them. And indeed, it would ſeem, by the behaviour of this *Inca Atahualpa*, that he was reſtrain'd from reſiſting the *Spaniards*, either by the remembrance of ſome Speeches of his deceas'd Father, who had told him, (as they ſaid) a Prophecy of the deſtruction of their Government and Empire, ſoon after his death, by a bearded race of men; or by ſome ſupernatural infatuation, which made him neglect the defence of his Country, to puniſh his Rebellion and Parricide againſt his lawful King and Sovereign Lord; or finally, by a natural damp which the Conſcience of wicked Actions uſually caſts up Mens Courage and Reſolution. Which ever of theſe was the cauſe, it is certain that this Prince loſt his Sovereignty, his Country, his Liberty, and Life, by his own ſupine Negligence; and was diveſted of that dignity, he had ſo unjuſtly acquir'd, by a handful of men, who could not, in all human appearance, have ſtood the firſt attack of any of the armies he had been at the head of, ſince his being made Cacique of *Quitu*. And whatever advantage the *Spaniards* might have had, by the opinion the *Indians* had conceiv'd of their Horſes and Fire-arms; yet the inſtance of *Cortez*'s dangers and difficulties in the Conqueſt of *Mexico*, tho' he had three times the number of *Spaniards*, beſides 200,000 Natives to aſſiſt him, is ſufficient to make us believe that *Pizarro* muſt have periſh'd in the attempt to ſubdue *Peru*, had this Uſurper had common Senſe, or common Courage.

Upon *Pizarro*'s arrival at *Caxamalca*, the *Inca* order'd quarters to be provided for him and his forces, with all kinds of neceſſaries, by the *Curacas*, or Nobility; but he was inform'd, that the *Inca* himſelf reſided at a palace he had at ſome two or three leagues diſtance. The *Spaniards* were treated with much civility in this City; but there was one piece of reſpect ſhew'd them, which, tho' it may ſeem to argue the folly of the *Indians*, to us who know better, yet it ſhews the good-nature of thoſe ignorant people, and the avarice of the *Spaniards*; when, in viewing the horſes, which was a new ſpecies of creatures to them, they obſerv'd them champing upon their bits, they took it for granted that iron was their food, and that they were eating their bits every time they mov'd them between their teeth; ſo that perceiving that the *Spaniards* eſteem'd Gold above Iron, they brought bars of Gold, and laid them in the mangers before the horſes, as the more elegant food; which pleas'd their maſters, who told them, they could not oblige them more than by bringing them ſuch provinder for their horſes.

Pizarro *arrives at* Caxamalca.

The General being diſappointed in his expectation of ſeeing *Atahualpa*, at his arrival in *Caxamalca*, ſent his Brother *Ferdinand*, with *Hernando Soto*, accom-

Sends his Brother to Atahualpa.

company'd by *Philippillo*, one of the native Boys, whom he had taken out of the country two years before to *Spain* with him, who now serv'd as interpreter, to return the *Inca*'s compliments in his last Embassy. Some *Indians* were sent with them by the *Curaca* of the City, to signify at the Court, that the *Spaniards* were coming. The *Inca* order'd one of his chief officers, with some companies of Soldiers, to meet, and conduct them to his Palace. The Officer having made them a profound reverence, told his Soldiers, these were the true Offspring of the Sun; at which they all bow'd to them to the very ground; and then they brought them to the Palace; where having been introduced, they saw the *Inca* in a chair of solid Gold, richly adorn'd, and attended by a numerous train of attendants, and soldiers. The admiration of the *Spaniards* and *Indians* was mutual upon this occasion; the one wondering at the magnificence and state of the *Inca* and his Palace, and the others at the aspect and dress of the Strangers. As soon as the *Spaniards* came near *Atahualpa*, they made a low reverence, after the *Spanish* manner, with which he seem'd pleas'd, and rising up, he embraced the Ambassadors with much affection; and ordering two chairs of Gold to be brought for them, he made them sit down, welcoming them to his Dominions, as *Viracacha's*, or Children of the Sun. Soon after, two young Maidens of the Royal Line brought, each of them, two Cups of Gold, full of the Liquor which the *Inca* us'd to drink. Having bow'd before *Atahualpa*, one of them presented a Cup to him, and the other to *Ferdinand Pizarro*; and the other Lady gave one of the Cups to the Inca's Brother, and the other to *Soto*; and they being told, by the interpreter, that drinking together was a mark of peace and friendship, the Ambassadors bowing to the Inca, drank their Cups, the Inca drank twice or thrice, and gave his Cup to his Brother; and so the Brother did the same with his Cup, and then gave it to his Uncle; which it seems was a favour in that Country. After this came a collation of green and dry fruits of several sorts, of which they desir'd them to eat, with much civility.

The Inca *entertains* Pizarro's *Ambassadors.*

When that was over, one of the Ambassadors rising up, uncover'd his head, and then, sitting down again, deliver'd his message, being in substance, "That "*Don Francisco Pizarro*, the Subject "of the great Emperor *Charles* V. King "of *Spain*, was come into his dominions on an Embassy from the said Emperor, and likewise from the great "High-Priest of the Christians, to his "Highness; and therefore, they were "come, in his Name, to beg of him, "that he would give an audience to the "said *Don Francisco* their General, that "he might deliver the message from "those two great Princes from his own "mouth." To this the Inca made answer, by the interpreter, "That he "would come the next day to the *Spa*"*nish* Quarters, and there speak with "their General." And then the Messengers being dismiss'd, return'd to *Caxamalca*.

But, before I relate this interview, upon which the whole success of *Pizarro*'s expedition depended, I must inform the Reader, that two of the most celebrated Historians, who have writ upon this subject, I mean *Vega* and *Herrera*, differ widely in their accounts of it. The first of these Authors tell us that *Atahualpa*, all along shew'd the greatest respect, nay submission to the *Spaniards*; that when they sent *Ferdinand Pizarro*, and *Soto* to him, he told them, "That since he look'd upon them "to be Children of the Sun, and their "General as the Ambassador from the "great Creator of all Things, he had "determin'd to submit himself intirely "to him, even if his orders were to "punish him and his people for their "faults, as he had done at *Puna* and "*Tumbez*." And when he came, the next day, to see *Pizarro*, the same Author says, he still continu'd the same respect; and when the *Spaniards* fell upon the *Indians*, without provocation, the Inca forbad resistance, even tho' they should kill him; and that he submitted to be made a Prisoner, without suffering his people to defend him, tho' he had an army about him. *Part* 2. B. 1. C. 20 *et seq.*

The other Author, *Herrera*, whose History of the *Indies* has likewise great reputation, gives this Story in a quite different light. For, he represents *Atahualpa* as the Cause of all the mischief, from his underhand Treachery against the *Spaniards:* He says, that all the good Words he gave them, were so many Cheats to entrap them; that he had order'd his Van-guard, which consisted of 10,000 men, to be secretly arm'd, and that they should fall upon the *Spaniards* at a signal given; and that he had brought Cords and Chains to tie them with. So that, according to him, the Fate of this Inca was not only just, upon the account of his Rebellion against his Sovereign, and his having *usurp'd* a Throne which he had *no Right* to, (which I freely allow) but likewise his having been the aggressor, and his forcing *Dec.* 3. B. 8. C. 3. *&* *seq.*

cing *Pizarro*, in his own defence, to fall upon the *Indians*.

It is not an eaſy matter to determine, at this diſtance of time, whether of theſe Authors has the Truth of his ſide, for ſome follow the one, and ſome the other. But I am of opinion, that neither of them is to be depended upon intirely. For *Vega*, who was born in *Peru*, and, by his Mother, deſcended of the Blood-Royal, of which he appears to be not a little proud (tho' his Father was a *Spaniard*) ſo that, in his Writings, he takes the title of Inca, might, from a natural affection to the Country, which gave him birth, or from having his accounts from the Natives, as he owns in ſeveral places, give a repreſentation of this expedition, more in favour of the *Indians*, than of the *Spaniards*. And one reaſon which induces me to believe this, is, the difference between the Speeches made *to Atahualpa*, and thoſe made *by* him, as he relates them; by which he makes that Inca ſpeak better ſenſe, and reaſon more cloſely, than all the *Spaniards* he convers'd with, either Clergy or Laity; which is very much in a Man altogether ignorant of Letters, and in a Country remarkable for groſs conceptions of things they had not been acquainted with before. On the other hand, *Herrera*, to excuſe the cruelty and exceſſes of the *Spaniards*, perhaps exaggerates, in repreſenting the treachery of the *Indians*, and the contrivances of *Atahualpa*. For, it is unaccountable that one who was ſo cunning, as he makes that Inca, ſhould have ſuffer'd the *Spaniards* to paſs thro' a tract of ground of about 400 miles, without any oppoſition, if he had intended to have cut them off at *Caxamalca*; and, when they were come there, that he ſhould have an interview with the General, in order to deſtroy him and his men; and yet that there ſhould not be a ſtroke ſtruck to defend his liberty, in an open field, in the ſight of ſo many thouſands of ſuch as own'd themſelves his Subjects. For tho' we have related (in *Cortez*'s Conqueſt of *Mexico*, and other Expeditions to *America*) ſeveral battles, and encounters, where the *Spaniards* prevail'd over vaſt numbers, by their horſe and fire-arms; there never was any open attack made upon the *Indians*, without ſome reſiſtance, and ſome blows given; and tho' *Montezuma* was made priſoner in his own Palace, it was in a clandeſtine manner, and he made his people believe that he was free. Having thus given a caution to the Reader, concerning the different accounts of the ſeveral Authors, as to the reaſon of the quarrel, and left him to judge for himſelf as to the provocation, I return to recount the iſſue of the interview, the principal facts of which, all Hiſtorians are agreed in.

The interview between Pizarro *and the* Inca.

Early the next morning, *Pizarro* divided his horſe into three bodies, which he kept by the ſide of a wall, near the field, where the Inca was to give him audience, having his artillery and muſquets ſo diſpos'd, as they could do moſt execution, in caſe there ſhould be occaſion for them; and he himſelf, with only fifteen in his retinue, came to the place appointed. *Atahualpa* was carry'd in his Litter upon men's ſhoulders, with 10,000 men going before, about 5000 upon the flanks of each ſide, and a body of 10,000 in his rear. As ſoon as he came to the plain, near *Caxamalca*, *Pizarro* waited upon him, and having made his compliments, his Chaplain was prepar'd to make a ſpeech, by the interpreter, upon the Chriſtian Religion firſt, and then upon his Submiſſion to the *Pope*, and King of *Spain*, of which *Vega* pretends to give a juſt Copy. The ſubſtance of it is, "That he ſhould be-"lieve the Trinity, the Creation, the "Fall, Original Sin, the Incarnation "of our Bleſſed Saviour, his Death up-"on the Croſs," (the figure of which he had in his hand) "his Reſurrection, and "Aſcenſion; his leaving the Govern-"ment of his Church with the Apoſtles, "the Primacy of St. *Peter*, the *Pope*'s "being GOD's Vicar; his having given "Power to the Emperor *Charles* V. to "ſubdue all People who would not re-"ceive theſe Truths; and if they did, "the ſaid Emperor was inveſted with "Power to make all Kings his Vaſſals, "and to make them pay Tribute to "him." And the Friar ended his ſpeech with denouncing Fire and Sword againſt the Inca, if he would not believe the Articles he had rehears'd, and ſubmit to the Authority of the *Pope*, and the King of *Spain*.

This harſh concluſion, together with the ill-concerted, and worſe interpreted Speech, ſounded odly in the Inca's ears; and indeed it was a very prepoſterous way to convert a Monarch, who, had he been ſo by juſt Right, and not by Uſurpation, knew none greater than himſelf. The Truths contain'd in this Speech, were not ſupported with arguments ſufficient to convince any reaſonable man; and they were blended with ſuch ſtuff, as made them ridiculous; and our Author expoſes the whole ſufficiently, by the Anſwer which he ſays the Inca made; in which he taxes the *Spaniards* with having deny'd him every thing he deſir'd of the Ambaſſadors ſent to him, and by repreſenting to them, the

the cruelty they had exercis'd to the *Indians*, and the menaces expreſs'd in the Friar's Speech, he reaſonably enough infers, That they and their Prince were Tyrants, and unjuſt oppreſſors of free People, or elſe Scourgers, in the hand of GOD, to chaſtiſe Nations who were not ſubject to their Authority, but by force and violence. He objected againſt the Trinity, as was natural enough, as it was propos'd to him, without being explain'd, or his Underſtanding prepar'd for it, by previous inſtruction. He taxed the *Spaniards* with worſhipping more Gods than the *Indians* did. But when he came to anſwer that part of his Speech, which concern'd his ſubmiſſion to the Emperor; he very juſtly obſerv'd, that if he was to be a Vaſſal (for which he had heard no reaſon given) he ought to become tributary to the Pope; becauſe it was pretended that he had given the Emperor Power over thoſe Countries, and conſequently was the Emperor's Sovereign. He therefore very reaſonably deſir'd to have his doubts and ſcruples ſolv'd before they threaten'd him with Fire and Sword. *Pizarro* finding by this Speech, that *Atahualpa* was not diſpos'd to what they would have perſuaded him (as indeed they could not expect he ſhould) made a ſignal to fire the guns, which was done to the great terror of the *Indians*, and the three ſquadrons of horſe, from different places, attack'd them at once, and made a terrible ſlaughter. *Pizarro* himſelf, with his fifteen companions, ſet upon the Litter, and the General pull'd the Inca down from it with his own hand, which, in that action, receiv'd a hurt with one of his own people's ſwords, he being the only *Spaniard* wounded that day. As ſoon as *Atahualpa* was made priſoner, the *Indians* fled, after they had loſt about 5000, and the *Spaniards* fell to plunder, as indeed many of them had, before the execution began. This Maſſacre happen'd on the third day of *May*, 1533.

The Inca made priſoner.

The Inca bore the change of his condition calmly enough, only he ſeem'd to reſent his being put in chains. But, having perceiv'd what a value his new maſters put upon gold and ſilver, he told them he would give them as much of thoſe mettals as ſhould fill the room where he was, to the heighth of a line drawn as far as a man could reach his hand. The *Spaniards* at firſt took this for a gaſconade; but being afterwards better inform'd of the riches of the Country, and particularly of the immenſe Treaſures kept in the Temples, they accepted the propoſal of the Inca; and, at his deſire, ſent ſome of their own people to *Coſco*, and other Cities, along with the Meſſengers of *Atahualpa*, to bring the Gold and Silver.

Offers vaſt wealth for his ranſom.

Tho' they kept the Inca in chains, they did not hinder his ſervants to attend him; ſo that he had intelligence of all that paſs'd, and being afraid that his Brother *Guaſcar*, now a priſoner to his General in *Coſco*, might find a way to make advantageous offers to the *Spaniards*, which could not fail, if accepted, to end in his deſtruction; he was reſolv'd to put him out of the way; but as he was cunning, he pretended, one day, to *Pizarro*, that his General had, without his orders, put *Guaſcar* Inca to death, which he ſeem'd much concern'd at, as having had an intention only to adjuſt matters with him, and to have reſtor'd him both to his Liberty and Crown. *Pizarro* anſwer'd, without being mov'd, that it was the fate of war, that ſome were kill'd, and others made priſoners. The Inca finding that the *Spaniſh* General made no more of it, ſent private inſtructions to his General to put his Brother to death. But he did not long enjoy the fruit of that unnatural villany, as we ſhall ſee by and by.

The Gold, for the Inca's ranſom, was order'd from all quarters. But the diſtance was ſo great of ſome of the places from *Caxamalca*, that the *Spaniards*, who were impatient to finger the Treaſure, thought the time very long; and ſome, who hated *Atahualpa*, for his having murder'd his Brother, and rightful Sovereign, or for worſe reaſons, endeavour'd to give *Pizarro* a jealouſy, that the delay of the Gold was a ſtratagem to gain time, till his Generals might come with Armies to reſcue him, and deſtroy the *Spaniards*; and one of the chief promoters of this ſurmiſe, is ſaid to have been *Philippillo*, the interpreter, who was in love with one of the Inca's Concubines, and wanted to have him diſpatch'd that he might enjoy her. *Atahualpa* being appriz'd of this jealouſy, endeavour'd to clear himſelf, by telling *Pizarro*, that he needed be under no apprehenſion of any of his Generals, as long as he was in cuſtody; for he could at any time, by a meſſage, disband any Army that ſhould be rais'd by his Generals, or ſend for any of them to come to him from any part of the Empire; and he ſhew'd them an Experiment of it, by ſending for *Chaliquichiama*, who immediately left his forces, and come to him with the ſame ſubmiſſion as uſual.

Plots againſt his life.

About this time, *Almagro*, with 200 *Spaniards*, arriv'd at *Caxamalca*, which made the Inca apprehend greater danger than formerly. And it ſoon appear'd that

that his fears were not groundleſs, for theſe new comers being ſurpriz'd at the prodigious wealth, which now came from different quarters to *Caxamalca*, and which they thought they might be the better entitled to a ſhare of, by being active in the death of the Inca, preſs'd *Almagro* to inſiſt upon it; and indeed a mutiny was like to enſue, which was underhand fomented by *Philippillo*. At laſt *Atahualpa*'s enemies prevail'd, and a formal indictment was laid againſt him, conſiſting of two Articles, *viz.* His rebelling againſt, and murdering his Brother; and his conſpiring the deſtruction of the *Spaniards*. The laſt of which charges he deny'd to his death, nor was there any ſign appear'd of it thro' the whole Empire; but the interpreter made the evidence of the *Indian* witneſſes whatever he pleas'd to interpret it to be: ſo that tho' the Inca deſerv'd juſtly to have been condemn'd by the Judges and Laws of *Peru*, yet he was murder'd, and that againſt publick Faith, by the *Spaniards*, after a great part of his ſtipulated ranſom was paid down, and the reſt upon the road; but ſpirited away, when the report of his death was ſpread abroad, and never found afterwards. To make the grimace the more ſolemn, they got people to perſuade him, after he was condemn'd, to deſire Baptiſm, tho' he neither underſtood nor believ'd the Chriſtian Religion. But the thing that prevail'd with him was, that by being baptiz'd, his ſentence was to be graciouſly chang'd from Burning to Strangling. Thus *Atahualpa*, who, not contented with the Dominion left him by his kind Father, uſurp'd the Empire of his Brother, againſt the Laws of Nature and the Country, was, by the juſt Judgment of GOD, puniſh'd for his crimes done againſt his Brother, by thoſe to whom he had done no wrong, and who had made a plain contract for his Liberty, upon the receiving of ſuch a quantity of Gold and Silver, a great part of which was paid, and the reſt would have come in, had they given time. But their putting him to death ſtop'd the bringing more Gold, and gave the *Indians* ſuch an idea of their falſhood and cruelty, that rather than the ſpoils of ſome of their richeſt Temples ſhould fall into the hands of the *Spaniards*, they threw their largeſt Veſſels and Statues of Gold into Lakes, or hid them in places, from which they have never been recover'd to this day.

Atahualpa condemn'd and ſtrangled.

But there were many *Spaniards* who oppos'd the Inca's condemnation, and openly proteſted againſt it in Court, both as illegal and unjuſt, as contrary to publick Faith, and diſhonourable to the *Spaniſh* Name; and there were ſo many, and ſuch conſiderable perſons who eſpous'd *Atahualpa*'s cauſe, that an open rupture would have follow'd upon it, but for the prudence of ſome of the more moderate of both ſides, who brought matters to be amicably adjuſted; and the dividing the riches among them, made them forget their animoſities for a while. The Inca's ranſom, tho' not all paid, amounted to 4,605,670 Ducats; which with the other Gold and Silver they had gotten ſince their coming to *Peru*, was all diſtributed, according to their rank and quality, and there was not a private Soldier who had leſs than 10,000 Ducats for his dividend. The General diſpatch'd his Brother *Fernando* to *Spain*, with the fifth part for the King, and added to it a rich preſent from his own ſhare; and writ Letters to his Imperial Majeſty, giving an account of his progreſs.

The Treaſure divided.

It may appear incredible, that ſo ſmall an Army of *Spaniards* ſhould have been able to advance ſo far into a Country, which was all in arms at their coming to it; or that before they had put the Inca to death, none of his Generals or Relations ſhould have taken arms to prevent it. But there were ſeveral things contributed to the ſucceſs of theſe lucky Adventurers. The quarrel between the two Brothers hinder'd both of them from oppoſing the Progreſs of the *Spaniards*; and when *Atahualpa* came to meet them at *Caxamalca*, his ſuperſtition in believing them to be the Children of the Sun, and therefore ſacred, made him ſubmit to his impriſonment; and then the fear of his perſon, when he was in their power, made him put a ſtop to the efforts that his Generals might have attempted for his Liberty, leſt they ſhould exaſperate the *Spaniards* againſt him. And then, after his death, the Factions of both the Inca's being irreconcilably at variance, they both thought it their wiſeſt courſe to keep in with the Strangers (for ſome time) of whom they entertain'd a better opinion than they deſerv'd; till by a farther acquaintance with them, they began to hate them as much for their cruelty and avarice, as they had admir'd them before for their courage and bravery. To which may be added, that moſt part of the Royal Family of *Peru* having been put to death by *Atahualpa*'s order, after *Guaſcar* was taken; the *Indians* wanted a Head to bring, or keep them together; ſo that they either fled to the diſtant parts of the Country, or ſubmitted to their new Maſters, where-ever they march'd.

But this negligence of the *Indians* did not laſt long. For, as ſoon as *Pizarro*

and *Almagro* remov'd their camp, and march'd towards *Cosco*, *Quisquiz*, who had manag'd the war against *Guascar*, and had been the executer of *Atahualpa*'s cruelty at *Cosco*, remov'd from that City; and having intelligence of the careless march of the *Spaniards*, way-laid them in a convenient place. But before they advanced so far as the ambuscade, *Titu Atauchi*, Brother to *Atahualpa*, (who had been employ'd by him to gather Gold for his Ransom, and was upon his march with a great quantity of Gold and Silver) being inform'd of the Inca's death, left his Riches, and got together about 6000 men, and fell upon the *Spaniards* unexpectedly in their march, and took eight prisoners, retiring with them before *Pizarro* got his people in order. Among the prisoners was *Sancho de Cuallar*, who had drawn up the indictment against the Inca. With this success *Atauchi* was satisfy'd, and march'd to *Caxamalca*; and *Pizarro* held on his route to *Casco*; and coming to the place, where *Quisquiz* had conceal'd 12000 men, (only taking a small party to provoke the *Spaniards* to attack him) *Pizarro* order'd two Captains of horse to chase that party, who, retiring according to orders, decoy'd the horse to the ambuscade, where the whole Army rushing upon them, a sharp battle was fought, which lasted three hours; seventeen *Spaniards* were kill'd, and several taken; which was the greatest loss they had sustain'd in the whole expedition; the *Indians* lost seventy; and *Quisquiz* not thinking it advisable to wait the coming up of *Pizarro*, retreated from the Cavalry, who, being fatigu'd, were not sorry at his flight. He came with his prisoners to *Caxamalca*, where he join'd *Atauchi*; and it was lucky for seven of the *Spaniards*, who were prisoners in the first skirmish, that he came thither so soon; for *Atauchi* having resolv'd to put them to death, in revenge of his Brother's murder, they were all sav'd, except *Cuallar*, by *Quisquez*'s bringing with him *Francisco de Chaves*, and *Hernando de Haro*, who had openly oppos'd the condemnation of *Atahualpa*. *Atauchi*, out of gratitude to them, forgave all the rest; and having imitated, as near as he could, the execution of his Brother, in that of *Cuallar*, he releas'd all the others; and when their wounds were cur'd, dismiss'd them with considerable presents. An Action which denoted more greatness of mind, than any thing done by the *Spaniards* in that Country, and gave this Prince a better Title to the Name of *Viracocha*, than the Thunder and Lightning of his enemies gave them. And when they were to leave *Caxamalca*, he made conditions of Peace with them in the name of the rest of their companions, which shew'd no sign of force, but might, nay ought to have been agreed to by the *Spaniards*, if they had had *Charles* V's Army in *Peru*. For they only requir'd them to promise, "That all Acts of "Hostility, already done, should be "forgiven on both sides. That firm "Peace should be maintain'd, for the "future, between the *Spaniards* and "*Indians*. That the *Spaniards* should "not deprive *Manco* Inca (a surviving "Son of *Guayanacapa*, and consequently the *rightful Heir*) of the Empire. "That the *Spaniards* should set the *In*"*dians* at liberty, whom they had in "Chains; and that no more should, "from thenceforth, be put in Irons, "but that they might be freely us'd as "Servants. That the Laws of the for"mer Inca's, in as far as they were not "contrary to the Christian Laws, should "be in full force. And that *Don Fran*"*cisco Pizarro* should, in a reasonable "Time, procure the King of *Spain*'s "Assent and Confirmation to these Ar"ticles."

A skirmish with the Brother of Atahualpa.

And another with one of his Generals.

A Spaniard *executed at* Caxamalca.

Articles of Peace.

Had these most reasonable Conditions been well and faithfully made good on the part of the *Spaniards*, there might have been an end of war and blood in that Country, and the Christian Religion might have been receiv'd, without the least opposition, the Natives being all persuaded that their great Inca *Guayanacapa* (for whose memory the whole Empire had a sacred regard) had declar'd upon his death-bed, that the Religion of the bearded Men was infinitely better than theirs was. But the *Spanish Pride*, *Avarice*, *Revenge*, and *Luxury*, brought all things into disorder, and made *Peru* a seat of Confusion and Blood for many Years; of which we shall only touch slightly, it not being our business to write the History of *America*.

After the last skirmish between the *Spaniards* and *Quisquez*, *Pizarro* march'd with more caution, and they arriv'd at *Cosco* without any memorable adventure; where they took care to visit Houses and Temples for the sake of golden Moveables. But, tho' they got considerable riches in this City, yet vast quantities of Gold, Silver, and Jewels, had been privately convey'd away before they came; and, for many years together, Statues of Gold, and other rich things were found, by chance, under ground; and, no doubt, may be had to this day, if people could hit upon the places where they were hid, to save them from the *Spaniards*.

Pizarro arrives at Cosco.

But

But here they were alarm'd with news from the North, which gave ſome uneaſineſs. They had an account, that *Don Pedro d'Alvaredo*, the valiant Companion of *Cortez* in the Conqueſt of *Mexico*, was arriv'd at *Porto Viejo*, and was upon his march to *Quitu*, with an Army of above 500 *Spaniards*, a great part of which was Horſe, and moſt of them Gentlemen of good Families. *Alvaredo*'s character of a brave Man, and an able Officer, was too well known to the *Peruvian* General, not to give him ſome umbrage, upon hearing of his march into his Diſtrict; for he reckon'd all that had belong'd to the Inca's of *Coſco*, to be his Province. *Pizarro*, therefore having conſulted with the Captains, it was agreed that *Almagro* ſhould march towards *Quitu* with 100 *Spaniards*, either to prevent *Alvaredo*'s encroaching upon his Government, aſſign'd him by the King's Patent, or if he could not prevail with him to deſiſt, that he ſhould bribe ſome part of his forces to deſert him; there being no other way to prevent the miſchief they foreſaw by his arrival in *Peru* with double their number.

Alvaredo arrives at Porto Viejo.

Almagro was ſcarcely gone, when *De Chaves*, and the other priſoners arriv'd from *Caxamalca*, full of the praiſes of *Atauchi*, for his generous treatment of of them, and the eaſy Conditions with which he had diſmiſs'd them. And indeed this *Indian* deſerves to be recorded to poſterity, as an example of Virtue, and greatneſs of Mind, not only for his mild treatment of the priſoners, but for his Loyalty, and Regard to his Country. For, tho' he was now in the heart of a Country which had ſtuck by his Brother *Atahualpa*, and had one of his beſt Generals to eſpouſe his quarrel, he was ſo far from ſetting up for himſelf, that he oblig'd the *Spaniards* to promiſe to reſtore *Manco Inca*, the lawful Son of *Guayanacapa*, (whereas he himſelf was full Brother to the late Uſurper;) and when the *Spaniards* had agreed to thoſe Conditions, as we have ſaid, he ſent a moſt reſpectful meſſage to *Manco*, which gave him the moſt joyful hopes of ſucceeding to the Throne, which he was, before, afraid to claim. This continu'd courſe of virtue, in this young Prince *Atauchi*, makes me lament his death, which happen'd ſoon after for grief, at ruin of his Country of *Quitu*, and the maſſacre of his Relations, by the Rebellion and Cruelty of *Ruminavi*, another of *Atahualpa*'s Generals, who ſet up for himſelf.

Almagro ſent to treat with him.

The new of this growing Rebellion, made *Pizarro* diſpatch *Belalcazar* to reinforce *Almagro*, and to ſuppreſs *Ruminavi*, who, by his cruelty and barbarity to all *Atahualpa*'s family, whom he murder'd with the principal people of *Quitu*, at an entertainment; and by his inhuman burying alive the ſelect Virgins, who were look'd upon as ſacred in *Peru*, was become ſo odious to the *Indians*, that upon the news of the *Spaniards* approach, they deſerted him, and he was forced to go, with a ſmall number as wicked as himſelf, to live in the Mountains; ſo that *Belalcazar* had no trouble with him; and therefore he continu'd his march to join *Almagro*, who was in great doubt how to behave towards *Alvaredo*, hearing that he was not far off, in his route to *Quitu*. But he was ſoon determin'd; for *Alvaredo*'s advanc'd guard, coming near his quarters, took ſome of his Horſe who were ſtraggling about, but hearing to whom they belong'd, immediately releas'd them; which gave *Almagro* ſome hopes of an amicable accommodation. An interview being agreed upon between them, they met in the plain of *Riobomba*, with all their forces drawn up on both ſides; and both armies being not only *Spaniards*, but for the moſt part of the Province of *Eſtremadura*, between *Leon* and *Andaluſia*, they, of their own accord, without any command of their Generals, fell into a friendly converſation with one another, offering conditions of Peace and Amity to each other.

And Belalcazar to encounter Ruminavi.

An interview between Alvaredo and Almagro.

Alvaredo declar'd, "That he had no "deſign to encroach upon the Conqueſt "that *Pizarro* and *Almagro* had made, "but that his intention was to make "other diſcoveries out of their Pre-"cincts; and therefore was willing to "live amicably with them, till his fleet "ſhould ſail farther ſouthward. That "he would march thro' the Empire of "*Peru*, as a friend and ally; and as a "ſervant to the ſame Emperor, as King "of *Spain*." But in one or two friendly conferences of this kind, it was agreed upon between them, that *Alvaredo* ſhould return to his Government in *New Spain*, but leave a good part of his forces with *Almagro*; that the forces thus left ſhould be entitled to their ſhare as the other *Spaniards* were; and in conſideration of his charges and trouble, *Alvaredo* ſhould receive 120,000 Pieces of Eight out of the Treaſure of *Peru*; to which *Pizarro* agreed, and ſent powers to *Almagro* to perfect the treaty.

They agree.

In the mean time, the *Manco* Inca having receiv'd intelligence, as we have ſaid, from *Atauchi*, of the conditions at *Caxamalca*, aſſembled his friends, in a place near *Coſco*, to conſult of the fitteſt manner of applying to *Pizarro* for his Reſtoration; and, after ſome debate, his

his own opinion prevail'd, of going only with a ſelect number of followers without arms, to beg the General's aſſiſtance, and the fulfilling the Articles made by *De Chaves*. *Pizarro* receiv'd him handſomely, and promis'd to perform his requeſt; and deſir'd him to take the Enſign of Royalty, which was a colour'd wreath about his head, at his putting on of which, in a publick manner, there were great and ſolemn rejoycings in *Coſco*; and the *Spaniards* were reſpected as true *Viracocha*'s, by thus keeping Faith with the *Indians*. And had they continu'd to act like men of honour, they might have converted all *Peru* without oppoſition or blood.

Manco *Inca goes to* Pizarro.

But the generous *Atauchi* did not live to hear the good news, but dy'd at *Caxamalca* of pure grief, for the villany of *Ruminavi*, charging *Quiſquez*, at his death, to keep the Articles with the *Spaniards*, and to be loyal to *Manco* Inca; and indeed it was well for him that he dy'd then, for, that ſhort ſatisfaction of ſeeing his Brother's ſeeming Reſtoration, would have been far outweigh'd, in his honeſt mind, by the treachery of the *Spaniards*, and the miſery that afterwards befel his Country.

Atauchi's *death.*

Almagro was gone from *Coſco* before *De Chaves*'s arrival, ſo that it does not appear that he knew any thing of the Peace at *Caxamalca*, and therefore after the agreement with *Alvaredo*, having heard, in his return, that *Quiſquez* was ſtill at the head of an Army, (which he had not disbanded, thinking it proper to wait, but without any acts of hoſtility, till the Conditions ſhould be perform'd with regard to his lawful Sovereign) he made haſte to attack him, who lay with his forces not far from *Caxamalca*, without any apprehenſion of an enemy. There being no fit interpreters among them, it was not in *Quiſquez*'s power to make the *Spaniards* acquainted with the peace; ſo that he could do no more, to avoid fighting, than to retire to the high ground, his army being divided, and many leagues being between the one part and the other; which he was too good a Soldier to have ſuffer'd, had he thought of engaging the *Spaniards*.

Almagro *attacks* Quiſquez.

Alvaredo and *Almagro* divided their army likewiſe, and *Almagro* march'd to the high ground to hem in the *Indians* between the two armies; but *Quiſquez* finding one wing of his army attack'd made up to the rocks, from whence he roll'd down great ſtones upon the *Spaniſh* horſe, by which ſeveral of them were kill'd; and the *Indians* in that manner defended themſelves till night, the party that had been attack'd retreating alſo to the hills. The next day they retir'd to a river, and were again attack'd in the rear. The *Indian* General maintain'd a paſs near the river for many hours together, and at laſt retir'd to the Mountains. A few days after there was a third skirmiſh with the *Indians*, and in all the three, tho' there were many of them kill'd, yet the *Spaniards* loſt about fifty, moſt of which were horſe, which was a conſiderable mortification to the Generals.

Pizarro *goes to meet* Alvaredo.

In the mean time, *Pizarro*, hearing of the approach of *Alvaredo*, reſolv'd to go to meet him as far as *Pachacamac*, about a hundred leagues from *Coſco*, having no mind he ſhould come to the Metropolis of the Empire. Before his departure, he went to take leave of the Inca, telling him that he left his Brothers, and the reſt of his men under his protection, and was going himſelf to finiſh ſome affairs with his Countrymen lately arriv'd, upon which depended the Peace of *Caxamalca*, which, at his return, ſhould be faithfully executed. The Inca wiſh'd him a proſperous journey, and told him he would be careful that his Brothers and the other *Viracocha*'s ſhould be treated as his own kindred, till his return. And in the mean time he ſent orders to all the places upon the road, to provide the *Spaniards* with all things neceſſary, and to uſe them with reſpect. He arriv'd with thirty Horſe at *Pachacamoc* ſome days before *Alvaredo*; but he coming at laſt, they embraced and treated each other as friends, and *Pizarro* had taken care to have the Gold, ſtipulated between *Almagro* and *Alvaredo*, brought to that place, and there paid it to that General, together with a handſome preſent in Gold and Jewels over and above what was promis'd. Theſe Generals and Governors having ſtaid ſome time together, parted at laſt with the ſame friendſhip, *Alvaredo* going towards the coaſt to take ſhipping for *New Spain*, to his own Government of *Guatimala*, ſituated on the South-Sea, in 14 deg. n. lat. near the Province of *Honduras*; and *Almagro*, with a good number of *Alvaredo*'s forces, march'd to *Coſco*; *Pizarro* recommending to him the new Inca *Manco*, and his own Brothers whom he had left there. The Governor himſelf ſtaid behind at *Pachacamoc*, intending to find out a convenient place for a Colony near the South-Sea, which he effected, laying the foundation of a new City upon the little River *Lima*, in 13 deg. ſ. lat. 120 miles weſt from *Coſco*. This City he call'd *La Ciudad de los Reyes*, the City of Kings, becauſe it was founded upon the 6th of *January*,

Pizarro *builds* Lima.

January, 1534. And is now the residence of the Vice-Roy of *Peru*.

Having built this new City, he divided such portions of Land to his own people, as he thought proper, allowing such a number of *Indians* to every one as were sufficient to begin their Plantations; and having settled that Colony in peace, he march'd northward. and about 300 miles from *Los Reyes* he founded another City on the South-Sea coast, and gave it the name of *Truxillo*, from his own Country. It lies in 8 deg. n. lat. and is well inhabited.

He builds Truxillo.

Whilst *Pizarro* was thus worthily employ'd upon the coast, the news of the negotiation of his Brother *Ferdinand*, or *Hernando*, in *Spain*, arriv'd in *Peru*. He had been graciously receiv'd at Court, and obtain'd the Title of Marquis for his Brother *Don Francisco*, with an enlargement of Territory from the Equinoxial Line to a certain distance southward. *Almagro* was made *Mareschal* of *Peru*, with the Government of 200 leagues from north to south, distinct from the jurisdiction of the Marquis; which, in *Spain*, was call'd *New Toledo*, as that of the Marquis was nam'd *New Castile*. But *Almagro*, who was then at *Cosco*, hearing this report, tho' the Commissions were not come, nor any authentick account from Court, of the particular powers assign'd to each of them; being eager to grasp at Power, laid aside the Deputation he had from *Pizarro* to be his Lieutenant at *Cosco*, and, upon the report that the Marquis's Government was to reach only 200 leagues south from the Line, he declar'd himself Governor of *Cosco*, and canton'd out the vassalage of the *Indians* to his own Creatures. But being oppos'd in this attempt by the Brothers of *Pizarro*, and some of *Alvaredo*'s Officers, they came to an open rupture, and several *Spaniards* were kill'd on both sides, in some scuffles about that affair. *Pizarro* being then at *Truxillo*, was soon advertis'd of this quarrel, and leaving all his people at his new Colonies, he was carry'd by *Indians* (to whose integrity he trusted himself without any other attendants) to *Cosco*; where, by his presence, he quieted all the dispute, *Almagro* owning his rashness, and submitting to his Authority. However, to make the good correspondence between them the more durable, they agreed that *Almagro* should go to *Chili*, which joins to the south of *Peru*, and runs along the coast from 26 to 44 deg. s. lat.

Almagro *marches to* Chili.

About the beginning of the year 1535, *Almagro* begun his march with 550 *Spaniards*. But as he was to pass thro' a considerable part of the Inca of *Peru*'s dominions before he arriv'd in *Chili*, he took the Inca's Brother, *Paullu*, along with him, and 15000 *Indians*, with the approbation of *Manco*, who gave his Brother a charge, that all things necessary should be provided for the *Viracocha*'s thro' all his Empire. The way over the Mountains of *Cordilleras* was the neareſt route, but *Paullu* told them they were not passable for Snow; but he would not take his word for it, which he had cause to repent soon after; for being oblig'd to clear the way of the Snow with their hands, their journeys were so short, that the provisions prepar'd for their march, were done long before they had finish'd their journey: and the cold was so excessive, that 10,000 *Indians* perish'd in the Mountains; and the *Spaniards*, tho' better clad than they, lost 150, who were frozen to death. But after a long and terrible march of about 600 miles, they came into the Country of *Copayapu*, upon the borders of *Chili*, but subject to the Inca of *Peru*, being about 26 deg. s. lat. Here they were chearfully entertain'd, and refresh'd after their past fatigue; the Natives being very civil to them upon the hopes given them by *Paullu* of Inca *Manco*'s advancement to the Throne by the *Spaniards* means; and being likewise inform'd by him of the great liking the *Spaniards* had for Gold, they quickly brought to the value of 200,000 Ducats in vessels, which had been design'd for presents to the Inca *Guascar*, when the war broke out; and, during their stay there, the value of 300,000 more was brought from the Villages and Towns under the Curacas of *Copayapu*.

But *Almagro*, having propos'd to *Paullu* the reduction of the rest of *Chili* under the Empire of *Peru*, the innocent *Indian*, believing it would be a considerable addition to his Brother's power, consented to it, and issu'd out orders to all the adjacent *Curaca*'s to repair to their quarters, with the Soldiers under their command. With these *Almagro* march'd to several Provinces in *Chili*, in some of which he met with opposition, and others receiv'd him friendly. He staid about five months in this Country, and visited above 100 leagues southward, where he might have settled Colonies, as was afterwards done, but that his ambition and great inclination to be a kind of a Sovereign in *Cosco*, made him return thither, which was the occasion of his ruin.

Takes some Places there.

Whilst he was skirmishing with the *Indians* in *Chili*, *Ruis Diaz*, and *Juan de Herrada*, arriv'd from *Cosco* with recruits, having pass'd the *Cordillera* Mountains by the same road he had

come, but with leſs danger and fatigue, becauſe being in the month of *November*, it was their Summer. *Herrada* brought with him the King of *Spain*'s Commiſſion to *Almagro*, by which he either really found, or interpreted it ſo, that *Coſco* fell within his juriſdiction; and therefore by the advice of ſome of his officers, he reſol'd to return, and take poſſeſſion of it, either by fair or foul means. The *Indian Paullu*, who had no good opinion of the *Pizarro*'s, was likewiſe pleas'd with this reſolution. So that, ſlighting all that he had done in *Chili*, *Almagro* began his march northward, but determin'd to take his route by the coaſt, it being terrible to his Army to think of *Cordilleras*. But in the road he was now to take, there was a Deſart to paſs of about 200 miles, where there was no water, but ſuch as was to be found in wells, or ſtanding pools, which, the *Indians* inform'd him, ſtunk with the heat of the Sun; and even thoſe, ſome eighteen, ſome four and twenty miles diſtant from one another. However, they propos'd to *Almagro*, to ſend a party of *Indians* before, to draw out the ſtagnated water, that freſh might be gather'd before the Army march'd; and they contriv'd to make bottles of skins, in the manner of *Boraccio*'s to take along with them full of water; both which were of great uſe to them in their march. And having, by theſe precautions, paſs'd the deſart Country of *Atacama*, with the leaſt difficulty poſſible, they came to the more fruitful plains of *Arequipa*, where they refreſh'd themſelves for ſome days.

But abandons that Country and returns to Peru.

During the time that *Almagro* ſpent in *Chili*, things had put on a new face at *Coſco*. *Manco* Inca, ſeeing that *Pizarro* had diſpatch'd the principal Officers of his Army to different parts, upon different commands, and yet had never reſtor'd him to the free exerciſe of his Government, but ſtill kept all in his own or his Brothers hands, and left him the empty Title of Inca, and the inſignificant *wreath* of Royalty, whilſt he was little better than a ſtate Priſoner; he therefore made application to him again, to perform the conditions of *Caxamalca*, in the full extent of them. The Marquis and his Brothers did not well know what anſwer to return to this demand, there being no ſufficient reaſon for refuſing it. The Marquis told him, at laſt, that his Brother *Fernando* was juſt arriv'd at *Tumbez* from *Spain*, and he was going to meet him, where he ſhould be veſted with full powers to conclude the Treaty of *Caxamalca*, and to put the Government of the Empire into his hands, which could not be ſecure to him, without the authority of his Sovereign, the King of *Spain*. With this pretence, he left *Coſco*, and retir'd to *Lima*, leaving the Inca, together with the City and Country adjacent, to the care of his Brothers, *Juan* and *Gonzalo*, who perſuaded, or rather decoy'd *Manco* to their fortreſs, where they kept him priſoner, contrary to honour, faith, and good ſenſe. But he diſſembling his reſentment, by his diſcreet behaviour, ſo engratiated himſelf with the *Spaniſh* Officers, that they prevail'd with the Deputies to ſuffer him to live in one of his own houſes, before *Fernando Pizarro* arriv'd, to ſuperſede his Brothers in the Government of the City; and after his coming, he manag'd the matter ſo, by giving him, now and then, preſents of Gold, that he had leave to go, under pretence of keeping a ſolemn feſtival, to *Yucaya*, abont four leagues north-eaſt from *Coſco*, where the Inca's had their Gardens; promiſing to bring from a Sepulchre, near that place, a ſtatue of his Father of ſolid Gold. At this place he privately had an interview with ſome of his oldeſt Officers, who were near, and having complain'd of all the affronts, and other injuries he had undergone from the *Spaniards*, telling them that he had diſſembled, but not born them patiently, that he might have it in his power to revenge them; he ask'd their advice and aſſiſtance.

Affairs at Coſco during Almagro's abſence.

The Inca Manco made priſoner.

The reſult of this Conference was his ſending orders to all the eaſtern parts of the Empire, to muſter their forces, and to ſend them with all expedition to places appointed, in order to be ready at a certain day. He would not ſummon the people near the coaſt, becauſe they had been harraſs'd by the late civil war; beſides that he would not alarm the *Spaniſh* Generals, canton'd in thoſe parts. His deſign was to attack *Coſco*, *Lima*, and *Truxillo* at one time, and to put all the *Spaniards* to the ſword. And, at at the ſame time, he ſent towards *Chili*, under colour of enquiring news of *Almagro* and his Brother; but in reality to ſpirit up all his vaſſals in thoſe parts, to fall upon the *Spaniards* and to cut them off. This meſſage was to be deliver'd to *Paullu*, but miſs'd of him by *Almagro*'s ſudden retreat.

But being releas'd levies forces,

Whilſt theſe orders were putting in execution, the Inca retir'd, with ſuch forces as could be quickly got ready, to a great diſtance from *Coſco*, where he remain'd till he muſter'd 200,000 men. And the *Spaniards* being diſpers'd to ſeveral places amongſt the Gold-Mines, having no apprehenſion of danger, were ſuddenly ſurrounded in ſeveral places, and many of them cut off; and before his

his design was known at *Cosco*, the Inca was there with a numerous Army, with which he attack'd the place. The *Spaniards* taking the alarm, stuck close together, and did great execution with their horse, repuls'd the *Indians* in all their attacks, killing great numbers of them; but they not being above 200, were quite fatigu'd with slaughter; and some *Spanish* writers, to make the stories they tell of the Siege of *Cosco* seem probable, tell strange miracles of the *B. Virgin*'s and St. *James*'s fighting for the *Spaniards*. I, for my part, have not so good an opinion of the virtue of those Club-propagators of the Gospel, as to think that God Almighty wrought manifest Miracles in their defence, nor do I believe that their Devotion to these Saints was capable of making them turn Soldiers to save them; but be that how it will, the Fire-arms, and Horse of the *Spaniards* certainly did prodigious execution amongst the poor naked *Indians*. And any one who considers what a difference there is between regular Troops, tho' few in number, and a much greater number of raw undisciplin'd men, must allow, that forces enur'd to war, and arm'd with Coats of Mail, proof against any weapons the *Indians* had; with offensive weapons capable of killing whole Companies at one shot, and with circumstances of terror, enough to frighten the most resolute, who were not acquainted with Cannon or Musquets; and then the Horse, against which the *Indians* had no defence; Forces so prepar'd might well defeat vast numbers of unarm'd people, and disperse whole Armies, tho' never so numerous. I would not be understood as if I thought light of Miracles. I am sure Miracles have been wrought, and God has still the same power; but I would not give too readily into the belief of pretended ones, for fear of discrediting the true. And if any one will believe that St. *James* did get upon a white Horse, and knock down the Infidels at this attack upon *Cosco*, he may do so freely for me; tho' I should rather have thought it had been St. *Peter*, both because he was better acquainted with the Sword, and that the *Spaniards* were fighting for his Supremacy; if indeed Religion had any thing to do in the quarrel. But that the *Spaniards* believ'd that St. *James* fought for them is very certain; for they painted him in the porch of the great Church of *Cosco* upon a white Horse, with a Buckler upon his left Arm, and a flaming Sword in his right hand, and many *Indians* dead under his horse. This Picture our Author saw very fresh in 1560, and was himself born in 1539, not four years after the Siege.

And attacks Cosco.

Vega, P. 2. B. 2. Ch. 25.

The *Indians* being masters of a strong fortress near *Cosco*, the *Spaniards*, having quite beaten them from the City, attack'd them there, but the *Indians* behav'd with such resolution, that it cost the *Spaniards* five or six days siege to beat them out of it. And *John Pizarro*, who was the best of all the Brothers, having taken off his Helmet, for fresh air, after a sharp engagement, was hit by a stone out of a sling, which struck him in the head, of which he dy'd in three days.

John Pizarro *kill'd.*

Things were at this pass, when *Almagro* return'd from *Chili*; and the Inca hearing of his coming, and believing that he was to join the other *Spaniards*, retir'd from *Cosco*. *Almagro* sent a message to him, complaining of his raising war against the *Spaniards*; but he excus'd himself, as being forced to it by the avarice, and ill-usage of the *Pizarro*'s; nor would he come to any terms with *Almagro*, since the Peace of *Caxamalca* was so ill observ'd. So that *Almagro* finding there was no good to be done that way, march'd towards *Cosco*, and summon'd the Magistracy to receive him as their Governor, by virtue of the King's Commission; they answer'd that it was a matter of such consequence, that they could not take upon them to determine it suddenly, and therefore desir'd time, and in the mean while, demanded a cessation of arms; which *Almagro*, supposing to be a plot of *Fernando Pizarro*'s to gain time, refus'd to grant; and entring the City, by night, attack'd the Deputy-Governor in his house; but he refusing to surrender himself, they set fire to it, which oblig'd him to come out, and yield himself prisoner with his Brother *Gonsalo*. *Almagro* assembled the Magistrates, who immediately own'd him as their Governor, and he appointed *De Rojas* his Lieutenant in the City.

Almagro *enters* Cosco *by force, and takes the Marquis's two Brothers prisoners.*

In the mean time, the Marquis, being at *Lima* (knowing nothing that had pass'd of late at *Cosco*) sent *Alonso d'Alvaredo* to the assistance of his Brothers, against the Inca; in his march, he had several encounrers with the *Indians*, tho' the Inca himself was retir'd to the Mountains, despairing of success against the *Spaniards*. But *Almagro* hearing of *Alvaredo*'s approach, and that *Lerma* (who had been ill us'd by the Marquis) was with him, order'd one of his Officers to write to *Lerma* to come over to his side, which he resolv'd to do, upon the first opportunity, and persuaded several others to do the same. And *Almagro* himself sent some Officers, with his Commission to *Alvaredo*, desiring him to submit to him as Governor; or else to return to the Marquis. But *Alvaredo* kept his

Messengers

Meſſengers priſoners, and fortify'd his Camp, ſending an account of all to the Marquis, who had lately receiv'd a recruit of 200 *Spaniards* from *Hiſpaniola*. *Almagro* having waited ſome time for the return of his Meſſengers, at laſt deſpairing of them, march'd out of *Coſco*, with all the force he could ſpare, and coming to the Bridge of *Abancay*, *Lerma* deſerted to him with a party of his friends, aſſuring him that he had ſecur'd a great number of *Alvaredo*'s Army to come over to him, upon the firſt engagement; which ſo encourag'd *Almagro*, that he paſs'd the River, and attack'd *Alvaredo*, who had given good orders, but they were not obey'd. A great number of his men join'd *Almagro*, ſo that *Alvaredo* was defeated, and taken priſoner, with many Officers, who ſtood by him. And one of *Almagro*'s Captains would have put him to death, if the General had not abſolutely forbid it. He treated him very civilly, and made his men reſtore the things they had plunder'd, as far as he could find them out, and what was wanting, he made up out of his own treaſure. This civility ſo gain'd the affections of the Soldiers, that the greateſt part of them liſted themſelves under him, and had *Lerma* for their commander.

He defeats Alvaredo.

Orgonez, one of the principal Captains under *Almagro*, and one who hated the *Pizarro* family, preſs'd the General to ſend a Deputy to *Coſco*, with orders to cut off the heads of the two Brothers, and to march himſelf to *Lima* to deſtroy the Marquis. But others more moderate diſſuaded him from that cruelty, ſo that he went to *Coſco* with his priſoners; and reſolv'd to ſend to the Marquis, to have their Governments divided by arbitration.

In the mean time, the Marquis having intelligence of the bad ſucceſs of *Alvaredo*, was in great confuſion, not thinking himſelf ſecure of the reſt of his Army, ſince that under *Alvaredo*'s command had ſerv'd him ſo ill. He therefore thought of agreeing the matter amicably, both to ſave the lives of his Brothers, and to keep himſelf from the imputation of diſobeying the King's orders, and ſtopping the Conqueſt of *Peru* by a civil war. So that tho' he had march'd from *Lima*, with a deſign to make war upon *Almagro*, he return'd thither again, and ſent Deputies to *Coſco*, deſiring an arbitration to be appointed. Many of *Almagro*'s friends were againſt any accommodation, telling him that the Marquis would never keep any Articles made; and therefore adviſ'd him to march to *Lima*. However, he gave the Meſſengers civil treatment, and ſent them back, with aſſurance, that he would meet the Marquis, and appoint Commiſſioners to ſettle bounds of their Government. And accordingly he march'd out of *Coſco* at the head of his forces, being 550 *Spaniards*, leaving ſuch a garriſon as he thought ſufficient in the Town. He took the direct road towards *Lima*, and for the better managing of the treaty, or rather for further ſecurity, he carry'd his priſoner, *Fernando Pizarro* with him, leaving *Gonzalo*, together with *Alvaredo* and his Officers, under the cuſtody of his Lieutenant. Several meſſages paſs'd between the Marquis and *Almagro*, where propoſals of accommodation were made, but as ſoon rejected. But at laſt, they both gave their word of honour to meet in a valley near *Lima*, having only twelve horſemen each in his company.

Almagro *marches towards* Lima.

The reaſon of this diſpute was this. By the King's Commiſſions to thoſe two Governors, which were brought them from *Spain* by *Fernando Pizarro*, his Majeſty had conſtituted the Marquis, Governor and Commander in chief of all the Country of *Peru* for 270 leagues ſouthward from the Equinoctial Line; and had given *Almagro* the ſame power and authority over the reſt of the Continent for 200 leagues, commencing where *Pizarro*'s ended. But as no place was fix'd for the bounds between their commands, they both laid claim to *Coſco*, as being in their own diſtrict. Theſe bounds were to be reckon'd by the degrees of latitude, and all the Continent within thoſe degrees, either eaſt or weſt, were to belong to their reſpective Governments, as they ſhould ſubdue and poſſeſs them. By this Commiſſion, *Pizarro* had certainly right both to *Coſco* and *Lima*, both which lie within 13 deg. ſ. lat. To adjuſt this difference, the Biſhop of *Terra-Firma* came to *Lima* (before *Almagro* went to *Chili*) with a Commiſſion from the King to ſettle the bounds of their Governments. But *Pizarro*, concealing the Commiſſion from *Almagro*, perſuaded him to go to *Chili*, believing that, if he ſettled there, he himſelf ſhould be maſter of all the Dominions of *Peru*; ſo that the Biſhop return'd without doing any thing: and *Almagro* coming back to *Peru*, upon the receipt of his Commiſſion, as has been related, took poſſeſſion of *Coſco* unjuſtly, notwithſtanding the fair character given him by *Herrera*.

The occaſion of the diſpute between Pizarro *and* Almagro.

Herrera, *Dec.* 4. *B.* 4.

Whilſt theſe meſſages, about an accommodation, were carry'd on between the two Governors, *Gonzalo Pizarro*, and *Alonzo d'Alvaredo* found means to bribe the keepers at *Coſco*, and ſo made their eſcape. For having been furniſh'd with

Fernando Pizarro *and* Alonzo d'Alvaredo *eſcape out of priſon at* Coſco.

with files, and other inſtruments, in the priſon, they ſoon got rid of their fetters; and juſt before the time concerted for their taking horſe, *De Rojos*, the Lieutenant of the City, coming to viſit them unexpectedly, found them all at liberty, contrary to his orders; but they, knowing the danger their lives were in after this attempt, ſeiz'd the Lieutenant, and giving notice to their accomplices, went out of the City, and carry'd him with them; and, with ſome difficulty, they arriv'd at *Lima*, after ſome time; to the number of 60 horſe.

Upon the news of this eſcape, *Orgonez* again preſs'd *Almagro* to put *Fernando Pizarro* to death, as the moſt dangerous of all the Brothers; but he ſtill refus'd to follow his advice. And after many propoſals on both ſides for Peace, the two Competitors met at *Mala*, with the appointed number of twelve, on each ſide. But *Gonzalo* follow'd his Brother with 700 men; and *Orgonez*, ſuſpecting ſome treachery, advanced near the place with his troops. When the two Governors met, they ſaluted one another, as ſome ſay, with equal civility and marks of ancient friendſhip; but, according to others, *Pizarro*'s behaviour was ſtiff and imperious. However, all Authors agree, that one of *Almagro*'s company coming into the room, and telling him, he was betray'd, he mounted his horſe immediately, and march'd in haſte to his Army, before any thing was concluded. And now they ſeem'd both prepar'd for war; but the Marquis, being afraid of his Brother's life, renew'd the treaty to get him releas'd; and it was agreed upon oath, on both ſides, that *Almagro* ſhould poſſeſs *Coſco*, till the King's pleaſure ſhould be known. That he ſhould remove a Colony he had lately planted in *Chinca*, upon the road to *Coſco*, to *Zangalla*, in 15 deg. ſ. lat. That he ſhould ſet *Fernando Pizarro* at liberty, upon his oath not to act directly or indirectly againſt *Almagro* for the future. All which were punctually perform'd by *Almagro*, for he ſet *Fernando* at liberty, and remov'd his Colony.

Vega, *P. 2. B. 2. Ch. 35.* Herrera, *ubi ſupra. Ch. 2.*

Treaties made and broken.

As ſoon as the Marquis had recover'd his Brother, he broke the Treaty, probably by his advice; for he ſent a Notary and Witneſſes to *Zangalla*, to ſummon *Almagro* to evacuate the Countries ſubdu'd by the Marquis, and to give up *Coſco*; proteſting that if he refus'd to do it, all the effuſion of Blood that might enſue was to be charg'd upon him. This he did, notwithſtanding his having receiv'd the King's poſitive orders, by a Meſſenger of his own, that each of the two Governors ſhould keep what places they were poſſeſs'd of, when that order ſhould reach them, and whoever was injur'd, ſhould appeal to the King and Council.

War begun.

Almagro complaining, in vain, of this breach of Faith, diſpatch'd *James Alvaredo* to ſecure *Coſco*, and march'd at more leiſure himſelf with *Orgonez*, who now expoſtulated with him for rejecting his advice. *Pizarro*'s Army, under the command of his Brother *Gonzalo*, purſu'd *Almagro*; and being ſuperior in number, encamp'd at the River *Apurima*, and the next day came to the *Salinas*, or Field of Salt, there being in it a pleaſant fountain of ſaltiſh water, within a few leagues of *Coſco*. Here they found *Orgonez* with his Army drawn up, which, tho' inferior to that of the *Pizarro*'s, were reſolv'd to give them battle. The two Armies engag'd with equal bravery, and maintain'd a fight for near two hours with great obſtinacy, but at laſt the numbers of the *Pizarro* ſide overpowered the other, and *Orgonez* being wounded, after he had done valiantly, ſurrender'd himſelf to one *Fuentez*, who is ſaid to have murder'd him baſely after quarters given. *De Lerma* meeting *Fernando Pizarro* in the Battle, call'd him perjur'd Traitor, and with his launce overthrew both horſe and man; but his good armour ſav'd his life. But afterwards he himſelf was knock'd down, and was ſtab'd by one of *Pizarro*'s people, as he lay on the ground; yet he recover'd to be butcher'd in cold blood afterwards.

The battle of Salinas.

Herrera *ubi ſupra. Ch. 3.*

Almagro not having been able to mount a horſe, did not engage; but, after the defeat, was carry'd to the Citadel of *Coſco*, and was purſu'd by the Victors; and *Alonzo d'Alvaredo* enter'd the Citadel (*Pizarro* having taken poſſeſſion of the City, without oppoſition, the ſame day of the Battle, which was the day before *Palm-Sunday* 1538) and brought *Almagro* out. *Fernando Pizarro*, being exaſperated againſt him for his having continu'd ſo long his priſoner, was now reſolv'd to make ſure of him; and therefore caus'd an indictment to be drawn up againſt him for High-Treaſon, as having invaded the Provinces of the King's Lieutenant, violently poſſeſs'd himſelf of *Coſco*, fought two Battles againſt the King's General, and been the occaſion of ſpilling much *Spaniſh* Blood. *Almagro* ſaid much in his own defence, but finding Sentence paſs'd againſt him, he appeal'd to the King and Council of *Spain*, deſiring to be ſent home priſoner; and *Alonſo d'Alvaredo* pleaded for allowing his appeal, repreſenting to *Fernando*, that when he himſelf was priſoner to *Almagro*, along with him, they

Almagro *executed.*

had been well us'd, and that *Almagro* had releas'd *Fernando* upon his ſecurity; and therefore beg'd he would now, at his deſire, either ſet *Almagro* at liberty, or ſend him to *Spain*. But *Fernando* was deaf to all ſolicitations for him; and upon pretence that there was a Plot to reſcue him, caus'd him to be ſtrangled in the priſon, in the 75th year of his age, others ſay the 65th, and an infirm ſtate of health. Many conſiderable officers of his were likewiſe put to death in cold Blood, to the great diſhonour of *Fernando*, at whoſe inſtigation all thoſe cruelties were ſaid to have been executed.

Pizarro ſends out his Captains to make new diſcoveries.

The *Pizarro's* being now in peaceable poſſeſſion of *Coſco*, ſent out ſome of their Captains, who had declar'd moſt againſt their violent proceedings, upon new Diſcoveries and Conqueſts, with a deſign to get rid of them, and to quiet the mutinies like to ariſe about the diſtribution of the lands about *Coſco*, which the Brothers were in no haſte to make. But *James Alvaredo*, whom *Almagro* had left Executor of his Will, and Guardian to his Son (by an *Indian* Woman) deſir'd the Marquis to evacuate that part of the Country to the ſouth of *Coſco*, which muſt be allow'd to be without the 270 leagues ſpecify'd in the King's Commiſſion, that he might perform his truſt, by taking poſſeſſion of the Government ſouthward, in name of young *Almagro*; the Marquis haughtily anſwer'd, that his Government had now no bounds, nor would he ſuffer any one to interfere with him. Upon this *Alvaredo* march'd directly to *Lima*, where, without the Marquis's leave, he took ſhip for *Panama*, and ſo went to *Spain*, carrying with him Evidence for what he had a mind to repreſent to the Court.

The Indians appear in arms.

In the mean time, *Manco* Inca being encourag'd, by this civil war among the *Spaniards*, appear'd again in arms; and, without doubt, had the *Indians* made as good uſe, as they might have done, of this Quarrel, and prepar'd themſelves to fall upon them after the fatigue they endured in the battle of the *Salinas*, they might have recover'd their Country, and have cut the throats of both parties of the *Spaniards*. *Pizarro* being arriv'd at *Coſco*, ſent out ſeveral parties, to all the places where he heard the *Indians* were in arms, and many skirmiſhes happen'd, where the *Spaniards*, tho' they ſometimes ſuffer'd loſs, yet were in the end victorious; and conquer'd many places farther eaſt, which they had not diſcover'd before. Other *Spaniſh* Captains march'd ſouthward towards *Chili*; ſo that in a ſhort time, the Marquis found himſelf maſter of above 400 leagues from ſouth to north, and his Government conſiderably enlarg'd eaſtward. But his pride, and hatred to the men of *Chili* (which was the name *Almagro*'s Soldiers went by) procur'd him much trouble, and ſow'd the ſeeds of thoſe diſorders, which occaſion'd his deſtruction.

Fernando Pizarro goes for Spain.

Fernando Pizarro, being apprehenſive of Plots againſt his life, for his cruelty to *Almagro* and his friends, thought proper to go over to *Spain*; thinking himſelf in leſs danger from the Court, than from the private enemies he had in *Peru*. This reſolution he put in practice, and carrying all the Gold he could ſcrape together, went to *Lima*, and purſu'd his voyage to *Spain*, whilſt his Brother *Gonzalo* was proſecuting the war againſt *Manco* Inca. When he arriv'd at Court, he was arreſted at the ſuit of *Alvaredo*, who had drawn up articles againſt him before he came; and tho' *Alvaredo* dy'd ſoon after, having been poiſon'd, as was ſuppos'd; yet the things he had charg'd *Fernando* with, were ſo well atteſted, and his defence ſo weak, that he continu'd priſoner for twenty years.

And is put in priſon.

This whole year, and part of the next, were employ'd in planting Colonies in ſeveral places, both ſouth and north. One was placed in the Province of *Guamanga* ſouth of *Coſco* in 15 deg. latitude, to which they gave the name of *St. Juan de la Victoria*. And another, by *Pedro Anxures*, at *La Plata*, 21 deg. ſ. lat. on the eaſt of *Cordillera*, in the Province of *Los Charchas*, not far from *Potoſi*. And *Gonzalo Pizarro*, having chas'd *Manco* Inca to the Mountains, march'd northward to *Quitu*, where *Belalcaſar* had reduced every thing to a peaceable condition, and was now gone to *Spain*, where he got the Government of *Popayan* for himſelf, independent of *Pizarro*. This Province lies from *Quitu* northward to about 6 deg. n. lat. and joins to *New Granada*.

In the mean time the Marquis had advice, that the troubles of *Peru* having made a great noiſe in *Spain*, the King had given a Commiſſion to a Judge, to repair to this new Conqueſt, to take cognizance of the whole affair, and to make report. This news troubled him, becauſe he was conſcious to himſelf that many unjuſtifiable things had been done, and that he had enemies enough to repreſent, and prove them. But he was not ignorant that, tho' ſeveral Governors in other parts of *America*, had been condemn'd by Judges ſent from *Spain*, and carry'd thither priſoners, they were generally acquitted there, notwithſtanding the crimes prov'd againſt them,

them, in their reſpective Governments; which was ſuppos'd to be owing to the riches they had acquir'd, by which they were able to bribe the Council for *Weſt-Indies* affairs; he therefore prepar'd himſelf the beſt way he could. But the men of *Chili*, hearing that *Chriſtopher Vaca de Caſtro*, who was charg'd with the Commiſſion, was arriv'd at *Panama*, began to pluck up their ſpirits; ſo that when the Marquis ſent to *John de Sauvedra*, *Chriſtopher de Sotelo*, and *Franciſco de Chaves*, to offer them lands for their maintenance, (tho' he had done all he could to ſtarve them and their Companions before) they anſwer'd in great rage, that they would rather periſh than be oblig'd to him for bread.

A Conſpiracy againſt the Marquis.

The men of *Chili*, who had behav'd with great bravery in the diſcoveries and conqueſt of ſeveral parts of *America*, were ſo hardly us'd in *Lima*, for their conſtant adherence to *Almagro*'s intereſt, that twelve Gentlemen of them ſtaid in one houſe, and had but one cloak amongſt them, ſo that they could only go abroad by one at a time; and were maintain'd by a farm which *De la Preſa* gave them out of compaſſion; but, upon his death, the Marquis took it from them. This cruelty, with other hardſhips, made the *Almagrians*, who were numerous in *Lima*, conſpire the death of the Marquis, but they were reſolv'd, by *Sotelo*'s advice, to defer it till they ſaw the iſſue of *De Caſtro*'s coming, a part of whoſe retinue was already arriv'd. But whether *Pizarro* really deſign'd to make away with the chief men of them, to prevent their proſecuting him, or that their fear that he would do ſo, precipitated their plot, is not certain. However, upon *Sunday* the 26th of *June*, 1541, *San Millan* going, in haſte, to *De Rada*, one of the chiefs of the conſpirators, told him, that he and all his companions were to be hang'd and quarter'd in two hours. *De Rada*, believing this report, which agreed with the apprehenſions they were under, gave the alarm to the reſt, and about nineteen of them, being all deſperate men, went, in arms, thro' the Market-place, crying out, *Let the King live, and Tyrants die.* In this manner, they march'd with all ſpeed to the Governor's houſe, where he was with three or four friends, and ſome ſervants about him, with his gates open, as fearing no danger; but having notice given him, that the *Chili* men were come to the houſe, he bid his Lieutenant-General, *Franciſco de Chaves*, ſhut the great door, which had he done, they might have defended themſelves till other aſſiſtance had come. But he, thinking it was ſome mutiny among the Soldiers, which his preſence would be able to ſuppreſs, inſtead of ſhutting the door, went down to them, asking them what was the matter, to which they anſwering with their daggers, kill'd him upon the ſpot; the Marquis hearing them in the gallery, had not time to put on his armour, but taking his ſword and buckler, defended the door of the dining-room, having only his Brother by his Mother's ſide, and two of his Pages with him; all the reſt of his family having either hid themſelves in the houſe, or elſe leap'd out of the windows into the garden. Thoſe four made a valiant defence for ſome time; but the aſſaſſins, being afraid of ſome aſſiſtance coming to the Marquis, preſs'd into the room, and having kill'd the Brother firſt, then fell upon the Marquis and his Pages, who, after a brave reſiſtance, in which they wounded many of the conſpirators, were kill'd at laſt.

He is murd.r'd.

Thus dy'd the Marquis *Don Franciſco Pizarro* in the 65th year of his age, who, tho' he was ſo illiterate that he could not write his own name, but drew two lines with the pen, between which his Secretary writ, *Franciſco de Pizarro*; yet he was a man of ſtrong natural parts, great abilities both for war and peace, and was endow'd with many qualities which make a great man. And, had not too great ambition and jealouſy of power made a breach between him and his friend *Almagro* (for which, perhaps, *Almagro* was as much to blame as he) and had not the ſame jealouſy, or rather his Brother's hatred ſhed the blood of that unfortunate old man, which his followers reveng'd in as unjuſtifiable a manner; the Marquis would have dy'd with as good a character, as moſt of the Conquerors of the *Weſt-Indies*.

Young Almagro proclaim'd Governor at Lima.

As ſoon as this murder was committed, all the men of *Chili*, to the number of 250 appear'd in arms, and taking young *Almagro*, proclaim'd him Governor of *Peru*, and *New Toledo*; to which the Magiſtracy, ſettled at *Lima* by the Marquis in his life time, durſt not make any oppoſition; ſo that *Almagro* took poſſeſſion of the Governor's houſe, where it is ſaid, were found a million of Pieces of Eight, beſides Jewels, and very valuable Furniture. But that houſe, and *D' Alcantara*'s, the Marquis's Brother, as alſo that of his Secretary *Picado* were plunder'd, and great riches found in them, and *Picado* put to death. Several other diſorders were committed, as might well have been expected from ſuch reformers.

Having oblig'd the City of *Los Reyes*, or *Lima*, to own *Almagro*'s authority, they ſent to all the Colonies, throughout

out the whole Empire, to follow that example; which ſome did, and others refus'd. *Alonzo d'Alvaredo*, who was in the Province of the *Chiachapuca's* to the ſouthward, having receiv'd the Declaration from *Lima*, rejected it, declaring that he would never receive orders from *Almagro* as Governor of *Peru*, unleſs he ſaw the King's Commiſſion for it. The people of *Coſco* made a dubious anſwer, till they ſent Meſſengers to ſome of *Pizarro*'s Captains, who were then in different places making diſcoveries. Among thoſe, *Holguin* had march'd eaſtward, with 100 men, but upon notice given him of this Revolution, he made haſte back to *Coſco*, and took upon him the command, ſetting up the King's ſtandard there, and ſent to the Provinces of *Arequipa* and *Los Charcas*, to ſummon all the Loyaliſts to it, againſt the *Almagrians*. Upon this, about fifty, who were friends of the faction, ſtole ſecretly out of Town, but were purſu'd and brought back.

But rejected by other Cities.

The Royaliſts having intelligence that young *Almagro* was marching towards *Coſco* with 800 men, call'd a council of war, in which it was determin'd to march directly to join *Alonſo d'Alvaredo*, becauſe they were not ſtrong enough to fight the men of *Chili*.

In the mean time, *Vaca di Caſtro* being driven by the ſoutherly winds into the Bay of *Gorgona*, and not having been able, in many days, to weather *S. Francis*'s Point, reſolv'd to travel by land to *Lima*, and was now come as far as *Quitu*, when the news of *Pizarro*'s death arriv'd. Beſides his inſtructions to enquire into the affairs of *Peru*, he had an ample Commiſſion as Governor of that Conqueſt, in caſe the Marquis ſhould die before his arrival, or during his ſtay there. When, therefore, he had intelligence of his having been murder'd, he open'd his Commiſſion at *Quitu*, where all the *Spaniards* ſubmitted to the King's authority, (*Gonzalo Pizarro* being many leagues to the eaſtward in the Province of *Canela*.) Soon after, he had a meſſage from *Alvaredo*, and *Holguin*, declaring their attachment to the King's authority, and their zeal for his ſervice; upon which, tho' he was no Soldier himſelf, he determin'd to levy all the forces he could to maintain his dignity, and to make head againſt the Rebels. He ſent to *Belalcaſar*, who readily came from his new Government of *Popayan* to join him, and he likewiſe invited *Gonzalo Pizarro* from his expedition in *Canela*.

Vaca di Caſtro *arrives with the King's Commiſſion to regulate the affairs of* Peru.

Almagro, having begun his march, there was a great diviſion among his officers what meaſures were beſt to follow. Some propos'd to move northwards and ſeize *Di Caſtro*, before he could be join'd with other forces; but others oppos'd this advice, as being too open an inſult upon the Royal Authority. Another party were for attacking *Holguin* in his march from *Coſco* to join *Alvaredo*, but that was rejected by ſome of the contrary faction; and the ſickneſs of *De Rada* (who had been made General by *Almagro*) retarded the march, till they loſt all opportunities of doing any thing to purpoſe. So that *Di Caſtro* had time to increaſe his forces, and march ſouthward, being recruited at every place where the *Spaniards* had any footing, as he paſs'd; and his authority ſubmitted to in moſt places, which were not frighten'd by the neighbourhood of *Almagro*; and even from his Army, ſeveral Gentlemen deſerted, in favour of the King's Commiſſion, and join'd *Holguin*, or elſe *Di Caſtro*. And in this march *De Reda* dy'd.

Holguin ſent out a party of horſe, who ſurpriz'd ſome of *Almagro*'s people, two of whom he hang'd, and ſent the others back, bidding them tell their new Governor, that he would beat up his quarters in a day or two, as he march'd to *Caxamalca*; but whilſt *Almagro* ſtood upon his guard, after this intelligence, to receive him, *Holguin*, who did not intend to come in his way, march'd a quite different route, in order to join *Alvaredo*, which he did; having ſo far gotten the ſtart of *Almagro*, that he purſu'd him in vain. With their joint forces they march'd, wide of *Coſco*, whither they had intelligence *Almagro* was gone, and arriv'd at *Vaca di Caſtro*'s quarters, as he was marching to *Lima*; and by the addition of their forces, they increas'd his Army to 700. When they came to him, they diveſted themſelves of all command, giving up the Commiſſions they had receiv'd from the deceas'd Marquis, profeſſing that they came, with a deſign to ſerve the King, in any ſtation he ſhould think fit to aſſign them. The Governor receiv'd them with much civility, and granted them the ſame poſts they had before, confirming their former Commiſſions; but to avoid any emulation for the chief command, he declar'd himſelf Captain-General, deſigning to execute it, in his own perſon, tho' he had not been bred in Camps.

He is join'd by Holguin *and* Alvaredo.

Upon *De Reda*'s death, *Almagro* divided the Commiſſion of General of his forces between *Chriſtopher de Sotelo*, and *Garcia de Alvaredo*. *Sotelo* march'd with a part of the forces to *Coſco*, without any oppoſition, and ſettled in the Magiſtracy ſuch of the *Chili* faction as he

he thought proper, in the room of thoſe who had been left there by *Holguin*. Soon after, *Almagro* arriv'd with the reſt of the Army, where he was receiv'd as Governor of *Peru*, and had a kind meſſage from *Manco* Inca. But his ſplitting the office of General was fatal to him; for, *Sotelo*, and *Garcia de Alvaredo* differ'd in their orders; and their diſputes proceeded to ſuch a heighth, that npon *Sotelo*'s ordering a Soldier to be hang'd for robbery, *Alvaredo* pick'd a quarrel with him, and kill'd him; which was ſo much reſented by *Almagro*, that the other fearing the effects of his diſpleaſure, reſolv'd to be before-hand with him, and to that intent, invited *Almagro* to an entertainment, with a purpoſe to murder him; but *Almagro* either having intelligence, or apprehending his deſign, feign'd himſelf ſick; and *Garcia* fretting at the diſappointment, went to his houſe to perſuade him to come to the feaſt. *Almagro*, hearing of his coming, placed ſome men in the room next to his bed-chamber, and when he was admitted, and preſs'd him to riſe, *Almagro* conſented, and getting up, call'd for his cloak; at which thoſe in the next room ruſhing in, ſeiz'd *Garcia*; and *Almagro* drawing his ſword, run him thro' the body, the others ſtabbing him to death. When this execution was over, he appointed *Balſa* as his General, and reſolv'd to march againſt the new Governor *De Caſtro*.

Diſſention between Almagro's *Generals.*

Sotelo kill'd.

And his death reveng'd.

Vaca de Caſtro took poſſeſſion of *Guamanga*, about 50 leagues ſouth-weſt of *Coſco*; but hearing that *Almagro* was upon his march towards him, and being willing to ſpare the effuſion of blood, he ſent two meſſengers to him, to deſire him to lay down his arms, and ſubmit to the King's Commiſſion. But whilſt thoſe meſſengers were in *Almagro*'s camp, a *Spaniard* was ſeiz'd, in the diſguiſe of an *Indian*, with Letters from *De Caſtro*, to *Pedro di Candia*, deſiring him to play booty with the artillery; at which *Almagro* was ſo incens'd, that he order'd the ſpy to be hang'd; and, tho' he ſeem'd inclin'd to accept the pardon offer'd, and had condeſcended to give up his pretenſions to the Government of *Peru*, provided that of *New Toledo* was allow'd him, which his Father had, by the King's Commiſſion; yet now he rejected all propoſals, unleſs *De Caſtro* would baniſh out of his Army, *Holguin*, *Alvaredo*, *De la Vega*, *Tordoya*, &c. that is to ſay, all that had been friends to the late Marquis; which was, in effect, to disband his Army.

Offers of peace ſent to Almagro.

Which he refuſes.

All thoughts of accommodation being laid aſide, the two Armies haſted to meet each other, which, at laſt, they did, in the valley of *Chupas*, not far from *Guamanga*. *Almagro* drew up his forces upon a high ground, and placed his artillery ſo as to command the plain below, giving orders to keep that poſt, and to play the cannon upon the enemy as they marched to attack them. But *Caravajal*, Serjeant-Major to *De Caſtro*, obſerving that a direct march muſt expoſe them to the artillery, advis'd to decline, under the cover of a little hill, which would ſhelter them a good part of the way; which was put in practice. And when that fail'd them, and they were in view of the battery, the cannon began to be fir'd, but not a man fell, the balls flying over their heads; which *Almagro* taking notice of, rode up to *Pedro di Candia*, and calling him Traitor, run his ſpear thro' his body; and alighting, got upon the mouth of one of the guns, low'ring the piece with his weight, and then made them fire it; which was the firſt ſhot that bore upon the enemy, and did any execution, for it took off ſeventeen men. But, by this time, the Governor's Army was ſo near, that *Almagro*'s people, impatient to engage, preſs'd to begin the attack, ſo that he advanced with his ſquadron, between the enemy and his own cannon, upon which *Suarez*, his Serjeant-Major, coming up to him, told him aloud, "That "if he had ſtaid in his poſt, as he had "adviſ'd him, he would have given him "a compleat victory; but ſince he had "put it out of his power, by other peo-"ple's advice, he would not be partner "in his defeat." And ſo went over to the Governor's ſide, encouraging them to attack the *Almagrians*, who were in confuſion by contrary orders.

The battle of Chupas.

The Battle being begun on all ſides, was fought with great bravery for ſome time. *Holguin* was kill'd with a muſquet bullet; *Tordoya* receiv'd three ſhots, of which he dy'd in two days. The fight continu'd four hours, with great obſtinacy on both ſides, and ſuch was the valour of young *Almagro*, that *Alonzo de Alvaredo* was like to be overpower'd by him; which *De Caſtro* (who had, by the repeated Inſtances of his Army, kept, with thirty horſe, in the rear) perceiving, he charg'd *Almagro* with ſuch reſolution, with that freſh party, that he chang'd the face of affairs, and gave courage to his own people, and deſpair to the enemy. *Almagro* being no longer able to make head againſt *De Caſtro*, many of his people being fled, and many ſlain; after he had done all that could be expected from a valiant man, retir'd, with only ſix in his company, and not finding any remains of his Army, after the Battle, he took the

road to *Cosco* with these few; where being arriv'd, he and his companions were made prisoners by the very Magistrates, which he himself had made, who being inform'd of the defeat at *Chupas*, seiz'd him, to engratiate themselves with the new Governor, whom they expected there in a few days.

Almagro defeated, and afterwards taken at Cosco.

This Battle was fought on the 16th of *September*, 1542. In it were kill'd, in all 500 *Spaniards*, 300 of whom were on the side of the Royalists; a great number of them were Officers, whose names (tho' it might be proper to reckon up by *Spanish* Historians, to keep up their memories in that Country) we have designedly omitted, as being of no consequence to an *English* Reader; so that we have only mention'd such as were necessary, to illustrate such parts of the Narration, as could not be well understood without it. Many of the *Almagrians* were taken prisoners, and such of them as had been guilty of the murder of the Marquis *Pizarro*, were afterwards condemn'd and executed. A great number were wounded on both sides; and not a few dy'd of cold, having been strip'd by the *Indians* in the night.

De Castro, who had carefully observ'd what pass'd in the Battle, commended the bravery of his own Officers and Soldiers, and did not at all derogate from the valour of the enemy's side; speaking in praise of *Almagro*, with a generous encomium. And having given necessary orders for the taking care of the wounded, and the burial of the dead; being inform'd that *Almagro* was confin'd at *Cosco*, he march'd thither, where he was receiv'd in great triumph. He went to visit *Almagro* in prison, and expostulated with him concerning his Rebellion; to which he answer'd, that he had no intention to rebel, but had acted agreeably to the King's Commission granted to his Father. However, all *De Castro*'s Council being profess'd enemies to the men of *Chili*, they persuaded him to put him to death; in compliance with whom, he appointed Judges, who upon an indictment of High-Treason, condemn'd him, and he was executed at *Cosco* in the beginning of the year 1543.

De Castro marches thither.

And puts Almagro to death.

During these transactions, *Gonzalo Pizarro* had suffer'd intolerable hardships in the rugged Province of *Canela*, (so call'd, by the *Spaniards*, from the Cinamon found in some parts of it.) But whether *De Castro*'s message had reach'd him, or that the ill success of his Expedition (in which he had lost two thirds of his men with cold and hunger) oblig'd him to return to *Quitu*, a little before the Battle of *Chupas* happen'd, is not certain. When he came to that City, (which had been assign'd him by the Marquis, as a part of his division) and had been fully instructed in the manner of his Brother's death; and of the Commission granted to *De Castro*, who had been own'd almost every where as Governor of *Peru*, he sent a message to the new Governor, owning his authority, and offering his assistance against *Almagro*, which *De la Vega* says, the Governor *De Castro* receiv'd kindly, and desir'd him to stay at *Quitu* to repose himself after the great fatigue he heard he had undergone; and that in compliance with this order, he staid in that City to the end of the war. But *Herrera* (who seems all along to have been an enemy to the *Pizarro* family, for what reason I don't know) asserts, that he march'd from *Quitu* to *Lima*, and there asserted his own right, and that *De Castro* and he conspir'd each others death. But indeed this seems to be ill founded; for, even as he tells the story, *Gonzalo* did not do any one act of hostility against *De Castro*; and when he was order'd to go from *Lima* to *Cosco*, he went without any hesitation, with a number much inferior to what the Governor had; which he surely would not have done, had he conspir'd against him, and been the fool to tell it; nor is it likely, that *De Castro* would have suffer'd him to have left *Cosco* with an armed force towards *Los Carcas*, had he apprehended any mischief from him. However this be, they both agree that *Gonzalo Pizarro* liv'd peaceably either at *Quitu* in the north, or at *Los Carcas* in the south parts of *Peru*, during the administration of *De Castro*; and it is true that he went soon after to *Los Carcas*.

Vega, P. 2. B. 3. Ch. 15.

Herrera, Dec. 4. B. 8. C. 3.

De Castro, having now rooted out the faction of the *Almagro's*, and the memory of the men of *Chili*, and quieted all the disturbances rais'd in revenge of the death either of *Almagro* or *Pizarro*, employ'd his time in settling the Government both in Church and State. He took special care to send Missionaries thro' the whole Country (there being now several Priests who had learn'd the *Indian* language, and *Indians* who understood *Spanish*) to convert the Natives, in which they had the better success, by putting them in mind, that their Inca *Guayanacapa* had declar'd, upon his death-bed, that the Law of the bearded men, was infinitely preferable to their own. He took great pains upon *Paullu* the Inca *Manco*'s Brother, who had stuck close to the *Spaniards*, and was a man of Sense. He receiv'd Baptism by the name

De Castro's good Government.

name of *Chriſtopher*. This Governor likewiſe ſettled the diſtricts of the ſeveral Biſhopricks, having authority both from the Emperor and Pope, for that purpoſe, and having Biſhops, and other Church men, to conſult with upon that ſubject.

Nor was he wanting in regulating the political Government; for, like a wiſe and good man, he conſulted the intereſt both of the *Spaniards* and *Indians*, conſidering theſe laſt as ſubjects of *Spain*, and therefore not to be oppreſs'd more than the others. He convers'd frequently with the Natives, and particularly with Inca *Paullu*, from whom he inform'd himſelf of the beſt Laws and Regulations made, of old, by their wiſeſt Inca's; and as he found ſeveral of them very good, he conform'd his to them, as far as regarded Juſtice and Property, with reſpect to the Natives. And he took care to redreſs their grievances, in contracts and bargains, and made both their Countrymen, and the *Spaniards*, do them Juſtice as far as was conſiſtent with the Conqueſt of their Country. Nor would he ſuffer the *Spaniards* to oblige them to change their native air, to one leſs healthful, nor to uſe them as ſlaves, becauſe they were ſervants; ſo that in a ſhort time, the *Indians* came to forget that they had loſt their Country, and became very eaſy, under the Government of *De Caſtro*. And ſure it had been the wiſdom of *Spain* to have always had ſuch Governors in *America*; becauſe they would have had three times more ſubjects there, by mildneſs and juſtice, than they had, by the cruel and inhuman uſage which thoſe poor creatures often met with.

The greateſt trouble he met with was, to pleaſe the *Spaniards*, who thought they had every one deſerv'd all *Peru*, for their ſervices, eſpecially in joining the King's Standard, in the laſt civil war. However, he divided the Lands with as even a hand as he could; and when he could not ſatisfy their demands and extravagant claims, he gave them Commiſſions to make new diſcoveries, and plant new Colonies, where they had been before, or in other parts as they thought moſt proper, as the Marquis *Pizarro* had done before him. An expedient which rid him of the importunities of many unreaſonable people; and the expectation of Mountains of Gold, made thoſe Adventurers eaſier than a greater tract of ground than ever any of their anceſtors had been maſters of, would have done. Thus he ſent *Pedro de Vergara* back to the *Pacamoros*, to the eaſtward of the northern part of *Peru*, from whence he had come, upon notice given him of the death of the Marquis *Pizarro*. *Diego de Rojas*, *Nicolas de Eredia*, and *Philip Gutierrez*, went to the Province of *Muſſu*, or *Moxos*, which is likewiſe eaſtward of *Peru*. And *Monroy* march'd to *Chili* to reinforce *Valdivia*. Others went to other places, where they had various ſucceſs; but the civil broils, often brought them together; where they eſpous'd ſometimes one cauſe, ſometimes another, as their intereſt or inclinations led them.

All things being now quietly ſettled at *Peru*, *De Caſtro* govern'd that Empire for about a year and a half, with great moderation, and to the ſatisfaction both of the *Spaniards*, and Natives. But in the year 1544, a new Scene open'd, which put the whole Empire in a combuſtion, and engag'd the *Spaniards* in a new Civil War, and a Rebellion of worſe conſequence than the former; the occaſion of which was this:

A certain Friar *Bartholomeo de las Caſas*, having been ſome time in *Mexico*, return'd to *Spain* about the year 1539. And, upon pretence of Zeal for the Propagation of Religion, propos'd a new Scheme for the Government of the *Weſt-Indies*; which was rejected by the Council for *American* Affairs, of which the Cardinal *de Loyaſa* was Preſident. However, in the year 1542, the Friar found means to be introduced to the Emperor, lately come from *Germany* into *Spain*, and having blended his new Conſtitutions, with ſome ſpecious Articles with reſpect to Religion, and ſome good Laws concerning the mild uſage towards the *Indians*; the Emperor, having join'd ſeveral others to the Council, had this Scheme debated; and tho' they who were beſt acquainted with the *Weſt-Indies* were againſt the Regulations propos'd, the Scheme was approv'd by the majority of the Council, and confirm'd by the Emperor at *Barcelona* on the 20th of *November*, 1542. Theſe Regulations conſiſted of 44 Articles, of which our Author only mentions four, as the ground of the future troubles. Vega, *P.* 2. *B.* 3. *Ch.* 20.

New laws made for the Weſt-Indies.

1. That after the death of the Conquerors, or the poſſeſſors of Plantations, all the Lands, ſo poſſeſs'd, or Cities built by any Commander, ſhould fall to the King; the Children and Widows of the ſaid Conquerors, Poſſeſſors, or Founders, having no property in them, but to have ſuch a ſhare of the Fruits of them, as the King ſhould think fit to appoint, for their maintenance.

2. That no *Indian* ſhould be tax'd, or oblig'd to pay any Tribute, in any Province where they paid perſonal ſervice; nor ſhould any of them be forced to work in the Mines, or to fiſh for Pearls; and

And where they paid corporal ſervice, they ſhould be capable of redeeming it, by a Tax upon their Goods.

3. That all *Biſhops*, *Monaſteries*, and *Hoſpitals*, ſhould give up, to the King, all the Right and Title they had to Lands, or Plantations, cultivated by *Indians*; and that all *Governors*, *Preſidents*, *Judges*, and their *Deputies*, as likewiſe all *Officers* of the King's *Revenue*, ſhould diſclaim all Right to ſuch Plantations, and that none of the King's Officers whatſoever ſhould be capable of keeping *Indian* Slaves, tho' they ſhould quit their Poſts to qualify themſelves for doing ſo.

4. That all ſuch as had Lands in *Peru*, and had been concern'd in the late diſturbances between *Pizarro* and *Almagro*, ſhould forfeit all their Power and dominion over the *Indians*; which diſabled all the *Spaniards* at once from having any Service from the Natives, there not being one *Spaniard*, in that part of the Continent, but what was engag'd, on the one ſide or the other.

The firſt of theſe Conſtitutions was contrary to the Grant already given by the Emperor, to all who ſhould venture their Lives in that Service; for they were not only to hold what ſhould be allotted them by the Governor, for the time being, during their own Lives; but their eldeſt Sons, or Daughters, and if they had no Child, their Widows were to poſſeſs the ſame during their Lives.

Tho' the ſecond ſeem'd, and perhaps was intended, for the eaſe of the Natives; yet it really was an injury to them; becauſe, if it took place, they could have no opportunity of working for their Bread, after their Land was taken from them. And had no *Indians* been employ'd in the Mines, *Spain* would have had a ſmall ſhare of the Riches of *Peru*. It would have been a thing worthy of the Emperor, to have reſtrain'd the uſing them ill, or making them Slaves; but to exempt them from ſervice was ill-judg'd, ſince it was their conſtant practice under their own Inca's.

As to the third, I wonder more at its paſſing, than I blame the rigour of it, tho' it ſeems to have made thoſe Lands uſeleſs to the Poſſeſſors, ſince it muſt be ſuppos'd, that, without people to cultivate it, Land is of no ſervice to the Proprietors.

When theſe new Laws were enacted, Copies of them were ſent to all the parts of the *Weſt-Indies*, where there were *Spaniſh* Colonies; and gave a general diſguſt. And when *Don Franciſco Tello* was ſent to put them in execution at *Mexico*, (for all, except the fourth Article mention'd, took place every where) the *Spaniſh* Poſſeſſors there, oppos'd them to a man, and the Superintendant, being a man of ſenſe, and temper, ſuſpended the execution of them in moſt of the hard Articles, becauſe he ſaw the inconvenience of them; and having repreſented to the Emperor, the ill conſequences of purſuing thoſe meaſures, he got them ſuperſeded, (at leaſt the moſt grievous of them) with regard to *Mexico*; and having quieted the minds of the ſubjects, he return'd to *Spain*.

Blaſco Nunez ſent Vice-Roy to Peru.

But that affair was carry'd after another manner in *Peru*. For *Blaſco Nunez* being ſent Vice-King to *Peru*, arriv'd at *Nombre de Dios* in *January* 1544, and, croſſing the ſhort neck of Land, came to *Panama*, where finding many *Indians*, brought from *Peru*, by *Spaniards* then reſiding at *Panama*, he diſcharg'd them all, even againſt their own wills, and order'd them to be ſent home. And when many expoſtulated the caſe with him, and told him, it would be an injury both to GOD and the King; becauſe, many of thoſe *Indians*, having embraced Chriſtianity, would be under a temptation of returning to their former Idolatry, by leaving their Maſters, beſides that their ſervice was neceſſary to procure Treaſure for the King; he made them no other anſwer, but that ſuch was his Majeſty's pleaſure, from which he was reſolv'd not to depart in a tittle; and he caus'd 300 *Indians* to be embark'd contrary to their inclinations, who periſh'd with famine and other hardſhips, without being able to reach their own Provinces. But *Nunez* talk'd ſo haughtily, and with ſuch indecent warmth upon that ſubject, that few people at *Panama* car'd to take the liberty to ſpeak to him of it; only *Carate* the Governor, finding that he reſolv'd to leave the Judges, (ſent with him from *Spain*, to aſſiſt him in the Government of *Peru*) repreſented to him, with much freedom, but very civilly, the danger of putting the new Laws in execution, in a Country ſcarce quieted after a ſharp Civil War; and therefore adviſ'd him, rather to ſuſpend the matter, till he had new inſtructions from the King, or until he had fix'd himſelf in the Government, and ſeen the true intereſt of the Country. But he reply'd, with great heat, that he would execute the King's Orders, without any delay, and he would let the Judges ſee, that he had no need of their aſſiſtance.

He arrives at Tumbez.

With this intention, he left *Panama*, with only his own family, and landed at *Tumbez* the 4th of *May*, and taking his journey by land, he publiſh'd his new Orders wherever he came; laying a Tax upon ſome, according to the number

ber

ber of *Indians* they kept, and taking them away from others. He likewiſe diſpatch'd expreſſes to *Lima* and *Coſco*, to let them know, that, as he was arriv'd in the Country, *Vaca di Caſtro*'s Commiſſion was void. *Di Caſtro*, having intelligence of his approach, went to *Lima*, where he determin'd to wait his coming, and to ſubmit intirely to the King's orders without murmuring.

In the mean time, the *Spaniards* of the Country, who had both from *Spain*, and *Panama*, receiv'd Copies of the new Laws, which (if put in execution) depriv'd them of all benefit of their Fatigue and Blood, employ'd in the Conqueſt of *Peru*, hated the new Vice-Roy before they ſaw him; and finding, by his behaviour in the places he paſs'd thro', ſuch as *Tumbez*, *S. Michael*, and *Truxillo* (from all which they had advices ſent them) that he put the new Laws in execution, without liſt'ning to any remonſtrance made againſt them; and hearing, from all quarters, that he was a man of an inexorable nature, they ſent meſſengers to *Coſco* and *Lima*, to deſire them to enter into ſome concert, to ſtop the execution of the Laws, and to provide againſt the impending Storm. The Colony at *Coſco* apply'd to *Di Caſtro*, before he left them, declaring that, if he would ſtand by them, they would ſupport his Commiſſion, and refuſe admittance to the new Vice-Roy; but finding him reſolv'd to obey the King's orders, and that he poſitively refus'd to engage in any meaſures againſt *Nunez*; after the principal Citizens had convey'd him a part of his way to *Lima*, they took leave of him, and return'd to *Coſco* to put themſelves upon ſome footing, whereby they might enjoy the fruits of their labours.

When *Di Caſtro* arriv'd at *Lima*, he was receiv'd with loud acclamations; but the new Vice-Roy being not far from the City, the old Governor ſent his Secretary, and Major *Domo*, to compliment him, in his Name, and by Letter aſſur'd him of his readineſs to obey his Majeſty's commands, and to ſhew all regard to his Lordſhip's Commiſſion. *Nunez* receiv'd them civilly, and ſoon diſpatch'd them, with his Compliments to their Maſter. But, at their return, they gave ſuch accounts of the ſeverity of the Vice-Roy's temper, that the Colony at *Lima* were like to mutiny, and talk'd openly of ſhutting the gates againſt the Vice-Roy: but others, of more moderate tempers, diſſuaded them from violent reſolutions, and prevail'd with them to receive him in an honourable manner.

Upon *Nunez*'s arrival, he was met by *Vaca di Caſtro*, and the principal inhabitants of *Lima*, about three leagues from the City; and by the Magiſtrates, near the Town, where *Suarez*, Commiſſary of the King's Revenue, in the Name of the Corporation, tender'd an Oath to him, obliging him to maintain all the privileges and immunities, granted by his Majeſty to the Conquerors, and *Spaniſh* inhabitants of *Peru*; and that he would hear their Reaſons, and receive their Petitions, in the Courts of Juſtice, againſt the new Regulations. The Vice-Roy would only ſwear, in general terms, to do every thing that was for the King's ſervice, and the good of the Country. This indefinite Oath troubled the *Peruvian Spaniards* very ſenſibly. However, the Vice-Roy was conducted to the Cathedral in great ſtate, and after paying his Devotions there, to the late Marquis *Pizarro*'s Houſe, where he and his Family were accommodated.

And comes to Los Reyes.

And here our two Authors, *De la Vega*, and *Herrera*, differ ſo widely in their accounts of what paſs'd, during the adminiſtration of *Nunez*, that it is impoſſible to reconcile them; but tho' I by no means approve of Rebellion in any ſhape, or upon any pretence, and conſequently blame *Gonzalo Pizarro* for carrying things farther than he ought to have done, I cannot but do this juſtice to *La Vega*, as to inform the Reader, as it appears to me, that he was, in all appearance, leſs biaſs'd by perſonal prejudice that the other Author. For, thro' the whole Hiſtory of the affairs of *Peru*, *Herrera* ſhews himſelf a mortal enemy to the whole *Pizarro* Family; and talks of all the Brothers, in the moſt indecent, virulent terms. Whereas *De la Vega*, ſpeaks favourably of them, and yet does not juſtify them, in any bad action; for he blames both the Marquis, *Don Franciſco*, and the other Brothers, for their behaviour to *Almagro*, when they had him in their power; and he owns that *Gonzalo* made a bad uſe of the power given him, and that he was a Rebel, as we ſhall ſhew hereafter. I do not ſay, that this Author has no biaſs; but, as far as I can judge, it is the moſt excuſable one that can be, *viz.* his affection to his Country. Taking, therefore, things in this light, it will not be thought ſtrange if I am more inclin'd to follow *La Vega*, than the other; eſpecially when it is conſider'd that he was a Native of *Coſco*; and born ſome years before *Nunez* arriv'd in *Peru*: and, tho' he was too young to know the tranſactions of the enſuing war, when they happen'd; yet he was acquainted with ſo many of the principal actors, of both ſides, that I can not but think he had

the beſt opportunity of coming at the Truth; and I believe he has given it faithfully, in the moſt material things, where he was not led aſide by Authors who writ before him, in matters which he had no opportunity of learning from the actors themſelves. But I ſhall not follow him implicitly neither, nor take his accounts upon truſt, where his biaſs appears. To return then to our purpoſe.

The Vice-Roy being reſolv'd to execute the new Regulations, in the very Letter of them, ſo diſguſted all the *Spaniards* of *Peru*, that all Authors are agreed, that he ſoon incur'd the univerſal hatred of the whole *Spaniſh* Inhabitants; and, in a ſhort time, they began to cabal againſt him, not only in the diſtant Cities and Colonies, but in the very Town of *Lima*, where he reſided. And what encourag'd them the more to it, was, that the Judges, (ſent with him from *Spain*, as his Counſellors and Aſſiſtants) being now arriv'd at *Lima*, and ſeeing the inconveniencies of the new Laws, and judging of the ill conſequences of putting them in execution, endeavour'd to perſuade him to ſuſpend them, until he ſhould hear from *Spain*; telling him plainly, that if the Emperor had been appriz'd of the true ſtate of the Country, he would not have given him ſuch a Commiſſion. But *Nunez*, who appears to have been of a ſtiff poſitive temper, and perhaps out of a miſtaken principle of Loyalty, would obey the King's orders, to his Majeſty's prejudice; *which a Miniſter ought never to do, without having firſt repreſented things in a true Light to his Maſter*; fell into a paſſion with the Judges, reproaching them with want of Loyalty, or, at leaſt, of Zeal for his Majeſty's Service; declaring that he would, with vigour, execute his orders to the very ſmalleſt point: which, tho' the Judges, for ſome time, diſſembled their reſentment, created ſuch a miſunderſtanding between them, as ſoon became viſible to the whole City of *Lima*, and was very acceptable news to the whole Empire.

A miſunderſtanding between the Vice Roy and his Judges.

But, tho' the *Spaniards* hated the Vice-Roy, upon account of the new Laws, and his obſtinacy in rejecting all ſolicitations for ſuſpending them; *Manco* Inca, who, for a long time, had liv'd retir'd in the Mountains, and ſeem'd to have given over thoughts of Empire, being inform'd of this miſunderſtanding, between the new Vice-Roy and the Proprietors, thought it a lucky juncture for him, to recover his Right, at leaſt to a part of his Dominions. He therefore, being prompted by *Mendez*, and *Perez*, who, with ſix other *Spaniards*, had taken ſhelter with him, to skreen them from the juſtice of *Di Caſtro*, writ a Letter to *Nunez*, offering his Service to the King of *Spain*, by joining with his Vice-Roy; the *Spaniards* writing, at the ſame time, to deſire a pardon for what was paſt, and promiſing to promote his intereſt with the Inca. *Perez* was charg'd with this Embaſſy, having a ſufficient number of *Indians* for an eſcorte. The Vice-Roy receiv'd the Letters with pleaſure, granted all that the *Spaniards* deſir'd, and ſent a civil meſſage, full of reſpect to the Inca; with which *Perez* came back to the Mountains, and was receiv'd with joy both by his Companions, and the *Indians*. *Manco* gave immediate orders to levy forces; but, poor Gentleman! his unlucky Fate, occaſion'd by the brutality of this very *Perez*, diſappointed his expectation.

He had kindly entertain'd theſe eight *Spaniards*, for many months, and, being inſtructed by them, had got a Bowling-Green made, where he frequently play'd with them; but *Perez* had ſeveral diſputes with him, about their caſts, wherein he treated the Inca with little reſpect. After his return from *Lima* he grew more inſolent; and, one day, playing at Bowls with him, he us'd the Inca in ſo rude a way, that *Manco* loſing his temper, punch'd him on the Breaſt, bidding him remember whom he ſpoke to; at which the Ruffian threw the Bowl at his head, and kill'd him with the blow. This ſo juſtly enrag'd the *Indians*, that they kill'd them every man. This unfortunate accident made the *Indians* diſperſe, thinking now all the *Spaniards* equally their enemies; ſo that they reſolv'd to retire till the *Spaniards* ſhould deſtroy one another, that they might have an opportunity of killing the laſt; and ſo rid their Country of a People who had done ſo much miſchief in it.

The unfortunate death of Manco Inca.

In the mean time, the Vice-Roy, going on in the vigorous execution of the new Laws, ſtill increas'd the Diſcontents of the *Spaniards*; who finding that there was no redreſs to be expected from him, by any particular applications, notwithſtanding all that the Judges could do; they reſolv'd to join in a general Petition of the moſt conſiderable Cities, and Colonies, in the ſouth part of *Peru*. In order to this, the Magiſtrates of *Coſco* ſent Letters to *Guamanga*, *Arequipa*, and *Caquiſaca*, all in the ſouth of *Peru*, to repair to *Coſco*, by their Deputies, to conſider of the common ſafety; and after ſeveral debates, and different opinions, it was agreed to ſend for *Gonzalo Pizarro*, who was now in the Province of *Los Charcas* ſouth of *Coſco*, where his

Several Cities join, and ſend for Gonzalo Pizarro.

Brother

Brother *Fernando* and he had both Plantations, intending to make him their Solicitor to the Vice-Roy. *Gonzalo* having receiv'd their Letters, ſet out, with only ten or twelve friends, and made what haſte he could to *Coſco*; having firſt provided what Money he could, out of his own and his Brother's Plantations.

When he arriv'd at *Coſco*, they talk'd over the Grievances, which, to be ſure, he did not endeavour to leſſen, being ſecretly vex'd to ſee the Government of that rich Country torn out of his hands, firſt by *Di Caſtro*, and now by *Nunez*. However, he conceal'd his private deſigns, only he told them, that he hop'd they would not expect of him, that he ſhould throw himſelf into the Vice-Roy's power, who had given out that he had the Emperor's orders to cut off his head. If therefore they would have any thing done to purpoſe, they muſt raiſe ſuch a force as was ſufficient to guard his perſon, both againſt the *Indians* under Inca *Manco* (who at this time was alive, and raiſing forces) and likewiſe againſt any inſults he might meet with at *Lima*. This bore a long debate, there being many, who, tho' they were willing to petition, were averſe to any thing that had the face of Rebellion; but *Pizarro* cunningly work'd up the tempers of the moſt firy, and got ſome of his creatures underhand, to ſhew the neceſſity of arms, not to oppoſe the King's Authority, but to keep themſelves from having their Throats cut, or their Eſtates confiſcated by a Tyrant, who being in the *Almagrian* Intereſt, would, without the Emperor's knowledge, oppreſs all ſuch as had any intereſt in the *Pizarro* family.

He is made Procurator General for ſome Cities.

By theſe Artifices, he brought them to ſign a joint Commiſſion, from the Deputies of the Cities above-nam'd, to make him their Procurator-General, with a power to liſt men, for the ſafeguard of his perſon, againſt the *Indians* on the road. Having obtain'd this, he ſoon levy'd about 400 men, and writ very endearing Letters to other Towns, and private Plantations, inviting all the *Spaniards* to join him, for the ſafety of their Lives and Eſtates, againſt the tyranny of *Nunez*, who acted againſt the Emperor's orders, in ſhewing no regard to the advice of the Judges, in concert with whom he had been commanded to act. This bait took with a great many, ſo that *Pizarro*'s forces increas'd every day.

He raiſes forces and declares himſelf Governor.

Having thus got himſelf at the head of above 500 men, horſe and foot, he threw off the mask, and proclaim'd himſelf the Emperor's Governor of *Peru*; alledging, that it was not in his Majeſty's power to recall the Grant he had once beſtow'd upon the firſt Conquerors, which was, that every one was to enjoy the Lands aſſign'd to him for two Lives, and that the Marquis *Pizarro* was to be Governor for his life, and to leave it to his heir, for his. This plain declaration made many, who had ſign'd his Commiſſion, repent of what they had done. But it was now out of their power to diſpoſſeſs him of his authority; yet he ſtill pretended to continue upon the defenſive, and that his deſign was only to petition, and if that did not ſucceed, to keep himſelf and his conſtituents out of *Nunez*'s hands, until they might have time to ſend to the Emperor, and if that fail'd of the wiſh'd effect, he declar'd he would then ſubmit to his Majeſty's pleaſure.

Di Caſtro impriſon'd by the Vice-Roy.

When the account of the proceedings at *Coſco* was brought to *Lima*, the Vice-Roy, knowing that he was little belov'd there, caus'd ſeveral perſons, whom he ſuſpected (and among them *Vaca di Caſtro*, the late Governor) to be ſeiz'd, under pretence of intelligence with the Rebels, (for ſuch indeed *Pizarro* was now become) and ſent them aboard ſome ſhips, in the port of *Lima*. He likewiſe gave orders to augment his forces, and gave the command of them to his Brother *Vela*; providing them with all ſorts of arms; and even melting down the Church Bells to make Guns of. His Army conſiſted of 600, about 150 of which were horſe.

Forty Gentlemen of Coſco deſert Pizarro.

In the mean time, about forty of the moſt conſiderable Gentlemen of *Coſco*, who did not approve of this ſeditious and treaſonable manner of petitioning with Pike and Gun, deſerted *Pizarro*, who was now encamp'd not far from the City; and going home, prepar'd every thing neceſſary for an expedition to *Arequipa*, where two ſhips lay, which *Gonzalo* had bought to carry Ammunition and Proviſions to *Lima*, when he ſhould be poſſeſs'd of it. Thoſe ſhips they deſign'd to have ſeiz'd, and carry'd to the Vice-Roy; and accordingly perform'd the journey; but when they came to the place, they found that they had been prevented by *Serena* and *Carceres*, two Citizens of *Arequipa*, who had perform'd what they deſign'd, and, by bribing the Seamen, had ſail'd to *Lima*, and were graciouſly receiv'd by the Vice-Roy. This diſappointment broke all their meaſures; for there was no hazarding the going by land, becauſe *Pizarro* had guarded all the paſſes leading to *Lima*; that they were oblig'd to ſtay there forty days, to build a Boat to tranſport them to *Lima*; but that delay loſt the whole affair. For, had they gone by land (as they

they were oblig'd to do after all, becauſe their Boat ſunk as ſoon as launch'd) they had arriv'd time enough to have given reputation to *Nunez*'s party, and in all probability, they might have occaſion'd a general deſertion in *Pizarro*'s.

Pizarro having muſter'd his forces, and added to them 20,000 *Indians*, of which 12,000 were employ'd in drawing twenty pieces of cannon, which had been taken from *Guamanga*, where *Di Caſtro* had left them, began his march towards *Lima*. But the revolt of the forty Gentlemen gave him much trouble, tho' it was ſoon made up by a double deſertion from the Vice-Roy's ſide to his. For, *Pedro di Puelles*, Deputy Governor of *Guanuco* (a Colony in 10 deg. ſ. lat.) having his Commiſſion renew'd by *Nunez*, was ſent for, by him, to come to his aſſiſtance, againſt *Gonzalo*. But *Puelles*, being join'd by ſome other Colonies near him, repreſented to his friends the Slavery they muſt be under, if the Vice-Roy ſhould get the better of *Gonzalo*; ſo that they all agreed to march and join the Rebels, inſtead of going to *Lima*. This reſolution of theirs being diſcover'd to *Nunez*, he ſent a party, under the command of his Brother, to intercept them; but that party miſſing of them, follow'd their example, and march'd to join *Gonzalo*, their leader hardly eſcaping, with a few friends, back to *Lima*.

Pedro di Puelles revolts from the Vice-Roy.

But ſo uncertain were people's minds, and ſo divided between Loyalty and Intereſt (*ſo ill it is judg'd to drive things to extremities*) that whilſt ſome recruits were upon their march to join *Gonzalo Pizarro*, others were contriving how to get from him to *Lima*. One of the chief of thoſe was *Gaſpar Rodrignez*, or as ſome call him *De Rojas*; but he having been the perſon employ'd in taking the cannon from *Guamanga*, he would not truſt himſelf with the Vice-Roy, unleſs he firſt ſign'd a pardon for that offence; which he did; but being elevated with the thoughts of *Gaſpar*'s declaring for him, he imprudently publiſh'd it in *Lima*, from whence it was immediately tranſmitted to *Pizarro*; with the pardon ſign'd, which they had taken from the Prieſt, to whom it had been deliver'd. *Gonzalo*, upon this diſcovery, adviſ'd with ſome of his friends; and ſending for *Gaſpar*, by their advice, (under pretence of communicating ſome diſpatches arriv'd from *Lima*) as ſoon as he came to him, he was ſeiz'd and beheaded, with ſome others concern'd in the Plot.

And De Rojas *thinking to revolt from* Pizarro, *is diſcover'd and kill'd.*

To compenſate this loſs, *Nunez* taking umbrage at ſome intercepted letters writ in cypher, from *Benito de Carvajal*, to his Brother, the Agent *Illan Suarez*, who was then at *Lima*, ſent for him, and commanded him to decypher the Letters, which he did without heſitation, and producing the key, made it appear, that thoſe Letters were an account of the miſunderſtandings in *Pizarro*'s Camp, and his own deſign of taking the firſt opportunity of coming to join the Vice-Roy; yet *Nunez* ſtill ſuſpected him, tho' without reaſon, and ſoon after, ſome relations of *Suarez*'s quitting *Lima* in the night, the Vice-Roy ſent for *Suarez*, and calling him *Villain* and *Traitor*, had him murder'd in his preſence. This ſtep, ſo arbitrary, and ſo unjuſt, he often repented of afterwards, and reproach'd his Brother for having brought *Suarez* to him, when he ſaw him in a paſſion; and indeed he had good reaſon to be ſorry for it, becauſe it was made a ground for his confinement very ſoon after.

The Vice-Roy murders Suarez.

Gonzalo Pizarro, being encourag'd by the arrival of *Puelles*, proceeded in his march to *Lima*; upon the report of which, the Vice-Roy, finding that he was not in a condition to fight him, and being unwilling to ſtand a Siege, determin'd to ſend the Citizen's Wives by Sea to *Truxillo*, and to march himſelf by Land, with ſuch forces as he had. This reſolution he communicated to the Judges, who boldly oppos'd it, and, by intelligence with the Inhabitants, ſeiz'd the perſon of the Vice-Roy, and, under colour of freeing him from the danger of falling into *Pizarro*'s hands, ſent him on board a ſhip, giving *De Robles* a warrant under their hands for ſeizing and detaining him, as being neceſſary for the King's ſervice.

And is confin'd himſelf by order of the Judges.

This proceeding of the Judges brought all things into confuſion at *Lima*, ſome ſetting up for *Nunez*, and others for the Judges; but indeed, the Judges were in the right to ſend him aboard, for otherwiſe he had been murder'd by *Suarez*'s friends; his Brother being arriv'd, as he had promis'd in the cypher Letters, and was ſo much incens'd for his murder, that he was reſolv'd to revenge it: whilſt, on the other hand, a conſiderable number conſpir'd to kill the Judges, and releaſe the Vice-Roy; but being diſcover'd, one of the chief of them had his hand cut off, by their ſentence, and the reſt were impriſon'd for ſome time.

In the mean time, *Alvarez*, one of the Judges, was deputed to carry the Vice-Roy to *Spain*, and the whole proceedings, during his adminiſtration, were prepar'd to be ſent along with him; but he going on board, chang'd ſides; for, tho' he had been one of the greateſt promoters of the confinement of *Nunez*, he now beg'd his pardon, promiſing to do whatever

whatever he desired; and to make good that promise, at his desire, he set sail for *Truxillo*, without waiting for the dispatches. This shock'd the judges, and made them apprehend the consequences of it. But hearing that *Pizarro* was upon his march, they sent a deputation to him, requiring him to lay down his arms, and to come peaceably to *Lima*, because all that he had given out, as the reason of his having first taken them up, was now perform'd; for they declared the new laws suspended, till farther orders from the King; which being done, and the Vice Roy sent out of the country, to be judg'd in *Spain*, there was nothing left for *Gonzalo* to do by force. In answer to this message *Gonzalo* insisted that the judges should declare him Governor of *Peru*, and to give him the investiture of it by their authority. They hesitated some time before they came into these proposals; but, upon his taking possession of *Lima*, and hanging two or three persons, in *Terrorem*, the judges got the whole inhabitants to join with them in declaring the government of *Peru* vested in *Gonzalo Pizarro*, till the Emperor's further orders.

Gonzalo *marches to* Lima.

Gonzalo Pizarro *declar'd Governor of* Peru at Lima.

Thus was *Gonzalo* in full possession of the administration, and wisely left the courts of justice to the judges, keeping the army under his own direction: but some irregularities were committed and some considerable persons were put to death, which *Pizarro* charged upon *Carvajal*, altho' it is to be suppos'd he, at least, conniv'd at, since he did not punish him.

Things being settled at *Lima* to *Gonzalo*'s mind, he judg'd it proper to send an account to *Spain* of all that had happened, and after consulting his friends about it, it was thought necessary to send two messengers, in the same ship, on board of which *Vaca de Castro* was still embark'd, and detain'd prisoner, there being no other then in the Port. But *de Castro* being afraid of some insult from *Pizarro* or *Carvajal*, and having no body aboard of their party, prevailed with the ship's crew to set sail for *Panama* before *Pizarro*'s dispatches were got ready. This provok'd the new Governor to that degree, that he in a fury imprison'd all such as he suspected to be of the King's party, (not only the inhabitants of *Lima* but those who had come from *Cosco* to join the Vice Roy,) pretending that they were concern'd in the escape of *de Castro*; and many severities and cruelties were then committed; and *Carvajal* made money of delaying some executions, till *Pizarro* was in good temper to grant pardons, which brought in bribery, and turn'd the hearts of many from the new administration.

Whilst *Pizarro* carried matters thus, with a high hand at *Lima*, the Vice Roy *Nunez* arriv'd at *Tumbez*, where he landed, and, with the sole judge *Alvarez*, erected a court of justice, and published a manifesto, containing an account of the rebellion of *Pizarro*, with all the particulars of his own confinement and escape; exhorting, and commanding all his majesty's loyal subjects to come to his assistance: but, altho' some were prevail'd upon to join him, and sent in provisions to him; yet the dread of the new laws, and the universal ill character he had acquired, prevail'd with most of those whom he trusted, to carry his manifesto, and other warrants to the *Spanish* Colonies, to go with them to *Lima*, so that *Pizarro* had intelligence of all his proceedings; and not thinking it convenient to let him sit quietly so near him, sent out a strong party to dislodge him. The news of their march coming to *Tumbez*, the Voce Roy was forc'd to leave the place, having been deserted by many of those who first came over to him; and *Bachicoa*, one of *Pizarro*'s captains, for that expedition, surpriz'd two ships belonging to *Nunez*, with which he scour'd along the coast, to hinder any assistance from coming from *Panama* to him, and took all ships which came in his way.

Nunez *arrives at* Tumbez.

The Vice Roy, together with judge *Alvarez*, march'd over the mountains to *Quitu*, in which march they suffer'd much by the ruggedness of the road, and want of provisions, so that they were forc'd to eat horse flesh, and roots and herbs. *Pizarro* pursuing him sometimes by his Captains, and sometimes in person; so that, for the space of a whole year, there was nothing but confusion and slaughter thro' the whole empire of *Peru*; the Vice Roy be-heading and hanging such of his own party, as either were betraying him, or he suspected of treachery; *Pizarro*, on the other hand, putting to death all the heads of the vice roy's party who came in his way; and these butcheries on both sides were attended with all the circumstances of cruelty and injustice; but I chuse rather to give this account of them, in general, than to descend to particulars, of small importance to an *English* reader. I shall only add, that I believe the slaughter committed by both Parties, during this civil war, had great influence upon the *Spanish* writers, and made them give characters of the different Chiefs, according to the treatment they gave their friends: altho' I cannot but commend the moderation of *La Vega*, who all along speaks with temper of *Pizarro*, tho' he does not approve his actions, nor does he justify his own father, for having espous'd his cause.

is pursu'd by Pizarro.

But the blood and ſlaughter were not confin'd to the places where the Vice Roy and *Pizarro* kept their quarters. For, whilſt they were hunting one another, and ſtarving their men in mountains and deſarts in the North, the Cities of the South were not at peace; ſome of them declaring for the Vice Roy, and ſome for *Pizarro*; and thoſe who were ſome part of the year for one party, chang'd ſides and declared for the other; ſuch as, *Coſco*, *Guamanga*, *La Plata*, and even *Lima*, which was now become the chief Colony of the *Spaniards*. Thoſe frequent revolts obliged *Pizarro* to ſend *Carvajal* into the South, where having recruited his army at *Lima*, with ſuch as were beſt affected to *Pizarro*, and at *Coſco*, he march'd againſt *Diego Centeno*, who had kill'd *Almandra*, (governor of *La Plata* for *Pizarro*) and declar'd forthe vice roy. They had ſeveral skirmiſhes together, but *Centeno* kept ſome paſſes in the mountains, where he preſerv'd himſelf for ſome time with great bravery. And altho' he was not ſo old and experienced a ſoldier as *Carvajal*, he defended himſelf ſo well, that *Carvajal* himſelf commended his conduct, particularly in one reteat, and equall'd him to the moſt famous Generals that he had known, or read of. Nor did he ever yield to *Pizarro*, but kept himſelf cloſe, after the Vice Roy's defeat, and appear'd afterwards on the King's ſide, where he did good ſervice.

In the mean time *Gonzalo Pizarro* was ſtill in purſuit of the Vice Roy, and in his march ſuffer'd much; for *Nunez* being before him, left him no proviſions for his army, wherever he came. But thoſe difficulties did not frighten *Pizarro*, who knowing that the whole ſucceſs depended upon the perſon of the Vice Roy, was reſolv'd either to kill him, or to drive him out of *Peru*; and therefore holding on his march to *Quitu*, *Nunez* left it, taking the route of *Popayan*, the Government of *Belalcazer*. *Pizarro* purſued him as far as *Poſto*, the firſt *Spaniſh* Colony in that territory; but knowing the country, thro' which *Nunez* march'd, to be ill provided, and a deſart, and being aware that his enemy would ſeize all the ſcanty proviſions there were, he contented himſelf with having obliged the Vice Roy to abandon *Peru*, and ſo return'd to *Quitu*, where he ſpent ſome time in feaſting and jollity, thinking himſelf little leſs than king of all that country without any competitor. From *Quitu* he ſent *Hinojoſo*, with ſome ſhips, to *Panama* to prevent their ſending any recruits to *Nunez*. This new admiral of his, having put into the port of St. *John*, otherwiſe call'd *Buena Ventura*, on the coaſt of *Papayan*, had intelligence that *Vela Nunez* was there, upon his march to *Panama*, having been ſent, by his brother the Vice Roy, to haſten the recruits; *Hinojoſa* ſent out ſome parties in ſearch of him, one of which brought him to the town priſoner, together with a baſtard ſon of *Gonzalo Pizarro*'s whom he had taken, and was carrying with him. Having got *Vela Nunez*, in his power, he ſet ſail for *Panama*, where he was receiv'd, after ſome ſtruggle, upon his promiſe of committing no hoſtility; which he perform'd very honeſtly; and hearing that *Verdugo*, (who had declared for the Vice King in *Truxillo*) had retir'd to *Nicaragua* in *Mexico*, becauſe he durſt not come to *Panama*; he ſent one of his officers with two ſhips after him thither. This officer was refus'd entrance at *Nicaragua*, but he took the ſhip in which *Verdugo* had made his eſcape, and ſo return'd to *Hinojoſa*.

Nunez *returns to* Popayan.

Whilſt theſe things paſt at *Panama*, *Pizarro* decoy'd the Vice Roy out of *Popayan* by a ſtratagem. He gave out that he was going ſouthward, in order to chaſtiſe *Centeno*, and having corrupted a ſpy, (ſent by the Vice Roy to *Quitu*,) he writ falſe accounts, in his cypher to *Nunez*; and made *Pedro di Puelles* write to ſome of his friends in *Popayan*, inviting them to come and divert themſelves at *Quitu*, becauſe *Pizarro* was gone to *Los Charcas*, having left him his Deputy at *Quitu*. Theſe letters, having been ſent in ſuch a way as to fall into the hands of the Vice Roy, had the deſign'd effect; for *Nunez*, believing that he had no enemy at *Quitu* but *Puelles*, march'd immediately with his own forces, and thoſe of *Belalcazar*, conſiſting in all of about 300; and *Pizarro* had taken ſuch care of the roads, that the Vice Roy knew nothing of his being in the country, till he came to *Quitu*. In the mean time, having begun his pretended march towards *Lima*, he thought fit to be ſick the ſecond orthird day, and therefore ſtop'd under colour of recovering his health, till he had intelligence that *Nunez* waswithin two or three day's march of *Quitu* and having concerted meaſures before hand with *Puelles*, they join'd to oppoſe his paſſage at a river within three leagues of the city. But *Nunez*, by *Belalcazar*'s advice, gave them the ſlip, and took another route to *Quitu*; but finding no aſiſtance there, and being purſu'd by *Pizarro*, he drew up his forces, near the city, and gave him battle; but the other was ſo much ſuperior to him in number, that after a ſtout reſiſtance for ſome time, the Vice Roy's party gave way, many brave officers were kill'd, and *Nunez* himſelf, in ſpite of his age, fighting like a heroe, was knock'd down, and by *Suarez*'s order

Pizarro *by ſtratagem brings him back to* Quitu.

Nunez *defeated and kill'd.*

der (in revenge for his brother's death) his head was cut off, and carried to *Quitu*, where it was ſet upon a pole: but *Pizarro*, angry at that indignity, order'd it to be taken down, and honourably buried with the body. Above 200 of the Vice Roy's people were kill'd in the battle, and not above 20 of *Pizarro*'s. *Belalcazar* was ſore wounded and taken priſoner, but as ſoon as he was cur'd of his wounds, *Pizarro* diſmis'd him, and he went to his government with as many of his men as were left, promiſing never to oppoſe *Gonzalo* again. Some of the priſoners (who had deſerted to the Vice Roy, and had been moſt active againſt *Pizarro*) he either hang'd up, or baniſh'd to *Chili*; and releaſed all the reſt, taking them into his army, in the ſame ſtations they had under *Nunez*. He likewiſe forgave the Vice Roy's Brother, but to prevent his doing any thing againſt his intereſt, he took him with him to *Lima*.

Pizarro having now no enemy to make head againſt him in *Peru*, march'd to *Lima* very peaceably, eſtabliſhing the colonies as he paſt, and giving very prudent orders both with regard to the *Spaniards* and *Indians*. When he arrived there, he took care to lay aſide the fifths for the King, and iſſued out all his orders in his majeſty's name, as his brother the marquis had done. And for ſome time, he govern'd with great moderation, and with all the marks of loyalty. But *Carvajal*, having defeated *Mendoza*, and ſent his head to *Arequipa*, together with three other heads of the chief officers of *Centeno*'s party, march'd to *Lima*, where *Pizarro* careſs'd him as his beſt friend; and this *Carvajal* being of a ſour cruel temper, put the governor upon ſeveral harſh and bloody acts, and particularly he put *Vela Nunez* to death, for attempting to eſcape.

Whilſt *Pizarro* was making way for his advancement in *Peru*, the news of the troubles there, had reach'd the court of *Spain*, which gave them great uneaſineſs. The Emperor being, at that time, in *Germany*, his ſon Prince *Philip* took cogniſance of the matter, with the council of the *Indies*, who were much divided in their opinions about the remedy to be apply'd to the preſent diſtemper: ſome adviſing to ſend forces to ſubdue *Pizarro*; but others thinking of more moderate ways, it was, at laſt, with the approbation of the Emperor, whom they had conſulted upon the ſubject, agreed to ſend a perſon of wiſdom and temper, with a commiſſion of *Preſident*, to ſettle the affairs of *Peru*; and according as he ſhould find matters at his arrival there, either to ſend *Nunez* back to *Spain*, and to confirm *Pizarro* in the government, or to puniſh him as a rebel.

De la Gaſca ſent from Spain as Preſident of Peru.

To perform this important piece of ſervice, they pitch'd upon *Pedro de la Gaſca*, a prieſt, and one of the council of the inquiſition, whoſe good ſenſe, and ſmooth temper were much wanting to rectify a diſordered ſtate. His commiſſion dated at *Vienna* in the year 1546, gave him as abſolute power over all perſons and cauſes in *Peru*, as the King himſelf had. He could puniſh or pardon treaſon, make or repeal laws, and, in ſhort, perform all acts of ſovereignity; as he ſhould judge moſt for the ſervice of GOD, and the King.

With this commiſſion, *Gaſca* ſet ſail from *Seville* in ſpring 1546, and arriv'd at *Nombre de Dios* about the middle of *July*, and croſs'd over the mountains to *Panama*, where *Hinojoſa* then was with his fleet. The preſident was receiv'd in that city, with much reſpect, where he treated every body with great civility; and having had ſeveral conferences with the admiral, he perſuaded him to eſpouſe the royal intereſt, which, in a little time, he comply'd with, the Preſident having ſhew'd him his inſtructions, to repeal the new laws, and to grant a free pardon for all that had been done, during the civil war. But they agreed to keep the thing ſecret for a while, till they ſhould firſt ſee after what manner *Pizarro* would receive a meſſenger whom *Gaſca* deſign'd to ſend to him, with the emperor's letter, and one from himſelf. *Hinojoſa*, in the mean time ſent him an account of the preſedent's arrival, and of the repeal of the new laws, and adviſ'd him to accept of the pardon, and ſubmit to the King's authority.

Vega p. 2. b. v. c. 5.

Upon the arrival of this intellignce at *Lima*, there was great variety of opinions among *Pizrrro*'s chief confidents. *Carvajal*, as *De la Vega* ſays, declar'd his opinion for ſubmitting to the King, ſince the preſident had orders to repeal the new regulations, which were the occaſion of taking arms, and likewiſe to grant a pardon for all that was paſt, without any exception. But this was oppos'd by others, who ſaid that theſe were gilded pills, to entice them to lay down their arms, and then to lead them to execution. They were therefore of opinion, that a meſſage ſhould be ſent to *Gaſca* to return to *Spain*, and not to ſet his foot in *Peru*, upon pain of death. Others again adviſ'd to invite him to *Peru*, and as ſoon as he came, to put him in arreſt, or to murder him. However, at laſt, it was agreed upon, to ſend an embaſſy to *Spain*, and in the mean time, to keep the preſident as long at *Panama* as they could, and when he ſhould come to *Peru*, to enter into a treaty with him, and to ſpin out the negotiation to ſuch a length, that they might

Different opinions at Lima how to behave towards him.

might give time to their meſſengers to return from *Spain*, with new orders. When this was concluded on, they choſe *Aldana* with two others to go to *Spain*, who, upon their arrival at *Panama*, went to *Hinojoſa*, and told him their inſtructions; but in a few conferences with them, he perſuaded them to follow his example, which they did, going with him to the preſident, and offering their ſervice to the king.

The preſident ſends letters to Pizarro.

In the mean time, the preſident ſent *Paniagua* to *Peru* with the king's letter to *Pizarro*, and another from himſelf; in both which the fault of the civil war was laid upon *Blaſco Nunez*'s obſtinate temper, and *Pizarro* was, in mild terms, exhorted to return to his duty; upon which, the new laws were to be abrogated, and not only a pardon granted, but *Pizarro* and his family were to be rewarded, for their ſervices to the crown. When *Paniagua* arriv'd at *Tumbez*, he made the beſt of his way, without any oppoſition to *Lima*, where *Pizarro* receiv'd him with outward civility, but deſir'd him to meddle with nothing belonging to the government, as he valued his own ſafety.

Having conſider'd the letters from the king, and the preſident, with *Carvajal* and the judge *Cepida*, *Pizarro* call'd a meeting of all his chief officers, and the principal inhabitants of *Lima*, to the number of eighty perſons, and ſhew'd them the letters, deſiring their opinions, the aſſembly was divided according to their different tempers; but *Carvajal* ſtill inſiſted that the terms offer'd them, were ſufficient to make them eaſy; and therefore preſs'd their ſubmiſſion to the king's authority. All people of temper and moderation came into his ſentiments; but the warmer ſpirits prevail'd, who adviſ'd *Pizarro* not to part with the authority he was in poſſeſſion of; nor to truſt to the fair-promiſes of the preſident, who was veſted with ſuch an unlimited power, that, by virtue of the commiſſion he had, he could chop off all their heads as rebels, if they once laid down their arms.

Paniagua, in the mean time, was viſited privately, by ſeveral of the principal people of the place, and even by ſome the moſt intimate confidents of *Pizarro*, and had aſſurance from them, that when the preſident ſhould appear in *Peru*, and ſet up the royal ſtandard, they would join him with all their friends. This made *Paniagua* ſuppreſs a ſecret inſtruction given him by the preſident, which was, that if he found *Pizarro*'s intereſt very ſtrong in the country, he ſhould offer to confirm him in the government of *Peru*, upon his ſubmiſſion to the king. This, *De la Vega* ſays, *Paniagua* often declar'd afterwards, and repented that he had not diſcover'd it to *Pizarro*, as the beſt expedient to prevent the miſchief that happen'd from his ambition.

Pizarro who cou'd not brook being diveſted of that authority he believ'd ſo juſtly due to his family, for having added ſo conſiderable an empire to the crown of *Spain*, and thinking himſelf ſure of his army, and the affections of his people, which he knew would make him ſuperior to any force that could be brought againſt him by the preſident from the continent of *America*, rejected the good council of his lieutenant general, and writ a letter to the preſident, in which he gave an account of the great ſervices which his family had done to the crown, by reducing the empire of *Peru* under obedience to his majeſty; he boaſted of the loyalty of his brother the marquis, and his other brothers, and ſhew'd the little advantage they had got to themſelves, for all the treaſure they had ſent to the king, ſince none of them had a foot of land in the new conqueſt. And as to himſelf, "he "declar'd that his heart abhor'd the "thoughts of rebellion; and that he had "oppos'd *Nunez*, as the beſt ſervice he "could do to the crown; for had he "yielded to that vice roy, and ſuffer'd "the new laws to take place, the coun-"try had been loſt by the imperious tem-"per of that miniſter, and the rebellion "of the *Indians*." He therefore concluded, that he hop'd he ſhould not be term'd a traitor, for ſupporting that authority, which had been put into his hands by the king's judges, and which had, by the King's own commiſſion, to his brother the marquis, granted the government of *Peru* to the ſaid marquis for his life, and to any one he ſhould name as his ſucceſſor, for one life more; which was no greater favour than all the conquerors were entitled to both in *New Spain*, and *Peru*; ſince all the lands given them, at the diſtribution, were for two lives, before *Nunez*'s arrival. With this letter he diſmiſs'd *Paniagua*, who was very glad to get ſafe back to *Panama*, not thinking himſelf very ſecure at *Lima*; nor had he been ſo, if *Pizarro* had been inform'd of his ſeeret meetings with the inhabitants.

Pizarro *anſwer's the preſident's letter.*

Several cities revolt from Pizarro.

Centeno, who had been reduced by *Carvajal*, to abſcond, being now inform'd of the arrival of the preſident's agent, came out from his retirement; and *Paniagua* having ſcatter'd privately, in ſeveral places, copies of the repeal of *Nunez*'s laws, and of the general pardon, many cities declar'd for the king, ſuch as St. *Michael*, *Truxillo*, and *Quitu*, in the the north, and *La Plata* and *Arequipa*, in the ſouth. Some horſe from *Arequipa* getting

getting intelligence of *Centeno*'s appearing with only five men, went to join him, and chose him for their captain; and, in a short time, they encreas'd to about 80 horse; and holding a council of war, they determin'd to march to *Cosco*, where *De Robles* was governor for *Pizarro*, with a garrison of 300 men. At their approach to the city, they made a halt, and agreed to attack it by night, and to amuse the enemy, they took off the bridles from their mules and other carriage beasts, and ty'd lighted matches to the pummels of their saddles, making the *Indians* drive them to one side of the town, and to enter a certain street with great noise, whilst *Centeno* with his party, taking a compass about the city, enter'd the opposite street. This stratagem took; for, the *Indians*, performing their part, drove the mules with terrible cries up the street, which giving the allarm to the garrison brought the soldiers to that place; so that *Centeno* marching without opposition, came unexpectedly upon their rear, and put them in such confusion, that the garrison, who were not very well affected to the governor, nor to *Pizarro*, deserted to *Centeno*, and welcom'd him to the city. *De Robles*, upon this revolt, took sanctuary in a convent, but being discover'd and brought before *Centeno*, his own haughty and imperious behaviour procur'd his death, the general ordering him to be beheaded.

Centeno *takes* Cosco.

By this time the president was landed at *Manta*, a port subject to *Quitu*, where having publish'd the general pardon, he was join'd by the chief persons of note in the north, and hearing of the taking of *Cosco*, he sent letters to *Centeno*, commending his zeal for the king, and giving him assurance of the repeal of the new laws, and an authentic copy of the pardon; which *Centeno* transmitted to *Arequipa* and *La Plata*; from which two places, he was join'd by such a number of forces as encreas'd his army to 1000 men, with which he was resolv'd to give battle to *Pizarro*, who was still at *Lima*, and but ill secur'd of the affections of his people: For, the conditions offer'd were all that honest men had ever desir'd; nor did they think themselves oblig'd to cut the throats of their countrymen (especially against the king's commission) to support the ambition of *Pizarro*.

In the mean time, *Pizarro* was in great perplexity; every day bringing him bad news. The desertion of his fleet, and the revolt of his ambassadors; the landing of the president, together with the northern garrisons having join'd him; the taking of *Cosco*, and the unexpected encrease of *Centeno*'s forces, were so many thunder strokes to him: yet being a man of resolution, he prepar'd himself for war, notwithstanding all these disappointments. He therefore muster'd his forces, to the number of about 600, and march'd them out of town to prevent desertion; and sent to call back *D'Acosta*, whom he had dispatch'd with 300 men to reduce *Truxillo*.

The president sent four ships to the bay of *Lima*, under the command of *Aldana*, to receive deserters, which had good effect, many going off daily from the camp, either to the ships, or towards *Truxillo*, to meet the president; the greatest care having been taken to prevent any march southward, in order to hinder any desertion to *Centeno*. These frequent desertions much troubled *Pizarro*, for he was reduced to about 300; and which was worse, the greatest part of the quality, and rich men of his party had left him; and many in whom he repos'd the greatest trust. This oblig'd him to remove his camp from the neighbourhood of *Lima*, which he did, and march'd towards *Arequipa*, in which march he was join'd by *Acosta* with 180 horse, a seasonable addition to his small army.

Frequent desertions from Pizarro.

Pizarro was no sooner gone, but the city of *Lima* declar'd for the king; nor did *Rebera*, whom *Pizarro* had left governor of it, oppose their intention. Upon the news of this, *Aldana* landed his men, and took up his quarters in the city, sending expresses to the president, now upon his march to *Truxillo*, of all that had happen'd; altho' he had been inform'd of a good part of it by the deserters. The president had with him above 400 men, and his forces were daily encreasing by such as went to him from *Lima* and other cities which had declar'd against *Pizarro*; and knowing that *Centeno* was already superior to the enemy in number, he held on his march towards *Lima*, having no apprehension of any danger from *Pizarro*.

Lima *declares for the king.*

Whilst he was upon the road, *Pizarro*, being almost desperate with his ill success, resolv'd to march southward towards *Potosi*, (the silver mines of which, so beneficial to *Spain*, had been found out the year before, by chance;) near that place, on the east side of the mountains, they design'd to make a colony, it being almost out of the empire of *Peru*; and if they should be disturb'd there, they were resolv'd to go farther south, and plant in *Chili*. But *Centeno* being southward of him, *Pizarro* resolv'd to force his way thro' his army, and to get to the mountains. However he try'd first to bring him over to his side, which would restore his affairs. He therefore sent a gentleman to him to represent, "the trouble "he was under, for having him his ene-

Letters pass between Pizarro *and* Centeno.

" my, whose life he had spar'd when it " was in his power, and when his friends " advis'd him, to take it away; he told " him that he had been one of the first " who had promoted, and sign'd his com- " mission as procurator general; and yet " had deserted him, when he was made " governor. But he had so great an " esteem for him, that he would forgive " all that was past, upon his coming " over to his party, and would shew him " as much friendship as he did to any of " his officers". To this, *Centeno* returned a very civil answer, in which, " He acknowledg'd *Pizarro's* favours, " and thank'd him for them; he own'd " that he had concurr'd in making him " procurator, because he thought sub- " jects might lawfully represent their " grievances, without the imputation of " disloyalty: But he had deserted him " when he commenced governor, with- " out the king's commission, nay against " his authority, at that time vested in " *Nunez*; because he could not then be " of his party, without being guilty of " treason; and he concluded by telling " him, that in return for the pardon " which he had offer'd him, he would " use all his interest with the king's pre- " sident, to obtain a pardon for *Pizar-* " *ro*, provided he would lay down his " arms, and submit to the royal autho- " rity".

Pizarro was enrag'd at this answer, and resolv'd to make his way through *Centeno's* army, or to perish in the attempt. He therefore gave orders for the march, of which *Centeno* being inform'd, took up a pass in the plain of *Guarina*, which he design'd to keep, and drew up his army there, altho' he himself was so sick, that he was forced to be carried in a litter to view the ground. The night before the battle, *Acosta*, with a party of horse attack'd *Centeno's* camp, with a design to kill him; but being repuls'd, he retir'd without any loss.

The battle of Guarina.

Upon the 20th of *October* 1547, both armies were drawn up within 600 paces of one another; *Centeno's* consisting of 1,000 (some say 1,200) men, and *Pizarro's* not 500. But *Carvajal's* judgment and experience made up the defect of number; he order'd the whole body to stand firm, in the ground he had drawn them up in, and to keep up their fire, till the enemy should come close to them. On the other hand, *Centeno's* forces, thinking themselves sure of the victory, were eager to attack, against the inclination of their generals; and, at last, march'd, of their own accord, without orders, to the engagement; and with such precipitation, that they broke their ranks, and put themselves in disorder before they had receiv'd the first fire. But when they had discharg'd their own muskets, without any effect, because of the distance; and that the foot were now come within less than 100 paces of *Pizarro's* men, *Carvajal* gave the signal to fire, which was done so *a propos*, that 150 of the king's party fell with the first fire, among whom were some of their best officers; and having spare muskets by them, ready charg'd (which had been left by the deserters) before *Centeno's* pike-men could reach them, they gave a second fire, which put the other side into such confusion, that they turn'd their backs and fled outright. But the horse on the left wing, behav'd after another manner, for they being superior to *Pizarro's*, and well supplied with officers, bore down *Pizarro's* cavalry, and cut many of them to pieces. *Pizarro* himself being so beset, that with much to do, he took shelter amongst his infantry. The horse on the right had orders to charge *Pizarro's* victorious foot; but *Carvajal* kept them so intire, and made such a seasonable fire upon the horse who advanced to attack them, that they wheel'd about, having lost their captain *De Rios*, and several other officers. La Vega, *Pag.* 2. B. v. *chap.* 19.

The slaughter was great on both sides, *Pizarro* having left above 70 horse and only 15 foot, and *Centeno* had 350 kill'd, among whom were their major-general, and most of their foot officers, besides *De Rios*, and the standard-bearer. There were of *Centeno's* side almost as many wounded, many of whom died after the battle.

Centeno *defeated.*

Centeno himself seeing the execution and flight of his infantry, from the litter, in which he was carry'd, forgot his sickness with the surprize of the defeat, and mounting a horse made after the fugitives, but not being able to make them rally, giving all over for lost, he pursued his journey thro' bye-ways to *Lima*, from whence he sent an account of his defeat to the president, who was upon his march to that city from *Truxillo*. Many others of his army made their escape, and join'd the president; but a good number of them were prisoners, and some listed themselves with *Pizarro*, who being conqueror, gave the pillage of *Centeno's* camp to his soldiers. Several parties were sent out to pursue those who had fled, in hopes to light upon *Centeno*, but having miss'd of their aim, they return'd; and *Pizarro*, having staid some time there to dress the wounded, and to bury the dead, march'd to *Cosco*, having sent a part of his forces before him to take possession of the city; and after his arrival there, he detach'd several parties to *La Plata*, *Arequipa*, and other places, to raise money; the captains of which parties, did many acts

of

of cruelty and oppreſſion; killing and plundering ſuch as had ſerved the king, or had declared their inclinations to the preſident; nor excepting even women from death or ill uſage, to the great diſcredit of *Pizarro* and his intereſt. But here *De la Vega* gives an inſtance of *Carvajal*'s gratitude; for, when he found, at his going to *Arequipa*, that a great number of the better ſort of citizens had left it, he ſent 25 of the beſt horſe in purſuit of them, who brought them all back: and *Carvajal* ſeeing *Corneja* among them, (who at his firſt coming to *Peru*, had kindly entertain'd him and his family, till the marquis *Pizarro* provided for them) he took him aſide, *and blam'd him for retiring for fear of him, who could not be ſo loſt to honour, as to forget the favours he had received from him, and the generous hoſpitality he had ſhew'd to himſelf and family.* And aſſuring him of pardon for all the royal party for his ſake, he diſmiſs'd him, with all the priſoners.

When the news of the defeat at *Guarina* arrived in the preſident's quarters, every one was ſtruck with it; and indeed it was a happy providence for the loyaliſts that they were appriz'd of it ſo ſoon; for, having been inform'd before, of the ſtrength of *Centeno*, and *Pizarro*'s weakneſs, the preſident was upon the point of diſmiſſing the ſeveral captains to their reſpective provinces, and of disbanding his army, as thinking them burthenſome to the country, and a hindrance to farther plantations; and had that been once done, it would not have been eaſy to have got together another army, able to make head againſt *Pizarro*. But the account of the battle coming to *Gaſca* as he was upon his march through the *Sauxa* to *Lima*, chang'd their former reſolutions; and inſtead of disbanding his forces, he ſent to *Lima* to raiſe more, and gave orders to bring all the artillery belonging to the ſhips in that port; both which ſucceeded happily; and the preſident, altho' he was inwardly griev'd at the ill ſucceſs of *Centeno*, yet, to animate his army, made a moſt religious ſpeech to them, wherein he told them, *That perhaps providence had permitted this defeat, to give* Pizarro *either time to repent, or that he might fill up the meaſure of his iniquities, and to humble them for their too great dependence on human force, and the arm of fleſh.* He therefore exhorted all his officers to be diligent in their ſeveral charges, and to depend upon GOD Almighty for ſucceſs.

Before the preſident march'd againſt *Pizarro*, he was join'd by *Pedro de Valdivia*, the governor of *Chili*, with about 12 horſe. This Gentleman, having found that there was need of more forces for the conqueſt of that country than he had there, embark'd at St. *Jago*, with a ſmall retinue, for *Lima*, bringing with him a conſiderable quantity of gold and ſilver, to furniſh himſelf with men and arms; but finding how matters went, at his arrival in the port of *Lima*, he march'd directly to the preſident, where he was received with all the demonſtrations of joy, and all the marks of honour, as being juſtly eſteem'd the beſt ſoldier in their army, and the only perſon fit to match *Carvajal*.

Gaſca *marches againſt* Pizarro.

The preſident's army was now encreas'd (by the arrival of *Belalcazar*, and ſome other planters from the north, and by his general *Hinojoſa*, and many ſoldiers, and ſeamen from the fleet) to above 1,500. And it was agreed, in a council of war, to quit the route to *Lima*, and to march in queſt of *Pizarro*, who, they were inform'd, deſign'd to leave *Coſco*, and being fluſh'd with ſucceſs, was determined to move towards them. By this time *Centeno* was come to the king's army with many gentlemen who had eſcap'd from *Guarina*, and had met by chance in or about *Lima*. The preſident therefore moving his camp, march'd towards *Coſco*, and came as far as the river *Abancay*, where, as we obſerved before, *Almagro* defeated the army led by *Alonzo de Alvaredo*, one of the marquis *Pizarro*'s generals.

In the mean time, *Pizarro* (having neglected the advice of *Carvajal*, which was to burn the city of *Coſco*, and to avoid fighting the preſident, but to ſtarve him, by deſtroying all the proviſions wherever he paſs'd, except ſuch as was neceſſary for his own army;) upon intelligence of the preſident's march, call'd a council of war, where *Carvajal*, with much aſſurance, told *Pizarro*, that if he would give him 200 foot and 50 horſe to ſtop the paſs of the river at *Apurimac*, he would crown him king at *Coſco* in eight days. But *Pizarro* having a ſecret diffidence of *Carvajal*, notwithſtanding his great ſervices, refuſed that command to him, and beſtowed it upon *Acoſta*, to the great mortification of *Carvajal*, who notwithſtanding that denial, gave *Acoſta* ſuch advice as might have ruin'd the preſident had it been follow'd. He told him, that *Apurimac* was about nine leagues off, and therefore adviſed him to march four leagues, next day, without ſtopping, which he might do, with eaſe, by two a-clock after noon; and then he might refreſh his men, one hour; and ſo purſue his march to the top of the mountain, above the river, where he would find a ſpring of fine water, well known to many in the preſident's army. Thither he might march without fatigue,

by

by nine at night; and after ſupper, he adviſ'd him to repoſe all night, and the next day; becauſe it was impoſſible for the preſident's army to have the bridge, they were oblig'd to make, ready before the night following; by which, having paſt the river, they would come up the hill, without any order, to drink of the ſpring; as not imagining to find an enemy before them; ſo that, upon his firſt fire, he would defeat their army, altho' he did not kill one man. Had *Acoſta* follow'd theſe inſtructions, there had been an end of the preſident's government, in all appearance.

The next morning *Acoſta* began his march with 200 musketeers a horſeback, and thirty launces, all choice men; but inſtead of ſtopping only one hour, after they had march'd the firſt four leagues, he took up his quarters there for that night, and the next day, delay'd the time ſo much, that a good part of the king's army had taken up the ground, which *Carvajal* had nam'd for *Acoſta's* quarters, and where an unexpected attack upon the firſt that came up the hill, (as *Carvajal* gueſs'd,) without order or officer, would, in all probability, have caus'd a general deſſertion; for *De la Vega* ſays, a falſe alarm had like to have had that effect, without an enemy.

Ubi ſupra ch. 32.

Whilſt *Acoſta* was upon his march, the preſident arriv'd at the river; and began to make his bridge, having brought his materials, ready fram'd for that purpoſe. But, there being a neceſſity to paſs ſome of his men, in order to fix the ſtakes on the other ſide, to which cords were to be tied to draw the frames over; about 200 men paſt on floats, altho' with great danger, by reaſon of the rapidity of the river. However they got to the other ſide; but it was ſo difficult to lay the bridge, that it coſt them above four and twenty hours, before they could make it capable of receiving the horſes; and therefore many horſe men ſwam over to guard the workers in caſe of an attack, of which ſeveral were carry'd down, and loſt. Notwithſtanding which diſadvantages, a good part of the army got over, and, as we have ſaid, aſcended the hill to the fountain; ſo that *Acoſta's* ſcouts diſcover'd them, and gave intelligence to their captain, who rode out with ſix of his party, to reconnoitre them, and finding them too numerous, ſent an expreſs to *Pizarro* for a freſh recruit.

The preſident paſſes the river Apurimac.

Pizarro, finding the opportunity loſt, and that the preſident's whole army muſt have paſt the river, before his new detachment could arrive; determin'd to march with all his force, and to give the enemy battle; and in order to it, commanded his officers to be ready, in four days, to leave *Coſco*, and to march to *Sacſaguana*, four leagues from the city, where he reſolv'd to wait for the preſident. This reſolution was oppos'd by *Carvajal*, as the certain overthrow of all their hopes. He told *Pizarro*, *that the preſident out number'd him, and had many good officers in his army, and that they would all ſtand by him*; *whereas, in* Pizarro's, *there were* 300 *men, who had been under* Centeno, *and would certainly deſert, upon the firſt opportunity, beſides many others of whom he was not ſure. He ſhow'd him, that his going to meet the enemy, ſav'd them ſo much fatigue, and therefore adviſ'd him rather to march, as many leagues ſouthward to a place he could ſhew him, where it was impoſſible to force him to fight, againſt his will, and where he might ſtraiten the enemy for want of proviſions.* But *Pizarro* rejected his propoſal; and indeed he ſeem'd to have been doom'd to deſtruction by the great avenger of rebellion; for had he follow'd *Carvajal's* council, in ſeveral ſteps of this war, he had a fair proſpect of retrieving his affairs.

He march'd out of *Coſco*, about the beginning of *April* 1548 at the head of 900 men; and as he came firſt to the plain, he took up the higheſt ground, where he ſtaid three days, before the other army arriv'd; and for three days more, they encamp'd in ſight of one another. At laſt, upon the 9th of *April*, both armies drew up in order of battle; the general officers on both ſides having, like men who underſtood their buſineſs, diſpos'd their troops to the beſt advantage; and ſo remarkable was *Valdivia's* skill that way, that as ſoon as *Carvajal* view'd the diſpoſition of the preſident's forces, he ſaid, Valdivia *muſt be in that army, for there is not an officer in* Peru *could have drawn up an army in that order but himſelf.* But there is no occaſion to deſcribe the order of the two armies, where there was not a blow given. For, as ſoon as they were drawn up, on both ſides, there was ſuch a general deſertion from *Pizarro*, that the preſident deferr'd the engaging, in hopes that he ſhould be conqueror, without blood, as indeed he became in a very ſhort time; and *Pizarro* was ſo ſtruck with it, that he had no heart to give the ſignal. The firſt who revolted was *Garcelaſſo de la Vega*, our author's father, who went over by himſelf, and was received well by the preſident, to whom he declar'd, that it had been his intention, for ſome time, to engage in his majeſty's intereſt, as ſoon an as opportunity offer'd. His example was follow'd by many others, and then the whole right wing went over in a body, ſubmitting themſelves to the preſident; and after

Pizarro *marches againſt him.*

His army revolts.

ter them whole ſquadrons of horſe did the ſame.

Carvajal, (who was ſo diſguſted at the miſmanagement of every thing, by *Pizarro*'s obſtinacy, that he would take no command, but had put himſelf in the firſt line of the foot) ſeeing this univerſal defection, which it was not in his power to prevent, began to ſing aloud, with a mixture of ſpight and contempt; *thus, mother, the wind carries away my hairs by two and two.* The pike-men, ſeeing themſelves left alone, threw down their arms and fled; which deſtroy'd the very appearance of *Pizarro*'s army; there were not kill'd above a dozen, and thoſe by their own people, at the beginning of the deſertion.

Pizarro having now no body near him but a few officers, turning to *Acoſta*, ſaid, *brother* John *what ſhall we do?* the other reply'd, *Sir, let us die like old* Romans; *no*, ſaid *Pizarro, rather like chriſtians*; and ſo mov'd towards the other army, with the few friends who had ſtaid with him. As they were marching ſlowly, *Pizarro* ſpy'd *Pedro de Villavincentio*, and finding upon enquiry, that he was *ſerjeant major* of the preſident's army; he made up to him, telling him, that *he was* Gonzalo Pizarro, *and was going to ſurrender himſelf to the* emperor. The other thank'd him for the honour done him, and would not ſo much as take his ſword or dagger from him, which were all the arms he had. As he was going with him to the preſident, *Centeno* met them, and ſaid to *Pizarro, my lord I am heartily ſorry to ſee you in this condition. Pizarro* ſmil'd and anſwer'd him, *captain* Centeno, *my buſineſs is finiſh'd to day; to-morrow you yourſelves will lament my fall.* Being brought before the preſident, *Gaſca* reproach'd with his diſloyalty, and accus'd him of taking the government upon him againſt the emperor's orders, and of having killing the vice roy *Nunez*. To which *Pizarro* anſwer'd, *that he had not aſſum'd the government, but that it had been confer'd upon him by the king's judges, and that it, of right, belong'd to him, by the king's commiſſion to his brother. He repreſented to him the ſervices which he and his family had done to the crown, for which they had had no recompence; and that he did not look upon himſelf as a traitor, for having maintain'd that dignity, to which he had been rais'd by the king's own commiſſion, and the act and deed of his judges.* This bold vindication of himſelf, in his abject ſtate, nettled the preſident; ſo that he objected to him his ingratitude to the emperor, who had rais'd him, from the dunghill, to honours which did not belong to his family; to which *Pizarro* reply'd, *that he was a gentleman before he came to* Peru; *and if his family was poor, they did not owe their becoming rich to any thing, but their own bravery: and if his majeſty had beſtow'd any titles of honour upon them, he thought the adding ſo conſiderable an empire, to the crown of* Spain, *had well deſerv'd more rewards than they had receiv'd.* The preſident offended at his freedom, order'd him to be taken away, and he was conſign'd to *Centeno*, who had deſir'd to have him in cuſtody, and ſhew'd him as much reſpect as formerly.

Pizarro *ſurrenders himſelf.*

His converſation with the preſident.

The other officers who ſurrender'd with *Pizarro*, were deliver'd to different guards; and that ſame day old *Carvajal*, endeavouring to make his eſcape, and falling under his horſe, in a brook, whoſe banks, were high, was brought back to the field of battle; and, being known, he was like to have been ill uſed, but *Valdivia* and *Centeno* protected him; to the laſt of whom he was given in charge by the preſident; and was uſed by him with great humanity. Carvajal *taken.*

All apprehenſions of war being now thus happily over, the preſident conſulted his officers about the priſoners, who unanimouſly agreed, that it was beſt to try and paſs ſentence upon them, in that very place, for fear of accidents; and ſo *Alonzo d'Alvarado* and *Chianca* being appointed judges, *Pizarro, Carvajal, Acoſta* and *Guevara* were condemn'd to be hang'd, but the preſident, in conſideration of the patent of marquis, granted to *Franciſco Pizarro*, chang'd *Gonſalo*'s ſentence to that of beheading. And accordingly, the next day, *Pizarro* was excuted, in the 45 year of his age; who, in a better cauſe, and in better times, would have been an ornament to any country. And I cannot help ſaying, that if *Charles* V. had not been miſinform'd of the behaviour of the *Pizarro* family, and of the true intereſt of *Spain*, with regard to *Peru*, *Gonſalo Pizarro* had liv'd and died governor of that country, without the imputation of a rebel or traitor, and neither *Nunez* nor *Gaſca* had been ſent to ſuperſede that family, in the government of an empire, which they had acquir'd, by the moſt romantic courage; and which (as far as appears to me) they had govern'd with the greateſt prudence; bating the misfortunes of war, for which no general thinks himſelf accountable, nor can the mildeſt ſoldier always prevent. Pizarro *beheaded.*

I would not be thought to juſtify *Gonzalo Pizarro* in carrying on the war againſt the emperor's commiſſion. I hate rebellion as I do the ſin of *witchcraft*; but there are ſome circumſtances, in the ſtory, that might have led him into withſtanding *Nunez*, with the concurrence of

the generality of the kingdom, as a bad minister, until he should represent the grievances of the country, to his sovereign; which, altho' they cannot justify, may, at least, extenuate his crime. But when the just grievances were redress'd, and things set upon a right bottom, he ought to have taken *Carvajal*'s advice, and have submitted himself to his *lawful prince*, altho' he and his family were not well used, nor rewarded according to their merit. But this only by the bye.

The other officers, who surrender'd with *Pizarro* were hang'd the same day; and *Carvajal* (of whom *La Vega* tells very merry stories, both in his life, and at death) was hang'd and quarter'd, and his head, together with *Pizarro*'s sent to *Lima*, and set up in the market place.

The next day after these executions, the president pursu'd his march to *Cosco*; having dispatch'd *Mexia de Gusman* and *Martin de Robles* thither before, to secure any of the *Pizarro* faction, and to keep the city in peace. He likewise dispatch'd *Alonzo di Mendoza* with a party, to *Los Charcas*, and *Potosi*, in pursuit of *Espinosa* and *Diego Carvajal*, two of *Pizarro*'s captains; who were taken and executed. The president was receiv'd, at *Cosco*, with great acclamations, and spent some days in feasting, and diversions of several kinds; after which, he gave a new commission to the same judges, who had condemn'd *Pizarro*, to try and pass sentence upon the other prisoners; many of whom they sentenc'd to be hang'd, and a great number of soldiers to be whip'd, and sent to the gallies, to the great scandal of the *Indians*, who thought it more infamous to be whip'd than hang'd. After which executions perform'd, *Gasca* proclaim'd a general pardon.

The president enters Cosco;

But now his troubles were but beginning. For, when the rebellion seem'd to have been pluck'd up by the root, the distribution of the land, and rewarding the officers and soldiers, gave him much more uneasiness, than the subduing the rebels had done: there being scarcely a soldier, who had join'd with him at his first landing, or deserted to him from *Pizarro*, but expected to be made a lord of a manor; and when they were disappointed of their views, as many of them were, (for indeed it was impossible to satisfy all their demands,) they began to murmur, and, at last, openly to tax the president, of injustice and partiality; which he wisely foreseing, retir'd with the bishop of *Lima* to *Apurimac*, about 12 leagues from *Cosco*, forbidding any of the people to follow him, but such as he appointed. In this place he staid to adjust the division of lands. Here he liv'd three months with close application, and notwithstanding the petitions, and claims daily sent to him, he distributed most of the lands in favour of his general *Hinojosa*, and his people, who had first deliver'd up the fleet to him; as indeed he had promis'd to them at *Panama*.

But returns to Apurimac, *to divide the lands of* Peru,

When this division was made, he went directly to *Lima*, leaving the bishop at *Apurimac*; who was to return to *Cosco*, to publish the distribution in that city, together with a letter from the president, in vindication of himself. As soon as the bishop arriv'd at *Cosco*, he appointed a day for the publication, and order'd the father provincial to preach a sermon, exhorting all people to rest satisfy'd with their lot, in the division; and that those who had been past by in it, should have patience till new land should be discover'd, in which they might have shares. The president's letter was address'd *To the right noble, and right worshipful lords, and gentlemen, and sons of gentlemen, in his majesty's service at* Cosco. The substance of it was, shewing the esteem and affection he had for them; his care in distributing the lands impartially, according to the merits of the persons whom he had made proprietors; and his grief that he could not satisfy them all; but promising to banish all the disloyal out of the country, as also all that had continued neuters, and to distribute their lands to them, as they should come into his hands; in the mean time he exhorts them to patience, and promises them his friendship. But neither did this letter, nor the sermon quiet the pretenders: for, as soon as the distribution of the land was read, there was all the appearance of a general mutiny. They complain'd loudly, that the president had enrich'd those who had been deep in the rebellion, and left out of the division such as had been always loyal. For, *Hinojosa* had for his share, of *Pizarro*'s lands, to the value of 100,000 ducats a year; besides a rich silver mine at *Potosi*, which was worth as much more; whereas *Centeno*, who had done long and good service to the king, had no addition made to his estate in the new division.

which division disgusted many.

But he who made the greatest noise about the inequality of this division, was *Hernandez Giron*, whose former estate, in *Pasto*, did not exceed 600 ducats, and had by the president's partition, about 10,000 allotted him. He exclaim'd so much against the injustice done him, that they who knew his turbulent temper, said it was only a pretence to raise a new rebellion; and therefore they thought it bad policy in the president to give him a commission, with the title of governor of the *Chuncos*, towards the south east, which he was to conquer; but he excepted out of his commission the frontiers of *Cosco*,

La

La Paz and *La Plata*. And indeed the conjectures of thoſe prov'd true, for he began a new rebellion which coſt a deal of blood, and ended not but with his life; as we ſhall ſhew hereafter. Nor was *Centeno* leſs diſpleas'd; ſo that taking his leave of the preſident, he went to his former plantation near *La Plata*, where, giving out that he would pick up as much money as he could, and go over to *Spain*, he was poiſon'd at an entertainment.

The preſident was a man of that temper, that he bore the impertinence of many, who ſpoke amiſs of him, and ſome even to his face. And, by good words, and by granting commiſſions for new diſcoveries (which took off many of the grumblers to other places) he kept them quiet, for above a year. But, at laſt, he was ſo tir'd with daily ſolicitations, and importunities, that he was reſolv'd to return to *Spain*; and accordingly, he ſet out from *Lima* in *January* 1550, leaving the new grants of land, and ſome other orders, ſeal'd up, with the biſhop, to be publiſh'd eight days after his departure; and being impatient to be gone out of the very ſight of *Peru*, he would not ſo much as touch at any port upon that coaſt, to refreſh himſelf, but made the beſt of his way to *Panama*, having on board a million and a half of gold and ſilver, for the king's uſe; notwithſtanding all the expence of the war. He likewiſe carry'd with him judge *Cepida* priſoner, to be try'd in *Spain*. Being arriv'd at *Panama*, he brought his treaſure a ſhore, and giving order that it ſhould be ſent after him to *Nombre de Dios*, on the north ſea, he ſet out, to paſs the mountains for that place, where he arriv'd the 26th of *April*.

The preſident leaves Peru.

He ſtops at Panama *and goes to* Nombre de Dios.

He was not gone above two days from *Panama*, before ſtrange convulſions happen'd in that city upon the following occaſion. *Rodrigo Contreras* had ſucceeded his father-in-law *Pedrarias d'Avila*, in the government of *Nicaragua*; and being, by the new laws, depriv'd of the ſervice of his *Indians*, he went to *Spain* to find redreſs; but being diſappointed by the council's approving of what had been done, he ſent the news of it to his family at *Nicaragua* with expreſſions of great reſentment. His two ſons, *Ferdinand* and *Pedro*, being young men of great ſpirits, were ſo enraged at this treatment of their father, that they made ſecret cabals with ſome malecontents, who had fled from *Peru*, and particularly with *John Bermejo*, and agreed to take arms, and raiſe forces to invade *Peru*; *Bermejo* aſſuring them, that with 300 men, they might carry that empire, by being join'd with a conſiderable number of people who only wanted a head to bring them together, to oppoſe the government. Encourag'd by this incendiary, the brothers privately provided arms and liſted men; and when they had got a ſufficient number, of fugitives from *Peru*, and thoſe of *Nicaragua* whom they either cajol'd or frighten'd into their ſcheme, the firſt act of revenge they ſet about, was the murdering the biſhop of the place in his own houſe in the city; which having accompliſh'd, they run arm'd into market place, and ſet up a ſtandard crying out *liberty, liberty*: and having heard that the preſident *Gaſca* was ſoon expected at *Panama*, they ſeiz'd ſome ſhips, and burn'd the reſt, intending to intercept the preſident, and to make themſelves maſters of the king's treaſure. To this end, having ſhip'd about 300 men, they ſet ſail for *Panama*; but, before they arriv'd, they had notice that *Gaſca* was landed; upon this intelligence, they reſolv'd to enter the port by night and to ſeize him in his bed, knowing where he had lodg'd.

The Contreras's *ſack* Panama,

At their arrival, they enter'd the town, as they had propos'd, and went to the houſe where they ſuppos'd to find the preſident; but being inform'd that he was gone, they rob'd the houſe, and ſeveral merchants houſes, and the treaſury, in all which they found near two millions of ducats, beſides vaſt quantities of *Spaniſh* goods: and being inform'd that ſeveral loads of gold and ſilver were already ſent off for *Nombre de Dios*, they detach'd *Salguero*, with a party of men, to ſeize them before they reach'd the foot of the mountains, on the north ſide. He had ſo good ſucceſs, that he got 70 load, amounting to the value of 570,000 ducats and ſent them all to *Panama*.

Sieze moſt of the preſident's treaſure;

The people of *Panama* were ſo ſurpriz'd at this unexpected attack, that they were in no condition to oppoſe them, and had they gone to their ſhips with the treaſure they had got, and ſet ſail for *Peru*, they might have done miſchief enough. But ſuch riches, which they were not accuſtom'd to, turn'd their brains, and precipitated them into ruin; ſo that, inſtead of ſailing to *Peru* with their own four ſhips (and four others which they had ſeiz'd in the port, and were theſe in which the preſident had come,) they divided their forces into four bodies. The elder *Contreras* march'd with about 50 men towards *Nombre de Dios* to kill the preſident, or make him priſoner; *Pedro* took 50 more to guard the ſhips; *Bermejo* ſtaid with 150 at *Panama* to keep the city in aw; and *Salguero* with the reſt went in ſearch of more gold. *Bermejo* was ſo infatuated with the ready obedience he had found in the city, that he only took an oath of obedience

obedience from the principal citizens, and march'd out with all his forces to get what horſes and mules were in the country about.

He was not gone many hours, when the citizens call'd a council, and having enter'd into an aſſociation to defend their city; they rung out their bells to allarm the country, which was well ſtock'd with *Spaniards*, every one of which had a number of blacks. Upon hearing the bells of *Panama*, many of the neighbouring gentlemen came in, and, in a ſhort time, of *Spaniards* and blacks, (to whom they gave arms) they muſter'd 500; thoſe who fled out of the city upon the firſt alarm, having return'd upon the ſound of the bells. *Bermejo* having an account of this revolt, as he call'd it, from two of his people, who had ſtaid behind him upon ſome occaſion, march'd back to the town; but *Azevedo*, a gentleman of courage and prudence, adviſ'd the city to march out, and attack him, leſt he ſhould ſet fire to it, to divert them from fighting; becauſe the houſes were, for the moſt part, of timber or thatch. This, with ſome ſtruggle, they agreed to, and attacking *Bermejo* with a ſort of deſperate courage, and *Azevedo* leading on the blacks with bravery and conduct, they defeated the enemy altho' *Salguero* join'd *Bermejo* in the action. Both thoſe chiefs were kill'd, with about 80 of their men, and as many more were taken, and put to death after they were brought back to the city. Some few that eſcap'd, gave notice to *Ferdinand Contreras*, who was marching to *Nombre di Dios*; but upon hearning of the defeat of *Bermejo*, he bid his men diſperſe, and make the beſt of their way to the ſhips, he himſelf intending to go thither. Moſt of his men were taken, by parties ſent out for that purpoſe; and they found a man drown'd in a moraſs, whom they took for *Ferdinand* by his hat, and a gold chain, which he us'd to wear; and therefore they cut off his head and ſet it up with *Bermejo*'s in *Panama*. The other brother, retiring with his fleet, upon the report of the defeat of *Bermejo*, was purſu'd by a great number of boats; ſo that landing his men, the boats follow'd him, and he himſelf with about 10 men eſcap'd to the woods; the reſt were taken and hang'd; but *Pedro* was never heard of.

But ere defeated.

Upon the defeat of this ill conducted rebellion, moſt of the treaſure was recover'd, both the preſident's and of thoſe who attended him; and being reſtor'd to the proper owners, and all things rectify'd at *Panama*, *Gaſca* ſet ſail for *Spain*, where he arriv'd happily in the month of *July*, after having been out of it above four years. His return, with ſo much gold and ſilver, was very acceptable to the emperor, who made him biſhop of *Placentia*, and afterwards king *Philip* tranſlated him to the biſhoprick of *Ciguenza* in *Spain*, where he dy'd. But to return to *Peru*.

The preſident *Gaſca*, at his departure from *Lima*, had left the government of *Peru*, in the hands of the judges, under the title of lords juſtices of the kingdom, but having receiv'd an expreſs from *Spain*, either at *Lima* or *Panama*, (for authors differ as to the place) exempting the *Indians* from all perſonal ſervice; and being ſufficiently aware, that ſuch an order, in *Nunez*'s time, had occaſion'd the civil war, he ſent the orders to the juſtices, but withal, gave his opinion, that they ſhould not put them in execution, till he ſhould ſpeak with the emperor upon that ſubject. Notwithſtanding this caution, they were reſolv'd to publiſh the orders, and to ſee them perform'd. This, meeting with the turbulent mutious humour of ſeveral captains, diſguſted for having been neglected by the preſident, or not rewarded according to what they thought they had deſerv'd, kindled a new flame, or rather ſtir'd up the fire, which was only cover'd but not extinguiſh'd.

Troubles in Coſco.

Hernandez Giron, who had receiv'd a commiſſion for new diſcoveries ſouth eaſtward, (as we ſaid before;) march'd to *Coſco*, of which place he was an inhabitant; and proclaiming his commiſſion there, got a body of above 200 to join him. But upon the publiſhing the new orders, the city of *Coſco* began to be mutinous, and *Saavedra*, the governor, apprehending the ill intention of *Giron*, deſir'd he would begin his march to his new diſcoveries, and eaſe the inhabitants of the burthen of his men: but finding that he made no haſte to remove, the governor appear'd in the market place, with a number of arm'd citizens, nor inferior to *Giron*'s; and they had undoubtedly come to blows, if ſome, more moderate than the reſt, had not gone between them, and propos'd an intervew, which they had in a church pitch'd upon for that purpoſe; where it was agreed that *Giron* ſhould withdraw his forces, and go himſelf to *Lima*, to anſwer the complaints laid againſt him; to which he ſolemnly ſwore: but afterwards, pretending that his ſoldiers would not let him obſerve his oath, the governor ſent a warrant for him, and put him in priſon; upon which his ſoldiers were ſo ſurpriz'd, that inſtead of endeavouring to reſcue him, they diſpers'd, and left the city. However *Saavedra* releas'd him, upon his promiſe to go to *Lima*, which he perform'd, and, after ſome ſhort confinement, he was ſet at liberty, and nothing was attempted farther by him, till ſome time after.

But

But there ſoon broke out a new mutiny at *Coſco*, at the head of which were *Miranda*, *Barrionuevo* and *Melgarejo*; but this being diſcover'd to *Saavedra*, he refus'd to meddle in it, ſaying that he would not create more enemies to himſelf, ſince the royal council at *Lima* put thoſe he had already, in a condition to do him a miſchief, for doing his duty. When this was repreſented to the juſtices at *Lima*, they appointed *Alonzo D'Alvaredo* governor, or may or of *Coſco*, who, upon his arrival there, making a thorough inquiry into the mutiny, and finding the three gentlemen, above mention'd, to have been guilty, had them all three executed; by which he quieted the ſedition in *Coſco* for that time.

Quieted.

In theſe kindof ſeditions was the whole year 1550, and the beginning of the following year ſpent; in which many loſt their lives, and ſome of them for no other crime than murmuring at the new orders. But a new vice roy was ſent by the emperor to *Peru*, who was *Don Antonio de Mendoza*, (ſecond ſon to the marquis de *Montexar*, count of *Tendilla*,) who had been vice roy of *Mexico*. He arriv'd at *Lima* about the end of the year 1551; but being in a very bad diſpoſition of body, he could not attend the affairs of the government as he would have done; and therefore the juſtices ſtill kept their power. To keep all things quiet in the ſouth parts, the council ſent a commiſſion to the general *Hinojoſa*, to be ſuperintendant of *Los Charcas*; which was ſign'd by the vice roy, ſoon after which he dy'd at *Lima* in *July* 1552, very much lamented, and left the government of *Peru* threatned with deſolation and confuſion, which ſhortly after it fell into.

Mendoza ſent as vice roy.

His death

Alvaredo had kept ſuch a ſteady hand over the malecontents of *Coſco*, that they had been pretty quiet for ſome time; but hearing of ſome diſturbances in other places, and being reſolv'd that they ſhould not be abetted from his city, he gave publick orders, that none ſhould leave the place, upon any pretence, without leave. But *Don Baltazar di Caſtilla*, being afraid that the governor ſuſpected him, left the city about midnight, and with ſome of his friends well arm'd got to *La Plata* where *Hinojoſa* reſided, and where were likewiſe *Don Sebaſtian Caſtilla* and *Egas de Guſman*, who had eſcap'd from *Coſco* ſome time before, in the ſame manner. As ſoon as *Alvaredo* was inform'd of Don *Baltazar*'s going thither, he ſent an expreſs to *Hinojoſa*, to warn him of the danger he was in from ſuch ill neighbours, for that having been diſappointed of their deſign of murdering the governor of *Coſco*, they would attempt to kill the ſuperintendant of *Los Charcas*; but *Hinojoſa* not imagining gentlemen well born, as the *Caſtilla*'s were, capable of ſuch a baſeneſs, receiv'd *Baltazar* very civilly, exhorting him to continue loyal to the king, and promiſing him all the aſſiſtance in his power. This intrepidity of his, and dependance upon other people's honour, becauſe he had a good ſhare of it himſelf, were the occaſion of his death; for upon the 6th of *March* 1553 D. *Sebaſtian* with a party of ruffians murder'd him in his own houſe; and having riffled it, they run out to the market place crying, *Long live the king, the tyrant is dead.*

Hinojoſa *murder'd by Don* Sebaſtian Caſtilla.

This aſſaſſination had been, underhand, carry'd on by ſome diſappointed officers and ſoldiers, from the time that the new diviſion of the lands had been publiſh'd; but of late had been chiefly fomented by the *Caſtilla*'s, who as ſoon as they had committed the murder, were join'd by all the grumblers in *Hinojoſa*'s army, and then they compell'd the reſt to join them, for fear of their lives; ſo that all *La Plata* was at their devotion, and Don *Sebaſtian* was proclaim'd general. The firſt thing they did was to ſend a party under the command of *Ramon* to murder *Alvaredo*; but in the march, *Ramon* perſuaded his men to deſert the general they had lately choſen, and to declare for the king, which they did, and join'd *Alvaredo* at *La Paz*, which was within his diſtrict of *Coſco*. The news of this revolt ſurpriz'd Don *Sebaſtian*, ſo that conſulting the officers about it, *Vaſco Godinez*, who had promoted the rebellion, took him aſide from the reſt, and told him, there was no ſecuring himſelf nor them, but by the heads of 20 which he could name to him, who were well affected to the king, and thoſe being now in the army, no time was to be loſt, but he muſt immediately execute them. Don *Sebaſtian* was confounded at the propoſal, and refus'd to do it; which the other ſeeing, deſir'd him to ſtay there till he return'd; and immediately going to the place where thoſe gentlemen were, and not having conveniency to ſpeak to them in private, he ſqueez'd the hands of ſome of the principal of them, which, *De la Vega* ſays, was the ſign before given them to prepare for what he was to go about; but he was only follow'd by one *Hernandez*, with whom he return'd to Don *Sebaſtian*, and both of them falling upon him, kill'd him upon the ſpot. After which *Godenez* drag'd out the body to the market place, uſing the ſame words they had done after the murder of *Hinojoſa*. *Let the king live, the tyrant is dead.* There were but five days time, between the death of the old general, and the new.

And Don Sebaſtian *by* Godenez.

As ſoon as *Godenez* had done the murder, he call'd ſome of the magiſtrates of the city; telling them, that he had done all this for the ſervice of his majeſty; but that there was a neceſſity of chuſing him chief juſtice of the city; and general of the army, and likewiſe to make over to him *Hinojoſa*'s eſtate. The magiſtrates being over-aw'd by the ſoldiers, and not being over confident of the honour of the general, thought it was not prudent to diſoblige him, and therefore, only deſiring him, that they might have it under *Fernandez*'s hand (who was a lawyer) that they might grant ſuch commiſſions legally; which being deliver'd to them, they ſign'd two commiſſions, one for general of the forces, and another for chief juſtice of *Los Charcas*. By virtue of the laſt, he try'd and hang'd ſuch as he did not like of the officers, and ſent a party to *Potoſi*, which took up *Guzman*, who by a warrant from him was hang'd and quarter'd. But his chief crime, (as that of ſeveral others whom he diſpatch'd) was, his knowing how far the new general had been inſtrumental in the murder of *Hinojoſa*; and whatever ſhould happen, *Godenez* was not willing to have witneſſes alive of his villanies, even altho' they had been accomplices in them.

But being aware, that his authority was not well founded, without the concurrence of the lords juſtices, he ſent two of his friends to *Lima*, with orders to repreſent the important ſervice he had done his majeſty, by cutting off the ringleaders of the rebellion, and therefore deſiring their confirmation of his commiſſions. But the juſtices having heard of the tranſactions at *La Plata*, before his meſſengers arriv'd, had wiſely ſent a commiſſion to *Alonzo D' Alvaredo*, as governor of *Los Charcas*; upon the receipt of which, he was preparing to go thither; but firſt ſent an account of his commiſſion, and withal gave out, that he had orders to reward all who had contributed to the overthrow of the rebels, and particularly to give the eſtate of *Alonzo de Mendoza* to *Godinez*. This report, induſtriouſly ſpread abroad, and written to *Godinez* by ſome of his own friends, altho' it made him rant and ſwear, at the injuſtice of the judges, in cutting off his hopes of *Hinojoſa*'s eſtate, which he had allotted to himſelf; yet it kept him from providing for his own ſafety; ſo that when *Alonzo Velaſquez* was ſent to *la Plata* to ſeize him, he made no attempt to eſcape, but receiv'd him in a ſurly way, as being to beſtow upon him a recompence beneath his merit. But when the captain ſeiz'd his arm, and told him he was his priſoner, and order'd him to jail; he curs'd, and tore his beard, and did many things like a deſperate perſon.

Godinez *arreſted,*

In the mean time *Alvaredo* having ſetled all his affairs in the province of *Coſco*, came to *Plata*, where, by virtue of a commiſſion from the lords juſtices, he ſet up a criminal court, and brought all delinquents before him (a great many of which had been ſeiz'd by his orders in different places) giving them fair play for their lives; and allowing them time and means to clear themſelves: but being a man of ſtrict juſtice, and of a ſevere temper, he pardon'd none who were prov'd guilty. Thus he condemn'd *Godinez* to be hang'd and quarter'd; together with ſeveral others, which ſentence was accordingly executed. And indeed the ſeſſions for trying the rebels laſted ſo long, and ſo many were concern'd in the guilt, that there was great uneaſineſs in other places; but no where more than in *Coſco*, where *Hernando Giron* (formerly mention'd) reſided. *and executed.*

Giron being a proud haughty man, and of a turbulent ſpirit, very unwillingly ſubmitted to the governor of *Coſco*, and ſeldom convers'd with any of the gentlemen of the city, but kept company with the ſoldiers, whom he courted and made friends of. Whether his behaviour had really given umbrage to the governor, who kept a correſpondence with *Alvaredo*; or whether *Giron*'s own guilt made him apprehend being call'd to an account, is not certain; but he was reſolv'd to free himſelf by an inſurrection. To this end, he daily improv'd the diſlike which many people had againſt the continuance of the proſecutions at *La Plata*; moſt wiſe men being of opinion, that a few of the moſt guilty having been made examples of, to deter others, the government had done better to have pardon'd the reſt. But *Giron* thinking there was no ſafety for him, but by cutting off thoſe he had reaſon to be afraid of, and having no concert with the citizens, as having neglected them, reſolv'd to proſecute his deſign, by the aſſiſtance of ſome ſoldiers. And therefore, taking the advantage of a wedding feaſt of one of the gentlemen of the city, to which he had been invited; he went thither, after the governor, and the other gueſts were ſet at table; and being follow'd by ſome of his mirmidons, he enter'd the room with his ſword drawn, his followers with their partizans in their hands, to the great ſurprize of the whole company; but to give them the greater terror and a diffidence in one another, he ſaid aloud, *Gentlemen, fear nothing, you know I only execute the plot agreed on between us.*

Giron *rebels in* Coſco.

The governor of the city, who was at the upper end of the table, retir'd, with much precipitation, to another room, where the ladies were, and was follow'd by

by a great many gentlemen: ſome of whom going from thence into a back court, found a ladder there, by which they went over the wall, into another houſe. *Garcelaſſo de la Vega*, ſeeing the others eſcape that way, came back to the governor, to perſuade him to get off, in the ſame manner, but he would not ſtir; ſo that *La Vega*, and his ſon, our author, went over the wall, and drew up the ladder, to prevent being purſu'd.

In the mean time *Giron* and his people had kill'd *Palomino*, who was ſetting with his back to the door, at which the aſſaſſines enter'd; they likewiſe kill'd *Juan de Morales*, a merchant, who endeavour'd to put out the candles, to help them to eſcape in the dark. After this execution, *Giron* broke open the door where the laides were, who beg'd of him that he would not kill the governor, and upon his promiſe to do him no hurt, he deliver'd himſelf up; *Giron*, believing he ſhould have the whole city to join him when he had the governor in his power, left him under a ſtrong guard, and went to the market place, but he was join'd by very few; inſomuch as not having men enough to guard the ſtreets leading out of the town, moſt of the principal inhabitants, believing that he was much ſtronger than he really was, made their eſcape by themſelves, or by two's and three's, without having time to concert meaſures together.

He ſeizes the governor of Coſco,

Altho' none but three perſons of any reputation in *Coſco* came to offer their ſervice to *Giron*, yet having the governor his priſoner, and the principal people being gone, the rebels did what they pleas'd, and ſo *Giron*, going to the houſes of the chief citizens, told them he had done nothing upon his own account, but for the publick good, and in concert with the principal people of *Peru*, and therefore deſir'd the ladies to perſuade their husbands to appear, for the ſafety of their liberties, ſince he intended to do nothing but to get the new laws ſuſpended, as they had been in the late preſident *Gaſca*'s time. But being aſſur'd, by moſt of them, that their husbands had left the city, he made proclamation of this, as his deſign, and in ſome days, there being none to controul him, he muſter'd about 150 men in *Coſco*; and appointed officers under him.

And releaſes him.

He then ſent a party with the governor of *Coſco*, and having conducted him 20 leagues out of town, they let him purſue his journey to *Lima*, with his own people, without offering any violence to him.

His next care was to ſend accounts to the neighbouring cities towards the ſouth, that all *Coſco* had join'd him for the cauſe of liberty; which had ſuch an effect upon *Guamanga* and *Arequipa*, that both thoſe cities ſent congratulations to him, and offer'd him their aſſiſtance. Theſe embaſſies he boaſted much of, and indeed they gave great credit to his enterpriſe, and to help it out, he pretended to have receiv'd advice from the province of *Los Charcas*, that they had declar'd for him, and had ſlain the ſuperintendant *Alvaredo*. But his artifices laſted but a ſhort time; for the ambaſſadors from the above mention'd cities, at their return, giving but a mean account of his forces, and intereſt at *Coſco*, the magiſtrates repented of what they had done, and declar'd for the king. Nor did they ſtick to that reſolution, but chang'd as each party ſeem'd to prevail; or as they apprehended miſchief from the neareſt army.

Upon the 4th of *January* 1554 *Giron* ſet out from *Coſco* with 300 men, and was ſoon afterwards join'd by *Vaſquez* with 200 more. With theſe he propos'd to march to *Lima*, before *Alonzo D'Alvaredo* ſhould be able to reach him with his army of 800, which he had levied in the ſouth parts. But he was ſcarce gone from *Coſco*, but *Saavedra*, who had lurk'd privately in the city, ſhew'd himſelf in the market place, and lifting all that he could, march'd for *Potoſi*, to meet *Alvaredo*.

Giron marches from Coſco.

In the mean time, the lords juſtices, hearing of this new rebellion, immediately diſpatch'd a new and fuller commiſſion to the mariſchal *Alvaredo*, making him captain general of *Peru*, and impowering him to take what money he ſhould think proper, for the ſervice of the war, out of the king's treaſury; and, if that fail'd, they gave him an unlimited credit: and at the ſame time they ſent him a new act of council, for ſuſpending the new ordinances for two years. Theſe orders came luckily, for about forty priſoners at *La Plata*; who, in all probability, would have follow'd their companions to the gallows, but for this new rebellion. But as ſoon as *Alvaredo* got thoſe inſtructions, he broke up his ſevere ſeſſions, and releas'd his priſoners to recruit his army. And one merry fellow, who expected to have been hang'd, appearing at liberty in the ſtreet, an acquaintance of his bad him thank GOD for his deliverance; to whom he replied, *I thank* GOD *with all my heart, and S.* Peter *and S.* Paul, *and S.* Franciſco Hernandez Giron, *by whoſe means I am ſav'd, and in return of which I can do no leſs than go and ſerve him.* And he was as good as his word, upon the firſt opportunity.

Giron was adviſ'd to march directly to *La Plata* to encounter *Alvaredo*, and perhaps, had he taken that council, he might have ſucceeded better. For, altho' that

that gentleman was a good ſoldier, it is certain, that he was but little ſecure of his army; the bloody ſeſſions had rais'd a great cry againſt him, and his having rejected the interceſſions of ſome of the moſt conſiderable people of the province and army, for ſome of their friends, had diſguſted them at him. But *Giron* was intent upon reducing *Lima*, thinking that if he could aboliſh the council, or change it, he might bring all *Peru* under his power, and ſtill act with a colour of loyalty; for he ſtill pretended, that his was the *royal* army; and the army at *Lima* he call'd, *the army of the juſtices*.

The juſtices at *Lima*, hearing of *Giron*'s march that way, rais'd an army, but had a great diſpute about chuſing the general; the archbiſhop giving them great diſturbance, by his being a pretender to it. At laſt it was compromis'd, and the office divided between the archbiſhop, and *Santillan*, one of the lords juſtices. Having thus diſpos'd of the commiſſion of general, with great wiſdom, to two perſons, who were not likely to agree in their opinions, the army took the field, and march'd to oppoſe *Giron*'s march to *Lima*. But when the armies came near each other, the lieutenant general, *Meneſſes*, labour'd much to get leave to force the enemy to a battle, but the two generals being of different minds, they loſt ſeveral opportunities of making an end of the war at once. But *Giron*, finding that his men began to deſert, retir'd towards *Pachacamac*, and *Meneſſes* having got leave, purſu'd their rear with a ſmall party, but was repuls'd, and loſt fourteen men.

The jealouſies encreas'd ſo much between the generals, in the king's army, that the lords juſtices, at laſt, were forc'd to remove them both; which they did, with much to do, making *Meneſſes* general. But before he could quiet the jealouſies of the army, *Giron* had march'd to *Naſca*, northward of *Coſco*. So that to prevent his going towards *Quitu*, where he had many friends, the army under *Meneſſes* march'd to *Pachacamac*. But upon advice of *Alvaredo*'s coming to *Coſco*, where he had an army of 1100 men well appointed, *Giron* chang'd his route, marching ſouthwards, but kept wide of *Coſco*, ſo that the mareſchal *Alvaredo*, who had given orders to repair the bridges at *Apurima*, and *Abancay*, upon intelligence of *Giron*'s march, countermanded thoſe orders, and caus'd the bridges to be burnt; and, with all his forces, took the route to *Parinacocha* near the *Cordilleras*, whither he was told *Giron* was going. Whilſt he was on this march, and had arriv'd at a place call'd *Gualaripa*, he heard that the enemy was within four leagues of him. *Giron*, on the other hand, having intelligence of the mariſchal's being ſo near him, took up his quarters in a ſtrong place call'd *Cuchinca*, near a river, which was only paſſable at one place thereabouts, where he poſted *Pedrahita* with a choice body of men, in ambuſcade.

Alvaredo declared his intention, in a council of war, of attacking the enemy in their quarters; but the moſt part of the officers were againſt it, becauſe, ſome deſerters having deſcrib'd the place, they foreſaw that it was to ſacrifice their men, at a great diſadvantage. However, the general being poſitive, they were forc'd to ſubmit. *Alvaredo* order'd 150 muſketiers under *De Robles*, to paſs the river, and to attack upon the left, and *Ramon* with the like number, upon the right; whilſt the main body was to march, and draw up in a plain between the two. But his orders were, that no attack ſhould be made till he gave the ſignal by firing a gun, and then both wings ſhould fall on at the ſame time. But upon *De Robles*'s paſſing the river, *Pedrahita*, from his covert, ſet unexpectedly upon him, and broke his order, and being reſolv'd to conquer or die, he ſoon put that party to the rout. *Alvaredo* advanced with the main body to ſuſtain them, and paſs'd the river with only a few, the army refuſing to follow him, ſo that being unable to recover the diſadvantage, and being himſelf wounded, he was forced to repaſs the river, which *Giron* ſeeing, purſued him with his main body, and falling furiouſly upon *Alvaredo*'s men, he defeated them. The general himſelf, finding that his people would obey no orders, fled with ſome few friends. In this action there were 100 kill'd of his men, 300 wounded, and many more taken. *Giron* having loſt only ſeventeen, and about 40 wounded. After the Action 300 of the Priſoners liſted themſelves with *Giron*.

Upon advice of this defeat of the mariſchal, *Meneſſes* march'd to *Guamanga*, and ſo to *Chupas*, and *Abancay*, where they had intelligence that *Giron* was, in the valley of *Yucay*, about ſix leagues from *Coſco*, having paſt by that city without ſtopping, and only ſent for his wife to come to him. At *Abancay* the mariſchal *Alvaredo* came to the king's army, much dejected for his defeat at *Cuchinca*. In the mean time, *Giron* mov'd his camp to *Coſco*, but making no ſtay there, march'd farther ſouth, the king's army purſuing him. But, to make an end of this confus'd tedious ſtory, *Giron* arriving at *Pucara*, *Meneſſes* follow'd him; and having ſome skirmiſhes with him, by parties, *Thomas Vaſquez* revolted from the rebels, to the great mortification of *Giron*, who, almoſt

Meneſſes *declar'd general of the army of* Lima.

Alvaredo *attacks the rebels*

But is defeated.

A skirmiſh between the armies.

almoſt in deſpair, drew up his forces, conſiſting of about 560 *Spaniards*, and 250 blacks, whom he had trained up. With theſe he attack'd the king's forces in the dark; but *Meneſſes*, having had intelligence of his deſign, by two ſoldiers who had deſerted, was prepar'd to receive him. The fight continued in great confuſion for two hours, but the body of both armies, not knowing where to engage, ſtood in their ranks. *Giron* retir'd with the loſs of twenty men kill'd, and 150 taken or deſerted. The next day two ſoldiers more deſerted to *Meneſſes*, and brought with them a ſilver helmet, which they ſaid *Pedrahita*, *Giron*'s major general, had ſent as a pledge of his following them; which he did that evening.

This laſt ſtroke ſo confounded *Giron*, that he mov'd his camp at the beginning of the night, with a deſign to go to *Arequipa*; but before he had marched four miles, three captains and a major with 150 ſoldiers deſerted in the dark. Thus was *Hernandez Giron* as good as abandon'd by his whole forces; and the deſerters having inform'd *Meneſſes* of his retreat, he purſu'd him with a party of 150 horſe, ſending other parties different routes to intercept him. *Tello* and *de Serna*, with a ſmall party of about 80 horſe and foot, overtook him in a valley upon the road to *Lima*, accompanied by about 100 men, *Giron* drew up to fight them, but 20 of his men chang'd ſides, and after the firſt fire, almoſt all his men deſerted him; ſo that the king's party ſurrounded him, and the few that remain'd with him; and *Gomez D'Arias*, taking hold of the top of his helmet, bad him yield himſelf; but he refuſing to give his ſword, altho' *Arias* had hold of his wriſt, *Silveſter* put the point of his ſpear to his breaſt, bidding him deliver his ſword, or he was a dead man. *Giron* ſeeing it was to no purpoſe to reſiſt any longer, quited his ſword, and being ſet behind *D'Arias* they carry'd him with his companions to *Lima*, as being neareſt, where they conſign'd them into the hands of the mayor, taking a receipt in form, of having deliver'd them to ſafe cuſtody. This happen'd in *October* 1554, and now, the rebellion being at an end, the juſtices preſt by the army to diſtribute the lands and effects of the rebels to them, determin'd to march firſt to *Lima*, that being the place of juſtice; and accordingly, on the 19th of *November* they ſet out from *Coſco*, leaving *Garcelaſſo de la Vega* governor of that city.

Giron *defeated.*

And taken.

The juſtices return to Lima.

As ſoon as they arriv'd at *Lima*, the priſoners were brought to trial; and without ceremony, were hang'd and quarter'd; which put an end to the troubles of *Peru*. And here likewiſe ſhould end our farther account of this part of the world, (reſerving the natural hiſtory both of *Mexico* and *Peru*, to a particular chapter in this our TRAVELLER;) but conſidering, that the diſcovery of *Chili*, *New Granada* and *Popayan*, with the places adjacent, was begun and, in ſome meaſure, carried on, under the direction and influence of the *Pizarro*'s, and by perſons who came into *Peru*, during their adminiſtration, we thought it not improper to give ſome account of them in this place; eſpecially conſidering that the authors we have conſulted, in the preceding ſheets, put their adventures together. Having therefore only given hints at the planting thoſe countries in our accounts of *Peru*, we ſhall as far as our deſign'd brevity will allow, ſpeak more at large of the diſcoveries of them, and of their firſt planting with *Europeans*. And becauſe *Chili* was the firſt diſcover'd in order of time, we ſhall begin with it.

We took notice * that, in the year 1536, *Almagro*, march'd to the kingdom of *Chili*, thro' the terrible mountains of the *Cordilleras*, where he loſt ſeveral of his *Spaniards* and their horſes, and ſeveral thouſands of the poor *Indians* who went along with him under *Paulu*, the brother of *Manco Inca*. But *Almagro* ſtaid ſo ſhort a while in that country, that we may ſay, he rather look'd at a part of it, than made any conqueſt in it.

* *Page* 113.

After the defeat and death of *Almagro*, there was no attempt made upon *Chili*, till 1541, and then *Pedro di Valdivia*, (who had ſerv'd marquis *Pizarro*, at the battle of the *Salinas*, and had the government of *Los Charcas* aſſign'd to him,) beg'd leave, and a commiſſion to make diſcoveries in *Chili*; which was granted him. When he was arriv'd, thro' the ordinary difficulties of the road, to *Copayapo*, where *Almagro* deſign'd to have ſettled, *Valdivia*, conſidering that this being juſt upon the confines of *Peru*, the *Spaniards* would be for going back thither, upon every little diſguſt, reſolv'd to plant a colony farther ſouth; and therefore left the pleaſant fruitful vale of *Copayapo*, and march'd to that of *Guaſco*, and from thence ſtill farther ſouth, to the 33 deg. of latitude, where he laid the foundation of St. *Jago*, and built a fort, for defence of his colony againſt the natives, who were a warlike people. They ſubmitted to him for a while, being terrify'd at the horſes and fire arms, as all the *Indians* were at firſt; but when they came to be a little us'd to them, that extreame terror went off, and they began to cabal againſt him, intending to fall upon the garriſon, when he ſhould go abroad with his horſe, as he frequently did. But the conſpiracy being diſcover'd by means of ſome of the *Indians* whom he had

Valdivia *goes to* Chili.

Builds S. Jago.

had gain'd by good uſage; *Valdivia* ſeiz'd ſome of their *Curaca's*, or lords, and put them into his fort under a guard; notwithſtanding which, upon his going out with 60 horſe to a river, 14 leagues from St. *Jago*, the *Indians* attack'd the fort, which was defended by his lieutenant *Monroy*, who kept them in play from morning to night. And here, *Herrera* tells us of a bold, but cruel action of a lady, not much becoming her ſex and condition. He ſays, the lady *Agnes Suarez*, to prevent the *Indians* releaſing the curaca's, without any orders for it, kill'd all the priſoners with an ax. But the encloſures made about the fort, being a hindrance to their horſe in attacking the *Indians*, the *Spaniards* agreed to abandon the fort, and march'd (with the martial lady, and all the women and children in the centre) to the rivers ſide near by; and when the *Indians* purſu'd, the horſe charg'd them with ſuch violence, that having made a terrible ſlaughter among them, they fled. However during the action, the *Indians* ſet fire to the barracks, and burn'd a great quantity of proviſions, to the great mortification of *Valdivia*.

His fort attack'd in his abſence.

Dec. iv. B. 7. *ch.* 2.

But are repuls'd.

This attack, and the great difficulty and danger of getting proviſions, now that the *Indians* had declar'd againſt them, made the *Spaniards* weary of *Chili*. But the general being reſolv'd to hazard all rather than leave that country, ſet immediately about building new barracks, and ſent out ſtrong parties for proviſions; the fatigue of which was ſo inſupportable to his men, that they conſpir'd to murder him, and to return to *Peru*. But he, having notice of the plot, cruſh'd it in the bud, and puniſh'd the chief mutineers, and aſſum'd the title of governor of *Chili*, to procure the greater reſpect from his little army; and being a man of undaunted courage and bravery, and of no leſs prudence and conduct, in a ſhort time, he ſubdu'd the *Indians* of the vale of *Chili*, who were the moſt conſiderable of any in his neigbourhood, and having made them his friends, he began to work the mines of *Quillota*, and built a fort, for the defence of his miners, putting a garriſon in it. And having a navigable river at St. *Jago*, he order'd a frigate to be built, for the conveniency of trade to *Peru*.

Valdivia *ſends* Monroy *to* Peru.

But being in want of recruits from *Peru*, he would not wait till his frigate could be ready, and therefore he ſent 30 horſe to the valley of *Guaſco*, and from thence, he order'd *Monroy* to go to *Peru*, with ſix horſe-men, and (to entice the *Spaniards* of *Peru*, by the riches of *Chili*,) he caus'd ſix pair of ſtirrups, with buckles for as many breaſt plates, and girts, with hawk's bells to every one of them, to be made of pure gold, as alſo the pummels of ſix ſaddles, which *Monroy* was to carry with him. But as they were preparing to enter the deſart of *Atacama* (which as we obſerv'd before, is the utmoſt limit of *Peru*, adjoining to *Chili*) the *Indians* of the vale of *Copayapo*, fell unexpectedly upon *Monroy*, and kill'd five of his men, he himſelf and *Miranda* eſcaping upon their horſes bare back'd; but being wounded in ſeveral places, their horſes tir'd, and they without arms, they became priſoners to *Coteo* an *Indian* commander, who purſu'd them with 100 archers, and brought them back to his *curaca*, whoſe wife was heireſs of the whole vale. As they were bound in order to be put to death, that lady (by good providence) took pity of them, and riſing up haſtily, unbound them with her own hands, bidding them fear nothing, for they ſhould not die; then ſhe order'd water to waſh their wounds, and gave them ſome liquor to drink, after ſhe had drank of it before them. For, all which, *Miranda*, who underſtood the language, gave her moſt hearty thanks. Here they continu'd ſix months, and were well treated, and to divert themſelves, and pleaſe the *curaca*, they perſuaded him to ride, which he lik'd very well, and having five horſes, beſides thoſe of *Monroy* and *Miranda*, the *curaca* and ſome of his chief officers mounted ſome of them almoſt every day, the *curaca* having a launce and a naked ſword carry'd before him, which they had taken from the *Spaniards*. But *Monroy* being weary of ſtaying among the *Indians*; as he was riding, one day, with the *curaca*, he clos'd with him, and wounded him in ſeveral parts of his body, with a little knife, of which he dy'd ſome months after; at the ſame time *Miranda* ſnatch'd the launce from the one *Indian*, and the ſword from the other. As the *curaca* fell from his horſe, the reſt of the *Indians*, who were a foot, fled with the utmoſt fear; ſo that *Monroy*, *Miranda* and one *Caſco*, who had ſtaid among the natives from the time that *Almagro* had been at *Copayapo*, rode off towards *Atacama*; and, by a wonderful providence, met an *Indian* woman, driving one of their ſheep laden with toaſted *Indian* wheat, which being in different bags, they took upon their horſes, and ſo had ſuſtenance to paſs the deſart, of above 60 leagues, (as we obſerv'd before) and coming to *Lima*, addreſt themſelves to *Vaca di Caſtro*, the new governor of *Peru*; who conſidering the importance of *Chili*, ſent him back, after the defeat of young *Almagro*, to reinforce *Valdivia*, with 60 men. But what excuſe *Monroy* made to the fair lady who had ſo generouſly ſav'd his life, and, in

The Indians *kill five of* Monroy's *men, and make himſelf and* Miranda *priſoners:*

They eſcape to Peru.

p. 114.

in recompence for it, had her husband murder'd by him; our author does not say; and indeed, as it could bear no excuse, I suppose he made what haste he could thro' the vale of *Copayapo*, at his return.

In the mean time, *Valdivia* had his hands full at St. *Jago*. He was intent upon his gold mines at *Quillota*, and left *Gonzalo de los Rios* to keep the fort, and gather the gold. But the *Indians*, who had sagacity enough to find out a proper bait for *Spaniards*, brought a pot full of grains of gold to the captain, telling him, they would give him as much of it as he pleas'd; and so decoying him and his party at a little distance from the fort, they fell upon him unexpectedly, and kill'd all his men, except one free'd black, who with the captain made an escape on horse back. *Valdivia* being inform'd of this, and of his frigate's being burnt, when it was almost ready to be launch'd, march'd from St. *Jago*, with 50 horse, and made some examples of the most forward natives, and having establish'd peace with the rest, built a strong house in the valley of *Quillota*, and left a garison in it.

In this condition *Valdivia* continu'd during all the troubles of *Peru*, till *Monroy*'s return; because his men being reduc'd, it was not practicable to enlarge his conquests, not having people enough to make colonies, or to send garisons to any other places, altho' his courage and conduct were not inferior to any of the conquerors of *America*. He therefore contented himself with keeping the ground he had, and employ'd the *Indians*, who were his friends, in working the mines at *Quillota*, not knowing what was become of *Monroy* till he return'd in the year 1554, there having been no communication between *Peru* and *Chili*, by reason of the civil war, in all the time from *Monroy*'s setting out from St. *Jago* to his return to it again.

Monroy *returns with recruits,*

Valdivia, having got this seasonable recruit, which, tho' a small one, was very acceptable to him, he wisely thought it best policy to secure the country between his city of St. *Jago*, and *Peru*, before he ventur'd to conquer farther south. In order to this, he founded a city at *Coquimbo*, about 60 leagues north of St. *Jago*, being in 30 deg. south lat. nearer the sea than St. *Jago*. In this place, the longest day, (*viz.* the 11th of *December*,) is 14 hours: here there is a small river, which serves to water the whole country round, and makes it produce every thing in great abundance. And near it is a hill which produces a good quantity of gold. In maintaining this new plantation, and that of St. *Jago*, with the mines of *Quillota*, *Valdivia* spent the years 1544, and 1545, and very much he could compass it.

Coquimbo *founded.*

Whilst *Valdivia* was carrying on his discoveries and conquests in *Chili*, one *Pedro Sanchez de Hoz* appear'd in *Peru* producing a commission from *Charles* V. as governor of all to the southward of the coast of *Peru*. But the commission having been first legally granted, by vertue of the emperor's commission, to *Pedro de Valdivia*, it was not thought proper to supersede it, especially considering that there was some informality in *Hoz*'s commission. The council of *Lima*, therefore, desir'd this new governor, to go on to *Chili*, and sent a recommendation with him to *Valdivia*, who, upon his coming, assign'd some lands to him, but did not own his commission. And when he found, that there was a necessity for his own going to *Peru*, to get more forces, that he might keep his ground in *Chili*, he took no notice of *Hoz*, but left a deputation with *Francisco de Villagra* to govern *Chili* in his absence.

The manner of his leaving *Chili* was artful enough. He spoke to several money'd men of his following, to lend him money, that he might send *Villagra* to *Peru* for recruits; but they refusing his request, he gave out a licence to as many as pleas'd to depart with *Villagra* with all their effects. About 20 of his people embraced the opportunity, and carried all their riches aboard the frigate which he had made, after the first was burnt. When they were gone aboard, *Valdivia* came down to the shore, and, having made an entertainment for them, invited them ashore, which they accepted, and came in the boat. As they were at dinner, he recommended *Villagra* to them as a person he had a very great value for, and therefore hop'd they would shew him kindness upon his account; which they all promis'd; but as they were ready to depart, *Valdivia* jump'd into the boat, and made the sea men set off, calling to his guests to remember their promise and be kind to *Villagra*, with whom he had left a deputation to be their governor, in his absence. Thus he went a board the frigate, and took an exact account of every man's money in his pocket book, intending to pay them honestly, (the whole sum being about 80,000 pieces of eight) and weighing anchor, he set sail for *Peru*, where he arriv'd, and join'd the king's forces, against *Gonzalo Pizarro*, as we related in the proper place.

Valdivia *leaves* Villagra, *his deputy, and sails to* Peru.

La Vega P. 2. B. v. ch. 19.

It is natural to believe that the gentlemen who were thus trick'd were not in good humour for some time; but *Villagra*, having now full power, quieted them by degrees, and the rather because there was no remedy, there being no other ship upon the coast of *Chili*. However *Hoz* taking

taking advantage of this diſcontent, endeavour'd to make a party for himſelf, by virtue of his commiſſion formerly mentioned; but *Villagra* being inform'd of it, ſeiz'd *Hoz*, and cut off his head, and hang'd one *Romero*, who was deepeſt in the plot. And thus he brought all the *Spaniards* in *Chili* into good obedience; having nothing to do, but to keep their ground againſt the *Indians* till *Valdivia*'s return.

He returns to Chili.

As ſoon as *Gonzalo Pizarro* was defeated, *Valdivia* ſet out for *Chili*, with a new and full commiſſion from the preſident *Gaſca*, as has been ſaid before. At his arrival, with a conſiderable reinforcement, he approv'd of what *Villagra* had done; but having intelligence that the *Indians* of *Copayapo* had kill'd captain *Bon* with 40 men, who were coming to him from *Peru*; and that *La Serena* (a new city built between St. *Jago* and *Guaſco*) had been burnt by thoſe *Indians*; the governor ſent *Aguirre*, with a ſufficient number of men to rebuild that city; which he did, and chaſtis'd the *Indians* who had revolted.

These things being happily perform'd, and all things quiet in the north, *Valdivia* bent his thoughts to make diſcoveries towards the ſouth. And therefore, taking with him 150 men, he march'd thro' the provinces of *Arauco* and *Tucapel*; in both which he had many encounters with the *Indians*, but being always victorious, he ſubdu'd them, and brought them to deſire peace: and marching to the valley of *Andalien*, he founded the city of *Conception*, upon the ſea coaſt, in the 37 deg. of lat. But ſoon after this, the *Indians* brought a formidable army againſt him, which they divided into ſeveral bodies, and attack'd him. He fought them for the ſpace of a whole day, and altho' he was in danger of being defeated by their numbers; yet at laſt he put them to flight, having made a terrible ſlaughter amongſt them. Then he built a fort, at his new plantation, and being attack'd there, he gave the *Indians* another overthrow.

The city of Conception *built.*

Having now a breathing time, he ſent *Alderete* with 70 horſe to view the cities of *Arauco* and *Tucapel*, who marching ſometimes on one ſide and ſometimes on the other of the river *Biobio*, ſaw many cities, and vaſt plains, where were many inhabitants, but they were for the moſt part retir'd to the mountains. *Aldarete*, having run thro' a great tract of land, return'd to *Valdivia*, who, upon his report, determin'd to make a progreſs thro' thoſe provinces the year following.

Accordingly, in the beginning of the year 1551, having left a gariſon well ſtor'd with ammunition and proviſion in the fort of the *Conception*, he ſet out, with all his forces, along the plains of *Ongol*, ſouth of his new city, and at ſeveral places defeated the *Indians* who oppos'd him. At laſt he founded another city, which he call'd *Imperial*; and, to perſuade his men to a vigorous defence of this new city, he divided the lands amongſt them. From thence he march'd, ſtill ſouthward, to the valley of *Marequina*, where he had advice that 180 new men were come from *Peru* to St. *Jago*. He ſent orders to *Villagra* to bring ſuch of them as were able and well arm'd; which being done, the governor march'd with a pretty army, compos'd of *Spaniards* and north *Chilians*, towards a river, in 41 deg. ſouth lat. to which he gave his own name, and is ſtill known, by the name of *Baldivia* river (changing the V into B) where is a ſpacious harbour, near which he built a city, which ſtill retains his name.

The city Imperial *founded.*

As likewiſe Valdivia *or* Baldivia.

From thence, he ſent *Alderete* north weſt towards the ſnowy mountains, which are a continuation of the *Cordilleras*, which run thro' the ſouth of *Peru*, and all along the eaſt of *Chili*, and terminate in the magellanic land. Near theſe mountains, *Alderete* founded *Ciudad Ricca*, call'd in our maps *Villa Ricca*, or the rich city, but the ſituation was, after ſome time, chang'd to where it is now, in 38 deg. lat. nearer the ſea coaſt, on the ſide of a large lake. All matters having ſucceeded ſo proſperouſly with *Valdivia* in this country, he return'd to *Imperial*, all the *Indians*, as he paſt, ſubmitting to him; and having divided all the lands of thoſe conqueſts, among his men, keeping moſt of the *Arauco* and *Tucapel* provinces for himſelf, and built three forts within eight leagues of one another in that country; which done, he march'd to *Conception*, and then to St. *Jago*. From thence he diſpatch'd *Alderete* to *Spain* with the king's mony, and a particular account of the country, and of his own labour in the conqueſt of it.

Villa Ricca *built.*

Alderete *ſent to* Spain.

In the year 1552 a new ſupply of men arriv'd from *Peru* under the command of captain *Avendano*, who brought with him, by land, 350 horſes and mares, for breed: there came alſo ſome other *Spaniards*, by ſea, with their families, to ſettle in the new plantations; which indeed were too many, for the ſmall number of *Spaniards* then in *Chili*, conſidering that the country was well peopled with natives, and they a warlike nation, and not under any king, as the people of *Peru* and *Mexico* were; but in *clans* and *tribes*, ſubject to the oldeſt or braveſt of the ſeveral races. So that there being ſo many cities founded, there could be but a ſmall number of *Spaniards* in every city; and they were at ſuch a diſtance from one another

another, that when one city was vigorouſly attack'd, they could not ſend notice, or receive relief from another in a long time. For, from *Copyapo* to *Baldivia* are 900 miles, and, at that time there were ſix cities between them; and ſuppoſing there were, with the ſupplies lately come from *Peru*, 400 men in *Chili*, thoſe could make but 50 to every city; but conſidering that there was a neceſſity of keeping a body of troops, in one place, to ſuccour the country as occaſion offer'd, if 150 were in one city, or marching thro' the provinces, then every city could have but 33 men to defend it, perhaps againſt 20,000 *Indians*, who might come to attack them.

But *Valdivia*'s ſucceſs now began to leave him, and perhaps the long tide of good fortune, which had attended him, made him too ſecure, and occaſion'd a preſumption that ruin'd him. But the true reaſon of the inſurrection, in which he periſh'd, was, the love of money. For, having, as we have ſaid, reſerv'd for his own ſhare, the greateſt part of the provinces of *Arauco* and *Tucapel*, (in which he had found gold mines) he employ'd the natives to work in them, and exercis'd ſuch a tyrannical authority over them that the whole provinces were diſguſted, and join'd together, as one man, to break the yoke of bondage from their necks; the ſeveral *Curaca*'s, or heads of different clans, uniting in this, as the common intereſt of the whole country, nor indeed could they be juſtly blam'd for doing ſo. For, what brave people will ever tamely undergo the diſgrace and miſery of being *ſlaves* to *foreign Tyrants*, and *Uſurpers*, who under pretence of *Religion*, and baniſhing *Idolatry*, pillage their treaſure, and make them, and their poſterity their drudges and beaſts of burden; as if the cant of ſaving a nation from going to the devil by a *falſe religion*, were ſufficient compenſation for the *loſs* of *Liberty*, and for making them, with their own gold, bribe their task-maſters to make their *Slavery* perpetual.

The Indians *riſe in arms.*

And attacks two of the forts.

The *Indians* having concerted meaſures, at one and the ſame time attack'd two of their forts in *Arauco* and *Tucapel*, in the laſt of which, *Erozar* repuls'd the enemy ſeveral times, and ſent to *Valdivia* for aſſiſtance; but none coming in time, he deſerted the place in the night, and march'd, in ſilence, to the other which was beſieged. At laſt *Maldonado* was ſent to *Tucapel* with ſix men; but, upon his arrival, found the fort burnt, and he was attack'd by the enemy, who kill'd three of his men, he himſelf with the other three eſcaping to *Arauco*; from whence he ſent advice to *Valdivia*, who haſtily marching with 150 men, paſt the river *Biobio*, and arriv'd at the fort, where *Maldonado* adviſ'd him to ſtay, and ſend for all the force he had, to quell this inſurrection, which, he aſſur'd him, was the moſt univerſal of any he had ſeen in *Chili*. But he would not hear of delays, ſaying that the life of buſineſs was expedition.

Part i. b. vii. ch. 22. *& ſeq.*

But becauſe *De la Vega* is more full, in his relation of *Valdivia*'s defeat, than any other author I have ſeen; and becauſe he ſeems to give the moſt rational account of the manner of it, I have choſen to tranſcribe from him, at leaſt to give the reader his ſenſe, in this part of the ſtory: which is as follows,

Valdivia *engages the* Indians *with ſucceſs.*

Upon *Valdivia*'s arrival in the plain of *Arauco*, he found an army of *Indians*, to the number of 14 or 15,000, whom he attack'd, and put to flight, as uſual, and continued to do ſo in ſeveral encounters; yet they ſtill appear'd, the next day, in greater numbers, altho' his horſe made great ſlaughter among them, at every engagement. At laſt, an old *Indian* general, of great experience in war, having conſider'd both armies, and wondering that the *Spaniards* ſhould ſtill get the better of the natives, notwithſtanding the odds of their numbers; he deſir'd the *Curaca*'s and officers, of the *Indian* army, to call a council, where having found, by the anſwers made to the ſeveral queſtions he ask'd, *that the* Spaniards *were mortal*; that they were *ſubject to hunger and thirſt*; that they could be *overcome with fatigue*; and that both *they and their horſes could be kill'd*; he deſir'd his countrymen to take their repoſe, and leave the ordering of the next battle to him, and he hoped to give them a good account of the uſurpers.

But by a new device of an old Indian *general he is defeated.*

Accordingly the next morning, he divided the army into 13 different battalions, of 1,000 men each; placing them at ſuch a diſtance behind one another, as that one could engage without being encumber'd by the reſt. His orders to every battalion were, that they ſhould engage ſingle; and when they could ſtand no longer the ſhock of the *Spaniſh* horſe, they ſhould betake themſelves to flight, but with this ſpecial caution, that they ſhould take ſuch a compaſs, either to right or left, as to keep clear of the battalions behind them; and when they were out of the enemy's reach, he order'd them to fall in the rear of the laſt battalion, and there to refreſh, and reſt themſelves whilſt the ſecond battalion took up their poſt in the battle. Thus the whole 13 battalions were to engage the *Spaniards* by turns, and when they were broke, they were to fall into the rear: by which means, the firſt that fought, and were beaten, had time to rally, and would be

freſh again, before the 12, that were before them, had perform'd their part.

With theſe inſtructions, they advanc'd, and the firſt battalion ſtood the firſt aſſault for a while; but being diſorder'd by the horſe, (as the old *Indian* foreſaw they ſhould,) they fled, and obſerv'd his orders, flying to the right and left, and caſting two half circles, to fall into the rear of the 12th battalion. As ſoon as they began to flee, the ſecond body mov'd up to the attack, and did what execution they were able, and then fled, as the firſt had done; and, like them, falling into the rear, there was an experienced general there, to put them in order as they retreated. This manner of fighting kept the *Spaniards* in conſtant work, for many hours, till they had beaten 10 battallions of the *Indians* one after another, but ſtill they ſaw a dozen freſh ones before them. At laſt, after ſeven hours cloſe fighting, both the men and the horſes began to fail, and loſe that vigour which they ſhew'd at firſt. Which the *Indians* being ſenſible of, theirs encreas'd, and they ply'd them inceſſantly with freſh forces: ſo that *Valdivia* ſeeing the afternoon half ſpent, and concluding, by this new way of fighting, that they would be able to harraſs him the whole night, after the ſame manner, thought it expedient to retreat, to a place he had obſerv'd, about four miles from the field of battle; where a few *Spaniards* would be able to repulſe the whole army of *Indians*; he therefore gave orders to retreat to that poſt. But our author ſays, that order was diſcover'd by an *Indian* ſervant of his, which gave the enemy an opportunity to be before hand with him; ſo that when the *Spaniards* would have enter'd the paſs, they found the *Indians* poſſeſt of it: and being quite ſpent with labour and toil, and not having had any refreſhment, they gave themſelves for loſt, which the *Indians* perceiving, they united all their battalions, and fell upon them at once, 20 or 30 of them getting about one horſe, knocking down both man and horſe with great clubs. Thus *Valdivia* and all his men were kill'd in a moſt butcherly manner, not one eſcaping except one *Indian* boy, who fled to *Arauca* and gave the account of it to *Maldonado* who had been left there wounded.

And ſlain with all his men.

Herrera *dec.* v. B. viii. ch. 3.

Maldonado, upon this news, thought it convenient to abandon the fort of *Arauca*, and with the 15 men left there, retir'd to the *Conception*, and ſent to *Gomez d'Almagro*, to join him with the garriſon of the third fort of *Puren*. But he deferring his march a day too long, was ſet upon by the *Indians*, and loſt ſeven of his men, and made a gallant retreat with the reſt back to the fort, tho' they were all wounded, having fought the whole day, and march'd the greateſt part of the night; but as ſoon as they had got ſome reſt, they evacuated the fort, and march'd to *Imperial*.

When this misfortune happen'd, *Villagra* was at *Baldivia*, but upon the hearing of the news, he ſet out, (with his own 30 men, and ſome others he got to join him from the towns in the ſouth) for the *Conception*; and recruiting his forces, with ſome from St. *Jago*, he reſolv'd to revenge his general's death upon the *Indians*. To that end, he march'd to *Arauco* with 160 men, and ſix pieces of cannon, and having paſt the river *Biobio*, the major general *Reynoſo* fought ſome battalions of *Indians*, till *Villagra* came to his aſſiſtance; but the *Indians*, who had now learn'd the way to make their numbers of uſe to them, the battle laſted moſt part of the day, and *Villagra* being knock'd down, and his horſe kill'd, they ſo preſt upon him, that he had great difficulty to prevent being ſlain; and being mounted again, by ſome of his people, upon a freſh horſe, he thought fit to retreat, after having loſt, eight of his men. The *Indians* purſu'd him for three leagues, and kill'd fourſcore in the retreat; the reſt, almoſt by miracle, got ſafe with their general to the *Conception*; which finding not tenable, he ſent the wounded men, the women, and other uſeleſs people, by ſea, to St. *Jago*; going himſelf by land, with ſuch has had eſcap'd at the laſt battle.

Villagra *marches againſt the* Indians.

And is defeated.

When he arriv'd in this city, he found that *Valdivia* had left a will, by which he had appointed *Alderete* (now in *Spain*) his ſucceſſor in the government, and, failing him, *Aguirre*, who was (at this time) on the other ſide the mountains, and knew nothing of what had happen'd. However *Villagra* having been lieutenant general to *Valdivia*, and, upon his death, choſen general by moſt of the cities, he inſiſted upon his election, but *Aguirre* returning from the mountains, was admitted at St. *Jago* as governor; ſo that theſe two rivals were near coming to blows; at laſt, they agreed to refer the diſpute to the royal court of *Lima*; but left *Baldivia* and *Imperial*) the only two cities left in the ſouth) ſhould be loſt, before they could have the council of *Peru*'s deciſion, *Villagra* undertook to relieve them; and marching ſouthward with 150 men, he march'd thro' the rebel provinces (as they call'd them) and had ſeveral encounters with the *Indians*, who had learn'd to uſe *Spaniſh* weapons with great dexterity. Nothwiſtanding which, he, with great bravery, recover'd all the territories about *Imperial*, and ſent ſuccours

cours to *Baldivia*; till his conquests were interrupted by an order from *Lima*, that both he and *Aguirre* should give up their claim, to the *alcaid* of every city, within his own district. *Villagra* comply'd with the order. But the council of *Peru* seeing their mistake, sent him a commission, as lord chief justice of *Chili*, until *Alderete*'s arrival, whom the king had made lord lieutenant there, upon the news of *Valdivia*'s death. This was the saving of *Chili* to the *Spaniards*, for *Villagra* now exerted himself, and raising all the forces he could, he march'd against *Lautaro*, general of the *Indians*, who had done much mischief to the *Spaniards*; and having beat up his quarters by break of day, after an obstinate resistance, he kill'd him, and defeated his army.

But afterwards retrieves the Spanish interest.

By this victory, he secur'd the *Spanish* interest among the *Indians* in the several territories of the cities, then in their possession. Soon after which, *Alderete* dying at *Taboga* near *Panama*, the vice roy of *Peru*, Don *Hurtado de Mendoza*, made his own son captain general of *Chili*, and making *Villagra* and *Aguirre* both prisoners, they were sent by sea to *Peru*. A glorious recompence for all the services *Villagra* had done. But there were in *Peru*, and always have been in courts, from age to age, ministers, who have very little regard for the reputation of their masters, so they can gratify their passion, or advance their own interest. But this submission to the royal court of *Peru* crown'd his victories, which had been very considerable, and rais'd his reputation above all the selfish views of his enemies. And this being the conclusion of the conquests in *Chili*, under the conduct of *Pizarro*'s captains; we shall here leave *Mendoza*'s son to manage the *Indians*, and give some account of the progress of *Pizarro*'s other officers in the north.

Notwithstanding which he is sent prisoner to Peru.

We have already spoken of *Belalcazar*'s settling the colony at *Quitu*; and hinted at his discovery of *Popayan*; but as that was only glancing at it, in relating another story, we shall now give a fuller account of it.

Belalcazar having been sent to *Quitu*; after *Ruminavi*, one of *Atahualpa*'s generals, as we said before, soon subdu'd that country, by the interest of *Manco Inca*, and by the expectation the *Indians* had, that *Pizarro* would settle that prince in his empire; which expectation the *Spaniards* kept up in them, till they had rivetted their own power so strongly, that it was not possible for the *Indians* about *Quitu* to set themselves free. But as it was the common practice of the *Spanish* captains, who were settled in any government, to send parties out to make farther discoveries, out of their own precints, and to make a merit of those discoveries at the court of *Spain*, which generally rewarded them with the goverment of those new countries, when they were not included in the commissions formerly granted; so *Belalcazar*, being inform'd by the natives of *Quitu*, that there was a large country towards the north, rich in gold, under the dominion of *Colambaz* and *Popayan*, two brothers; he being fond of making discoveries towards the north sea, to save the trouble of carriages over the mountains, set out with 300 men, well furnish'd with ammunition; but he was no sooner out of the territories of *Quitu*, than he found the natives drawn up in order of battle, to oppose his passage, with whom he had frequent skirmishes; but by the terror of his horse and his fire arms, he still got the better of them. The greatest hardship he labour'd under was want of provisions, for the natives having been often beaten, with great slaughter, abandon'd their dwellings and carry'd away every thing to the mountains. However *Belalcazar* and his men, being inur'd to hardships, furnish'd themselves as well as they could with the natural produce of the country, arriv'd at the capital city of the province, which, from the name of the prince, they call'd *Popayan*, by which name the whole country goes to this day.

Herrera, Dec. IV. B. 3. ch. 3.

Belalcazar marches towards Popayan.

In this place, he determin'd to settle; being an open country, and not far from a large river, which by the course of it, he believ'd was the *Rio Grande*, which empties itself into the north sea. During his stay in this pleasant valley, thro' which many small rivulets ran, he sent out several parties to discover the country round, and to bring him in provisions. But the natives being a warlike people, and many of them man-eaters, there were many skirmishes between the *Spaniards* and them; but the former still kept their ground, and put the *Indians* to the rout in all the encounters they had with them; and very wisely treated all their prisoners well, to engratiate themselves with the *Indians*. The greatest disadvantage they were at was the want of being understood, for the language of that country was quite different from that of *Peru*, and the farther they penetrated into the country northward, the diversity of languages encreas'd, and they were, in some places, forced to use three interpreters to explain what one person spoke.

This city of *Popayan*, where *Belalcazar* settled his first colony, was in a pleasant valley about 60 leagues from *Quitu* in 3 deg. n. lat. so that the days and nights were of a length the whole year

year round. After he had fix'd at this city, he had very frequent skirmiſhes with the natives, who ſometimes made peace with him, but when the firſt opportunity happen'd, broke all their engagements and attack'd the *Spaniards*; but ſtill to their own loſs. After living about a year with them after this manner, he at laſt brought them to be quiet; and then he ſet out for farther diſcoveries northward, to purſue the courſe of the great river to the north ſea. He left a deputy in *Popayan*, and marching in purſuit of the river's mouth, came into that country, now well known by the name of *New Granada*, between 5 and 8 deg. n. lat. and is directly north from *Popayan*.

Belalcazar having ſettled a colony in Popayan, *advances to* New Granada.

But altho' *Belalcazar* believ'd, at firſt, that he had been the diſcoverer of this country, he ſoon was undeceiv'd. For, being arriv'd at the great river, ſome of the natives, who ventur'd to converſe with him, told him, that on the other ſide of the river, there were men ſuch as they were, and that they had ſuch creatures to carry them as his people had. *Belalcazar* paſt the river with 130 men, to ſatisfy himſelf of the truth of this report, and march'd to the province of *Bogota*, where he had intelligence thoſe ſtrangers lay. As he was upon his way to *Santa Fe*, a new colony eſtabliſh'd in that province, before he came into it, he was inform'd, that a third diſtinct army of ſtrangers, were marching from the eaſt towards the river. *Belalcazar* ſent out a party to get intelligence from whence, they came, and who they were; who, having ſeen and ſpoken with their captain, brought their own commander an account, that they were *Spaniards*, who had come from *Venezuola*, under the command of *Nicholas Federman*, to make diſcoveries.

Three different diſcoverers meet in that country.

Theſe three parties being within ſix leagues of one another, each of them ſent to enquire of the other two, who they were, which every one of them told without reſerve. They who were ſettled at *Santa Fe*, and had given the name of *Nueva Granada* to the country, had come by order of the lord lieutenant of the *Canaries*, to diſcover the *Rio Grande*, or the great river of *Magdalen*. Their captain was *Gonzalo Ximenes de Queſada*, who had march'd, by land, from the mouth of that river with 500 foot and 100 horſe; and ſome ſhips ſail'd up the river to be ſerviceable to him, in this expedition; and had join'd him much to his comfort, when he was in great ſcarcity of proviſions. And having march'd over terrible mountains, he was ſtop'd, for ſome time, by an army of *Indians*, in this province of *Bogota*, ſo call'd from the *Curaca*, to whom it was ſubject. But *Ximenes* ſoon ſubdu'd them, and took poſſeſſion of the city which this *Curaca* had built, and call'd by his own name, where he found plenty of all things, and the *Curaca* ſent him a preſent of gold, but did not come himſelf altho' *Ximenes* invited him; but *Ximenes* having intelligence of him, attack'd him in his quarters, beat his party, and *Bogota* eſcaping to the wood dy'd of a wound he had receiv'd in the action. Upon his death, *Sagipa* took poſſeſſion of his dominion, and became a friend to the *Spaniards* upon condition they ſhould aſſiſt him againſt the man-eaters. But the *Spaniards* inhumanly rack'd him to death to oblige him to diſcover *Bogota*'s treaſure.

Belalcazar, hearing of *Ximenes* and *Federman*, began to apprehend, as indeed it was very probable, that they three would quarrel about the right of conqueſt, being all come from different places, and having poſſeſs'd ſeveral places by their arms. But the prudence and moderation of *Ximenes* prevented any miſchief which might have enſu'd; for, altho' his title ſeem'd to be the beſt, both as being the firſt, and as having conquer'd the proprietors; yet he receiv'd the other two captains courteouſly, and *But agree* he and *Belalcazar* agreed to give *Federman* ſome gold, and to aſſign him a part of the country to plant, and they all three concluded to leave *Federman*'s ſoldiers in *New Granada*, that half of *Belalcazar*'s ſhould retire 80 leagues back, and ſettle a colony in the vale of *Neiva*, as being more contiguous to his own conqueſt of *Popayan*. And as to their pretenſions to the government of the new country, they agreed to go all to *Spain* together, and apply to the court for juſtice. To this end they built more brigantines to carry them down the river; and whilſt they were building, *Ximenes* planted two new colonies, one at *Tunja* 22 leagues from *Bogota*, and the other at *Velez*, 30 leagues from *Santa Fe*, and 12 from *Bogota*. This country of *New Granada* is about 130 leagues in length, and in ſome part of it 30, and in others 20 in breadth. It is bounded on the ſouth by *Popayan*; on the north by St. *Martha*; on the weſt by the ſouth ſea; and on the eaſt, by the *Terra Firma*.

When the two new brigantines were launch'd, the three captains, without pretending to command one another, went aboard, with about thirty followers, and ſail'd down the river, and from thence to *Carthagena*, where they ſhip'd for *Spain*. During *Belalcazar*'s abſence from *Popayan*, ſeveral captains, from ſeveral places, enter'd that province upon pretence of making new diſcoveries, and planted

planted colonies; but fearing *Belalcazar*'s return, they made it their buſineſs to engratiate themſelves, ſome with the *Spaniards*, others with the *Indians*, to put themſelves in a condition to oppoſe him, if he ſhould endeavour to diſpoſſeſs them. Thus *Robledo* founded ſome colonies in *Auzerma*, belonging to *Popayan*, and in the territories adjacent, ſuch as *Carrapa*, *Picara*, and *Paucura*. And *Paſcal de Andagora* did the like in the adjoining provinces. But inſtead of doing him hurt, they planted the country for him. For, *Belalcazar* having carry'd his point in *Spain*, receiv'd the king's commiſſion as *Adetuſado*, or lord lieutenant of *Popayan*, and returning by *Panama* to that country, and producing his commiſſion, the *Spaniards* receiv'd him, and thoſe gentlemen were forced to give up their pretenſions. This happen'd before the fall of the *Pizarro* family.

Belalcazar *made lord lieutenant of* Popayan.

Near about this time, there were ſeveral colonies planted towards the eaſt of *Peru* on the other ſide of the cordilleras towards *Paraguay*; but many of them were made by captains who had no relation to the firſt diſcoverers, nor can they well be brought under the title of the *Pizarro* expedition.

I have entirely avoided giving any part of the natural hiſtory of ſuch parts of *America* as we have yet touch'd upon, becauſe it had not been poſſible to have kept clear of repetitions, if we ſhould have given the natural hiſtory of every part of that continent, as it was diſcover'd; ſince many things relating to that ſubject are common to the country in general. It was therefore thought more eligible to go on with the diſcoveries of the moſt conſiderable parts of this new world, according to the order of time when they happen'd; and to reſerve the natural and moral hiſtory of the whole to a particular chapter by itſelf.

If this chapter has not appear'd ſo diverting to ſome readers, as that of the conqueſt of *Mexico*; or if any ſhall complain, that there ſeems to be more of confuſion in the narration, than there was in that; I hope they will give allowance for the ſubject, and conſider that it was not an eaſy task to give a ſhort abſtract of *murders*, *civil wars*, *invaſions*, *treaſons*, and a long chain of *confuſion* and *diſorder* for a tract of years together, and thoſe carry'd on in many different parts of the ſame kingdom at the ſame time; I ſay, that cannot be ſo eaſily put into method, as one continu'd ſtory of one man's actions, who had only one thing in view; and where the ſcene of action was confin'd to a ſmaller compaſs, both of time and place. All the apology I can make for any defects that may be found in this performance, is, that it is as well as my time and materials (together with my own ſmall ſufficiency) could allow. And if I have ſometimes taken one author's reaſoning rather than another's, and chang'd from him to the other, upon other occaſions, it was becauſe I thought there was a byaſs upon one or the other in ſome parts of their relation; which I think I have not copy'd them in. But if I have made a wrong Judgment, I muſt ſubmit that to the publick; but I have diſguis'd no facts, but told them as I found them.

CHAP. V.

The other Spaniſh DISCOVERIES *in* AMERICA.

Having given a full and particular account of the diſcovery and conqueſt of the two great empires of *Mexico* and *Peru*, each by itſelf; it will not be ſo entertaining to dwell ſo long upon the other ſmaller diſcoveries, and therefore we propoſe to bring all the others, in which the *Spaniſh* nation was concern'd, into one chapter, as being of leſs conſequence than the two vaſt empires already treated of; and therefore we ſhall begin with

SECT. I.

The Diſcovery of FLORIDA.

WE took notice, * that in the year 1517, *Corduba* landed in *Florida*, (altho' it had not then receiv'd that name;) but he only water'd there, and ſail'd directly to *Cuba*. But ſome time before *Cortez* undertook the expedition to *Mexico*, *John Ponce de Leon*, formerly mention'd, † and who had been governor of *Porto Ricco*, being now ſuperſeded from that dignity, rather than be idle, reſolv'd to lay out ſome of the money he had got, in making ſome farther diſcovery, in order to gain ſome reputation, and likewiſe to encreaſe his fortune: and having

* p. 41.

† p. 34.

Herrera *dec.* I. b. ix. ch. 5.

having heard that there was land towards the north, which had not been poſſeſt by any *Europeans*, he fitted out three ſhips, with good ſtore of men and proviſions, and having paſt by ſeveral iſlands, at laſt, about eaſter, he caſt anchor near a land, which he took to be an iſland, but it prov'd to be a part of the continent. To this they gave the name of *Florida*, either from the beauty of the country, or becauſe it was diſcover'd in the eaſter holydays call'd by the *Spaniards Paſqua Florida*. He landed in two or three places, but could not make good the country, and the only advantage made by that expedition was, that *Alaminos* his pilot found a ſhort cut from the bay of *Mexico* to *Spain*, without going about *Cuba*, as all the ſhips had done before. But one ridiculous project *Ponce de Leon* had, *viz.* the finding out a certain imaginary ſpring of *Bimini*, a river in *Florida* which the *Indians* at *Cuba* dream'd to have the virtue of renewing youth; and he, being fool enough to believe them, run a wild gooſe chaſe after that ſpring. And ſo having ſpent ſome months about that coaſt and the *Bahama* iſlands, he went to *Spain* to brag of his diſcoveries.

Ponce de Leon *ſails to* Florida.

But to no purpoſe.

Another fruitleſs attempt by de Ayllon.

Such another expedition *Vaſquez de Ayllon* made to *Florida* ſome time after, with the like number of ſhips, of which he loſt one; and having landed 200 men, (a number under the conduct of *Cortez* or *Pizarro*, ſufficient to conquer half *America*) the greateſt part of them were kill'd by the *Indians*, and ſome ſay *Vaſquez* himſelf left his bones there; they that eſcap'd came back to *Hiſpaniola*, having ſeen no towns in *Florida* except *Oritza*, which they call'd *Chicora*, and *Guale* which they nam'd *Gualdape* near point St. *Hellen*.

Herrera dec. iii b. II. ch. 6.

Narvaez *undertakes the conqueſt of it.*

The next that attempted the conqueſt of *Florida* was *de Narvaez*, who having been releas'd by *Cortez*'s order after the conqueſt of *Mexico*, had return'd to *Cuba*; and now in the year 1528 ſet out from that iſland with 400 foot, and 80 horſe, on board four ſhips and a brigantine for *Florida*; they ſet ſail in *March*, and after ſome ſtorms which toſs'd them too and from about a month, they arriv'd on the 12th of *April* upon the coaſt of *Florida*. *Narvaez* landed as many of his men as the boats could carry, and the day after brought his horſes aſhore which were reduc'd to 42, the reſt being dead. He found the *Indians* houſes abandon'd, ſo that, having taken poſſeſſion of the country in name of the king of *Spain*, he march'd northward, with 40 foot and ſix horſe, ſending his pilot with the brigantine, along the coaſt, to find out a ſafe harbour for the ſhips. *Narvaez* piercing into the country ſome leagues, met with ſome ſtragling natives, but having no interpreter, they could not underſtand one another; but having ſeen ſome gold about the *Indians*, they ask'd, by ſigns, where they had it; the *Indians* pointed north weſt, and named *Apalache*. *Alvar Nunez* the treaſurer advis'd to return to their ſhips and altogether to ſail up the gulph, towards the places pointed out by the natives, but it was carry'd againſt him; ſo that having ſent for all his forces, every ſoldier taking two pound of bisket and half a pound of bacon, they ſet out with 300 foot and 40 horſe, and travell'd 15 days without ſeeing either town or houſe, and croſs'd a river on floats and by ſwimming; and having ſpent a whole day in paſſing it, they ſaw 200 *Indians* at a diſtance in arms; ſending out ſome horſe, they took ſix of them, who brought them to their houſes, where they found a very ſeaſonable recruit of corn. Being guided by thoſe *Indians*, they march'd another fortnight in ſearch of *Apalache*. At laſt on the 17th of *June*, one of the lords of the country came to them, with ſome attendants, and being ask'd for *Apalache*, ſignify'd as they believ'd, that the people of that country were his enemies. This lord they made preſents to of hawk's bells and other trifles; and he march'd with them to his own town, where he preſented them with *Indian* wheat; and purſuing their journey the next day, they march'd thro' woods and rugged ways, till about the 25th of *June*, they came in ſight of *Apalache*.

Herrera dec. iii. b. iv. ch. 4.

This town conſiſted of about 40 low houſes, in a flat country, full of woods of walnut, laurel, cedar, ſabine and other timber. In this place they found plenty of maiz, dear, rabbits, hares, as alſo bears and lions; with geeſe, ducks, herons, patridges, *&c.* There were no men in the town at their going thither; but in ſome hours after their arrival, the men returned demanding their wives and children, which the *Spaniards* deliver'd to them; only they detain'd a cacique, who had come to treat with them; which ſo incens'd the *Indians* that the next day, the natives attempted to burn the town; but the *Spaniards* taking arms, they fled to the moraſſes. Here they ſtaid 25 days, and finding, by ſome parties they had ſent out, that the country northward was a wild uncultivated waſte; and, as far as they could underſtand the cacique, being inform'd that *Aute* was a plentiful place near the ſea coaſt, they determined to march that way; and in 10 days they arriv'd, having been almoſt every day aſſaulted by the natives: but not finding it anſwer their

expectation, they departed, purſuing their march towards the coaſt.

From their firſt landing, they had march'd above 280 leagues, thro' woods and rugged roads, without having ſeen ſo much as one hill or mountain, in all the march: and were now quite fatigu'd; ſo that finding ſome rivers whoſe courſe, being ſouthward, they concluded that they empty'd themſelves in the gulph of *Mexico* upon the *Florida* coaſt; they built ſome large barks of 20 cubits long, caulking them with the films of *palmito* trees, and made ropes of the horſe-tails and mains, and ſails of their ſhirts. On board theſe veſſels they embark'd, having eaten all the horſes in this laſt march. They ſail'd ſeven days down one of thoſe rivers without ſeeing the ſea; at laſt they diſcover'd an iſland, where were five canoes landing on the iſland; they found in one houſe a number of dry'd skates, which were very acceptable to them. Leaving this iſland, and taking the canoes with them, they ſail'd down along the ſtream, till thirſt forced them to land upon the continent, where they ſaw ſome houſes, in which they got freſh water and fiſh ready dreſt, but the people were fled. However in the night they were attack'd by the natives, but beat them off. Next morning they embark'd again; but a ſtorm diſpers'd their little fleet, and the bark wherein *Nunez* was, drove aſhore upon an iſland where he was reliev'd by the natives, and ſetting out again, the bark overſet, and three of his company were drown'd; and he with the reſt got to land, without arms; the ſame *Indians* who had reliev'd them at firſt, now brought them proviſions, and ſetting down by them, lamented their misfortune, as they obſerv'd by their behaviour; they likewiſe made fires in the open fields to dry them, and prevent their periſhing with cold, it being then in *November*. After this they brought them to ſome houſes, where they entertain'd them with great hoſpitality, altho' the *Spaniards* were under great apprehenſions that all this kindneſs was in order to ſacrifice them; but they were miſtaken. A day or two after, the *Indians* brought another bark's company to join them, theſe having been ſhipwreck'd upon the ſame iſland. The two companies made up eighty perſons in all; but, being oblig'd to winter here, ſuch a number of them dy'd, that they were reduced to fifteen. The *Spaniards* call'd the iſland *Mal Hado* or ill Luck.

De Narvaez was never more heard of; and indeed from his behaviour, both in *Mexico*, and *Florida*, he ſeems to have miſtaken his talent, when he ſet about making conqueſts. The treaſurer and his company ſtaid with theſe good-natur'd iſlanders till *April*; and then all proviſions failing, the natives, as they us'd to do, left the iſland, and went to the continent, till the fruits of their own iſland ſhould be ripe, and the fiſh return. They took the *Spaniards* with them, to whom they ſhew'd the greateſt kindneſs, becauſe (as our author ſays) they had done thoſe poor people much good, in curing their ſick, by making the ſign of the croſs, and praying over them. *It ſeems the* Indians *had more faith than the* Spaniards, *or elſe ſo many of them had not dy'd, when they had the phyſicians ſo near them.* But be this as it will, it is certain that the *Spaniſh* writers take it for granted, and *Nunez*, and two of his companions, who ſtaid among the mountain *Indians*, and travell'd from place to place, they did not know where, for ſix years together, (and were all that were ever heard of, of all thoſe who march'd with *Narvaez*) made oath at St. *Michael*, on the South Sea, of their having been well treated all that time, upon the account of having cur'd all the ſick wherever they came. Thus ended *De Narvaez*'s expedition. Her. *dec.* iv. b. iii. ch. 5.

The fourth adventurer for *Florida* was *De Soto*, who had been the marquis *Pizarro*'s lieutenant-general in *Peru*; but, having foreſeen the miſchief like to happen upon the diſcord between him and *Almagro*, left that country, and went to *Spain*; but being a martial man, and of an aſpiring genius, having heard of the ill ſucceſs of *Narvaez*, he begg'd of the king, the honour of conquering *Florida* for his majeſty; which he obtain'd leave to attempt; and, to capacitate him the better to accompliſh it, he was made governor of *Cuba*; that being to be the place of arms for the expedition. Having procur'd this commiſſion, he made preparation in *Spain* for his voyage. Above 1000 men quickly liſted themſelves for this ſervice, and the reputation of the general brought many gentlemen of birth into it. Ten ſhips being got ready for this expedition, he ſet ſail from St. *Lucar*, *April* 6. 1538. Upon his arrival in *Cuba*, he put ſome things in order there, and leaving the government of the iſland in his lady's hands, he embark'd again with 900 foot and 330 horſe, from *Havana*, on the 12th of *May* 1539, and upon the 31ſt came to an anchor in the bay of *Spirito Santo*, or the *Holy Ghoſt*, being in 27 deg. north lat. on the eaſt ſide of the *Mexican* gulf, immediately landing 300 men, who lay there all night, without any diſturbance; but about break of day, being attack'd by the *Indians*, and ſuſtain'd by a freſh party from the fleet, they beat them off, and kept their *Dec.* iv. b. vi. c. 1.

Ferdinand de Soto *is made general for conquering* Florida.

He lands in Florida.

their ground; in the mean time *Soto* landed all his men, and march'd that day two leagues into the country to a town belonging to *Harrihiagua*. That cacique fled to the mountains, for fear of the *Spaniards*, becauſe he had kill'd all the *Spaniards* of *Narvaez*'s company, who came in his way, except *John Ortiz*, who had been ſuffer'd to eſcape, by the compaſſion of *Harrihiagua*'s wife, and had taken ſhelter under the cacique *Mucozo*, who had us'd him well. But the admiral being inform'd that *Ortiz* had eſcap'd, and where he was, ſent *Gallegos* with 60 horſe, to bring him, having great need of him for an interpreter. At the ſame time *Mucozo*, having heard of the arrival of ſuch an army, ſent an embaſſy of 50 *Indians* with *Ortiz* to make peace. *Gallegos* met them upon the way, and his people taking *Ortiz*, who was naked, for an *Indian*, and ſeeing them all arm'd with bows and arrows, run at them with their ſpears without command. The *Indians* retir'd to the wood, but *Ortiz* ſtood, and had like to have been kill'd by one *Nieto*, but that he jumpt aſide, and made the ſign of the croſs, and nam'd himſelf; upon which *Nieto* took him up behind him, and he encouraging the *Indians*, who had fled, they were all brought before the admiral.

Soto was pleas'd to have found *Ortiz*, whom he careſs'd, and ſpoke kindly to the *Indians*, deſiring them to thank their cacique for his kindneſs to *Ortiz*, and to aſſure him of his friendſhip. Soon after their return, *Mucozo* came to viſit the admiral, who received him after a friendly manner; he ſtaid eight days, and ſhew'd himſelf a man of good ſenſe, by his way of informing himſelf of the affairs of *Spain*, and the account he gave of his own country.

He ſends back his ſhips.

About this time, *Soto*, in imitation of *Cortez*, and other more ancient generals, ſent his ſhips back to *Cuba*, except three or four ſmall ones for coaſting, that ſo his men might not have confidence in any thing, but their valour. He likewiſe took care that no miſchief ſhould be done in his quarters, nor in any part of the cacique *Harrihiagua*'s territories, thinking to bring him to peace by this regard ſhew'd to his ſubjects; but he was very obſtinate; and his people fell upon the *Spaniards* when ever they found a fit opportunity; notwithſtanding which, the general continued his mild uſage. For, the *Indians* having ſurpriz'd a party a forraging, took one *Grajal* priſoner, and carrying him clear off, ſtrip'd him naked, and thinking themſelves out of danger of being purſu'd by the *Spaniards*, they were making merry with their wives, and deſiring *Grajal* to eat and drink: but a party of horſe ſurprizing them, they all run off, leaving the women and the priſoner, who were all brought to the *Spaniſh* quarters, and *Soto* releas'd all the women.

And treats the Indians well.

He then ſent *Gallegos* to view the country, (beyond the dominions of the two caciques mention'd,) who taking with him 60 foot and as many horſe march'd about 17 leagues, and ſent the general word, that the country abounded in vines, walnut, mulberry, plum, oak, pine and other trees, and that a city which he had ſeen, altho' abandon'd by the inhabitants, was well ſtor'd with proviſions. Upon this intelligence, *Soto* deſparing of bringing in *Harrihiagua*, left *Calderon* with 40 horſe, to ſecure the ſhipping and proviſions, with a ſtrict charge, not to diſoblige the *Indians*; and began his march to overtake *Gallegos*. He refus'd to march to *Mucozo*'s town, altho' he invited him, being unwilling to be burthenſome to him, but recommended *Calderon* to his protection; he therefore took the direct route to *Urribarracuxi*'s country, where his lieutenant was; but he could not bring that cacique to ſpeak with him. Coming to a moraſs three leagues over, he was two days in paſſing it, the *Indians* of the country whom he took for guides induſtriouſly leading him thro' the moſt difficult ways; which he diſcovering, ſuffer'd his men to ſet the dogs upon them, which ſo frighted the reſt, that they ſoon brought him into a very good road. In this march, he was often attack'd by parties of the natives, but being ſtill upon his guard, they were always repuls'd with loſs. Having paſt another moraſs with ſome difficulty, he came into the province of *Acuera*, and ſtaying there 20 days, and having ſome skirmiſhes with the natives, he proceeded to *Occali*, farther north, where the cacique came to him, whom he treated kindly and diſmis'd; and taking new guides, he march'd towards *Vitacucho*, a province of about 50 leagues in compaſs, divided among three brothers; and coming about day break to *Ochile*, he caus'd his drums and trumpets to ſtrike up; at which the cacique, one of the three brothers, got to arms, altho' *Soto* offer'd him peace; and upon his refuſing it, the *Spaniards* took ſome priſoners, and releas'd them, ſending a civil meſſage to the cacique by them; this behaviour prevail'd with him to come to the general, whom he accompany'd ſome leagues in his march; and ſent his brothers word of the civility of the ſtrangers.

Two caciques join him.

The younger brother made peace with the *Spaniards* upon his brother's recommendation, but the elder whoſe name was *Vitacucho*, after whom the province was call'd, kept the meſſengers, and by one

one of his own, reproach'd his two brothers for what they had done; bidding them tell the ſtrangers, that if they offer'd to ſet foot in his dominions he would boil the one half of them, and roaſt the other. Notwithſtanding this angry meſſage, the general returning a courteous anſwer, the cacique fell of his rage, and came to viſit *Soto*, with 500 men, gaily adorn'd. He beg'd pardon for his harſh meſſage, and promis'd good behaviour for the future; which the general accepting for an apology, us'd him well. The next day the general march'd his troops into *Vitacucho's* capital which bore the ſame name, where having ſtaid two days, the two brothers deſir'd leave to be gone, and were diſmiſs'd by *Soto* with agreeable preſents.

In the mean time, *Vitacucho*, whoſe friendſhip was only pretended, was contriving the deſtruction of the *Spaniards* under-hand; but having, by good providence for them, put ſuch confidence in four *Indians*, whom *Soto* had for interpreters, as to truſt them with the plot, telling them, that he had 10,000 men ready to put it in execution; they applauded the contrivance, and encourag'd him to purſue it; but, at their parting with him, they diſcover'd the deſign to *John Ortiz*, who giving the general an account of it, he commanded them to keep the thing ſecret, reſolving to make *Vitacucho* fall into his own trap. In the mean time he kept his guards very exact, without ſhewing any ſign of ſuſpecting the cacique. When the day propoſs'd for the execution of the plot was come, *Vitacucho* deſir'd the general to march out to the plain, to ſee his *Indians* exerciſe, and be acquainted with their manner of fighting. *Soto* accepted the invitation, telling him, that in return of his compliment, his *Spaniards* ſhould march out in order of battle, which was the greateſt honour they could pay to their friends. But to cover his deſign, he himſelf walk'd a foot with the cacique.

Vitacucho's *plot to deſtroy* Soto.

The *Indians* were adorn'd as if only for ſhow, but had their arrows cover'd with graſs lying by them, they were drawn up in a plain with a wood on their left, and a lake on their right hand, being 10,000 in number. The cacique and the general, having the ſame plot upon each other's perſons, were attended by twelve choſen men each. And when they were come to the place, where *Soto* had been told the cacique was to give the ſignal, he prevented him, by ordering a musket to be diſcharged, which was his ſignal for ſeizing *Vitacucho*, who was to have done the ſame by him, if the other had not got the ſtart of him. Upon the ſignal, the 12 men, who attended the general, quickly ſeiz'd the cacique, and *Soto*, who had his armour beneath his coat, mounting his horſe, which was brought to him, according to his private orders, and falling in with his cavalry upon the main body of the *Indians*, after a conſiderable ſlaughter, put them to flight, ſome to the wood, others into the lake. The *Spaniards* purſu'd thoſe who fled, kill'd a great number, and took many priſoners; and the general ordering his croſs bows and muskets down to the lake, ply'd the *Indians*, for near half a day, to oblige them to ſurrender. For, the lake being ſmall, the *Spaniards* planted themſelves ſo upon the banks, that the *Indians*, after they had ſhot all their arrows as they were ſwimming, (which they were ſo dexterous at, that one would ſtand upon the backs of two, and diſcharge all the arrows he had, unleſs he happen'd to be knock'd down by a musket ſhot, or by an arrow from a croſs-bow) they were forc'd to keep the middle of the lake, to be at the greateſt diſtance from the ſhot: till, at laſt, being able to endure the water no longer, ſome of the weakeſt among them came to land, and the *Spaniards*, according to orders, help'd them out, and did them no harm; which the reſt ſeeing, they all ſurrender'd, except ſeven who ſeem'd to be reſolv'd to periſh in the water rather than ſubmit; for they ſtaid in it above 20 hours. The general, ſeeing their obſtinacy, order'd 12 *Spaniards*, who were good ſwimmers, to bring them out: thoſe putting their ſwords between their teeth, threw themſelves into the lake, and coming up with the *Indians*, now ſcarce able to keep themſelves above water, they caught them by the hair, and, in that manner, drag'd them aſhore. They were brought before the general, with whom the cacique was; *Soto* ask'd them, why they were ſo obſtinate? to which four of them anſwer'd, that having been commanders, they would let their lord ſee, that they deſerv'd the truſt repos'd in them, by dying in their fidelity to him. The three others, being youths of 18 years old, ſaid, they being gentlemen's ſons, had come at the cacique's call, to gain honour, but things happening otherwiſe, they were aſham'd to return home vanquiſh'd. *Soto*, who being a brave man lov'd bravery in others, treated them with great courteſy, and when they were recover'd of their fatigue, preſented the young gentlemen with looking glaſſes and other baubles, and diſmiſs'd them. And calling the four commanders, told them in the preſence of the cacique, that they deſerv'd to die, for endeavouring to deſtroy the *Spaniards* under colour of friendſhip; but that he would pardon them, in

Turns upon himſelf.

hopes they would repair their former conduct by their future good behaviour.

The general, having eſcap'd this danger, reſolv'd to try what good uſage would do; he therefore had the cacique conſtantly to dine with him, and imploy'd about 1000 priſoners he had taken, in his own ſervice and that of his forces, without keeping any in chains. Nor was the cacique under any reſtraint, other than that of keeping within the town; which civility he made very ill uſe of; for, having ſecretly concerted matters with the *Indians*, now in the ſervice of the *Spaniards*, on the ſeventh day after the battle, as they were at dinner, *Vitacucho*, ſtarting up ſuddenly, with a great cry, (which was the ſignal) with his fiſt clinch'd, knock'd down the general, and, thinking to have kill'd him, fell upon him; but ſome of the *Spaniſh* officers who were next to him, diſpatch'd the cacique, and recover'd *Soto*. Upon the firſt ſignal given, every *Indian* attack'd his maſter, with pottage pots, Pitchers, fire-brands, or any thing they could get; but altho' they wounded ſome, the *Spaniards* taking the alarm, cut them all to pieces.

Vitacucho *kill'd.*

Having no farther oppoſition in this country, the other two brothers of *Vitacucho* making no diſturbance, the general, hearing great talk of *Apalache*, mov'd from his old quarters, in a north-weſt route, which he perform'd, without any thing remarkable, other than ſeveral skirmiſhes with the *Indians*, in the different provinces where he paſt; in which he always got the better; and towards the beginning of winter came to *Apalache*, *Capaſi*, the cacique of the place, having deſerted it. It was now the month of *October*, and therefore *Soto*, deſigning to make that town his winter quarters, having heard that the cacique had fortify'd himſelf in a wood, about eight leagues from the city, he march'd againſt him, and after a deſperate reſiſtance, the *Indians* ſubmitted, and the cacique was brought before the general in his litter, being an infirm man, and very fat. But ſome time after the *Indians* proving troubleſome, the cacique told *Soto*, that he could not get them to diſperſe, as long as he was in their quarters, but if he would ſend him ten leagues off he could then order them to be quiet; which being done, the cacique taking advantage of the negligence of his *Spaniſh* guard, crept away upon all four, till he met with ſome of his own people, who carry'd him off. When the *Spaniards* miſs'd him, they return'd to the general, telling him that *Capaſi* had flown from them, thro' the air, to which, *Soto* reply'd ſmiling, *It may be ſo, for the* Indians *are ſorcerers.*

The general Soto *marches to* Apalache.

The general, having no more uſe for his brigantines at the bay of the *H. Ghoſt*, ſent *Anaſco* to bring *Calderon* to him, and to order the ſhips to the bay of *Aute*, not far from *Apalache* on the northmoſt part of this ſea, on the *Florida* ſide. *Anaſco* march'd ſouthward with 30 horſe, and had ſome skirmiſhes with the *Indians* as he paſt, but making quick marches, he had little loſs; and meeting *Calderon* with all his men in good condition, after ſome days ſtay, he embark'd upon the brigantines, and *Calderon* taking leave, as he paſt, of the cacique *Mucozo*, who had ſtill been a friend to the *Spaniards*, march'd by land; and both thoſe captains arriv'd ſafe, within a ſhort time of one another, at *Apalache*, to the great ſatisfaction of the general, who order'd *Maldonado* to cruiſe along the coaſt towards the weſt, and to ſend him an account in two months of all the creeks, ports and capes, which he ſhould find in his courſe; which he did, telling him there was a fine harbour call'd *Achuſi*, 70 leagues from *Aute*; with which intelligence, and to hear news of his wife, the general ſent *Maldonado* to *Havana*, as alſo that the *Spaniards* of *Cuba* might be encourag'd to come to *Florida*; which was punctually perform'd by *Maldonado.*

The brigantines ſail to Aute.

Whilſt the *Spaniards* lay at *Apalache*, an *Indian* youth (who was ſervant to ſome merchants travelling that country) with ſome of his companions, being brought to *Soto*, inform'd him, that 14 days journey from thence, there was a province call'd *Cofachiqui*, which abounded in gold, ſilver, and pearls. This ſo tickled the ears of the *Spaniards*, that they long'd for the ſeaſon of marching. Accordingly, in the ſpring 1540, they began their march towards the north eaſt, and having paſt beyond the province of *Apalache*, they arriv'd at *Atalpaha*, the firſt town of which province was deſerted, only ſix *Indians*, who, being commanders, had ſtaid to ſee all the reſt ſafe out of town, were made priſoners; theſe ask'd, without any ſign of fear, whether they were for peace or war? *Soto* anſwer'd, he was not for war, but only wanted proviſions and free paſſage; the others reply'd, there was no occaſion to make them priſoners, for if that was all they wanted, they ſhould be more faithfully ſerv'd in that province than they had been in their laſt quarters; and then they conducted him to a better town, where the army was well ſerv'd for three days that they ſtaid there, the cacique himſelf coming to the general, and ordering every thing they wanted to be brought them.

Her. *dec.* iv. b. vii. ch. 3.

Soto leaves Apalache.

From thence they march'd ten days, ſtill in the ſame courſe, by *Acalaqui* and

Cofachi

Cofachi, the general preſenting the caciques, as he paſs'd, with ſome boars and ſows for breed, having brought 300 of them to *Florida*, and having had no occaſion to kill any of them for his army, and they had increas'd much in that country. In this province there were two caciques, who were brothers; they both came to the general, and behav'd in a friendly manner. The cacique *Cofachi* quarter'd the troops in his own city, and retir'd to another to give them room. He likewiſe order'd proviſions for the army, in paſſing a deſart, which he told them was a march of ſeven days to *Cofachiqui*, ſending 4000 *Indians* to carry the baggage, and 4000 more, with arms for their defence. Before they began their march, the cacique told his own general, that now he was ſupported by thoſe brave ſtrangers, he expected he would revenge his quarrel upon their old enemies the people of *Cofachiqui*; which he promiſing to do, the cacique took a rich ſable mantle which he had on, and put it about his general's ſhoulders, which was the greateſt mark of honour he could give him.

He is well received at Cofaqui.

Our author relates an odd ſtory, if it was true, that happen'd, as he ſays, the night before the march. There was an *Indian*, who was very familiarly us'd by the *Spaniards*, and whom they call'd *Peter*. In the night, a comrade of his call'd out that *Peter* would be kill'd, which alarm'd the guard; and two ſoldiers going to the place where he was, found him quaking for fear. He told them, *That the devil had dragg'd and beaten him black and blue, and threaten'd to kill him, if he went to ſhew the* Spaniards *the way, and that he had left him at the approach of the two ſoldiers.* He therefore begg'd to be baptis'd, ſince he found that the great devil himſelf fled from two chriſtians. The general being inform'd of this, ſent *Peter* to the prieſts, who having inſtructed him, gave him baptiſm, and he ſet out with the army the next day on horſeback, becauſe of his beating the night before.

An odd ſtory.

The two armies began their march apart, the *Indians* going firſt in very good order, having the baggage in the center. After them, at ſome diſtance, march'd the *Spaniards*; and at night they took up their quarters apart, *Soto* ordering his people to keep ſtrict watch, as having ſo many arm'd *Indians* in his company. Upon the third day, they enter'd the deſart, of which they had been told, and continued in it for ſix days march; but the ſeventh day, they loſt the great road, and the *Indians* did not know which way to go. But the *Indian* general made ſuch an honeſt excuſe for his people's not knowing the road, (*viz.* that they had never been at *Cofachiqui*, but had diſputes with them at the rivers, which the two nations frequented for fiſhing) that *Soto* had no jealouſy of treacherous dealing. They march'd on therefore together, till they came to a large river, which was not fordable; and their proviſions would not hold out till Floats ſhould be made. He order'd parties out ſeveral ways, with 1000 *Indians* in each party. One of theſe commanded by *Anaſco* march'd up the river, and finding a town well ſtor'd with proviſions, ſent back four horſemen to the camp; ſo that the army march'd that way. But the *Indian* general having kill'd all the people he found the firſt night, and plunder'd a temple which was the place of burial, *Soto* diſmiſs'd him and all his people the next day, making preſents to him and his officers, and giving them proviſions for their journey, with which they departed well pleas'd.

The army loſe their way.

Soto proceeded in his march up the river, thro' a fine country, but it was abandon'd by reaſon of the late ſlaughter committed by the *Cofaqui Indians*. *Anaſco* being ſent before with 30 horſe to ſearch out a paſſage over the river, it being now night, he heard dogs bark, and ſaw light, but going nearer, he perceiv'd that the light was on the other ſide of the river, of which having given an account to *Soto*, he ſent, the next day, an hundred horſe to reconnoitre the town; and with them went *Peter* and *Mark*, who were both Chriſtians, the former being the ſame that was ſaid to have been beaten by the devil. When they came over againſt the town, the new converts call'd over to ſome men they ſaw upon the ſhore; and ſoon after, ſix of the inhabitants came over in a canoe; and, by that time, the general being arriv'd, was ſeated in a chair, which was always carried with them for giving audience in ſtate, according to the cuſtom of the country. The ſix *Indians* being brought before him, made their obeyſance firſt to the ſun, then to the moon, and afterwards to the general. Then they ask'd him, *If he was for peace or war?* *Soto* anſwer'd, by his interpreter, *For peace, and only wanted proviſions.* The *Indians* reply'd, *They accepted peace, but proviſions were ſcarce, occaſion'd by a plague in their country*; *however*, they ſaid, *they would lay the matter before their miſtreſs, who was a maiden lady.* Accordingly they went back in their canoe; and ſoon after, two great canoes, with awnings, ſet out from the town, in one of which were ſeven women, and in the other, the ſix men before-mention'd.

The lady, who was ſovereign of the country which was call'd *Cofachiqui*, was one

one of the ſeven; who coming aſhore, ſate down upon a ſtool (brought with them for that purpoſe) near the place where the general was; and after ſome civilities, on both ſides, ſhe told him, *She was ſorry proviſions were ſo ſcarce with her, but that ſhe had two ſtore-houſes for the relief of the poor, one of which ſhe would willingly beſtow upon him, but deſir'd, he would leave her the other.* She likewiſe told him, *That ſhe had* 2000 *buſhels of maiz in another town, which were at his ſervice, and offer'd to quit her own houſe, and half the town (or, if he pleas'd, the whole) to quarter him and his men.*

A maiden lady, ſovereign of Cofachiqui, *comes to ſee the general.*

The general, charm'd with the frankneſs and generoſity of this proceeding, return'd her thanks in the moſt courteous manner; but ſaid, *That he could not think of putting her to the inconveniency of changing her place of abode upon his account; that he would reſt well ſatisfy'd with what favours ſhe thought fit to confer upon him and his people, and aſſur'd her, that he would take ſuch order, as that neither ſhe nor any of her ſubjects ſhould have cauſe to complain of him or any of his followers.* Whilſt he was ſpeaking, the lady took a ſtring of beads from her neck, and gave it to *Ortiz* the interpreter, to be delivered to the general, excuſing herſelf for not giving them out of her own hand to him, leſt it might be thought a breach of modeſty. The general, riſing up, receiv'd the preſent with profound reſpect, and taking a ruby from his finger, preſented the lady with it. After this ſhe took her leave, having left ſtrong impreſſions upon the general and all the *Spaniards* to her advantage, both upon the account of her beauty and graceful behaviour, and the generous offers ſhe had made them. As ſoon as ſhe was got over, canoes and floats were ſent from the town, which tranſported all the forces, who were quarter'd in the middle of the city.

The Spaniards charm'd with her behaviour.

This lady had a mother who liv'd, a widow, at twelve leagues diſtance from the town, to whom ſhe ſent to deſire her company, that ſhe might ſee the ſtrangers, whom ſhe commended for their civility and good aſpects. But the old gentlewoman not only refuſed to come herſelf, but reprov'd her daughter for having entertain'd people whom ſhe did not know. Upon her refuſal, the general ſent *Anaſco* with thirty horſe, and an *Indian* of quality to pray her to come; who having travell'd together ſome leagues, they ſate under a tree to eat; the *Indian* gentleman was very penſive, and laying aſide his ſable mantle, drew out of his quiver all his arrows one by one; they were of reeds curiouſly wrought, headed with deers bones, and fiſh bones, in a triangular form; but one arrow was headed with flint, ſhap'd like the point of a dagger; having thrown down all the reſt, whilſt the *Spaniards* were intent upon obſerving the workmanſhip of them, the *Indian* thruſting the arrow, with the flint pile, into his own neck, ſuddenly cut his throat with it, and fell down dead. The whole company were ſurpris'd at this accident, but the *Indians* ſaid they believ'd, that he had kill'd himſelf rather than be obliged to carry a diſagreeable meſſage to the old lady. *Anaſco*, hearing that the widow had remov'd her quarters, that ſhe might not be found, return'd back.

The *Spaniards* found in this country much copper of the colour of gold, but very light, and it moulder'd like earth, which made them believe that the youth who ſaid there was gold in this country, had been deceiv'd by the colour. However, they found great quantity of pearls, and the young lady, who was ready to oblige them, gave them leave to take the pearls out of the burying-place of the nobility, and that of her anceſtors, near the town. Of which pearls the king's officers weigh'd 500 pound weight; they were as large as peas.

Many pearls in Cofachiqui.

But *Soto* finding himſelf diſappointed of his expectation of gold, in this country, reſolv'd to ſearch farther, and therefore taking leave of the lady, who had entertain'd him and his men with ſo much generoſity, he divided his forces into two bodies for the conveniency of proviſions, one part of them he gave to the conduct of *Gallegos*, and kept the other with himſelf. The lady ſent four of her ſubjects with him to ſolicite the friendſhip of the cacique of *Guaxale* in favour of the *Spaniards*, or elſe to declare war againſt him. Theſe *Indians* march'd with them thro' the province of *Calaque* where they had like to have been kill'd by hail as big as pidgeons eggs, but that the trees ſhelter'd them, and the ſixth day, they arriv'd at the valley of *Xaula*, a pleaſant country, which our author ſays is north eaſt of *Cofachiqui*. But if the road mark'd in the *Engliſh* atlas, (in the map of *Miſſiſſippi*,) as the route of *Soto*, be the way he march'd, this valley as well as *Cofachiqui* muſt have been in the territory now call'd *Carolina*; and if *Cofachiqui* is what is there call'd *Cutifacoqui*, as probably it is, then his march from thence, as it is mark'd in that map, was directly north. However it be, he ſtaid a fortnight in the valley of *Xaula*, which was ſtill under the lady's dominion, and leaving it, they march'd five or ſix days over a deſart mountain, but not diſagreeable, having groves, ſprings, and paſture in ſe-

Soto *marches farther north.*

Guaxa-

veral parts of it: and coming to *Guaxale*, they ſtaid ſome days, and proceeded to *Tchiaca*, a town ſituated in a ſmall iſland upon the ſide of a river. Here the cacique told him, that, about 30 leagues off, there were mines of yellow metal; but having ſent ſome *Spaniards* to view them, they return'd with the mortifying news that they were of the copper of *Cofachiqui*. In this iſland, they got good ſtore of pearls, but by laying the oyſters in which they were, upon the fire, that they might open them with the greater eaſe, they ſpoil'd the luſtre of them. One of the ſoldiers, eating ſome boil'd oyſters, found a pearl as big as a hazel nut; which he preſented to the general as a preſent to his lady; but *Soto* refus'd it, and for the ſoldiers compliment, he paid out of his own pocket, for the king's fifth of the ſoldiers pearl, being valu'd at 400 ducats.

Leaving this iſland, he march'd ſtill north, to *Acoſte*, where finding the *Indians* leſs civil, and being unwilling to break with them, he proceeded in his route to *Coza*, which being a large province, he march'd above 100 leagues in it, thro' a fruitful country, where they were treated well wherever they came; and when he arriv'd at *Coza*, the cacique came out to meet him, attended by 1000 of his people, who wore rich mantles of furs, and gaudy plumes. Here they were kindly entertain'd; and the cacique, dining one day with the general, pray'd him to winter there, and to ſettle a colony in his country. The general thank'd him, and told him that he deſign'd to accept of his invitation, but firſt he muſt take a view of ſome other parts farther up the country, and provide for the conveniency of trade. He ſtaid here 12 days; and then, thinking that he was far enough from the ſea (for he did not know that he was within 60 leagues of the north ſea, at what is now call'd *Cape Fear*, in the ſea of *Carolina*) believing *Apalache* the neareſt ſea to him, and that, by the road he had march'd, was about 300 leagues off. Being therefore reſolv'd to viſit the harbour of *Anchuſi*; *Gallegos* having join'd him before he left the friendly iſland, he chang'd his courſe at *Coza*, march weſtward, and a little to the ſouth; the cacique of *Coza* accompanying him, till he came to the frontiers of *Taſcaluſa*, who was his enemy.

Comes to Coza.

As ſoon as he enter'd that province, his friend the cacique took leave of him, and young *Taſcaluſa* came to meet him, offering him peace and friendſhip in his father's name. This youth was not above 18 years of age, but ſo tall, that there was not a *Spaniard* in *Soto*'s army, that could reach his hand to the young gentleman's head. When they came to the cacique's city, he receiv'd the *Spaniſh* officers in his chair, without moving, being attended by a great number of men; but as ſoon as the general came up, he roſe from his ſeat, and advanced 20 paces to meet him. He was taller than his ſon, and well ſhap'd, and was a man of about 40 years old, and not fat. He entertain'd the *Spaniards* three days, and when *Soto* began his march from thence, he march'd along with him, being mounted upon one of the largeſt baggage horſes the general had, and yet his feet were not above a ſpan from the ground.

Taſcaluſa of a gigantic ſize.

The firſt night they took up their quarters near a river, which they had paſt with ſome difficulty, being ill furniſhed with floats; and two *Spaniards* being miſſing, ſome of their companions having ask'd the *Indians* for them, they anſwer'd ſurlily, that they were not their keepers. This anſwer gave ſuch jealouſy to the general, that early next morning, he ſent a party of horſe to view the town, where they were next to quarter, being only five miles diſtant, having heard that a great number of *Indians* were aſſembled under colour of ſerving the *Spaniards*. The party having reconnoitred the town, return'd, giving an account, that they had met with no oppoſition, but that the town they were to quarter in next, was ſuch as they had never ſeen in any part of *America* where they had been, being better fortify'd than any other in thoſe parts.

The general receiving this intelligence, upon his march, advanced to the front of his army, and leading the van, with 100 horſe, and 150 foot, accompany'd with the tall cacique, approach'd the town, which was call'd *Mavila*, by eight o'clock in the morning. This town conſiſted of only 80 houſes, but thoſe ſo large, that 1000 men might lodge in each houſe; and the whole was enclos'd with ramparts and a ſort of walls, with piles driven into the earth, ram'd with ſtraw and earth between the hollow ſpaces; and at ſmall diſtances there was a ſort of a tower, with loop holes for fighting under cover. In the middle of the town was a large ſquare, into which the cacique brought the general, bidding the interpreter tell him that there was a houſe for him to lodge in, and as many of his people as he thought proper, and that he had order'd huts for the reſt of the army without the town. *Soto* ſaid he would order that matter as ſoon as his major general was come up. In the mean time, the cacique retir'd to a large houſe, where he had appointed all the principal officers of his own army to aſſemble, to execute

The general comes to Mavila.

A plot againſt him.

the deſign he had projected, which was to cut off the *Spaniards* at once.

Soto, altho' he knew nothing of the plot, yet kept ſtill upon his guard, ſo that he order'd the horſes to be ready bridled till all the army were come up. And ſending *Ortiz* for the cacique, the *Indians* would not let him ſpeak to him, but *Ortiz* preſſing to get in, an *Indian* came out in an angry manner, calling the *Spaniards* names, and taking a bow, he level'd at ſome of them whom he ſaw in the ſtreet; but *Gallegos*, who by chance came by, ſeeing him draw his bow, cut him from the ſhoulder to the waſte.

The Indians *attack the* Spaniards.

The killing this *Indian* gave the alarm, and *Soto* with his people mounting their horſes, retir'd out of the town to join the reſt, and to have an opportunity of engaging the *Indians* in an open place. The cacique purſu'd them at the head of 7,000 men, who (with above as many more) had lain conceal'd in the town; but thoſe being charg'd by a troop of horſe, and a company of musketeers, they drove them back into the town, and attempted to enter with them, but ſuch a ſhower of arrows met them in the teeth, that they deſiſted, and kept their ranks, but retreated a little. The *Indians* made a furious ſalley, but were again repuls'd.

The battle of Mavila.

Thus fighting for ſome time, and all the army being, by that time, arriv'd, the general diſmounted, and making 200 men, with battle axes, cut the gate, and the ſtakes (of which their wall was compoſed,) to pieces, he mounted and march'd, into the town, where an obſtinate reſiſtance was made, the *Indians* galling the *Spaniards* from the galleries and tops of the houſes; and the women throwing ſtones, and ſhooting arrows againſt them; which oblig'd them to ſet fire to the houſes, in which great numbers periſh'd, and others ruſhing out, there was a terrible ſlaughter. This action laſted near nine hours, when towards the ſun ſetting, a great number of *Indians* getting out, by the breach made in the wall, were attack'd by the *Spaniards*, who were without the town, and many of them being kill'd, the reſt made their eſcape.

This battle was fought upon S. *Luke*'s day, the 18th of *October* 1540. Of the *Spaniards* 48 were kill'd upon the ſpot, and 35 dy'd of their wounds ſoon after; and they loſt 45 horſes. But of the *Indians* they reckon'd 11,000 periſh'd; of which 4,000 were found dead without the town, and amongſt them young *Taſcaluſa*; above 3,000 were cut to pieces in the ſtreets, and market place, and the *Indians* who were made priſoners, computed that 4,000 more had been burnt in the houſes which were ſet on fire, in which it was believ'd the cacique himſelf periſh'd. Some women who were taken, ſaid that *Taſcaluſa* had ſummon'd their husbands to *Mavila*, and order'd them to conceal themſelves there, promiſing them the ſpoils of the *Spaniards*; and, giving out that, when thoſe invaders were deſtroy'd, he would make a magnificent feaſt in honour of the ſun, all the women, both wives and maids, had flock'd thither to aſſiſt at the ſolemnity.

11,000 Indians *kill'd.*

This place was within 50 leagues of the ſea, where the river of *Alibamous* falls into it, near the bay *de la Mobile*. Here they ſtaid a fortnight, and ſent out parties all about the country to obſerve the motions of the natives: but the flower of their country having fallen in the battle, there was no ſign of any attempt to revenge their deaths, but the people brought in plenty of proviſions, and behav'd with the greateſt ſubmiſſion. One party that had been ſent to view the country towards the ſea, brought advice, that *Maldonado* and *Gomez Arias* were upon the coaſt making diſcoveries. *Soto* had a great inclination to ſettle a colony at *Anchuſi*, and therefore march'd as far as the mouth of *Alibamous*; but being afraid that his people would deſert him, upon the firſt opportunity they ſhould have of going to *Cuba*, he quitted the coaſt, and taking his courſe northweſt, met with great oppoſition in the province of *Chicoza*, which I ſuppoſe is what goes by the name of *Chicaches* in the map of *Miſſiſſippi*, that being in the courſe of *Soto* there mark'd, in about 33 deg. n. lat. Theſe *Indians* aſſembled in great numbers, and diſputed the paſs of a river with him; but he having privately built two *Piraguas* or large boats, which were finiſh'd in 12 days and putting rollers under them, he drew them to the river's ſide, and launch'd them before the *Indians* were aware of it. He put 40 musketeers and as many croſs bow men on board each boat, with ſome horſe, who getting aſhore, altho' ſome of them were wounded by the *Indians* who had ſpy'd them from the other ſide, they drove the natives from the banks, and kept their ground till *Soto* came to their relief in the ſecond cargo.

Soto *arrives at* Chicoza.

Having diſpers'd the *Indians*, they held on their march to the capital city of the province, which they fortify'd with a deſign to ſtay the winter in it; thinking that they had made friends of the *Indians*, by ſome baubles they had given them. But they had not been long there, till they were attack'd in the night by three different bodies of the natives, who fell upon the town, and ſet it on fire by ſhooting arrows to which were ty'd bunches of a certain plant, which burn'd like ſtraw; and the houſes being

thatch'd

Chicoza *burnt by the* Indians.

thatch'd, they ſoon took fire. The general ſoon had his people in order, and marching out of the town, fell in among the enemy with his uſual reſolution; and in a little time, the *Indians*, having, to their coſt, felt the ſharpneſs of the *Spaniards* ſwords, fled, having loſt great numbers of their own men, and deſtroy'd 40 *Spaniards*, ſome in the action, and ſome who had been wounded were burnt in the houſes. Moſt of the ſwine were burnt, and 20 horſes, beſide 30 kill'd in the field. Thus their intended winter quarters being demoliſh'd, they remov'd about a league farther, to *Chicacolla*, where they ſpent the winter, but having loſt moſt of their baggage in the fire, they ſuffer'd much from the cold.

The Spaniards *take up their winter quarters in* Chicacolla.

Having ſtaid in this town till march 1541, they march'd northward to *Alibamo*, where his ſcouts having told him there were 4,000 *Indians* in a fort, he attack'd them a foot, becauſe his horſe could not enter the gate. The *Indians* ſally'd out upon them, but being repuls'd, enter'd the fort again, and the *Spaniards* with them, where the *Spaniſh* blades made ſuch ſlaughter among thoſe naked men, that many of them threw themſelves down from the wall, and were kill'd by the horſe without. There were ſuppos'd to have been ſlain in this attack about 2,000 *Indians*, for they purſu'd them to a river, where they attempted to eſcape; and many were made priſoners, who liv'd peaceably afterwards, when they were releas'd. Here they were much put to it, to underſtand the natives, there being great variety of languages in that country; but the women were ſo apt to learn *Spaniſh*, that, in two month's time, they could converſe with them ſo as to be underſtood.

In 1541 *they came to* Chiſca *upon the* Miſſiſſippi.

From *Alibamo*, they march'd to *Chiſca*, upon a river, which they call'd *El Grande*, for the largneſs of it; and indeed it is the largeſt known in *North America*, and is the ſame now call'd *Miſſiſſippi*. Here they ſurpriz'd the inhabitants, and took many priſoners. Their cacique liv'd upon the ridge of a hill, to whoſe houſe they mounted by ſtairs. When he was inform'd of the *Spaniards* having ſurpriz'd the town, he call'd thoſe people who had fled to him, and conſulting what was to be done, they reſolv'd to accept the peace, which *Soto* offer'd by ſome priſoners whom he had releas'd, and ſent to make conditions. The peace was concluded, upon condition that the *Spaniards* ſhould releaſe all the priſoners, and forbear going to the cacique's houſe; the cacique promiſing to ſupply the *Spaniards* with proviſions, and not to diſturb them. Here they reſted 16 days, for the ſake of ſome ſick people among them, and then march'd up the river, to find a convenient place for paſſing it, free from wood, and the banks low, which having found, after four days march, the general order'd two piraguas to be made. Whilſt they were making, four *Indians* came to offer peace and proviſions, which they ſuppos'd was done, to ſave the corn from being deſtroy'd, it being now ready to be cut down. Here they continued 15 days; and then, the piraguas being launch'd, they paſt the river without oppoſition, and came to *Caſquin*, ſituated in a fine country near the river. This town conſiſted of about 400 houſes, compaſs'd with large fields of *Indian* wheat, and ſeveral ſorts of fruit. Here they were well receiv'd, and invited to the cacique's houſe, farther up the river, whither they went after ſome days, and were kindly entertain'd.

And from thence to Capaha.

From thence they departed for *Capaha*, a people who were enemies to *Caſquin*, the cacique of *Caſquin* went along with them, attended by five thouſand of his people in arms; having a mind to revenge himſelf of his enemies, by the aſſiſtance of the *Spaniards*; bu he ſaid nothing of it to *Soto*. As they drew near to *Capaha*, *Caſquin* heading the van with his *Indians*, at ſome diſtance from the *Spaniards*; the cacique of *Capaha*, not being provided for an enemy, retir'd with ſome of his people, in canoes, to a fortify'd iſland, he had, upon a canal drawn from the great river, for about three leagues. *Caſquin* advancing to the town, put many to the ſword, and took many priſoners, and particularly two beautiful wives of the cacique's; and committed many outrages, before the *Spaniards* arriv'd, and would have burn'd the town, but for fear of *Soto*'s diſpleaſure. The general releas'd ſome of the priſoners taken by *Caſquin*, and ſent them to their lord, with a meſſage of peace, which he refus'd, vowing to be reveng'd on his enemy; and therefore *Soto* prepar'd to attak'd him. *Caſquin* having all along had this deſign in his head, had order'd canoes to come up the river, and ſo along the canal; which being arriv'd, the general march'd oppoſite to the iſland, and then went over in the canoes, the *Spaniards* attack'd the firſt paliſades, and carry'd them after ſome oppoſition, which terrify'd the women ſo, that they gave a great ſhriek. The ſecond work made a ſtout reſiſtance; and the *Capaha*'s threaten'd *Caſquin*'s people, telling them that when the ſtrangers were gone, they ſhould pay dearly for their inſolence, in attacking that place, which they durſt not have look'd at, but that they were ſupported by the chriſtians. This ſo frighted the *Caſquinians*, that in ſpite of all

Which the Indians *who went with* Soto *plundered.*

Soto *attacks the cacique* Capaha *in an iſland,*

all their cacique could ſay, they run to their canoes, and took away 40 of them; and would have taken off the other 20, but that ſome *Spaniards* defended them. The *Spaniards* ſeeing themſelves deſerted by the *Indians*, retir'd from the attack; but *Capaha* would not allow his people to ſally upon them; deſigning to take that opportunity of accepting the peace, which he had refus'd before.

They make peace.

The next day, he ſent four *Indians* to *Soto*, without taking any notice of *Caſquin*, to deſire peace, and leave to ſee him. The general, being pleas'd with the meſſage, excus'd his having attack'd the cacique, which he ſaid had been occaſion'd by the rejecting the peace offer'd, and bidding them tell their lord, that he would receive his viſit with pleaſure. The day after, the cacique leaving his iſland, came back to the city, where *Soto* was arriv'd the day before, and going firſt to the burying place of his anceſtors, took up their bones, which *Caſquin* had thrown about, and kiſſing them, put them into the coffins, and then went directly to the general's quarters. Theſe two complimented each other with much civility, and the cacique having giving *Soto* a very ſuccinct account of the ſtate of the country, (altho' he was but about 26 years of age,) turn'd to *Caſquin*, and ſaid, *I ſuppoſe you are now well pleas'd, having ſeen what you never expected; thank the power of theſe ſtrangers; but they will be gone, and we ſhall underſtand one another. I beg the ſun and moon to give us good ſeaſons.* *Soto* being inform'd of what the cacique had ſaid, without giving *Caſquin* time to reply, addreſt himſelf to *Capaha*, and ſaid *He was not come into their country to encreaſe their enmity, but to reconcile them.* And in effect he ſo manag'd them both, that he made them friends, and they both din'd with him together. Then *Capaha*'s two wives were reſtor'd to him, which he ſeem'd pleas'd with; but he made a preſent of them both to *Soto*, who refuſing to accept of them. The cacique deſir'd him to beſtow them to whom he would, for they ſhould not ſtay with him; upon which the general took them.

From this city *Herrera* ſays, *Soto* return'd with *Caſquin*, and, from thence, to the ſouth, down the river a great way. This does not agree with the account given, in the Atlas, of his route, for that makes him march north weſt as far as the lake of *Mitchigamia*. But as *Herrera* ſeems to have been well acquainted with the affairs of *America*, we ſhall purſue his account of it, nor indeed is it very material, whether of the two roads he took, ſince the whole expedition prov'd of ſo little uſe, either to himſelf or to the king of *Spain*.

Herr. *ubi ſupra* ch. 6.

Soto returns towards the ſouth.

Having ſtaid ſome time at *Capaha*, and being vext that he had heard nothing, (in the long march he had made, of above 750 leagues,) of gold or ſilver mines, he reſolv'd to give over his fruitleſs ſearch northward, and to return towards the coaſt, and, at leaſt to ſettle his projected colony at *Anchuſi*. In order to which he return'd to *Caſquin*, where he ſtaid five days, and then march'd down the river to *Quiguate*, and from thence, in the ſame courſe to *Colima*, and ſo without any hoſtilities, till he came to *Tula*, where they were oppos'd by men and women, and put the whole town to the ſword. But the people of the province aſſembling four days after, fell upon the *Spaniards* in their quarters with ſuch fury, in the night, that they were much put to it to defend themſelves. The ſcuffle laſted till break of day, and then with much ado, the *Indians* were forc'd to retire, leaving many *Spaniards* to evidence the bravery of the enemy by the wounds they had receiv'd from them. And there was one *Indian* whoſe fate was much to be pity'd for his courage. After the battle, this man ſtarted up among the dead, and ſnatching up a battle, ax, which had belong'd to a *Spaniard*; when *Carauza* run at him, the *Indian* gave him ſuch a blow, that he cleft his target and wounded him in the arm; *Godoy* going to the relief of his comrade, was diſabled by the next ſtroke the *Indian* made; and *Salazar* making at him, the *Indian* avoiding a thruſt or two made at him, gave the *Spaniard* ſuch a ſtroke upon the neck, that he drop'd off his horſe; at laſt *Gonzalo Silveſter* attack'd him, and having ſhun'd a ſtroke the *Indian* made at him, with a back ſtroke of his own, cut him in the forehead, and the ſword ſlipping down his breſt cut off his left hand cloſe by the wriſt; the brave *Indian* ruſhing upon him, to have a ſtroke at his face, *Silveſter* receiv'd it upon his target, and cut him almoſt in two in the middle. Had the *Indians* been as well provided for defence as the *Spaniards* were, the latter had not travel'd ſo eaſily thro' the country of *America*. The *Spaniards* ſtaid 20 days at *Tula*, and then march'd to *Vitangue*, where, upon account of the good ſituation, and plenty of poviſions, the general determin'd to winter, which he did.

Is attack'd at Tula.

A brave Indian.

In *April* 1542 he remov'd from *Vitangue*, and marching thro' a fruitful country, arriv'd in ſeven days, to the capital of *Naguaten*; where he ſtaid 17 days. Some days after they had been there, four men of quality, with 500 ſervants came

came to wait upon the general, in the name of the cacique, and told him that their lord would come himſelf, but he did not. As they march'd from thence, they miſs'd one *James Guzman*, a gentleman of *Sevil*, and inquiry having been made, it appear'd that, ſome days before, he had loſt all that he was worth at play; that he had deliver'd his arms and horſe; but having likewiſe loſt an *Indian* woman that he had, he promis'd to give her up in five days; it was therefore ſuppos'd that the ſhame of loſing his horſe and arms, and his paſſion for the woman, had induced him to go with her to her father's, who was the cacique of *Niguaten*. Upon this intelligence, *Soto* deſir'd the four *Indians*, who were ſtill with him, to get *Guzman* reſtor'd, or he would keep them for him. They ſent one of their ſervants to the cacique, who ſent an account, that *Guzman* was there, but that he refus'd to return. One of the *Indians* deſir'd leave of the general to go himſelf to find the reaſon of it, and deſir'd they might write to the *Spaniard*; which was done. In a few days the *Indian* return'd with the letter; at the bottom of which was written with charcoal, *I will not return. James Guzman.* The cacique bid the *Indian* tell the general, *that he had us'd no perſuaſions, much leſs force, to oblige his ſoldier to ſtay; but ſince it was his own inclination, he did not think it would be juſt or honourable in him, to thruſt him from him. He wiſh'd he had many more ſuch, for he would uſe them all well; that, in the mean time, if the general would kill the four* Indians, *or ruin his country for that man's having left him, he had the power, and he might uſe it as he would.* The general, conſidering that the cacique ſaid nothing but what was reaſonable, diſmiſs'd the four *Indians* with preſents; and continu'd his march.

A Spaniard leaves the army to live with the Indians.

Theſe two laſt marches were probably to the weſtward of the great river; but the change of names of places, in that country, makes it difficult to trace him. But now intending to find a paſſage to the ſea, and judging that the river was the moſt ready way to accompliſh that deſign, he turn'd that way, and marching thro' ſeveral provinces, without any occurrence worth relating, he came to *Anilco*, where he found the cacique with 1500 men ready to oppoſe him: but upon his approach they fled, and croſs'd the river in canoes. I ſuppoſe it was one of the two rivers which fall into the *Red* river. Keeping on his march, he enter'd the province of *Guacachoia*, the chief town of which is call'd, in the Atlas, *Guachoia* in the lat. of 31, or 32. At the place where the red river falls into the great river of *Miſſiſſippi*.

Soto comes to Guacachoia.

The cacique of this place, being inform'd of the behaviour of the people of *Anilco*, who were his enemies, thought he had a good opportunity of gaining the friendſhip of the *Spaniards*, by which means, he might be an over match for his neighbours. He therefore ſent four of his chief nobility, with a number of ſervants, laden with fruit and proviſions; and finding by the accounts they ſent him, that the general ſeem'd well diſpos'd towards him, he came himſelf the 5th day, attended by 10 gentlemen, adorn'd with plumes, and furs, arm'd after their manner. *Soto* receiv'd him with great civility, and treated him, and his court handſomely. And here I can't omit taking notice of a trifling circumſtance, to ſhew that there are ſome cuſtoms practis'd all the world over, the riſe of which no body can account for. The cacique, during his firſt interview with the general, happening to ſneeze, all the *Indians* preſent, bow'd their heads, open'd their arms, and ſaluted him, ſaying in their language, *the ſun preſerve you*, others, *the ſun be with you*, or words to that effect. I hope it will not be thought, by ſome of my country men, to amount to a proof, that ſaying GOD *bleſs you* when a chriſtian ſneezes, is rank idolatry, and heatheniſm.

This cacique among other diſcourſe, deſir'd the general to march againſt the cacique of *Anilco*, offering to go along with him with an army, and to ſend 80 canoes down the great river, which might ſail up the other river to the capital of *Anilco*. *Soto* approving the project, march'd with moſt of his people, together with the cacique at the head of 2000 *Indians*, by land, ordering capt. *John Guzman* to go with his company, aboard the canoes, where were embark'd 4000 *Indians*, well arm'd after their manner; and were to join the forces that march'd by land, in three days, as they did. The people of *Anilco*, not being able to ſtand againſt this united army, the *Guacachoians* enter'd the city without reſiſtance, and put all to the ſword, without regard to age or ſex, and committed all the acts of barbarity imaginable. But *Soto*, vex'd that ſuch cruelty ſhould be exercis'd under his protection, gave orders to his men, to drive the *Indians* out of the town, and to hinder farther damage; but the *Guacachoians*, in ſpite of their endeavours to the contrary, ſet the town on fire. After this execution, which gave great uneaſineſs to the general, he would not march farther into that province, but return'd to *Guacachoia*.

He then apply'd himſelf to provide timber, with all other neceſſaries for building brigantines to carry his people

down to the ſea; deſigning to depart, as ſoon as they could be got ready. But whilſt he was thus employ'd, he was ſeiz'd with a fever; which, increaſing, he found was like to prove mortal. He therefore made his will, and prepar'd himſelf for death; and calling his principal officers to him, he, in their preſence, appointed *Louis de Moſcoſo de Alvaredo* general in his room, entreating and commanding them all to obey him, after his death, until other orders ſhould come from the king. And having recommended unanimity to the whole army, (now reduc'd to leſs than half their firſt number;) and taking leave both of officers and ſoldiers, he dy'd upon the 7th day of his fever, and was juſtly lamented by them all; having been a man of a graceful preſence, agreeble temper, brave, but merciful, generous to all; and never making a difference between himſelf and the meaneſt ſoldier, either in dangerous actions, or ſuffering fatigue or hardſhips. He dy'd in the 42d year of his age, and had ſpent 100,000 ducats of his own money (which he had got in *Peru*) upon this fruitleſs expedition in *Florida*. To prevent any inſult being offer'd to his corps, when they ſhould leave the country, they put it in a hollow oak, which they ſunk with weights, in the middle of the river, which was at that place nineteen fathoms deep, and a mile broad.

The death of Soto.

Moſcoſo Alvaredo *ſucceeds him by his appointment.*

As ſoon as the funeral was over, *Moſcoſo* aſſembling the officers, thank'd them for the honour they did him, in admitting him for their general, deſiring them to give their opinions freely, what courſe they ſhould take, in the preſent ſituation of their affairs. They return'd his compliment, by ſubmitting every thing to his conduct; ſo that he, finding the ſoldiers weary of their conqueſts, reſolv'd to quit *Florida*; and, by I don't know what infatuation, in the month of *July* 1542, they ſet out weſtward, where they march'd above 100 leagues in deſart and barren provinces; every now and then attack'd by the natives in ſmall parties, and from coverts, where they ſhot their arrows at them, without being ſeen; beſides that ſome of their guides led them into barren countries, on purpoſe to deſtroy them, for which they ſet their dogs upon one, who confeſs'd that his cacique had order'd him to lead them that way to their ruin.

The army marches weſtward.

Being quite weary of this progreſs, and having one or other popp'd off with *Indian* arrows every day, they began to repent that they had not follow'd *Soto*'s ſcheme, and having now run this wild gooſe chaſe above three months, they turn'd their courſe eaſtward, with an intention to go back to the great river, not knowing how far they were from the gulf of *Mexico*, nor indeed what latitude they were in. Purſuant to this reſolution, they march'd thro' ſome provinces they had ſeen before, without knowing them; but ſometimes holding too much to the north, in the end of *November*, they came to the great river; but, as they found afterwards, they were about 17 leagues higher than *Guacachoia*, having travel'd 350 leagues, and were now reduced to 320 foot and 70 horſe.

But returns to the great river.

The two caciques of *Anilco* and *Guacachoia*, now vy'd with one another, who ſhou'd ſhew moſt kindneſs to the *Spaniards*, inviting them to their towns; but *Moſcoſo*, being willing to reſt his weary'd men, took up his quarters in a town upon the river, call'd *Aminoia*, where they liv'd free from any inſults of the *Indians*: and as ſoon as they were well recover'd from the fatigue of their expedition, which was not before the middle of *January* 1543, they ſet about hewing of wood, and preparing iron work, for the new brigantines they propos'd to build for taking them down the river.

The Spaniards *build brigantines.*

The ſhips took them all the months of *Feburary*, *March* and *April*; and for ſails, they employ'd the blankets made of an herb like mallows, which ſpun like flax, and of the ſame they made ropes great and ſmall. Theſe as well as moſt other neceſſaries were furniſh'd from *Anilco*, to the great jealouſy of *Guacachoia*.

On the eaſt ſide of the great river, there was a young cacique, an enemy to the *Spaniards*, looking upon them as the invaders of dominions they had no right to. He therefore enter'd into confederacy with the other provinces near the river, and deſir'd *Anilco* to join with them, to deſtroy the ſtrangers; which combination, he diſcover'd to *Moſcoſo*, who now began, in his turn, to be jealous of the cacique of *Guacachoia*, becauſe he had not ſent him any account of it, altho' he concluded it had been diſcover'd to him. However he diſembled his ſuſpicion, as the confederate caciques did their deſign, ſending preſents to the *Spaniards* and proviſions from all the neighbouring provinces. But from this time *Moſcoſo* ſent thro' all the country, telling the caciques, that their ſubjects ſhould be welcome to the *Spaniſh* quarters by day, but that he had given orders to his people to admit no body in the night time. Notwithſtanding this warning, two *Indians* attempting to come over the ditch upon a tree laid croſs by way of bridge, near the poſt where *Silveſter* was keeping watch, he ſtop'd them, but they ſtriving to paſs him, he gave one of them a cut over the face, at which they both fled.

The

A confederacy of Indians againſt the Spaniards.

The next day the cacique, who was at the head of the confederacy, ſent a meſſage to *Moſcoſo*, deſiring he would put to death the centinel, who kept ſuch a poſt, becauſe he had wounded one of his people, in time of peace; the *Indian* being a gentleman, and was in danger of his life. And ſoon after another came, demanding juſtice againſt the ſoldier, for that the gentleman was dead. The general return'd anſwer that he was ſorry for the accident, but after the publick warning he had given, the gentleman had been guilty of his own death, and he could not puniſh a *Spaniſh* ſoldier for doing his duty. The confederates inſiſted no more upon it, intending in a ſhort time to take a full revenge. But their deſign at this time was diſappointed by the ſudden ſwelling of the river, which overflow'd the whole country for 20 leagues together; ſo that all the *Indians* on both ſides were forced to abandon their houſes, and retire to places at a greater diſtance; and the *Spaniards* brought their brigantines, half finiſh'd to the higheſt part of the town, for the greateſt part of it was overflow'd, and ſo went on with their work: and having occaſion to ſend to *Anilco* for proviſions, he order'd the canoes to be tied two and two together, leſt they ſhould be overſet by the trees or tops of houſes which the river had overflow'd. When the canoes came to *Anilco*, they found moſt of it drown'd; ſo that going farther, they ſaw a great number of *Indians* on the ſide of a hill, who, ſeeing the canoes, made to the water ſide to ſpeak to the *Spaniards* that were aboard. Theſe happen'd to be *Anilcans*, and the cacique was there himſelf, who hearing that they were *Spaniards* brought them aſhore, and loaded their canoes, and ſome others of his own, with the beſt proviſions he had, and the next day ſent them back to the general. *Silveſter* commanded this party with the canoes, and had brought the cacique's ſon to him, who had gone the whole weſtern progreſs with the *Spaniards*, and had learn'd their language. They had treated him ſo well, that he would gladly have ſtaid with them; but his father would not conſent to it.

Delay'd by the overflowing of the great river.

This flood continu'd from the beginning of *March* to the latter end of *April*; but the mire and dirt had ſo fill'd the ſtreets, that it was ſome weeks before they could walk in them, eſpecially conſidering that their ſhoes were made of green leather, which, with the wet, became like a piece of tripe. But they had been ſo enur'd to hardſhips, that they made light of ſuch ſmall inconveniencies; and went on with their brigantines, which were ready to be launch'd the beginning of *June*: and upon the 29th of that month, being St. *Peter's* day, the forces being all embark'd, and the general having before made peace between *Anilco* and *Guacachoia*, and taken his leave of thoſe caciques, with great demonſtration of friendſhip on all hands, ſet ſail from *Quiqualtanqui*, where they had now ſtaid ſix months.

The Spaniards ſail from Quiqualtanqui.

The confederate caciques, having been diſappointed, (as we obſerv'd) by the flood of the great river, had laid a ſcheme to deſtroy the *Spaniards* as they ſail'd down the river; and for that purpoſe had got together about 1000 canoes, ſome of which were ſo large, that they had 25 oars of a ſide; (as our author ſays, but indeed I cannot tell how to believe it, ſince they did not know the uſe of iron; nor had they any in the country, the *Spaniards* being obliged to beat the barrels of their muskets into bolts and nails for the brigantines, ſince they were of no uſe to them in war, for want of powder.) With this fleet, the *Indians* purſu'd the brigantines, and the third day after their ſetting out, the *Spaniards* ſaw them making all the haſte they could to ſurround them. The number of the brigantines was but ſeven, each of them having a canoe at her ſtern like a cock boat. On board theſe ſeven, were 350 *Spaniards*, with thirty *Indian* men and women, who ſaid they would rather die, than quit their *Spaniſh* maſters.

Her. *dec.* iv. b. x. ch. 2.

Are purſu'd by 1000 *canoes.*

To provide againſt any attack'd by water, they had fortify'd the ſides of the brigantines with planks, and hides, which was of conſiderable ſervice to them. The canoes drawing up in a line, ſent a flight of arrows among the *Spaniards*, ſome of whom were wounded by them, notwithſtanding the defence made; but they gall'd the *Indians* with their croſs bows, the only meſſive weapon they had left: and the canoes, being afraid to come within reach of their ſwords, kept at a diſtance; and, for ten days together, peſter'd them with their arrows; during which time, they ſuppos'd they had ſail'd about 200 leagues. Then the *Indian* fleet made a ſtop, and let them get before them, by which the *Spaniards* conjectur'd they muſt be near the ſea. And therefore plying their oars chearfully, as well as making uſe of their ſails, they ſpy'd a ſmall town, to which they made, and landed 100 men with eight horſes to carry proviſions, and alſo to charge the enemy if there ſhould be occaſion. This party was commanded by *Silveſter*, who going to the town found it deſerted, but well ſtor'd with proviſions, and likewiſe great plenty of skins of different kinds well dreſt; and, amongſt other things, a ſlip of the fineſt ſables of eight yards long, and an ell wide, adorn'd, at certain diſtances,

And had a flying fight for 16 *days.*

diſtances, with ſtrings of pearls, and ſmall tufts of ſeed pearls regularly placed, which was ſuppos'd to have been deſign'd for ſome publick ſhow.

But while they ſtaid here, the *Indian* canoes advanced again in ſight, which made the general order a retreat to be ſounded from the brigantines; as *Silveſter* was returning, a great many *Indians*, coming from places where they had been hid, ſhot ſome of the horſes loaded with proviſions, but did no other dammage. The canoes attack'd the brigantines as before, but ſtill at a diſtance. But the imprudence of one mad *Spaniard* occaſion'd a greater loſs then they had as yet met with in all the voyage. Upon the 16th day after their firſt embarkation, one *Eſtevanez*, a fellow of a brutal courage, having ſpirited up five more to follow him, leap'd into the canoe, which was at the ſtern of the brigantine, in which he ſail'd, and pretending that he was going to the general to propoſe ſomething of importance, got clear of the brigantine; and then rowing towards the *Indians*, call'd out aloud, *fall on, they run.* *Moſcoſo* ſeeing the raſhneſs of the attempt, made him be call'd back by a trumpet, and ſent ſeveral canoes after him, in which were 40 men, intending to have hang'd him for his temerity. At the ſame time he made the ſails be furled, and the brigantines row againſt the ſtream, to ſupport the canoes; but the *Indians*, who could out-ſtrip the brigantines when they only rowed, got the ſtart of them, and getting between the *Spaniſh* canoes and the ſhips, they ſunk them every one, and ſhot theſe that could ſwim, ſo that the whole 40, except four who eſcaped, periſhed by the madneſs of that one.

A mad Spaniard occaſions the loſs of forty.

The *Indians*, pleaſed with the victory, purſued them all that day with great rejoicings; but being weary of having rowed ſo much, and being now 400 leagues from home, they thought fit to give over the chaſe. The river was in this place, as near as they could gueſs, 15 leagues over; from which they concluded they were near the ſea; and accordingly upon the 19th day, they came within ſight of it; but not knowing whereabouts they were, they took into an iſland, where having ſtaid three days, to reſt themſelves after their fatigue, and to put any thing in order that they found amiſs in the brigantines, the laſt day they ſtaid there, ſeven canoes pop'd out from a place overgrown with ruſhes, in the head of one of the canoes was a huge black man, who in a threatning tone, call'd them robbers, and bad them be gone, or he would kill them, and burn their ſhips. *Silveſter* with 100 men, in their canoes, purſu'd thoſe ſeven, which had retir'd behind the ruſhes, and entering after them, they found about ſixty canoes there, which they attack'd, with their croſs bows, killing and wounding ſeveral *Indians*, and having overſet three of their canoes, the reſt fled. When they were return'd to their ſhips, they all ſet ſail, and keping as cloſe to the ſhore on the ſouth weſt ſide, as was convenient, they got out of the river into the ſea of *Mexico*, after a tedious voyage. Then, believing they could not be far from *New Spain*, they coaſted along, being afraid to venture far from land, for fear of the north wind, which at laſt ſeperated them, for all their caution; five of them getting into a creek, but two were blown to ſea; however after they had been toſs'd for 24 hours, they ſaw land, and making towards it, they run their ſhips aſhore, one after another upon the ſand, and ſo walk'd to the land.

They arrive in the bay of Mexico.

Gonſalo Silveſter happen'd to be in one of theſe; they deſpers'd themſelves in parties, to find ſome body that could inform them where they were; *Silveſter*, going up into the country, ſpy'd three *Indians* fiſhing on a lake, and two others gathering fruit off the trees; one of whom he took, who repeated often *Brezos*, but they did not know what he meant. In a ſmall cottage hard by, they found two baskets of fruit, a turky, a cock, and two *Spaniſh* hens, and ſome conſerve of *Maguey*. Theſe *Silveſter*, and his party, brought back to the ſhore, where the *Indian* told ſome who underſtood him, that he belong'd to *Chriſtopher de Brezos*; and that a league off there was a cacique who could read and write, whom he would bring to them; that the place they were in, belong'd to *Panuco*, which was 10 leagues up the river. They gave this *Indian* ſome toys, and ſent him to the cacique, who came with him, in four hours, bringing eight *Indians* laden with fowl, *Indian* corn, fiſh and fruit; he brought likewiſe pen, ink and paper, which enabled them to write to the governor of *Panuco* to acquaint him of their arrival. They ſent along the coaſt eaſtward in ſearch of the five brigantines, which they found at laſt, and brought them all to the ſame place. The whole crew were almoſt naked and bare footed, and in this equipage they went to *Panuco*, where they were civilly treated by the governor, who ſent an expreſs to the vice roy of *Mexico*, to inform him of their diſtreſs. He immediately ſent four horſe loads of ſhirts and other neceſſaries, ordering them to be ſent to him, which was done, they marching in different parties. But as ſoon as they were refreſh'd a while there, they were ready to tear the king's officers, (who had been with them

And ſo to Panuco.

them in *Florida*) in pieces, laying the blame upon them of their not having ſettled in that fruitful country. When the vice roy heard of it, he ſent for them, and quieted them, by promiſing to undertake that enterprize himſelf very ſoon, and to employ them in it, and in the mean time he provided for them in *Mexico*. But thoſe brave ſoldiers finding no likelihood of that expedition, ſome of them went to *Peru*, others ſtaid in *Mexico*, and ſome took on the religious habit. And thus ended the conqueſt of *Florida*, for that time, when, in all apperance, had *Soto* liv'd but one year longer, they might have planted ſeveral colonies there. But the *Spaniards* heads about that time, were ſo full of gold mines, that they deſpis'd all other methods of growing rich, and all opportunities of planting the goſpel, except in countries where they could reap a golden harveſt. I don't ſay this to caſt an odium upon that nation; for, to their honour, they have done more that way than any other nation in *Europe*. I wiſh we, who think our religion better than theirs, had half the zeal for converting the poor *Indians* that the *Spaniards* have ſhew'd; and I could give ſome reaſons why, in all appearance, by the bleſſing of GOD, we might have ſucceeded better than they.

It is needleſs to give an account of an enthuſiaſtical expedition of ſome dominican fryers, who attempted to convert the people of *Florida* in the year 1549. It was ſo quickly over that they did not live 24 hours after their landing, but were murder'd by the natives. I admire the zeal of thoſe religious men; but I cannot much applaud their prudence: for I can, by no means, think that a few prieſts (let them be ever ſo pious and learned) are fit to convert a ſavage people to chriſtianity, when they don't underſtand one word of their language, nor know any thing of their cuſtoms. And even the apoſtles themſelves had fail'd of making proſelytes, if GOD Almighty, among the other gifts he beſtow'd upon them, had not given them the gift of tongues. I have a great regard for martyrs, but I would have them to have common ſenſe.

SECT. II.

Other Diſcoveries, and Colonies planted in NORTH AMERICA.

ALTHO' we broke off *Cortez*'s conqueſt of *Mexico*, at his being in poſſeſſion of that city; yet many other parts of *America* having been diſcover'd and planted from thence, it is neceſſary to look back to *New Spain*; which we are the rather inclin'd to do, as being deſir'd, by ſome of the encouragers of this work, to purſue that ſubject a little farther. But, becauſe *Panama* was the place of greateſt note, and where all the *Spaniſh* diſcoverers either eaſt or weſt, upon the ſouth ſea, provided themſelves of ſhipping, and from whence they took their departure, we ſhall add, ſome farther account of affairs there, to what was formerly ſaid*.

* p. 39, 40.

Pedrarias being governor of *Darien*, and having very unjuſtly and barbarouſly put his ſon-in-law *Nunez* to death, as we obſerv'd before; having been informed of the riches found near the coaſt of the ſouth ſea, of which he had ſeen many marks, by the great quantity of gold brought to *Darien*, by the ſeveral parties ſent out, reſolv'd to go thither himſelf; and therefore neglecting the colony of *Darien*, which indeed was an unhealthful place, eſpecially conſidering that *Nombre de Dios*, founded about this time, was the neareſt way, by land, to the ſouth ſea, he remov'd from *Darien*, and croſſing the mountains, ſettled at *Panama*, which had been diſcover'd by *Nunez*; and for the largeneſs of the harbour, was pitch'd upon as the moſt convenient place for a city; and altho' the damps, occaſion'd by a moraſs near the place, make it not ſo wholeſome as it otherwiſe might be, it ſoon came to be one of the moſt flouriſhing places for trade in all that country; and engroſs'd the commerce both of the ſouth and north ſeas.

Panama *the chief city on the ſouth coaſt.*

Pedrarias having now no competitor, exercis'd all the authority which was before veſted, by the king's commiſſion, both in him and *Nunez*. He therefore ſent out ſeveral captains, to ſubdue the provinces thereabouts. Of all the caciques who withſtood the *Spaniſh* arms, *Urraca* gave them the greateſt trouble. The territory of this cacique was north-weſt of *Panama*, in the mountains of *Veragua*. *Eſpinoſa* having been ſent by the *Adelantado* or lord lieutenant *Pedrarias*, with two ſhips well man'd, to ſubdue the iſlands of *Zebaco*, about 60 leagues to the weſtward of *Panama*, the people of thoſe iſlands ſubmitted; and being ask'd where there was any gold to be had, they pointed to the mountains upon the continent, and named *Urraca*. This intelligence determin'd him to land upon the continent; but *Urraca* ſpying the ſhips from the hills, and hearing that the *Spaniards* had ſubdu'd ſeveral of the provinces in thoſe parts, provided what forces he could, and made ready to oppoſe them: and being inform'd by his ſpies, that they were marching towards him, he went

Eſpinoſa *ſent to ſubdue the iſlands of* Zebaco.

Marches againſt Urraca.

went to meet them with undaunted courage; and engag'd them with a great deal of bravery; and altho' the few horſe which *Eſpinoſa* had, terrify'd the *Indians* who had never ſeen any creatures of that kind before, yet they charg'd the *Spaniards* with ſuch vigour, that they were much put to it, and in all probablity had been defeated, if *de Soto* (who had been detach'd by *Pizarro* with 30 horſe) had not, by good providence, come near the place of battle, and hearing the noiſe, advanced to their aſſiſtance. This new recruit, eſpecially ſuch a number of horſe, made the *Indians* give way. However *Eſpinoſa* did not think it adviſeable either to purſue them, or to remain in their neighbourhood; and therefore, as ſoon as the night came on, he withdrew in ſilence; but ſuch was the vigilence of *Urraca*, that he had intelligence of the retreat, and knowing the ground perfectly well, he got the ſtart of the *Spaniards*, and had taken up a narrow paſs, thro' which they were oblig'd to march, where he attack'd them furiouſly. *Eſpinoſa*, who was now join'd by all *Pizarro*'s party, made a ſhort ſpeech to his people, telling them the neceſſity of exerciſing that valour which had hitherto procur'd them ſo much honour; in ſhort, that they muſt conquer or die. Having animated them by his words, he ſhew'd them good example by his actions, and being well ſeconded by *Pizarro*, fell in with the *Indians*, and by dint of ſtrokes, which thoſe naked people could not reſiſt, he broke thro' them, and retir'd to the ſhips; and ſail'd to one of the iſlands from whence he had ſet out, which the *Spaniards* call'd S. *Maria*, where they ſtaid to refreſh themſelves.

With whom he has ſeveral hot ſkirmiſhes.

From S. *Maria*, they ſail'd a ſecond time to the continent, but weſtward of their laſt landing place, to the province of *Borica*, where the ſight of the horſes frightning the army of *Indians*, drawn out to oppoſe them, they enter'd the chief town of that province, and made all the women and children priſoners, which the cacique of that province being more griev'd at, than if he had been priſoner himſelf, came, of his own accord, to *Eſpinoſa*, who generouſly releas'd all the women and children, and accepted of the cacique's ſubmiſſion. The like they did in ſome other towns weſtward, till they came to *Pariqueta* or *Nata*. Upon the coaſt ſide, having on the north eaſt the *Urraca* or *Veragua* mountains. Finding this country open, and fruitful, lying in an agreeable plain upon the river *Nata*, he reſolv'd to plant a colony, and ſent to get leave from *Pedrarias* for building a city there; which he granted, but ſaid he would ſee it done himſelf;

As alſo with other Indians.

and in the mean time, order'd *Eſpinoſa* to leave a party at *Nata*, and to come himſelf to *Panama*; which he did. But *Urraca*, having intelligence that the bulk of the *Spaniards* was gone, march'd his forces againſt thoſe who remain'd. His advanced guard caught three *Spaniards* in a houſe by themſelves, they kill'd one, took another, and the third hid himſelf; but finding an opportunity, while the *Indians* were making merry, to recover his arms, which were lying not far from him, he broke out of his hole, and catching up his ſword and other arms, he broke in upon the guard, with a furious cry and kill'd five of them: they thinking a freſh party was come unexpectedly upon them, fled out of the houſe, leaving their priſoner behind; ſo that the two *Spaniards* got out another way, and return'd to give the allarm to their captain at *Nata*. *Companon* who commanded the *Spaniards*, ſent two expreſſes to *Panama*, and in the mean time fortify'd the place he was in, as well as he could. But *Urraca* had inveſted his quarters in ſuch a manner, that he had no way free, but towards the ſea, inſomuch that not being able to ſearch for food in the country, and all his proviſions being ſpent in his little fortification; they were in a ſtarving condition, when *Herman Ponce* arriv'd with a recruit of 40 men, and proviſions from the governor; and *Urraca*, ſeeing the ſhip, and believing that the whole *Spaniſh* force was a coming, quitted his blockade, and retir'd.

A party of Spaniards left at Nata.

Pedrarias arriv'd ſoon after, and taking 150 men, and ſome ſmall guns, he and *Pizarro* (ſo famous afterwards in *Peru*) purſu'd the cacique. But he being an expert ſoldier, having intelligence of their march, poſted himſelf ſo advantagiouſly, that upon the *Spaniards* approach, *Pedrarias* ſaw the difficulty of attacking him; but knowing that all the ground they had gain'd in that country would ſoon be loſt, if they did not get the better of that warlike *Indian*; having planted his attillery ſo as to bear directly upon the thickeſt ranks of the enemy, he order'd them to fire, while he with a party took a little compaſs to attack them to the beſt advantage. The cannon being new to them, and being ſo level'd that they carry'd off whole files of the *Indians* at once, put them in ſuch conſternation, that *Pedrarias* falling upon them with his diſciplin'd forces at the ſame time, after ſome reſiſtance they gave way, and the *Spaniards* took up their ground; but not being in a condition to purſue ſo great an army, he kept that advantage, altho' *Urraca* attack'd him four days ſucceſſively. But finding that he was ſtill repuls'd with great loſs,

Pedrarias goes againſt Urraca.

eſpecially

eſpecially by the great guns, he retir'd, in order to raiſe more forces, and, to hinder the *Spaniards* from purſuing him, he order'd ſome *Indians* to ſtroll near them and ſuffer themſelves to be taken; and knowing that the *Spaniards* would inquire where gold was to be had, he inſtructed them to point to ſuch places as he named to them; and ſent a ſufficient force to ly in ambuſh on the roads leading to thoſe places. This bait took, and ſeveral *Spaniards*, who went in parties, were kill'd, and others wounded. However in the end they prevail'd, and *Pedrarias* went back to *Nata* and there planted a colony, dividing the lands, in the provinces round about, together with ſuch a number of *Indians* to every man's ſhare, who were to be employ'd in building their houſes, tilling their ground, and fiſhing for their maſters; which thoſe poor people reſented, altho' they had been put to the ſame ſervices by their own caciques before; *ſo natural is it, for people, to abhor being ſlaves to foreigners.*

Pedrarias having ſeen the new city of *Nata* (ſo call'd from the name of the cacique of the province) he left a garriſon of 60 *Spaniards* there, under the command of *Alibetz*, and return'd, with the reſt of his forces to *Panama*. *Alibetz* had ſeveral skirmiſhes with parties of the natives, and had great difficulty to keep his ground; but being frequently reliev'd from *Panama*, he went on with the building, and the city was, in time, peopled with *Spaniards*, who brought their families, ſome from *Panama*, *Nombre de Dios*, and other places on the north ſea; others from *Cuba*, *Hiſpaniola*, and *Porto Ricco*; and ſome from *Spain:* the expectation of the riches of *Peru*, ſetting all their heads upon ſettling on the ſouth ſea; from whence that great empire was diſcover'd and conquer'd, as we related in the preceeding chapter.

Whilſt theſe things were tranſacting on the coaſt of the ſouth ſea, *Cortez* was carrying on the conqueſt of *Mexico*, which he at laſt accompliſh'd, as has been fully related in the III. chapter of this work. But being as good as maſter of the whole empire, by ſubduing the city of *Mexico*, becauſe the whole ſtrength of that great dominion, having been ſummon'd to defend that city had been deſtroy'd in 60 pitch'd battles or form'd attacks; or had periſh'd by famine, or ſickneſs; he had nothing now to do, but to ſettle the confuſions occaſion'd by the war; and to make diſcoveries in other places, which had not been ſubject to the kings of *Mexico*. The capital city being, for the moſt part, in ruines, *Cortez* retir'd to *Guayoacan*, a league and a half ſouthweſt from *Mexico*, giving neceſſary orders for clearing the ſtreets, and repairing the houſes, in which he employ'd the *Indians*, who were now as ſubmiſſive to him, as they had formerly been to their own emperor.

But altho' *Cortez* had a great deal of reaſon to be ſatisfy'd with having conquer'd this great empire, and annexing it to the crown of *Spain*, which was the greateſt ſervice that any ſubject had ever done to that monarchy; yet as ambition is never ſatiated, he reſolv'd to enlarge the dominions of *New Spain* beyond the territories of *Montezuma*; and in order to that, he ſent out ſome *Indians* with one or two *Spaniards* who were diſcreet perſons, not to conquer, but to view the country, beyond the limits of *Mexico*. *Parillas*, a pleaſant merry fellow, who having learn'd the *Mexican* language, was very acceptable to the natives for his good humour, went as far as the kingdom of *Mechoacan*, where the report of the conqueſt of *Mexico* had made ſuch a noiſe, that upon the rumour of a *Spaniard*'s coming into the country, people of all ranks came out to gaze at him, as a ſtrange thing. But when they heard him ſpeak their language, and ſaw that he treated them with civility, and did no harm to any body, they ventur'd to touch him; and ask'd him a great many queſtions, to all which he anſwer'd with great dexterity; and having ſeen ſeveral towns, and got ſome ſamples of gold, he return'd to *Cortez* with two *Indians*, which ſome of the chief men of *Mechoacan* had given him. *Cortez* careſs'd the *Indians*, and order'd ſome of his people to ſhew them the horſes, artillery, and arms; he made the horſe men skirmiſh before them, and the muſketeers to fire, which they were much aſtoniſh'd at, and at firſt were terribly frightned. Having ſpoken kindly to them, and treated them well for ſome days, he diſmiſs'd them with ſome baubles, with which they were highly pleas'd. He would have ſent ſome *Mexicans* along with them, but they refus'd to take them, becauſe their country had always been enemies to *Mexico*, but they accepted of a convoy of *Tlaſcallans*.

Cortez ſends to view the country out of the limits of Mexico.

Soon after they were gone, *Cortez* ſent *Montano* and three other *Spaniards*, in company with 20 *Indian* gentlemen, to the capital city of *Mechoacan*, giving them inſtructions, that they ſhould endeavour if poſſible to ſee the king, and, at the ſame time, to inform themſelves of the trade and produce of the country, and of the manners and cuſtoms of the people. This company ſet out together, and in four days march, came to the frontiers of *Mechoacan*, and going on to *Taximaroa*, were receiv'd by the caci-

que

que of that city, and the other citizens, in a moſt friendly manner; for the *Indians*, who had been at *Guayoacan* with *Parillas*, had given them ſuch favourable impreſſions of the *Spaniards*, that all the natives vy'd with one another who ſhould ſhew them greateſt reſpect. Having been entertain'd ſome days in this city, the cacique, at their departure, told *Montano*, that he deſign'd in a ſhort time to go and ſubmit himſelf to *Cortez*, and he did not doubt but their ſovereign, the king of *Mechoacan* would do the ſame. This city, being the frontier of the kingdom, was fortify'd with a wall two fathoms high, and one broad, made of oaken planks; which, by reaſon of their wars with the *Mexicans*, they renew'd from time to time, and it was done with the greateſt art.

Montano having ſent one of the *Indians* to give *Cortez* an account of their ſucceſs at *Taximaroa*, proceeded on his journey, and in ſix days arriv'd at *Mechoacan*; the natives, wherever they paſt, coming in multitudes to gaze at them. A little way out of the town, they were met by a number of lords, ſent by their king to compliment the *Spaniards*; the eldeſt of thoſe lords welcom'd them in the king's name, and declar'd, that he deſir'd to be a friend to *Cortez*, and a ſubject to the king of *Spain*. *Montano* made a ſuitable anſwer to the *Indian*'s ſpeech, and ſo enter'd the city, being conducted to a ſpacious houſe, where they were conveniently lodg'd, and entertain'd after a handſome manner.

Montano arrives at Mechoacan.

After they had din'd, the king himſelf came to the houſe, and with a ſtern countenance ask'd them, *whence they came? what was their buſineſs? what made them deſtroy the city of* Mexico? and told them, *If their general attempted to ſubdue him, he ſhould find it a harder task than the conquering* Montezuma. This diſcourſe ſurpriz'd the *Spaniards*; but *Montano*, ſoon recollecting himſelf, made anſwer, *that he had no reaſon to be jealous of them, for they were ſent by their general only to offer his friendſhip to his highneſs, together with that of their great lord and maſter the king of* Spain; *and to ſettle trade, and a good correſpondence between the* Spaniards *and the ſubjects of* Mechoacan. The king appear'd to be unreſolv'd how to treat them; he roſe up, and bid them repoſe themſelves, and he would give them an anſwer. Upon his going away, a ſtrong guard was put about their quarters, but no inſult offer'd to their perſons.

The king's behaviour towards them.

Towards the evening, there were great rejoicings in the city, and fires were lighted in all the towers of their temples; and the *Mexicans* were of opinion that both the *Spaniards* and they were to be ſacrificed; and it was believ'd that he once had ſuch a deſign; but that he chang'd his reſolution, by the advice of an old counſellor. He ſent for four of the chief *Mexicans*, from whom he deſir'd to know the behaviour of *Cortez*, and an account of the conqueſt of *Mexico*. Thoſe gentlemen being much in *Cortez*'s intereſt, and, having been inſtructed by *Montano*, ſpoke boldly, repreſenting the wonders that had been perform'd by the *Spaniards* both before, and during the ſiege; they told the king, that they were invincible in the field, but mild and courteous towards thoſe who accepted of peace. This account agreeing with what they had heard before, was eaſily credited by the king and council; ſo that having diſmiſs'd the *Mexicans*, whom he order'd to be treated according to their quality; after ſome conference with his council, the king went to viſit the *Spaniards* a ſecond time, and coming to them with all his people in arms, he himſelf having his bow in his hand, and a gold quiver full of arrows, at his back, they look'd for nothing but deſtruction, and were reſolved to ſell their lives as dear as they could. But they were very agreeably ſurpriz'd, when, after great quantities of deer, rabbits, quails, and great variety of other fowls alive and dead, were brought in, the king told them by the interpreter, that *he had delay'd them ſo long, by reaſon of an anniverſary feſtival which he had been oblig'd to perform; but now that it was over, he deſign'd to ſend them back to their general; and deſir'd them to acquaint him, that he was ſo taken with the report made him of his courage and conduct, that he was reſolv'd to court his friendſhip, and to ſubmit himſelf to that great monarch, who had ſuch people for his ſubjects. And therefore, he bid them prepare for their return the next day, when they had receiv'd the preſent he deſign'd to ſend them.* He likewiſe told them, *that he would ſend ſome of his chief nobility along with them, deſigning, in a ſhort time, to go himſelf to confirm what he then promis'd:* to all which *Montano* anſwer'd, with much reſpect, promiſing to deliver his meſſage to the general, and aſſuring his highneſs, *that the noblemen ſhould be treated according to their quality, and as became the ambaſſadors of ſo great a prince.*

According to the king's promiſe, the next morning, ſeveral gentlemen came to their quarters, attended by a number of men, laden with garments of the fineſt ſort; wooden ſeats curiouſly wrought; five loads of buskins made of dear skins of different colours; and ſeveral pieces of ornaments ſome of pale gold, and others of

of silver. All these were laid down in the court, upon very curious mats; and upon delicate white cloath, were deposited bars of gold and silver to the value of 100,000 pieces of eight. After this the king came, and made a favorite tell the interpreter, that what was laid in the corners of the court, was design'd for the *Spaniards* who were present; and that in the middle, for their general. And then recommending eight noblemen, (whom he had chosen to go along with them,) to their care and protection, he retir'd.

When they were ready to begin their journey, 800 *Indians* took up the present for *Cortez* and the ambassadors, marching out by two and two, and *Montano* with his retinue, and the *Mechoacan* ambassadors follow'd them, and made the best of their way to *Guayoacan*, where *Cortez* welcom'd them, having been in pain for their long stay, they having been detain'd three weeks at *Mechoacan*.

As soon as *Cortez* had inform'd himself of all that had past, he sent for the ambassadors, whom he receiv'd in great state; and they marching two and two, made their obeysance first at the door, and then in the middle of the room, where he was seated in an arm chair. As soon as they came up to him, he rose from his seat, and embrac'd them one by one. When he was seated again, the eldest of them deliver'd his commission, being in substance, *That the king his lord had sent them to assure him of his friendship, and to testify the esteem he had for him, for his conduct and bravery, who, with such a handful of men, had subdu'd the vast empire of* Mexico. And he concluded with declaring his master's resolution of coming soon to see him, and to submit himself to the crown of *Spain*. *Cortez* receiv'd their compliments with a good grace, and, *thank'd their king for his good opinion of him, desir'd them to assure him of his friendship, and that he should be rejoiced to have the honour of seeing him.* And as to them, he told them, *they were as free in* Guayoacan *as in their own houses, and might return when they thought fit; but desir'd it, as a favour, that they would stay with him some days to see his people exercise their arms.* The ambassadors extremely pleas'd with their reception, retir'd to the quarters appointed for them, where they were splendidly entertain'd, and the next day, by *Cortez*'s order the horse and foot were drawn out, and made sham fights, and the cannon were discharg'd. And thus having staid some days, they took leave of *Cortez* highly satisfy'd with what they had seen, and with the presents he made them.

Upon their return home, they gave such accounts of *Cortez*, that the king prepar'd to make him a visit; but first he was advis'd to send his brother; who accordingly went with a retinue of 2000 men, some of them carry'd a present, of garments, made of cotton and feathers, together with the value of 8000 pieces of eight in pale gold, and above 1000 marks in silver allay'd with copper, all made into vessels for use or ornament. This prince being very desirous to see such a heroe, as *Cortez* had shew'd himself to be, made a very expeditious march, and *Cortez* being inform'd of his approach, sent some gentlemen, with the interpreter, to welcome him, and conduct him to his palace, he himself receiv'd him in the antichamber, and having embraced him, led him into his appartment, and made him sit down by him; ordering dinner to be serv'd up. After they had done eating, they enter'd into a friendly conversation, by means of the interpreter; the prince amongst other things, beg'd as a favour, that *Cortez* would shew him those strange things which the ambassadors had talk'd so much of, and particularly the great canoes, as the *Indians* call'd the brigantines. *Cortez* desir'd he would repose for that day, promising to satisfy his desires the day following.

The king sends his brother to see Cortez.

In the mean time he gave orders for all his *Spanish* forces to rendezvous the next morning, and both horse and foot to divide themselves into two distinct bodies, and, to shew the prince the manner of their fighting, he order'd them to engage as soon as the prince and he came to the field; the artillery firing powder at the same time. After that show was over, they went to *Mexico*, in a stately canoe, with a rich awning, attended by many gentlemen in other canoes. Being arriv'd there, the *Mechoacan* prince took a view of the city, and could not forbear shewing compassion for the ruin of that place, which he had seen in its full splendour. *Cortez* did not fail to let him know that it was much against his inclination, that he had been forced, by the obstinacy of the *Mexicans*, to make such havock in the city, but that he design'd to repair it as soon as he could. By the time that they had seen the principal places of the city, one of the brigantines was set a float; and having 50 men aboard, ply'd about the lake for some time, to the great admiration of the prince and his retinue. After he had staid there some time, they return'd to *Guayoacan:* and the next day, having receiv'd a handsome present from the general, they parted, being very much satisfy'd with each other.

The prince, at his return, gave the king a distinct relation of all that he had seen, insisting so much upon the praise of *Cortez*, and extolling the bravery of the

And upon his return goes himself.

Spaniards, that the king would no longer delay his journey; and therefore, having provided a rich preſent for *Cortez*, he ſet out, with a royal retinue, and ſent every day an expreſs to *Guayoacan*, giving the general an account of his progreſs. As ſoon as *Cortez* had intelligence of his approach, he march'd out of the town at the head of the principal *Spaniards* all well dreſs'd, taking with him all his muſick, having been inform'd that the king had brought his along with him. When they came in ſight of one another, the muſick began on both ſides, ſo continuing till they met; and then there was a deep ſilence. The king made a low reverence to *Cortez*, who embrac'd him in a very affectionate but reſpectful manner. And then the king, excuſing his having defer'd his viſit ſo long, told him, *that he was now come to claim that friendſhip he had been pleas'd to offer him, and withal, to ſubmit himſelf and his kingdom, to his ſovereign, the great king of* Spain; *in token of which he had brought ſuch things as his kingdom afforded, as a preſent for his majeſty and him.*

Cortez was much pleas'd with the king's behaviour, and diſcourſe, to which he made a ſuitable return, letting him know, that his ſubmiſſion to the king of *Spain* would be a great advantage to himſelf, as he would explain to him more particularly when his majeſty had taken ſome repoſe after his long journey. After this ſhort converſation, they march'd together to *Guayoacan*; where *Cortez* had prepar'd the beſt appartment in the palace for the king, whom the *Mexicans*, becauſe he was meanly habited (altho' his retinue were richly dreſt) call'd *Cazonzin*, or old buſkin; but his true name was *Tangajuan Bimbicha*. He ſtaid with *Cortez* ſeveral days, and ſaw the *Spaniards* exerciſe after the ſame manner as his brother had done, to his great ſatisfaction; and when he had a mind to go home, he was diſmis'd with all the marks of eſteem; *Cortez* having firſt talk'd to him about the unreaſonableneſs of ſeveral cuſtoms they us'd, and particularly concerning human ſacrifices; and obtained liberty of ſending colonies to his country when he thought fit: which he accordingly put in execution ſome months after, ſending *D'Olid* thither, with 40 horſe and 100 foot, who were well receiv'd by the king, and planted the firſt colony at *Zinzontza*, near *Mechoacan*; weſt of *Mexico*, and not far from the ſouth ſea.

D'Olid *plants a colony in* Mechoacan.

Much abuot the ſame time, towards *November* 1522, he ſent *Sandoval* with 200 foot and 35 horſe ſouth eaſt, towards the north ſea, to chaſtiſe ſome provinces which had murder'd thoſe *Spaniards* ſent to diſcover the mines, when he was forced to abandon *Mexico* after the death of *Montezuma*. *Sandoval* went to *Guatuſco*, *Gonzocoalia*, *Gucchallon*, *Civatlan*, *Quezaltepec*, and *Tobaſco*: (where ſome ſubmitted, and others were ſubdu'd by force;) and built *San Spirito* about three leagues from the ſea. At the ſame time he ſent *Alvaredo* ſouthward, to the pleaſant valley of *Guaxaca*; (the place which afterwards, gave *Cortez* the title of marquis *della Valle*;) in this valley, about ſix leagues from the town of *Guaxaca* afterwards call'd *Antiquera*, the *Indians* made head againſt *Alvaredo* at *Ytzquintepec*; but he ſubdu'd them, by cutting off their water. This valley is in 18 deg. n. lat. about 80 leagues ſouth from *Mexico*. *Alvaredo* run thro' ſeveral provinces in the neighbourhood, ſome of which had been under the dominion of *Mexico*, and others not.

Sandoval *builds* San Spirito.

Upon *Alvaredo*'s return, having left a colony at *Antiquera*, *Cortez* ſent him with 200 foot, 40 horſe, and two ſmall braſs guns, towards the ſouth ſea, againſt the cacique of *Tututepec*, who made war upon the lord of *Tecoantepec* for having ſubmitted to the *Spaniards*, and ſending a preſent to *Cortez*. *Alvaredo* was a month by the way, and having at laſt reach'd that province, met with oppoſition at firſt, but the cacique ſubmitted, and offer'd to quarter his men in his own palace; but *Alvaredo*, being inform'd that he deſign'd to burn them there, excus'd himſelf, and ſtaid in the lower part of the town, as moſt convenient for the horſes, keeping the cacique and his ſons with him, who finding that they were priſoners, ranſom'd themſelves, and ſubmitted. Here *Alvaredo* planted a colony, and call'd his town *Segura*; but after his departure, the *Spaniards* quarrelling among themſelves, left the place, and went to *Antiquera*.

Alvaredo *plants a colony at* Antiquera.

Another at Tututepec.

By means of theſe parties, ſent out at ſeveral times, *Cortez* had diſcover'd a good part of the ſouth ſea courſe; and having gotten poſſeſſion of *Zacatula*, ſouth weſt from *Mexico*, upon the ſouth ſea, he ſent ſhipwrights thither to build ſhips, in order to diſcover farther ſouth, and appointed *D'Olid* to over-ſee the building of the ſhips, and to coaſt along, when they were ready. That captain, being then at *Mechoacan*, march'd from thence, with 100 *Spaniſh* foot, 40 horſe, and a body of natives; and upon his march, being inform'd that the *Colimans* were in arms, who liv'd upon the ſouth coaſt, not far from *Zacatula*, he took them in his way; but they being a warlike people, he was not able to ſubdue them, but ſent to *Cortez* for a reinforcement, who diſpatch'd *Sandoval*, with 70 foot, 25 horſe and a number of *Indians*.

Cortez *builds ſhips upon the ſouth ſea.*

He

He engaged with the people of *Colima*, and, after a ſtout reſiſtance, got the better of them, upon which they ſubmitted; and he founded a colony at *Colima*; and by *Cortez*'s orders, diſtributed the land among the *Spaniards* who ſettled there; and ſo returned to *Mexico*.

Cortez, after ſettling theſe colonies, upon the ſouth ſea, by his lieutenants; hearing that *De Garay* was making preparations at *Jamaica*, to ſubdue *Panuco*, upon the north ſea, he was reſolv'd to get the ſtart of him, and ſo to bring all that great country, from ſouth to north, into *New Spain*. He therefore march'd with 300 foot, 80 horſe and 40,000 *Indians* of *Mexico*, and having defeated an army of natives upon his march towards *Panuco*, ſeveral provinces ſubmitted to him, and he proceeded to *Chila*, where *De Garay* had been defeated in a former expedition, and the people truſting to their boggs and moraſſes, oppos'd his paſſage; but having provided himſelf of boats, he paſt a river, in the night time, with all his *Spaniards*, and attack'd a great army of *Panucans*, and being in good time ſupported by his *Mexicans*, the next morning, he routed the enemy with a great ſlaughter. They had ſeveral skirmiſhes in this country, and, after a great reſiſtance, at laſt, the whole country ſubmitted; and he planted the colony of *San Eſtevan del Puerto*, near the mouth of the river *Chila*, having deſtroy'd the towns of *Chila* and *Panuco* for their obſtinacy. And having chaſtis'd ſome other provinces who had rebel'd, and hang'd the cacique of *Tututepec* for revolting, he return'd in triumph to *Mexico*.

He ſubdues Panuco.

About this time, *Cortez*'s great actions having been reported in *Spain*, notwithſtanding the oppoſition made againſt him, by the biſhop of *Burgos*, in favour of *Velaſquez*, the emperor *Charles* V. ſent him an ample commiſſion as general, and commander in chief in all the places conquer'd by him, with orders to all the king's officers, in the iſlands of *Cuba*, and *Hiſpaniola*, to be aiding and aſſiſting to him. When he had receiv'd this commiſſion, he ſet himſelf upon repairing the city of *Mexico*. He firſt appointed magiſtrates in it, after the model of *Spain*, appointing the different diſtricts to the care of ſuch perſons as he knew moſt capable of carrying on the work. He drew the plan of the city as he deſign'd it ſhould be rebuilt; and divided ſuch a ſhare to each of the conquerers; he laid out ſome places for churches, others for markets and publick buildings. The *Spaniſh* quarters, which began with 1200 inhabitants, were ſeparated from the reſt of the city. To pleaſe the natives, he gave one ward of the city to be built by the ſurviving ſon of *Montezuma*, and another by *Xihuacoa*, their laſt emperor's general; and allotted whole ſtreets and iſlands on the lake, to other men of quality, and gave great privileges and immunities to all citizens of *Mexico*; which brought a vaſt concourſe of people to it. *Cortez* built a fine houſe for himſelf, in the place where *Montezuma* had a palace; and in a ſhort time there were 100,000 good houſes rear'd in the city: and he took care to procure all ſorts of ſeeds, plants, and animals either from *Spain*, or the *American* iſlands, together with iron, all ſort of tools, and artificers: but eſpecially he provided artillery and fire arms of all ſorts, with ſtore of ammunition. He likewiſe ſet up printing houſes, a mint, and a college; ſo that he liv'd to ſee *Mexico*, as flouriſhing a city as any in *Europe*.

Receives the emperor's commiſſion as capt. general.

Cortez *repairs* Mexico.

Whilſt theſe things were a doing in *Mexico*, *Gonzalez D'Avila*, who had the king's commiſſion to make diſcoveries on the ſouth ſea coaſt, after *Nunez*'s death, having built four ſhips at *Acla* in the bay of S. *Michael*, or *Panama*, ſail'd weſtward in *January* 1522, and having coaſted along about 100 leagues, was forced to leave *Nino* with the ſhips to have them careen'd, and march'd up the country, giving orders to ſail the ſhips 80 leagues farther weſt, and wait for him. The rain fell ſo heavy in this march, that for 15 days together they could not ſtir, but ſtaid in one of the cacique's houſes; but the rain had ſo moiſten'd the ground all round, that the houſe ſunk plumb down, and they were forced to make their way thro' the roof, by the help of a lamp, which they kept burning before a picture of the B. Virgin. When they got out, they got up to the tops of trees, where they ſtaid two days, till the flood abated; and then made floats to go towards the ſea, it being impracticable to travel by land; and arriving at the bay of S. *Vincent*, they found *Nino*, who was juſt come thither with the ſhips.

Gonzalez D'Avila *diſcovers weſt of* Panama.

Gonzalez purſu'd his march, by land, with 100 men and four horſes, endeavouring to convert the caciques, where he was well receiv'd; particularly at *Nicoya*, whoſe cacique, of the ſame name, receiv'd baptiſm together with 6000 of his people. He gave *Gonzalez* 14,000 pieces of eight in gold, and deſir'd he would take ſix idols of the ſame metal, for he would be no longer troubled with them. From thence *Gonzalez* march'd to *Nicaragua*, about 50 leagues from *Nicoya*, in 12 deg. n. lat. The *Nicoyans* diſſuaded him from that march, becauſe of the power of *Nicaragua*, but he went on,

Converts Necoya.

on, ſending a meſſage to that cacique, that he was coming, in a friendly manner, to inſtruct him in the faith of JESUS CHRIST, and to perſuade him to ſubmit to the king of *Spain*; which if he refus'd, he challeng'd him to meet him in the field. The cacique having heard of the *Spaniards*, what conqueſts they had made upon the continent, by the ſharpneſs of their ſwords, and the fierceneſs of their horſes, ſent four gentlemen to *Gonzalez*, to acquaint him, that he accepted of his friendſhip, and would embrace his religion, if he lik'd it. When they met, the cacique entertain'd the *Spaniards* hoſpitably, gave *Gonzalez* 25,000 pieces of eight in gold, with ſeveral garments, and plumes of feathers; getting, in return, a linnen ſhirt, a ſilk looſe coat, a ſcarlet cap, and ſome *Spaniſh* baubles, with which he was pleas'd.

This cacique had ſeveral converſations, by an interpreter, with *Gonzalez* and his confeſſor, about the chriſtian religion; and ask'd very ſurprizing queſtions. Such as, *whether the Chriſtians had any knowledge of the flood that had drowned the world? whether it was to be drowned again, or the ſky to fall? why the nights were dark, and the weather cold? how big the ſun, moon, and ſtars were? and who mov'd them? what was the honour due to the* GOD *of the chriſtians, who made heaven and earth? where the ſouls were to be, and how employ'd after death? whether the king of* Spain *and the pope ever dy'd? and why ſo few men coveted ſo much gold?* To all which, *Gonzalez* anſwer'd very diſcreetly, ſo as the other appear'd ſatisfy'd, and, being farther inſtructed, was baptiſed with many of his ſubjects; the idols were all taken down, and croſſes ſet up in their temples.

And Nicaragua.

Gonzalez having ſtaid in this country ſome time, march'd on, but meeting with oppoſition from a warlike cacique, call'd *Diriangen*, he retir'd to the coaſt, and embark'd for *Panama*, having travell'd 224 leagues, and baptiſed 32,264 ſouls. He carry'd out of that country 112,524 pieces of eight, beſides the value of 145 in pearls. Upon their report, *Pedrarias* ſent to plant a colony at *Nicaragua*, about four leagues from the ſouth ſea.

Her. *dec.* III. B. i. ch. 4.

In the year 1523, new inſtructions came from *Spain* to *Cortez*. The emperor order'd him, by all means, to lay out all his care upon the converſion of the natives; and, to encourage them, he commanded, *that they ſhould be uſed as the natural* Spaniards *were*, particularly, *that no* Indian *ſhould be given as a property, to any* Spaniard, *but that they ſhould pay ſuch a tribute to the government as they could beſt afford. That no* Spaniard *ſhould uſ any of the natives ill, either in body or goods, but that an* Indian *ſhould have the ſame remedy, in his majeſty's courts, againſt a* Spaniard, *that any* Spaniard *had againſt another. That all the tythes of* New Spain *ſhould be apply'd to the maintenance of the clergy, and the ſervice of the churches. That all fines and forfeitures belonging to the crown, ſhould be apply'd to building bridges, and repairing highways. That no lawyers whatſoever ſhould practice in that empire. Nor any* Jews *or* Moors *enter that country, to the fourth generation. And finally, that no rich ſilks, nor any gold or ſilver ſhould be worn.* And *Cortez* having made it his requeſt to his majeſty, that the dominions of *New Spain* ſhould be for ever annex'd to the crown of *Spain*, the king declar'd, that it never ſhould be in the power of himſelf, or his ſucceſſors, to alienate *New Spain* from the crown, upon any pretence whatſoever. And altho' the fifth part of all the money and jewels had been hitherto paid to the crown; now, as a reward for the pains and fatigue the conquerors had been at, his majeſty only requir'd the tenth part for two years, and the ninth part for the third year, and ſo encreaſing one part every year, until the revenue ſhould come to the fifth, where it was to continue as formerly. And likewiſe they were exempted from any duty upon goods of the country, or what ſhould be imported, for ſix years; with ſeveral other immunities, and marks of honour to the conquerors; particularly coats of arms granted to ſuch as had none before, or additions to ſuch as had; the addition to *Cortez*'s being, a double ſpread eagle, and three crowns, together with the city of *Mexico*.

New inſtructions from Spain.

This ſame year, *De Garay* fitted out, at a great charge, a fleet to conquer *Panuco*, where he miſcarry'd before, and altho' he was inform'd before he ſail'd from *Cuba*, of *Cortez*'s having ſettled a colony in that province, he proceeded on his expedition, but had no better ſucceſs than formerly, and was fain to go to *Mexico*, where *Cortez* us'd him handſomely notwithſtanding his attempt to ſnatch ſome of the honour of his conqueſts from him, and in that city *De Garay* dy'd, and very poor, having thrown away great ſums of money upon his fruitleſs attempts upon colonies on the continent, when he had made himſelf rich by the iſlands. When *Garay* went to *Mexico*, his men ſtaid at S. *Eſtevan*, but not being under ſuch diſcipline as *Cortez*'s ſoldiers, *Ocampo*, the governor of that new colony, order'd them out of his garriſon, which gave them an opportunity of plundering the country, ſo that the natives getting together, fell upon them, and

Garay *miſcarries at* Panuco.

The Indians of Panuco revolt, but are reduced by Sandoval.

and kill'd 400 of them, and ate them: and being flush'd with this success, they made a general insurrection, marching to besiege *Ocampo* at S. *Estevan*. But upon *Cortez*'s being inform'd of it, he sent *Sandoval* with 100 foot, 50 horse and 20,000 *Indians* commanded by two *Mexican* noblemen. He try'd fair means to reduce the revolted *Indians*, but finding it to no purpose, he fell upon them with fire and sword, took 60 of their lords, and 100 of the richest people, with a great multitude of the meaner sort, whom he try'd and condemn'd with great solemnity, but, having no intention to put the sentence in execution, by *Cortez*'s advice, he burnt 30 of their lords, *in Terrorem*, and releas'd the rest upon their promise of living peaceably, and so return'd to *Mexico*.

Alvaredo sent to reduce some revolted provinces.

Towards the end of this year, *Cortez*, being inform'd that some provinces of the south, who had submitted to him, were in arms against his confederates, he sent *Pedro d'Alvaredo* to chastise them, with 300 foot, and 150 horse; who marching thro' *Tecoantepec* and *Sochanuso*, reduced some by fair means, and others by force, particularly the people of *Zacutalla* oppos'd him, but he got the better of them, and march'd towards *Utlatlan*, in which march he beat 4000 *Indians* in one place, and then routed 30,000 in a plain, by the help of his cavalry; and when they rally'd again, at the foot of a mountain, he attack'd, and defeated them with great slaughter. Soon after proceeding in his march towards the south sea, he defeated another considerable army of them, and having got the caciques, who were the chief promoters of the revolt, in his power, he put them to death, upon which the whole country submitted; so that by the 25th of *April* 1524, he settled every thing in the provinces of *Guatimala* and *Utlatlan*; but marching from thence to *Mopicalanco* and *Cayucatil* upon the south coast, he was attack'd by an army, which with difficulty he overcame, having many of his men wounded, and he himself got a lame leg, which from that time continu'd to be shorter than the other to his dying day. Having settled all matters here, he return'd to *Guatimala* and founded a colony there, by the name of *Sant Jago de Guatimala*, according to *Cortez*'s instructions, who sent him 200 *Spaniards* to plant it, and procur'd him the king's commission as governor of that province, which he well deserv'd.

Founds Sant Jago de Guatimala.

In the mean time, *Gonzalez* having, as we observ'd before, discover'd *Nicaragua*, sent to *Spain* to beg a commission for being governor of that province. But the governor of *Panama* supplanted him in it, by sending *Hernandez de Cordona* to possess himself of that province, which he did, *Gonzalez* having gone to *Hispaniola* to get recruits. *Hernandez* settled a colony on the cape, which he call'd *Brusselles*, having the south sea on one side, the mountains, where the mines are, on the other; and hard by is a large plain. But proceeding farther west, about 30 leagues, he founded *Granada* on the side of a lake, where he built a fort to secure his new city against the natives. But soon after *Pedrarias*, who it seems made no bones of cutting off the heads of *Spanish* officers, who had done good service to the crown, went to *Nicaragua*, and put *Hernandez* to death, under pretence that he had revolted from him; altho' the *Spaniards* of the new colonies said there was no such intention appear'd, and they profest much grief for *Hernandez*'s death.

Pedrarias sends Hernandez to plant a colony on the s. sea.

And afterwards cuts off his head.

Whilst these things were carrying on in the south, *Cortez*, finding all safe in *Panuco*, sent *D'Olid*, whom of all his officers he trusted most, to *Havana*, to buy horses and raise men, in order to sail to *Honduras*, where he hop'd to find a passage to the south sea. *D'Olid* accordingly sail'd to *Havana*, and there met with *Montejo*, who finding that *D'Olid* thought his merit not sufficiently rewarded by *Cortez*, blew the coal, and kept up the spirit of discontent in him. However he ship'd all that *Cortez*'s agents there had provided at a very dear rate, for this expedition of *D'Olid*'s cost *Cortez* above 30,000 pieces of eight. Having got all his recruits aboard, he set sail for *Honduras* gulf, lying between *Honduras* and *Yucatan* in 17 or 18 deg. n. lat. and near port *Cavallos* (so call'd from *Gonzalez*'s being oblig'd to throw a great many horses over-board because of foul weather) he built a town, by the name of *Trionfo de la Cruz*, *The Triumph of the Cross*, designing, as was said, to throw off all obedience to *Cortez*. Here he manag'd with so much discretion, that he met with no disturbance from the natives, having given them no cause of complaint against him. But *Cortez* having intelligence that he design'd to set up for himself, sent *De las Casas* with 150 soldiers, in two ships, to take him prisoner. *Casas* arriving at *D'Olid*'s new colony, and having surpriz'd two of his men, whom he found upon the shore, early in the morning, and finding the condition the garrison was in, cannonaded it. *D'Olid*, who was a brave soldier, went aboard two caravals he had in the harbour, and fought *Las Casas* for a whole day; but at last one of the caravals was sunk, but the men sav'd. *D'Olid* offer'd to submit to *Cortez*, upon condition he might keep his command. But

Cortez sends D'Olid to discover a passage between the n. and s. seas.

Cortez grows jealous of him.

a ſtorm ariſing, during the treaty, both *Caſas*'s ſhips were driven aſhore, and 40 of his men were drowned, and the reſt ſaved themſelves by ſwimming aſhore without arms.

This giving *D'Olid* the victory, he treated *Las Caſas*, and his people with great civility. And now being inform'd that *Gonzalez* was return'd to that country from *Hiſpaniola*, he march'd againſt him, with his own forces, and moſt of *Caſas*, who having ſtill had a regard for him, went along with him in this expedition; which ſucceeded ſo well, that he return'd to the garriſon with *Gonzalez* priſoner, whom he treated as he had done *Las Caſas*, allowing them the liberty of the town, and entertaining them at his own table; only he refus'd to releaſe them: they enter'd into a plot againſt him, and having hir'd *Mercado* to aſſiſt them, they two fell upon him after ſupper, when all the ſervants were retir'd, and whilſt *Mercado* held him behind, *Las Caſas* ſtab'd him with a pen knife in the breaſt and throat; *Gonzalez* wounding him in ſeveral other places. And then running out, and declaring that he was kill'd by *Cortez*'s order, the ſoldiers, who had a profound reſpect for *Cortez*, laid down their arms, and the conſpirators returning to the place where the murder was committed, and finding him dead, caus'd his head to be ſtruck off in the market place, as a traitor.

D'Olid *murdered.*

Cortez having advice of *Caſas*'s being made priſoner, but knowing nothing that had happen'd after, reſolv'd to march to *Thueras* in order to reduce *D'Olid*. But whilſt he was making preparations for that expedition, there arriv'd ſome new officers from *Spain*, ſent thither, at the inſtigation of his enemies, to inquire into his conduct. Theſe were *D'Eſtrada* the treaſurer, *D'Albornoz*, controller, *Salazar* factor, and *Almendez* inſpector. *Cortez* receiv'd them honourably, and they being intirely governed by avarice, ſet themſelves upon prying into the nature of his government, and gave ear to all the ſlanders, and title tatles of his enemies; they endeavour'd to abridge his power, and to engroſs the treaſure. *Cortez* let them go on their own way, and, in the mean time, he neglected nothing that he thought for the ſervice of the crown; and therefore ſent his lieutenants to reduce ſome provinces which had revolted, and manag'd all the military affairs without a rival.

New officers of ſtate come from Spain.

Some time having been ſpent in their clandeſtine inquiries, which *Cortez* knew well enough, but took no notice of, he declar'd his intention of going to *Honduras*, and committed the government of *Mexico* to *Eſtrada*, *Albornoz*, and the licentiate *Alonzo de Zuazo*, and taking *Salazar* and *Almendez* along with him, at their own deſire, he began his march with 150 horſe and the ſame number of foot, and 3000 arm'd *Indians*, beſides a great number for the ſervice of the army, and four pieces of cannon. He had not been long abſent, before *Eſtrada* and *Albornoz* were at daggers drawing about orders, ſo that *Cortez* was oblig'd to ſend back *Salazar* and *Almendez*, and join'd them in the commiſſion with the other three, for adminiſtring the office of governors. But this did not mend the matter; for a report being ſpread that *Cortez* was dead, they came to ſuch a heighth of diſcord, that they were upon the point of deciding the quarrel by arms; however they agreed upon pillaging *Cortez*'s houſe, and ſeizing upon all he had. And *Salazar* and *Albornez* getting the better of the other three, puniſhed all people who affirmed that *Cortez* was alive, and made publick ſervice to be performed for his ſoul, in the church: and then ſet his goods, together with thoſe of *Sandoval*, and other of his captains to publick ſale, and having arreſted *De Pax*, ſteward and kinſman to *Cortez*, they put him upon the rack, to diſcover *Montezuma*'s treaſure, which they pretended *Cortez* had hidden; and when he conſtantly affirm'd that he knew nothing of any ſuch treaſure, they hang'd him.

They pillage Cortez's houſe in his abſence.

In the mean time, *Cortez* endured great hardſhips upon his march, paſſing many rivers, moraſſes and mountains; he travelled thro' many provinces, and quartered in towns which he found for the moſt part, deſerted, the people having been induſtriouſly told, the *Spaniards* killed all the people that came in their way. But *Cortez* having ſent ſome ſmall parties out, they took ſome of the natives, and brought them to the general, who uſing them well, and giving them ſome toys, diſmiſs'd them in a friendly manner; ſo that in all the reſt of his progreſs, the natives came to him, and furniſh'd him with all neceſſaries. The caciques in ſeveral places ſubmitted, and ſome of them burned their idols at his deſire. But *Cortez* having brought *Guatimozin* the captive emperor of *Mexico*, along with him in that expedition, together with the chief caciques of the neareſt provinces, (who had ſtuck by that prince,) to prevent their making an inſurrection at *Mexico*, during his abſence; and being informed that they were conſpiring to murder him, and ſo to make their eſcape to *Mexico*, he ſecur'd them all againſt whom he had information, and bringing them to a trial, and the plot ſufficiently prov'd, he cauſed *Guatimozin* and two caciques to be hanged. The other

Cortez *marches to* Honduras.

He executes the captive king of Mexico

other guilty perſons he paſt by, but kept an eye over them. The *Indians* not knowing how he had his intelligence, believed he came by it, by a little ſea compaſs which he carried in his pocket, and therefore ſome of the caciques deſired him to look into that little box, and he would ſee that they were friends to him in their hearts. This miſtake of theirs the *Spaniards* encourag'd, as being of uſe to them at that time.

After a moſt tedious march, he arriv'd at *Nito*, where *Nieto* with about 60 *Spaniards*, who had been left there by *Gonzalez*, kept a ſort of a garriſon; here he was inform'd of the death of *D'Olid*, and that *Gonzalez* was gone to *Mexico* with *Las Caſas*. This news pleas'd him, as having prevented a tedious march. Here, by good providence, a *Spaniſh* ſhip arriv'd, with men and proviſions; all which he bought, and ſailed to the bay of S. *Andrew*; and hearing that *Las Caſas* had founded a colony at port *Hondurus*, otherwiſe called *Truxillo*, in 15 deg. n. lat. he ſailed thither, and the *Spaniards* there were ſo over-joy'd at his arrival, that they ſtrove who ſhould get firſt into the water to carry him aſhore.

Diſorders in Mexico.

Whilſt he was ſuffering great hardſhips in this expedition, the diviſions at *Mexico* encreas'd. *Salazar* and *Almendez* acted in ſuch an arbitrary manner, that they occaſion'd the death of many *Spaniards* by the revolt of ſeveral provinces, becauſe of the uncontroul'd licences of their people; and even the *Spaniards* themſelves who were in *Cortez*'s intereſt, had their cabals againſt them, which was like to embroil the whole empire. *Cortez* having intelligence of theſe diſorders at *Truxillo*, ſent an expreſs to *Mexico* with a new commiſſion to ſome of his friends, to take upon them the government, and to ſecure the perſons of ſuch as made any diſturbance. As ſoon as his letters arriv'd at *Mexico*, the captains to whom he had written, aſſembled his other friends, who being certify'd, by ſeeing his hand writing, that he was alive, went immediately and ſeiz'd the tyrants, and proclaim'd his orders, to which the whole city adher'd; ſo that putting *Salazar* and *Almendez* in two cages, made on purpoſe, they appointed *Eſtrada* and *Albornoz* to exerciſe the ſupream authority till his return.

Cortez had deſigned to have gone to *Nicaragua*, to order matters upon the ſouth ſea; but having now received an ample commiſſion from *Spain* as lord lieutenant of *New Spain*, he chang'd his reſolution, and taking upon him the ſtate and title of *Adelantado*, took ſhipping at *Truxillo*, and ſail'd to the bay of *Mexico*, and held on his march, with the general acclamations of all the places he paſt, till he arriv'd at the capital, where he was received with the greateſt demonſtrations of joy; both the *Spaniards* and *Indians* receiv'd him with loud huzza's, and making bonfires and illuminations.

ortez's turn.

But altho' the fame of his great bravery made a noiſe in *Spain*, and the great and rich preſents he ſent thither, made him much taken notice of; yet he had ſo many enemies in the iſlands, and ſo jealous were others, upon the continent, of his growing power, that the court of *Spain* often changed their meaſures with regard to him, ſometimes ſending inſpectors to inquire into his conduct; and at other times judges to try him. But he had the good ſenſe to be patient under them all, and kept his authority by ſubmitting to the king's; and never loſt an opportunity with the power they left him, to advance the intereſt of the crown of *Spain*, which at laſt the court was ſo ſenſible of, that this great man got the better of all his enemies, and had great honours confer'd upon him, as he certainly deſerv'd; there being no flaw in his character, but his uſage to *Montezuma*; unleſs it may be objected to him, that the whole progreſs of his conqueſts was one continu'd uſurpation. *But I leave that among the politicians; for the gentlemen of the ſword would not condemn conquerors; altho' all the divines of both univerſities ſhould give it againſt them. But this I can bodly aſſert, that the* Spaniards *pretence for knocking the* Indians *on the head, becauſe they would not part with ſome images, and receive others, was a very bad reaſon for war. Nor can I bring myſelf to believe that kings or private perſons are to be diſpoſſeſt of what is their juſt right, for the ſake of religion; and when it is done, under that vizard, it is all grimace. It is the gold of the altar, or the dazling luſture of the king's crown, and his treaſure, that is the true motive; religion is only the ſtale to come at the other. And we have read of people who have diſpoſſeſt and murder'd kings for religion, that were themſelves a ſcandal to all religion, and had no other plot in demoliſhing a bad worſhip, but that of turning all religion out of the country.* But this only by the bye.

The noiſe of the conqueſts in *America*, brought the grandees and court of *Spain*, into factions, and there were ſo many competitors for almoſt every government in that new world, that there was ſcarce a year, but there were different generals or governors ſent to the ſame province, which ſet the *Spaniards* together by the ears, and gave the natives an opportunity to deſtroy great numbers of them as they were at variance among themſelves.

Thus

Thus were the provinces of *Nicaragua* and *Panama* upon the ſouth ſea manag'd, and thoſe of *Panuco*, *Honduras* and *New Granada* and *Yutacan* on the north ſide; ſo that the ſoldiers employ'd in conquering thoſe countries, and in planting colonies in them, were influenced rather by the affection they had to the different leaders, than by any attachment to the king's commiſſion, or to the true intereſt of *Spain*; and they fell as heartily to butcher one another, for the particular quarrel of their reſpective captains, as they at firſt attack'd the *Indians*, when they were oppos'd by them at their landing.

A moſt remarkable inſtance of this was ſeen in *Nunez de Guzman*, who having, by the intereſt of his friends in *Spain*, and perhaps by diſguiſing things by names unknown there, procur'd a commiſſion of governor of *Panuco*; (becauſe *Cortez*'s government was ſtil'd *New Spain*, or *Mexico*,) and arriv'd upon the coaſt in the bay of *Mexico*, deſigning to take poſſeſſion of the new colony ſettled thereby *Cortez*, ſince he found no encouragement in the places, he at firſt propos'd to ſettle in. He arriv'd at S. *Eſtevan*, before mention'd in the territory of *Panuco*, and being reſolv'd to have ſome dominion worth his while, upon the continent, laid claim to a part of the *Mexican* territory; and meeting with oppoſition from *Cortez*'s deputies, he ſent letters to *Spain* full of invidious reflections againſt *Cortez*, which being either ſupported, or contradicted, according to the intereſt which the enemies, or friends of that general had at court, it was thought neceſſary to call *Cortez* home to anſwer for himſelf.

Guzman *arrives at* Panuco, *and makes diſturbance.*

This order was the moſt agreeable thing that could happen'd to *Cortez*, he having deſign'd to have gone to *Spain*, of his own accord, if he thought it would not have been miſrepreſented. As ſoon therefore as he had receiv'd a letter to that purpoſe, from the biſhop of *Oſma*, at that time preſident of the council of the *Indians*, he made all the diſpatch poſſible for the voyage. He carry'd over 750 pounds (at 16 ounces to the pound) of wrought ſilver; 20,000 pieces of eight in gold; 10,000 more without allay; and jewels to a great value. At the ſame time he gave free paſſage, and their maintenance, at his own charge, to all that pleas'd to accompany him; among whom were *Sandoval*, *Tapia*, and ſeveral others, his principal officers in the conqueſt of *Mexico*, as alſo a ſon of *Montezuma*'s, and one of his faithful *Tlaſcallen* friend *Magiſcatzin*, (both which were chriſtians) and ſome of the chief nobility of *Mexico*, *Tlaſcala*, and other confederate cities. He likewiſe took along with him many curioſities of the country, and rich manufactures: with all which he arriv'd ſafely in *Spain* about the end of *May* 1528, all the world flocking to ſee ſo famous a commander; and notwithſtanding the envy of his enemies, he commanded reſpect wherever he went; and he had omitted nothing of outward pomp, to procure a good reception, wiſely judging, that a man of character is, by the vulgar, eſteem'd or diſregarded, by the appearance he makes. But, to his great grief, he loſt the brave *Sandoval*, his moſt faithful friend and companion in all his conqueſts, who dy'd ſoon after his landing in *Spain*, and was juſtly lamented by *Cortez*, and all that had been witneſſes of his courage and conduct.

Cortez *is call'd to* Spain.

As ſoon as *Cortez* arriv'd at court, the emperor did him uncommon honours; and having convers'd with him at ſeveral times, and receiv'd a full account of his conduct in *New Spain*, which was atteſted both by the *Spaniards* and *Indians* he had brought with him, he confirm'd him in the government of *New Spain*, to which were annex'd the provinces of *Panuco*, *Yucaten*, *Cozumel*, *Guatimala* and the river *De Las Palmas* in *Terra Firma*; without any regard to former commiſſions granted to others. He likewiſe beſtow'd upon him, the whole valley of *Guaxaca*, with all the cities, towns and vaſſalage belonging to it, and gave him the title of marquis *Della Valle*. Here he married *Donna Joanna de Zuniga*, ſiſter to the count *D'Aguilar*, to whom he ſent rich preſents, eſpecially one emerald, for which the marchants at *Sevil* had offer'd him 40,000 ducats.

Is highly honoured and rewarded by the emperor.

Nor did the new marquis *Della Valle* forget the friends of *Hernando Cortez*, whether in *Spain* or in *America*; but procur'd governments for ſome, and lands for others, whohad ſignalized themſelves in the wars of *New Spain*. He likewiſe ſo repreſented the great merit of the *Tlaſcalans*, that he procured an utter exemption, for them, from all veſſalage, even to the crown of *Spain*; which was both the higheſt honour, and likewiſe the greateſt advantage to that ſtate. Thus *Cortez* having ſettled all matters in *Spain* to his liking; after he had ſtaid about a year there, embark'd with his lady and friends at *Sevil* in 1529.

During *Cortez*'s abſence, *Guzman* had behav'd in the moſt arbitrary inhuman manner. He baniſhed *Pedro de Alvaredo* for refuſing to ſubſcribe his villanous repreſentations againſt *Cortez*'s adminiſtration. He was alſo charged with having ſent 17 ſhip loads of ſlaves from *Panuco*, which ruined thoſe provinces. That he had hanged ſix noble *Indians*, for not ſweeping the way before him

Guzman behaves moſt tyrannically.

him; and two *Spaniards* for ſending an excuſe that they could not attend him when he ſent for them: and that he had dragged out of a church, one of the firſt conquerors and put him upon the rack, till he was left for dead; and, when he recovered, had him whiped, his tongue bor'd, and then baniſhed him, and confiſcated his goods, for no other crime but his ſaying, that a new council would come, and do juſtice. Theſe, and many other vile and ſcandalous proceedings having been repreſented to the emperor by the biſhops and friars in *New Spain*, a new council was nam'd, to take cogniſance of thoſe complaints, and to ſuperſede the council, then at *Mexico*, and to make full reparation both to *Cortez* and the other *Spaniards*, as alſo to the *Indians* who had ſuffer'd by the tyranny of *Guzman*, and the council of *Mexico*.

But before the arrival either of the marquis, or this new council, *Guzman* ſet out upon diſcoveries, as he pretended, for the ſervice of the crown, but indeed to furniſh himſelf with gold. He march'd firſt to *Mechoacan*, where he ſeiz'd the perſon of *Canzonzin*, *Cortez*'s friend; and, under colour of his plotting to deſtroy the chriſtians, altho' he was one himſelf, he rack'd him, and afterwards burn'd him, as moſt people ſaid, to poſſeſs his treaſure. He had with him 8000 confederate *Indians*, beſides great numbers to carry the baggage, whom he us'd like ſlaves; but allow'd the arm'd *Indians* to pillage and murder wherever he came. He march'd thro' ſeveral provinces about the coaſt of the ſouth ſea, moſt of the inhabitants abandoning their dwellings, and leaving cities and provinces waſte, becauſe of the barbarities committed by his army. The cacique of *Cuiſco*, (a place near a lake,) after ſome reſiſtance, came in, and his people brought plenty of proviſions. But, upon pretence that he had not provided people enough to carry the baggage, he ſet a dog upon him, who bit and tore him moſt unmercifully. From this place he paſt by *Xaliſco*, on the ſea coaſt, which being abandon'd, he ſent a party to ſet the town on fire, and ravag'd all the country.

Marches towards the ſouth ſea.

Whilſt he was thus pillaging the provinces near the ſouth ſea, advice came, from his wicked accomplices, the old council of *Mexico*, that *Cortez* was arriv'd in *New Spain*, with power, and, as he might well judge, with full intention, to call him to account. This ſtartled him a little, however he went on, and wintered in *Chiametla*, under the tropic of *Cancer*, having ſpent the whole year 1530 in coaſting along the ſouth ſea, and the provinces adjacent. In the beginning of 1531, he ſent a party to found the town of *San Spirito*, afterwards call'd *Compeſtella*, in 22 deg. n. lat. upon the ſouth ſea; whilſt he ſuffer'd his *Indians* to burn all the towns as he march'd; and going northward along the coaſt, the rains fell ſo heavy, that his whole army ſollicited his return; which he at laſt comply'd with, or rather becauſe he did not find his account in a northen expedition. Having therefore proceeded to the latitude of 33 or 34, he return'd, and in the valley of *Culuacan*, about 30 deg. lat. he built S. *Michael*, near the river *De las Mugeres*, or of *women*, from the great number of women whom they took there. After this, he return'd to *Chiametla*, *Xaliſco*, and ſo to *Tepique*, in which province was *San Spirito*. Upon his arrival at this new colony, he took upon himſelf the title of preſident of *New Spain*, altho' he was inform'd that the biſhop of *San Domingo* was arriv'd at *Mexico* with that character. From *Compoſtella*, or *S. Spirito*, he ſent *Onate* to found a city, and plant a colony in *Teutla*, about half way between *Compoſtella* and *Mechoacan*; this colony was call'd *Guadalajara*, from *Guzman*'s place of nativity in *Spain*. He likewiſe call'd this whole province *New Gallicia*.

Plants colonies in ſeveral places.

Cortez arriv'd at *Vera Cruz* in *July* 1530, to the great joy both of the *Spaniards* and *Indians*, who were ſick of the tyranny and inſolence of the preſident *Guzman*, and the council of *Mexico*; inſomuch that they offer'd to *Cortez* to kill the licentiates *Matienzo* and *Delgadello*, as being his enemies; but *Cortez*, knowing that their power was now out of date, (or, at leaſt, would ſoon determine, upon the arrival of the new council, which he expected every day,) diſſembled his reſentment, and ſpoke kindly both to the *Indians* and *Spaniards*, who flock'd from all parts to him. He writ to the counſellors at *Mexico*, to notify his arrival and likewiſe, gave them an account of his commiſſion; but they, imagining, that the new counſellors, who they heard were expected, were only to be join'd in commiſſion with them, but not to ſuperſede them, being inform'd that *Cortez* had taken poſſeſſion of *La Rinconada*, near *Vera Cruz*, before he had ſhew'd his commiſſion to them, they directed the *alcade* or mayor of *Vera Cruz* to diſpoſſeſs him of that place, and commanded all the king's ſubjects to leave the marquis, and to return to their reſpective places of abode, upon pain of death. The marquis made his commiſſion be publickly read, and had himſelf proclaim'd captain general, and no body minding the orders of the council, as having no force againſt the marquis's commiſſion, he ſet out for *Tlaſcala* with a

Cortez *arrives at* Vera Cruz.

great retinue both of *Spaniards* on horſe-back, and *Indians*, and proceeded to *Tezeuco*, where he had free communication with *Mexico* by the lake, being unwilling to create any diſturbance in *Mexico* before the arrival of the new council, to whom he was reſolv'd to leave the deciſion of his own claim, and not to do himſelf juſtice, as he might eaſily have done.

And ſtays at Tezeuco.

When he was come to *Tezeuco*, his court was ſoon encreas'd, and that of the council almoſt deſerted; which, with the conſciouſneſs of their own guilt, made them raiſe men, and get the artillery made ready againſt him, in caſe he ſhould attempt to enter *Mexico* by force. But the marquis bore all with patience. At laſt the new counſellors arriv'd at *Mexico*, and took up their reſidence in the marquis's palace, with his conſent, puting a value upon it, in order to pay him for it, and immediately gave him poſſeſſion of all that had been taken from him in his abſence. They deſir'd he would come to the city to reſide, becauſe they apprehended ſome inſurrection, and knew there was no other able to keep things quiet. Then they proceeded to inquire into the miſmanagement of the government, during the marquis's abſence; and receiv'd depoſitions from ſuch as made complaints againſt the former preſident and council.

Till the new council calls him to Mexico.

Whilſt they were thus employ'd, the biſhop of *San Domingo*, whom the king had appointed preſident of the council of *Mexico*, arriv'd, who being a prudent man, and very moderate, gave ſatisfaction to *Cortez*, but forbore to puniſh *Guzman*, as he deſerv'd, in conſideration of the ill effects it might have, at that juncture, in the colonies he had planted in new *Gallicia*; in which, as in all the affairs relating to the whole empire of *New Spain*, he always conſulted the marquis, and a conſtant good correſpondence continu'd between them. He apply'd himſelf to redreſs all grievances, promoted the building of the cathedral, which *Cortez* had begun; ſet all the natives at liberty, not ſuffering any of them, to be made ſlaves; he encourag'd the firſt conquerors; and ſet up ſchools, where the *Indians* were taught grammar, which they came to be very fond of: he divided the city into pariſhes, and the kingdom into dioceſes; placing prieſts in the one and prelates in the others: he erected monaſteries, and churches; reduced revolted provinces. And, in a word, exercis'd all the parts of a good governor, with the utmoſt prudence. He not only made good all that the emperor had granted to *Tlaſcala*, but augmented their privileges, for the affection *Cortez* bore them, and for their ſeaſonable aſſiſtance in the conqueſt of *Mexico*.

A new preſident arrives at Mexico.

The marquis *Della Valle*, being now at his eaſe, fitted out two ſhips he had built at *Acapulca*; (a port now famous on the ſouth ſea) *Hurtado de Mendoza* had the command of this diſcovery, which was deſign'd to the north weſt. He ſail'd as far as *Xaliſco*, where *Guzman*, being at that time, refus'd to let them water, ſo barbarous did he ſhew himſelf in all his actions; ſo that they proceeded in the ſame courſe, for about 200 leagues farther, watering at other places, at that time, unconquer'd. But ſome of his men mutinying, he ſent the mutineers back to *New Spain*, with one of the ſhips, and continuing his courſe was never more heard of. The mutineers, not daring to land at *Xaliſco* for fear of *Guzman*, held on their courſe eaſtward; but not caring to return home, leſt they ſhould have been puniſh'd for their mutiny, they ſail'd over againſt the bay of *Honduras*, and not knowning that coaſt, they landed on ſome part of the province of *Guatimala*, not then ſubdu'd, where they were ſet upon by the natives, and all kill'd but two, who eſcaping to *Mexico*, gave all the account that ever was known of this unlucky expedition.

Cortez *ſends to diſcover the north weſt coaſt of the ſ. ſea.*

The preſident of *New Spain*, was all the while, going on with the regulations in the government, ſeeing that all the *Indians* were releas'd from ſlavery throughout the whole empire; and having taken care to have good ſtuds of mares, and a great number of cows brought over, for breed, he diſcharg'd all *Indians* from carrying burdens at any diſtance, making horſes and cows be diſtributed at reaſonable rates for carriage, and for drawing in carts. By this wiſe government, he brought the natives to a liking of their change of maſters; and had all the *Spaniſh* miniſters acted after the ſame model, the *Indians* would have found their account in adhering to the intereſt of *Spain*. But there were ſo many of them who acted purely upon the principle of gathering money, that they neither conſulted religion nor policy, but ſtrove to enrich themſelves by all the ways they could think of, without regard to chriſtianity, or common humanity. And indeed the behaviour of one ſuch governor, or captain, coſt the lives of many *Spaniards*, who, had it not been for the barbarities committed by ſuch a one, in that country, would have been well receiv'd, and have ſettled colonies peaceably, and without blood. And in thoſe places where they met with oppoſition, by the bravery of the natives, or the generous publick ſpirit of ſome of the caciques (for I cannot but commend thoſe brave men, altho' heathens, who rather loſt their lives, than they would ſubmit to have their country

enſlav'd

enſlav'd by *foreigners*) the avarice of the *Spaniards*, and their own private quarrels gave the natives many advantages againſt them, and made the conqueſt of *America*, as far as they became maſters of that country, coſt them very dear.

Many inſtances have been already produc'd, to verify this obſervation, in both its branches, and none can read the conqueſt of *Peru* without ſeeing plainly the miſchief of covetouſneſs, and ill regulated ambition; both which get the better of loyalty, friendſhip, humanity, and religion; and the word *honour* (the moſt pernicious thing in the world, when wrong placed) is thought ſufficient to conſecrate, or at leaſt to excuſe all the villanies and barbarities that can be committed upon occaſions, where there is the beſt opportunity of ſhewing it in its true light, which I take to be, in a ſoldier, *bravely deſpiſing danger in a juſt cauſe, and treating thoſe who are in our power, with humanity and good nature.* But a particular inſtance, of the effect of covetouſneſs and ambition, we have in *Guzman*, ſo often nam'd. For, altho' he had no manner of title to have the aſcendant over *Cortez*, nor any pretence to reap the harveſt he had ſow'd and cultivated with his blood and treaſure; yet he not only endeavour'd to put him in diſgrace with the court of *Spain*, by miſrepreſenting him; but he unjuſtly ſeiz'd his goods, wherever he could come by them, againſt the emperor's expreſs orders to the contrary. For, beſides his joining with the two licenciates at *Mexico* to plunder him, as we obſerv'd before, he ſeiz'd one of his ſhips at a port within what he call'd his diſtrict, altho' the marquis's commiſſion made the whole ſouth coaſt open to him, at leaſt ſafe from any inſult from *Spaniards*.

Cortez having had intelligence, from the two *Spaniards* who eſcap'd the ſlaughter of *Hurtado*'s mutineers, of the ill ſucceſs of that expedition, and having heard no news of that poor gentleman, fitted out two other ſhips at S. *Jago* in the province of *Guatimala*, in 1533, commanded by *Bezerra de Mendoza*, and *Ferdinand de Grijalva*. But neither had theſe better ſucceſs, as to diſcoveries; and one of them viz. *Bezerra*'s (the captain having been murder'd by the pilot) was ſeiz'd by *Guzman*, having landed within his juriſdiction. The marquis complain'd of this injuſtice to the council of *Mexico*, but finding no redreſs, nor any anſwer to his letters from *Spain*, fitted out three ſhips more, and march'd himſelf, by land, with a good body of horſe and foot, to *New Gallicia*. This put *Guzman* in a terrible fright; but *Cortez*, probably out of regard to the intereſt of the crown of *Spain*, did not hurt any of the new

Cortez marches to New Gallicia.

colonies there; altho' he found his ſhip plunder'd to the value of 20,000 ducats. He then went aboard the ſhips with as many foot and horſe as they could carry, and ſail'd weſtward; but after having loſt ſome of his ſhips, tho' the men were ſav'd, he came back to *Acapulco*, this having been the leaſt important expedition he ever had made. But it is probable he had not quitted the ſouth ſea ſo ſoon, but that he had advice of the arrival of *Don Antonio de Mendoza*, as vice roy of *New Spain*, which was occaſion'd by the preſident's begging leave to return to his biſhoprick, after having been near ſix years in the government of *Mexico*. Soon after the arrival of the new vice roy, there was a judge appointed to go to *New Gallicia*, in order to try *Nunez de Guzman*, for many crimes objected to him. But altho' he was ſent priſoner to *Mexico*, and from thence to *Spain*, he had plunder'd enough of other people's money to bribe his judges there, to bring him off.

Much about this time, the colonies before planted in *Yucatan*, and *Honduras*, were in a bad way; for, *Montejo*, who was adelantado of *Yucatan*, having had no ſupplies of men, and being preſt by the natives, abandon'd the government, and went to *New Spain*, to deſire aſſiſtance from the vice roy. And *Cereceda* controuller of *Honduras*, for the ſame reaſons, quitted *Truxillo*; ſo that all was in confuſion in thoſe parts. But the ſmall garriſon which *Cereceda* left in *Honduras*, being in great ſtreights made a ſhift to ſend to *Don Pedro d'Alvaredo* governor of *Guatimala*, who with all expedition came to their aſſiſtance, and they willingly admitted him for their governor. He recover'd their ruin'd affairs, and built a new city at *Gracias a Dios* on the weſt ſide of *Honduras* in 15 deg. n. latitude, oppoſite to the cape of the ſame name, and in the ſame latitude on the eaſt coaſt. And ſoon after, he planted a colony at port *Cavallos*, which he did for the conveniency of the river, for a communication between the north and ſouth ſeas. And having ſettled good order in *Honduras*, he himſelf ſail'd for *Spain*. After his departure, *Montejo* coming back from *Mexico*, with ſome forces, took poſſeſſion of *Alvaredo*'s labours, by virtue of the commiſſion he had to make diſcoveries on that coaſt: He took away all the lands from thoſe to whom *Alvaredo* had divided them; and ſent back all the peaceable *Indians* who had follow'd that renown'd captain from *Guatimala*.

Affairs in Yucatan *and* Honduras.

But when he thought himſelf ſettled in peace in that country, a warlike *Indian* call'd *Lapira*, in *Cerquin*, not far from

Gracias

Lapira *takes arms against the* Spaniards.

Gracias a Dios, having ſummon'd all the caciques, and lords to his aſſiſtance, took the field with 30,000 men, engaging themſelves to extirpate the *Spaniards*. To ſecure himſelf from the horſe, *Lapira* fortify'd a rock, and from thence in pickeering parties, kidnap'd the ſtragglers as they could be found. *Montejo* ſent *Cazeres* againſt him, with a ſtrong detachment, who beſieg'd him in his fort, for near ſix months; nor had the war been ended ſo ſoon, but for the death of *Lapira*. But *Cazeres* being inform'd that the other caciques were inclin'd to peace, and were only kept, from acceping his offers, by *Lapira*, was reſolv'd to take him off, if poſſible; and finding that he often mounted the fort, and revil'd the *Spaniards*, when they came within hearing of him; he order'd a horſeman to ride within musket ſhot of the fort, and ſent along with him, one of the beſt markſmen he had, whom he order'd to ſhoot at *Lapira*, whilſt the horſeman made ſome propoſals to him: the ſoldier perform'd his part ſo well that, by the horſeman's ſide, he diſcharg'd his piece, and brought *Lapira* down from the wall, the bullet having hit him directly in the forehead. As ſoon as he was kill'd, *Cazeres* ſent propoſals to the caciques, which they accepted of, and laid down their arms.

He is kill'd by a muſketeer.

Theſe matters having taken up ſome time, and accounts of the proceedings of *Montejo*, in this country, having been ſent to *Spain*, *Alvaredo*, who had been well receiv'd by the court there, repreſented the injuſtice done him by *Montejo*'s invading his province and breaking the donations he had made; he therefore procur'd a commiſſion for being reinſtated in the government of *Honduras*, and for annexing it to that of *Guatimala*; and receiv'd an order to *Montejo* to reſtore the lands to him, with all the profits of them during his abſence. With theſe new orders he landed at port *Cavallos* on the weſt coaſt of *Honduras*, where he ſtaid a month without taking any notice of *Montejo*, who was much troubled at his coming with a force, againſt which he was not in a condition to keep his ground. His friends adviſ'd him to ſend a compliment to *Alvaredo*, to congratulate his arrival, and to enquire into his intentions in a civil manner; which he did, and had for anſwer, that he had orders from the king to oblige him to reſtore the lands he had unjuſtly poſſeſt himſelf of, and that he had ſufficient power to make him do it, if he would not obey his majeſty's orders without being forc'd to it.

Alvaredo *arrives at* Honduras.

Montejo ſaw there was no withſtanding the king's authority, when back'd by *Alvaredo*'s arm'd arguments; he therefore employ'd the biſhop elect of *Honduras*, to make up the difference in an amicable manner, which *Alvaredo* accepting of, *Montejo* went to ſee him and his lady, and upon ſight of the king's commiſſion, agreed to give up his pretenſions to *Honduras*, only deſiring, as a favour, that he would give him the government of *Chiapa*, to the weſtward of *Guatimala*, to which *Alvaredo* readily yielded; and the biſhop having computed the profits of the land, at 20,000 ducats, *Alvaredo* firſt remitted the half, and ſoon after made *Montejo* a compliment of the other half. From this time *Honduras* flouriſh'd under *Alvaredo*'s government. Having ſettled his affairs there, and left a deputy, he march'd to his former government of *Guatimala*.

In the mean time, there was not ſuch a good underſtanding between the new vice roy and the marquis, as had been between this laſt, and the late preſident; for the vice roy, having been told by the biſhops and friars, that the beſt way to convert the *Indians*, was, by ſending miſſionaries among them, without arms, gave into their ſcheme; (which undoubtedly was an honeſt one, provided theſe miſſionaries had taken time to learn the language of the country; before they pretended to preach the goſpel to the *Indians*;) he therefore ſent father *Mark de Nixa* a franciſcan friar, along with *Cornado*, who was appointed to ſucceed *Guzman*, in the government of *New Gallicia*. This friar being a pious and zealous man, offer'd to travel into the country to convert the natives; and accordingly ſet out, with proper guides, and ſome interpreters, for *Culiacan*, and from thence was to travel into the country northwards. He began his journey in march 1539, with another friar of the ſame order, and a black, and ſix *Indians*, who had learn'd the *Spaniſh* language. But altho' this good father travell'd very far, and ſaw places, which our author ſays, no body ever ſaw afterwards. * He was fain to return, having ſet up a croſs, and taken poſſeſſion, (at a diſtance,) of a country which he ventur'd to ſpy from a hill, but was wiſe enough not to go to, being aſſur'd by ſome people he had ſent before him, he had no buſineſs there. *Cortez*, who by his commiſſion was authoriz'd to make diſcoveries along the coaſt of the ſouth ſea, ſent out three ſhips under the command of *Franciſo de Ulloa* from *Acapulco*, in *July* the ſame year; theſe ſail'd along the coaſt, (ſometimes landing for water and ſometimes to view the country,) till chriſtmas, having all the while ſeen but very few people, and thoſe they could not underſtand: ſo that having gone as far as 30 degrees of n. lat. and loſt one of their ſhips, and the others dammag'd; the commodor,

A friar undertakes to make diſcoveries.

* Her. dec. IV. b. vi. ch. 4.

But returns in a ſhort time.

Ulloa *ſent by Cortez along the coaſt of the ſ. ſea.*

commodor, being obſtinate in making farther diſcoveries, they refitted both the ſhips, and, by conſent, one of them return'd home, and *D'Ulloa* ſail'd farther north with the other, but it was never known what became of him. Theſe two ſhips had ſail'd a great way up the gulf of *California*, without having ſeen that iſland, for any thing that appears in our author's account of their voyage.

But the vice roy, being impatient to make farther diſcoveries, and finding that the miſſionaries had not ſucceeded to his liking, the governor of *New Gallicia*, *Cornado*, being at *Culuacan*, and *Cortez* gone a ſecond time to *Spain*, he ſent forces to *Culuacan*, with an order to *Cornado* to endeavour to find out *Cibola*, of which father *Mark* had talk'd ſo much. *Cornado*, in obedience to this order, ſet out from *Culuacan*, by land, with 150 horſe, and 200 foot, well arm'd, with good ſtore of ammunition, ſome ſmall field pieces, and ſheep, ſwine, and other proviſions. They march'd northward in *May* 1539, about the ſame time that *Cortez*'s ſhips were upon the coaſt; but as this army penetrated into that country, they could have no opportunity of meeting with *Ulloa*. They gave names to ſeveral places as they paſt, but little memorable occur'd for ſome time, the natives giving them little diſturbance. At laſt they came into the province of *Cibola*, and to the firſt town of that province, which was the firſt place where they found any reſiſtance, but they paid for it, *Cornado* revenging the murder of the black who had gone with father *Mark*, and had been kill'd by the lord of that town. Taking ſome *Indians* for guides, they paſt ſeveral rivers, ſaw many towns; but altho' one of their guides talk'd of great wealth (as far as they could underſtand him,) they found nothing for many days but droves of cows feeding wild, which afforded meat, drink and cloathing to the natives. But another *Indian* giving them to underſtand that they were led aſtray, they began to ſuſpect their firſt guide, and ſo putting him, under a guard, in the rear, they were conducted by the other.

And Cornado, by the vice roy by land.

Cornado finding the people here of a peaceable diſpoſition, left moſt of his forces in this country, which they call'd *The Place of Cows*, and taking 30 horſe with the faithful *Indian*, he march'd 30 days together, till he went as far north as *Quivira*, in 45 deg. lat. This they found to be a pleaſant country, with ſtore of good fruit, well water'd, and full of plains and little hills; and here the honeſt *Indian* deſir'd to be left; which *Cornado* agreed to, and made him preſents of ſuch things as he had brought for bartering, with which he ſeem'd pleas'd: and *Cornado* telling him, that he deſign'd to return to his companions, but would come back another time, the *Indian* promis'd to ſerve him upon all occaſions. *Cornado* march'd back to his forces, and having a mind to be at his government, gave orders to begin the march towards *Culuacan*, to the great grief of his men, who would gladly have ſtaid in the pleaſant country of *Quivira*. The firſt guide finding they were for going off, endeavour'd to raiſe the country upon them, which *Cornado* finding out, order'd him to be hang'd; and ſo march'd home.

He goes as far as Quivira *and returns home.*

The vice roy was much diſpleas'd at his return; and therefore, the year following he ſent *Alarcon* with two ſhips northward; after ſome bad weather, in which they were in danger of being loſt in the ſhoals where *Ulloa* had been, they proceeded along the coaſt to a river in 40 deg. of lat. to which they gave the name of *Buena Guia* or *Good Guide*, as it is ſtill call'd, in our maps, not far from *Quivira*. The *Indians* appearing upon the banks, in a threatning manner, *Alarcon* made ſigns of peace by laying aſide his ſword, and ſhewing them toys; one of them advanced before the reſt, giving the commodor ſome ſhells which he had ty'd to a long ſtick, and reach'd out to the boat, in which he came near the ſhore. *Alarcon* took the ſhells, and, in return, ty'd ſome ſtrings of beads to the ſtick, at which the other *Indians* came flocking about him, and receiv'd baubles to their great ſatisfaction. Then he made ſigns to them to give him to eat, and they brought him mayz; and deſir'd he would land, and he ſhould have meat enough. The commodor going back to his ſhips, ſail'd up the river a little farther, the natives following along the banks both men and women. Caſting anchor at night, he kept a good watch, and the next morning arm'd men appear'd on each ſide with bows and *macanas* or wooden ſwords. The *Spaniards* made ſigns to them to lay down their arms, which they did, and *Alarcon* went aſhore in his boat, with great quantities of glaſs beads, and hawks bells, for which they gave *Indian* corn, and skins well dreſt; ſo that in a ſhort time they came to be very familiar with the *Spaniards*. But the ſtream of the river being now too ſtrong to ſail farther, he left his ſhips, and taking as many as his pinnance could hold, he prevail'd with the *Indians* to tow it up the ſtream, by a rope from the ſhore.

Alarcon *ſent by ſea to diſcover northward.*

Comes to Buena Guia *river.*

Is well receiv'd by the natives.

He was much troubled that they did not underſtand his interpreter, becauſe there was great diverſity of languages in that country; however he deſir'd him to ſpeak aloud, in caſe there might be ſome one among them who might know ſome-

thingof what he ſaid; which luckily happen'd, for, one man anſwer'd him in his own dialect; and then ask'd him, *who theſe ſtrangers were? and from whence they came?* the interpreter inſtructed by *Alarcon*, who had obſerved that they worſhip'd the ſun, made anſwer, *that they were chriſtians, and were ſent thither by the ſun.* The *Indian* reply'd, *that could not be, for the ſun was at a great diſtance, and always in motion,* The other ſaid, *that the ſun was near the earth, as they might ſee, every morning, and that the chriſtians came from the place of his riſing.* The *Indians* finding by that, that *Alarcon* was the offspring of the ſun, as they thought, ſhew'd him great reſpect, inviting him to ſtay and be their lord: but he refus'd it, telling them, he was willing to be eſteem'd their brother. This *Indian* then went aboard the boat, and talk'd a long time with the captain; and upon his going aſhore, the chief man of thoſe people, invited *Alarcon* to land, which he did, and was entertain'd after the beſt manner they could.

Sails a great way up the river in his boat.

He ſtill went up the river, being tow'd after the ſame way by the natives, who all along were very friendly; he ask'd them about *Cibola*, they ſaid it was 30 days journey from them, that the lord of *Cibola* had diſhes ſuch as the *Spaniards* had, and a dog like that of the captain's, which he had taken from a black man that he had kill'd. When he had gone a conſiderable way up this river, and found no ſign of gold or jewels, he thought of going back to his ſhips, but asking ſtill for *Cibola*, one *Indian* told him he had been there, and that ſuch men as he was, with beards, and ſuch weapons as thoſe he had, came to a town belonging to *Cibola*, and had puniſh'd the inhabitants for having kill'd the black man; by which *Alarcon* perceiv'd it muſt have been *Cornado*.

Having taken his reſolution to return, he went down with the ſtream as much in two days, as he had gone up in 15; the people calling to him from the banks, not to leave them, ſince he was their lord, and telling him, if any one had offended him they would revenge his quarrel to his ſatisfaction. Being come to the ſhips, as they were weighing their anchors (having taken their leave of the people, and recommended peace and friendſhip to them, and deſir'd them to ſhew kindneſs to all ſtrangers) the ſhip's boat being near the ſhore taking up one of the anchors, a woman threw herſelf into the river, and being taken up by the boat, ſhe crept under one of the ſeats, declaring that ſhe would go with the chriſtians, having nothing to keep her in her own country, becauſe her husband, forſaking her, had children by another. *Alarcon* took her with him, as alſo an *Indian* man, who was ſatisfy'd to go, and became a good chriſtian. Thus they ſet ſail, and obſerving all the places of the coaſt backwards, they landed in *New Gallicia*, and ſo return'd to *Mexico*.

A little after this expedition, the people call'd *Chichimecans*, who inhabited the towns in the diſtrict of *Guadalajara* in *New Gallicia*, refuſing to pay their taxes, tho' very moderate ones, revolted, and taking arms, in great numbers, retir'd to the hills call'd *Penoles*, behind *New Gallicia* nothward. *Onate*, who was deputy governor, of that province in *Cornado*'s abſence, march'd againſt them, with 40 horſe, and as many foot, beſides a great number of *Indians*, going as far as the rock of *Mixtan* upon the *Penol*. When he arriv'd there, he ſent to offer them terms, but they kill'd a friar who was ſent to reaſon them into peace; and afterwards thoſe ſavages, pretending to make an accommodation, and believing the *Spaniards* were, by that, render'd ſecure, came down from the mountain to the *Spaniſh* quarters in number about 15,000, and fell upon them with great fury, and altho' they found them upon their guard, they preſt them ſo hard, that the *Spaniards* were glad to retire, in the beſt order they could, after having ſuſtain'd great loſs, by the ſlaughter of many *Indians*, all their blacks, and ſeveral *Spaniards*. With this mortification, they came back to *Guadalajara*, and ſent to *Mechoacan*, *Colima*, *Zacatula*, *Compoſtella* and the other *Spaniſh* towns all about, to come to their aſſiſtance, hearing that the lords of *Muchiſtan* were coming with an army to attack *Guadalajara*; but leſt thoſe ſhould not be ſufficient to defend the place, they ſent to *Don Pedro D'Alvaredo*, who was then upon the coaſt about 20 leagues off, to come to aſſiſt them, which he readily did, and being arriv'd at *Guadalajara*, they agreed to prevent the *Indians* by attacking them before they could reach the city. They march'd with that deſign to *Muchiſtan*, but finding that the *Indians* were withdrawn to the mountains, they purſu'd them, and order'd a party of 100 *Spaniards*, commanded by captain *Falcon*, with 5000 *Mechoacans* under a noble *Indian* call'd *Don Pedro*, to attack the rock, when the horſe ſhould arrive to ſupport them. *Falcon* being too forward, went up the hill before the horſe came to join him, contrary to orders, and to the advice of the other officers, the *Indians* from the rock fell upon them, both in front and flank, and not being ſuſtain'd by the horſe, they were repuls'd, *Falcon* with ſeven *Spaniards* being ſlain upon

The Chichimecans riſe in arms, and threaten Guadalajara.

The Spaniards ſend to Alvaredo for aſſiſtance.

upon the firſt ſalley. The enemy purſu'd them to the plain, and *Alvaredo* finding the ground marſhy, occaſion'd by great rains lately fallen, did not think fit to attack them, becauſe his horſe were uſeleſs. He therefore reteated in good order; but coming to a ſteep aſcent, where they were oblig'd to lead their horſes, that brave captain, ſtaying to bring up the rear, a horſe fell juſt before him, and came down the hill upon him ſo unexpectedly, that altho' he had been the moſt active, nimble man of all the *Spaniards* in *America*, he could not avoid the horſe's throwing him down, by which, and the horſe's weight, he was ſo cruſh'd on the breaſt, that he dy'd in three days.

Alvaredo *kill'd.*

The death of *Alvaredo* was much lamented; and moſt of his men ſtaid for the defence of *Guadalajara*, his ſhips returning home to *Guatimala*, where a ſtrange diſaſter happen'd, very ſoon after, which deſtroy'd half the town, and among others *Alvaredo*'s lady, who ſcarce out-liv'd the news of her husband's death. For, upon the 8th and 9th of *September* this year 1541, ſo heavy a rain fell that the ſtreets of *Guatimala* were overflow'd, and and at the ſame time a flood came down from a mountain near it, bringing along with the current, ſtones, trees and logs of wood, which coming with force againſt the walls of ſeveral houſes brought them down, and kill'd all that were within them. *Alvaredo*'s lady having retir'd to an oratory belonging to her houſe, to pay her devotion in this time of danger, was unfortunately kill'd by the falling of that part of the houſe. The deputy governor, endeavouring to ſave the lady, had like to have periſh'd himſelf, but was ſav'd by getting upon a dead horſe, which was floating about the court, and ſo kept himſelf above water till morning. Above two thirds of the city were deſtroy'd, and it was ſome time before it was repair'd; but the court of *Spain* encourag'd the rebuilding it, by exempting it from all taxes for a number of years, and ordering ſums of money for the loſs they had ſuſtain'd, which in time, made it a flouriſhing place.

Guatimala *deſtroy'd by a flood.*

But the *Chichimecans* growing ſtill more inſolent in *New Gallicia*, the vice roy of *Mexico* rais'd an army and march'd in perſon at the head of 300 *Spaniſh* horſe, 150 musketeers, and 50,000 *Indians* commanded by their caciques, to whom he gave leave to buy horſes, and to arm themſelves and their principal officers after the *Spaniſh* manner, which ſome people thought not ſo prudent, leſt they might, in time, grow too ſtrong for the *Spaniards*. The vice roy made ſome ſtay at *Mechoacan* till all his forces join'd him, and then proceeded towards the *Chichimecans*. At *Acuyna*, the enemy had a fort upon a mount, which they reſolv'd to defend, having refus'd the offer of peace ſent them by the vice roy. The *Spaniſh* infantry, ſupported by 20,000 *Indians*, attack'd the place; and after ſome reſiſtance carry'd it, and either kill'd or took all that had defended it. The army advancing ſeven leagues farther, ſummon'd another rock defended by the natives, who promis'd to ſurrender if they were not reliev'd in fifteen hours. But the time being elaps'd and the garriſon not coming out according to promiſe, the vice roy order'd three patararoes to be planted againſt the fort; which having been fir'd ſeveral times, the chief of the enemy, with the lady to whom the rock belong'd come out, with croſſes in their hands; whom the vice roy, (out of reſpect to the croſs, and complaiſance for the lady) receiv'd to favour, and oblig'd them to no other conditions, but to live peaceably at home.

Mendoza *marches in perſon againſt the* Chichimecans.

From this place juſt half way to *Guadalajara*, was the rock of *Nuchiſtlan* which was 12 leagues diſtant from each of them; the vice roy ſent an expreſs to *Guadalajara* for the garriſon to meet him at the rock, but not to be there before him, leſt any accident ſhould happen; they obſerv'd his orders ſo punctually, that they were both there at the ſame time. Having encamp'd near the rock, he ſummon'd the enemy to ſurrender, but they haughtily ſent him word, *that the whole country was theirs, and they would defend it.* Upon this, the artillery was order to play, which ſoon made breaches in two of the intrenchments; and the *Spaniſh* foot being but few, the vice roy made his cavalry diſmount, except 12 of every troop, and gave order for the aſſault with ſword and target. After a ſtout reſiſtance, they enter'd the breach, and captain *Lopez de Anuncibay* ſet up the colours of his company within the enemy's trenches. The confederate *Indians* ſupporting the *Spaniards* with much bravery, they ſoon got poſſeſſion of the rock, the *Mexicans*, *Tlaſcallans*, and the other auxiliaries, making a terrible ſlaughter; but the vice roy finding the place in his power, ſtop'd farther execution, and made priſoners of all that laid down their arms. Many eſcap'd, but the dead and the priſoners amounted to 8000.

And reduces them.

Having thus ſucceſsfully carry'd theſe three rocks, and kill'd a great number of the moſt warlike natives; he march'd thro' the whole country, and ſubdu'd all that perſiſted in their revolt, demoliſhing ſome ſtrong holds, and putting garriſons in others. And having ſpent two years in this expedition, and ſettled *New Gallicia* in

in peace, he return'd to *Mexico* in triumph, where he apply'd himſelf to all parts of Government with great diſcretion and moderation. Among other good regulations, he eſtabliſh'd a court for country affairs intirely, where all diſputes about property, eſpecially with regard to cattle (which had encreas'd wonderfully in *New Spain*) were decided, and took ſuch care to make the *Indians* eaſy, that they had great reſpect for him.

After his return from the *Chichimecan* expedition, he fitted out two other ſhips to proſecute the diſcoveries upon the ſouth ſea, under the command of *Cabrillo*, theſe ſet ſail from *La Navidad* in the province of *Xaliſco* on the 26th of *June* 1542, and cruiſing along the coaſt weſtward, putting aſhore in many places, ſome of which had been diſcover'd before and others not, they went to 44 degrees n. lat. where the cold was exceſſive, it being now the firſt of *March* 1543. The commodore dying, they return'd to the port from whence they ſet out.

They break out again.

But after *Mendoza* was recall'd from the government of *Mexico*, and *Don Lewis de Velaſco* ſent vice roy in his place, the *Chichimecans* began new diſturbances, not only killing the *Spaniards*, when they could do it with ſafety, but obſtructing the converſion of their countrymen, by art and force. They ſeldom aſſembled in great numbers, that they might not bring the whole force of the *Spaniards* againſt them; becauſe they found by experience they were not able to withſtand them; and therefore they made their excurſions by 200 at a time, and then they came unawares upon the neighbouring chriſtians, whether *Indians* or *Spaniards*, and plunder'd all that came in their way. It happen'd once that they attack'd and got the better of a convoy which guarded 60 carts, laden with cloath, wrought ſilver and other goods, to a conſiderable value. Among the other things they took a *Spaniſh* maiden, who finding herſelf in their power, ſhew'd all the marks of being pleas'd with her captivity, and ſhew'd them which cart had moſt cloath in it; when ſhe found that they did not mind her, but were intent upon the plunder, ſhe got up into one of the carts where there was a ſick man, who had two muskets; ſhe perſuaded him to take to his arms, and as he fir'd one, ſhe loaded it, and ſtill kept him in charged pieces, ſo that ſeveral *Indians* having been kill'd they went off with the reſt of the carts, leaving that to the young lady for her courage and good conduct. It was a long time before thoſe *Chichimecans* were reduced, and at laſt could only be perform'd by planting colonies among them, and thoſe ſo near one another, that the allarm could bring two or three of them together at a ſhort warning.

Thus from *Columbus*'s firſt diſcoveries in the year 1493, to the year 1550, which made 57 years, the *Spaniards* had diſcover'd in *North America*, (without reckoning *Florida*, becauſe they were not in poſſeſſion of any part of it) beginning with *Panuco* upon the north ſea, a vaſt tract of coaſt to *Darien*; which, altho' it only makes about 20 degrees of latitude, and reaches as far as the tropic of *Cancer*; yet in coaſt is above 800 leagues, taking in all that part of the gulf of *Mexico* between *Panuco* and the bay of *Campechy*; both ſides of *Yucatan*, *Vera Paz*, *Honduras*, *Nicaragua*, with all the coaſt oppoſite to *Veragua* and *Panama*; in which tract of coaſt they planted a great number of colonies for the time, beſides thoſe they ſettled in the inland countries, which ſerv'd to keep that large continent in ſubjection to the crown of *Spain*. In many parts of this country, all between the two ſeas was ſubject to them, and upon the ſouth ſea, they went farther, having ſail'd to above 40 deg. n. lat. almoſt to the head of the gulf of *California*. But at the time we mention 1550, they had no colonies farther north than *Cinoloa* in about 28 deg. which, conſidering the ſtraightneſs of the ſouth ſea coaſt, makes no more than 800 leagues from *Panama*, altho' their progreſs on the ſouth ſea is farther north, than that upon the oppoſite coaſt. In this tract are comprehended *Culuacan*, *Chiametla*, *Xaliſco*, *Mechoacan*, *Guaxaca*, *Soconuſco*, *Guatimala*, *Nicaragua*, *Coſta Ricca*, *Veragua* and *Panama*: in all which there were *Spaniſh* colonies before the time mention'd, beſides their numerous colonies in the iſlands of *Cuba*, *Hiſpaniola*, *Jamaica* and *Porto Ricco*, with other ſmaller iſlands.

SECT. III.

SPANISH *Diſcoveries in* SOUTH AMERICA.

ALTHO' one would think the moſt natural diviſion of *America* into ſouth and north, ought to be taken from the equinoctial line; yet ſince it is generally taken from the Iſthmus of *Darien*, we ſhall follow the common computation, calling all the eaſt coaſt, from the river of *Darien* in the gulf of *Uraba* to the iſland of *Trinidad*, and then ſouthward to *Terra del Fuogo* beyond the *Magellan* ſtreights, on the north ſea; all ſouthward from *Panama* to the ſame *Terra del Fuogo*, on the ſouth ſea, by the common name of *South America*. We

We have in other places of our traveller, * taken notice of the first peopling of *Darien*, and of the discords among the *Spaniards* at that place; as of also the planting some colonies in some parts of *Terra Firma*; and indeed the settling most of the plantations thereabouts is little more than a repetion of the same things over and over, and would rather disgust than divert the reader: We shall therefore only give a summray account of the colonies themselves, without a particular detail of the manner of settling them, unless we find something new and worth our reader's pains.

* Ch. II.

The first province of *South America* is *Carthagena* or *New Adaluzia*, just eastward of the river of *Darien*, having the ocean to the north, *Santa Martha* to the east, and *New Granada* to the south. It was first discover'd by *Alonzo Nino*, as has been said, * but no city was built till several years after, by *Heredia* in 1532, call'd *Carthagena* from the place of his nativity in *Mercia* in *Old Spain*; and finish'd by *Robledo* in 1540, after many quarrels both with the natives, who were a warlike people, and also with the *Spanish* captains, who came frequently to several parts of *America*, sometimes two or three of them having the same commission, by a strange oversight of the *Spanish* court, setting people together by the ears to support their authority against one another, when all the force they had was too little to keep their ground against the *Indians*, as we have taken notice of upon several occasions. In the year 1585 Sir *Francis Drake* demolish'd *Carthagena*, of which we shall give a particular account in its place. It was, after that, burn'd to the ground by the *French*.

* *Ibid.*

New Andaluzia *or* Cartagena.

Besides the city of *Carthagena* which is a bishop's see, there are other colonies belonging to *New Anduluzia*, such as, 2. *Tolu*, which the *Spaniards* call S. *Jago*, famous for a fine gold colour gum, call'd the balsom of *Tolu*, a sovereign medicine, and of an excellent flavour. It flows from a pine tree. This city is 12 leagues from *Carthagena* in the bay of *Uraba*. 3. *Santa Cruz*, a neat little town, near the meeting of the two rivers S. *Martha* and *Magdalena*. 4. *Baranca de Nolamba*, upon the river *Magdalena*, six leagues from the sea. 5. S. *Sebastian de Buena Vista*, upon the gulf of *Uraba*, not far from *Darien*. 6. S. *Maria*, 30 leagues southward of *Carthagena*.

Ogivy's America p. 402.

Joining to the province of *Carthagena*, is S. *Martha*, both this and the other take their names from the chief cities of the provinces. S. *Martha* has *New Andaluzia* on the west, *New Granada* on the south, *Rio de la Hacha* on the east, and the ocean on the north. It was discover'd by *Bastidas*, and the capital city S. *Martha* was built in 1524. Many struggles happen'd in this province with the natives, and several captains landed here, pretending to the discovery of it. The chief towns in this province are, 1. S. *Martha*, which is a bishop's see. This was also pillag'd by Sir *Francis Drake*, and afterwards by the *French*. 2. *Teneriff*, upon the *Rio Grande* or *Magdalena*, 40 leagues from the capital. 3. *Villa de las Palmas*, 20 leagues south of *Teneriff*. 4. *Ocanna*, an inland harbour. 5. *New Salamanca*, or *Ramada*, at the foot of the *Cordilleras*, which begin in this province and run thro' *Peru* and *Chili*, to the streights of *Magellan*. 6. *Ciudad de los Reyes*.

Santa Martha.

Upon the east of S. *Martha* is a little province call'd *Rio de la Hacha*, which lies between S. *Martha* and a bay of the sea running far up in the land from *Venezuela*. The chief towns in *La Hacha* are, 1. *La Hacha*, eight leagues from *Salamanca*. 2. *Rancheria*, six leagues farther east. 3. *Tapia*. All these were discover'd by *Nicuessa*, *Oreda* and *Anciso*, and planted at different times.

Rio de la Hacha.

Towards the south from *Carthagena* and S. *Martha*, lies the province of *New Granada*, discover'd partly by *Ximenes*, and partly by *Belalcazar*, as we have taken notice of in the conquest of *Peru*. By these two captains, this province was divided into that of *New Granada*, and *Popayan*, the latter of which *Belalcazar* had a grant of, from his master the king of *Spain*. The cities in *New Granada* are, 1. *S. Fe de Bagota*, an arch-bishop's see, and metropolis of the province, and the residence of the governor. 2. S. *Michael*, about 12 leagues north of S. *Fe*. 3. *Tocaima* westward of *Santa Fe*, on the river *Pati*, which falls into the *Rio Grande*. 4. *La Palma* built in 1572, in the territory formerly inhabited by the *Musi* and *Colymæ*. 5. *Trinidad*, which has chang'd its situation more than once. 6. *Tunia*, built upon a hill, and has the greatest market in the whole province. 7. *Pampelona*, 60 leagues north east of *Santa Fe*. 8. *Merida*, the next town, in this province, to *Venezuela*. 9. *Belez*, much frequented by friars of different orders. 10. S. *Sebastian del Oro* or *Marequita*. 11. *Tubague*, inhabited chiefly by dominicans. 12. *La Vittoria de los Remedios*, and 13. *Juan de los Lanos*, where there are good mines of gold and silver. The merchandise that come to these towns, are brought up the *Rio Grande*, in canoes of sixty feet long.

New Granada.

Popayan is divided from *New Granada* by S. *Martha* river. It has *Mar del Zur* on the west; *Carthagena* on the

north; *Granada* on the eaſt; and *Quitu* in *Peru* on the ſouth. The chief towns in this province are, 1. *Popayau*, ſo call'd from the name of the cacique of it, at the time when the *Spaniards* diſcover'd it. 2. *Antiochia*, on the borders of *Carthagena*, waſh'd by ſmall rivers, where they got gold duſt. 3. *Caramanta*, on the bank of *Santa Martha*. 4. S. *Anna* in the territory of *Anzerma*, ſo call'd from the word *Anzer* which ſignifies ſalt, in the *Indian* language. 5. *Pueblo Llana*, where the people hang'd themſelves with their wives and children, when the *Spaniards* firſt went thither. 6. S. *Jago de Arma*, near a river to which the *Spaniards* gave that name, from the oppoſition they met with there. 7. *Carthago*, the chief city of the *Quimbays*, upon the rivers *Tacurumbi* and *La Cequo*. 8. *Cali*, the reſidence of the governor, upon a pleaſant river which runs into the *Rio Grande*. 9. *Bonaventura* haven. 10. S. *Juan di Paſto*, near the borders of *Peru*. 11. *Timana*, where a valiant people inhabited, who gave the *Spaniards* much trouble. 12. *Guadalajara de Buga*, and 13. *Sebaſtian de la Plata*, where they us'd to ſell men's fleſh in their publick ſhambles; with ſeveral other ſmaller towns. All theſe provinces laſt mention'd from the river *Darien*, or gulf of *Uraba* are within that part of the continent, call'd *Terra Firma*, which name the firſt diſcoverers gave it, to diſtinguiſh the continent from the iſlands diſcover'd before.

Having ſhew'd the diviſion of *Terra Firma*, we ſhall go round the *Spaniſh* dominions of *South America* in the ſame method, and give the ſeveral provinces as they lie along the coaſt, or penetrate into the country; taking no notice of the time or manner of planting ſuch colonies as have been mention'd in this work before.

Quitu. The neareſt colony to *Popayan*, poſſeſs'd by the *Spaniards*, is that of *Quitu*, which is the firſt province of *Peru*, having on the weſt, the *Mar del Zur*; on the ſouth, the province of *Lima*; on the eaſt, the province call'd *Los Quixos*, and on the north *Popayan*: being from the line ſouthward, 72 leagues in length, along the ſouth ſea; and in ſome places, from that ſea, in breadth 25 leagues. The chief cities of this province are, 1. *Quitu* from whence the province takes its name, and was remov'd by the *Spaniards* from the place where it was at firſt, to the foot of the *Andes* or *Cordilleras*, from whence there is a noble high way to *Cozco*. 2. *Caranguez*, which, during the government of the inca's, was a royal ſeat, and had a fine palace, of which the ruins ſhew the magnificence to this day. 3. The caſtle of *Atabala*, anothor royal ſeat, not inferiour, ſays our author, to any of the ancient roman buildings. 4. *Tomebamba*, where was a glorious temple of the ſun, whoſe gates were curiouſly painted, and inlaid with emeralds, and the dome adorn'd with gold to a vaſt value; but deſtroy'd by the *Spaniards*. Here were rich mines of gold. 5. *Tacunga*, where was another palace now defaced. All theſe were not far from the road to *Cozco*, the laſt being within 15 leagues of that city. Along the coaſt in the ſame province of *Quitu*, are, 6. S. *Jago de Puerto Viego*, which is not a wholeſome place, by reaſon of the exceſſive rains. 7. *Manta*, near the river *Dable*, once famous for a large emerald which they worſhip'd. 8. *Guayaquil*. 9. *Caſtro*. 10. *Loxa*. 11. *Zamora*. 12. *Taen*. Near theſe five laſt nam'd, there are gold mines. 13. S. *Michael*, which was the firſt city built by the *Spaniards* in *Peru*. 14. *Paita*, which was firſt burnt by *Candiſh* in 1547, and afterwards by the *Dutch*.

Los Quixos. *Los Quixos*, the ſecond province of *Peru*, has *Quitu* on the north weſt; *Popayan* on the north; and *Los Pacomaros* on the ſouth eaſt; and borders upon *Canela* and S. *Juan de Salinas*, if theſe are not a part of *Quixos*. The chief towns in this province are, 1. *Quixos* or *Baeſa*. 2. *Archedona*. 3. *Avila*. 4. *Sevilla del Oro*. The rivers which run thro' theſe two provinces laſt nam'd are, 1. S. *Jago*, which falls into the ſouth ſea at *Quitu* point. 2. S. *Matthew* at cape S. *Francis*. 3. *Los Quiximes* near cape *Aaſſao*. 4. *Tumbez*, mention'd frequently in *Pizarro*'s expedition.

Lima. The third province of *Peru* is *Lima*; which has *Quitu* and *Los Quixos* on the north eaſt; on the eaſt *Colloa* and a part of *Cozco*; on the ſouth *Los Charcas*, and on the weſt the *Paciſic Ocean* or ſouth ſea. In this province there are a great number of fruitful valleys, and very rich in gold. The chief towns are, 1. *Miraflores*, in the valley of *Zanu*, five leagues from the ſea, where there is a good harbour. 2. *Truxillo*, three leagues from the ſea. 3. *La Parilla*, or *Santa* cloſe to the ſea, with a good harbour. 4. *Arnedo*, ten leagues north of *Lima*, among the vineyards of the valley of *Chancas*. 5. *Lima* or *Los Reyes*, of which in the preceding chapter. To the arch-biſhop of *Lima*, all the biſhops of *Peru*, *Chili*, *Popayan*, *Panama*, *Nicaragua*, and *Rio de la Plata*, are ſuffragans. Sir *Francis Drake* took twelve ſhips from this bay in 1579. 6. *Canuete* call'd alſo *Guarco* from the valley where it is ſituated. 7. *Valverde*, ſo nam'd for the pleaſantneſs of the valley where it ſtands. 8. *Pachacama*, four leagues ſouth of *Lima*; where *Pizarro* found 900,000 ducats in

one

one old temple, beſides great treaſure hidden by the prieſts and other natives. 9. *Caſtro Verreina*, 60 leagues ſouth eaſt of *Lima*, in the valley of *Cocolocha*, where there is a rich gold mine, and the beſt of tobacco. 10. *Miguel de la Ribera*, in the valley of *Camana*. 11. *Arequipa*, about 11 leagues from the ſea towards the mountains; being a place of great reſort, upon account of the mines of *Cancos*, *Porcos* and *Potoſi*, which are brought to this place, and convey'd by the river *Quilca* to *Lima*, 12. *Caxamalca*, the place of *Atahualpa*'s impriſonment, and death ſpoken of before. 13. S. *Juan de la Frontiera*, in the country of *Chiacapoyas*, weſt of the mountains. 14. S. *Jago de las Valles*, and 15. *Leon de Guanuco*.

Cozco. The fourth province is that of *Cozco*, which lies eaſt and ſouth eaſt of *Lima*; north of *Los Charcas*; weſt of *Los Quixos*, *Guiana* and *Pacomoros*. This is the leargeſt province of *Peru*, for it goesa great waybeyond the *Cordilleras* or *Andes*. In this the inca's of *Peru* had many magnificent palaces and houſes of pleaſure. There are likewiſe ſeveral lakes in it; and ſome of the greateſt rivers in the world take their riſe out of thoſe lakes, or from the mountains in this province; ſuch as, the river of *Plate*, which runs to the north ſea, thro' the valley of *Xauxa*, and the great country of *Paraguay*; and falls into the ſea in 35 deg. ſ. lat. and is augmented in its courſe, by the waters of *Parcos*, *Bilcas*, *Abencay*, *Apurima*, and many others which fall into it. The firſt *Spaniſh* conquerors were at a great deal of pains to plant colonies in this province, to the eaſtward of the mountains, and ſuffer'd much in the diſcovery; but what with their own quarrels among themſelves, and the intereſt of the royal family of *Peru*, who, being ill us'd by the *Spaniards*, retir'd to the mountains, and had intelligence with the natives all about; and what with the difficulty and fatigue of the march thro' ſuch inacceſſible places, it was along time before there were any *Spaniſh* colonies fix'd there. The chief towns in this province are, 1. *Bombon*, ſituated upon the lake *Chinchacocha*. 2. *Porcos*, upon a little hill, near the mountains. 3. S. *Juan de Vittoria*, built by *Pizarro* 1539, between *Lima* and *Cozco*. 4. *Guamanga*, rich in mines, of different kinds, as alſo fruitful in corn, and well ſtock'd with cattle. 5. *Bilcas*, which is almoſt the centre of this vaſt empire. 6. *Guancavelica*, made rich by mines of quickſilver found near it, in 1566. 7. *Cozco*, which was the metropolis of *Peru* before the conqueſts; but ſince then, for the conveniency of being near the ſea, *Lima* has been the ſeat of the vice roy, and of judicature. 8. *Franciſco de Vittoria*, in the valley of *Vilcabambo*; and 9. *Juan del Oro*, ſo call'd from the richneſs of it.

There is a ſmall province between *Cozco* and *Las Charchas*, (if it is not rather a part of one of them) call'd *Callao* Callao. ſouth of *Cozco*, and eaſt of *Lima*, but does not paſs the mountains. The chief towns are 1. *Cuquingua*, a place naturally ſtrong from the unfordable rivers on one ſide, and the inacceſſible mountains on the other; having only one cawſey leading to it, which for three leagues together allows room only for one man to walk. 2. *Pucara*, a good town in former times, but now ruinous. 3. *Ayavire* or *Las Sepulturas*, where the *Peruvian* nobility us'd to be buried. 4. *Hatuncolla*, the chief town of the province, upon the river *Caravaia*. 5. *Chinquita*, upon the lake *Titicaca*. 6. *Tiaguanaca*, at the mouth of the lake, where there are ſtones of 30 feet in length, the remains of old buildings. 7. *Nueſtra Segnora de la Paz*, our lady of peace, about half way between *Cozco* and *Potoſi*. 8. *Copavana*, with other ſmaller towns. This lake *Titicaca* is ſaid to be 80 leagues round, and is ſupply'd by 10 conſiderable rivers.

The laſt province of *Peru* towards the Los ſouth is *Los Charcas*, which is bounded Charcas. on the ſouth by *Chili*, on the weſt by the *pacific Ocean*; on the north by *Lima*, *Collao* and *Coſco*, and on the eaſt, by thoſe undiſcover'd countries which lie between it and the province of *Paraguay* or *De la Plata*. This province is about 150 leagues in a ſtreight line, from north to ſouth. The chief towns in *Los Charcas* are, 1. *La Plata*, formerly *Cuchiſacha*, on the eaſt ſide of the *Cordilleras*. The neighbouring mines of *Potoſi* having brought the richeſt *Spaniards* in *Peru* to ſettle in this city, or made them ſo after they came, this is the chief city in the province, and the place of judicature, and a biſhop's ſee. This city with a conſiderable territory near it, was *Pizaro's* property, and might have been continu'd to him and his heirs, which would have been worth 200,000 ducats a year, and might have been enjoy'd by him without envy; but by his ambition he loſt all. 2. *Oropeſa*, 20 leagues north of *La Plata*, in the rich valley of *Cochobamba*. But the richeſt of them all is, 3. *Potoſi*, where the ſilver mines were ſo accidentally found out, by pulling up a branch to which a piece of ſilver ſtuck, and by a narrower inſpection diſcover'd the mine, of which the *Indian* who found it might have made a conſiderable eſtate, had he not truſted another with the ſecret; but they two falling out about the dividend, one of them ſhew'd the mine to the *Spaniards*, who

who ſoon cut them both out of the whole. What makes the mines of *Potoſi* the more valuable is, that there was never any water in them to trouble the workers. But we ſhall take farther notice of theſe mines in the natural hiſtory of *America*. 4. *Santa Cruz* up in the country eaſtward, where the *Spaniards* having taught them to weave cotton, they now drive a good trade.

Along the coaſt of the ſouth ſea, we come next to *Chili*, which reaches as far as the *Magellan* ſtraits. But commonly this track of coaſt is divided between *Chili Proper* and *Terra Magellanica*, and therefore we ſhall diſtinguiſh them after the ordinary manner.

Chili Proper reaches from the deſart of *Atacama*, which divides *Peru* from *Chili*, near the tropic of *Capricorn*, above 300 leagues ſouthward in a ſtreight line; having the ſouth ſea on the weſt, and the undiſcover'd lands towards *Rio de la Plata* on the eaſt. This country, altho' very large, is not diſtinguiſh'd into different governments and prefectures, as *Peru* and *Mexico* are, we ſhall therefore give the principal towns of *Chili* all conſider'd as one province; (moſt of them having been mention'd in the laſt chapter;) and are theſe, 1. *Copiapo*, which has a commodious harbour, upon the coaſt, in the north part of *Chili*. 2. *La Serena*, upon the banks of *Coquimbo* near its mouth, in a rich country for gold mines. Here Sir *Francis Drake* attempted to attack the *Spaniards*, but was beaten back after a hot engagement, in his expedition to the ſouth ſea. 3. S. *Jago* on the river *Tapocalma*, lat. 35 deg. 14 leagues from the ſouth ſea, where there is a good harbour call'd *Valparayſo*, where *Drake* ſucceeeded better than at *Serena*, for he burnt the town, and took four *Spaniſh* ſhips, and got a great treaſure. 4. *La Conception*, ſituated on the *Penco* bay lat. 37 deg. Here the *Spaniards* are oblig'd to keep a ſtrong garriſon to oppoſe the warlike *Araucans*, whom they were never able entirely to ſubdue. 5. *Los Confines*, built to guard the rich mines at *Angol*. 6. *La Imperial* built about the ſame time, as we obſerv'd before. 7. *Villa Ricca* about 16 leagues from *Imperial*, and 25 from the ſea. 8. *Baldivia*, built, as we obſerv'd before, by the governor of the ſame name, near the very beſt mines in all *America*, from which that valiant man got, whilſt he liv'd, 25,000 crowns a day. 9. *Oſorno* on the bay of *Chilo*, in a barren ſoil, but rich in mines. Theſe three laſt mention'd towns, were pillag'd and burnt by the *Araucans* in 1596, 1599 and 1604. 10. *Caſtro*, the moſt ſoutherly city in *Chili*, built in an iſland in the bay of *Chilo*. 11. *Mendoza*, and 12. S. *Juan de la Frontera*; both on the eaſt of *Chili*, towards the countries unconquer'd, being beyond the *Cordilleras*.

The chief towns in Chili.

Next to *Chili*, is the *Terra Magellanica*, which lies between *Chili* and the *Magellanic* ſtraits, and runs behind, that is, to the eaſtward of the ſouth part of *Chili*. But as we have given no account, as yet, of the diſcovery of this part of *America*, it will not be improper to ſhew how it came to be found out.

In the year 1519, *Ferdinand Magellanes* and *Ruy Falero* made a contract with the king of *Spain* to diſcover the ſpice iſlands ſouthward; for which his majeſty granted them a patent of *Adelantado*'s and generals in thoſe countries or iſlands, which they ſhould diſcover, to be enjoy'd by them and their heirs for ever; he was likewiſe to provide them in ſhipping and men. But a controverſy ariſing between them, who ſhould be admiral, the king order'd *Magellan* to go alone, under colour of *Falero*'s being indiſpos'd. The king of *Portugal* gave all the oppoſition he could to this voyage, as being an infringement of his property, agreeable to the pope's bull formerly mention'd. * But the king of *Spain* aſſur'd him, that no damage ſhould be done to his juſt right. * Ch. I.

The diſcovery of the ſtraits of Magellan.

Magellan ſet out from *Seville* on the 10th of *Auguſt* 1519, with five ſhips, two of 130 tun a piece, two of 90, and one of 60; on board which were 234 men, with proviſions for two years. They ſtop'd at the *Canary* iſlands to get what neceſſaries they wanted, and then *Magellan* took a courſe almoſt ſouth. His captains telling him that he ought to ſteer ſouth weſt, he bid them follow his flag by day and his light by night, without asking queſtions. Thus he ſail'd 15 days along the coaſt of *Guinea*, and for 20 days more was becalm'd. After this they had dreadful ſtorms, ſo that they were in great danger: but at laſt, upon the 13th of *December*, they found themſeleves in a large bay, which they call'd *Santa Lucia* having enter'd it upon S. *Lucy*'s day; and is the ſame to which the *Portugueſes* gave the name of *Rio de Janeiro*, upon the coaſt of *Brazile*, under the topic of *Capricorn*. As ſoon as they came to an anchor, the natives came about their ſhips, in canoes, bringing plenty of hens, parrots, and other ſorts of fowl, with *Indian* wheat, and fruit, this being midſummer tide with them. Theſe they barter'd for toys, giving ſeven or eight hens for a face card; and a ſlave for an ax or hatchet. But this being ſuppos'd to be within the line or diviſion given by the pope's bull, to the king of *Portugal*, *Magellan* forbad all traffick with

Magellan's *diſcoveries*.

Her. *dec.* II. b. ii. ch. 5.

Rio di Janeiro.

with the natives for any thing but proviſions.

Departing from this place, they ſail'd along the coaſt ſouthward; and upon the 11th of *January*, they came up with a point of land, which the pilot call'd cape S. *Maria*, which he ſaid a *Portugueſe* pilot had deſcrib'd to him by that name; and in a few days more they reach'd the *Rio de Solis*, afterwards well known by the name of *Rio della Plata*, which gives the name to all the large country that lies between *Brazile*, and *Terra Magellanica*. This famous river is in 35 degrees ſ. lat. and is the ſame where *De Solis* was kill'd, as has been related. * Here the *Indians* appear'd in their canoes, but would not come within ſpeech; and when the commodore order'd out ſome boats, the natives fled ſo faſt, that there was no overtaking them. But at night, one *Indian* came aboard the admiral in a canoe; *Magellan* gave him a linnen ſhirt, and a red jerkin, and diſmis'd him; but he never return'd. *Magellan* went aboard a ſmall ſhip, and ſail'd quite croſs the river, which, at that place (being a good way up) was 20 leagues over.

Rio della Plata.

* Un. Trav. Ch. II. p. 40.

Leaving this river, they ſail'd, in a ſouth weſt courſe, and came to a bay, on the 25th of *February*, which he therefore call'd S. *Matthias*'s bay in the latitude of 41 and a half; where they felt much cold; and, farther ſouth, they had ſtormy weather, which diſpers'd their fleet for ſome days. Coming together again, they ſent ſome boats to an iſland to wood and water; but they found neither, only they got vaſt flocks of *Penguins*, a ſort of large fowl, whoſe wings are ſo ſhort, that they cannot bare them up; there was alſo a great number of ſea calves. One of the boats ſtaying behind the reſt, ſuch a ſtorm blew, that they were forc'd to ly aſhore all night, in fear of being devour'd by the calves, or elſe ſtarv'd to death with cold. As ſoon as it was day, the admiral ſent two other boats aſhore to ſearch for them, who found them half ſtarv'd, hid under a rock. This bay they call'd the *Penguin* bay, which they got out of as ſoon as the ſtorm ceas'd, ſailing to a bay where they deſign'd to have winter'd, (it being now the month of *April*, the beginning of winter in that climate;) but they ſuffer'd ſo much in it, that they were glad to get out with the ſafety of their ſhips, giving it the name of *Baia de Los Travajos*, the bay of troubles; and ſailing along the coaſt, they enter'd the river S. *Julian* upon eaſter eve.

Bay of S. Matthias.

Peguin *bay.*

Magellan being reſolv'd to winter in this place, went aſhore on eaſter day, where they had maſs perform'd; and then he order'd his men's allowance to be ſhorten'd, at which they grumbled, telling him, that now they ſaw no appearance of any paſſage, but that the land, in all probability reach'd to the *Antartick pole*; begging of him to give them a larger allowance, or elſe to return home. But the admiral reſolutely told them, "He had determin'd to proceed, and to "compaſs what he had undertaken to the "emperor, or to die in attempting it. "That they were in no difficulty as to "their ſtated allowance, becauſe there "was plenty of fiſh and fowl upon the "coaſt, with abundance of wood and "water. That he was ſurpriz'd to find "ſo much faint heartedneſs among *Spani-* "*ards*. But he ſaid they did not conſi- "der, that in a few months, if they "ſhould be oblig'd to ſail to the pole, it "would be as warm there as any where "elſe, becauſe towards the beginning of "*October*, they would have continual "day for three months together. But "he aſſur'd them that they could not "have much farther to ſail ſouthward be- "fore they ſhould find a paſſage weſtward "to the *Molucco* iſlands. And therefore "he bid them take courage, and remem- "ber that the king would reward them "nobly for their fatigue; and for his part, "he did not doubt but he ſhould be able "to enrich them all with gold and ſpice."

They come to the river S. Julian.

Altho' this ſpeech quieted ſome of them, yet a great number mutiny'd; and the admiral having ſent his boat to the ſhip S. *Anthony* to take in ſome hands for watering, one of the ſhip's crew call'd to them not to come nearer, for *they would obey no orders from* Magellan, *for their preſent captain* Gaſper de Queſado, *having confin'd* Alvaro de la Meſquita, *the admiral's kinſman, whom he had made captain of the S.* Anthony, *and likewiſe the pilot* Mafia; *and that he himſelf had kill'd the maſter. Magellan* being inform'd of this ſent back his boat, deſiring to know, *whom they were for?* and the ſame queſtion he put to the other ſhips. When the skiff ask'd the S. *Anthony, whom they were for? Queſada* anſwer'd boldly, *for the king and for me. Lewis de Mendoza* made the ſame anſwer, from on board the *Vittoria*; and *John de Cartagena* from *the Conception*. But *Serrano*, who commanded the *Sant Jago*, not being concern'd in the mutiny, when he was ask'd, *whom he was for?* anſwer'd, *for the king and* Magellan.

A mutiny aboard.

The admiral, finding that this conſpiracy was far advanced, ſaw there was nothing but reſolution could ſtop it; and therefore he gave orders to have all things ready for an attack: and ſending thirty choice men, whom he knew to be faithful, aboard the long boat, and five in the skiff, he gave them orders to go to the *Vittora*; and that they in the skiff ſhould go aboard her with a letter to *Mendoza*;

Mendoza; but he order'd them to ſtab him whilſt he was reading it, and upon the noiſe, that the 30 from the long boat ſhould make haſte to their reſcue: which they perform'd without any oppoſition, there being many aboard that ſhip who were faithful to *Magellan*. The *Vittoria* being thus ſecur'd, the admiral ſet a ſtrict watch upon the other two, leſt they ſhould eſcape him in the night; and ſeeing the S. *Anthony* going down the river (but it was by the force of the current) he believing ſhe deſign'd to fight, ſent orders to the *Vittoria* to be ready. *Queſada* was the only man that appear'd upon the quarter deck, with a ſpear in one hand and his target upon his arm; his men not ſtiring tho' he call'd them. As ſoon as that ſhip was up with the admiral, *Magellan* let drive a broad ſide at her, and, boarding her, ſeiz'd *Queſada*, and ſome of the chief of the mutiners, ſending them aboard his own ſhip. He then ſent a ſecond time to *the Conception* to ask, *whom they were for?* and they anſwering, *for the king, and* Magellan, he order'd *Carthagena* to be ſent to him.

Quell'd by Magellan.

The next day, he made *Mendoza*'s dead body be quarter'd, and the ſame ſentence he paſt upon *Queſada*, which, for want of an executioner, was perform'd by that captain's ſervant, who ſav'd himſelf from being hang'd by doing it. *John de Carthagena* was ſentenced to be left aſhore, which was done; and ſoon after he got, for a companion, a *French* clergyman, who was endeavouring to raiſe a new mutiny aboard the S. *Anthony*; this being thought a ſeverer puniſhment than death. Having thus put an end to the mutiny, he pardon'd the reſt, becauſe he had occaſion for them.

Winter being over, he ſent *Serrano* along the coaſt, to diſcover for ſo many leagues ſouthward, if there was any ſtreights to be ſeen, with orders to return after having gone ſuch a diſtance. About 20 leagues higher *Serrano* found a fine river, which he call'd *Santa Cruz*, becauſe he came into it the 3d day of *May*. Here he ſtaid ſix days, but as he attempted to proceed, a ſudden guſt ſpilt all his ſails, the rudder ſtarted out, and the ſhip fell a plunging, and then was driven upon a flat where by good providence, the men got a ſhore, but loſt the ſhip, and cargo. There being no natives to be ſeen, they liv'd upon ſhell fiſh, found among the rocks; but not knowing how to get over the river *Santa Cruz*, they waited till the waves had broken their ſhip to pieces, and then took up ſuch of the planks as they could carry; but being weak and faint, they were four days in marching the ſix leagues back to the river, living upon herbs all the while. They were 37 in number; but all the timber, they could carry, was only ſufficient to make a boat that would hold two. With this, two men paſt the river, and to aviod the tedioufneſs of paſſing and re-paſſing 36 times, it was agreed that they two ſhould go to the place where they had left the fleet, and give the admiral notice of their diſaſter.

Santa Cruz.

Seventeen days were ſpent in this march, and when they came to S. *Julian*, quite ſpent with hunger and cold, the weather was ſo ſtormy, that there was no going to ſea; and therefore the admiral diſpatach'd 20 men by land with proviſions, for thoſe who were left behind, which was a moſt ſeaſonable relief to them. They ſpent two days in paſſing the river, in the boat they had made; and, with much to do, got back to the fleet; which had ſuffer'd much, from the cold, this winter, three having loſt the uſe of they hands, for S. *Julian* is in 49 or 50 degrees of lat. *Magellan* had ſent ſome of his people up into the country, to ſee if they could find any inhabitants; but they having march'd a great way, and finding it a deſart, return'd. At laſt ſix *Indians* appear'd, and the boat being ſent aſhore, at their ſigns, they came aboard, and ate as much pottage as would have ſerved 20 *Spaniards*, ſome few more came, and brought does with them; but never return'd more. Some fires having been ſeen at midnight, the admiral ſent, next morning, ſeven men to ſearch where the light was ſeen, but they march'd the whole day to no purpoſe; till towards evening, they were attack'd by nine *Indians*, who ſhot at them, and kill'd one *Spaniard*, and had done more miſchief, but that the *Spaniards*, covering themſelves with their targets, clos'd with them, and put them to flight.

On the 24th of *Auguſt* 1520, they weigh'd anchor and ſail'd to *Santa Cruz*; but, in the end of *October*, they left that river, and, with much difficulty, by reaſon of bad weather, they arriv'd at *Cape Virgines*, ſo call'd becauſe they came to it upon S. *Urſula*'s day. From thence he ſent two ſhips to diſcover whether there was any ſtreights there, and to come back in five days. Upon their return they differ'd in their accounts, having taken different ſides of the ſtreights; but *Magellan*, finding that they agreed, that the current in, was ſtronger than the ebb out, had great hopes to find what he had ſo long look'd for; ſo that ſailing up the open, and obſerving the ſtreight to ly eaſt and weſt, he came to an anchor, and ſent the S. *Anthony* farther up, which was the firſt (as far as we know) that ever ſail'd from *Europe* to the ſouth ſea. When ſhe came back, *Magellan* with a great

They arrive at Cape Virgines.

Magellan *finds a paſſage to the ſouth ſea.*

great deal of joy call'd a council of all the captains and other officers, deſiring them to take an exact account of the proviſions, being reſolv'd to go to the *Molucca* iſlands. The pilot of the S. *Anthony* propos'd, that they ſhould return to *Spain*, having accompliſh'd the chief deſign of their voyage; becauſe ther being of neceſſity a larger ocean between the entry into the ſouth ſea, and the *Molucca* iſlands, they were in danger of periſhing for want of proviſions, as well as by ſtorms. But *Magellan* would not liſten to that advice, declaring that if he were ſure to be reduced to eat the hides that were about the main maſt, he would not return to *Spain* in that forlorn condition.

Accordingly he weigh'd anchor the next day, and finding the paſſage in ſome places not above a musket ſhot in breadth, and in others with large bays, he at laſt enter'd the ſouth ſea, on the 27th of *Nov.* and after a publick thankſgiving, he ſail'd towards the north coaſt, to get out of the cold. The entry to the ſtreights from the eaſt (call'd, from this admiral, *the Streights of* Magellan,) is in 52 deg. ſ. lat. and proceeding, thro' many turnings and windings ſtill weſtward; the out-let, to the ſouth ſea, is in 53 degrees of lat. For a conſiderable way, from the eaſt ſea, the country, on both ſides, is pleaſant; but farther weſt, the land is high, and rocky, very dangerous in ſtormy weather; which is probably the reaſon that ſo few make uſe of this paſſage; the *Spaniards* chuſing to ſail from *Panama*, and other parts of the ſouth ſea, to the *Molucca*'s, and ſending the commodities they bring from the eaſt, by way of *Nombre de Dios*, into *Spain*; the *Engliſh*, and other nations, who trade to the eaſt *Indies*, going by the cape of *Good Hope*, found out by the *Portugueſes*, as has been ſaid.

Which he enters.

Whilſt *Magellan* was in the ſtreights, he ſent the S. *Anthony* thro' a creek, towards the ſouth of the bay he lay at anchor in, to diſcover which way it turn'd, promiſing to ſtay there, three days, for their return: but ſhe not coming back in ſix days, his pilot, and other officers perſuaded him to ſet ſail, ſaying that ſhe was return'd to *Spain*. After he was gone, the S. *Anthony* came to the bay, but (miſſing the admiral,) *Mezquita*, who commanded her, would have follow'd him, but *Gomez* the pilot, a *Portugueſe*, and one *Guerra* fell upon him, wounded, and confin'd him, and turning their courſe, made out of the ſtreights the way they came in, deſigning to return to *Spain*.

And ſails towards the n.

The admiral, having now only three ſhips, ſail'd along the coaſt of what, from that time was call'd *the Magellanic Land*, the ſun being in his *Zenith*, that is perpendicularly above him, he found he was got within the tropic again; and taking his obſervations, he ſaw himſelf in the latitude of 21 deg. but having no intention of ſtaying upon the *American* coaſt, he bent his courſe more weſterly, and ſail'd above 2000 leagues from the entry of the ſtraits, on the ſouth ſide; and upon the 20th of *January* 1521, he found himſelf in 15 deg. 48 minutes, and fell in with two beautiful iſlands; but found the inhabitants very unpoliſh'd, and brutal; however they were not ſo ſhy as the *Indians* generally were; for they came aboard the ſhips in great numbers, in their canoes, and refuſing to go out again, the admiral was oblig'd to turn them out by force. This diſoblig'd them ſo, that they ſhot arrows, and threw ſtones from their canoes, againſt the *Spaniards*. *Magellan*, at firſt, order'd that they ſhould not be hurt, but finding that they perſiſted in their fury, and that ſeveral *Spaniards* were wounded, he made ſome cannon be fir'd upon them, which killing ſeveral of them, and ſinking ſome canoes, oblig'd them to retire.

Leaving thoſe iſlands, (which he call'd *de las Velas*, becauſe they us'd ſails of palm leaves to their canoes) he ſail'd about 300 leagues in a weſterly courſe, where he found many iſlands and plenty of proviſions, the natives bringing in fowls and other things, to barter for baubles. At one of thoſe iſlands call'd *Mazagua*, the lord of the place ſent ten men, in a canoe, to ask who they were, and what they wanted; *Magellan* ſaid, they belong'd to the king of *Spain*, and wanted proviſions, and liberty of trade. The *Indians* receiving this meſſage, (for the admiral's interpreter underſtood thoſe people) the king or lord, ſent four ſwine, three goats, and ſome rice aboard, excuſing himſelf that he was ſcarce of proviſions at that time. The admiral having talk'd with this king, ask'd him where he could be well ſupply'd? to which he anſwer'd, that about 20 leagues from thence, there was a great iſland whoſe king was his relation, where he might have as much as he pleaſed. *Magellan* deſiring him to ſend him ſome of his people for pilots, the king offer'd to go himſelf; which he did. And, in a ſhort time, they arriv'd at the iſland of *Zebu*; where 2000 people arm'd with ſpears and ſhields, came upon the ſhore, gazing at the ſhips, with much aſtoniſhment.

Iſland of Mazagua.

The king of *Mazagua* went aſhore, and going to his couſin, told him, that the *Spaniards* were peaceable people, and wanted nothing but proviſions, and liberty of traffick. The king of *Zebu* made anſwer, that his cuſtom was, when he made peace with any ſtranger, to have blood

blood drawn from one another's breaſts, which the contracting parties were interchangeably to drink. *Magellan* conſenting to this, expected the king on board, the next day, to perform the ceremony; but he ſent him word, that his having agreed to do it, was ſufficient, and he look'd upon the peace as concluded.

Upon this, the admiral order'd all the guns to be fir'd; which, had not the peace been firſt concluded, would have frighten'd the natives out of the city; but they had ſuch dependance upon the publick faith, that no body, ſtir'd. Soon after, the natives brought plenty of fowl, ſwine, goats, and rice aboard, with all ſorts of fruit of the country; for which they receiv'd hawks bells, glaſs beads, and other toys.

Magellan makes peace with the king of Zuba.

The admiral living in ſecurity at this iſland, order'd a room to be built, of ſtone, upon the ſhore, for maſs; and going aſhore with his men, his chaplain celebrated maſs in great ſtate, at which the king, and all his family, with the principal people of the city, were preſent. After maſs, the prieſt, by the interpreter, gave a ſhort ſummary of the chriſtian faith, which the king embracing, he and his family were baptis'd, and in a few days the whole city. Here *Magellan* built a houſe for a factory; and hearing of the iſland of *Borneo* in the *Eaſt-Indies*, he deſign'd to ſail thither. This iſland of *Zebu* is one of thoſe call'd, the *Philippine* iſlands, and is about the lat. of 14 deg. But it was not all under the dominion of this king; for the iſland was a large one, and under ſeveral kings, who ſome times had war with one another.

One of the Philippin iſlands.

The admiral ſent to thoſe kings, ſummoning them to come to him, and to ſubmit to the new chriſtian king. Two of them comply'd, and ſent their ſubmiſſion, but other two made a jeſt of his meſſage; and therefore *Magellan* ſet out at midnight, with two boats full of *Spaniards*, and, having guides from the confederate king, ſurpriz'd the city of one of the recuſants, and burnt it. Next day, he ſent a meſſage to the king of *Matan*, that he would uſe him after the ſame manner, if he did not ſubmit; to which the other reply'd, that he might come for he was ready for him. The admiral, willing to ſhew the bravery of the *Spaniards*, and to let the new convert ſee the advantage he was to reap by his ſubmitting to the king of *Spain*, ſet out with 60 men, in three boats, againſt the advice of the chriſtian king, who told him, that the king of *Matan* had 6000 men ready, and that the two kings who had ſent their ſubmiſſion, had join'd him. However not being able to diſſuade him from the expedition, he accompany'd him with a thouſand of his people in canoes. Capt. *Serrano* was likewiſe averſe to his going, but he was obſtinate. He arriv'd therefore at *Matan* two hours before day, but the tide being out, the boats could not come within croſs-bow ſhot of the town. The chriſtian king pray'd him to give him leave to make the firſt attack with his *Indians*, and to ſuſtain him with the *Spaniards*; but the admiral was ſo far from taking that good advice, that he would not let the *Indians* engage at all, bidding their king ſtand ſtill, and ſee the *Spaniards* manner of fighting. At break of day he landed with 55 men, and marching to the town, found it abandon'd. But as he had ſet fire to it, he was attack'd of a ſudden, by two conſiderable bodies of *Indians*, againſt whom he maintain'd a fight moſt of that day; till the powder and arrows failing the musketeers and croſs-bow men, the *Indians* preſt hard upon them; ſo that *Magellan* thought fit to retire, the *Indian* confederate king ſtanding an idle ſpectator the whole time, according to order. In this retreat, *Magellan* expoſing himſelf needleſly, loſt his life; and indeed his death ſeems to have been owing to a ſort of fatality, if it was not occaſion'd by unſeaſonable pride, to ſhew that he needed no aſſiſtance to conquer *Indians*, tho' there was great inequality in their numbers. He was a brave man, and deſerv'd a better fate. As ſoon as the admiral fell, the *Spaniards* were diſcourag'd, and if their confederate king had not brought them off, by falling with his freſh men upon the enemy, it is probable they had all periſhed, being overtoil'd with ſo many hours labour.

Magellan kill'd.

Upon his death, *Barboſa* was choſen commodore: but the new convert ſhew'd that he had been baptis'd without having been fit for it; for, he invited the new commander with ſeveral of his men, to an entertainment, where he treacherouſly murder'd all that went. They who ſtaid aboard, having intelligence of what was done, choſe *Carvallo* in his ſtead, and ſetting ſail from that treacherous iſland, they ſtop'd at the iſland *Quepindo*, then at *Puluan*, where they traffick'd for proviſions; and from thence they arriv'd at *Borneo* (formerly mention'd,*) under the line. As ſoon as they came into the river, three veſſels, call'd *Canamiſes*, with gilt ſterns, like heads of ſerpents, came to them from the king of the iſland, to know who they were, and what was their buſineſs; on board one of them was the king's ſecretary, a grave old man. The *Spaniards* having heard his quality, ſaluted him with their guns, after which he came aboard the admiral ſhip, and embrac'd the commodore with much

Barboſa ſucceeds him, but is murder'd by the new chriſtian king.

* p. 14.

The fleet arrives at Borneo.

much civility; and finding that they had goods to barter, he order plenty of provisions to be sent to the ships. The commodore gave him and his attendants presents, and sent a present to the king.

Upon the secretary's return, the king bid them send two of their number to him, and *Gonzalo de Espinosa* with another gentleman went ashore, where they were met by 2000 men in arms, and an elephant upon whose back they placed *Espinosa*, and his companion. Being come into the king's presence, and having told their case, and that they only desir'd to trade with the island; he was well receiv'd, and had for a present two pieces of *China* damask, and one for every *Spaniard*. But some time after, five *Spaniards* having been sent ashore to buy things, they were detain'd; and the *Spaniards*, by way of repriſal, having seiz'd some of the vessels belonging to the island, two of the *Spaniards* were releas-ed, but the other three detained; so that the fleet sail'd without them. But being disgusted at their new commodore, they degraded him, and elected *Espinosa* in his place, and made *Sebastian de Cano*, capt. of the *Vittoria*; and on the 8th of *Nov.* 1521, by the assistance of a moor they had taken, they arriv'd at *Tidore*, one of the *Molucca* islands which they had been so long in search of.

And then at the Molucco *island.*

As soon as they came to an anchor near this island, the king of the place, whose name was *Almanzor*, came aboard the admiral ship, in a rich shirt, wrought with needle work in gold, over which he had a white cloth girt about his waste, hanging down to the ground; and, on his head, a fine silk vail, in the figure of a mitre. When he came aboard, he stop'd his nose, for the smell of the bacon, being a mahometan. The commodore, and all the *Spaniards* accosted him with great respect, and made presents of such things as they had, to him and his son; desiring leave to traffick in the island, which he readily granted, bidding them kill any one that injur'd them. And looking upon the flag, and the cross upon the *Spanish* coin, he told them, he had found out by astrology, that christians were to come thither for spices, which they should be welcome to. And having been inform'd that they were *Spaniards*, and ask'd several questions about the king their master, he took an oath, that he would always be a friend to the king of *Spain*, and supply his subjects, when they came to his island, with cloves and such other spices as were in it, in exchange, for linnen cloth and silks. The kings of the neighbouring islands did the same, and sent presents for his catholic majesty; and also for the *Spaniards*.

They are well receiv'd by the king of Tidore, *and the kings of the other* Molucco *islands.*

These were the *Molucca* islands, discover-ed by *Antonio de Brito* upon the king of *Portugal*'s account, the year after, *viz.* 1526, as we observ'd before.* * p. 14.

Having succeeded so well among these islands, they laded their ships, and de-sign'd to return home: but, upon exami-nation, they found that the *Trinidad*, which was the admiral ship, was so leaky, that they could not venture to sea in her; and there being no possibility of refitting her without turning up her keel, which would take up much time; it was agreed that *De Cano* should take, on board the *Vittoria*, the presents from the kings, and the youths of the country, which had been given them, and make the best of his way to *Spain* by the cape of *Good Hope*. And therefore in the beginning of the year 1522, the *Vittoria* set sail from *Tido-re* with 60 *Spaniards*, and some of the natives of the *Molucca* islands. They touch'd at an island, in 8 deg. and a half n. lat. which abounded in pepper; and then came to *Timar*, in 9 deg. where they took in white saunders, and saw much gin-ger and gold. Then passing by *Sumatra*, under the line,* they struck into the main ocean, steering south west, to avoid meeting with the *Portugueses*. And find-ing, by their observations, that they were to the westward of the cape of *Good Hope*, they steer'd north west; the wind having favour'd them the whole voyage. Arriv-ing in some distress, (for want of water, and the ship's being leaky) at the island of S. *Jago*, near *Cape Verd*; they were forced to stop, and sent some of their men ashore for water, and to get some blacks to work their pumps, several of their own men being sick. But as they sent the boat ashore another time, the *Portugueſe* governor, having had an account of their being there, seiz'd the boat and men, and endeavour'd to possess himself of the ship. But *de Cano*, being upon his guard, and not finding his boat return, set sail, and by good providence arriv'd at S. *Lucar*, on the 6th of *Sept.* 1522; having been three years, wanting 14 days, in per-forming this voyage. The *Trinidad* be-ing refitted, sail'd for *Panama*, but meeting with tempests was beaten back to *Tidore*, and seiz'd; as they heard two years after, by some few of the crew who escap'd, and came to *Europe* in *Portu-tugueſe* bottoms. * p. 14.

The admi-ral ship being lea-ky, the Vittoria *sails for* Spain.

Comes to Cape Verd.

And ar-rives at S. Lucar.

At the return of the *Vittoria* they found they had gain'd a day, finding that what they reckon'd sunday was only saturday in *Spain*. They computed that they had sail'd 14,000 leagues in this voyage and were the first that ever had the honour to sail round the glode; which made *Sebastian del Cano* much respected every where; but indeed it was all owing

to *Magellan*, who altho' he did not live to reap the fruit of his labour, the world has done juſtice to his memory, in calling the ſtreights he found out, as well as the country, on the north part of them by his name; which was more than was done to the great *Columbus*, who ſhew'd them all the way to this new world, and yet they ſuffer'd *Americus Veſputius*, (who made no diſcoveries but what he had firſt led him to) to chriſten this country after his own name, which would more juſtly have been *Columba* or *Colona*, for he had both thoſe names.

When the *Vittoria* arriv'd at S. *Lucar*, they unladed her, having 533 quintails of cloves, beſides a quantity of cinamon, nutmegs, ſaunders, and other goods. The emperor receiv'd *De Cano* moſt graciouſly, and gave him and his men many marks of his favour, as they well deſerv'd, having pav'd the way for all others who afterwards made ſuch a merit of following the road they had chalk'd out for them.

The next that attempted the ſtreights of *Magellan* was *Garcia de Loayſa*, who ſet out with ſix ſhips and a tender, from *Coruna* in *Gallicia*, in the year 1525, in order to go towards the *Molucca* iſlands. They came upon the coaſt of *Brazil*, on the 8th of *Dec.* where their ſhips were diſpers'd by a ſtorm; upon the 18th of *Jan.* they came to cape *Virgines*, where one of them was caſt away. The admiral was miſſing for ſome days, and had run a great hazard of being loſt; but at laſt returned to the fleet, and brought off ſuch of the ſhipwreck'd crew as had been ſav'd by ſwimming aſhore. The wind being croſs, they did not enter the ſtreights till *April*. They found ſeveral harbours a little way up the ſtreights; one of which they call'd S. *George*'s, (probably being found on the 23d of that month) where they found green cinamon growing wild. Some *Indians* of a gigantick ſize came in canoes near the ſhips, with firebrands in their hands, but did not venture ſo cloſe as to do miſchief, nor could the boats catch them, they row'd ſo ſwiftly. Thoſe were call'd *Patagones*, and inhabited the country between the *Magellanick land* and the ſtreights mouth on the ſouth ſea.

Loayſa *paſſes the ſtreights.*

Advancing farther weſt, in the ſtreights, they came to a harbour, which, from the cold, they call'd port *Frio*: and the next day, being the 25th of *May*, they enter'd the ſouth ſea. By their reckoning, they run, between cape *Virgines* on the north (or more properly the eaſt) ſea, and cape *Deſcado* or *Deſire* on the ſouth ſea, is 110 leagues. In this run, there was much oak, and wild cinamon, which altho' green, burn'd pleaſantly. The water in the ſtreights abounded with whales, merHer. *dec.* III. b. iii. ch. 2.

maids, tunney, and ſeveral other fiſh, and near the ſhore muſſels and oyſters in great plenty. They obſerv'd likewiſe that the current run in from both the ſeas, almoſt equally, and met about the middle of the ſtreights making a great noiſe upon the turns of the tide. There were many large brooks falling into the ſtraights, whoſe waters were very good.

When they had enter'd the ſouth ſea, they held northward, as the coaſtlay, and in 45 degrees lat. the tender loſt ſight of the other ſhips, having 50 men on board, and no proviſions but 400 weight of bisket, and eight pipes of water: and therefore making all the ſail they could northward, they came to anchor at a large cape, on the 25th of *July*; but having no boat they made a long rope faſt to a cheſt, and *Arreyzago* a prieſt offering to venture a ſhore with the tide, they let down the cheſt, intending to pull it back in caſe it ſhould be overſet. In this manner, he was driven half way to land, the whole being about a mile, and then his cheſt was overſet, and he ſet a ſwiming, but had been drown'd, had not five *Indians* come to his aſſiſtance from the ſhore. As ſoon as they had brought him to land, they laid him down, half dead, and ſtood at a diſtance. When he recovered, he ſtood up, and beckon'd to them to approach; but they lay down and embrac'd the earth, which he, believing it was a token of friendſhip among them, likewiſe did. They ſeeing a box floating in the water, which had been put into the cheſt with him, brought it out, and ſet it down by him. He open'd it, and taking out ſome toys, offer'd them to them, but they would not take them, making ſigns to him to follow them, which he did: and having walk'd over a hill, he ſaw a town with a great many towers in it, and above 20,000 people all arm'd with bows and arrows came out to gaze at him. One of the *Indians* carried the box upon his head, having, before they left the ſhore brought the cheſt out of the ſea, with the rope ſtill faſt to it, as the other end was to the ſhip. A great many of the natives clear'd the way as he paſt. When he had enter'd the town, they brought him before the cacique, who expected him under a great tree, with a numerous attendance. Towards the market place, the prieſt ſaw a croſs erected, and at his appearing before the cacique, he was ſurpriz'd to be ſaluted by him with *Santa Maria*, that is *Holy Mary*. The cacique led him to a ſtately palace, where they ſet before him plenty of fleſh dreſt, with fruit, and liquor. When he had eaten, he gave the cacique the box with all the toys, which he was much pleas'd with. The prieſt made ſigns, that the people

The tender loſing ſight of the fleet.

Comes to a bay, and ſends a prieſt aſhore in a cheſt.

people aboard wanted meat; the cacique order'd three bucks, with ſtore of other proviſions, and going himſelf along with the prieſt to the ſhore, the ſhip having caſt anchor within hearing, the prieſt call'd out to tell them of his good entertainment. The weather being ſtormy, they durſt not adventure aboard that night; but the next morning the cacique and the prieſt getting into the cheſt, the *Spaniards* hawl'd them aboard, above 500 *Indians* ſwiming round to keep the cheſt from overſetting; and when they were got aboard, they brought the float aſhore again, and faſten'd the proviſions to it. The cacique having told them, that, on the other ſide of the cape, there was a good harbour, they weigh'd anchor, and doubling the cape, came to an anchor before the town, and the next day they all landed (except ſuch as were neceſſary aboard) upon a float made by the natives. The cacique brought them to his palace, and treated them in the beſt manner they could deſire for five days.

This prov'd to be in New Spain.

This town was *Macatan*, in the province of *Tecoantepec*, in *New Spain*, a country which had never ſubmitted to *Montezuma*, but was now ſubject to the vice roy of *Mexico*; and had at this time a *Spaniſh* governor reſiding at *Tecoantepec*; to whom the cacique of *Macatan* ſent an account of the arrival of this ſhip; who coming himſelf to ſee them, carry'd them to his city.

The admiral ſhip ſails for the Molucca's.

In the mean time, the admiral ſhip, having loſt the company of all the others, held on her courſe for the *Molucca*'s; and *Loayſa* dying by the way, the command fell to *Alonzo de Salazar*, who order'd the pilot to ſteer for the *Ladrones* iſlands, and in their way, upon the 13th of *Sept.* they diſcover'd an iſland in 14 deg. n. lat. This iſland they call'd S. *Bartolomeo*, but finding no bottom with a line of 100 fathoms, they paſt by it without ſtoping, and came to *Borta* one of the *Ladrones* next to the line, in 12 or 13 deg. n. lat. where, as ſoon as they came to an anchor, a *Spaniard* came out in a boat, and having bid them welcome, told them he had belong'd to the *Trinidad*, which, as we have ſaid, was left at the *Molucca*'s where he had deſerted. He told them, he was of *Gallicia*, his name *Gonzalo de Vega*, and that he underſtood the language of thoſe iſlands; but he would not go aboard without ſecurity in the king's name, which *Salazar* gave him. On the 10th of *Sept.* 1526, they ſet ſail for the *Molucca*'s; *Salazar* dying by the way, *Martin Iniguez* ſucceeded to the command; and on the 2d. of *October* came up with the iſland of *Mindinao*, one of the *Philippines*, and anchoring at *Vizaya* in eight degrees, barter'd *Spaniſh* pedlary ware for palm wine, fowls, rice, and fruit. Leaving this, in a ſouth courſe they arriv'd at *Taloa*, where the lord of it treated them friendly, and preſt them to go with him to the iſlands of *Gualibu* and *Salibu*, with whom he was at war, and where there was much gold; but the commodore refus'd to go with him. This iſland is in 3 deg. and a half n. lat. From hence they ſail'd towards *Gilolo*, one of the *Molucca* iſlands; and coming to an anchor at *Camaſco*, on the eaſt ſide of *Gilolo*, the mooriſh governor came on board, with an *Indian*, who having been a ſlave to a *Portugueſe*, ſpoke that language. This governor finding they were *Spaniards*, told them, that place belong'd to the king of *Tidore*, who for having furniſh'd *De Cano* with cloves, had his town of *Tidore* burnt by the *Portugueſes*, under the command of *Brito*, who had ſeiz'd the *Trinidad* after her being forced back, by ſtreſs of weather, in her deſign'd voyage for *New Spain*; and had taken out of her 70,000 weight of cloves, ſending 47 *Spaniards* priſoners to *Malaca*, and had built a fort in the *Molucca* iſlands where he had veſſels of ſeveral ſorts.

Arrives at Gilolo.

Iniguez, upon this intelligence diſpatch'd meſſengers to the kings of *Tidore* and *Gilolo*, ſignifying, that, by the authority of the emperor and king of *Spain*, he was come to trade in their dominions, and was ready to defend them againſt all enemies, and to aſſiſt them to procure reparation from the *Portugueſes* for any inſults or injuries they might have offer'd them. The meſſengers he ſent were treated moſt magnificently by the king of *Gilolo* who being neareſt to them (the king of *Tidore* having retir'd to the mountains upon the burning of his capital) invited the commodore to his iſland, and repeated the ſame account of *Brito*, as it had been told them by the governor of *Camaſco*. Shortly after the king of *Tidore* ſent an ambaſſador, congratulating their arrival, and confirming the peace he had made with the king of *Spain*, by the means of *De Cano*. Upon this *Iniguez* left *Camaſco*, and ſet ſail for *Gilolo*, but was driven to the iſland of *Maro*, and in his paſſage from thence, was met by a ſmall veſſel belonging to the *Portugueſes*, which coming up to him, requir'd him in the *Portugueſe* governor's name, to go with them to *Tidore*, telling him, that the *Molucca* iſlands belong'd to the king of *Portugal*. He likewiſe brought him an arrogant letter but not ſign'd, from the *Portugueſe* governor, threatning him, if he refus'd to come to him. *Iniguez* anſwer'd, "That he was ſent, by the emperor, and king of *Spain*, to whom "thoſe iſlands belong'd; that he was re-

"ſolv'd

" ſolv'd to obey his maſter's orders, ſo " that the *Portugueſe* captain needed not " give himſelf any farther trouble about " him; and as to his gaſconade, of forcing " him to go to *Tidore*, againſt his inclina- " tion, he deſpis'd both him and it." The *Portugueſe* deſir'd him to put his name to his anſwer, becauſe it was only forgetfulneſs that had made the governor ſend him his letter unſign'd. He reply'd, " That it was neither thro' haſte nor for- " getfulneſs that he had given his anſwer " unſign'd, but to teach his captain how " to treat one of the emperor's comman- " ders." After this, the *Portugueſe* factor came to him, threatning to carry him by force to *Tidore*, if he refus'd to go. *Iniguez* bid him be gone, and never come back to him with ſuch a meſſage, leſt he ſhould be oblig'd to give him ſuch an anſwer as his inſolent meſſage deſerv'd.

Upon the laſt day of *Dec.* the ſhip came to an anchor at the place where the old town of *Tidore* had ſtood, where the king came on board, being about 13 years of age; and ſoon after, the king of *Gilolo*, a man about 80; both of them declaring they would ſtand by the emperor. What the iſſue of theſe meſſages, between the *Spaniſh* and *Portugueſe* captains, was, and the war between the two nations, in the *Molucca* iſlands, altho' their maſters were at peace at home, is not our buſineſs at preſent, having only mention'd this as the conluſion of a voyage to the ſtreights of *Magellan*; we ſhall therefore leave *Iniguez* and his two kings, to defend themſelves againſt the *Portugueſe*, and return to the affairs of *America* about the ſtreights.

The *Terra Magellanica*, (that is, all the country between *Chili* and *Magellan* ſtreights, on the ſouth ſea, and between *Rio de la Plata* and the ſtreights, on the north, or eaſt ſea) not being to this day diſcover'd, otherwiſe than upon the coaſt, all that we ſhall ſay of it, ſhall be to name the principal ports or capes in that circuit, as they were ſeverally diſcover'd by *Magellan*, *Loayſa*, and others who paſt the ſtreights ſince: nor ſhall we diſtinguiſh that part of the continent from *Chili* to the ſtreights on the ſouth ſea, by the name of the *Patagones*, but comprehend the whole under the common name of *Magellanic Land*. The chief places of which, known to the *Europeans*, are, 1. *Cabo de las Iſlas*, a promontory about 26 leagues from the confines of *Chili*. 2. *Puerto de S. Stefano* 50 leagues farther ſouth. 3. *Villa de Nueſtra Segnora*, or *Our Lady's Town*, 18 leagues farther on the ſame coaſt. 4. *Puerto de S. Andrea*. And at the entry of the ſtreights cape *Vittoria* on the north weſt ſide, and cape *Deſcada* oppoſite to it.

Ogilvy's *Amer.* b. III. ch. v. §. 3.

Within the ſtreights, I find mark'd in ſome maps, cape *Frio*, and cape *Famine*. *Ogilvy* has many more, but there being ſo ſmall accounts of what is within, and thoſe being ſo little uſeful at preſent, I ſhall paſs them over.

On the ſouth part of thoſe ſtreights is the *Terra del Fuego*, ſo call'd from the fires ſeen from it, by ſome who paſt the ſtreights. It is ſo little known, that it is diſputed whether it be one continent, or ſeveral iſlands.* On the ſouth part of this *Terra del Fuego* are *Le Mare's* ſtreights, found out by a *Dutch* man of that name in 1615, and not ſo dangerous a paſſage. The ſouthmoſt point of all *America*, as mark'd in our maps is *Cape Horn*. lat. 55 d. 40. m. *What other places there may be, worth taking notice of ſouthward of the ſtreights of* Magellan *either to the eaſt or weſt, we ſhall refer to ſome particular voyages of* Engliſh, French *or* Dutch, *hereafter to be related.*

* Engl. *Atlas* p. 259.

From the mouth of the ſtreights of *Magellan* which lies upon the north ſea, the moſt remarkable places are, 1. *Cape Virgines*, which, as we obſerv'd, is at the entry to the ſtreights. 2. *Rio della Cruz* in 51 deg. lat. 3. Port S. *Julian*, in 47 deg. 4. Cape *Look out*, 46 deg. 5. Cape S. *George*, in 44 deg. 6. Cape S. *Helena*, in 42 deg. and a half. 7. *Coſta de Sierta* in 39 deg. 8. the bay of *Anagada* in 37 deg. and 9. Cape *Blanco* in 32 deg. All theſe are on the coaſt of the *Magellanic Land.*

The next country to the *Terra Magellanica* northward, is *Paraguay* or *Rio de la Plata*; which laſt name the *Spaniards* gave it, from the great river call'd *La Plata*, for the abundance of ſilver they found there. This country was firſt diſcover'd by *De Solis* and *Pinzon* in 1508, but they only touch'd at it.* In the year 1515, the ſame *De Solis* having been ſent from *Spain* to find out the ſpice iſlands, neglected that attempt, and ſail'd to the ſouth parts where he had only touch'd in the former voyage. He paſt by cape S. *Auguſtine* on the coaſt of *Brazil* in 8 deg. ſ. lat. and ſo to cape *Frio*, near the *Rio de Janairo*, under the tropic of *Capricorn*; and from thence to cape *Cananea* in 25 degrees, and leaving that they came to an anchor in a bay 27 deg. lat. to which the captain gave the name of *Los Perdidos*, becauſe it was not a ſafe place. They proceeded in that courſe to the port of S. *Maria*, within the iſlands, which they call'd *Los Lobos*, in 35 deg. where the capt. took poſſeſſion for the king of *Spain*. And at laſt arriv'd at the mouth of a river, which they firſt call'd *Mar Dolce*, from the ſweetneſs of the water; and afterwards

* Un. Trav. p. 34.

De Solis, *the firſt diſcoverer of this country.*

De

De Solis, from the commodore's name; but ſince that time, well known by the name of *Rio della Plata*, by which the whole large country of *Paraguay* is known to this day. Leaving his own ſhip in the mouth of the river, he took a caravel, or ſmall bark, which he had with him, and ſail'd up the river, whoſe courſe coming due north, carry'd him back to 24 deg. In this courſe up the river of *Plate*, he ſaw many towns and villages, with people almoſt every where, who flock'd to the ſhore to gaze at the caravel. *De Solis* very imprudently truſting himſelf a ſhore in his boat, with as many as it could hold; the *Indians*, making ſigns, and laying things upon the ground, for the *Spaniards* to take up, decoy'd *De Solis* and his people from the ſhore, and having before laid an ambuſcade for him, kill'd them every man, with their arrows, notwithſtanding the cannon fir'd upon them from on board; and cutting off their heads, arms and legs, in the ſight of their companions in the caravel, roaſted their bodies at great fires made at a little diſtance from the ſhore, and devour'd them with great ſigns of joy. The caravel ſeeing this horrible ſight, made the beſt of their way down the river, and finding the other ſhip, they ſet ſail for cape S. *Auguſtin*, where they loaded with brazil wood, and return'd to *Spain*.

His tragical death.

Magellan was the next that ſail'd from *Spain* to this coaſt; and after him *Loayſa*, of both which voyages, we have already given a ſhort account: and they touch'd here only by the way.

Much about the time of this laſt voyage of *Loayſa*, *viz.* the years 25, 26 and 27. *Gabot*, the king of *Spain*'s pilot (the ſame mention'd before*) got the command of four ſhips to follow the track of the *Vittoria*, to the *Molucca* iſlands. But his deſign privately was for the river of *Plate*, having had an account of it from thoſe who had been in it with *De Solis*. Accordingly he ſail'd with four ſhips in 1525, and after having touch'd at ſeveral iſlands, on one of which (being a deſart one) he left *Mendez* his vice admiral, captain *De Royas* and *Michael de Rodas*, becauſe they found fault with his proceedings. He came into the river *Plate*, and ſail'd 30 leagues up the river; near the north ſide of which he found an iſland, which he call'd S. *Gabriel*. Here he came to an anchor, and went up in his boat three leagues higher, where he found another river running into the great one; and ſeeing it a very ſafe harbour, he brought his ſhips up to it; and built a fort there which he call'd S. *Salvador*: and leaving ſome men there to guard the ſhips, he went farther up the river of *Plate* with his boats and a ſmall caravel. About 30 leagues higher he built another fort, on the *Zarcarana* river; to this fort he gave the name of S. *Spirito*; call'd by ſome *Gabot*'s fort. Going ſtill higher, he came to another river, which the *Indians* call'd *Parana*, but ſeeing it ſtrike off northward, and therefore concluding it would lead him into *Brazile*, he left it upon his right hand, and purſued the great river ſtill north, till he reckon'd he had ſail'd above 200 leagues in all. Here he found the natives tilling the ground, and ſaw ſeveral marks of induſtry among them. But, when he attempted to land, they betook themſelves to their arms, and made ſuch oppoſition, that having kill'd 25 *Spaniards*, and taken three, with conſiderable ſlaughter among the natives, he retir'd to his boats, and ſtood off from the ſhore.

* p. 31.

Gabot's voyage to the river of Plate.

Builds forts there.

Whilſt *Gabot* was making diſcoveries up the river, *James Garcia* who had been ſent from *Spain* to make farther diſcoveries up this coaſt, enter'd the mouth of the river; not knowing any thing of *Gabot*, till he came to S. *Salvador*, where he found the admiral's ſhips. *Garcia* had ſent away his own ſhip, as too large for ſailing up the river; and coming to the firſt fort, where he had an account of *Gabot*'s being upon the river before him; he follow'd his example, and leaving the bulk of his men at S. *Salvador*, he ſail'd with two brigantines, and 60 men, the ſame way the other had done; and found him at fort S. *Anna*, about 110 leagues above S. *Spirito*; and return'd with him to that fort. *Gabot* diſpatch'd a meſſage from thence to S. *Salvador*, and order'd one of the ſhips to *Spain*, to give an account of his diſcoveries, and an excuſe for not having paſt the ſtreights. *Gabot* had traded with the natives in ſeveral places, and had made peace with many of their lords, and built the forts already mention'd, in thoſe places where he had made ſome friendſhip with them. He ſtaid in the river above three years; but having no accounts from *Spain*, and being tir'd with waiting, having only one ſhip left, and many of his men being dead, he return'd to *Spain*; bringing home ſome gold with him, which was not the product of *Paraguay*, but of *Peru*, and brought down the river by the natives from that country. The country all along the river on the north ſide was fruitful, and abounded with ſeveral ſorts of grain, and fruit, and the rivers which run into it, as well as the *Plate* river it ſelf, had great variety of fiſh, particularly alligators, eight or nine foot long, fat and well taſted; and in the woods plenty of deer of three kinds; one as big as ſmall cows, with large horns; a ſecond

James Garcia *in the river of* Plate.

ſort bigger than goats; and a third no bigger than kids. Horſes and black cattle have multiply'd exceedingly, ſince they were carry'd thither by the *Spaniards*.

Gabot kept up the friendly correſpondence with the *Indians*, for above two years, and had due care been taken to ſend colonies from *Spain*, and a full commiſſion as lord lieutenant of the province, in all probability things had gone very well there. But *Gabot* having ſail'd up that river, not only without, but even againſt, orders, he had no title to controul *Garcia*, whoſe people, not being under ſuch good diſcipline as *Gabot*'s, and perhaps himſelf not being ſo well acquainted with the temper and genius of the *Indians*, the inhabitants of the countries near S. *Salvador* and S. *Spirito*, took umbrage at the behaviour of *Garcia*'s men, and having privately rais'd forces, they burn'd both the forts, the *Spaniards* hardly eſcaping with their lives; and getting aboard their ſhips return'd to *Spain*. This happen'd, I ſuppoſe, after *Gabot* had ſail'd for his own country, altho' our author is not diſtinct as to the time.*

The natives burn Gabot's forts.

* Herr. *dec.* III. b. v. ch. 3.

We hear no more mention made of the *River of Plate* for 12 or 13 years, when the court of *Spain* granted an ample commiſſion to *Don Pedro de Mendoza*, as governor of the provinces all round that river, on both ſides, that is, 200 leagues ſouthward towards the ſtreights, and what he could conquer in *Paraguay*; but upon condition, that he ſhould find a communication with *Peru* or *Chili*, that that ſo there might be an open trade to the ſouth ſea. *Mendoza* having made the neceſſary preparations, ſet ſail at S. *Lucar* with eleven ſhips, and 800 men well equip'd. He came up with the iſland of S. *Gabriel*, which *Gabot* found near the mouth of the river, as has been ſaid. Here he anchor'd, and ſending out boats towards the ſouth ſide of the great river, he diſcover'd a river, about 60 leagues from the entry at the north ſea, where he ſet about building a town, which he call'd *Nueſtra Signora de Buenos Ayres, our lady of good air*; and is well known at this day by the name of *Buenos Ayres*, and a place of great trade.

Don Pedro de Mendoza *made governor of* Rio della Plata.

Buenos Ayres *founded.*

The ſouth ſide of this river was inhabited by a ſavage people, a ſort of canibals, who, upon their firſt landing, fell upon a party, commanded by *Don Diego* the governor's brother, and kill'd him with five of his men, and having made ſnares to catch hold of the horſes, they had deſtroy'd the whole party if they had not made a quick retreat. *Don Pedro* ſent ſeveral ſhips to different places to ſearch for proviſions; and the allowance made to them being very ſcanty, they were reduced to great hardſhips: but he himſelf, with the bulk of his troops ſtaid to carry on his new city, whilſt the ſmaller ſhips were ranging along the river, and touching at ſmall iſlands which they found there, in ſome of which they got ſubſiſtance, but in ſuch ſmall quantities, that they laſted but a ſhort time, and then they were reduced to the ſhort allowance of three ounces of bisket a day. But, the governor falling ſick, reſolv'd to return to *Spain*, but having ſent *John de Ayolas*, (who was fitteſt to be left deputy in his abſence) to the north ſide of the river, to ſee if their were any remains of *Gabot*'s forts upon that coaſt; he left captain *Franciſco Ruyz* to command in *Buenos Ayres*, during the abſence of *De Ayolas*; and then ſet ſail for *Spain*, but dy'd by the way.

De Ayolas, ſail'd with three brigantines towards *Paraguay*, and going aſhore in the boats at ſeveral places, met with *Indians* much more friendly than thoſe on the ſouth ſide. He paſt by the country of the *Ameguays*, and from thence to the *Cariores*, and farther up the river to the *Payaguaes*; where he left *De Irala* with 40 men to guard the brigantines, till he went a progreſs into the country. *Salazar* went in the year 1537 in ſearch of *De Ayolas*, to give him an account of the commiſſion left him by *Mendoza*. He ſail'd up the river directly north to 25 deg. to the country of the *Carioes*, whither he heard he was gone; and miſſing him built a ſtrong fort at a town near that branch of the river which flows from *La Plata* in *Peru*, and gave the town the name of *the Aſſumption*.

Mendoza's *death.*

In the mean time the court of *Spain* having had intelligence of *Mendoza*'s death, diſpatch'd *Cabrera*, with two ſhips for *Rio della Plata* in 1539. He brought a commiſſion from the king empowering the officers and ſoldiers to chuſe a governor, in caſe *Mendoza* had not nam'd one. But finding upon his arrival at *Buenos Ayres*, that *Ruyz* had been left to ſupply the place till the return of *De Ayolas*; *Cabrera* thought it belong'd to him; which was like to make a rupture; but they compromis'd it, and govern'd jointly. Soon after, there arriv'd a ſhip there, which had deſign'd to have paſt the ſtreights, but was beaten back by contrary winds; ſo that the governors, being recruited by this new addition of men, and a ſhip, ſet out for *the Aſſumption*. Upon their arrival, they found that *Irala* was deputy there, by a commiſſion from *De Ayolas*: and *Cabrera* caballing with him, to get into a ſhare of the government there, excluding his partner *Ruyz*, fail'd in his project, for *Irala* would admit neither of them: and therefore

fore they went farther up in ſearch of *De Ayolas*, and at laſt they heard, that he and his people had been murder'd by the natives of the *Payaguaes*. Upon this intelligence, they return'd to *the Aſſumption*, and from thence to *Buenos Ayres*. But liking the north ſide of the river of *Plate* better than the other, they remov'd from *Buenos Ayres* to *the Aſſumption*.

And that of De Ayolas.

As ſoon as the account of *De Ayolas*'s misfortune came to *Spain*, *De Vaca*, (who had made the unlucky expedition with *De Narvaez* in *Florida*, as has been ſaid in its place) was ſent to *Paraguay* as adelantado; and on the 2d of *November* 1540, he ſet ſail from *Seville* with two ſhips and a caravel, and arriv'd at S. *Catharina* iſland on the *Paraguay* bay in 28 deg. ſ. lat. where he landed 26 horſes, having loſt 14 at ſea. From this iſland he ſent the caravel to the river of *Plate*; but, by reaſon of bad weather, they could not enter it, and therefore came back to S. *Catharine*, bringing with them nine ſoldiers who had deſerted from *Buenos Ayres*, for having been ill us'd by the commander there, and therefore had ſtolen away a boat, in which they deſigned to have coaſted along to ſome of the *Spaniſh* plantations, where they might have an opportunity of informing the court of *Spain* of the ill conduct of the officers in thoſe parts.

Cabeza de Vaca *ſent to* Rio de Plata.

De Vaca finding by the report of thoſe ſoldiers, that *the Aſſumption* was above 350 leagues up the river from *Buenos Ayres*, which conſidering the courſe of the river of *Plate*, and the great track of coaſt he had to run, made it much nearer to march, by land, reſolv'd to leave his ſhips at the iſland of S. *Catherine*, after they had ſet him and his people aſhore upon the continent. He began his march with 250 foot, and the few horſe he had left; giving orders to *Eſtopinan* to ſail to *Buenos Ayres* with the fleet, whenever the wind was fair. He march'd 19 days thro' woods and mountains with much trouble, and began to be in want of proviſions, when, to their great comfort, they diſcover'd a fine open country, which he enter'd, and was well receiv'd by the natives, who furniſh'd them with neceſſaries, for which the governor gave them ſhirts and other things. This was the country of the *Guaranies*, to which the adelantado gave the name of *Vera*, between the coaſt from which they ſet out, and the river *Parana*. Going ſtill farther weſt, they met an *Indian* chriſtian belonging to *Brazile*, who had been at *the Aſſumption*; this man offer'd to be their guide to that city, and gave a good account of the *Spaniſh* colony there.

He marches by land thro' a part of Paraguay.

The Governor kept his men in ſo good order, and behav'd himſelf with ſo much civility and juſtice towards the natives, that the report of his peaceable behaviour being ſpread abroad, all the *Indians*, wherever he paſt came to him bringing proviſions from all quarters. But they wonder'd at the horſes, and were much afraid of them, and often brought them honey, fowls, and other eatables to keep them in good humour; which was occaſion of great mirth to the *Spaniards*. And men, women and children came from remote provinces to ſee thoſe ſtrange creatures, of which they heard odd ſtories in their own country. Upon the 7th of *Dec.* he came to *Abangobi*, on the banks of *Taguari*, which falls into the *Parana*, (a great branch of the river of *Plate* running from the country of *Brazile*) at *Guayra*, afterwards call'd *Ciudad Real* in 24 degrees ſ. lat. Having purchas'd canoes of the natives, he embark'd upon this river, and went down to the *Parana* with ſome of his people, where in a ſhort time he was join'd by the reſt who went by land.

Upon his coming to the *Parana*, inſtead of ſailing down that river, to the ſouth, in order to get to the river of *Plata*, and ſo northward again to *the Aſſumption*, which was a vaſt way about, eſpecially as he was but ill fitted for water travelling; he croſs'd the *Parana*, and by the aſſiſtance of his *Brazile* guide, he march'd croſs the country to the *Aſſumption*, where he arriv'd on the 11th of *March* 1542, being met by many *Indians* ſome leagues before he reach'd the town, bidding him welcome in *Spaniſh*, and ſome of them ſpoke the *Spaniſh* tongue tolerably well. He was receiv'd by the *Spaniards* with great joy, and having produced his commiſſion was own'd as governor.

And arrives at the Aſſumption.

The firſt thing he did was to ſend two brigantines, with as many men as he judg'd neceſſary to repair and keep poſſeſſion of *Buenos Ayres*, becauſe he knew his ſhips would come there directly, if no accident happen'd to them. He then apply'd himſelf to regulate all diſorders in the government, and particularly to redreſs the grievances complain'd of, occaſion'd by the oppreſſion of the king's officers. He call'd the chiefs of the natives together, and exhorted them to allow the prieſts and religious men to live among them, deſiring them to liſten to what they taught them; and he gave them aſſurance, upon condition they liv'd peaceably, and gave over their barbarous practice of eating man's fleſh, that they ſhould be as free as the *Spaniards*, and treated in all reſpects as they were. They all anſwer'd that they would chearfully ſubmit to all his orders, and ſtill continue loyal.

There

There were ſeveral different people that inhabited the countries upon the banks of the river of *Plate*, who often had war with one another, and ate their priſoners. One of theſe barbarous nations, call'd the *Guaycures*, made war upon the other *Indians*, ſuch as the *Agaces* and *Guaranies*, for having ſubmitted to the *Spaniards*, poſſeſſing themſelves of their lands and fiſheries: which the chiefs of thoſe people having repreſented to the governor, he ſent three prieſts with a guard of 50 *Spaniards* to require the *Guaycures* to reſtore the lands to the right owners, and to ſubmit themſelves to the king of *Spain*, and give ear to the preachers; and in caſe of their refuſing, to denounce war. The prieſts and the ſoldiers return'd in eight days, and inform'd the governor, that the people were obſtinate, and had not only refus'd to comply, but had fallen upon the party, and wounded ſome of them.

He marches againſt the Guaycures.

De Vaca, taking 200 musketeers and croſs-bow men, with twelve horſe, left *the Aſſumption* on the 12th of *July*, and march'd to *Zaguay*, upon the bank of the river, where *Laurence Mormocen* a converted *Indian*, who was lord of the place, had aſſembled a conſiderable army of *Guaranic Indians* to aſſiſt in this expedition which was undertaken upon their account. The whole army paſt the river in brigantines and canoes; and having ſent ſpies into the enemy's country to ſee what preparations they had made, they had intelligence that the *Guaycures* were a hunting without any apprehenſion of danger; and therefore the governor marching his army all night, fell in with them in the morning, and altho' they quickly aſſembled in great numbers, and behav'd themſelves with courage, the few horſe which were with the governor terrify'd them, and made a great ſlaughter; and about 400 were taken priſoners, of whom the governor order'd great care to be taken.

After this bruſh with thoſe people, *De Vaca* return'd to *the Aſſumption*, and calling the priſoners before him, told them, that he did not deſign to make any of them ſlaves, but would make peace with thei nation if they would promiſe to live peaceably: and ſending one of them home to acquaint their chiefs with his intention; in a few days, that *Indian* return'd with 20 others, who ſitting down upon one foot, as was their cuſtom on ſuch occaſions, told the governor, "That having made "war upon the *Guaranies*, the *Imperues*, "the *Agaces*, *Guatataes*, *Naporbes*, the "*Mayayes*, and ſeveral other nations with "ſucceſs, and having been vanquiſh'd "only by the *Spaniards*, they agreed to "ſubmit to them, as the braver nation." The governor told them, that he would make peace with them, provided they would not hurt the *Guaranies*, and allow the prieſts to live quietly among them and be inſtructed by them. To all this they agreed, and getting their priſoners all reſtor'd, they went away well pleas'd, and that nation ſubmitted to the king of *Spain*, and liv'd peaceably ever after. Other nations likewiſe on both ſides of the river, ſeeing that the *Guayacures*, which indeed were the moſt valiant people of that country, had ſubmitted, ſent meſſages of peace, and were all receiv'd into friendſhip. About the end of this year 1542, *Eſtopinan* who had been left to bring the fleet from S. *Catharine*'s to *Buenos Ayres* arriv'd at *the Aſſumption*, having ſuffer'd much fatigue and been in great neceſſity; but was ſeaſonably reliev'd by the brigantines ſent by *De Vaca* to repair *Buenos Ayres*; but he told him, it was impracticable to build houſes there during the winter, becauſe the rains waſh'd the mud away whereof they were made.

And makes peace with them.

Having ſent *Irala* to make diſcoveries farther up the river, or rather to give his ambitious temper ſome honourable exerciſe, and thereby to prevent any diſturbance he found him inclin'd to forment, in order to keep up the character of deputy with which he had been veſted before *De Vaca* arriv'd; and having receiv'd information from him, at his return, that he had ſail'd a great way towards the north, and had found ſome tokens of gold and ſilver in the country; the governor ſent out parties among the confederate *Guaranies* to buy proviſions ſufficient for an expedition he deſign'd to make up the river. But being inform'd that two powerful *Indian* lords had revolted, and obſtructed the coming in of proviſions, he ſent *Irala* with 150 men to reduce them, injoining him to do it by fair means, and to avoid, as much as was poſſible, any acts of hoſtility. Theſe inſtructions were punctually follow'd, and only a few of the moſt obſtinate were chaſtis'd.

When all things were ready, the king's officers, being diſguſted at the governor's mild treatment of the natives, which prevented their enriching themſelves by plundering the country under colour of collecting the king's dues, pivately agreed with two religious to ſteal away towards the coaſt, and to ſail over to *Spain*, with letters of accuſation againſt *De Vaca* as an enemy to the king's intereſt. But the governor getting intelligence of it, ſent after the friars, and brought them back and having examin'd the matter, he confin'd the officers: and being now prepar'd for his progreſs, he took two of them with him, leaving two at *the Aſſumption*, but diveſted of their office till further orders. Having thus ſettled all his affairs, he

He confines the officers of the cuſtoms,

out

set out with 200 muskeetrs and crosbow men in 10 brigantines, ordering the like number of foot and 12 horse by land, leaving the city under the care of *Salazar de Espinoza* with 200 men and six horses. Together with his brigantines 1,200 choice *Indians* went in 120 canoes; and setting out the 8th of *Sept.* 1543, in a few days they arriv'd at *Guaibiano* in 22 deg. the confines of the *Guaranies*, and a little higher, he met his land forces, whom he took aboard at *Itabitan*; sailing up the river, without any opposition, and supplying themselves with abundance of fish, and sometimes going a shore to kill deer, and other game which they found in great plenty; so that they had a most agreeable voyage up as far as *Candelaria* in almost 21 deg. (the place where *De Ayolas* had been treacherously murdered) where they arrived on the 12th of *Oct.*

And sails up the river.

At this place, six *Paraguay Indians* came to the governor, and having been told that these were not the christians who had been there before, they said, they were sent by a great lord of that country, who desir'd to be their friend, and in token of his good intention, he would restore all that he had taken from *De Ayolas*, being 36 men's loads of plates, bracelets, crowns, hatchets, and small vessels of gold and silver. The governor desir'd them no assure their lord, that he would forgive all that was past, and accepted of his offer and friendship; and giving the messengers some toys, dismiss'd them. But that lord not appearing in some days, altho' his messengers had said he would come the day following, the interpreter advis'd *De Vaca* to go in search of him, because believ'd that the six *Indians* had been sent as spies. He therefore departed from *Candelaria*, and sailing eight days farther up the *Paraguay* river (for it takes that name above *the Assumption*) they found the banks of it planted with *Cassiafistula* trees, and several other sorts of fruit. He divided his fleet, for fear of giving umbrage to the *Paraguay* lords; going up the river with half his men, and leaving *Mendoza* with the other half to follow him slowly.

Passes thro' the country of the Paraguays.

As the governor sail'd along the banks of this river, the natives came to him in canoes, and he often went a shore, and made peace with the *Indians* as he past; but these were only a kind of borderers, the principal *Paraguay*'s living farther on, towards the north west. In this course northward he proceeded till the river divided into several channels, and several islands were seen in the water. He therefore order'd crosses to be set up on the banks, to shew the rest of his fleet under *Mendoza* which branch of the river he had taken, which was that to the westward, where he stop'd at a small river, falling into the *Paraguay* in 16 deg. lat. which he call'd *Los Reyes*, or the kings, being now in the christmas time. As soon as *Mendoza* arriv'd, the governor sent *D'Accuna* and *Antony Correa* his interpreters, with a party of his *Indians*, to the country of the *Xarais* at the very fountain head of the *Paraguay* river, and the fartheſt limits of the country of *Paraguay* or *Rio della Plata*, towards the *Amazon* country. He sent presents, by them, to the principal lords, and offer'd peace and friendship to them upon the same conditions as the other *Indians* had receiv'd; which they accepted, to the great disgust of his soldiers, who would rather have subdu'd them by force, that they might have profited of the pillage. The governor march'd by land into that country, and made peace with all the nations as he past, not allowing either his *Spaniards* or *Indians* to commit the least act of hostility; and then return'd to *Los Reyes*.

He discovers the Xarais, at the head of the river.

After he came back, he was inform'd that some of those who had made peace with him, had revolted, at the persuasion of the *Guaxarapos*, a people inhabiting that part of the country next to *Brazile* near the river *de Piros* in 19 deg. lat. But upon the report of the governor's return, they came in, and renew'd the league, which they kept but a short while; for in the year 1544, the *Spaniards* beginning to be sickly at *Los Reyes*, those confederate *Indians* sent private embassies to the *Guaxarapos*, and preparations were making to attack the *Spaniards* on all sides. Upon information of this conspiracy, *De Vaca* resolv'd to sail down the river to *the Assumption*, but having utterly forbidden his people to take any of the natives of the country, against their wills, along with them, they grumbled much at that restriction; and the king's officers, making use of the opportunity, spirited up the soldiers to withdraw their obedience from the governor; and the mutiny proceeded so far, that they confin'd *De Vaca*, and made *Irala* deputy governor; who being weak or wicked enough to connive at all their oppressions, they lorded it over both, *Spaniards* and *Indians*, plndering both under pretence of the king's dues; which occasion'd the *Indians* to rebel, and many *Spaniards* to quit the country and march to *Brazile*. These officers with their new deputy proceeded so far, in their insolence, as to put the governor in chains, and sent him down the river in a brigantine for *Spain*, two of them going with him as his accusers. But a storm happening when they were at sea, they releas'd him from his chains and begg'd pardon, owning their

He returns to the Assumption.

And is confin'd by some mutineers.

And sent to Spain.

own crimes; but coming ſafe to land, they forgot their former repentance, aad went on with their proſecution. As ſoon as the governor appear'd at court, they ſlunk away, and both of them dy'd miſerably. *De Vaca* was acquitted, but not ſent back; which was doing him juſtice by halves.

After his departure from *the Aſſumption*, the new deputy and the king's officers, who ſtaid behind, fell to pieces, and were more then once ready to decide the quarrel with the ſword; which encouraging the *Indians* to revolt, the *Spaniſh* intereſt ſuffer'd much, and altho' *Irala* march'd 100 leagues up the river, nothing was done to purpoſe; and the ſoldiers falling out among themſelves, they put *Mendoza* in his place, but ſoon, after turn'd him out, and reſtor'd *Irala*.

About this time, *viz.* in 1546, *Gutierrez* and *De Roias* and after their death, their ſoldiers under *Franciſco de Mendoza*, made an incurſion from *Peru* thro' *Tucuman*, as far as *Paraguay*; but planting no colonies there, their expedition was to little purpoſe. *Irala* likewiſe enter'd *Tucuman*, and ſend *De Chaves* farther with a party, who went as far as *Los Charcas*; which he found poſſeſs'd before: But the preſident of *Peru* hearing of his arrival, and getting an account from him of the ſtate of affairs in the *Paraguay*; appointed *Centeno* to go thither as governor, but he dying, that country was left to the management of *Irala* for ſome time, to the great loſs of the *Spaniſh* intereſt. However *De Chaves* being much careſs'd by the preſident *Gaſca*, and ſupply'd with money from him, for the good ſervice he had done in opening a communication between *Peru* and *Rio della Plata*, went back the ſame way he had come, to *the Aſſumption*. And ſome time afterwards went up the *Guapay* river, which takes its riſe in *Los Charcas* and falls into the *Paraguay* in 19 deg. near which river he built *Santa Cruz de la Sierra* on the confines between *Peru* and *Paraguay*; which continues as a communication between thoſe two famous countries to this day.

Having thus given a ſufficient account of the diſcoveries of *Paraguay* or *Rio della Plata*, we ſhall proceed to the diviſion of it. It has *Tucuman*, and *Los Charcas* on the weſt; the *Magellanic Land* on the ſouth; the country of the *Amazons* and *Brazil* on the north; and the eaſt ſea on the eaſt. It reaches from 14 to 35 deg. ſ. lat. being above 1,260 miles in length from ſouth to north, and at the broadeſt part of it from eaſt to weſt where the tropic of *Capricorn* goes thro' it, it is about 1200 broad. This country is divided into ſix provinces. 1. the province of *La Plata* proper, beginning from the mouth of the river on both ſides. It is bounded by the *Magellanic Land* on the ſouth; the ſea on the eaſt; by *Urvaig* or *Uraguay*, and *Parana* on the north; and *Tucuman* on the weſt. The chief cities are, 1. *Buenos Ayres*, mention'd formerly. 2. *Santa Fe* in 32 deg. lat. It is ſaid there are rich mines here, but the *Spaniards* do not open them for fear of invaſion upon that account. La Plata.

2. The ſecond province of *La Plata* is *Urvaig* or *Uraguay* between the river *Parana* and the eaſt coaſt. The river *Uraguay*, from whence it takes its name, runs thro' it. It is a fruitful country; and the chief towns in are S. *Salvador* and S. *Nicholas*. Uraguay.

3. *Paraguay* proper, on both ſides of the river *Paraguay* as it is diſtinguiſhed from *La Plata*, (that is, on the north part of it;) between the *Chaco* on the north weſt, and the *Guayra* province, on the ſouth eaſt of it; begining from the *Carioes* in 25 degrees, and running northward to the borders of the *Amazones* country. In this province were the cities of *Candelaria*, *Itabitan* and *Guaibiano*. Paraguay.

4. *Parana* lies between *Guayra* and *Urvaig* upon a large river of the ſame name which runs thro' it, taking its riſe from the country of *Brazile*, and falling into the river of *Plate* in 28 deg. In this province are *the Aſſumption*, and *Bareja*. Parana.

5. *Guarya* lies on both ſides of that part of the *Parana* river which is next to *Brazile*, and is bounded by the *Paraguay*, *Brazil*, *Urvaig*, and *Parana*. Its chief towns are *Guayra* or *Ciudad Real*, *Villa Ricca*, and *Arcangeli*. Guaira.

6. *Chaco* lies on the north weſt part of *Rio della Plata*, and runs as far as the *Amazon* country. In it may be reckon'd *Los Reyes* and *Santa Cruz*. Chaco.

Altho' *Brazil* does not come within the title of this chapter, not being properly a *Spaniſh* plantation, but planted by the *Portugueſes*; yet ſince it comes in courſe, and is the only part of the continent of ſouth *America*, poſſeſs'd by *Europeans*, which is not under the *Spaniſh* dominion, we ſhall ſay ſomething of it in this place, that we may not leave that gap in the coaſt of ſouth *America*; eſpecially conſidering that this country was diſcover'd by the *Pinzons* for the king of *Spain*.* Brazile.

This country lies from the *Tropic* of *Capricorn* to the equinoctial line, which makes it 460 leagues in length from ſouth to north: and towards the north, it is almoſt 400 leagues broad; comprehending in coaſt, along the north and eaſt ſeas, from cape S. *Vincent* to the *Amazon* river, (which falls into the north ſea at the line, and

* Un. Trav. p. 32.

and divides *Brazil* from the *Terra Firma*) about 800 leagues. It is bounded, on the east and north by the ocean; on the west by the country of the *Amazones*, and a part of *Paraguay*; and on the south, by *Guayra* and part of the east sea.

After the division of the world, lately found out by the *Spaniards* and *Portugueses*, and the limits of their conquests ascertain'd by the pope's bull, with the consent of the two kings, this country of *Brazil* being the eastern part of *America* was judg'd to belong to the king of *Portugal*; and so much the rather, because *Cabral* having been driven thither by chance, as was before related,* took possession of *Puerto Seguro* for the king of *Portugal*; and call'd the country *Santa Cruz*.

* p. 33.

Whilst the *Spaniards* were much taken up in the conquests upon the south sea, the *Portugueses* having receiv'd intelligence of *Brazile* from *Cabral*'s accidental discovery, fitted out a fleet in 1549 under the conduct of *De Sosa*; but meeting with a warlike barbarous people upon this coast, they found it a very hard matter to settle among them; and even to this day, they have no footing in the inland country, but have all their colonies along the coast. The natives of *Brazil* had no kings among them, but were divided into different clans, and were at constant war with one another, which they carry'd on with that animosity, that the *Portugueses* took advantage of it, and sometimes siding with one people, sometimes with another, they drove them from the coast by degrees; but the inland towns being very populous, they met with such resistance, that they were beaten off with loss as often as they attempted to make conquests in the country at a distance from the sea.

A barbarous custom of the people of of Brazil.

This people, amongst other barbarous customs, had one horrible practice: whenever they took any prisoners, they ate all that were fat; but the lean ones they carry'd home, and gave them in charge to young girls, to feed them for the table. Every maid who got such a prisoner, was obliged to cherish him, and give him food in plenty all day, and to ly with him at night. When he grew fat, they cut off his head, arms and legs, and roasted the body, inviting their friends to feast upon it. If his tender prov'd with child, she was watch'd to the time of her delivery, and the child made a feast to those canibals; to prevent which the women who had the charge of prisoners, us'd all means they could to cause abortion; and some of them, finding themselves with child in spite of all they had done to prevent it, made their escape with the man they had in charge, and so sav'd the life both of father and child.

The continual war which the *Portugueses* have maintain'd with the natives (as well as with the *Dutch*, *French* and *English* at several times) hinder'd them from planting any where except on the coast; which they divided into about 13 *Capitanias* or captain-ships; which are these following,

S. Vincent.

1. S. *Vincent*, which begins near the tropic, and reaches to *Rio de Janeiro* in a north east coast. The chief towns of this prefecture or captain-ship are, 1. S. *Vincent*, lying in an island upon the confines of the *Guaranies*, where there is a good harbour. 2. *Santos los Leyes*, which has above 400 houses, and three sugar mills; and the largest ships take in their lading in the middle of the town. 3. *Hitanhacin* or *Hitauchin*, near which is S. *Paulo* built by the jesuits, who have engross'd the best settlements of this country. Not far from the mouth of the river which runs by S. *Vincent*, is the island S. *Sebastian*, well stor'd with wood and water, full of game, and has a good safe harbour. Behind this captain-ship north west, are the people call'd *Tupinces* and *Tupinaques*, towards the head of the *Parana* river; and are sometimes at peace with the *Portugueses*, and sometimes not.

Rio de Janeiro.

2. *Rio de Janeiro* is the second captain-ship, and the place where *De Solis* landed in 1515. But the *French* settled first in this river, about the year 1555, having brought a colony of those people call'd protestants under the protection of the famous admiral *Coligni*. They built a fort here, call'd by *Coligni*'s name, but that colony was of no long continuance; for they were dispossest by the *Portugueses*, in 1558. They built S. *Sebastian* in the mouth of the river in 21 deg. lat. a place of good trade, and a bishop's see. The next best settlement they have in this captain-ship is *Angra de los Reyes*. The country to the north west, as far as *Amazonia* being inhabited by savages.

Spirito Santo.

3. Next to *Rio de Janeiro* is that of *Spirito Santo*; one of the most fruitful counties in *Brazile*, abounding in cotton and brazile wood; it lies in 20 deg. It has one city of the same name; and the bay *Hermosa* near cape *Frio* lies in this district. The other towns are inhabited by the natives.

Puerto Seguro.

4. *Puerto Seguro* lies north of *San Spirito*, in 16 deg. having the cities of *Puerto Seguro*, *Sant'*, *Amaro* and *Santa Cruz* in it. The coast before this captain-ship is famous for the *Abrolhos* which are tracks of shallow water about 25 leagues off the shore, where the *Batavia* was cast away in 1629.

5. *Los Iſleos* or *the Iſles*, is the next capitania, which takes its name from a river that has iſlands in it. Along this river is the country of the *Guaymures*, the moſt ſavage people of all *America*, of ſtrong bodies, and barbarous manners, for they are ſaid not only to eat the fleſh of their enemies as a great many *Indians* did before and ſince their acquaintance with *Europeans*, but they devour'd their own children which few beaſts will do. Thoſe people gave the *Portugueſes* a great deal of trouble, and ſometimes forced them ſome of from their ſugar mills. The chief town of the country has the ſame name.

All Saints Bay. 6. *Baia de Todos Los Santos*, lies about 13 deg. lat. where the governor of *Brazil*, and the auditor general reſide. It is alſo a biſhop's ſee. In this captainſhip are three cities, *viz. Villa Vella*, S. *Salvador* and *Parepe*, which altogether about 140 years ago, had above 2100 families in them, and 18 ſugar mills; but cotton was their ſtaple trade. *Soſa* or *Souſa* landed firſt on this part of the coaſt, as we obſerv'd before, and built S. *Salvador*. The *Portugueſes* having at that time little or no footing in *America*; and any part of it diſcover'd by *Cabral*, or any other of that nation, was loſt before *Souſa* went thither.

Pernambuco. 7. *Pernambuco* in 8 deg. ſ. lat. is the next capitania; the chief towns of which are *Olinde* and *Garaſu*. In this diſtrict there happen'd a very remarkable revolution, about the year 1651 the *Dutch* having fitted out a conſiderable fleet to diſtreſs the *Spaniards*, diſpatch'd *Henric Longue* to *Brazil*. That captain, had, in company with *Peterzoon*, the *Dutch* admiral ſome time before, *viz.* 1529, taken the *Spaniſh* plate-fleet, having ſurpriz'd them at *Mataca*, on the north ſide of the iſland of *Cuba*. About the *Canary* iſlands, having only ſeven ſhips, he was attack'd by the whole *Spaniſh* fleet, under *Toledo*, and fought his way thro' them: and ſtaying at S. *Vincent* till he was join'd by 40 ſhips from *Holland*, with about 7000 marines, beſides ſeamen, he ſet ſail for *Brazil*, and arriv'd on the coaſt of *Pernambuco*; where *Wardenberg* landed near *Olinda* with 2950 men which he divided into three bodies. One commanded by *Vander Eltz*, march'd along the ſhore to *Olinda*; and the other two were led on to the ſame place, by different routes, under *Callenfels*, and *Honx*. The firſt party was attack'd by 800 *Portugueſes* from behind a ſconce at the paſs of the *Rio Dolce*, but *Wardenberg* paſſing the river, up to the middle, beat them from their ſconce, and attacking the city, they ſcal'd the walls near the jeſuits cloyſter, and carry'd it after ſome reſiſtance. The other two parties making attacks at different parts, they got poſſeſſion of the city, (the *Portugueſes* retiring to the adjacent woods) but they miſs'd of their chief deſign, the governor having ſet fire to moſt of the valuable goods, which the citizens had convey'd to *Rechiffa*, leſt they ſhould fall into the hands of the *Dutch*. The loſs was computed at two millions of crowns. This ſame place had been taken by the *Engliſh* in 1594.

Attack'd by the Dutch 1630.

Ogilvy's America p. iii. ch. 7.

8. The next capitania is that of *Itamaraca*, an iſland near the coaſt, three leagues long, and two broad, in 7 deg. and a half lat. whoſe juriſdiction reaches for about 30 leagues along the coaſt, and is one of the moſt ancient colonies in *Brazil*. The chief city is *the Conception*. Here the *French* were ſettled at firſt, but were driven out by the *Portugueſes* in 1585. Itamaraca.

9. *Paraiba* lies north of *Itamaraca*, and takes its name from the river, as many provinces in *America* do. Here is tobacco and ſugar; with fowl and fruits. The chief town has the ſame name, but was call'd *Fredrickſtadt* by the *Dutch*. It has a good harbour, defended by four forts. Paraiba.

10. *Rio Grande*, from a large river which enter the ſea in about 5 deg. and a half, is the next captain-ſhip. Here the coaſt begins to turn weſtward. The chief town of the *Portugueſes* here is *Natal*. They have great quantities of ſugar in this diſtrict. Rio Grande.

11. *Siara* lies weſt from *Rio Grande*; it has a river and a city of the ſame name, and abounds with cotton, chriſtal, precious ſtones, ſugar, ſalt, and wood of ſeveral ſorts. Siara.

12. *Maragnon* runs almoſt parallel with the equinoctial line in 3 deg. ſ. lat. and abounds with ſafron, cotton, lacque, balm, tobacco, and *Brazil* wood and ſugar. Great quantity of ambergreaſe is ſometimes found on this coaſt. At the mouth of the river *Maragnon* is the iſland *Igarupee* or *Tabicoru* 45 leagues round, the chief town of which is S. *Philip*, the ſee of a biſhop ſuffragan of S. *Salvador*. Maragnon.

13. *Para* is the laſt captain-ſhip of *Brazil*, and reaches to the *Amazon* river. It has two chief towns belonging to the *Portugueſes*, *viz.* 1. *Para* or *Belem*, built on a branch of the *Amazon* river, and 2. *Commuta* on the ſame river, 18 leagues farther ſouth. Para.

Altho' the inland country is inhabited by the *Indians*, yet the *Portugueſes* have many farms, where they employ ſuch of the natives as they can ſubdue; and if they could prevent their running away they might be very rich; but as it is, they live in plenty and eaſe; the whole country

country being fruitful and healthy; and altho' it be ſo near the line that there is little difference between the nights and days throughout the year, yet it is a temperate climate, occaſion'd by the breezes and rains which they are frequently refreſh'd with: and it is obſerv'd that people live to a great age in *Brazil*.

Thus we have gone thro' the *Spaniſh* diſcoveries both in north and ſouth *America*, and have given as full a hiſtory of the firſt planting of them as is conſiſtent with our deſign. We ſhall therefore proceed to

CHAP. VI.

ENGLISH *Voyages to, and Plantations in* AMERICA.

In treating this ſubject, we ſhall follow the ſame method, as near as we can, that we have done in the *Spaniſh* diſcoveries; by giving an account of the expeditions of the different adventurers, according to the order of time; and when we have ſhew'd the ſeveral colonies planted in *America* by the *Engliſh*, we ſhall finiſh this chapter by ranging them in order as they ly in the map.

SECT. I.

Sir FRANCIS DRAKE's *Expedition.*

Purchas's Pilgrim Vol. i. b. 2.

ONE of the firſt *Engliſh* men (after *Gabot*'s expedition, formerly mention'd, in an *Engliſh* bottom) who ventur'd to *America*, was the renow'd Sir *Francis Drake*, who, for his bravery and conduct, both in his voyages round the globe, and in his encounters with the *Spaniards*, then at war with *England*, left a moſt glorious name to poſterity, and has ever been mention'd with due praiſe. In the year 1577, he ſet ſail with five ſhips, and only 164 perſons aboard, and holding his courſe ſouthward, on the 27th of *Dec.* he arriv'd at the iſland *Magador*, on the coaſt of *Barbary* about 24 deg. n. lat. where the natives ſeem'd at firſt inclin'd to trade with them, but having got one of the *Engliſh* aſhore, they carry'd him off, and came no more near the ſhips. Setting out from that place, the admiral coaſted along, and took ſome *Spaniſh* caravals upon that coaſt. On the 17th of *January*, he took a ſhip at anchor within *Cape Blanco*, and having ſtaid there ſome days, he ſtood over to the *Cape Verd* iſlands, and landed on the *Mayo*, where they found excellent ripe grapes, as alſo Goats, hens, and ſalt, with great ſtore of cocoa nuts as big as a man's head. Having travers'd a good part of the iſland, but the inhabitants keeping out of their way, he went aboard, and ſet ſail *Jan.* 21, and paſſing by S. *Jago*, anothor of *Cape Verd* iſlands, they took a *Portugueſe* ſhip laden with wine, which

Sir Francis Drake ſets out from Plimouth.

Comes to Cape Verb iſlands.

the *Engliſh* took out and Sir *Francis* diſmiſs'd the ſhip, only keeping the pilot.

Leaving thoſe iſlands, they bent their courſe ſouthwards, towards the line, but being beclam'd, ſometimes for many days together, and at other times being toſs'd with rough ſtorms, they were 54 days without ſight of land. At laſt they came *April* the fifth upon the coaſt of *Brazil*, in eight degrees ſouth latitude, and were ſeparated by a ſtorm near cape S. *Auguſtin*; but came together again after it was over. They ſail'd along this coaſt to 36 deg. ſ. lat. and enter'd the *Rio della Plata*, but making no ſtay there, they went to ſea again, and held their courſe towards the ſtreights, ſtoping at ſome pleaſant iſlands, in 48 degrees, where they met with abundance of fowl and fiſh, eſpecially ſeals. The admiral going aſhore upon one of thoſe iſlands, the natives came dancing about him, and truck'd what they had, for things brought by the *Engliſh*; but they would take nothing out of their hands, ſo that they laid their goods, on the ground, and the natives took them up. Having ſtaid ſome days at port S. *Julian*, they ſet ſail again, and on the 20th of *Auguſt* came to the entry of the ſtreights.

And from thence to S. America.

There being nothing new, in the account of Sir *Francis*'s paſſing the *Magellanic* ſtreights, we ſhall only ſay, that he enter'd the ſouth ſea on the ſixth of *Sept.* and there was toſs'd by ſtorms which forc'd him to the ſouthward, where, upon the coaſt of *Terra del Fuogo*, he met with a good harbour which is call'd, in ſome maps, by his name, being in 55 deg. ſ. lat.

He paſſes the ſtreights of Magellan.

ſ. lat. In this ſtorm he miſs'd one of his ſhips, and believ'd ſhe was driven back into the ſtreights, and caſt away. But ſhe came ſafe to *England*.

Sir *Francis* ſetting ſail from thence, held his courſe northward, and arriv'd at the iſland of *Moha* or *Mocha*, oppoſite to the city of *Imperial* on the coaſt of *Chili* in 38 deg. This iſland was full of natives from the continent, who had taken ſhelter, in that iſland, from the cruelty and oppreſſion of the *Spaniards*. Theſe people, probably taking the *Engliſh* for *Spaniards*, fell upon ſome of them as they were filling their casks with water, and kill'd them. Sailing northward along the *Chili* coaſt, they met an *Indian* in a canoe, who thinking they were *Spaniards*, told them, (I ſuppoſe in *Spaniſh*) that there was a large ſhip from *Peru* in the bay of S. *Jago*; and this *Indian* having been well treated by the admiral, went along with him to the place; they found the ſhip at port *Valpariſo*. There were only eight *Spaniards* and three negroes aboard; ſo that they boarded her without any oppoſition. One of the *Spaniards*, finding that they began to put his comrades under hatches, with ſome marks of hoſtility; leap'd over-board, and ſwiming aſhore, allarm'd the *Spaniards*, who liv'd at S. *Jago*; ſo that when Sir *Francis* landed, and march'd to that town, he found it abandon'd; and having pillag'd it, not even ſparing the chappel, he went aboard, and releas'd his priſoners, except one whom he kept for a pilot. In the ſhip, and at S. *Jago* the booty conſiſted of the value of 37000 *Spaniſh* ducats in the fineſt gold of *Baldivia*, beſides a great quantity of wine and cedar wood.

He pilleges St. Jago and takes a Spaniſh ſhip.

Holding on his courſe northward, he ſent ſome of his men aſhore at *Coquimbo* to water; but 500 *Spaniards* coming to attack this party, which only conſiſted of 14, they kill'd one of the *Engliſh*, and the reſt got back to the boat, and ſo eſcap'd. The admiral ſent a ſtronger party aſhore to bury the man; which they did, but altho' the *Spaniards* hung out a white flag, in token of peace, the *Engliſh* would not truſt them, and therefore left the place. Going to water at another place upon the *Chili* coaſt, they found a *Spaniard* aſleep, and hard by him 13 bars of ſilver, valu'd at 4000 ducats, of which burthen the civil tars eas'd him, without diſturbing his repoſe. At another place they met a *Spaniard* and an *Indian*, driving eight *Peruvean* ſheep, laden with two leather bags each, (which held 50 pound weight of ſilver a piece,) The *Engliſh* led them to their boat, and unloaded the ſheep, allowing the *Spaniard* and his man to carry home the ſheep, without any farther diſturbance.

Coming now to the coaſt of *Peru*, they rifled three ſmall ſhips in the port of *Arica* in the province of *Los Charcas* in which they found 57 wedges of ſilver weighing 20 pounds a wedge; but *Arica* being a large town and well peopled, they made no attempt upon it. Proceeding from thence to *Lima*, he ſeiz'd 12 ſail of ſhips in that harbour, on the 13th of *Feb.* in which he found a cheſt full of rials of plate, and large quantities of ſilks and linnen: he carry'd the cheſt aboard his own ſhips, with as much of the other things as he thought fit. But the admiral had intelligence that the *Cacafuogo*, a very rich ſhip, had ſail'd from thence a few days before; and therefore, he made all the ſail he was able after her, promiſing a gold chain he wore, to the man that firſt diſcover'd her. In this purſuit they came up with another ſhip, which yielded them 80 pound weight of gold, and a fine gold crucifix, adorn'd with emeralds, beſides ropes and ſhip tackling of which ſhe had good ſtore, and ſerv'd the *Engliſh* in good ſtead.

Rifles 3 other ſhips at Arica, in Peru.

And 12 more at Lima.

Having coaſted all along *Peru*, one afternoon about three o'clock, Mr. *John Drake* purchas'd the admiral's gold chain, by calling out the *Cacafuogo*, as indeed it prov'd; they had her in chace for three hours, near cape S. *Francis* in one deg. n. lat. About ſix o'clock in the evening, they came up with her, and with one of three ſhots fir'd at her, they brought down her miſen maſt, and immediately boarded and carry'd her. Nor was the admiral diſappointed in his expectation of her riches; for upon ſearch, he found 13 cheſts of plate in rials; eighty pound weight of gold, and 26 tun of ſilver in bars, beſides a good quantity of Jewels. The admiral after having taken the treaſure diſmis'd the ſhip. Soon after he took another, laden with linnen and white china, which he likewiſe pillag'd and releas'd. In this laſt he got a faulcon of gold with a large emerald in the breaſt of it.

He takes the rich ſhip Cacofuogo.

The admiral being now ſatisfy'd both with the riches he had gotten, and with the revenge he had taken upon the enemies of his country, reſolv'd to leave the further purſuit of the *Spaniards*, and return home to give the queen an account of the diſcoveries he had made in *America*, but being apprehenſive that the *Spaniards* might have ſent accounts to their ſeveral colonies on the north ſea to ſend a ſufficient force to ly in wait for him as he paſt the ſtreights of *Magellan*, he determin'd to ſail about by the *Molucca*'s, and ſo homeward by the cape of *Good Hope*. But before he left *America*, he landed at *Guatuaco* in *New Spain*, where coming unexpectedly into the town, he interrupted

rupted the judges, examining the cauſe of an intended treaſon of ſome negroes, who had conſpir'd to burn the town; he carry'd both the judges and priſoners aboard, and having ſent his people to pillage the town, where, among other things, they found a pot about the bigneſs of a buſhel, full of rials of plate, and took a gentleman making his eſcape with many jewels and a gold chain; he diſmis'd the judges and negroes, as alſo the *Portugueſe* pilot, whom he had taken at *Cape Verd*.

And now he ſet about his intended voyage to the *Molucca's*, and in order to it, finding himſelf becalm'd, he reſolv'd to ſail farther north for a fair wind, and continu'd in this courſe from the 16th of *April* to the 3d of *June*; at which time he found himſelf in 43 deg. n. lat. but ſo cold, that his men were ſcarce able to work; he therefore, at their requeſt, return'd to the latitude of 38, and ſet in for the land, and having found a convenient bay, he came to an anchor there. The natives came in crowds to the ſhore, and ſent a preſent of feathers, and cawls of net work to the admiral; for which he return'd them clothes, with which they ſeem'd much pleas'd. The men were naked, and the women had skirts made of bulruſhes down to their knees, and deer's skin about their ſhoulders. Many *Indians* flock'd from the neighbouring parts to gaze at the admiral's ſhip, and being told by the inhabitants with how much courteſy they had been us'd, the others made no ſcruple of going aboard in canoes, carrying preſents of feathers and tobacco with them.

After they had been there ſome days, the king of the country came in perſon to the ſhore; and ſent two ambaſſadors to notify his arrival. The admiral had landed before this happen'd, and had made an entrenchment for fear of accidents. When the ambaſſadors were admitted, they made their ſalutations in the moſt ſubmiſſive manner, and one of them made a ſpeech of half an hour, of which very little, if any part of it, was underſtood; but the admiral, believing by their ſigns, that they wanted ſome token of peace and friendſhip, gave them a preſent for the king, with which they return'd to their maſter very well ſatisfy'd. Soon after the king appear'd, one walking before him with a mace, to which hung two crowns, of different ſizes, with three chains of great length, of a kind of network, artificially wrought with feathers of different colours. The king was a perſon of a graceful appearance, and had a guard on each ſide of him, all clad with rabbets skins, and after them, the common people naked. Every one, from the king, to the very children, brought ſomething by way of preſent.

Sir *Francis* had drawn up his men under their arms within his entrenchment, where they made a glorious appearance to thoſe people, who had never ſeen *Europeans* before, for this was on the weſt coaſt of *California* which the *Engliſh*, at that time, took to be part of the continent of *America*, but is ſince found to be an iſland. As the king drew near the *Engliſh* quarters, the mace bearer began a ſong, and danced to his own muſick, and ſoon after the king and his guards did the ſame, and afterwards the multitude who follow'd him; only the women danced to the men's muſick, but did not ſing. After this manner, they enter'd the admiral's entrenchment, the guard opening to the right and left, by his order, to let them in; where having danc'd a while, the king made a ſign to the admiral to ſit down, and made him a long ſpeech; after which, he roſe up, and taking one of the crowns, he put it upon Sir *Francis's* head, and laid the ſcepter or mace at his feet, by which marks of ſubmiſſion he gave up his country to the admiral. Sir *Francis* ſaid aloud to his men, that he took the crown in the name of his miſtreſs queen *Elizabeth*, and took poſſeſſion of that country for her majeſty's uſe. After this ſurrender of the kingdom, they began a new ſong and dance; and, which was very diſagreeable to the *Engliſh*, they began to offer ſacrifice to them, tearing their own fleſh, till with much ado, they were made to underſtand that the hiob or king (as they call'd the admiral) was diſpleas'd with it; pointing upwards to them, to ſhew that no worſhip was due but to GOD. The *Engliſh* ſtaid ſeveral days in this country, (which he call'd *New Albion*, in honour of *England* which was once ſo call'd,) and went ſeveral progreſſes into the inland parts of it, finding in many places ſigns of gold or ſilver.

The iſland of California.

Sir Francis Drake accepts the crown in queen Elizabeth's name.

Before he left this country, he ſet up a wooden pillar with a plate fix'd to it, on which was engrav'd queen *Elizabeth's* name, with the year and day of his having taken poſſeſſion of *New Albion*; and under the plate, he fix'd a ſilver ſix pence of *Engliſh* money; and another plate under that with his own name upon it. The people of this country were conſtantly at the *Engliſh* quarters, and were ſome times preſent at their prayers; but there was no expectation of converting them, ſince they did not underſtand their language; and probably the admiral and his chaplain had no notion of baptiſing infidels, unleſs they could firſt inſtruct them what was to be believ'd in order to make them chriſtians.

But the admiral, being eager to proſecute his voyage, took leave of the king and the natives, to their great ſorrow; and

and ſetting ſail in a ſouth weſt courſe, about the middle of *Oct.* he came up with the *Ladrones* iſlands in 9 or 10 deg. and making but ſmall ſtop there paſſing by the new *Philippina* iſles, he arriv'd at the *Molucco* iſlands *Nov.* 14, deſigning to make for *Tidore*. But the king of *Ternate*'s vice roy for *Mutir* coming aboard, as they paſt by that iſland, advis'd the admiral to go to *Ternate*, where his maſter would receive him with pleaſure, if he would not go to *Tidore*; but if he went thither, there was no admittance afterwards at *Ternate*, becauſe his maſter was a mortal enemy to the *Portugueſes*. The admiral took his advice, and ſteering for *Ternate*, caſt anchor before that iſland and ſent a meſſenger to the king, with a preſent of a velvet cloak, deſiring leave to traffick in his dominions.

He comes to the Ladrones *iſlands.*

And from thence to Ternate.

In the mean time, the vice roy having been with the king the night before, had given him ſo favourable an account of the *Engliſh*, that he treated the admiral's meſſengers civilly, and granted what he deſir'd; and ſoon afterwards deſigning to go himſelf to ſee the admiral's ſhip, he ſent four large canoes in which were the perſons of greateſt quality about court, to conduct the ſhip to a ſafer port. Thoſe canoes were cover'd from head to ſtern with a large awning of perſum'd mats, ſupported with reeds; under which the nobility ſat; and without them, their ſervants all cloth'd in white; the ſoldiers well arm'd in ranks without the ſervants; the rowers, of which there were 80 to each canoe, ſat on benches, in galleries made all along the ſides of the canoe, and rais'd ſome ſteps above one another, and jetting out from the body of the canoe. Theſe canoes rowing quite round the ſhip ſaluted the admiral with much civility, telling him that the king had ſent them to ſhew them the way to a ſafer ſtation, and that he propos'd to come himſelf to pay him a viſit, the next day; the admiral receiv'd his compliment with great civility, and treated thoſe gentlemen in the beſt manner he could. But the next day, the king not coming as he had promis'd, but ſending an excuſe by his brother, and an invitation to the admiral, he, taking umbrage at this, refus'd to go aſhore, but ſent ſome of his chief officers, and kept the vice roy aboard by way of hoſtage, and ſent handſome preſents to the king and his principal courteours. The *Engliſh* officers were receiv'd, at their landing, by another brother of the king's, and conducted to the palace, where were aſſembled above 1000 perſons of diſtinction, 60 of whom were the lords of the council, all ſedate grave men, and four envoys from *Conſtantinople*. In a little time the king came in under a canopy, all embroider'd with gold, guarded with 12 launces. His habit was a looſe robe of cloth of gold, his legs bare, but his ſhoes of cordovan; a chain of gold about his neck, and his turbant wreath'd about with ringlets of gold; and on his fingers ſeveral jewels of great value. A page ſtood at the right ſide of the throne where he ſate, with an embroider'd fan of above two foot broad, ſet with rich *Saphirs*, and fix'd to a poll of four foot long, with which he fan'd his majeſty.

Large canoes of a new make.

The king of Ternate.

He receiv'd the *Engliſh* officers with a good grace, and having heard their meſſage, agreed to trade with the admiral, and expreſs'd great regard for the queen of *England*. After this audience they were conducted back to their boat by one of his council, and the admiral having ſtaid ſome time there, left the iſland in good correſpondence with the king, who was a mahometan, and one of the greateſt princes of all the *Molucca* iſlands, having 70 other iſlands under his dominion. Sir *Francis* ſtop'd 26 days at a little iſland ſouth of *Celebes*, where the trees were high without any boughs except at the tops; and were beautiful at night with a vaſt number of *Luccioletti* or ſhining flies ſo common in *Italy*, as we obſerv'd before.* Here likewiſe were large bats, and cray fiſh ſo large as one might be a dinner for four people.

* P. 70.

Sailing from thence thro' a number of iſlands almoſt ſouth, they had like to have been loſt; for upon the 9th of *Jan.* 1579, they came foul of a rock where they ſtuck from eight at night till four o'clock afternoon the next day; when having lighten'd the ſhip, by taking out ſome of their cannon, and other goods which were eaſieſt come at, laying them by upon the rock, it pleas'd GOD that the wind chang'd, and with ſtout working to which the admiral, with great chearfulneſs and courage, prompted them, they got clear of the danger; and holding more eaſterly, to avoid the ſhoals, they came to a fruitful iſland, which our author calls *Baratene*, but in the maps *Bouton*, on the ſouth eaſt of *Celebes*, where they found people very agreeable both in body and mind; the men were naked, but the women cover'd from the waſte down to their feet, with bracelets of bone, and ſome of braſs or horn upon their arms, of which ſome had eight or 10 at once, of two ounces a piece.

The admiral ſhip in danger.

Bouton *iſlands.*

This iſland produces gold, ſilver, copper, ſulphur, nutmegs, ginger, long pepper, limons, and ſeveral other fruits. And is 25 leagues long, and ten broad. Here the *Engliſh* liv'd better than they had done any where ſince their ſetting firſt out of *England*, except at *Ternate*. But the admiral, being bent upon his

voyage

voyage home, chang'd his courſe, and in a weſterly run, arriv'd at *Java Major*, where they met with courteous entertainment. The women there were not ſo recluſe as at the *Molucca's*, and the men carry their civility to ſtrangers ſo far as to offer them bedfellows. This perhaps might have been the reaſon of their having the pox among them, which they cur'd by ſitting in the ſun, and ſweating out the infection, as ſome quacks in *Italy* cure that diſeaſe, by putting the patient in a glaſs caſe, between two fires, till they are almoſt roaſted.

The admiral arrives upon the coaſt of Guinea.

But the admiral being informed that ſome large ſhips lay off this iſland, and being uncertain who they were, weigh'd anchor, and ſteer'd directly for the cape of *Good Hope*; nor did he ſtop there, but ſail'd to the coaſt of *Guinea*, not touching land till he came to *Serra Leona*. This courſe was ſo pleaſant, that the *Engliſh* tax'd the *Portugueſes* with lying by deſign, when they repreſented this voyage about the cape of *Good Hope* as a dangerous one. It was the 22d of *July* when they arriv'd at *Serra Leona*; where ſtaying only two days, they ſet ſail for *England*, where they landed on the 3d of *Nov.* 1580, having been three years abroad. Thus did this brave *Engliſh* man ſhew his country men the way to join *Europe*, *Aſia*, *Africa*, and *America* together.

SECT. II.

The Expedition of THO. CANDISH, Eſq;

THERE being a good deal of repetition of the ſame things in the accounts of theſe voyages, which coming together, I cannot believe they would be diverting to the reader; I ſhall therefore take the liberty to abridge this and other voyages, which follow one another, leaving out ſuch paſſages in any of them as have occur'd in the preceding expeditions. For altho' many things were proper to be told, by thoſe who wrote journals, independent of any other relation, and detach'd from any other writing, yet when one writes an account of two or more journeys or voyages to the ſame place, it is irkſome to repeat the ſame things. And therefore I hope this will ſerve for an apology, if this voyage, and perhaps ſome others, are more ſuccinctly related here than in other books. But we ſhall be careful to paſs by nothing that is material and worthy of obſervation.

Purchas *ubi ſup.*

In the year 1586, Mr. *Candiſh* of *Trimly* in the county of *Suffolk*, being a gentleman of a good eſtate, and bred to the ſea, and having a deſire to purſue the track of the renowned Sir *Francis Drake*, fitted out three ſmall ſhips at his own charge, his own ſhip *the Deſire* was no more than 120 tun; *the Content* 60, and *the Hugh Gallant* 40. The perſons aboard 123; with proviſions for two years. With this ſmall fleet, and the queen's commiſſion, he ſet ſail from *Plymouth*, *July* 21, and arriv'd at *Serra Leona Aug.* 25 where, the negro's having kill'd one of his men with a poiſon'd arrow, he burnt a town of theirs by way of reprizal, and ſtaying but a ſhort time there, he bent his courſe towards *South America*, and without any occurrence different from what has been related of others taking that courſe, in the end of *October* he came upon the coaſt of *Brazil*, were he landed and built a pinace, and took in freſh water. And ſailing ſouthward, in *Jan.* 1586-7 they enter'd the ſtreights of *Magellan*, and the ſecond day, ſaw a *Spaniard* upon the ſhore on the north ſide of the ſtreights, whom they took aboard. His name was *Hernando*, and he ſaid he was one of 23 *Spaniards* ſtill alive out of 400, who had come thither in order to fortify a narrow place that commanded the paſſage, to hinder all other nations from paſſing into the ſouth ſea. But having built a town there, three years before that, under the title of *Philip's Town* with four forts, guarded with as many cannon; they had ſtaid there two years, and not been able to raiſe any ſeeds or plants, but living upon muſſels and limpets, and the natives every now and then deſtroying ſuch as went abroad to look for food; they had been forced to abandon the town, being reduced to 23, two of which were women, who intended to travel towards the river *Plata*. This *Spaniard* the admiral took along with him, not having ſeen the other 22, and in three days ſailing up the ſtreights they ſaw the forts of *Philip's Town*, and going aſhore, dug up the cannon which the *Spaniard* told them he and his company had buried in the earth at their leaving the place. The *Engliſh* wooded and water'd there, and *Candiſh* call'd it *Port Famine*.

Candiſh *arrives at the ſtreights.*

Philip's Town.

Port Famine.

From thence they proceeded to the ſouthmoſt point of all the ſtreights, which, for the ſtormy weather and dangerous coaſt, they call'd *Cape Froward*. Having doubled that cape, they went on to a fair bay about 15 leagues weſtward, to which Mr. *Candiſh* gave the name of *Elizabeth's* bay. Some leagues farther they ſaw a fine freſh river, into which the admiral ſail'd ſome miles in the pinnace, upon the banks were many ſavages, who endeavour'd to decoy them aſhore, but *Candiſh* ordering his men to fire upon them, they fled, when they ſaw ſeveral

of their companions kill'd by the ſhots. Going back to their ſhips, they held on their courſe towards the ſouth ſea, which they enter'd the 24th of *Feb.* having been detain'd almoſt a month in one place by weſterly winds. After ſome foul weather which kept his ſmall fleet diſpers'd for ſome days, having met again, they came to the coaſt of *Arauco*, thoſe *Savage* or rather *brave Indians* who never would ſubmit to the *Spaniſh* yoke, and who by a new ſtratagem, which ſhew'd good ſenſe as well as great courage, had got the better of *Valdivia*, the beſt ſoldier the *Spaniards* had in *Chili*, as has been related, in its place. On the 16th of *March*, they came to an anchor near the iſland S. *Maria*, and *Candiſh* went aſhore with 80 men well arm'd, where the natives, being ſubject to the *Spaniards*, came to him, and welcom'd him to the iſland, taking them for *Spaniards*. Here they provided themſelves, out of the *Spaniards* ſtore houſes, with wheat and barley, hoggs and hens; and taking the principal *Indians* aboard, they entertain'd them handſomly; and in two days left the iſland.

Upon the laſt day of *March*, they came to an anchor in the bay of *Quintero* in 33 deg. lat. where *Hernando* made his eſcape, and alarm'd the *Spaniſh* colony, (probably that of S. *Jago*) ſo that 60 of *Candiſh*'s men going aſhore, and having march'd 10 miles into the country, without ſeeing any enemy, at their return, ſaw about 200 horſe, but keeping in good order, the *Spaniards* had not courage to attack them. But as another party were buſy the next morning, filling their casks with water, the ſame body of horſe fell unexpectedly upon them, and, before they could get to their arms, they kill'd or took 12 of the *Engliſh*; but about 15 more, putting themſelves in order, made head againſt the horſe, and killing above 20 of 'em, made them retire. And afterwards the *Engliſh*, being more upon their guard, ſtaid in that bay, and water'd frequently in ſight of the enemy without any oppoſition.

A skirmiſh with the Spaniards.

They left this bay after having ſtaid ſome days, and coaſted along *Peru* till they came to *Paita*, taking ſeveral ſmall barks as they cruis'd, in which they found ſome ſilver, which they took, and ſeveral other goods, ſome of which they carry'd off, and burn'd the reſt with the ſhips, ſetting the people aſhore. Landing at *Paita*, they burnt the town after they had pillag'd it; the people having fled to the mountains, they purſu'd them, and and took a good deal of ſilver, which had been convey'd away. Going afterwards to the iſland of *Puna*, the ſame place where the firſt diſcoverers of *Peru* landed, as has been ſaid, they ſunk a large ſhip, and going a ſhore to the cacique's houſe who was an *Indian*, but marry'd to a *Spaniſh* woman, they had intelligence that he had ſent all his beſt furniture together with the tackling of ſeveral ſhips to a little iſland hard by, for ſecurity againſt enemies, *Candiſh* went thither, and brought off all that he found worth his while. He ſtaid in this iſland, taking up his quarters in the cacique's houſe, till he refitted his ſhips; but the cacique having privately ſent to the continent, above 100 *Spaniards* came to the iſland, which being join'd with 200 *Indians* fell upon the *Engliſh*, of whom they kill'd about a dozen, but loſt about 46 *Spaniards* beſides *Indians*, and were glad to retire. After this the *Engliſh* burn'd the town conſiſting of 300 houſes, with the church, and ſpoil'd the gardens and orchards, together with four large ſhips that were building there; and then thinking themſelves ſufficiently reveng'd of the *Spaniards*, they ſet ſail, and continu'd their voyage.

Paita *burnt.*

As alſo the chief town in the iſland of Puna.

Holding northward towards the coaſt of *Panama* they came in ſight of land upon the firſt of *July*, but proceeding ſtill farther north, they took a ſhip of 120 tun, wherein was one *Michael Sancius* a native of *Marſeilles*, whom *Candiſh* kept as underſtanding the ſouth ſea coaſt the beſt of any man that ſail'd in it. This man gave the admiral intelligence of the S. *Anna*, a great ſhip coming from the *Philippine* iſlands. Proceeding along the coaſt, they took ſeveral ſhips, and burnt ſome ſmall towns, not material to be nam'd, not being in our maps. On the 14th of *October*, they fell in with the cape of S. *Lucar*, on the ſouth point of *California*, being juſt under the tropic of *Cancer*. Upon the 4th of *Nov.* they ſpy'd the S. *Anna*, whom they had been ſtill looking out for, from the time that *Sancius* had mention'd her. All hands were aloft immediately, and every thing ready for the attack. The admiral order'd to give her chace, which they did for four hours; and coming up with her in the afternoon, their firſt ſalutation was a broadſide from *the Deſire*, and a volley of ſmall ſhot from both, and attempting to board her, they found all things ſo diſpos'd, (the *Spaniard* having twice as many men aboard as were in both the *Engliſh* ſhips) that with the loſs of two or three of the *Engliſh*, they were glad to retire to their own ſhips; but the *Engliſh* ſhips being much better made for ſailing, and their ſeamen more expert at their trade than the *Spaniards*, the *Engliſh* admiral gave orders for tacking about, and giving another broadſide and

At California.

Candiſh *attacks the S.* Anna.

a volley of ſmall ſhot, which was accordingly done, and their ſhips lying ſnug upon the water, they rak'd her through and through, and ſome of their largeſt tire had her under water; ſo that upon the third broadſide, they hung out a flag of truce, offering to yield the ſhip and cargo, upon condition their lives ſhould be ſpar'd, to which the admiral readily agreed, having no intention to kill any of them but ſuch as refus'd to yield. He therefore requir'd that they ſhould ſtrike their top ſail, and come a board his ſhip in their boat, both which they quickly perform'd.

And takes her.

Thus the S. *Anna*, the *Spaniſh* admiral in the ſouth ſea, a ſhip of 700 tun and well man'd (for there were about 190 remaining after the action, beſides a great many kill'd during the fight) became a prize to two little ſhips, in both which there were not above 70 men, but they were ſuch as underſtood the working of a ſhip to great perfection.

When the captain, the chief merchant, and the pilot came aboard the *Deſire*, they told the admiral that they had in their ſhip, 122,000 pieces of eight in gold, beſides great quantity of rich ſilks, ſatins, damasks, muſk and ſpices, with good ſtore of proviſions. *Candiſh* taking out the gold, and ſuch other of the goods as he could ſtow in his own ſhips, ſet the *Spaniards* aſhore, at their own deſire, at a place in *California* which they call'd *Puerto Seguro*, and gave them the ſails of their own ſhip for tents, and ſuch other things as were neceſſary for them; good ſtore of wine and proviſions; boards to make them a bark, and likewiſe muskets and other arms to defend themſelves againſt any *Indians* that ſhould attack them. The place where they landed was well ſtor'd with fowl, hares and rabbets, and a pleaſant river run thro' it wherein was plenty of fiſh. This done, the admiral ſet the *Spaniſh* ſhip a fire, and taking one *Spaniſh* pilot along with him, who was well acquainted with the eaſtern iſles; and a *Portugueſe* who had been often upon the coaſt of *Aſia*, together with two young *Japeneſes*, and three youths belonging to the *Manilla* iſlands, alſo called *Luſſon*, among the *Philippines*; he ſet ſail from *California* on the 19th of *Nov.* leaving the *Content* to follow him, (whoſe crew had grumbled much at the admiral's diſtribution of the prizes;) but they never ſaw her more.

Candiſh arrives at the Ladrones.

Upon the 3d of *Jan.* 1587-8 *the deſire* had ſight of the iſland *Guana*, one of the *Ladrones* in about 13 deg. lat. and as ſoon as they came towards the ſhore, above 60 canoes full of the natives came about the ſhip, offering fiſh, roots and fruit to barter for ſome things the *Engliſh* had, ſuch as pieces of old iron, fiſhing hooks, and lines; but at laſt they became ſo troubleſome that *Candiſh* was forc'd to order his men to fire upon them, after which they retir'd. From hence, they ſail'd to the *Philippines*; and came up with *Luſſon* or *Manilla*, where lived about 500 *Spaniards*. It was a town of great trade, and had commerce with *Aquapulco* in *New Spain* on the one ſide, and with *China* on the other. They had plenty of gold which the natives exchanged for equal weight of ſilver. In a bay near one of thoſe iſlands, the admiral diſcovering a plot carrying on by his *Spaniſh* pilot, to betray the ſhip to his countrymen, he caus'd him to be hang'd, and continu'd trading with the natives, for proviſions which they brought aboard and got linnen for them.

And from thence to the Philippines.

Candiſh having cruis'd about the *Philippine* iſlands, brought the principal perſons of *Capul*, and many other iſles to be his tributaries, and having call'd them all aboard him, he told them, "That he "was an enemy to the *Spaniards*, and "that his deſign was quite different from "theirs; that he would make none of "them ſlaves, but friends, and would "protect them from the *Spaniards*, and "all who endeavour'd to deprive them "of their liberty, provided they would "trade honeſtly with the *Engliſh*." In token of which he pay'd them for all the proviſions they had brought him by way of tribute, which pleas'd them ſo much that they promis'd to unite their force with him, or with any of his countrymen that ſhould attack the *Spaniards* in thoſe iſlands. After this he took his leave of them, to their great mortification: and paſſing between *Peny* and the *Negro*'s iſlands, in 9 deg. n. lat. He ſent his boat aſhore upon one of the iſlands adjacent, (in which there was a garriſon of *Spaniards*) with a *Spaniſh* priſoner whom he releas'd, and bid him tell the commanding officer *to provide good ſtore of gold againſt his return from* England, *becauſe he deſign'd to try whether it was ſtandart by the* Engliſh *ſcales*.

Paſſing between a multitude of ſmall iſlands, about the beginning of *March* they came to an anchor on the ſouth weſt coaſt of *Java Major*; and meeting with ſome of the natives fiſhing, *Candiſh* ſent a meſſage to the king of the iſland, deſiring leave to trade for proviſions; ſoon after which, many canoes came out with victuals of ſeveral kinds. Here they were told, by a *Portugueſe* who came aboard them, that the king was the moſt abſolute prince in the world, and the people ſo great ſlaves, that if he commanded one of his ſubjects to ſtrike a dagger to his own heart, he would do it. That the king had

Java iſland.

A barbareus cuſtom there.

had 100 wives, who liv'd well during the king's life; but as ſoon as he dy'd, they were oblig'd to go in a tragical proceſſion, and to ſtab themſelves to the heart, in order to go and ſerve their deceas'd lord in the other world.

Having ſtaid ſome days near *Java*, they ſet ſail for the cape of *Good Hope*, which at laſt they reach'd in nine weeks, being then about the middle of *May*; from whence ſteering north weſt, about the 10th of *June* they arriv'd at S. *Helena* iſland in 16 deg. ſ. lat. and caſting anchor on the north weſt ſide of the iſland they went aſhore, and found a ſweet country, beautifully planted and well ſtor'd with ſeveral ſorts of game, and particularly partridges as big as hens. Here they ſtaid ten days, and careen'd their ſhip, and having provided wood, water, and other neceſſaries, they proceeded in their voyage for *England*; and, having paſt the *Azores* about the 20th of *Aug.* they met with a *Flemiſh* ſhip *Sept.* 3, which gave them intelligence of the defeat of the *Spaniſh Armada*, to their great joy; and ſix days after, having eſcap'd the danger of a great ſtorm, they arriv'd at *Plymouth* from whence they had ſet out two years and three months before.

S. Helena iſland.

They arrive in England.

SECT. III.

The ſeveral Voyages of the EARL *of* CUMBERLAND.

1ſt voyage in 1586.

THE ſame year that *Candiſh* ſet out from *Plymouth* as has been related in the preceeding ſection, the *Earl* of *Cumberland* fitted out three ſhips and a tender, in which were about 240 men, under the command of capt. *Widrington*, with orders to follow the courſe chalk'd out by Sir *Francis Drake*. But altho' they went to the river of *La Plata*, and took ſome prizes in their way going and coming, in which they got many cannon, ſome wine, and a great number of beads and religious pictures, which they ſet no value upon; yet a miſunderſtanding among themſelves, occaſion'd their return home, without doing any thing more than landing in *Brazil*, and taking four *Portugueſe* ſhips out of the bay of *All Saints* notwithſtanding the enemy's cannon.

2d voyage 1588.

The earl vex'd at this diſappointment, reſolv'd to renew the attempt and to go himſelf upon the expedition: and having done good ſervice in the defeat of the *Spaniſh Armada*, the queen gave countenance to his undertaking and gave him the *Golden Lion* for his admiral ſhip. But neither did this expedition ſucceed; ſtorms and contrary winds render'd it fruitleſs, and one *Spaniſh* merchant ſhip, which they took in the narrow ſeas, was all they had for a conſiderable expence his lordſhip had been at in the voyage.

3d voyage 1589.

But the earl, not giving over his deſign for theſe diſappointments, ſet ſail again, on board the *Victory* man of war, commanded under him by capt. *Liſter*, having three ſmall ſhips beſides in his fleet, with 400 men. In a few days after they had ſail'd from *Plymouth*, they took ſome *French* ſhips laden with fiſh from *Newfoundland*; and ſoon after, ſome *Dutch* veſſels, after ſome reſiſtance. Going to the *Azores* in *Auguſt*, under *Spaniſh* colours, his lordſhip took four ſhips out of the road at night, going himſelf in his pinnance, and manning all the boats they had to bring off the ſhips after they had cut their cables. Three of thoſe ſhips were laden with wine and oyl, and the fourth with cloth, ſilks, and taffeta's beſides *Madera* wine. In the *Fayal* road they found ſeveral ſhips at anchor, and manning their boats, the *Engliſh* took them in broad day, altho' under the protection of the cannon from the fort. And the earl, not contented with the ſhips, attack'd the town, and took it without any oppoſition, the garriſon having left it upon the firſt fire. The earl ſet a guard upon the great church and ſome convents, to prevent any harm being done to them; and the people of the place having ranſom'd them at 2,000 ducats they were reſtor'd untouch'd. But it was a great mortification to the *Engliſh* to have juſt ſeen the plate fleet ſteering into the harbour at *Angra*, the metropolis of *Tercera*, where they were too well guarded by the fort and caſtle to be attack'd by the ſmall fleet which they had. But having taken ſome other prizes, which he ſent to *England*. The admiral ſhip having been toſs'd at ſea, till they were reduc'd to three ſpoonfuls of vinegar a day, in which hardſhip the earl far'd no better than his men, he was forc'd to return, having refreſh'd his men in *Ireland*, after they had been almoſt ſtarv'd at ſea.

In the year 1591, another voyage was attempted, but with worſe ſucceſs than others; for, having taken two rich *Spaniſh* ſhips, they were retaken by the *Spaniards*, and all the *Engliſh* which were on board them made priſoners. 4th voyage 1591.

The fifth voyage undertaken by this noble earl, altho' he was not aboard himſelf, got ſome rich *Portugueſe* prizes, but notwithſtanding that his lordſhip was at all the charge of the voyages made in his name, yet moſt of this fleet being queen's ſhips, the dividing the treaſure was left to her, who, inſtead of a million, which juſtly belong'd to the earl, graci- 5th voyage 1592.

ouſly

ously beſtow'd him 36,000 *l.* with which he was forced to be contented.

6th voyage 1593. The year following, the earl ſet out with four ſhips; (for this ſeem'd to be a privateering time among the maritim powers) and, upon his firſt going out, took too rich prizes from the *French*; but, being ſeiz'd with a deſperate fit of ſickneſs, he was forced to return home, with the *Golden Lion*, leaving the *Anthony*, the *Pilgrim*, and the *Diſcovery* to proſecute the intended expedition to the *Weſt-Indies*. They arriv'd at S. *Lucia*, and holding a council of war, reſolv'd to attack the pearl fiſheries at the *Magarita* iſland.* In order to accompliſh this deſign, they lay by out of ſight all the day, and at night landed upon the iſland with 28 men, and having taken a *Spaniard* in a boat by himſelf, they oblig'd him, to ſave his life, by being their guide to the place where the fiſhery was carry'd on at that time; for the *Spaniards* ſhifted their place according to the plenty of oyſters about the iſland.

*Un. Tr. p. 27.

The Engliſh attack the pearl fiſhery at Margarita. In the firſt place which they attack'd, the *Spaniards* fled, and they found of pearls ready gather'd, to the value of about 2000 *l.* beſides other pillage. In the morning they went aboard their boats with all the oyſters the *Spaniards* had gather'd the night before, which were not yet open'd, and the pearls they found within them, were well worth their pains in opening them. After this they went back to their ſhips, and came down upon that part of the iſland next to the town of *Margarita*, which was three leagues from the ſea. But the *Spaniards*, who had been firſt attack'd, had given ſuch an allarm thro' the whole iſland, that all the pearls and other things of value were convey'd to the mountains, where the *Engliſh* were too few to purſue them: ſo that the beſt they could make of it was, to get the value of 2000 ducats in pearls, as a ranſom for ſome priſoners they had taken, and for their houſes and boats, which they threaten'd to burn if the ranſom were not ſent; and upon the receipt of it they left the iſland, diſappointed of their great expectation.

After this they coaſted along *Terra Firma*, and then ſtood over to *Hiſpaniola*, *Cuba* and *Jamaica*, and landing often upon thoſe iſlands, brought ſome places under contribution, but in effect did little ſervice. Going from thence back to the continent, in the bay of *Honduras*, they attack'd ſeven ſail of *Spaniards*, the leaſt of which was 180 tun, and after fighting a day and a night, the *Spaniards* deſerted their ſhips, and refuſing to ranſom them, the *Engliſh* burn'd ſix of them, after having put the moſt valuable things on board them, into the largeſt ſhip, whicy they mann'd and carry'd for *England*, where they arriv'd ſoon after.

7th, 8th, 9th and 10th voyages to little purpoſe. This noble earl fitted out four other fleets in 1594, 1595, and 1596. But little was perform'd except burning the beſt carrack of *Spain*, a ſhip of 2000 tun richly laden; after having kill'd, aboard her and another of 1500 tun, 1100 men at the expence of two *Engliſh* captains and ſeveral private men.

Having only touch'd ſlighly upon theſe 10 voyages, as of little importance, we ſhall enlarge upon the next, as containing things more worthy of obſervation.

11th voyage 1596. In the year 1596, the earl, who was a man of great abilities both in peace and war, but whoſe courage and indefatigable induſtry were not bleſs'd with that ſucceſs, with which other commanders of leſs merit had been attended, being ſtill bent upon doing ſomething conſiderable for the ſervice of his country, in the *Weſt-Indies*, provided a fleet of no leſs than 20 ſail, ſeveral of which were his own, and others hir'd at his charge; on board which were ſeveral perſons of diſtinction, particularly Sir *John Barkley* who was his lieutenant general.

With this fleet, the earl ſet ſail, and hearing of five rich carracks belonging to the king of *Spain*, which were expected home, he reſolv'd to ly in wait for them. But the report of his being at ſea with ſuch a fleet having been carry'd to the *Spaniſh* plantations, they had ſent intelligence to their plate fleet not to ſtir; ſo that the *Engliſh* ſaw the game they hunted for, lying in the bay of *Wiers*, under the protection of the caſtle of S. *Julian*, where were 100 pieces of cannon to defend the bay; and therefore knowing it would be impracticable to attack them there, he gave over thoughts of it, and, quitting that coaſt, made for the *Canaries*, and being inform'd that a rich marquis was governor of *Lancelota* and *Forteventura*, two of the *Canary* iſlands, the earl himſelf being ſick, he landed 600 of his beſt ſoldiers under the command of Sir *John Barkley*, upon the firſt of thoſe iſlands, where the marquis reſided.

The town was above ten miles from their landing place, and was ſo well ſecured againſt any attack that could have been made by a flying army, that the caſtle could have been defended by 20 men againſt 500. Notwithſtanding which, upon the firſt intelligence of the advance of the *Engliſh*, the marquis and his garriſon of 200 men abandon'd the town and caſtle, which the *Engliſh* took, and finding good wine there, they took ſo large a colation, that had the enemy had any intelligence, they might have return'd, and have cut all their throats: however no diſaſter happening, when they had ſlept

out their debauch, and taken what they could, which was no great matter, they return'd to their ſhips.

Their next deſign was upon the *Caribee* iſlands, and particularly *Dominica*, for which they bent their courſe. In their voyage thither, they paſt by *Teneriff*, famous for the high mountain in it, commonly call'd *The Peak of* Teneriff, whoſe top is cover'd with ſnow when it is at the warmeſt in the lower grounds. This iſland is commonly reckon'd the beginning of longitude; and is ſo fruitful of vines, that it was ſaid the king of *Spain* had 28,000 buts of canary from that one iſland yearly. After they paſt the tropic they met with rains that ſtunk of ſulphur, but not attended with any bad conſequence. Coming near the coaſt of *Dominica*, the *Indians* came out from the iſland, in their canoes to reconnoitre them, and, finding that they were neither *French* nor *Spaniards*, came aboard without any fear; and as ſoon as they had gone back to the iſland with a good account of the *Engliſh* civility, the natives came, in cluſters, to the fleet, bringing pine apples, plantanes, potatoes, and other fruits of the growth of the iſland.

The earl arrives at the Caribee.

On the north weſt ſide of this iſland, there is a fine bay, capable of holding a large fleet. Here the earl's fleet came to an anchor, and ſome of the *Engliſh*, who were ſick, went aſhore to a hot bath, near that place, where they ſoon recover'd. One of the captains went up a river, in his pinnace, to one of the *Indian* towns, where he was civilly entertain'd by the cacique, who made his daughters come into the room after dinner, and dance with the *Engliſh*; and they obſerv'd that the women here ſeem'd to be aſham'd of coming naked before men who were cloath'd. The fleet lay here ſome time, and the natives ſeem'd deſirous to learn *Engliſh*, for they often pointed to the different parts of their bodies, and to the things of the houſe, and pronouncing the names of them in their own language, as ſoon as an *Engliſhman* told the name of it in *Engliſh*, they repeated the word many times, till they thought they had it right, and would remember that word again upon ſeeing the ſame thing; their greateſt error being the making two ſyllables of one, ſuch as, *chin-ne* for *chin*, and *lip-pe* for *lip*; and ſuch like.

Virgin *iſlands.*

From *Dominica* they ſail'd to the *Virgin* iſlands, a cluſter of ſmall iſlands of the *Antilles*, where landing upon the *Bird* iſland, ſo call'd from the multitude of birds in it, ſo that a few men might have caught as many of them, without gins, as would have din'd the fleet. Here the earl declar'd that he intended to poſſeſs himſelf of the iſland of *Porto Ricco*, which is but a little diſtance from the *Virgin* iſlands. Accordingly ſetting ſail from the *Bird* iſland, without any adventure worth mentioning, they appear'd before *Porto Ricco*, where they landed 1000 men, and began their march to the town of the ſame name with the iſland: but not being ſufficiently inſtructed in the road, they had a very uncomfortable march over cliffs and rocks, at the back of which they found a narrow arm of the ſea, not above a gun ſhot in breadth, where the *Spaniards* fir'd upon them from a fort on the other ſide, but did little or no execution. At laſt, they came to a very bad cawſey, leading to a draw bridge, which was pull'd up; beyond which was a ſtrong barricade, and behind that a battery. Notwithſtanding all theſe difficulties, the *Engliſh* continu'd their march, for the moſt part chuſing to march by the ſide of the cawſey, in the water, and the tide being out they waded over the gut, and with undaunted courage attack'd the barricade, hewing it down with bills and hatchets; and altho' the tide turning, they were now up to the middle in water, yet they did not give over the attempt, and the night coming on hinder'd the *Spaniards* from taking right aim, ſo that moſt of their ſhot were wide of the mark.

The earl marches to the town of Porto Ricco.

The earl, who had made this hard march in perſon, had a narrow eſcape, for being in heavy armour, and walking upon the rugged cawſey, his foot ſlipping, he fell into the water, and had like to have been drown'd. The *Spaniards* defended their barricade ſo well that the *Engliſh* thought fit to retire; but as ſoon as it was day light, having conſider'd the ſituation of the place, and the ground about it; they divided their forces, and having ſent a conſiderable party, by a large compaſs about, they got between the battery and the town; and having attack'd the battery, they carry'd it after a ſtout reſiſtance, and ſo made way for their companions to demoliſh the barricade, when they were no longer troubled with the guns from the battery.

Having ſucceeded thus far, they united again, and march'd directly to the town of *Porto Ricco*, where they met with no enemy to oppoſe them, ſo that they found themſelves maſters of it without a ſtroke. But they were inform'd that the ſoldiers, as well thoſe of the town, as they that had fled from the barricade and battery, were retir'd to a ſtrong fort, call'd *Mora*, towards the ſea. The *Engliſh* quickly brought their own cannon againſt them, and beſieg'd this fort, which not being provided with any thing neceſſary for a ſiege, ſoon began to capitulate, when they perceiv'd day light thro' their walls

And take the fort Mora.

walls, by a brisk firing of ſome great guns upon them. In a word, they ſurrender'd upon condition, *That all their lives ſhould be ſafe; and that they ſhould march out with their portable arms, and that the earl ſhould get them tranſported to ſome place under the dominion of the king of* Spain. The earl took poſſeſſion, and ſet up the *Engliſh* colours on the fort; and what was very remarkable, there were but two *Engliſh* kill'd in this action.

Porto Ricco was a large town, and well built, having many ſpacious ſtreets in it; and, but for the poor canvas windows, the houſes would have made a good appearance. Altho' this iſland is ſituated in a warm climate, being within the torrid Zone, yet it is well refreſh'd by cool breezes, which blew moſt part of the day; but after ſix there is a damp falls, which they call the *Serena*, held to be dangerous; and therefore they avoid going abroad at ſuch times as thoſe dews fall.

The ſituation of the town is very pleaſant, being upon the brow of an eaſy hill, the ſea ſurrounding it almoſt on three ſides; and if the *Engliſh* had no reaſon to brag of the healthfulneſs of it, perhaps that was more owing to ſome accident, or to their manner of living, than to the nature of the ſoil, or to the climate. The greateſt inconvenience that ſeems to affect them, is want of rivers or ſprings, but they are ſupply'd by rain water in great plenty, every houſe in the town having a good well, and ſome two, for receiving it.

The iſland abounds with variety of fruit, produced with very little pains; and there are gold mines in it, if they were digg'd for. The chief produce of it are ſugar, ginger, and hides. It is about 36 leagues long, and 20 in breadth, with a good number of rivers, in all which there is ſaid to be gold duſt; in ſo much that a *Spaniard* told the earl of *Cumberland* that one could not thruſt a ſpade into the ground in any part of the river without finding gold; and his lordſhip making trial of it at hazard, when the gravel which was taken up was waſh'd, the grains of gold appear'd in a good proportion for the gravel.

Gold in the rivers.

Plenty of Beeves. In this iſland there are great herds of beeves, which are in ſuch plenty, that one *Spaniard* was reckon'd to have 12000, nor do they make any inquiry, if their neighbours ſhould kill any of them, provided they reſtore the hide, of which they make great profit; but the cattle themſelves are good to eat, and having plenty of good graſs are very fat. The ſheep and goats are not ſo numerous, becauſe they are deſtroy'd by wild dogs who multiply exceedingly in the woods, and when they cannot get crabs enough, or are ſtall'd with them, they fall upon the ſheep and goats without the woods. Thoſe crabs are a ſort of black ill ſhap'd creatures, which have their name, perhaps, from ſome reſemblance they have to the ſea crab; theſe have holes and burrowes like conies, and the wild dogs feed upon them. There are likewiſe in the iſland excellent hogs, which make fine pork and bacon; and abundance of poultry, and fowl of ſeveral ſorts; and particularly pidgeons in great plenty.

The fruit of the iſland. Their fruit are, *pine* apples, but of another kind than what are in *Europe*; they have a dilicious taſte, but will not keep; *mameis*, a dark colour'd fruit, with a thick rind, which being pull'd off, ſhews a yellow pulp, like a carrot, but much more delicious; *guavas*, like a peach without, and a goosberry within, only the ſeeds of it inclining to red; *popaies*, almoſt like an apple, but unpleaſant; *plums* black and white, the ſtones larger, but leſs pulp than ours: they are good againſt fluxes; *wild grapes*, which are call'd ſo, only for their growing in cluſters, but have neither the taſte nor colour of grapes. Beſides they have figs, pomegranates, melons, citrons, lemons, oranges, and ſeveral other kinds.

Bread and drink. Their bread is made of *caſſavic*, *maiz*, and *rice*. The *caſſavic* is a ſmall root like a potatoe from which they preſs the juice, and then bake it into cakes. The *maiz* is more eſteem'd. Their drink is a mixture of moloſſes, and other ſpices; but the better ſort drink high ſpices alone, made into a certain wine. As for foreign wines there is no want of them. They have here the *ſenſitive plant*, which is known every where, for the ſurprizing contraction of itſelf, upon being touch'd.

The earl of *Cumberland* having thus gotten poſſeſſion of the town of *Porto Ricco*, reſolv'd to leave a conſiderable number of men in it, to keep poſſeſſion, till he could ſend families from *England* to people the iſland by degrees; and the *Engliſh* were ſo delighted with the place, that they ſtrove who ſhould be enroll'd in the liſt of thoſe who were to be left. But in a ſhort time this project was quite ſpoiled; for above half the adventurers were carry'd off by a violent flux, ſo that all that remain'd alive were neceſſary to carry home the ſhips; and therefore the earl gave over thoughts of leaving any of his men there at that time; and they who, a little time before, were ſo fond of being nam'd for ſtaying, would now have thought it was marking them out for ſlaughter to be left behind. However the earl, to make the beſt of it, enter'd into a negotiation with the *Spaniards* of *Hiſpaniola* and *Cuba* to redeem *Porto Ricco* for

a

a ſum of money, which they pretended to treat with him about; but, knowing his ſituation, they protracted the time, till he was quite tir'd, and leaving the iſland, gave inſtructions and full power to Sir *John Barklay* to conclude the treaty. But he finding no good to be done, and that his men were ſtill dropping off, gave up the poſſeſſion of the iſland to any one that pleas'd to take it; and going aboard his ſhips, ſet ſail for *England*, and overtook the earl before he arriv'd, and ſo they came together to *Plymouth*. This was the laſt voyage of this kind undertaken by this noble lord, and it was pity he had not better ſucceſs.

SECT. IV.

CANDISH's *laſt Voyage to the* WEST-INDIES.

ADMIRAL *Candiſh* having made ſo proſperous a voyage in 1586, as has been ſaid; ſet out again in 1591, upon a new expedition with five ſhips, the *Leiceſter Galleon*, on board of which was *Candiſh* himſelf; the *Roebuck*, the *Deſire*, the *Dainty*, and the *Black Pinnance*. They ſail'd without any remarkable adventure, till they came to the line, where they lay 27 days in a dead calm, during which time, moſt of the men were afflicted with the ſcurvy. But at laſt with a good breeze at north weſt, they came up with cape *Frio* near the river *Janeiro*, about 30 leagues from *Santos*, which place the admiral had a deſign to attack. Upon their firſt approach to land, they took a *Portugueſe* ſhip, but found little or nothing in it, and taking the pilot to ſhew them the way to *Santos*, they landed upon an iſland 12 leagues from it; and the men ſhew'd ſuch a turbulent mutinous ſpirit in this place, as gave the admiral a diſmal preſage of an unfortunate expedition. They went to logger-heads among themſelves for every hog or hen that was found upon the iſland; ſo that the admiral, finding it impracticable to keep them within due bounds, thought of giving them ſomething to do, and therefore went upon his intended attack upon *Santos*.

Candiſh's men mutinous.

When he had given orders for 100 men, to man the long boats, and ſhallop, the whole crew, being eager to get plunder, flock'd to the boats to undertake the work, inſomuch that they came to blows, and to throwing one another over-board; which the admiral, at laſt, put a ſtop to, by culling out the perſons who ſhould go, and giving orders to hang up any other who ſhould attempt to ſet foot in the boats. As mutinous as they were, the matter was ſo conducted, that they attack'd the town, at the time when the *Portugueſes* were at high maſs; 23 *Engliſh* march'd directly to the great church, and having poſſeſt themſelves of the doors, with their firelocks ready cock'd, they kept about 400 of the *Portugueſes*, confin'd, making thoſe who had ſwords deliver them up; and in that poſture they ſtood till *Candiſh* came up with the reſt of the detachment. This allarm being given, thoſe who were at home in their houſes convey'd themſelves, and their moſt valuable effects that were portable to a place of ſecurity, whilſt the *Engliſh* were making thoſe priſoners whom they found in the church; but the admiral ſet them all at liberty, except a few of the chief men whom he kept as hoſtages.

He attacks Santos.

And takes the town.

The plunder gotten in this place conſiſted of *ſuccats*, *ſugar* and *Caſſavie* meal, together with a pretty large quantity of gold and ſilver; and one ſoldier found in a friar's cell, a cheſt of 1700 pieces of eight.

The *Indians* came flocking about the *Engliſh*, with joy in their faces, and begg'd of the admiral to ſtay among them, offering to join their forces with his to hinder the *Portugueſes* from having any more footing in that part of *Brazil*. They likewiſe diſcover'd all the places where they knew the *Portugueſes* had hidden their money or goods, a great part of which was recover'd by their means; and they brought them to a herd of 300 cows which ſerv'd them for food whilſt they ſtaid there, being about two months. This town was about the lat. of 23 deg. and the *Engliſh* were ſo well pleas'd with it, that they deſir'd earneſtly to be left to ſettle a colony there, or at leaſt to ſtay all the winter; but *Candiſh*, having other deſigns in view, utterly refus'd to comply with their requeſt; and having deſtroy'd all the ſugar mills, and burn'd the ſhips in the harbour, as alſo a part of the town, they went aboard their own ſhips in the bay, and ſail'd towards the ſtreights of *Magellan*; but as they came up with the river of *Plate*, ſuch a furious ſtorm overtook them, that they were in great danger of being loſt: however they got in, one after another, to port *Deſſeado*, which the admiral had appointed as the place of rendezvouz in caſe of being diſpers'd, where they refreſh'd themſelves, and then made for the ſtreights.

Sails to the ſtreights.

Having enter'd the ſtreights, they ſail'd as far as port *Famine*, and were wind bound a week, and liv'd upon muſſels, and ſome fruits which the natives brought them, but that was in ſuch a ſcanty proportion, that they could ſcarcely keep life and ſoul together. Nor was this the worſt of their miſery; for they were

were ſo frozen with cold that every day, one or other dy'd of it. One *Knivet* pulling off his ſtockings, ſome of his toes fell off, and another blowing his noſe, pull'd it off. In ſhort their miſeries were ſuch in the ſtreights, that altho' the admiral was very impatient to get into the ſouth ſea, yet finding that he had not got half way, and that he was in danger of loſing all his men if he ſtaid there any longer, ſet ſail for the north ſea, intending to ſteer to the cape of *Good Hope*, and by that way to *China*. But upon the firſt motion made of his deſign, the mutinous crew declar'd ſo unanimouſly againſt it, that for fear of worſe conſequences, he was oblig'd to comply with them, and ſail for the coaſt of *Brazil*.

Is forced to return to the n. ſea.

In this coaſt the *Deſire* and the *Black Pinnance* left him, which *Candiſh* ſuppos'd to have been done by the treachery of captain *Davys*; and a new ſtorm parted the *Roebuck* from him; ſo that, by much ado, he got into the bay of S. *Vincent* with his own ſhip only. His men, having ſuffer'd great hardſhips at ſea, deſir'd leave to go aſhore to ſome farm houſes which the *Portugueſes* had a little up in the country, which he granted, but with poſitive orders not to ly aſhore. Thoſe of them who obey'd his orders came very well off, got abundance of proviſions, and having refreſh'd themſelves, brought what they could carry to their companions aboard. But capt. *Barker* going aſhore one day with 30 men to a farm houſe which an *Indian* told them of, and finding good entertainment there, forgot the admiral's inſtructions, and having ſtaid eating and drinking two days without thinking of the admiral or their comrades, the *Portugueſes* finding, by the *Indian* ſpies, how careleſsly they liv'd, got together a party of about 80 *Portugueſes* and 200 natives, and coming unexpectedly upon the captain and his 30 men, kill'd every one of them, the *Indian* who had been their guide, eſcaping ſwam to the ſhip to give the admiral notice of it. It was a great mortification to him to have loſt ſo many of his beſt men, and what added to his grief, he had loſt his boat by their imprudence and diſobedience. However, to alleviate his trouble a little, the *Roebuck* came into the bay, but in the moſt ſhatter'd condition that could be. She had no maſt left but her miſen, her ſails were blown overboard, and her men quite ſpent with labour.

Come to the bay of S. Vincent.

Thirty of the Engliſh kill'd by the Portugueſe, by their own folly.

Candiſh. Notwithſtanding all theſe diſaſters, *Candiſh* reſolv'd to attempt ſomething againſt the *Portugueſes*, to revenge the death of his men, and having gotten one of their boats, he kept it inſtead of his own. His deſign was againſt the town of *Spirito Santo* in 20 deg. ſ. lat. and a *Portugueſe* pilot, who was aboard, promis'd to bring the ſhips up to it: but whether he was ignorant of that coaſt, or deſign'd to run them aground, and ſo loſe his own life to ſerve his country, is not certain; but when they came to the bar which leads up the river to the town, they found but three fathom water, ſo that not having ſmall ſhips, they could not proceed; but having diſcover'd three ſhips at anchor, not far from the town, the admiral propos'd attacking them with the boats in the night, not doubting but they ſhould be maſters of them, and with them to attack the town: but his mutinous crew would not ſtir, and ſo loſt the opportunity; for the next morning they weigh'd anchor, and got into the harbour cloſe up to the town, and the harbour was ſo fortify'd that it was madneſs to attempt to bring them out of it. Notwithwanding this, they who refus'd attacking them when it was practicable, were now obſtinately bent upon taking them when no wiſe man would have thought of ſuch a piece of *Don Quixotizm*; and they preſt the admiral ſo with noiſe and clamour, that he was forced at laſt to conſent to it, altho' againſt his own ſenſe and reaſon: however at the ſame time, he gave ſtrict orders to capt. *Morgan*, who was to command thoſe madmen, that he ſhould not ſuffer them to land, and that if he ſaw it dangerous to come at the ſhips, he ſhould return without running a viſable hazard.

The captain, taking the two boats full of musketeers, advanced up the river towards the harbour; but as ſoon as they were within reach of the ſconces, the enemy's guns began to play upon them, ſo the captain, foreſeeing the danger they muſt unavoidably encounter, would have retir'd according to inſtruction; but the ſoldiers being ſtout to foolhardneſs, out of ſeaſon, upbraded him with cowardice, telling him he was afraid to lead them on; which ſo provok'd him, that he forgot his orders, and rather than give a handle for ſuch a reproach, he landed with his party, and being a brave man, boldly attack'd the ſconces, and ſcal'd the wall of one of them; but, as had been foreſeen, it prov'd their deſtruction; for, altho' by his bravery he beat the enemy out of one or two of their ſconces, yet there being many of them along the river ſide, they were ſo ply'd by the ſhot of the *Portugueſes* and the arrows of the *Indians*, that poor *Morgan* loſt his life, with about two thirds of his men; and they who eſcap'd were much wounded.

Captain Morgan kill'd.

The admiral was ſo ſtruck with this misfortune, or rather miſmanagement, that being out of all hope of doing any thing

againſt the *Portugueſes*, he left that coaſt, and putting into the iſland of S. *Sebaſtian* to water, he found himſelf deſerted by the *Roebuck*, and, which was worſe, ſhe had carry'd away the ſurgeons and their medicines, leaving moſt of the ſick and wounded on board the admiral; they had taken away likewiſe the greateſt ſhare of the proviſions. This diſappointment, and the continu'd mutinous temper of his ſhip's crew quite broke his heart, ſo that having labour'd in vain, to perſuade them, either to attempt ſomething in the *Weſt-Indies*, or to go to the *Eaſt-Indies*, and finding that they ſteer'd a courſe, when he ſlept, quite contrary to his orders, and were determin'd to return to *England*, he writ an account of this baſe treatment, and deliver'd his letter, together with his laſt will, to one whom he truſted, when the ſhip was about eight deg. n. lat. but whether he himſelf liv'd to ſee *England* is not certain; but by what appears, he did not deſire it, being aſham'd that his laſt voyage ſhould have loſt him all the glory he had acquir'd by the former.

Candiſh forced by his crew to ſail homewards.

But one of his crew met with unaccountable adventures, which being very ſurprizing, will perhaps not be ungrateful to the reader.

We obſerv'd that one *Knivet* had loſt ſome of his toes by the cold, in the *Magellan* ſtreights. This man was in ſuch a condition ſoon after, by cold, that he was believ'd to be dead, and they were going to throw him over-board, when he luckily came to himſelf, and ſav'd his life for that time. He was very near feeding the fiſhes upon the ſame miſtake afterwards, and by the ſame ſeaſonable reviving prolong'd his life for farther troubles. He was ſet aſhore in a miſerable condition upon the iſland of S. *Sebaſtian*; but by what chance, or upon what account, he and ſome others were left there, when the ſhip ſail'd, we are not told. The firſt thing he tells of himſelf, is the ſurprize he was in to find himſelf, as one awak'd from a long ſleep, among ſome of his companions dead or expiring; he did not know where he was, nor had he any remembrance of how he had come thither; but finding himſelf comforted by the heat of the ſun, he began to try how he could walk, and in a little time, he went towards the ſhore, but being weak and faint, he expected every moment to accompany his companions, whom he now perceiv'd to be all dead, and having obſerv'd ſome ſigns of poiſon upon their bodies, he conjectur'd it was by their having eaten a ſort of peaſe which grew by the ſhore ſide, for he ſaw nothing elſe for food.

Knivet's ſtrange adventures.

In this perplexity, he obſerv'd ſomething ſtir within the flood mark, going towards the place, he found it was a crab, and ſearching along the ſhore, he found ſeveral others; and ſeeing a fire ready made near a large fig tree, but by whom it had been kindled he could not tell, he went thither, and roaſted his crabs upon the coals, making a comfortable meal of them. After this manner he liv'd eight or nine days, taking care to keep in his fire. But the ſtench of his dead companions being offenſive to him, he remov'd his quarters to a river ſide; where he was ſoon allarm'd by a monſter, which coming out of the water ſtar'd him in the face. Its back was all cover'd with ſcales, and its claws and tail were of a large ſize; but when it open'd its mouth, he ſaw a long forked tongue. *Knivet* being in no condition to run, ſtood ſtill in the place to ſtay for his fate, when the monſter turning its back plung'd into the river again, to his great joy. However having no inclination to have more viſits of that kind, he remov'd to another place where he found a large whale dead upon the ſhore, upon which he fed for a fortnight. But here he was agreeably ſurpriz'd by about 40 of his old comrades, who had been left aſhore upon the ſame iſland, but for what reaſon does not appear.

But this joy was but ſhort liv'd; for the *Portugueſes* having had intelligence of their being there, landed a conſiderable number upon the iſland, and falling upon them kill'd moſt of them; and an *Indian* of the enemy's party was going to make an end of *Knivet* with a bill-hook but he avoiding the blow, took hold of a *Portugueſe*, telling him, that he had ſome news for him if he would ſpare his life. The *Portugueſe* being of a merciful temper, reſtrain'd the ſavage, and *Knivet* probably contriving ſome ſtory in his fright, the other took it for good coin, and gave the *Indian* a charge to take care of him. They carry'd him with them to the continent, and bringing him before the governor, he gave him back to the good natur'd *Portugueſe* who had ſav'd his life, which was good luck for *Knivet*, for he was us'd with great kindneſs, having nothing to do but to feed his hogs, and gather crabs. But by a ſecond order from the governor, he was ſent to the ſugar mills, where he was diſciplin'd unmercifully, which made him run away, chuſing rather to truſt himſelf among wild beaſts in the woods, than with ſuch cruel maſtres. But, being found out, he was ſent to the mills again, till the governor's ſon, taking compaſſion of him, beg'd him for his own ſervant, and us'd him well.

His life ſav'd by a Portugueſe.

But

But whilſt he was in this ſervice, he was put into a terrible fright, for having been ſent by his maſter to a town of *Indians* to ſell ſome knives and hatchets, as ſoon as he came into a houſe, they gave him a hammock, in which he lay down; and immediately came in about 20 women, who coming about him, laid their heads upon his ſhoulders and knees, crying out in a diſmal tone, and then retir'd. After them came in an ill looking fellow with a great wooden ſword, which he brandiſh'd about the room, as if he wanted an enemy to exerciſe his valour upon. Poor *Knivet* thought he was to be a repaſt for this ſavage and the women; when all of a ſudden the *Indian* came and ſtroak'd his head, and bid him welcome, and raiſing him out of his hammock, gave him good entertainment. And he found that this was the cacique of the place, which was call'd the country of the *Poriés*; and this man was ſo kind to him, that he quarrel'd with another cacique for attempting to kill him.

But an odd adventure haappen'd to him after his return to his maſter; being ſeated on a rock a fiſhing, he fell aſleep with the line under him, and a fiſh catching his hook, pull'd the line ſo that he wak'd, but getting up haſtily, the line got about his leg, and the fiſh pulling hard, brought him down into the ſea, where he ſaw the fiſh come at him with open mouth to devour him, but giving a nimble turn, and taking the line ſhort, the hook ſo gall'd the fiſhes mouth, that it gave a friſk about, and he bethinking himſelf of a knife which hung in a ſtring about his neck, cut the line and eſcap'd; but he was ſo hurt among the rocks, that he was forc'd to keep the houſe for a week or two.

As ſoon as he was well, he went a fiſhing again, with ſome *Indians*, and ſpying ſome ſhips, which he took to be *Engliſh* by their make, he found ſome pretence to land his companions: as ſoon as they were aſhore, he puſh'd off the boat, and having the wind fair, he ſet ſail for the iſland S. *Sebaſtian*, believing to get the ſhips there; but the wind changing, he was driven upon another iſland, where his boat was ſtav'd to pieces; and here he had ſtarv'd, if he had not been brought off by ſome boats which the governor had ſent in purſuit of him. But this reprieve had like to have coſt him dear; for he was condemn'd to be hang'd for deſertion; and the ſentence would have been put in execution, but that he was beg'd off by the jeſuits, as he was going to the gallows; yet they could not prevent his being whipt, which ſtead the skin off him, and as ſoon as he was cur'd of that, they ſent him to the ſugar mills again, which he thought ſuch a hardſhip that he gave the good fathers no thanks for their charity, in ſaving him from being hang'd. The factor, altho' a chriſtian, was more a ſavage than any native, he us'd to beat him with, or without a fault, ſo that *Knivet* ſaw there was no ſafety for him, but by killing the factor; and one day the factor finding him aſleep, gave him a blow along the ribs with a cudgel, which ſpoil'd his nap, ſo that ſtarting up, and ſeeing him ready to repeat his blow, *Knivet* catch'd up a knife, and ſtab'd him in two or three places; and ſo got to the woods a ſecond time, where he conceal'd himſelf ſo well, that, altho' many were ſent in ſearch of him, he was not found. At laſt he found an *Indian* who had made as bold with his inhuman maſter, as *Knivet* had done with the factor; and notwithſtanding he was a man of the higheſt quality among the *Indians*, he had been treated as the meaneſt ſlave.

He is condemn'd to be hang'd but is ſav'd.

He kills the factor.

And makes his eſcape.

This conformity between their conditions link'd them in friendſhip, and *Knivet* gives him the character of the beſt man and the trueſt friend he ever knew. They ſwam over an arm of the ſea two miles broad, and paſſing over a ſort of wilderneſs, in 33 days came to the country of the *Poriés*, where he had been frighten'd, and much made of before. And having told them of the occaſion of his eſcape, he almoſt perſuaded them to make war upon the *Portugueſes*; but ſome of their neighbours, who were confederates of the *Europeans*, made them believe that *Knivet* was a liar, for they told them the *Portugueſes* were a good people. This ſo incens'd the *Poriés* againſt him, that they gave him bound into the hands of their neighbours, who intended to ſend him back to the governor. But as good luck would have it, his old maſter the governor's ſon coming to that country to truck for ſlaves, he was preſented to him, who told him, if he would go among the other provinces, and buy ſlaves for him, he would protect him; which he accepted of to ſave his life; and ſo going with other ſlaves into the canibals country, he found the people all ſtuck full of feathers, which they glu'd to their bodies with a kind of bitumenous matter, and look'd like ſo many walking fowls. However thoſe feather'd people us'd him kindly, and he pick'd up 90 ſlaves for ſuch things as he had brought with him, which ſo engratiated him with his maſter that all his faults were forgotten; and he was advanced to a poſt in the ſugar mills, which brought him in money without danger of drubbing; for in one year he pick'd up 200 crowns.

Is again deliver'd up.

But he was ſoon remov'd from this poſt; for, his maſter going to head an army compos'd

compos'd of *Portugueſes* and *Indians*, againſt the *Tamoya*'s, a people who made war upon their confederates, took *Knivet* along with him. In this march, which was ill concerted, they ſuffer'd ſo much, by the badneſs of the road, and the ſcarcity of proviſions, that had the enemy ſtaid to encounter them, they might have made an end of them at once; but being more afraid of the *Portugueſes*, than they needed to have been, they had deſerted their country before the others came; ſo that the general had nothing to do, but to reap their harveſt for them, to provide for their march back again. But, in this expedition, *Knivet* was near his end, as he had often thought himſelf before. For one of the ſoldiers, going a frog hunting, was attack'd by a ſnake which made him run for it; and having told the adventure before *Knivet*, he, to ſhew his ſuperior courage, runto the place, with a good club, in his hand and ſeeing the ſnake, made at it with his club, and with a lucky ſtroke, ſplit the creatur's skul, and dragg'd it home for the captain of the guard, and other officers to ſupupon. But one of the officers, who ow'd him a ſpite, accus'd him of having gone to ſhew his courage when he ſhould have been upon duty; which, altho' falſe, as appear'd upon examination, bred ſuch a quarrel between them, that *Knivet* exerciſing the ſame courage towards the officer, left him for dead in a fair duel, as the gentlemen of honour call it. This being reckon'd a crime in a private ſoldier he was condemn'd to dy; but the other officers oppos'd the captain's ſentence, and in ſpite of him diſcharg'd poor *Knivet*; and gave him leave to quit the army, which he willingly accepted, and with 12 *Portugueſes* more in his company, (who left the army I don't know for what reaſon) went down the river *Janeiro* in a canoe, and landed at a village which was uninhabited, except at the fiſhing ſeaſon. From thence they travell'd by land towards the ſouth weſt, finding, by the way, ſeveral ſigns of gold, as alſo beautiful ſtones, which made *Knivet* conclude they were not far from *Potoſi* in *Peru*.

Goes to the army,

But here we are told they came to a mountain, and march'd 20 days along the ſide of it before they found a way to paſs it. But I ſhall leave it to my readers to find it out, and to paſs it with *Knivet*; for the appearance of it, which dazzled his ſight, is a little too bright for mine; and his paſſing thro' it on a level, (where they were, he did not know how many days and nights in the heart of the mountain, before they got out on the ſouth weſt ſide) is ſo dark a paſſage that I cannot follow him in it; but they paſt, as he ſays, by water, and ſo they might be aſleep all the way, and at times as they wak'd grop'd for proviſions, which they had wiſely carry'd with them. At laſt on a certain morning they ſaw day-light and got out of the belly of this mountain to the great joy of their hearts.

Having made this extraordinary fairy voyage, they made to ſome houſes which they ſaw; and what pity it was they met with no inhabitants in the dark paſſage, who might, perhaps have told them their fortunes, and have warn'd the poor *Portugueſes* to deny their country, when they appear'd in the upper region again. For as ſoon as the people on the other ſide of the mountain ſaw them, they came to them in troops, and having examin'd them about their country the *Portugueſes* like fools told them who they were, but *Knivet* call'd himſelf a *French* man, which ſav'd his bacon, when his 12 companions were butcher'd with clubs, and their fleſh eaten by thoſe canibals who gave their entrails to the women for a regale. But *Knivet* was well treated, and made muſter maſter general of their forces, and perſuading them to leave that country, and finding now another route to the other ſide of the mountains than thro' this dark cave, he brought them back towards the *Portugueſe* territories, where his old maſter, the governor's ſon came againſt them with a new army, and notwithſtanding all *Knivet*'s diſcipline, deſtroy'd the greateſt part of them, and ſent the reſt to the ſugar mills.

To make an end of *Knivet*'s adventures, of which I dare ſay the reader will be as weary as I am, he was ſent over to *Africa*, and came back again, and the governor who now us'd him in a more friendly manner, being recall'd to *Portugal*, he went over with him, and after ſome misfortunes more, got ſafe to *England*, where he told ſtrange ſtories of his life.

As to the diſcoveries he ſaid he had made in the country, they may be as true as his paſſing the mountain, and therefore not to be regarded.

SECT. IV.

The Diſcovery and Planting of VIRGINIA.

IN giving an account of the ſettling of the *Engliſh* in this part of *America*, we ſhall not diſtinguiſh the particular voyages, any other way than by putting the names and dates in the margin; there being ſeveral of thoſe expeditions ſo ſhort, and others of them ſo triffling, that the dividing them into different ſections, would look like ſpending paper, and multiplying ſheets

ſheets by deſign. We ſhall therefore comprize the whole diſcovery and planting of *Virginia* under this one title.

The *Spaniards* had planted almoſt the whole empires of *Mexico* and *Peru*, beſides the ſeveral colonies along the coaſt to the ſouth eaſt of the bay of *Mexico* as far as *Brazil*, and the great iſlands of *Cuba*, *Hiſpaniola*, *Porto Ricco*, *Jamaica*, and other of leſs conſideration, before the *Engliſh* had any footing in *America*. And altho' *Gabot* had viſited ſome parts of it, towards the north, upon *Henry* VII's account, which gave the *Engliſh* as good a title to it as the pope's inveſtiture to the kings of *Spain* and *Portugal*; yet we cannot ſay, that the *Engliſh* had any right to a foot of ground in *America*, till the donation, or ceſſion made by the Hiob of *California*, to Sir *Francis Drake*, formerly mention'd; and *Forbiſher*'s taking poſſeſſion much about the ſame time of ſome part upon the north ſea, which, by not being inſiſted upon afterwards, dy'd of themſelves.

But in the year 1584, *Walter Rawleigh*, Eſq; afterwards Sir *Walter*, being in great credit, at that time, with queen *Elizabeth*, procur'd a patent under the great ſeal, for him and his heirs, to *diſcover, and poſſeſs for ever, under the crown of* England, *all ſuch countries and lands, as were not then poſſeſs'd by any chriſtian prince, or inhabited by any chriſtian people.* In conſequence of this grant, Mr. *Rawleigh* fitted out two ſhips, at his own charge, commanded by Capt. *Amadas* and Capt. *Barlow*, with inſtructions to ſail to the northward of the gulf of *Mexico*, which he knew was not then in the poſſeſſion of any chriſtian prince.

Sir Walter Rawleigh *ſends two ſhips to* N. America *in* 1584.

By virtue of theſe inſtructions. They ſet ſail from the weſt of *England* in *April* 1584, and came up with the *Bahama* iſlands about the middle of *June*, and holding their courſe ſtill north, they came to an iſland call'd *Roanoc*, not far from what is now call'd *Albemarle* river in 36 deg. n. lat. which they took at firſt for the continent, and took poſſeſſion of the country, after the *Engliſh* form, in name of the queen, and by virtue of her patent, for *Walter Rawleigh*, Eſq; but they ſoon found it to be only an iſland about 20 miles long and ſix broad; where in a ſhort time, they came to a good underſtanding with the natives, and had frequent converſation with the king's brother *Granganimeo*, the king himſelf being ill of ſome wounds he had receiv'd in a battle with one of his neighbouring kings. Here they traded with the natives, giving them 10 diſhes, and other veſſels, for buff, chamoys, and deer skins. But when the king's brother was preſent, no native durſt traffick but he; for they

They come to the iſland of Roanocon *the coaſt of* Virginia.

ſhew'd the greateſt reſpect to the royal family, and kept ſtill at a diſtance from him, except the nobility, who were allow'd to wear a piece of red copper upon their heads, as he did, to diſtinguiſh them from the others.

Granganimeo was a religous obſerver of his word, for when he receiv'd any *Engliſh* goods upon his word, he was ſure to ſend the things he promis'd for them, before, or at the day he had appointed. He ſeem'd very fond of edge tools, eſpecially ſwords; but the *Engliſh* were not fond of giving them any, altho' they offer'd a large box of pearls for a ſword; becauſe they thought it was not prudent to furniſh the *Indians* with other arms than they had already; and beſides they conceal'd the value they put upon pearls, till they ſhould diſcover where the natives found them. One of the captains (he who writ the account of this expedition to Sir *Walter Rawleigh*) went up a river to the village where *Granganimeo*'s houſe was; where as ſoon as the boat appear'd, that prince happening to be abroad, his wife came running to the water-ſide, and order'd her ſervants to get into the water, and carry the captain and his company out upon their backs, and then they drew the boat aſhore. When ſhe had, in the moſt courteous manner conducted them to her houſe, ſome women came, and pull'd off their ſhoes and ſtockings and waſh'd their feet, whilſt others waſh'd and dry'd their ſtockings. After which they were led by the lady to another room, where a long table, placed by the wall, was cover'd with diſhes full of maiz dreſs'd like furmety, deer, and fiſh both boyl'd and roaſted, melons and other fruit, which they din'd upon, and their drink was water boil'd up with ginger, black cinaman or ſaxafras. Both the houſe itſelf and all their veſſels and utenſils were made of cedar or other ſweet wood, which they have in great plenty; only thoſe they put upon the fire are of earth.

This iſland with ſome others lies over-againſt the coaſt of *Virginia*, which got that name from Sir *Walter Rawleigh* in honour of queen *Elizabeth*'s living in celibacy. But thoſe two captains, for what appears by this account of the firſt expedition, did not go to the continent, but after they had ſtaid ſome time among thoſe iſlands, return'd to *England*.

The year following, *viz.* 1585, Sir *Walter* fitted out ſeven ſail, under the command of Sir *Richard Greenville*. This fleet coming to *Hiſpaniola* in *June*, and having taken ſome *Spaniards*, whom they treated civilly and ſent them aſhore without any conditions; the governor of *Iſabella*, accompany'd with about 20 gentle-

Sir Walter Rawleigh's *2d expedition to* Virginia, *in* 1585.

men, and their ſervants came down to the ſhore near the place where the *Engliſh* were at anchor, and ſending a meſſage to the admiral, Sir *Richard* man'd all his boats, and went himſelf aſhore, with the principal gentlemen who were in the fleet. At their landing, the governor receiv'd them with great civility, and after ſome converſation, Sir *Richard* giving him his word, that he had no farther deſign upon the iſland, than to traffick for proviſions, the governor promis'd to give order for his being ſupply'd. And having entertain'd one another with great ſigns of friendſhip, and exchang'd preſents of ſuch things as they thought worthy of each other's acceptance, they parted with mutual ſatisfaction; and the *Engliſh*, having traded for ſeveral days, for ſuch things as the iſland afforded, took leave of the governor and the iſland on the 7th day of *June*, and leaving *Cuba* to the weſtward, and ſailing by the *Bahama* iſlands, they arriv'd at *Wococon* not far from *Roanoc*, and from thence, ſent intelligence to *Granganimeo*, and the king his brother, their being ſeveral gentlemen aboard this fleet who had been there the year before, particularly captain *Amadas*. From thence they ſent ſeveral parties along the coaſt in the boats to diſcover rivers and good harbours. Having ſtaid there till the 25th of *Auguſt*, and ſeen ſeveral places upon the coaſt, Sir *Richard* ſet ſail for *England*, leaving about 120 gentlemen and others to make good the ſettling of a new colony on the continent which they, from that time, call'd *Virginia* according to Sir *Walter Rawleigh*'s orders.

After the departure of Sir *Richard Greenville*, the *Engliſh*, who ſtaid behind under the command of Mr. *Lane*, ſettled in the iſland of *Roanoc*, where the natives ſtill continu'd their kindneſs to them, and from thence they propos'd to make diſcoveries upon the continent, and to plant colonies, as they ſhould from time to time, be recruited from *England*. In order to proſecute this deſign, they divided themſelves into parties, and finding the coaſt towards the ſouth, full of ſhoals, where ſhips were in danger, at leaſt till they were acquainted with the navigation of thoſe ſeas; they ſent out one boat, with 15 men well arm'd, and provided of victuals for ſeven days. This party ſail'd along the coaſt about 25 leagues towards the ſouth, as far as *Secotan*, upon the borders of what was afterwards, and is to this day, call'd *Carolina*; but at that time, all that coaſt, from the cape of *Florida*, as far north as had been diſcover'd by the late adventurers, under Sir *Walter Rawleigh*, went under the common name of *Virginia*.

Secotan.

But when theſe 15 return'd to *Roanoc* they held a council, and finding it impracticable to ſail, with their ſhips, along the ſouth coaſt, and that it might be dangerous to venture ſmall numbers amongſt the ſavages, eſpecially having heard of the miſcarriages of the *Spaniards*, more than once in *Florida*, which lay to the weſtward, joining upon the country they then had a mind to plant; It was therefore agreed, that they ſhould defer the farther diſcoveries ſouthward, till they ſhould be reinforced from *England*, and go towards the north, where they might ſail with the largeſt ſhips, provided they kept the channel. To put this deſign in execution, Mr. *Lane* himſelf went aboard the beſt ſhip he had, with the bulk of his men, leaving a ſmall garriſon at *Roanoc*, of the fidelity of the people of which iſland he had no ſuſpicion: and taking a large pinnace and other boats, which he ſent before to trace out the channel for his ſhip, he coaſted along, and went aſhore in the boats at ſeveral places, where they found good rivers, or harbours.

In this cruiſe they diſcover'd the towns *Paſſaquinoc*, *Chepanoc*, *Weapomeioc*, *Muſcamunge* and *Metackwem*. All which places loſt their old names when the country came to be planted, taking *Engliſh* names, either from the perſons who became the proprietors, or from ſuch towns or countries in *England*, from whence the new towns were peopled. All theſe towns were under the dominion of *Obiſco* king of *Weapomeioc*. Cities diſcover'd in Virginia.

Paſſing the dominions of *Obiſco* they proceeded to thoſe of the king, or (in their language) *Weroance* of *Chewanook*, which lies upon the river of *Cheſepeak*, 130 miles north of *Roanoc*. The king of that country was call'd *Menatonon*. He was lame, but a man of good underſtanding. He came aboard the ſhip, and Mr. *Lane* kept him two days, and by an *Indian* interpreter, whom they had aboard, and had been in *England*, the captain inform'd himſelf of the ſtate of the country from *Menatonon*. He told him, that ſailing up his river three days, and then going croſs the country by land, he would arrive at the territory of a certain king, four days march from the river northward, whoſe reſidence, and chief ſtrength lies in an iſland, upon a river which reaches to the ſea all under his own dominion. That out of that bay, where his iſland ſtands, he gets a vaſt treaſure in pearls, thoſe which are got in the ſhallow water are black; but what they catch in the deep water are bright and very large. The *Weroance* promis'd to ſend guides along with him to this iſland, but adviſ'd him to take

what

what force he could along with him, becauſe he was a warlike prince, and had an army of brave ſoldiers, and would oppoſe any ſtrangers who ſhould attempt to encroach upon the pearl fiſhery. But the captain not having men enough to ſend northward with the ſhips to find that river by ſea, and at the ſame time to attempt the intended expedition by land, he contented himſelf with ſailing up the river to ſearch for ſome copper mines, in which expedition, he had like to have ſtarved, the whole company being oblig'd to live two days upon the broth made of two maſtiffs, which were all the living creatures they could find for ſubſiſtance. So that he was forced to return, by the ſame way, but the ſtream brought them down the river as far in one day, as they had gone up in ſix: they got ſome fiſh (in the weires ſet by the natives,) after they had ſuffer'd great hardſhips.

Having no encouragement to ſtay longer there, he went back to *Roanoc*, taking *Menatonon's* ſon with him, by way of hoſtage for the good behaviour of his father. But *Pemiſapon* the king of the iſland, who had ſtill pretended great friendſhip to the *Engliſh*, was now privately engag'd in a treacherous conſpiracy, with the *Veroances* of the continent againſt them, which was happily diſcover'd to captain *Lane* by *Skike*, *Menatonon's* ſon, and ſo prevented; for ſome days before the time of the intended execution of the deſign, the captain, being ſufficiently appris'd of the whoſe ſcheme, fell firſt upon *Pemiſapan*, before the other kings had join'd him, and having kill'd ſome of his people, he fled after he had receiv'd a ſhot in his body, but being purſu'd, had his head cut off; which ſudden execution broke the confederacy, and ſav'd the *Engliſh* for that time.

A plot laid for the Engliſh.

Diſappointed.

Soon after this, Sir *Francis Drake* came before *Virginia* with a fleet, and captain *Stafford*, being upon the continent, went aboard, and giving the admiral an account of the *Engliſh* at *Roanoc*, Sir *Francis* ſail'd thither, and came to an anchor near it, offering captain *Lane* all the aſſiſtance he was able both of ſhips and proviſions; becauſe they inclin'd to ſtay there to wait for the recruits promiſed them by Sir *Richard Greenville*. But a ſtorm ariſing, the two ſhips given them by *Drake* (on board which ſeveral gentlemen, belonging to the colony, were at that time) were quite driven off the coaſt, and they ſaw them no more; and the *Engliſh* preſt captain *Lane* to deſire the admiral to take them with him for *England*; which he did, ſo that they deſerted the planting of *Virginia* and return'd home.

The Engliſh *return home.*

Not long after, arriv'd a ſhip at *Roanoc*, ſent by Sir *Walter Rawleigh* to ſupply the colony, till Sir *Richard Greenville* with three ſhips, upon the ſame deſign, ſhould reach them. But this ſhip finding no body there, nor in any of the places adjacent, made the beſt of their way to *England*.

They were ſcarce gone, when Sir *Richard* arriv'd at *Hatorask*, lat. 35 deg. and from thence to *Roanoc*, but miſſing the colony, and the ſhip ſent before with proviſions, he prevail'd with 15 men, with an officer, to take ſufficient proviſions for two years, and keep poſſeſſion of the iſland, he himſelf returing to *England*, as the others had done.

Sir Rich. Greenville *ſails to* Virginia.

Sir *Walter Rawleigh* notwithſtanding all theſe miſchances, would not give over his deſign of planting *Virginia*; but in the year 1587 fitted out three ſhips, on board which went a new colony with a governor, and 12 aſſiſtants. He gave them a charter under the title of *the governor and aſſiſtants of the city of* Rawleigh *in* Virginia. Upon their arrival at *Hatorask*, they ſent one of the ſhips to *Roanoc*, but ſeeing no ſign of the 15 men left by Sir *Richard Greenville*, they return'd, and coaſting along, landed a party at *Croatan*, ſending along with them *Manteo*, a native of the place, who had been in *England*, and was a faithful friend to the *Engliſh*. At their firſt landing, the natives took to their bows and arrows, but *Manteo*, ſpeaking to them in their own language, threw away their weapons, and run to embrace the *Engliſh*. Here they were told that the 15 men had been ſet upon by the *Secotans* and others who had been in the conſpiracy with *Pemiſapan*, that they having gone privately over to the iſland, had kill'd ſome of them, and that the reſt had fought their way to their boat, and ſet ſail, they could not tell to what place. The *Engliſh*, to revenge their death upon the *Secotans*, and their neighbours, landed 24 men, under the command of captain *Stafford*, whom we mention'd in the former expedition; but they fell upon a party of *Manteo's* friends, by miſtake, who had come to reap their neighbours corn, (the inhabitants having deſerted their country, for fear of the *Engliſh*) but their friend, the *Indian* having ſoon diſcover'd the miſtake, there was little harm done.

All the planters being landed at *Roanoc*, they repair'd the houſes which had been built by their country men, propoſing to ſettle there, till they had more aſſiſtance from the proprietor. But they had great debate amongſt themſelves, who ſhould go for *England*, to ſolicite that affair, and at laſt, their governor, captain *White*

was

was pitch'd upon for that office; but, becauſe he had a ſcruple of honour in leaving his government, they drew up a declaration, ſhewing that it was at the preſſing deſires of the planters that he had undertaken that expedition. With this he ſail'd upon the 27th of *Auguſt* 1587, and having met with hard weather, and moſt of the ſeamen of the fly-boat, on board of which he was, dying by the way, he landed in *Ireland*, and, going aboard another ſhip, got ſafe to *England* the 5th of *November*.

It is probable, that the noiſe of the famous *Spaniſh armada* which happen'd in 1588 hinder'd the recruits from being ſent, and that all people's thoughts were ſo employ'd upon *England*, that there was no room for *America*. But what hinder'd capt. *White* to go back in 1589, or why he was oblig'd to go in 1590, ſo ill accompany'd, is what I cannot well account for. He himſelf ſays, in his letter to Mr. *Hackluyt*, that, notwithſtanding the queen's order, to take in Mr. *White* and a convenient number of paſſengers for *Virginia*, on board three ſhips, going thither, all that he could bring the owners to, was, to take himſelf and his cheſt aboard, without receiving any other paſſenger; and in this manner he ſail'd on the 20th of *March* 1590.

Hackluyt Eng. *voyages p.* 288.

In this voyage, they ſail'd about the iſlands of *Hiſpaniola*, *Jamaica*, and *Cuba*, in ſearch of the *Spaniſh* plate fleet, and took ſome prizes of little value, and about the beginning of *Auguſt* they came upon the coaſt of *Virginia*; and the governor went aſhore at *Roanoc* with two boats, one of which being overſet, by miſmanagement, ſeven of the chief men belonging to one of the ſhips were drowned. Being come to the place where the planters had ſettled, they found no body, only they ſaw carved on one tree CRO, and upon another CROATOAN, by which they judg'd they had remov'd to that place, probably by *Manteo*'s perſuaſion, that being the place of his birth. The governor pray'd them to make for that place, at leaſt to know how their countrymen did, but the captains being more intent upon *Spaniſh* prizes, than upon the intereſt of the planters, and a ſtorm ariſing, they made back towards *Hiſpaniola*, and from thence to the *Azores*; and without any great matter done return'd to *England* in *October*.

Governor White *returns to* Virginia *in* 1590,

We have no account of any more colonies ſettled in that part of the world till the year 1602. Nor indeed was any conſiderable thing done then, capt. *Goſnol* having only landed on an iſland to which he gave the name of *Elizabeth*, being in 42 deg. lat. on the coaſt near *New Jerſey*. But their ſtay was ſo ſhort, that the expedition is not worth mentioning; and the ſame may be ſaid of capt. *Pring*'s, and capt. *Gilbert*'s the year following. In 1605 the earl of *Southampton* ſent the *Archangel* thither, commanded by capt. *Weymouth*, which ſail'd near to *Elizabeth* iſland, and gave the name of *Pentecoſt* iſland to another upon which they landed, and ſo return'd to *England*.

1602.

1603.

1605.

Hitherto the *Engliſh* plantations in *America* had gone but heavily on; but in the year 1606, king *James* being ſettled upon the throne of *England* ſome time, granted a new patent of *Virginia*, (no regard being had to that before granted by queen *Elizabeth* to poor Sir *Walter Rawleigh*) the patentees were Sir *Tho. Gates*, Sir *George Summers*, *Richard Hackluyt*, clerk, *Edward Maria Wingfield*, *Thomas Hanham*, and *Rawleigh Gilbert*, Eſqrs. *William Parker*, *George Popham*, and others. The extent of the land granted, by this patent, was from 34 and 45 deg. of n. lat. with all the iſlands lying between thoſe degrees, and within 100 miles of the coaſt; together with all the main land between the ſaid degrees, which were not then poſſeſt by any chriſtian prince. This patent mentions two diſtinct colonies to be planted by vertue of it; and the property aſcertain'd to two different bodies of adventurers, *viz.* the firſt colony, to belong to Sir *Thomas Gates*, Sir *George Summers*, Mr. *Hackluyt*, and Mr. *Wingfield*, under the title of the *London Adventurers*, or the *London Company*: and was to reach from 34 deg. to 41, with all the *lands*, *woods*, *mines*, *minerals*, &c. The other, call'd the ſecond colony, was from the end of the firſt to 45 degrees, granting the ſame privileges to *Thomas Hanham*, *Rawleigh Gilbert*, *William Parker* and *Geo. Popham* under the name of the *Plymouth Company*; with liberty to both colonies, to take as many as they pleas'd for partners; forbiding all others to plant within thoſe degrees in any part of *America*, without their expreſs licence under hand and ſeal; only reſerving the 5th part of all gold and ſilver mines, and the 15th part of copper to the uſe of the crown.

K. James I. *grants a patent for planting* Virginia.

This patent having paſt the ſeals, the adventurers prepar'd for the voyage. Above 100 perſons of account embark'd for *Virginia*, among whom were Mr. *Piercy*, brother to the earl of *Northumberland*, captains *Goſnol*, *Smith*, *Ratcliff*, *Martin*, *Kendal*, and Mr. *Wingfield*. They likewiſe had a number of artificers of all kinds, with all things requiſite for a plantation; and thus ſetting out in two ſhips, under the conduct of capt. *Newport*, they made for the coaſt of *America*, and having ſtopt at ſeveral iſlands by the way, where they took in wood and water, they

The London and Plymouth companies arrive in Chesapeck bay.

they arriv'd at *Chesapeak*, formerly mention'd: but finding it very unsafe anchorage there, altho' they lik'd the country about that river very much, they remov'd farther north to a place they call'd *Cape Comfort*; and roving about to look for a place to fix in, they came to *Paspiha*, where they found the people extreamly civil. Here they were visited by the king of *Rapahanna*, who invited them to his city, which they accepted; and, he going before to make preparation for them, the principal *English* went, soon after, in the shallop, well arm'd. The king met them at their landing, with a great train of his subjects. His hair, after the custom of the country, was cut close by his skul, on the right side, and very long on the left, and ty'd up in a knot; over which he had a kind of coronet of deer's hair, colour'd red, in the form of a rose; and, upon the bare side a plate of copper, and between the two, were fix'd two large feathers. His body was painted crimson, and his face azure; and he was adorn'd with several chains, and bracelets of pearls. He walk'd before his people, playing upon a reed, and walk'd in great state.

The king of Rapahanna treats them kindly.

Altho' this procession seem'd odd enough to the *English*; yet this savage king receiv'd them with surprizing civility, and after the first ceremonies were over, he led them to his town, where he had prepar'd a fine entertainment for them. They were much delighted with the pleasantness of the way to it, which led sometimes thro' fine meadows water'd with springs and brooks, and here and there fine corn fields; at other times they past thro' woods of beautiful trees. His palace stood upon a hill, where they were feasted after the best manner the custom of that wild country could afford. But finding that *Cape Comfort* was the only safe place, where they could trust their ships, they determin'd to plant their first colony in the country of *Paspiha* about eight miles from the cape.

When they had unanimously agreed in this resolution, they began to form their government in the *English* model, according to their instructions; that is by a president and council. The president was to be chosen every year, and always to act in concert with the council. Other matters were to be manag'd by juries as in *England*. But the spirit of dissention quickly appear'd even among this handful of people. For, the council having been nam'd in *England*, to which they were pin'd down by their instructions, and capt. *Smith* having been nam'd as one of them; some who had taken an aversion to him, having no way to supersede him, but by forging crimes against him, carry'd their malice so far as to get him confin'd; but failing in their proof, he was acquitted with honour, and took his place at the board. After that affair was adjusted, they thought next of making a fort for their defence, which they finish'd in a month, and call'd it *James's Fort*, in honour of the king. It was a triangle, at every angle of which was a redout with a half moon fortify'd with cannon. Their next care was to sow a sufficient quantity of corn, which, in a short time they saw rais'd to a considerable length, by the fruitfulness of the soil.

James's Fort *built.*

While they were employ'd in building the fort, they observ'd that the natives, who had shew'd them all the kindness imaginable before, now began to pry into their works with another air, and they had all the reason in the world to be jealous of some ill design. Their king came often to see them, and would have persuaded them to lay aside their arms, as a hindrance to their building; but his speeches of that kind had a quite contrary effect upon the planters; for, as he never came near them, but accompany'd with a number of his own people in arms, they very wisely had their arms ready against any surprize.

They become jealous of the natives.

Having finished their fort, Mr. *Wingfield*, the president for the first year, sent some men to view the country farther up the river, which was navigable 160 miles. In six days sailing they arriv'd at a town call'd *Powhatan*, from the name of the king. It was seated upon a hill, with pleasant corn fields near it; and all the country, as they sail'd up the river, was full of fine woods, sweet meadows, gardens of fragrant flowers, mix'd with strawberries, raspberries, and mulberries. At the head of this river, that is, as far as it was navigable, they landed, and proclaim'd king *James* lord of that country and river, and call'd the river, *The King's River*, or *James's* river. It lies in 37 degrees and falls into the sea in *Chesapeak* bay. When they had made this discovery, they return'd to their companions at the new fort, which likewise got king *James's* name.

Powhatan *town.*

Things seeming now to be upon a good footing, capt. *Newport* left them, and sail'd for *England*, to give an account of their good success, and the promising condition of the first colony. But they did not continue long in prosperity: for their president had no regard to any body's safety or welfare but his own, and neither allow'd the planters meat nor drink, but in such scanty measure that many of them fell sick; which so incens'd them at him, that with one consent, they depos'd him from his authority, and chose captain *Ratcliff* in his place, who, if an honest man, had not the spirit of government; so

Captain Newport sails for England.

that if capt. *Smith* had not by his good ſenſe, prevented many inconveniences they had been undone very quickly; and had they been ſo wiſe as to ſuffer themſelves to be govern'd by him, things had ſucceeded better with them. By his advice, they began to build a town by the ſide of the fort, and he, by working himſelf, and encouraging others to work, in a ſhort time built houſes for all the planters. This was the firſt beginning of *James's Town*.

The next thing he propos'd to them was, to begin a traffick with the natives, and in order to it, he himſelf went down the river to *Kecoughtan*, and offer'd to trade with the natives of the place; but they having heard of the ſtraits they had been in for want of proviſions, derided him, telling him that they would give them victuals to fill their ſtarv'd bellies, provided they would give them their guns and ſwords. Others of them propos'd that the *Engliſh* ſhould give the cloths off their backs for meat: but the captain, finding there was no good to be done by fair words, inſtead of giving them his guns gave them what was within them, for having fir'd 10 or 12 ſhot among them, they took to their heels, and fled to the woods. But whilſt the *Engliſh* were ſearching the town for proviſions, the natives return'd with their bows and other wooden arms, carrying their *Okee* or idol in great ſolemnity before them, and, with great cries after their manner, fell upon the *Engliſh*. But capt. *Smith*, who had been ſtill upon his guard, drew up his party, and with the firſt fire brought down *Okee*, and kill'd his ſupporters, which ſo aſtoniſh'd the *Indians*, that they fled a ſecond time.

A skirmiſh between captain Smith *and the natives.*

As ſoon as they had recover'd their fright, they ſent to beg peace, and to have their idol reſtor'd, which the captain gave them up for a boat load of corn, which having receiv'd, together with abundance of veniſon and wild fowl, he return'd to *James's Town*, where he arriv'd juſt in time to prevent the greateſt part of the planters leaving the place, who had already gotten aboard the pinnace for that purpoſe: but he attacking them with a falcon or two which he had aboard, and at the ſame time firing upon them with his muskets made them come aſhore again: in this action capt. *Kendal* was kill'd. The poor ſpirited preſident and capt. *Archer* form'd ſuch another deſign ſoon after, but capt. *Smith* broke their meaſures, and diſappointed them: and winter coming on, the river was cover'd with ſwans, geeſe, ducks and cranes, which being a ſeaſonable addition to their living, made them give over thoughts of leaving their new town, at leaſt for that time.

Mutiny at the Engliſh *town, quell'd by* Smith.

Having thus brought the planters to ſome better temper, capt. *Smith* went out upon a new diſcovery up a river which falls into the king's river, and having ſailed as far as his barge could float, he quitted it, and went into a canoe with only two *Engliſh* men, and as many *Indians*, giving a ſtrict charge to thoſe he left with the barge not to go aſhore till he return'd. But as ſoon as he was out of ſight, they broke his orders, and went aſhore, where one of them was kidnap'd by a party of the ſavages, and to ſave his life diſcover'd which way the captain was gone, and with what company; upon which, the natives went with a body of 200, and unluckily coming upon him aſſaulted him. The captain reſolving to ſell his life as dear as he could, fir'd upon them, and kill'd three, and ſo retir'd firing with his two men; and to ſave him from the arrows of the ſavages he ty'd one of his *Indians* to his left arm by way of target: but, as he retir'd backward not minding what was behind him, he fell up to the middle into a quagmire; the natives kept at a diſtance, not daring to come near him, and when he was almoſt benum'd with cold, upon their promiſe to ſave his life, he threw away his arms, and the ſavages pull'd him out, and brought him to a fire, where they chafed his limbs, ſo that he began to recover ſpirit. His two men had been kill'd in the action, as were the *Indians*, one of which being his target, was ſtuck full of arrows. When he was taken, he gave the king of *Pamanuc*, who commanded the party, a little compaſs dial, which he had in his pocket. The ſavages wonder'd at the playing of the needle in the box, which they could not come at for the glaſs: but when he explain'd the uſe of it, and as well as he could make himſelf be underſtood, made a ſort of a lecture of aſtronomy to them, they gap'd and ſtar'd at him as if he had lately come down from the upper regions to inſtruct them of the nature of their God the ſun.

Captain Smith *attack'd by the ſavages.*

He is taken.

After they had ſtaid upon the field of battle till he had recover'd the uſe of his limbs, they brought him, in great triumph, to the city, where the king had his reſidence, where after ſeveral odd dances, they ſet down veniſon boil'd and roaſted before him, and gave him ſuch victuals to eat, as often and as much as he pleas'd: this made him conclude that they intended to fatten him for the ſpit; however he ate his meat heartily, reſigning himſelf to providence.

Having ſtaid ſometime at *Pamanuc*, where he was civilly treated, he had obſerv'd ſome odd ceremonies; among the reſt, a ſtrange rediculous method of conjuring, which he afterwards found out to have

have been done to diſcover whether he had any intention to do them hurt; and it was lucky for him that the reſponſe happen'd to be in the negative, as they interpreted it. *The ſavages way of conjuring.* There method was as follows. Having made a great fire in a long room, they ſpread a mat upon the floor on each ſide, upon one of which they placed the captain: and, his guard retiring, a great tall fellow came in skipping and leaping into the room, in ſuch an odd dreſs, that he might have paſt for the devil any where. All that appear'd of his face was as black as charcoal could make it; but much of it was hidden by ſnakes and weaſles skins, which being ty'd by the tails upon the crown of his head, hung over his face and back, over which he wore upon his head a crown of feathers; and in his hand he held a rattle; which having ſhak'd, he began to gabble a ſort of prayer in a hideous tone, and at the ſame time ſtrow'd a circle of meal round the fire. After he had done, ſix odd figures, like him, came leaping into the room, by three at a time, making antick geſtures, as he had done. After which they all ſate down upon the other mat, oppoſite to the captain, three on one ſide and three on the other, and the firſt, who was the arch-devil, in the middle. Then they began a ſong, which for the melody of it, poor capt. *Smith* took for his neck verſe, but he ſaid nothing; when the ſong was ended, the firſt conjurer laid down five corns of wheat, and ſtraining himſelf with ſuch violence that he was like to burſt, he made a ſpeech, at the concluſion of which the other ſix gave a groan, and then he laid down three grains more, all without the circle of meal: and repeating the ſongs and orations till the fire was ſurrounded with grains of wheat, laid down by fives and three alternalty; and then, with the ſame ceremonies, they plac'da ſtick between every parcel of wheat. This they did for three days together; but our author * does not ſay after what manner they made their concluſion from ſuch premiſſes; only he tells us, that the circle of meal denoted the country of the ſavages, in their imagination, and the circle of ſticks the captain's country, and the two circles of corn, the ſea between them: but how they judg'd whether the ſticks were to do harm to the meal, we are not told, nor would we be much wiſer if we were inform'd of it; we may gueſs that it was not a very rational one, by the folly of the proceſs.

*Harris's Bibl. vol. I. b. v. ch. 23.

The people of this country were ſo ſimple as to believe gun powder was produced by being ſow'd like other ſeeds, and therefore kept a parcel of it to be ſow'd in the ſpring, and the reader may gueſs at the crop.

But the captain's troubles were not as yet ended. For, *Powhaton* expreſſing a great curioſity to ſee him, he was ſent to his place of reſidence. Upon his arrival, he was ſtop'd till his majeſty ſhould be in order to receive him in ſtate, and when he was admitted, he found *Powhaton* ſet, by the fire, in a chair made like a bedſtead, cover'd with a robe of skins; ſupported on each ſide by a young girl of 17 or 18 years of age. On each ſide of the room there was one row of men ſtanding, and behind them a row of women. Upon his entring the room, the whole audience gave a ſhout, and without any ceremony, they brought water for him to waſh, and a towel conſiſting of a bunch of feathers; and after that he ate a hearty dinner of good meat. But this civility was like to end in a ſower ſauce; for after they had conſulted together for ſome time, two broad ſtones were brought into the room, and as many as could get about him laid hold of him, and drag'd him by force to the ſtones, and thruſting down his head, there were ſeveral club-bearers ready to knock out his brains, in the king's preſence. Thus the captain was at his laſt prayer, as he believ'd, when *Pocahunta* the king's favourite daughter, taking a liking to the captain, call'd to the ruffians to ſtop, which they did, and ſhe addreſſing herſelf to her father, beg'd his life; but finding that ſhe was not like to ſucceed, ſhe ran to the captain, and taking his head in her arms, declar'd that they ſhould either ſave his life or take hers. The king ſeeing her bent upon ſaving the ſtranger comply'd with her at laſt, telling her, that he ſhould live to make toys for her, ſince ſhe had acquir'd a title to his ſervice by ſaving his life. The captain was of too noble a ſpirit to be ungrateful to the lady, but whether he was mechanick enough to gratify her in the way her father propos'd I do not know.

He is ſent to Powhaton.

And being upon the brink of death.

Is ſav'd by the king's daughter.

Soon after this *Powhaton* gave him his liberty, and ſent him, with an eſcorte, to *James's Town*, only deſiring for his ranſom a grindſtone, and a couple of guns; but the captain ſhew'd the ſavages a milſtone, and two demi-culverins, telling them they might carry them home to their maſter. This proceeding I cannot approve of, for the perſon, who, of his own accord, ſet him at liberty, had a title to greater ſincerity. Nor is it any excuſe for this equivocation, to ſay that it was not prudence to furniſh the *Indians* with arms; becauſe it could not be apprehended that they would make others by that model, having no tools to work with; or if they had, there was no danger of the guns, unleſs the gun powder which was to be ſow'd in the country ſhould produce a plentiful harveſt.

And returns to James's Town.

As

As ſoon as capt. *Smith* was return'd to *James's Town*, he had work enough upon his hands, to eſtabliſh a commerce with the natives, which the indolent preſident had all this while neglected; and likewiſe to prevent their giving up the colony. In the laſt of theſe he had good ſucceſs, for he prevail'd with a ſufficient number to join him, ſo that if the malecontents had perſiſted in their deſign, he was reſolv'd to have made uſe of the *Argumentum Bacelinum* to keep them in the country. But as to the trade, the preſident and council, envying the intereſt he had with the natives, from the time of his impriſonment among them, to break his credit with them, offer'd four times as much for the things he had agreed for, as they were ſatisfy'd to have taken from him; and thus they hurt the commerce of their country, to gratify an unreaſonable pique they had taken at the captain, for having more vertue than themſelves.

Ill conduct in the preſident and council.

About this time, capt. *Newport* arriv'd with a reinforcement from *England*, which enabled capt. *Smith* to make his party good againſt the mutineers. But the ſeamen who came along with him were ſo impolitic in their bargains, that in a ſhort time, the ſame things which had before been purchac'd for an ounce of copper, were now rais'd to a pound. *Powhaton* who was a cunning prince, ſoon made advantage of this humour of the *Engliſh* who came laſt, and deſiring to ſee capt. *Newport*, invited him to come with his old acquaintance capt. *Smith* to his city, which they did, taking a ſufficient guard along with them. *Powhaton* entertain'd them nobly, and knowing how to put on the king, when he pleas'd (altho' at other times he made his own ſhoes and cloaths,) he told *Newport*, "That "it was not agreeable to his dignity to "trade like a pedlar; but if he, whom "he took to be a great prince, would "ſhew all his goods at once, he would "pitch upon ſuch things as he lik'd, and "lay down the value of them." But the *Indian* ſet ſuch a price upon his own commodities, that they were not like to deal, till a parcel of blue beads dazled his eyes ſo, that he gave 2 or 300 buſhels of corn for leſs than two pounds of them. The other neighbouring kings barter'd for triffles of that kind, and gave good rates for them.

Ships come from England.

After capt. *Newport* had ſtaid ſome time in *Virginia*, he return'd to *England*. Soon after his departure, another ſhip, which had ſet out with him, and been forced to ſtay by the way to repair ſome dammage ſuffer'd in a ſtorm, arriv'd at *James's Town*, with more recruits for the colony. But an unlucky fire happen'd in the town which did great miſchief. Capt. *Smith*, and one Mr. *Scrivener*, a new comer, and one of the council, labour'd heartily to repair the dammage, and the town was ſoon in as good condition as formerly. But a difference happening between the *Engliſh* and natives laid the ſeeds of a great deal of michief to the colony. The occaſion was this:

Powhaton having ſent a preſent of turkies to capt. *Newport*, before he ſail'd, that capt. had very imprudently ſent him back as many ſwords as he had receiv'd fowls; which ſo pleas'd the ſavage, that he ſent ſuch another preſent to capt. *Smith* but he being more cautious, ſent no ſwords back, which ſo incens'd *Powhaton*, that he was reſolv'd to have them either by fraud or force; and the firſt failing him, he ſent underhand ſome parties of his men to ly in ambuſcade for the workmen, and committed many inſults upon the colony, which the preſident and council, *having nothing of the true* Engliſh *ſpirit in them, tamely ſuffer'd without ſhewing any reſentment*. But capt. *Smith*, after having, in vain, repreſented the indignity, and other ill conſequences of it to the council, went out of town one evening, with a party, and meeting with a conſiderable number of the ſavages in one of their retreats, he fell upon them, and without killing any of them, drub'd them heartily and brought ſeveral priſoners into the town, who own'd, that *Powhaton* had ſent them to get their arms from them, and to cut their throats.

Differences between the Engliſh *and* Powhaton.

This chaſtiſement of the natives brought an army of them before *James's Town*, who, with great clamour, threaten'd to burn the town, unleſs the priſoners were immediately releas'd. But capt. *Smith*, making a ſally, with his own company, treated them ſo harſhly, that in a ſhort time, they were glad to beg peace, many being kill'd, and more taken. At this freſh rebuke, *Powhaton*'s great ſpirit fell, and he thought the beſt way to gain his people's freedom at the captain's hand, was by ſending his beloved daughter *Pocahunta*, to make an excuſe for the injuries which had been done, to beg the releaſe of the priſoners, and to promiſe friendſhip. The captain, without heſitation, granted all that his fair deliverer ask'd, and ſent her back to her father, highly ſatisfy'd with the *Engliſh* civility.

Captain Smith *chaſtiſes the ſavages.*

And makes peace at the requeſt of Pocahunta.

The preſident and council would have call'd him to account for his publick ſpirit under pretence of his being the occaſion of this rupture, but the inſults of the natives had ſo rais'd *the true* Engliſh *ſpirit*, that the puſillanimous preſident had not courage to ſay one word againſt the captain; ſo that he was now a terror both to the ſavages, and to the knaves who follow'd

follow'd the preſident; and the council was glad to imploy him, (in order to get rid of him for a while) in diſcoveries up the river, beyond the falls, towards the ſouth weſt, with only 10 or 12 men in a ſmall boat. He made this expedition without any thing very momorable, only that he had like to have dy'd of the ſtink of a certain fiſh ſhap'd like a thornback, but with a longer tail, which had, at the end of it, a ſting about two inches long; with which it ſtruck the captain, ſo that he ſwell'd, as if it had been poiſon; but by good remedies he was ſo well as to ſup upon the fiſh at night, and he found it good eating.

Captain Smith ſtung by a fiſh, but recovers in a ſhort time.

At his return he found the *Engliſh* in an uproar, and ready to depoſe the preſident for his indolence and luxury; which deſign they purſu'd, and the major part of the colony, either perſuaded or over-aw'd the council to chuſe the captain, who making Mr. *Scrivener* his deputy, as being a perſon very fit for it, he himſelf, after having put things upon a good footing, went out again upon new diſcoveries; but neither did this expedition turn to any account; altho' he left nothing unattemped for the ſervice of the plantation, ſometimes meeting with peaceable natives, and ſometimes being oblig'd to thraſhthem into civility, and ſo return'd to the colony.

He is made preſident.

It was now in the year 1608, and ſoon after the preſident's return, that captain *Newport* arriv'd again from *England* with recruits and freſh ſupplies. He had likewiſe brought preſents for *Powhaton*, as being a ſort of an emperor, or rather a *ſuperintendant*, over the other *Weroances*, who were as tributaries under him. To oblige him the more, they agreed to invite him to *James's Town*, and there to treat him in the moſt magnificent manner they were able; and the preſident undertook to go in perſon, and make the invitation. Accordingly he ſet out, accompany'd only with four men; but when they came to the place of his uſual reſidence, they were told that he was at another city, about 30 miles farther in the country. Whilſt he and his company were in a large field, without the town, by the ſide of a wood, ſitting upon mats, by a fire, (made on purpoſe by the people of the place, that they might have time to act the farce they had projected) they were ſurrounded by a great number of women and children, who came very familiarly about the captain; when, all of a ſudden, the wood reſounded with the eccho's of howling and ſcreaming, much like what they us'd before engaging in battle. The captain, thinking *Powhaton* had contriv'd that trick to ſurprize him, ſtood to his arms; but thoſe about him, ſmiling, bid him fear nothing, for no harm was intended. By and by, there ruſh'd out of the wood about 30 young women, all naked (except ſome green leaves before) and their bodies painted of different colours, with bows and arrows clubs and ſwords, as their men us'd to be arm'd, and their heads adorn'd with a pair of ſtag's horns; theſe coming out of the wood with a great cry, all join'd hands, and began a dance round about the captain and his company, to the tune of their own voices, which was all the muſick they had.

An odd frolick of the Indians *at* Powhaton.

When their dance was over, they retir'd to the wood again, and having laid laid aſide their arms and horns, and dreſt themſelves after their uſual manner, they came out of the wood again and accoſting the captain with great civility, invited him to their lodge; whither he went and was much careſs'd, and entertain'd with fiſh and fowl, and ſeveral ſorts of fruit; and then they conducted him to his tent with fire brands in place of torches. The next day *Powhaton* arriv'd, and when the preſident deliver'd his meſſage in name of the council and the *Engliſh* general, and told him of the preſents brought from *England* to him; *Powhaton* anſwered, "If your king has ſent me any pre-
"ſents, I am a king too, and will receive
"them in my own kingdom; and I ex-
"pect that your general ſhould come to
"me, and not deſire me to go to him;
"nor am I ſuch a ſimpleton as to truſt
"myſelf within your fort." Capt. *Smith* finding it to no purpoſe to endeavour to make him change his reſolution, return'd back; and told capt. *Newport*, that, in his opinion, the beſt way to treat this ſavage, was to ſlight him; becauſe they found he grew more inſolent upon the regard that was ſhew'd him. But *Newport* was of another mind, and having brought a full coronation ſuit from *England*, together with a gilt crown for *Powhaton*, he reſolv'd, ſince they could nor prevail with him to come to *James's Town*, he would carry the preſent to his city, and perform the ceremony of the coronation, after the *Engliſh* manner.

Powhaton *refuſes the invitation made him to come to* James's Town.

Capt. *Smith* oppos'd this proceeding as much as he could, but finding the commodore poſitive, he acquieſced, and *Newport* ſail'd up the river in great ſtate to *Werowocomoco*, to deliver his preſent. *Powhaton* was not fond of his company in that manner, and tho' it ſooth'd his pride to have ſuch a ſolemn embaſſy ſent him by a great king, as he had been inform'd the king of *Great Britain* was; yet his jealouſy was allarm'd at ſuch an appearance of *Engliſh* as came in this fleet. However, he receiv'd them with

all the ſtate he could, and when they had cloth'd him in the coronation robes, they deſir'd him to kneel down till they put the crown upon his head; but he fancying they were going to cut off his head, refus'd to kneel, nor could his own people perſuade him that there was no danger in doing it; ſo that the commodore was forced to be ſatisfy'd with making him ſtoop a little by preſſing upon his ſhoulder, and ſo they put the crown upon his head. But the guns aboard firing at that inſtant, by a ſignal given, the monarch was ſo frighted, that he would have reſign'd his new crown and ſcarlet cloak to boot, to have had the *Engliſh* out of his dominions. Having recover'd himſelf, he beſtow'd his old ſhoes and mantle, as a mark of his royal bounty, upon capt. *Newport*: but he was ſo bent upon keeping all his commodities up at the higheſt price, that all the preſents he made to the fleet and colony upon this occaſion, was, ſeven or eight buſhels of wheat; nor would he condeſcend to give capt. *Newport* guides to *Monacan*, where he propos'd to make diſcoveries. Thus did too much courting this barbarous king, make him ſaucy and proud, thinking himſelf really greater than he was, becauſe the *Engliſh* ſeem'd to put ſuch a value upon his friendſhip; whereas, had they treated him with more indifference, but ſtill with juſtice and civility, they might have made him their friend thro' fear, when he ſtood in aw of their power, as well as he reſpected them for their good uſage.

The Engliſh crown him in his own.

Capt. *Newport* returning to *James's Town*, not very well ſatisfy'd with *Powhaton*, ſet out, with the whole council, and 120 of the colony, to diſcover *Monacan*; leaving the preſident, with about 18 men to be a guard to the town. But after a great deal of trouble and fatigue, they return'd with having done nothing.

Captain Newport goes to make new diſcoveries.

In the mean time, the preſident finding that there was a form'd deſign'd among the ſavages to ſtarve the *Engliſh*; by withdrawing their uſual trade of bartering corn and other proviſions, for beads, knives, &c. he went himſelf to the countries contiguous to their town, and laid them under contribution. But, conſidering that, whilſt *Powhaton* continu'd obſtinate, there was no good to be done in that country, he reſolv'd to force him to a more friendly correſpondence. And therefore, that king, having ſent him word, that he would give him a ſhip load of corn, if he would come to him, and bring him a grind ſtone, ſome guns, beads, and other things. The preſident, leaving Mr. *Scrivener* his deputy, as formerly, went aboard the pinnace, taking two barges with him and 46 men, and ſail'd up to *Powhaton's* city, altho' an honeſt ſavage, coming aboard him by the way advis'd him not to truſt himſelf to the king. *Powhaton* receiv'd him as uſual; but pretended he had no corn; yet he ſaid he would ſtraiten himſelf to let him have 40 buſhels, for as many ſwords. But *Smith* asking him why he had ſent for him, he pretended to put it off with a jeſt; and finding that the captain was not to be treated ſo, he told him, in plain terms, that he would give no corn, without having guns and ſwords in exchange for it. To this the captain reply'd briskly, "that he was not ignorant of his ſe-"cret practices, and would not be tri-"fled with; that he had always told him "they had no guns or ſwords to ſpare; "and he ſhould be ſorry to be oblig'd to "make uſe of what he had againſt him "and his people; which he muſt do if "they departed from that good temper "which they once ſeem'd of, towards "the *Engliſh*, without having receiv'd "any ill uſage from them".

Captain Smith goes to Powhaton.

Powhaton, ſeeing, by this reſolute anſwer, that the captain was in good earneſt, and knowing his valour too well, not to be afraid of him; reſolv'd to delude him by fair words, till he ſhould make himſelf maſter of their arms, and then to cut their throats with their own weapons. He therefore told the captain, that he and his people would willingly trade with them, provided they would come aſhore without thoſe murdering guns and ſwords which made them afraid to come near them. Capt. *Smith* being aware of the ſly deſign couch'd under this ſpeech, was the more upon his guard, and now reſolv'd to be before hand with him, and to take the firſt fair opportunity to ſecure the perſon of *Powhaton*. But the men, which *Powhaton* had ſent for to put his plot in practice, being ſecretly arriv'd, he ſlip'd out of town himſelf, and return'd at the head of them, the captain being in town with only eight of his men. The ſavages beſet the houſe where they were; but the captain opening the doors, and the *Engliſh* ruſhing out upon them, with their ſwords in one hand and piſtols in the other, they drove the whole herd of them before them; and retir'd to their boats. *Powhaton* ſeeing his plot diſcover'd and diſappointed, ſent an excuſe for what had happen'd, as having been done without his knowledge; and ſent a preſent of pearls to the captain; who deſiring they would ſend him corn to ſhew their repentance, they immediately ſent a good quantity; which being aboard the barges, he ſet ſail for *Pamanuc* intending at his return to pay another viſit to *Powhaton*.

The treachery of the ſavages.

Defeated by the bravery of the Engliſh.

The *Weroance* of *Pamanuc* receiv'd him with ſeeming openneſs of mind, and began

began a traffic with him, inviting him aſhore to trade freely. The captain accepted his invitation, but conſidering the treachery practis'd againſt him by *Powhaton*, he took 16 of his men with him well arm'd. And it was well he did ſo; for, whilſt the weroance entertain'd them after the frankeſt manner, the houſe was ſurrounded by 700 ſavages in arms. Capt. *Smith* being well aſſur'd of the courage and fidelity of his men, turn'd to the king of *Pamanuc*, and upbraiding him with his baſeneſs, challeng'd him to fight him ſingle hands, and offer'd to throw off his cloaths, and uſe no weapons but ſuch as the ſavage made uſe of. And the conditions of the combat ſhould be that the conqueror ſhould be abſolute maſter of both their followers. If he did not like that, he deſir'd him to go and head his men, but let each of them bring a buſhel of corn, and he would ſend to his barges for the value of it in copper, which he would lay down by the corn, and then he would engage their whole force with his 16 men, and the victorious ſide ſhould poſſeſs both the corn and copper. The ſavage was ſurpriz'd at the boldneſs of the challenge, and endeavour'd to perſuade the captain that there was no hurt deſign'd him; he told him the men who were without had brought a preſent for him, and deſir'd him to go out and receive it. The captain being aware of his villanious deſign, loſt all patience at this groſs impoſition, and ſteping to the ſavage, at the head of his guard, which he had ſtill had about him, he clap'd a piſtol to his breaſt, proteſting he would ſhoot him dead unleſs he gave up his arms. The poor king immmediately reſign'd his bow and arrows, and the captain taking him by the arm, and holding his piſtol ſtill towards him, he drag'd him to the door, the guard ſtanding aſtoniſh'd to ſee that one man durſt uſe their king after that manner. When he had thus brought him to the door, he call'd to thoſe without to lay down their arms, and hear him ſpeak, declaring that if any man ſhot an arrow, he would that inſtant kill their king.

A plot againſt them there.

The capt. by preſence of mind ſaves himſelf.

The *Indians*, who, amongſt all their bad qualities, had that good principle of having a great veneration for their natural kings, immediately threw away their arms, and ſeeing the captain let go his hold, and turn the piſtol from their prince, they came near to hear what he had to ſay. Capt. *Smith* made them a ſhort recital of the good uſage he had always ſhew'd them, he told them, "that the "*Engliſh* had never deſir'd their goods "without giving an equivalent for them. "He then repreſented to them the baſe- "neſs of promiſing to trade in a fair way, "and, under colour of friendſhip, to lay "ſnares for men's lives who liv'd peace- "bly among them. He ſaid, he would "paſs by all that they had done, provid- "ed they would deal like men of honour." But he concluded his ſpeech by telling them, "that they had promis'd to lade "his ſhips with corn, which they ſhould "do, or he would lade them himſelf "with their dead bodies.

His ſpeech to the ſavages.

The king and his people were ſo frighted at this menace, that they beg'd pardon for what was paſt, and brought goods of all ſorts, and corn in abundance; and the captain, thinking that they had now chang'd their minds, retir'd to repoſe himſelf for a while, having ſlept but little for ſome time before. However, he order'd four or five of his men to ſtay by him: but ſome of them neglecting his orders ſtragled about to barter ſome of their things, which the ſavages perceiving, about 40 or 50 of the ſtouteſt of them ruſh'd into the room to murder the captain, but one or two of his guard giving the allarm, he ſtarted up, and with his ſword and target flew in among them, and being well ſeconded, by the few men he had and ſoon after join'd by the reſt, he made ſuch havock among them, that they were glad to get out, leaving a good part of their companions dead upon the floor. Upon this farther diſappointment, they, according to their cuſtom, beg'd pardon, and the captain, altho' he reſolv'd not to truſt them any more, diſembled his reſentment, and having feaſted with the king, he went aboard that night, where he and Mr. *Weſt* grew deadly ſick, and the ſurgeon declar'd they had been poiſon'd; but by good management they both recover'd. But the captain having ſent away one of his barges that night, the king believing he had ſent for a recruit of men, or perhaps to find out whether he was dead or alive, ſent a preſent of a pearl chain to him the next morning, begging of him not to bring more men, and he offer'd to load his barge and pinnance, without putting the *Engliſh* to the trouble of coming aſhore for it; which being accordingly perform'd, the captain ſet ſail down the river, intending to kidnap *Powhaton* by the way, as the author of all the treachery he had met with; but the bird was flown before he came, and all the ſtores remov'd, ſo that he eſcap'd for that time.

Another attempt againſt him defeated.

But whilſt he was aſhore in this place, he was let into a ſecret, which was, that *Powhaton* had been ſpirited up to all the attempts he had made againſt the *Engliſh*, by ſome *Dutch* men (*the conſtant friends and truſty allies of the* Engliſh *nation*) who had been ſent from *James's Town* to build a houſe for *Powhaton*. Thoſe *good chriſtians* had betray'd all the

ſecrets

All these plots against the English, were contriv'd by some Dutch belonging to the colony.

ſecrets of the plantation to him, and, in the preſident's abſence had convey'd privately ſome arms and ammunition to him; having much at heart the deſtruction of the *Engliſh* intereſt in *Virginia*; a politick their country men have practis'd in more places than one, as we may have occaſion to ſhew in the proper place.

With this information, and an account of the place of rendezvouz between the *Dutch* and the ſavages, capt. *Smith* return'd to *James's Town*, bringing with him 270 buſhels of corn. And after he had diſpoſs'd of the corn in the publick granary, he took a party with him and went to a glaſs houſe in a wood, a mile from the town, which was the place to which the *Dutch* carry'd the ammunition to deliver it to *Powhaton*'s people. The principal traytor fled at his approach, and the preſident having detach'd his party to different places, to ſearch for him, was walking home all alone, when he was met by the king of *Paſpiha* (now one of *Powhaton*'s confederates againſt the *Engliſh*.) This man was very ſtrong, ſo that when the preſident would have drawn his ſword, the ſavage clos'd with him, and catching him up in his arms, he run with him to the river, and throwing himſelf headlong into it, kept the preſident in his arms. Being diſengag'd after the firſt plunge, they try'd who ſhould drown the other, all other weapons being forgotten in the ſtruggle. After this manner they continu'd in the water, till two *Engliſh* men coming that way by chance, parted them, and carry'd his majeſty priſoner to the town; from whence he made his eſcape ſoon after, by the negligence of his keepers. But the preſident by his prudence, reclaim'd this king, and brought his whole country into the *Engliſh* intereſt, and they bound themſelves by a ſolemn treaty to furniſh the colony with proviſions.

Captain Smith in great danger.

Some malecontents, who had gone to *England* with capt. *Newport*, had repreſented capt. *Smith* in ſuch colours to the council in *England*, that the lord *De la Ware* was made governor of *Virginia*; who appointed Sir *Thomas Gates*, and Sir *George Summers* as his deputies, and ſent them away with 9 ſhips and 500 men to ſtrengthen the colony, or make a new plantation, as they ſhould ſee cauſe. Six of theſe ſhips came ſafe to *James's Town*, but the admiral ſhip in which were both the deputies, was driven to *Bermudas*, and two more to other places; ſo that no new commiſſion appearing, the preſident ſtill kept his authority, till either his year ſhould expire, or the deputies arrive. But ſome of the old mutineers being come back with this fleet, they began their old practices, and altho' the preſident acted with vigour, as well as prudence, they were ſtill a thorn in his ſide; ſo that when Mr. *Weſt*, the lord *De la Ware*'s brother propos'd to ſettle a new plantation towards the head of the river with 120 men, the preſident agreed to it, and at the ſame time, encourag'd capt. *Martin*, one of the arch mutineers, to follow his example, and ſettle another in the country of *Nanſamund*, upon the ſame river, with the like number of men. But *Martin*, having ſeiz'd the king of *Nanſamund* in an arbitrary manner, and yet wanting courage to keep his people in aw, they made an inſurrection, reſcu'd their king, and kill'd ſeveral of the *Engliſh*; and altho' the preſident ſent him a recruit of men, he had not the heart to attempt any thing, but inglorioufly left his people to ſhift for themſelves, and came himſelf back to *James's Town*. Mr. *Weſt* having ſettled his plantation, left them in poſſeſſion, but the preſident going that way to ſee what they were doing, found the place ill choſen, and therefore made an agreement with *Powhaton*, whom he now reduced to better manners, for a very convenient ſpot of ground upon the ſide of the river; and in conſideration of their protecting his people from the *Monacans* their enemies, it was ſtipulated between them, that the natives ſhould furniſh the planters with corn, for a ſmall quantity of copper. The preſident having procur'd ſuch good conditions for them, deſir'd them to go down the river to that place; but they refus'd to obey him, and got to their arms; upon which he having only five men with him was fain to retire to his boat, but to be even with them, he ſeized the ſhip where their corn was; but finding them obſtinate he left them, and as ſoon as he was gone, the natives riſing upon them, for their oppreſſion, knock'd many of them on the head; ſo that ſending after the preſident, they offer'd to go to *Powhaton*, which they did, and call'd the place *Noneſuch*. But Mr. *Weſt* coming to them ſoon, altho' he was no encourager of the mutiny; yet perhaps a punctilio of honour, for his own plantation, made him give way to the ſolicitations of the grumblers, and ſo they left *Noneſuch*, and return'd to their firſt ſeat. The preſident ſeeing them ſo blind to their own intereſt, left them, and ſail'd down the river.

The lord De la Ware made governor of Virginia.

New colonies planted, but miſmanag'd.

In this voyage, an unlucky accident befel him; his powder bag taking fire, by ſome chance or other, (whilſt he was aſleep) blew him over-board, but he was ſo burnt, that, after the water had quench'd the fire, he could not make any help for himſelf, and had like to have been drown'd and burnt both at once: but being ſav'd by his men, he came in

that

that ſad pickle to *James*'s *Town*, before he could get a ſurgeon to dreſs him.

He was now reſolv'd to do juſtice upon ſome of the leading mutineers, particularly, *Martin*, *Ratcliff*, and *Archer*, whom he deſign'd to try by a fair jury; but they being conſcious of their own guilt, attempted to prevent their trial by the death of the preſident; and it was agreed that one of them ſhould ſhoot him as he lay ill of his laſt hurt; but the attempt prov'd abortive, ſo that they took arms, and getting a party to join them, and the honeſt people wanting the preſident to lead them, and Mr. *Scrivener* having been unhappily drown'd in a skiff ſome time before, they uſurp'd the government; capt. *Smith*'s friends carrying him aboard a ſhip ready bound for *England*, he ſet ſail, with many proteſtations that any miſchief which ſhould happen to the colony, for want of a lawful government, was not his doing.

The mutineers conſpire againſt him, and he is forced to go for England.

After capt. *Smith*'s departure, ſome of thoſe who had been the occaſion of moſt of his troubles, were, in the juſtice of providence, well ſerv'd by thoſe who had employ'd them againſt him: particularly the *Dutch* men, who, finding themſelves diſcover'd, upon the captain's ſearching the glaſs-houſe, had fled to *Powhaton*; after the preſident went away, they deſir'd leave to return to *James*'s *Town*, promiſing to repreſent matters to ſo great advantage for him to the new governors that he ſhould have a more beneficial trade with the *Engliſh*; but the ſavage king told them, that ſince they had betray'd capt. *Smith* to him, he did not doubt but they would betray him to the new governors, and ſo he gave orders to knock their brains out, which was accordingly done.

The colony dwindles after his departure.

But the *Engliſh* intereſt in *Virginia*, which by his courage, and good government was in a flouriſhing ſtate, fell immediately to decay. For, the natives, many of whom lov'd him, and all of them fear'd him, as ſoon as he was gone, fell upon the *Engliſh* wherever they found them in ſmall parties. Capt. *Ratcliff* was kill'd, with a conſiderable party at his back, by an ambuſcade; and ſo were Mr. *Weſt*, and capt. *Martin*. In a word, of 500 men that capt. *Smith* left in *Virginia*, there were not above 60 alive in ſix months; and thoſe reduced to live upon what they could pick up in the fields, or in the river, for *Powhaton*, being ſagacious enough to obſerve the difference between their old captain and the new ones, would trade no more with them, and their neighbour ſavages would give them no more corn.

The two knights arrive at Virginia.

In this forlorn ſtate Sir *Thomas Gates* and Sir *George Summers*, at their arrival found the colony. Theſe two gentlemen had been ſeparated from the fleet, as we obſerv'd before, by a moſt violent ſtorm; and their ſhip was ſo leaky, that they were forced to ply the pumps day and night, at which they labour'd ſo hard, throwing out 100 tun of water every four hours, that the men were quite ſpent, and were ſo diſcourag'd that they gave themſelves for loſt, when Sir *George Summers* gave them freſh vigour, by calling out *land*. This was the *Bermudas* iſlands, call'd from him, the *Summer's iſlands*, were they landed to their great joy, and found a comfortable habitation there, till they refitted their ſhip, and built a pinnace, to aſſiſt them in their voyage to *Virginia*, which they perform'd without any difficulty. But finding the affairs of the plantation in ſo bad a way, and being in no condition to retrieve them, or to force the ſavages to ſupply them, it was unanimouſly agreed upon to embark for *England*: ſo that having bury'd the great guns before the gate of the fort, they all went aboard, leaving the town as it was, by the abſolute command of the deputies, againſt the inclination of ſome who would have ſet it on fire.

The colony leave James's Town.

Having ſet ſail from *James*'s *Town*, down the river, they met their governor, the lord *De la Ware*, with three ſtout ſhips well provided, which ſoon determin'd them to return to their plantation. Upon their arrival, the governor immediately ſet about putting all things in order, and nam'd all his officers, making Sir *Thomas Gates* his lieutenant general; Sir *George Summers* admiral; the honourable Mr. *Piercy* governor of the fort; Sir *Ferdinando Weinman* maſter of the ordnance; and Mr. *Strachey* (who was the writer of the account, from whence our author took his relation) was made ſecretary and recorder. But, till they could bring the ſavages to better temper, Sir *George Summers* propos'd to return to *Bermudas*, were they could be plentifully ſupply'd with fiſh and fleſh. This propoſal was agreed to, and the admiral with capt. *Argol* were ſent upon the expedition. But being parted at ſea, capt. *Argol* miſſing his way to the *Bermudas*, fell in with the coaſt of *Sagadahoc*, upon the coaſt of *New England*, in 45 deg. where he furniſh'd himſelf with a ſmall ſtock of cod-fiſh which he carry'd back to *James*'s *Town*. The admiral was driven upon the ſame coaſt, but having ſtaid only to water, he made the *Bermudas* iſlands, where he unfortunately dy'd of a ſurfeit. He was a fine gentleman, and his death was much lamented, and was indeed a great loſs.

And return with lord De la Ware.

The death of Sir George Summers.

In the mean time, the plantation was but in a ſorry way. The ſavages were ſo

us'd to inſult them after capt. *Smith's* departure that they came often to the paliſades of *James's Town*, and knock'd on the head all the *Engliſh* whom they found ſtragling in the woods. To remedy this abuſe, the governor, finding that the forbearance of the *Engliſh* encreas'd the inſolence of the natives, reſolv'd to deal with them in another manner. He ſent Sir *Thomas Gates* to one of their towns, call'd *Kecoughton*, which he pillag'd, not ſo much out of any expectation of booty, as to ſtrike terror into the ſavages. And, at the ſame time, he ſent a meſſage to *Powhaton*, offering him his friendſhip if he would live peaceably, and trade with the colony upon the ſquare; but threatning fire and ſword in caſe of his obſtinacy: he likewiſe requir'd him to releaſe ſome *Engliſh* whom he detain'd as ſlaves. But *Powhaton*, fooliſhly imagining that all the *Engliſh* bravery was gone with capt. *Smith*, return'd an inſolent refuſal, bidding the meſſengers leave his country, and never appear before him with any meſſage, unleſs they brought him a coach and horſes, which he had been inform'd, (by one of his own people who had gone to *England* the year before by his contrivance,) the great lords made uſe of when they viſited one another.

A meſſage to Powhaton.

This refuſing to releaſe the priſoners would have been ſeverely reſented had the lord governor ſtaid much longer; but his lordſhip's ill health, and the phyſicians aſſuring him that nothing would recover him but his native air, determined him to leave *Virginia*; ſo that leaving a deputation with Mr. *Piercy*, till farther orders from the council in *England*, he embark'd, there being then in *James's Town* above 200 men in good caſe, and proviſions ſufficient for at leaſt 10 months. Sir *Thomas Gates* had been ſent for before, by the council of *England* for *Weſt-India* affairs, to give an account of the ſtate of the country, and to inform them whether it would be worth their while to be at farther expence in ſettling colonies there. To this he had return'd them an anſwer, which being confirm'd by the lord governor, at his return, gave them ſuch ſatisfaction, that they were reſolv'd to ſupport the plantations in *Virginia* to the utmoſt; and accordingly Sir *Thomas Dale* was diſpatch'd thither with a freſh ſupply, and a commiſſion to command in chief, as marſhal, till Sir *Thomas Gates* ſhould go over.

Lord De la Ware *goes for* England.

Sir Tho. Dale *ſent from* England *to* Virginia.

A. D. 1611.

Sir *Thomas Dale* found the colony at his arrival in the old ſtate of idleneſs and lazineſs, which gives one no extraordinary idea of the fitneſs of Mr. *Piercy* for government. However he made haſte to ſet them to work, and inſtead of letting them live upon the proviſions left them by lord *De la Ware*, he put them upon providing for themſelves in the country, and capt. *Argol* in one expedition among the *Patawomecks*, a people living upon the largeſt river in all *Cheſapeak* bay, and is the diviſion between what is now call'd *Virginia* and *Mary-Land*, brought to *James's Town* 1100 buſhels of corn; having met with a good reception from thoſe people. He likewiſe diſcover'd nearer the colony, the river *Nanſamund*, which runs into *James's River* about half way from the ſea on the ſouth ſide; and built a town, to which he gave the name of *Henry*, in honour of the prince of *Wales*. Nor was this all the advantage of this brave captain's expedition; for he made way for the redeeming all the priſoners who were in *Powhaton's* power, which he did in this manner.

Henry's Town *built by him.*

Powhaton's beloved daughter *Pocahunta*, being at this time in the king of *Patawomeck's* houſe, there being a friendſhip between them, capt. *Argol*, who was intimate with that king's brother, propos'd to him the getting this young lady into his hands, by aſſuring him, upon his honour, that ſhe ſhould be well treated, and by telling him, that he had no other plot in getting her in his power, but the releaſe of his countrymen, whom *Powhaton* unjuſtly detain'd. *Paſſtancie* at firſt boggled at it, as a breach of truſt, and an action which might bring the ſuperiour force of *Powhaton* upon their country; but *Argol* preſſing him upon the juſtice of it, and mixing ſome menaces of withdrawing his friendſhip if he would not comply with his requeſt; and at the ſame time promiſing to ſecure him againſt the reſentment of *Powhaton*; he prevail'd upon him to interceed with his brother, and by that means he got the lady deliver'd to him, to which ſhe had no averſion, having taken a liking to the *Engliſh* ever ſince capt. *Smith* had been her father's priſoner.

Captain Argol's *contrivance to redeem the priſoners.*

By getting Pocahunta *into his power.*

As ſoon as the captain arriv'd with his fair priſoner at *James's Town*, a meſſage was ſent to *Powhaton*, that ſhe was there; and if he expected her releaſe, he muſt ſend back all the priſoners he had, together with all the arms and working tools which the *Dutch* men had purloin'd out of *James's Town*, beſides that, he ſhould pay for her ranſom, a good quantity of corn, for the uſe of the colony. *Powhaton* was in great perplexity at his daughter's captivity, but as he lov'd her tenderly, (and indeed ſhe was the moſt valuable thing in his dominions) he ſent back word, that if the captain, who had his daughter, would ſail up his river, he would ſatisfy him, and enter into a firm alliance with the *Engliſh*. Sir

Sir *Thomas Gates* was now arriv'd, and had taken the government upon him; he treated *Pocahunta* with ſo much civility and reſpect, that ſhe was very indifferent about going home, having a ſpirit and inclinations very averſe from the ſavage way of living of the people of her country. She was young, having been but about 13 years of age when ſhe ſav'd capt. *Smith*'s life; ſhe was handſome too, and of a ſweet engaging temper, ſo that all the *Engliſh*, after the governor's example, ſhew'd her a great deal of reſpect; particularly Sir *Thomas Dale*, who took much pains to inſtruct her in the principles of the chriſtian religion, which ſhe ſoon learn'd, and began to have great liking to. It was agreed that Sir *Thomas Dale* ſhould go to treat with *Powhaton* inſtead of capt. *Argol:* and ſo taking the lady aboard his frigot attended by 150 men, he ſail'd to *Pamankie*, where the ſavage king reſided at that time.

However deſirous *Powhaton* was to relieve his daughter, yet the buſineſs was protracted, the ſavages, who came to the ſhip, pretending to know nothing of Sir *Thomas*'s affair, adviſing him to treat with the king's brother *Opecancanogh* (the ſame whom captain *Smith* had drag'd out in ſight of his army, as has been related in its place) becauſe they ſaid the king was not at home. But Sir *Thomas* giving orders to his men to uſe ſome hoſtilities, and to threaten more, *Powhaton* at laſt vouchſafed to ſend perſons to treat about *Pocahunta*'s releaſe; but when they came into her preſence, ſhe receiv'd them very coldly, bidding them tell the king, "That ſince ſhe found he "valued her ſo little, as to prefer a par-"cel of ruſty iron before her freedom, "ſhe would ſtay with the *Engliſh* where "ſhe was eſteem'd and reſpected."

Upon the return of the meſſengers to *Powhaton*, he ſent one of his chief courtiers to deſire Sir *Thomas* to retire to *James*'s *Town*, giving his word, that in 15 days, he would ſend all that they had demanded; and withal he told *Pocahunta*, that if ſhe inclin'd to ſtay with the *Engliſh*, he gave her leave, and deſir'd Sir *Thomas Dale* to treat her as his own daughter. This meſſage was agreeable to them both, and Sir *Thomas* ſhewing not the leaſt diſtruſt of *Powhaton*, went back to *James*'s *Town* with his fair diſciple, whom he inſtructed in a ſhort time ſo perfectly in the chriſtian faith, that ſhe deſir'd baptiſm, and had it by the governors chaplain, to the ſatisfaction of the whole colony, and to her own great comfort; and ſome time after, with her father's conſent, ſhe was marry'd to an *Engliſh* gentleman, of the colony, her uncle performing the father's part, in the publick church, by giving her to be marry'd according to the rubric.

Powhaton agrees with Sir Tho. Dale to give up the Engliſh priſoners.

Pocahunta turns chriſtian, and marries an Engliſh man.

Nor did *Powhaton* fail of his promiſe, but ſent the priſoners, the arms and inſtruments, together with a handſome preſent of corn, at the time appointed, and ſolemnly promis'd that if any of his people did any hurt to the *Engliſh*, he would ſend them to *James*'s *Town* to be puniſh'd. He liv'd ever after, in peace and friendſhip with the *Engliſh*. *Pocahunta* went with her husband to *England*, where ſhe was treated with great reſpect, as ſhe well deſerv'd, upon the account of her quality, but much more for her vertue and good ſenſe, and intending to go back to her own country, ſhe dy'd at *Graveſend* much lamented by all that knew her, having ſhew'd both by her life and at her death, that ſhe was a good chriſtian.

In the time, that Sir *Thomas Dale* was tranſacting the affair of the ranſom with *Powhaton*, capt. *Argol* ſail'd up the river, to the *Checahominies*, a people that inhabited a country, near a river of that name, which runs into *James*'s river from the north weſt ſide. Theſe people had never ſubmitted to *Powhaton*, but were ſtill at war with him. They had no king of their own, but were govern'd by eight nobles; and were willing to ſubmit themſelves to the king of *Britain*, and deſir'd to be call'd the *Checohominie Engliſh*. Theſe agreed with the captain, that every one who carry'd a bow, ſhould ſend two buſhels and a half of corn to *James*'s *Town* every harveſt, for which they were to receive ſo much copper a man, and each of their governors a ſuit of red cloth. Their country lies in a fine ſpot of ground.

Checahominies.

But one of the moſt conſiderable pieces of ſervice to his country, was his diſcovery northward to *Sagadahoc*, and farther north he ſail'd as far as S. *Croix* and *Port Royal* on each ſide the bay of *Fundi* in 46 deg. here he found the *French* making colonies, and thinking it an encroachment upon the right of the crown of *England*, he drove them out, deſtroy'd their forts, and brought their ſhips to *James*'s *Town*, with the two jeſuits who had the ſuperintendency of the plantations in thoſe parts.

Diſcoveries to the northward.

Thus by the good government of Sir *Thomas Gates*, and (after his departure for *England* in the year 1614) by the vigilance and excellent conduct of Sir *Tho. Dale*, and the bravery and indefatigable induſtry of capt. (afterwards Sir *Samuel*) *Argol*, the colony was brought to a flouriſhing condition. In the year 1616, *Dale* went for *England*, and left capt. *Yardly* in the office of deputy. It was with him that *Pocahunta* (now a chriſtian by the

Captain Yardly made deputy governor.

the name of *Rebekah*) went for *England* with her husband; and one of *Powhaton*'s councellors, call'd *Tomocomo* went at the ſame time; but he would never change his religion, altho' there was great pains taken to perſuade him to it. He was ſent by his king, to ſee whether *England* was as good a country as was pretended, and how it was peopled. At his firſt landing at *Plymouth*, he provided a ſtick and made a notch in it for every one he ſaw, intending by that way of reckoning to count the numbers of the people of *England*, at leaſt of the inhabitants of the cities where he ſhould happen to be; but he was ſoon convinc'd that the largeſt tree in his maſters dominions, would not have been enough to make the computation, and therefore threw away his ſtick, and admir'd the numbers he ſaw in that one place; and to be ſure was much more ſurpriz'd when he came to *London*.

Captain *Yardly* apply'd himſelf to advance the plantation, and made them employ a great deal of ground in planting tobacco; but he was forced at ſometimes to march out upon parties, to oblige the *Checahominies* to bring in the corn according to their agreement with capt. *Argol*. Several other provinces likewiſe furniſh'd them with corn and other neceſſaries, and all matters went very well on, the council from home, ſending them frequent recruits, with all things requiſite for advancing the colony. He being call'd home, capt. *Argol* was ſent to ſupply his place: and ſoon after the lord *De la Ware* ſet ſail for
1617. *Virginia*, but dy'd at ſea. About this time likewiſe dy'd *Powhaton*, and was ſucceeded by his ſecond brother *Itopaton*, who with the brother formerly mention'd renew'd the league with the *Engliſh*.

Upon *Argol*'s return to *England*, *Yardly* (now Sir *George*) was again made deputy of *Virginia*, to the general ſatisfaction of all the colony. And now the tobacco began to flouriſh, which has ſince been ſo conſiderable a branch of trade: but by an odd piece of roguery, they ſold the beſt *Virginia* tobacco, in *England*, as the growth of another country, and the worſt of it, as being only the produce of *Virginia*. Thus did ſome traders, for their own particular profit, cheat their country, and at the ſame time brought the *Virginia* plantation into diſrepute.

Notwithſtamding this and other inconveniencies, the planting in that country was well ſupported; for, before the
1619. end of the year 1619, eight ſhips were diſpatch'd by the company, and four more by private adventurers, in which went above 1260 perſons which made the number in *Virginia* 2260. And now they were model'd into a regular government; a college was erected, and many new houſes built, and all things had a fine appearance: and this year many particular patents were granted for ſeparate plantations, and much money was rais'd by voluntary contributions, for building churches, and propagating the chriſtian faith in *Virginia*, and publick ſchools were ſet up for breeding of youth in religion and literature; ſo that in the year 1621, by the encouragment of the earl of *Southampton*, and others, the company ſent over 21 ſhips, which carry'd 1300 perſons, and 26 new patents were given out this year, each of which occaſion'd freſh additions to the numbers already gone over. Their iron works, vineyards, ſalt-works, cotton plants, and tobacco, as alſo ſugar canes, hemp, flax, wood, mulberries, oranges, and lemons, corn, and all other things were in a thriving way; and by a particular recommendation from the king, the lord treaſurer *Southampton* and the company, they apply'd themſelves particularly to the making of wine and ſilk.

The colony in good condition.

The governor in 1621 was Sir *Francis Wyatt*, and all things ſeem'd to be in the moſt profound peace, and a good underſtanding kept with the natives. They had engratiated themſelves (as they thought) with *Opecancanogh*, by ſending workmen to build him a handſome houſe after the *Engliſh* faſhion, inſtead of the hog's-ſty he and his anceſtors had liv'd in before, and had furniſh'd it with their own moveables, of which he was very fond, and was ſo taken with the locks, that he ſpent the beſt part of the day in locking and unlocking the doors, wondering at the conjuration of ſhutting or opening of a large door, by only turning a key a little to one ſide or to the other.

1621. Sir Francis Wyatt governor.

But altho' this peace was honeſty meant on the part of the *Engliſh*, and that they were ſo far from having any ill deſign, or ſuſpecting any ill uſage from the natives that they entertain'd them in their own houſes like friends and brothers; and, without any fear, diſpers'd themſelves in ſmall parties thro' different places of the country to labour ſuch ſpots of ground as were aſſign'd them; yet all the appearance of good nature and familiarity in the ſavages, was only grimace, and they were actually carrying on a bloody conſpiracy againſt all the *Engliſh* in *Virginia*. In order to deſtroy them the more effectually, they did them all the good offices they could expect from their beſt friends, but under hand had a concert to cut them all off at one time; and to oblige the *Engliſh* to live the more ſecurely, they laid aſide their bows and arrows, for ſometimes

A plot againſt the Engliſh.

ſometime before the day fix'd for the execution of their plot; and obſerving that this made the *Engliſh* likewiſe go without arms, or lay them by, in a place by themſelves, they agreed ſecretly, to come unarm'd, and having ſeiz'd the weapons of thoſe they deſign'd to murder, they determin'd to cut their throats with their own ſwords.

Opechancanogh was at the head of this helliſh contrivance, and it had taken as fully as they intended it, had not the good hand of providence prevented it in a great meaſure, by putting it in the heart of one of the ſavages to diſcover it to one of the planters; ſo that the colony at *James's Town* were upon their guard, and as many others as they had time to give the allarm to. Notwithſtanding which above 400 *Engliſh* were murder'd in different places; for the ſavages coming about breakfaſt time, and being invited, as uſual, to eat with them, they watch'd the opportunity, and ſnatching up ſwords or other inſtruments of miſchief, fell in among the naked *Engliſh*, and ſpared neither age nor ſex, in all places where they had not been warn'd to be upon their guard. But at *James's Town*, and at the places near, finding the *Engliſh* arm'd they ſneak'd off, without attempting any thing. This happen'd on *Friday* the 22d of *March* 1621. How the *Engliſh* came to defer the chaſtiſing this villany till the year following, I don't know; but in the year 1622, they march'd in a body to *Pamanuc*, which they burn'd to the ground, together with many other towns and villages thro' the country, and kill'd all the ſavages who made any oppoſition, and *Opecancanogh* himſelf was ſaid to have dy'd by their hands. But after this revenge the natives beg'd peace, and the *Engliſh*, having ſettled the confuſions occaſion'd by the maſſacre, kept more upon their guard than formerly, and king *James* ſent them arms and ammuniton, from the tower of *London*.

In ſome meaſure executed.

And reveng'd.

But in the year 1623, there were ſo many complaints made of the ill management of the firſt colony call'd the *London Company*, that the king appointed an inquiry to be made into the affairs of *Virginia*; the reſult of which was, that a *quo warrnato* was iſſu'd out againſt their patent; and after a trial in the court of king's bench, in *Trinity* term the year following, it was declar'd forfeited; and, ſince that time, the plantations in *Virginia* have been under the imediate direction of the crown. And this is all that we have occaſion at preſent to ſay of *the firſt colony* mention'd in the patent granted in 1606; being in extent from ſouth to north, along *Cheſapeak* bay, from *Cape Charles*, on the eaſt ſide of the bay, about 60 miles, that is from 37 to 38 degrees lat. taking in all the land included in that degree, between *Cheſapeak* bay and the ocean. As alſo from *Cape Henry*, on the weſt ſide of the bay, to *Patowomeck* river, (call'd in the Atlas *Patowmeck*) about 90 miles, *viz.* from 37 to 38 degrees and a half; and keeps the courſe of that river north weſt, along the ſide of *Mary-Land*, from which that river divides *Virginia* on that ſide) till you reach the 40th degree of latitude. So that what is now call'd *Virginia*, is bounded by the ocean on the eaſt, till you come to the 38th degree (becauſe, ſo far it is on both ſides the bay of *Cheſapeak*) and by *Mary-Land* on the eaſt, for the reſt of it: by *Penſilvania* and a part of *Mary-Land*, on the north; by the *Apalitean* mountains on the weſt; and by *Carolina* on the ſouth. All which countries, at the time of their firſt diſcovery by Sir *Walter Rawleigh*, and even at the firſt patent's being granted by king *James*, went under the common name of *Virginia*. There are four great rivers, in proper *Virginia*, on the weſt ſide, which run into *Cheſapeak* bay within 15 or 20 miles of one another. 1. *Powhaton* river, to which the *Engliſh* gave the name of *James's* river, which is about three miles broad as it enters the bay, and is navigable 150 miles. 2. *Pamanuc* river, which, in honour of that moſt excellent prince king *Charles* I. then only duke of *York*, they call'd *York* river. It is 14 miles north of *James's* river, and is navigable 60 miles, and, with ſmall barges, 30 miles farther. 3. *Topahanoc*, navigable 140 miles, and 4. *Potawomec*, about 7 miles broad, and navigable 140; and is by much the largeſt river in *Virginia*, and the bounds between *Virginia* and *Mary-Land* on the weſt ſide of the *Cheſapeak* bay.

The ſituation of Virginia.

Four large rivers in Virginia.

In this country there are few towns, the *Engliſh* chuſing to live upon their ſeveral plantations. They are ſaid to have 49 pariſhes, moſt part of which have miniſters of the church of *England*, who are preſented by the church wardens and veſtry, and inducted by the governor: there are only two presbyterian, and three quaker meetings in all *Virginia*. It is divided into 23 counties, which have all *Engliſh* names, except *Nanſamund* and *Accomac*; and in the year 1703, the number of *Engliſh* in this country was reckon'd 60,616, beſides 6000 inhabitants of *Norther-neck*, which I ſuppoſe is that part of it, on the eaſt ſide of *Cheſapeak* bay, and about 200 *French* refugees.

Engliſh Atlas p. 242.

All the country here diſcrib'd was diſcover'd by *the firſt colony*, planted here by *the London Company*, being within

Ogilvy's America ch. 2. Virginia.

the limits fix'd by the patent to them, altho' they did not run farther up, on the east side of the bay, than 60 miles; and the patent being made void, before what is now call'd *Mary-Land* was discover'd, at least possess'd (which they might have laid claim to, had the patent subsisted) there was no more of that country call'd afterwards by the name of *Virginia*, than what is above describ'd.

SECT. V.

The Discovery and Planting of NEW ENGLAND.

HAVING in the preceding section, given an account of the progress of the colony, sent to *America*, by the *London Company*, we now proceed to the *2d Colony*, call'd in the patent of 1606, *the Plymouth Colony:* which (altho' granted to settle in *Virginia*) took another name so soon, that we think it properer to distinguish it from the former by the name of *New England*, as it was soon call'd, after the dissolution of the patent, than to confound our readers with the common name of *Virginia*.

The Plymouth Company *sends out ships.*

In the year 1606, the same year that the first colony set out, as we have already related, Sir *John Popham*, then lord chief justice of *England*, and Sir *Ferdinando Gorges*, governor of *Plymouth*, in conjunction with several other gentlemen and merchants in the west, fitted out a small ship, with only 30 men, for this great design of planting a colony among savages, and which was as bad, having the *Spaniards* constantly going and coming thro' the seas they had to cross in their way to their design'd settlement. And indeed the event shew'd that it was ill judg'd to attempt settling in *America*, with so slender a force. For their ship falling in with a fleet of *Spaniards*, near the islands possest by that nation, was taken, and capt. *Challons*, who commanded her, after very ill usage, was sent to *Spain*, where he and his men were treated no better.

The lord chief justice sent another ship, soon after, commanded by capt. *Hanham*, but gave him instructions only to view the country, and make report, that they might judge whether it would be worth their while to be at charge to make a plantation, many of the adventurers having been discourag'd by the miscarriage of their first ship. He perform'd the voyage happily, and gave so good an account of the country, that those who appear'd very backward to the attempt before, were now the most eager to carry it on. And therefore,

Two ships were forthwith, fitted out under the conduct of capt. *Popham* and capt. *Gilbert*, with 100 men, and all necessaries, who going to the north east of *Chesapeak* bay, according to the tenure of their patent, landed at *Sagadehoc*, formerly mention'd, in 45 deg. n. lat. in the country now call'd *New England*, and staid till the year folowing. But in that time, the lord chief justice dynig in *England*, and likewise Sir *John Gilbert* (brother to the captain, and president of the council for *West-India* affairs,) and capt. *Popham* dying in *America*; altho' Sir *Francis Popham*, who succeeded to his father's estate, sent over a fresh supply; yet capt. *Gilbert* being oblig'd to return to *England* to take possession of his brother's estate, and there being no other person there, whom they thought proper to be entrusted with the plantation, they unanimously agreed to return with the ships lately arriv'd; which they accordingly did, to the great discouragement of all the adventurers; so that the *Plymouth Company* was good as dissolv'd of itself.

But with little success.

The *English* plantation being thus deserted, the *French*, pretending to have been the first discoverers of that part of the continent, in the reign of *Francis* I. 1524, by *Verrazanus* an *Italian* then in the *French* service, now took possession of that part of the country up *Fundi* bay, and planted S. *Croix* and *Port Royal*, the one on the west, and the other on the east of that bay, and opposite to one another. But they were dispossest by capt. *Argol*, as has been already related.

The French *possess themselves of* Fundi *bay.*

But are thrust out by Argol.

The *French* being thus dispossest, the *English* adventurers for the *Plymouth Company*, again pluck'd up their spirits, and sent two ships in 1611, under the command of capt. *Hobson* and capt. *Harley*, to revive their old plantation; but they did not meet with that peaceable reception from the natives that the rest of their country men had done, of which this was the occasion: Before their arrival upon the coast one *Hunt*, who had come to some place thereabouts, in a smuggling way, had entice'd a good number of the natives aboard his ship, whither they went without any scruple, confiding in the honour of the *English* which they had experienced before. But as soon as he had them in his power, he clap'd them all under hatches, and sail'd away, and afterwards sold them for slaves. This piece of villany so exasperated the natives (otherwise a good natur'd people) that they no sooner perceiv'd the *English* ships, but they took to their arms, and altho' the captain's sent two of their country men ashore,

A piece of treachery done by one Hunt.

aſhore, who had been well us'd in *England*, they could not prevail with their friends to have any commerce with ſuch perfidious people as they believ'd the *Engliſh* to be. *Such miſchief is one wicked man, abandon'd to honour and vertue, capable of doing, when he has little private intereſt more at heart, than the honour and advantage of his country.* The two natives, whom they had ſent to perſuade their country men to renew their former correſpondence, were as much diſguſted, when they were inform'd of *Hunt*'s treachery, as the others were, and therefore plotted the deſtruction of the *Engliſh* they had come over with, however innocent they knew them to be of their country men's crime. Having concerted meaſures to bring this about, they fell upon the *Engliſh* one day, but they being more upon their guard, than the natives thought, they ſoon defeated them. But, finding it impracticable to bring them to have confidence in them, they thought it needleſs to ſtay any longer in that country unleſs they had had force ſufficient to ſubdue it; they therefore return'd to *England*.

A great damage to the Engliſh.

Capt. *Smith* was prevail'd upon to ſail with two ſhips to that coaſt, where he oblig'd the natives to trade with him, and with eight men only went along the coaſt, and, landing in ſeveral places, took an exact plan of it; and at his return, made 1500 pounds of otters and beavers skins, ſalt fiſh, and train oil. He ſet out a ſecond time that year, with two ſhips more, but being forced back by a ſtorm with his maſts all broken, he went aboard a ſmall bark to proſecute his voyage, and was taken by the *French* and carry'd priſoner to *France*, altho' the ſhip made her eſcape. Several other ſhips were ſent before the year 1620 and this *Plymouth* colony was in good reputation in *England*.

Several voyages to New England.

In the year 1620, a freſh recruit was ſent from *England*, by the *Plymouth Company*, under the command of capt. *Standiſh*, who arriv'd at *Cape Cod*, in the lat. of 42 and having turn'd the cape, they found a ſpacious bay running ſouthward, capable of containing 1000 ſhips, having the land on the eaſt, ſouth and weſt of it, and its entry, at the cape, about five miles broad, but is conſiderably wider farther ſouth, for about 10 miles. In this bay they ſaw a great number of whales, but were not equip'd for that kind of fiſhing. Their buſineſs being to find convenient places for ſettling, they ſent ſome parties aſhore, well arm'd, to view the country, who ſaw ſome of the natives, but could not overtake them. They found ſeveral places cover'd with mats, under ſome of which were hid bows and arrows, and under others, *Indian* wheat, which laſt they borrow'd ſome part of for food, and likewiſe for ſeed. They ſaw in the country great ſtore of ſtrawberries, walnuts, and ſome vines; and the ruines of an old fort; by which and by a ſhip kettle, which they found, they concluded that ſome *Europeans* had been in that country before. Another company of 24 men were ſent out in one of the long boats to ſearch the rivers that run into the bay, if any ſuch there were. One of the parties that landed, found ſome houſes, but no inhabitants, but they concluded they could not be far off, becauſe they found freſh proviſions, and good ſtore of corn in them: and at laſt they found they had judg'd right, for one night they were attack'd by the natives; but having kept ſtrict watch, they gave the *Indians* ſo warm a repulſe that they fled. Having view'd a good part of the country, they returned to the ſhips, and by the report of the ſeveral officers and their ſoldiers, that it ſeem'd to be a fruitful country abounding with all ſorts of trees, and a fat ſoil for producing all things neceſſary and beneficial, it was thought proper to ſettle a colony there. And their long boat returning at the ſame time, with the news of a moſt commodious harbour, at a place directly oppoſite to the point of *Cape Cod*, at the mouth of the bay, where there was great plenty of fiſh and fowl; at the entry to which harbour, there were two iſlands, not inhabited, well ſtock'd with wood, which would be of great uſe to them in building; thither they went; and finding every thing anſwer their expectation, they ſet about building a new town, and call'd it *Plymouth*; every family, and indeed every particular perſon taking ſuch a proportion of work.

1620 *the* Plimouth Company *arrive at* Cape Cod.

New Plymouth *built.*

When their town was pretty far advanced, one of the natives came very boldly thro' the ſtreets alone, and coming up to ſome of the *Engliſh* who were at work, bid them welcome to the country. He had his bow and arrows, but was ſtark naked, except a ſort of a leather girdle about his waſte. The *Engliſh* treated him civilly, and made him eat with them, and gave him ſtrong liquor to drink, which he ſeem'd to like very much by the quantity he drank. He told them that the place where they were was call'd *Patuxet*, and that the old inhabitants were either dead of the plague, or had deſerted the place. He ſaid he was a *ſagamore* (that is a lord) of *Moratiggon*, a country about five days journey from thence, and would come again to viſit them. In a ſhort time, he was as good as his word, and brought five or

ſix

ſix more of his country men along with him; but now they were all cloth'd with deer skins, and the chief man had a cat's skin upon his arm. Theſe were in like manner, well entertain'd by the *Engliſh*, and went away very well pleas'd.

Soon after this ſecond viſit a meſſage came to the governor, to give him an account, that *Maſſaſoyt*, the great *Sagamore* of the adjacent country was come to a certain place hard by to have an interview with the governor. Capt. *Winſlow* was ſent to meet him, with ſome toys, by way of preſent, who was well receiv'd by that king, and being told that the governor had no ill deſign, but only propos'd a league between him and his maſter the king of *Great Britain*, [*Maſſaſoyt* readily accepted it, and leaving capt. *Winſlow* with his brother, went himſelf only attended by 20 men, to the town. Capt. *Standiſh*, being advertis'd of his coming by a meſſage from *Winſlow*, went out to meet him with a ſmall retinue, and after they had embraced one another, in a friendly manner, the king was conducted to the governor's houſe, where he was treated with the beſt things they had, the principal part of the entertainment being ſtrong waters, which his majeſty was very fond of, and drank very plentifully of them. After the collation was over, they went upon buſineſs; and in a ſhort time concluded a peace, and enter'd into a league of friendſhip upon equitable terms on both ſides, *viz.* "That they "ſhould mutually aſſiſt each other in all "juſt wars. That reſtitution, and ſatisfaction ſhould be made in caſe of any "injury of either ſide, and all offenders "duly puniſh'd. That all *Maſſaſoyt's* "allies ſhould be comprehended in this "treaty; and that it ſhould be notify'd to them by him. And laſtly, that "both the *Engliſh* and the *Indians* "when they came to viſit one another, "ſhould be without arms."

A peace concluded between the Engliſh *and* Maſſaſoyt *lord of the country.*

This treaty was carry'd on and agreed to, by the help of an *Indian* interpreter call'd *Tiſquantum*, a native of *New England*, whom the *Engliſh* had carry'd out of *America* to *England* ſome time before, and ſpoke good *Engliſh*. The king having ſtaid ſome hours at *Plymouth*, retir'd to the woods about a mile from the town, where he lodg'd all night, his wives and children coming there to him, and the governor ſending, the next day, two gentlemen to make his compliments, *Maſſaſoyt* gave them a good entertainment, and ſhew'd by all his behaviour that he deſign'd to adhere to the treaty; and in this mind he retir'd to his own habitation.

In the mean time the colony went on to admiration, the town of *Plymouth* was far advanc'd, and they took care to to ſow their ground with ſuch ſeed as they had either brought from *England* or found in *America*. But in four or five months after the treaty, the governor having a mind to know how *Maſſaſoyt* reliſh'd it, and likewiſe being deſirous to have an account of the country, diſpatched capt. *Winſlow* with only three attendants (one of which was *Tiſquantum*) to *Pacanoke* where the *Indian* king kept his court. Mr. *Winſlow*, in this march, found all the marks of truth in what the *Moratiggon* had told them relatiug to the deſolation of the country by the plague, for he ſaw a fine country all along, but almoſt uninhabited. However ſuch people as he found, gave him the beſt entertainment they had, and offer'd themſelves to carry his baggage, and took himſelf and his company upon their ſhoulders, when they had any rivers to paſs.

When they arriv'd at *Maſſaſoyt's* palace, he was much out of countenance, for he was quite deſtitute of proviſions that he could not give them a dinner; their manner being to live from hand to mouth. However his people went a fiſhing and fowling, and in a little time, they got ſome fiſh and patridges. Nor were they better lodg'd, for they were forced to ly upon a mat with the king and his wife, where ſome of his nobles pidg'd in with them. So that having found by his chearful countenance, and open behaviour that he had not repented the treaty, they cut their viſit ſhort, and return'd back to *Plymouth*; giving great joy to the colony for *Maſſaſoyt's* firmneſs.

Mr. Winſlow makes a viſit to Maſſaſoyt.

But there were a people towards the ſouth eaſt from *Plymouth*, known by the name of *Narraghanſets*, ſituated near the great ſea, in 31 and a half n. lat. who ſeem'd to be quite diſaffected to the *Engliſh*; for *Conauacus*, their great *Sagamore* or king, ſent a meſſenger to *Plymouth*, with a bundle of arrows wrapt in the ſkin of a rattle-ſnake. This, as the interpreter told the governor, was an open declaration of war; and therefore in anſwer to this bravade, the governor took the arrows out, and ſtuff'd the ſkin full of powder and ball, and ſo ſent it back by the meſſenger: but at the meſſenger's return to his king, he was ſo frighted at the powder and ball (which he imagined were ſent to deſtroy him and his people before the *Engliſh* appear'd) that he would not let it ſtay a moment in his houſe, but ſent it back by another meſſenger. Whether he had been informed of the dreadful effects of powder and ſhot from the meſſenger who had carry'd the arrows, or ſome other way, I don't know, but he would not touch either, which gave occaſion of good diverſion

The king of the Narraghanſets, *ſends a challenge to* New Plymouth.

to

to the *Engliſh*, and gave them reaſon to believe, that he who was ſo much afraid of touching powder and ball, when they were not in a condition to do him hurt, would not ſtand the diſcharging them from a cannon or a musket.

But that they might not be attack'd at diſadvantage, they fortify'd their town as well as they could; and when they had finiſh'd their works, capt. *Standiſh* went with 10 men intending to go to the country of the *Meſſachuſets* northweſt from *Plymouth*, and afterwards a flouriſhing colony of *Engliſh*. But he was forced to return by an allarm from the city, that the *Norraganſets* were upon their march to attack the *Engliſh*. This allarm was a contrivance of *Tiſquantum*, who, altho' he was then with capt. *Standiſh*, had left inſtructions with a correſpondent of his to vent this piece of news as ſoon as they ſhould be ſome miles out of town (as appear'd afterwards). The *Indian* told this news with ſuch ſeeming concern, and zeal for the colony, that no body doubted the truth of it; he added likewiſe that *Maſſaſoyt* was in the league againſt them. Upon capt. *Sandiſh*'s return, the whole colony was in arms, and guards were placed at the proper poſts. But having continu'd ſome days ready prepar'd for ſo conſiderable an enemy, and no appearance of their coming, *Hobbamock*, one of *Maſſaſoyt*'s chief captains, who had reſided for ſome time with capt. *Standiſh*, being confident of his maſter's innocency, advis'd the captain to ſend to *Puchonoke*, that they might be convinced whether the king was making any preparations for war. This was accordingly done, and the meſſenger who was ſent, found *Meſſoſayt* at home, in his old way, hunting ſometimes with his ordinary retinue, without dreaming of war. The king was ſtruck with this ſtory, being vex'd that he ſhould be thus unjuſtly miſrepreſented to the *Engliſh*, and therefore went immediately to *Plymouth*, to clear himſelf. This was the firſt diſcovery of *Tiſquantum*'s villany, which was ſuppos'd not to be ſo much with a deſign to hurt the *Engliſh*, as to make himſelf appear a conſiderable perſon both to them, and to his own countrymen. For at the ſame time that he had threaten'd the *Engliſh* with this pretended invaſion, he told the natives that the *Engliſh* had the plague ſhut up in a hole under ground juſt by their ſtore houſe, and could let it looſe upon them in greater or ſmaller portions as they thought fit. By this ſtory he kept the *Indians* ſo much in awe, that that they courted him, and gave him conſiderable preſents to keep the hole cloſe, becauſe he made them believe, that he had ſuch intereſt with the colony, that they would make peace or war at his pleaſure. It happen'd that ſome barrels of gun-powder, kept under ground, were dug up in the late allarm, and *Hobbamock* ſeeing the hole, from whence it was taken, ask'd *Tiſquantum* what it meant, who very gravely told him, that they had dug that hole to let the plague out among the natives: but *Hobbamock*, being a man of better ſenſe than to believe him, told the ſtory to capt. *Standiſh*, which was the firſt diſcovery of the interpreter's roguery; and upon enquiry, ſeveral other things having appear'd againſt him, he loſt his credit with both parties; altho' the governor, thinking ſtill he was uſeful to him as an interpreter, would not give him up to *Maſſaſoyt*, altho' he deſir'd it, that he might puniſh him for having contriv'd an open rupture between him and the *Engliſh*. This gave ſome diſguſt to the *Indian* king, and indeed it was ill judg'd, for many of the *Engliſh* having by this time learn'd to converſe with the *Indians* in there own language, as the *Indians* had learn'd a good deal of *Engliſh*. The *Indian* king ſeem'd to have a right to demand the ſlave who had ſo unjuſtly ſlander'd him. However *Maſſaſoyt* never broke the league, nor enter'd into any meaſures, which could give any umbrage againſt him.

Tiſquantum's roguery.

Diſcover'd.

About, or ſome time before, this tranſaction, the *New England* colonies were much augmented. For multitudes of *Non Conformiſts* (having gone to *Holland* from *England*, for what they call'd *liberty of conſcience*, altho' others gave it a worſe name) thinking this open trade to the *Weſt-Indies* a good opportunity of enjoying their own opinions in religion, offer'd their ſervice to the *Plymouth Company*. And the grand patent having been given up to the king, particular patents were granted to the lord *Mougrave*, the duke of *Richmond*, the earl of *Carlile*, lord *Edward Gorges*, the marquis of *Hamilton*, capt. *John Maſon*, and Sir *Ferdinando Gorges*. And now colonies were planted in ſeveral places, which encreas'd in king *Charles* I's reign, being encourag'd by Sir *Harry Vane*, the lord *Say* and *Seal*, and the lord *Brook*, men afterwards very famous for the part they acted in the troubles and civil wars in their country.

Ogilvy's America, *ch.* 2.

But as we do not deſign a hiſtory of the progreſs of thoſe plantations, we ſhall only add, that in a few years time, the *Engliſh* had built 45 good towns, beſides a great number of villages. The whole country is divided into three provinces, *viz.*

1. The *Maſſachuſets* 110 miles in length, and in ſome part of it 80 broad, and is divided into ſix counties, *Main*,

Engliſh Atlas.

Cornwal, *Eſſex*, *Middleſex*, *Suffolk*, and *Hampſhire*. Each of theſe have ſeveral towns, and moſt of thoſe towns, and have their teachers. In the county of *Suffolk* is the city of *Boſton*, the metropolis of *New England*, the fineſt town in all *America*, except ſome of the *Spaniſh Weſt-India* towns. And in the county of *Middleſex* is the town of *Cambridge*, where *Harvard College* and *Stoughton Hall* are, ſo call'd from two perſons who were the erectors of them for the encouraging of learning.

2. *Plymouth* province is about 100 miles long, and 50 broad: and contains three counties, *viz. Plymouth*, *Barnſtable*, and *Briſtol*, each of which have their towns and teachers.

3. The third province is *Connecticut*, 70 miles long, and 50 broad; and contains four counties, *New London*, *Hartford*, *New Haven*, and *Fairfield*, with their towns, &c.

SECT. VI.

NEW-YORK, JERSEY, PENSILVANIA, *and* MARY-LAND.

WE chuſe to put theſe four colonies together, altho' they were not planted at one time, both becauſe they ly contiguous to one another, and becauſe we deſign to be very brief in our account of them, the principal *Engliſh* colonies of *Virginia* and *New England* having taken up ſo much of our time already.

New York.

Ogilvy *ubi ſupra.*

New York lies on both ſides of *Hudſon's River*, from lat. 41 to 44 deg. as it is in the *Engliſh Atlas*; the breadth from eaſt to weſt, that is, from *New England* to *Penſilvania*, being pretty near as much This country, as diſtinct from the others, was diſcover'd by *Henry Hudſon* in 1609, who having been employ'd by the *Eaſt-India Company* to diſcover the north weſt paſſage, in that voyage ſail'd up this river, and afterwards went to *Amſterdam*; where the *Dutch* either having purchas'd, or pretending to have purchas'd the chart he had made of the *American* coaſt, they founded upon that a good *Dutch title* to the country; and ſo having procur'd a patent from the ſtates at the *Hague* in 1614, only to trade in *New England*, they ſettled in this country, which they call'd *New Netherland*; and kept poſſeſſion till Sir *Samuel Argol*, formerly mention'd, diſputed their title, and ſhewed them, by the moſt prevailing argument with them, that that country having been diſcover'd by an *Engliſh* man in right of his maſter, he could not alienate it from the crown, without the king's

The Dutch *poſſeſs themſelves of it.*

conſent. Thus the *Dutch* colony was forced to ſubmit to the governor of *Virginia*, and held their plantation there in ſubordination to the *Engliſh*. But ſome time after, a new governor coming from *Amſterdam*, they not only neglected to pay their uſual acknowledgment to the governor of *Virginia*, but fortify'd their colony by building *New Amſterdam*, and *Orange Fort*, the one on the weſt, and the other on the eaſt of *Hudſon's River*, which laſt is mark'd on the map *Hell-Gate*, and the former is now call'd *New York*.

Theſe proceedings having been repreſented to king *Charles* I. then upon the throne of *England*, his ambaſſador at the *Hague*, made ſuch preſſing inſtances to the ſtates, that they diſown'd their, having given any commiſſion for what the *Dutch* had done, and laid the blame upon the *Eaſt-India* company at *Amſterdam*. Upon this his majeſty gave a commiſſion to Sir *George Calvret*, lately made lord *Baltimore* in *Ireland*, to poſſeſs and plant that part of *America* from *Cheſapeak* bay northward, under the name of *Mary-Land*, in honour of his queen; and to Sir *Edmund Loyden* to plant the northern part, towards *New England*, by the name of *New Albion*. The *Dutch* being afraid of the *Engliſh* power, were willing to compound matters a ſecond time, and offer'd to leave all their plantations in conſideration of 2500 l. to be paid them for the charges they had been at. But ſoon after, thoſe crafty people, ſeeing that excellent prince involv'd in troubles at home, which they too well foreſaw, would hinder him from ſupporting the colonies abroad, they not only flew off from their firſt propoſals, but (as was reported) furniſhed the natives with guns and ſwords, and taught them the uſe of them, that by their aſſiſtance, they might diſpoſſeſs the *Engliſh* all round them. Thus they kept poſſeſſion during the civil wars, and *Oliver's uſurpation*. I do not know how *Cromwel* came to neglect reducing this country: for altho' he was an *uſurper* and a *tyrant*, yet *to give the devil his due*, he ſuffer'd no *foreign* power to affront *England*, nor could he be ever charg'd with having ſuffer'd *Engliſh ſhips*, either of *war* or *trade*, to be *diſturb'd* or *inſulted*, in any ſeas wherever they they ſail'd. Perhaps the ill ſucceſs at *Hiſpaniola* had diſcourag'd the fleet; and in fact he did recover a part of this country from the *Dutch* in 1655, ſince call'd *Penſilvania*.

However that was, the *Dutch* kept poſſeſſion of *New York* till the happy *reſtoration* of the *exil'd* royal family: and king *Charles* II. conſidering of what ill conſequnce a *Dutch* colony might be, in the

the very heart of his dominions in *America*, determin'd to diſpoſſeſs them. To this end, he gave a patent to his brother the duke of *York*, of all the places in *America* which ſhould be retriev'd from foreigners, together with *Long Iſland*, ſituated near the ſouth coaſt of *New York*, and running along a part of *New England*. His royal highneſs gave commiſſion to colonel *Nichols*, groom of his bed-chamber, to go and poſſeſs himſelf of *New Albion*, which he did, and gave it the name of *New York*, which it retains to this day. *New Amſterdam* got likewiſe the ſame name with the country, and lies oppoſite to the weſt end of *Long Iſland*. Fort *Arundel* was call'd fort *James*, on the one ſide of the city of *New York*, a place well fortify'd, and defended with ſtore of cannon: and fort *Orange* got the name of fort *Albany*, the duke of *York*'s *Scotch* title. Theſe two forts command the entry to *Hudſon*'s river and by them on either ſide that river is the beſt defended of any one in north *America*.

But forced to reſign it.

Between the weſt end of *Long Iſland*, and *New York* city, there is a large bay, in which are two iſlands call'd the *States* iſland, and the *Manhatten* iſland. *Hudſon*'s river runs directly north, as far as it is diſcover'd that way. About 120 miles up the river from *New York* lies *New Albany*, a place of great trade with the *Indians*, ſince it came under the *Engliſh* government. In this town, the governor of *New York* has all his meetings with the *Indians*, and tranſacts all affairs with them.

In this government, the chief towns are, 1, *New York*. 2. *New Albany*, both above mentioned. 3. *Kingſton*, 50 miles north weſt from *New York*. 4. *Schenectada*, about 20 miles from *New Albany*. This town was burnt, and the inhabitants kill'd by the *French*, after the revolution; but is rebuilt and better peopled ſince. There are reckon'd about 8000 *Engliſh* in this province of *New York*, and not above 1000 *Indians*.

Engliſh Atlas n. America.

New Jerſey is rather a part of *New York*, than a diſtinct province, and the reaſon why it is reckoned apart from it, is that the duke of *York*, afterwards king *James* II. gave this country (which was included in his patent from his brother) to under proprietors, *viz*, the lord *Berkeley*, and Sir *George Carteret*.

New Jerſey.

It lies on the ſide of *De la Ware* river to the weſt and ſouth of *New York*, and reaches ſouthward as far as the ocean, and has the ſea on both ſides, all ſouth of the city of *New York*, being from ſouth to north above 200 miles, but nothing proportionable in breadth. The firſt proprietors, under the duke, aſſign'd their right to Sir *William Pen*, and partners. It is reckon'd, that there are 12,000 *Engliſh* in this ſpot of ground. It is divided into weſt and eaſt *Jerſey*, altho', by the ſituation, it would be more proper to call them north and ſouth *Jerſey*. In weſt *Jerſey* there are nine towns well inhabited, each of which has a great quantity of land of 30, 40, ſome 50,000 acres aſſign'd for plantations, beſides the plantations belonging to particular perſons in the different counties. Theſe towns are, 1. *Berghen*, which is the fartheſt north. 2. *Elizabeth* town; the ſeat of the government, and of the courts of judicature. 3. *Newark*. 4. *Piſcataway*. 5. *Wood-Bridge*. 6. *Perth Amboy*. 7. *Middleton*. 8. *Shrewsberry*, and 9. *Freehold*.

In eaſt *Jerſey* are, 1. *Cohanzy*, 2. *Fort Elſingburg*, at the mouth of *De la Ware river*. 3. *Salham*, upon a river of the ſame name. 4. *Glouceſter*. 5. *Burlington*, the ſeat of the *aſſembly*, and courts of juſtice; and 6. *Maidenhead*.

The country moſt contiguous to theſe laſt mention'd is *Penſilvania*, which lies to the weſtward of *New York*, and *New Jerſey*; being bounded by thoſe two provinces on the eaſt; by the *Indian* unconquer'd countries on the north and weſt; and by *Mary-Land* on the ſouth. This country takes its name from *William Pen* the famous *Quaker*, ſon to Sir *William Pen* admiral of the fleet in the time of the *rump parliament*, who commanded afterwards under the duke of *York* in the firſt *Dutch* war in 1664. In conſideration of the good ſervice of the father, upon this occaſion, the ſon obtain'd a patent in 1680, to plant this part of *America* recover'd by the *Engliſh*, in the year 1655 from the *Dutch*.

Penſilvania.

Engliſh Atlas ubi ſupra.

The extent of land granted by king *Charles* II. to Mr. *Pen* out of this country, call'd by the *Dutch New Belgia*, comprehends about 330 miles in length and 200 in breadth, and is divided into ſix counties, each of which ſends ſix members to the aſſembly; which aſſembly, with the governor's conſent, makes their laws. The other parts of their government are manag'd after the *Engliſh* model by ſeſſions, *&c.* there are people of different nations and religions in *Penſilvania*, but the bulk of them *Engliſh*, and for the moſt part Quakers. The *European* inhabitants with their negroes are reckon'd 35,000, and the *Indians* about 6000. Scarce a 30th part of the province is inhabited, but what is ſo, is better clear'd than any other *Engliſh* plantation in *America*. The chief rivers in this country are *De la Ware* and *Suſquahanagh*. The former of which is navigable, by ſmall veſſels 300 miles, and taking

taking its riſe from the *Iroquois* country runs in a ſouth courſe, and falls into the ſea at *De la Ware* bay, which divides *New Jerſey* from *Mary-Land*. The other river riſes in the ſame country, and emties itſelf in *Cheſapeak* bay. There are ſeveral ſmaller rivers which fall into thoſe; the moſt conſiderable of which is *Schoolhill* river, which enters *De la Ware* at *Philadelphia*. There are ten conſiderable towns in *Penſilvania*, beſides others of leſs note. 1. *Oxford*. 2. *The Falls Town*. 3. *Briſtol*. 4. *Pensburgh*. 5. *Philadelphia*, between *De la Ware* river, and that of *Schoolhill*, and is the capital of the whole province, well built, having two ſtreets in the middle of it, *viz*. the *High-ſtreet* and *Broad-ſtreet*, each 100 foot broad; there is a ſquare of ten acres, in the centre of the city for the town-houſe, ſchool-houſe and quaker's-meeting-houſe. There is a large church in *Philadelphia* with about 700 of church principles who frequent it. This is the ſeat of the government, and courts of juſtice. 6. *German Town*. 7. *Cheſter*, 8. *New-Caſtle*. 2 *Dover*, and 10. *Lewes*. Moſt of theſe towns are upon the river.

Mary-Land.

South of *Penſilvania*, lies *Mary-Land*, a ſmall track of land on both ſides of *Cheſapeak*, from about 38 deg. to 40. It has *Virginia* on the ſouth and weſt; *De la Ware* bay on the eaſt; and *Penſilvania* on the north. The lord *Baltimore* had a grant from king *Charles* I. in 1631, as we obſerv'd before: but that lord dying, before the patent paſt the great ſeals, another was made out in favour of his ſon, bearing date *June* 20 1632. This patent comprehends all the land between *De la Ware* bay and *Patowmeck* river from eaſt to weſt, and beginning on the ſouth by a ſtreight line drawn from the ſaid river in 37 deg. and 50 minutes eaſtward, (which divides it from that part of *Virginia* between *Cheſapeak* bay and the ocean) it reaches to the 40th deg. n. lat. By this patent, his lordſhip was made abſolute proprietor of *Mary-Land*, ſaving the allegiance and ſovereignty due to his majeſty.

Ogilvy's America *ch.* 2.

This lord ſent his two brothers, Mr. *Leonard* and Mr. *George Calverts* in the year 1633 with about 200 perſons, many of them gentlemen, to ſettle a colony in his new eſtate; who arriving on the *Virginia* coaſt the 24th of *Feb.* 1630, ſail'd up the bay of *Cheſapeck*, and turning up *Patowmeck* river, the elder *Calvret*, who was governor, purchas'd an *Indian* town from the natives, for things brought from *England*, and chang'd the name of it from *Tocomaco* to St. *Mary*'s; the natives were the readier to give up this town, becauſe they had ſome thoughts of removing farther up the country, to be free of the neighbourhood of the *Saſqenhanocks*, a troubleſome people lying between *Cheſapeak* and *De la Ware*, who us'd to croſs the river, and do them miſchief. This town of S. *Mary*'s, which afterwards became the metropolis of the *Engliſh* colony, lies upon S. *George*'s river, which runs into *Potowmeck* not far from the place where that river falls into *Cheſapeak* bay: ſo that S. *Mary*'s is ſituated near theſe two great rivers, upon the ſouth eaſt point of that part of the country, which lies weſt of *Cheſapeak* bay.

After they had purchas'd this town, they began to build after the *Engliſh* manner, and in a ſhort time brought it to be a large place, and the lord *Baltimore* ſending, from time to time, recruits of families to his new plantation, ſoon after the reſtoration, the *Engliſh* in *Mary-Land* amounted to near 20,000: for, by that time they had ſettled ſeveral colonies on both ſides the bay of *Cheſapeak*, and built ſeveral towns.

In the year 1661 the lord proprietor ſent his ſon and heir, the honourable *Charles Calvert*, as governor under him to *Mary-Land*, who took great care to oblige both the *Engliſh* and the natives, as indeed all the gentlemen of that family had done all along; only they had been oblig'd ſometimes to chaſtiſe the *Saſquehanocks* on the eaſtern part of the country; but having, at laſt, reduced them to good humour, they liv'd as quiet as thoſe on the weſt, and lord *Baltimore* govern'd that country by his lieutenants with as abſolute ſovereignty as any tributary king could deſire. The council and lords of manors, made a houſe of lords; and repreſentatives from the 10 different counties made up their houſe of commons, and the governor acted as king.

But as this family was *Roman* catholicks, (which was judg'd, at the revolution, to be ſufficient reaſon for making void titles, and taking away prerogatives,) the then government of *England* (notwithſtanding lord *Baltimore*'s patent) made him *abdicate* the government of *Mary-Land*, and ſent proteſtant governors thither, as they thought proper. Indeed his lordſhip had the good luck to keep his eſtate there tho' not his ſovereignty, a favour not granted to all of that religion at that time.

Eng. Atlasp. 241.

Of the ten counties which compoſe the *Engliſh* plantation here, five of them are on the weſt ſide of *Cheſapeak*, and as many on the eaſt. Thoſe on the weſt are S. *Mary*'s, *Charles*, *Calvert*, *Arundel*, and *Baltimore* counties; on the eaſt are, *Somerſet*, *Dorcheſter*, *Talbot*, *Cecil* and *Kent*. The chief towns are on the weſt ſide,

ſide, *viz. Annapolis*, in *Arundel* county, which is the ſeat of the governor, and aſſembly, altho' at firſt they were at St. *Mary*'s, but were transfer'd from that to the other, as being more centrical. St. *Mary*'s, the capital of the country, is ſtill the place where the courts of juſtice are kept. And this is all we think proper to ſay, in this place, of *Mary-Land.*

SECT. VII.

CAROLINA.

CAROLINA is that part of *North America* which lies ſouth of *Virginia* from 37 deg. to 31 deg. n. lat. having *Virginia* on the north; the *Atlantic* ocean on the eaſt; the point of *Florida* next to *Cuba* on the ſouth, and the mountains (which divide the eaſt coaſt of that part of *America* from *Florida*) on the weſt, being 360 miles in length, and almoſt as much in breadth on the north part, but narrower by one half towards the ſouth.

Eng. Atlas p. 243. About the year 1622 ſome *Engliſh* families ſettled in the ſouthmoſt part of this country, then reckon'd a part of *Virginia*, near the head of the river *May*, otherwiſe call'd *Matheo*, where they were well receiv'd by the natives, many of whom they converted, and, among the reſt, one of their kings. But this was not the firſt *European* ſettlement in this country; for Mr. *Hackluyt* gives an account of a *French* colony ſent thither in 1562, by *Chaſtillon*, admiral of *France*, under the command of *Rebault*. Of which it may not be improper to give a ſhort account in this place, having but little to ſay of the *Engliſh* ſettlement there before the reſtoration.

Hackluyt Vol. III. p. 308.

Capt. *Rebault* having been ſent, the above mention'd year, with two *French* ſhips, to diſcover and plant a colony in *America*, where the *Spaniards*, by that time, made ſuch a figure; ſet ſail the 18th of *February*, and in two months arriv'd upon the coaſt of *Florida*, northward of the *Bahama* iſlands, and touching at a point, in the latitude of 30 degrees he gave it the name of cape *Francois*, or the *French* cape, and it is, to this day, call'd in the *Engliſh* maps, cape *Francis*. Not far from this cape, he found the river of *May*, where the natives receiv'd the *French* with all the marks of hoſpitality, altho' they did not underſtand their language; and having obſerv'd thoſe ſtrangers lift their eyes to heaven, in their devotions, and believing from thence, that they worſhip'd the ſun, they became very fond of them; and expreſt great ſorrow, when they ſaw them ready to go from them; but not being able to keep them, their king order'd his people to go a fiſhing to ſupply them in their voyage, which was immediately perform'd; they took out of their weares great ſtore of trouts, mullets, plaiſe, turbets, and other fiſh, to which the *French* did not know what names to give, as having never ſeen any of the kind before.

The French expiditi-on to Carolina.

The river of May.

Leaving the place of their firſt landing, where they ſet up a pillar of ſtone, on which they had carv'd the arms of *France*, they croſs'd over to the other ſide of the river, where the king had aſſembled his people. Upon their approaching the ſhore, two ſons of this king came to meet them, and ſaluted the captain very courteouſly, inviting him to go to their father, which he did, accompany'd by all his men, who had landed with him, becauſe the *Indians* about the king had their bows and arrows. The king did not ſtir from his ſeat, at the captain's approach, and only bow'd his head a little, which look'd liker a nod, than a bow, from thence *Rebault* imagin'd that he had been affronted that they had viſited the king on the other ſide of the river, before they ſaw him. However the captain ſitting down by him, preſented him with ſome trifles of glaſs and guilt bracelets, and at the ſame time made preſents to his ſons. The king put on a chearful countenance, and treated the captain in the beſt manner he could, but they were at a great loſs by not underſtanding one another.

Having taken a view of the country, and found it marriſh ground, they went aboard their ſhips, and ſteer'd farther north along the coaſt; where they ſaw ſeveral rivers, to which they gave *French* names, as the *Seine*, the *Loire*, the *Soam*, the *Garonne*, &c. But coming to one river larger than any they had yet met with, they call'd it *Port Royal*, where they caſt anchor in ten fathom water, when the tide is out. This river is about 6 miles broad at the mouth of it, and ſeems by the deſcription of it to be the ſame with what is now call'd *Aſhley Cooper* river in 32 degrees and a half north lat. Capt. *Rebault* ſail'd 12 leagues up this river, and found abundance of fiſh in it; and all along the ſhore fine mulberry and palm trees. But as they went towards the ſhore, as they frequently did in their boats, the natives, who ſtood there to gaze at them, fled to the woods. But at laſt, the captain making ſome of his people land, and leave ſome trinkets upon the ſhore, the natives came to the place, after the *French* had retir'd to

Port Royal *river.*

their ſhips, they made no ſcruple. after that, to ſtay the landing of the captain, and treated friendly with the *French*, who ſtill us'd them with all demonſtrations of friendſhip.

Coming to an iſland in this river, and trading with the natives in a peaceable manner, they took two *Indians* aboard, with the conſent of the king of the iſland, which from the abundance of cedar trees, they call'd the *Iſland of Cedars*. With theſe *Indians* monſieur *Laudonniers* (from whom this account of *Hackluyt*'s was taken) made himſelf very familiar, and by writing down the names of every thing in the *Indian* language, as they pronounced them to him, in a ſhort time he was able to make himſelf be underſtood by the natives, and with the help of demonſtrations, at which the *French* are very expert, he convers'd with them without great difficulty. But theſe two *Indians* finding that they were ſtrictly watch'd, and never ſuffer'd to go aſhore, began to apprehend themſelves to be priſoners; ſo that altho' they were very well us'd by the *French*, and eſpecially by *Laudonniers*, they could not brook ſlavery, and therefore one night made their eſcape, leaving the cloaths which the captain had given them, becauſe they would take nothing but what was their own.

Rebault having ſearch'd the country on both ſides this river a great way up, and finding that it was a very proper place for trade, reſolv'd to ſettle towards the mouth of it; and to that end, calling his whole crew upon deck, he diſclos'd his purpoſe to them, ſhewing them how advantagious it would be to *France*, how acceptable to their king, and how glorious for themſelves, to reduce ſuch a fine country under the obedience of *France*. The men agreeing to the propoſal, he went aboard and ſet ſail for the entry where he had firſt come in, and coming to an anchor, went in his pinnace, with all who were willing to ſettle in *America*, to pitch upon a place for building a fort upon the north ſide of the great river; and having found an iſland near the mouth of the river, he pitch'd upon it for his colony, and immediately ſet about building a fort for their defence, and after he had finiſhed it, he gave the command of it to capt. *Albert*, and call'd it *Charles*'s fort.

Charles's Fort.

Having thus ſettled his new colony, and provided it with all things neceſſary, *Rebault* took his leave of them, and having given the name of *New France* to this part of *America*, and coaſted a little farther northward, till he met with ſhallows, he call'd a council, and with common conſent, ſet ſail for *France*, where he landed in *July*, having been abroad but ſix months.

Rebault *returns to* France.

After his departure, the colony made friends with all the neighbouring kings, and living in profound peace with them, were reliev'd by them in all their neceſſaries for ſome time; and when an accidental fire had conſum'd the fort, the *Indians* built a new one for them. But the *French* falling out among themſelves, murder'd capt. *Albert* for ſome rigorous proceeding of his againſt one or two ſoldiers: after they had rid themſelves of him, they choſe one *Barre* for their captain, and reſolv'd to leave the fort, and therefore built a pinnace (the natives having provided them with cordage) with a deſign to ſail for *France*. Having put to ſea, they were ſo detain'd by the calms that they were ready to ſtarve, and reduced to the ſad neceſſity of killing one of their number for food to the reſt. But their ſhip grew ſo leaky, that they had certainly periſh'd, if, by good providence, they had not been viſited by an *Engliſh* merchant ſhip, and taken on board, and ſo carry'd to *England*.

The civil wars at that time a foot in *France*, had hinder'd the court from ſending any ſuccours to *Albert*; but things being in a better way in 1564, the admiral began to think of the colony at *Charles*'s fort, and pitch'd upon *Laudonniers* to conduct the recruits thither, being ignorant of what had happen'd to them.

Laudonniers ſet ſail with three ſhips, the 22d of *April* 1564, and having ſtop'd at the *Canaries*, and afterwards at *Martinico*, and *Dominica*, where he ſtaid ſome days, he arriv'd on the coaſt of the continent near cape *Francois* on the 22d of *June*. Going aſhore there in a river, which, from the number of dolphins at the mouth of it, they call'd the *Dolphin River*, they were welcom'd by the natives; but making a ſhort ſtay there, they proceeded to the *May*, where, at their landing, they were met, and welcom'd by the *paracouſſy* or king of the place, whom they had ſeen two years before. As ſoon as he ſaw *Laudonniers*, he run to him and cry'd out *amy*, *amy*, which is the *French* word for *friend*; and having entertain'd the captain and all the company, he took him to ſee the pillar which *Rebault* had erected, which they found crown'd with bays. The natives went near and kiſs'd it with great reſpect, and the *French* did the ſame, at their deſire. After this they proceeded farther up the river, and were treated in a friendly manner by ſeveral kings, among whom one of them was above 250 years of age, if *Laudonniers* did not miſtake their manner of computation: altho' he muſt have been very old, for they ſhew'd five generations from him.

Laudonnires *ſent to* Carolina.

Is well receiv'd by ſeveral kings.

Having

Having discover'd a fine country up the river, especially that part of it belonging to *Satouriava*, they return'd to the pillar, where the king entertain'd them again, and gave the captain a large wedge of silver, and being ask'd, from whence it came, he gave them to understand, that many days journey from them liv'd the king of *Timogoa*, their mortal enemy, in whose country there was abundance of gold and silver. *Laudonniers* promis'd to assist him against this king, at which the *paracouſſy* shew'd much joy, desiring him to be as good as his word, and he should have gold enough.

Taking their leave of this king, they return'd to their ships, and sail'd farther north, but being inform'd that their countrymen had abandon'd *Charles*'s fort, and the country, they held a council to determine where to settle; and there being several gentlemen, besides the commodore, who had been in the country with *Rebault*, they agreed that the river *May* was the propereſt place for a colony; and therefore they return'd thither; and going up the river as far as *Satouriava*'s dominion, they pitch'd upon a spot of ground to build upon, and set about it forthwith, with the approbation of that *Indian*, who came almost every day to see their work, and gave them all the assistance they desir'd.

He settles upon the river May.

When they had finish'd the fort with convenient houses for themselves, and a store-house for their provisions and ammunition, the commodore call'd it *Carolina*, in honour of *Charles* IX. king of *France*. And having heard much of *Timogoa*, he sent his lieutenant *Ottigni* up the river, with two *Indian* guides to shew them his country. *Ottigni* having sail'd about 20 leagues his guides spy'd 3 canoes upon the water, and calling out *Timogoa*, *Timogoa*, they run, one to a halbert, and another to a cutlace, the lieutenant had enough to do to hinder them from throwing themselves into the water to attack them; but he manag'd the matter so, that the *Timagoans*, taking the alarm, got safe ashore before he thought fit to pursue them. After they were landed, he went ashore with a party, leaving the *Indians* aboard in custody of some of his own people, and advancing to the people whom he spy'd upon the shore, he laid down some of the things he had brought with him, and retiring from them, with all the signs of peace he was able to make, they took heart and came towards him, and finding by his behaviour that he was no enemy, they convers'd very famililarly with him: and being ask'd if there was any gold in their country, they answer'd that if he would send one along with them, they would shew him where it was to be had. Upon this *Ottigni* sent one of his men, who offer'd to venture himself along with them: but he staying all night, and not appearing next morning, *Ottigni* sail'd farther up the river to find him, and spying the boat he had sent with him, he made towards it, where he found him, with some pieces of gold of small value, but he told him that they had promis'd him great abundance of that sort of metal, provided he would have gone three days farther up the country, which he had refus'd to do without his consent. *Ottigni* gave him leave to go with them, and return'd with the rest of his party to fort *Carolina*.

Sends a party to Timogoa.

Laudonniers sent *Vasseur* with a party back again a fortnight after to bring back the soldier, who had so couragiously ventur'd himself among the natives. At their arrival at *Timogoa*, there were scouts upon the shore, to reconnoitre whether any *Indians*, their enemies, were in the boats; but seeing them all strangers they waited for their landing, and being ask'd where the soldier was, they told *Vasseur*, that he was with king *Molloua*, who was vassal to another great king, call'd *Olata Ovae Utina*, not far from thence. Thither *Vasseur* went in his boat, the natives going by land. When he came to *Molloua*'s house, the soldier came out to him, having five or six pound weight of silver. The king receiv'd the *French* very courteosly, and entertain'd them with fish and bread; and whilst they were eating, he told them of the power of the great king *Olata*, who had, for his vassals, above 40 kings besides himself. He likewise reckon'd up *Olata*'s enemies, among whom the principal person was *Satourioua*, who had 30 kings his tributaries. He told them too, that there was a nearer neighbour to *Olata*, who often made war upon him for a hard slate stone which they made use of for wedges to cleave their wood, and likewise for heading their arrows. This king's name was *Potanou*.

Vasseur promis'd that *Laudonniers* should come and assist *Olata* against his enemies in the high country, at which *Molloua* was highly pleas'd, and told him that the least of the great *Olata*'s vassals, should give them gold and silver, of a certain length and breath, two foot high. And thus parting good friends, *Vasseur* sail'd down the river towards *Carolina*: but stopping short of it three leagues, they went ashore in *Molona*'s dominion, who was one of *Satourioua*'s vassals. This king hearing that they had been at *Timogoa*, as'd how many of them he had kill'd. *Vasseur* dissembling with them, said they design'd to have destroy'd the whole country, but that the natives,

natives having taken the alarm, fled to the woods, but he affirm'd they had kill'd ſeveral of them. *Molona*, deſiring a ſight of his ſword, look'd all over it for blood, but ſeeing it very clean, ſeem'd out of humour, but the other told him that after he had kill'd two men, it was ſo bloody that he took great pains to waſh it in the river. This lie ſatisfy'd the *paracouſſy*, and was the occaſion of a ridiculous feaſt, for the ſuppos'd murder of people who were in good health.

A miſunderſtanding between the French *and an* Indian *king.*

Soon after *Vaſſeur*'s return to the fort, *Satourioua* ſent a meſſage to the governor to claim his promiſe of aſſiſtance againſt *Timogoa*, becauſe all things were now ready for the expedition. *Laudonniers* excus'd himſelf as not ready; but being preſt by the meſſenger, upon his promiſe, he made anſwer "That he would not fall out "with another king to keep friendſhip "with his maſter." This diſguſted *Satourioua* highly; and indeed the *French* commodore was much to blame, in having promis'd his aſſiſtance to his neighbour king, unleſs he had deſign'd to have made good his word: for refuſing to go along with him after having occaſion'd the levying forces, in hopes of his aſſiſtance, loſt the credit of the *French* among thoſe people, and ſtuck in the mind of *Satourioua*, with full purpoſe of revenge. However he diſſembled it, and went the expedition with his *Indians*, and falling upon the *Timogoans* unawares, he kill'd a good many of them, and took 24 priſoners, which they divided among the confederate kings, and ſet up the heads of the ſlain before the doors of their houſes when they return'd; and made ſolemn feaſts and dances, by way of triumph for their victory.

Upon *Satourioua*'s return, *Laudonniers* ſent to him for two of his priſoners, which the king refus'd, telling the meſſenger that he did not think himſelf under any obligation to his captain, ſince he had not aſſiſted him, according to his promiſe. Upon this ſmart anſwer, the commodore went to him, attended by 20 musketeers, and going into his houſe without ſaluting him, having placed centinels at the door to hinder any one to come out, he ſet himſelf down by *Satourioua*, with a very ſtern gravity. This behaviour ſurpriz'd the *Indian*, but he was more ſo when the commodore, in an imperious tone, demanded all the *Timogoan* priſoners; who after ſome difficulty, were deliver'd to him, and were carry'd by him to *Carolina*, to the great mortification of the *paracouſſy*. Theſe priſoners the commodore ſent, in his own boats, home to their own country who having declar'd to their friends how they had been reſcu'd and treated by the *French*, their king receiv'd the *French* with open arms, and ſent preſents to the commodore.

But this civility to the king of *Timogoa* rais'd ſuch a jealouſy in thoſe who were enemies to him, that they withdrew their former friendſhip from the *French*, and refus'd to ſend them proviſions, ſo that *Laudonniers* was forced to give way to ſome hoſtilities, againſt his own inclination. But this obliging his ſoldiers to more conſtant labour than they car'd to be employ'd in, bred a mutiny, and he himſelf falling ſick, their inſolence grew to that height, that they ſeiz'd him, and carry'd him aboard one of the ſhips, and there forced him to ſign a paſt-port for the ſhip, and ſetting him aſhore, ſet ſail with a deſign to trade to the *Lucay* iſlands, or, which is more probable, to turn pirates. But their pilot, being well affected to the commodore, and having been preſt aboard, made ſuch a party in the ſhip, that when the ringleaders of the mutiny were aſleep, they ſecur'd them, and brought back the ſhip to the river *May*. As ſoon as the governor was appriz'd of their return, he had the priſoners brought aſhore, and having try'd them by a court marſhal, they were ſhot, and all the reſt pardon'd upon promiſe of obedience for the future.

A mutiny among the French.

Laudonniers being inform'd from ſeveral quarters, that *Olata's* enemies in the mountains abounded in gold, had a mind to get acquainted with that country; and now a fair opportunity offer'd: for, *Olata Utina* having ſent for aſſiſtance againſt them, *Ottigni* was diſpatch'd with 30 muskeeters, who going to join the *Indians*, they march'd againſt *Patanou*, but very privately, becauſe *Olata* was afraid of his force: and when he found they had taken the allarm, he would have return'd without doing any thing, eſpecially being warn'd by a conjurer whom he kept, that *Patanou* was at ſuch a place with a ſuperior force to his; but *Ottigni* upbraided him for his cowardice, and deſir'd he would give him guides, and he would go and fight him with his own company without the *Indians*. This put ſome life in *Olata*, ſo they march'd on, and meeting with *Patanou*'s forces, *Ottigni* charg'd them ſo briskly, that in a ſhort time, they put them to flight; but it was more owing to the terror of the fire arms, than to the valour of the *Indians*. However *Olata* was ſatisfy'd with that one defeat, and would not venture upon another engagement, which bred a miſunderſtanding between him and *Ottigni*, and it went ſo far, that if that captain had not been reſtrain'd by the governor's orders, to do no harm to the *Indians* who profeſt friendſhip to them, he would have chaſtis'd *Olata* for bringing him ſuch a fools errand As it was, he ſhew'd his reſentment ſo much, that the *Indian* was no longer friend to the *French*, but, on the contrary ſought all ways to entrap them.

Laudonniers ſoon felt the effects of this change in the *Indian* kings: ſo that having try'd but in vain, all other methods of obliging the natives to ſend him proviſions as uſual; he ſent *Ottigni*, with a ſtrong party to *Olata*'s houſe, who ſurpriz'd him and one of his ſons, and, in ſpite of the reſiſtance the ſavages made, brought them aboard his boat. This had not the effect they expected; for the natives, believing that the *French* would certainly put him and his ſon to death, elected a new king, and thought no more of him, ſo that after *Olata* and his ſon had contiun'd ſome time priſoner at *Carolina*, they ſent them back again, upon the king's promiſe to ſend them proviſions. But he diſappointed them, when he was at liberty; and they, having diſoblig'd all their neighbour kings in releaſing him, were reduc'd to the utmoſt extremity of want; when by good providence, capt. *Hawkins* came upon the coaſt with four *Engliſh* ſhips, in *Auguſt* 1565, who generouſly ſupply'd them with neceſſaries, and offer'd to tranſport them to *France*; but *Laudonniers* not accepting that offer, he ſold them one of his ſhips for that purpoſe.

The French reliev'd by capt. Hawkins.

After the *Engliſh* were gone, the *French*, with one conſent, prepar'd for their voyage, deſpariug of relief from *France*; but as they were upon the point of embarking, they ſpy'd a fleet towards the mouth of the river, and ſending a boat to reconnoitre, it was detain'd aboard all that day, which made the governor put all things in readineſs for defence. The next day ſeven boats, of which *Laudonniers*'s was one, made up the river to the fort; nor would they make anſwer to any of the centinels poſted at different places; ſo that, as they came towards the fort, the governor was going to give orders to fire upon them, when one call'd out, that it was *Rebault*. As ſoon as *Laudonniers* heard who it was, he went to welcome him with great joy, and the garriſon laid aſide their arms, and receiv'd their countrymen with open arms.

Rebault *returns to* Carolina.

The reaſon of this behaviour of *Rebault*, they afterwards found to be, that upon ſome miſrepreſentations made of *Laudonniers* by ſome of his enemies, who had return'd to *France* in the firſt ſhips, the admiral had ſent capt. *Rebault*, to ſecure his perſon, and to take ſuch order about the colony, as he ſhould find proper, *Rebault*, finding upon inquiry, that there was no truth in the ſtories which had been told, frankly diſcover'd all to *Laudonniers*, and beg'd of him to give over his intended voyage to *France*: but he excus'd himſelf, telling *Rebault*, that ſince he was come thither with a commiſſion as governor, it was not conſiſtent with his honour to be commanded in that fort which he had built, and defended with ſo great hazard and fatigue, and therefore he could not think of ſtaying; but he was ſo vexed at the ill offices which had been done him with the admiral, that he fell ſick.

In the mean time a *Spaniſh* fleet appear'd upon the coaſt, and bearing down upon the *French*, the latter finding themſelves inferior in force, cut their cables and ſtood out to ſea, and being better ſailors than the *Spaniſh* ſhips, they got out of their way. The *Spaniards* having purſu'd them to no purpoſe, took into the river of *Dolphins*, formerly mention'd; where having landed, they began to entrench themſelves, being within eight leagues over land from *Carolina*. Upon this intelligence, *Rebault* determined to go with his ſhips (which were all but one come back to the river *May*) to diſlodge them from that place, againſt the advice of *Laudonniers*; but being obſtinate and by his commiſſion, maſter, he left the old governor ſick, with an inſignificant garriſon, and taking the beſt of the old colony with him, embark'd, and ſail'd out of the river, which loſt him and his fleet; for he was caſt away, and knock'd on the head by the ſavages of *Florida*.

His fleet is attacked by the Spaniards.

He embarks to purſue them, and is caſt away.

Not long after the *Spaniards*, marching over land, attack'd fort *Carolina*, and altho' *Laudonniers*, ſick as he was, made all the defence he could, they carry'd it, and he eſcap'd to the woods with one man, where meeting with ſome of his garriſon, he ſent two of them to the mouth of the river, where one ſmall ſhip lay at anchor; the maſter of which, hearing where he was, ſent his boat, and took him aboard, the people who were with him being oblig'd to carry him to the ſhore. The *Spaniards*, in the mean time, took poſſeſſion of fort *Carolina*, and *Laudonniers* landed in *Wales*, and ſo went thro' *England* to his own country.

Fort Carolina *taken by the* Spaniards.

The *Spaniards* put all the *French* to death that came in their way, hanging them up in the woods where they had hid themſelves; but this cruelty was revenged by *De Gourges* in 1568, who coming to the river *Seine* not far from *May*, was join'd by all the ſavage kings as ſoon as they found who they were. Theſe *Indians* complain'd highly of the cruelty of the *Spaniards*, beg'd *De Gourges* to rid the place of them, which he undertook, and with the aſſiſtance of theſe kings, took fort *Carolina* and two others which they had built down the river *May*. He put all the three garriſons to the ſword, and having demoliſh'd all the forts, return'd to *France*.

And recover'd by De Gourges.

Thus ended both the *French* and *Spaniſh* plantations in *Carolina*. We have little farther account of this country till the glorious reſtoration of king *Charles* II. ſoon after which, inſtead of *New France* it got the name of *Carolina* from that prince, and was by him beſtow'd upon the earl of *Clarendon* lord chancellor, the duke of *Albemarle*, the earl of *Craven*, lord *Berkeley*, lord *Aſhly* afterwards earl of *Shaftsberry*, Sir *George Carteret*, Sir *William Berkeley* and Sir *John Colleton*. Theſe gentlemen fitted out ſhips and planted the country at a conſiderable charge, and in a few years there were two very flouriſhing colonies ſettled there: one upon *Albemarle* river towards *Virginia*, about 36 degrees n. lat. to which ſeveral *Engliſh* families from *New England* very ſoon removed, either upon the account of a warmer climate, or, which is more probable, to enjoy a cooler devotion, more agreeable to the ſpirit of chriſtianity, in the free exerciſe of the *church of* England *ſervice*. The other colony ſettled at *Charles's Town*, formerly mentioned, to which many families, not only from *Old England*, but from the iſlands thereabouts, flock'd about the year 1671, and to encourage people to go thither, the proprietors allow'd every man 100 acres a a head, for himſelf, his wife, children and ſervants for ever, to him and his heirs at a penny an acre; and even that penny chief rent was remitted for 19 years: and every ſervant, when out of their time, was to have 100 acres for themſelves at the ſame price.

Ogilvy's America, *ubi ſupra.*

Carolina *granted to proprietors after the reſtoration.*

This province is divided into north and ſouth. *North Carolina* is made up of *Albemarle* and *Clarendon* counties: and *South Carolina* conſiſts of *Craven*, *Berkeley*, *Colleton*, and *Carteret* counties. *Albemarle* county borders upon *Virginia*, and lies along on both ſides of *Albemarle* river which falls into the ſea lat. 36. This county was once well peopled, but moſt of the *Engliſh* remov'd to *Cooper* river. *Clarendon* county is ſouth from that of *Albemarle*, and is water'd by a river of the ſame name, which enters the ſea near *Cape Fear*, lat. 34. On the ſouth ſide of this river (which divides the two *Carolina*'s) lies *Craven* county; being, pretty well inhabited by *Engliſh*, and by *French* refugees. *Berkeley* county is next to *Craven*, which is well planted in the ſouth part of it, having the advantage of *Aſhly* and *Cooper* rivers, which join at *Charles*'s town, and fall together into the ocean, in about 32 deg. and a half. *Charles*'s town, built in the ſame place where the *French* had their *Charlefort* in 1562, ſtands at the meeting of the two rivers, which from that place to the ſea take the name of both, *Aſhley Cooper* river. It is the metropolis of *South Carolina*, the reſidence of the governor, and the ſeat of juſtice. The *Colleton* county is ſouthward of *Berkeley*, and divided from it by the river *Stono*. The *Ediſto* river is likewiſe in this county, and the country on both ſides of it well planted. *New London* ſtands on the weſt ſide of *Ediſto*, and has ſeveral conſiderable plantations in the neigbourhood of it.

Engl. Atlas *p.* 243.

The diviſion of Carolina.

As *Carteret* county is not as yet planted, altho' generally eſteem'd the moſt fruitful and pleaſant part of the province, lying upon the river *May*, we have little to ſay about it. Perhaps when the new colony call'd *Georgia*, takes effect, there may be more to ſay of the ſouth parts of *Carolina*, but as we don't know how that may turn out, we ſhall leave it to time, and make an end of the *Engliſh* diſcoveries ſouthward on the continent of *North America*.

SECT. VIII.

The ENGLISH *Diſcoveries North of* NEW ENGLAND.

WE have elſewhere * mentioned the diſcoveries made by *Cabot* or *Gabot*, which gave the claim to moſt of the north of *America* to the *Engliſh*, and, altho' that claim was but a ſhadow with regard to the *Indians*, the true proprietors of the country, yet it was undoubtedly good againſt any other invaders and conſequently might juſtly have been pleaded, as it frequently was, againſt the encroachments of the *French*, *Dutch*, and others, who, by no better title, uſurp'd upon the true proprietors, and often turn'd them out of their country, or oppreſt them in it; and, under pretence of having been the firſt diſcoverers, challeng'd the property not only from the *Engliſh* and the other *Europeans*, who poſſeſt any of the adjacent provinces, but likewiſe pretended a right to ſubject the lawful ſovereigns of thoſe dominions, without their conſent; *as if ſailing by chance, or deſign, into another king's-harbour, were ſufficient to entitle a captain or admiral to take poſſeſſion of the country ſo viſited.*

* Univ: Tra. p: 31:

Gabot, as we have ſaid, having been employ'd king *Henry* VII. in 1497, to diſcover a north weſt paſſage to the *Eaſt-Indies*, went as far as 60 deg. n. lat. and there found out that part of *North America*, unknown to *Europe* before him; and in expectation of finding a paſſage farther ſouth, he coaſted along as far as *Virginia* to about 38 deg. from which voyage of his the *Engliſh* afterwards claim'd all that country as their own.

But it was ſome time before they purſu'd the firſt diſcovery, or made any other advantage

Martin Frobiſher's *expedition.*

advantage of it. At laſt *Frobiſher* ſet out with two ſhips in 1576, not to uſurp any other's dominions, but, as *Cabot* had done before, to find the north weſt paſſage, ſo long deſir'd. He ſet ſail the 7th of *June*, and came up with land about the ſouth of *Greenland*, being 59 or 60 deg. but the depth of the water was ſuch, and and the ſhoals of ice like iſlands, ſo numerous, that he durſt not venture near the ſhore, but in boats.

Hackluyt *vol.* iii. *p.* 29.

In this way he was oblig'd to ſail to and again, for many days, ſhuning the mountains of ice, which, (by the temperature of the air, when they got clear of them) he concluded not form'd where he ſaw them, but had been driven from the north by the wind. In this courſe he obſerv'd the variation of the compaſs, to the weſt about two points and a half between 59 and 61 deg. north lat. In this latitude they had ſight of land, which they ſuppos'd to have been *Labrador*, but ſeems to have been one of the iſlands towards the ſouth eaſt of *Greenland*, but having ſounded for ſeveral leagues, as the ice would ſuffer them, and found no anchoring ground, they went aſhore in their boats; and having ſeen ſome natives, they took one of them aboard and treated him well, and afterwards ſet him ſafe aſhore, giving his people expreſs orders to land him upon ſome rock by himſelf, for fear of being kidnap'd by the *Indians:* his men not obſerving his orders, landed the ſavage amongſt his own people, who in recompence of their civility to the *Indian*, ſeiz'd the *Engliſh* and their boat, nor could the captain ever recover either. So that having in vain ſearch'd for his men, he ſail'd along the iſland northwards to find out what he came for, and enter'd a ſtreight ſome little way in a ſoutherly courſe as he found the current run; but in a few days more, towards the end of *Auguſt*, he ſet ſail homewards, being afraid of being frozen if he had ſtaid any longer ſo far north.

Capt. Frobiſher's 2d *voyage:*

About the ſame time, the next year capt. *Frobiſher* ſet out upon the ſecond voyage for the ſame end as formerly, with one of the queen's ſhips, and two ſmall barks for tenders. He ſail'd by the *Orkneys*, where it would ſeem the writer of the Journal had not met with good reception, for he gives no very favourable account of the country; but, by his own confeſſion, he ſtaid there but one night, *too ſhort a time to pretend to know even a ſmall ſpot of ground.* Sailing from thence the 8*th* of *June*, altho' they had uninterrupted day till they came up with that part of *Greenland* to which the captain gave the name of *Queen Elizabeth's Foreland*, yet they paſs'd whole iſlands of ice, which ſeem'd to be 30 or 40 fathoms along the ſurface of the water. The captain went aſhore upon *Greenland*, and had like to have been left there, but that the gunner and the maſter's mates would not ſtir, altho' they were in great danger of being beat to pieces by the ice in a rank ſtorm. When he was come aboard, finding no poſſibility of going further north, he ſteer'd ſouthward, and finding a ſtreight about the latitude of 64, which was the ſame he had enter'd the year before, and ſuppos'd it was the entry to the South Sea; this ſtreight they call'd *Frobiſher's Streight*, which name it retains to this day.

He finds a paſſage into Hudſon's *bay:*

When they arriv'd at the weſt ſide of *Greenland*, they found a good harbour there, and going aſhore, they ſaw many of the natives, but ſo wild that they would not ſuffer them to come within ſpeech of them; only after ſeveral efforts in vain, at laſt they caught a woman and child. In ſome of the tents which the natives deſerted, they found a ſhirt, and ſhoes, which the *Engliſh* believ'd had been taken the year before from thoſe of their people whom the natives had detain'd, as was obſerved before.

Having ſtaid about thirteen days in that place, which they call'd from the firſt mate *Jackſon's Sound*, they return'd to the eaſt ſide, where the commodore often landed to ſee if he could have any communication with the natives, that he might find whether any of his five men were alive, whom he had loſt in the laſt voyage. Having ſeen ſome of the *Indians* one day, he made ſigns to them; but finding them ſhy, he laid down ſome Trinkets on the ground, and retir'd; when the natives had taken them up, they made ſigns and told the captain that three of his men were alive, and that they would bring them to him in a few days. Accordingly, there appear'd ſome of them upon the ſhore, and captain *Frobiſher* expecting to recover his men, went aſhore in his boat. They made ſigns to him to go behind a point they ſhew'd him; but as the natives were more malicious than cunning, he diſcover'd a great number of *Indians* arm'd among the rocks, and therefore would not go aſhore.

They ſtaid in this cold country till about the middle of *Auguſt*, and having found a ſort of ſhining oar, which the captain believ'd to be gold, he ſhip'd a good quantity of it, and returned home for fear of the ſtoſts. But when the oar was try'd, they perceiv'd the old proverb verify'd, *All is not gold that glitters.*

The year after, being 1578, captain *Forbiſher* ſet ſail upon the ſame deſign, with no leſs than 15 ſhips, the 31ſt of *May*, and arriv'd at the ſtreights the beginning

ginning of *July*, but found them quite frozen over. Here one of the ſhips receiv'd ſuch a ſhock with a huge piece of ice, that ſhe ſunk; but having time to fire a gun, there came ſo many boats from the other ſhips as ſaved all the men, and diſpos'd of them in the fleet. But one great loſs they had by the ſinking of this ſhip, that they loſt the greateſt part of the wooden houſe which they had brought from *England* in pieces, to put together in *Greenland* for wintering there, as ſome of them deſign'd to have done. Two other ſhips were ſeparated by the ice, and a ſtorm that happen'd with it, and for above twenty days they were miſſing. In this ſtorm, which was accompanied with ſuch a diſmal fog that they could not ſee the length of their ſhip, they had no way left to keep together (as much as the wind would allow) but by beating drums and ſounding trumpets; and as ſoon as it began to clear up, and that they had time to look about them, they found they were quite out of the courſe they propoſed, and that they were near the entry to ſome ſtreights, to which they who had been twice before at *Frobiſher's Streights*, declared they were ſtrangers. Nor could they take the ordinary method to find the latitude, for they could not ſee the ſun.

The commodore, altho' he knew they were upon an unknown coaſt, yet he diſſembled it, and order'd the fleet to follow him, thinking that, at leaſt, he might be able to find a paſſage to the ſouth ſea; which would have been a full amends for the diſappointment of his former port. But he was miſtaken; for this paſſage where he was ſeems to have been only between iſlands lying to the ſouth of *Greenland*, which brought him no nearer the ſouth ſea than he had been the year before. However in paſſing theſe ſtreights they found the natives more tractable than they were on the other; for in ſome places where they put a ſhore either for freſh water, or for diſcoveries, the people came about them, and traded for ſuch trifles as they ſhew'd them, and in exchange gave them fiſh and fowl in abundance, as alſo bears skins and other things as the country afforded. As ſoon as they had ſun to take their obſervations, they found they were not far from their former port, an finding an inlet running that way, the admiral ſent a pinnace to try which way it tended, and was by it led into his old ſtreights, which was a plain indication, that what he had taken for the continent of *America*, was only an iſland. They were much in danger among the iſlands hereabouts, and three of their ſhips were ſeparated from them; but upon the admiral's arrival at his place of rendevouz, which was the ſame port he had been in the year before, and where he had propoſed to ſet up his wooden houſe, he found two of his fleet there before him, and ſome time after they all ariv'd, except one, which by the contrivance of the pilate ſet ſail for *England*, for which the captain was call'd to account, and acquitted himſelf, by declaring that it was againſt his will, that the crew, by the perſwaſions of the pilot, had forced him to return.

Having laded the ſhips with oar, at the eaſt ſide of rhe ſtreights which they call'd the *Counteſs of Warwick's Sound*, and built a houſe on a pleaſant iſland there, they thought of returning home, the month of *Auguſt* being now well nigh ſpent; and being all ready, the admiral gave the ſignal for weighing anchor on the laſt day of the month: and ſo they made the beſt of their way for *England*, where they arriv'd ſafe, about the beginning of *October*. This was the laſt voyage of *Forbiſher* for finding out the north weſt paſſage.

Captain Davis's diſcoveries

The next *Engliſh* man who attempted the north weſt diſcoveries was capt. *John Davis*, who in the year 1585 with only two ſmall barks of 50 and 35 ton. They ſet ſail the 7th of *June*. Having ſail'd towards the north weſt till the 20th of *July*, and having ſeen many whales, and porpoiſes (of which laſt they kill'd ſeveral, and found them good meat) they came among the ice as uſual in thoſe ſeas, and at laſt diſcover'd land, but it had ſuch a diſmal aſpect, that they called it cape *Deſolation*. The captain went along the coaſt in his boat, but could not get near the ſhore for ice. But in lat. 64, the ice was gone, and they went aſhore in their boats, had ſpeech of the natives, and bartered ſome goods. But proceeding ſtill farther north to 66 deg. they arriv'd at *Totneſs* road, near a place call'd *Mount Raleigh*. Landing here they ſaw large white bears, one of which they kill'd. They found this country much more temperate than it was farther ſouth, and had no appearance of ice. But having cours'd along the coaſt, looking in vain for a paſſage to the ſouth ſea, and fearing the decline of the year, it being now towards *September*, they ſet ſail for *England*, the captain intending to make another eſſay the year following.

Davis's 2d and 3d voyages.

There being no great variety in theſe two voyages, we ſhall only ſay, in ſhort, that the captain having, in his firſt voyage left *Greenland* to the eaſtward, ſail'd by the weſt entry of *Frobiſher's* ſtreights, without ſeeing it, and having come up with the land of *Greenland*, farther north, which had a very ugly appearance to him, for which reaſon he gave it the name

name of *Deſolation*, as was ſaid before; he had ſail'd as far as GOD's *Mercy Cape*, upon the coaſt oppoſite to *Greenland* weſtward in the lat. of 67 deg. But being oblig'd to return home, becauſe of the ſummer's being ſpent; he left the farther ſearch to another time.

In the year 1586 he ſet out a new, and made a third voyage in 1587. But in both theſe he made little farther progreſs than he had made in the firſt, only that he made a more perfect diſcovery of the *American* coaſt than he had done in his firſt voyage; and gave name to that track of ſea which divides *Greenland* from the continent of *America*, near the *Artic Circle*, where he found many iſlands, and great ſtore of fiſh, many of which he brought home with him; they were the beſt ſort of cod. In this fiſhing place, during his third voyage, he left two of his ſhips, going himſelf farther up ſome leagues beyond the actic circle to 73 deg. n. lat. and meeting with new ſhoals of ice, from which he had been free for ſome time before, he was forced to ſteer ſouthward, to the fiſhing iſlands, where he expected to have found his two ſhips, but they had given him the ſlip, and return'd laden with cod for *England*, whither he follow'd them, bringing accounts of a fair probability of a paſſage thro' thoſe ſtreights call'd to this day by his name, but no certainty. Nor was the paſſage where he thought it was, nor has it been diſcover'd to this day.

Hudſon's *voyages.*

In the reign of king *James* I. of *Great Britain*, Mr. *Henry Hudſon*, having diſcover'd farther towards the north and north eaſt, than any *Engliſh* man, or perhaps any other, had ever done; for in 1607 and 1608 he had ſail'd as far as 80 deg. and 23 min. reſolv'd now to diſcover towards the northweſt; and therefore in 1609 he ſail'd along the coaſt of *Newfoundland* in 50 deg. to cape *Cod*, in *New England*, then part of *Virginia*.

But in 1610 he ſet ſail from the *Thames* to perfect *Davis's* diſcovery, if poſſible; and having paſt the *Orkneys* on the 5th of *May*, he came up with *Iceland* on the 11th, paſſing towards the eaſtward of it, only ſtoping at a place of that iſland call'd *Lowſy Bay*, where there is a bath hot enough to ſcald a fowl. On the 4th of *June* they made the coaſt of *Greenland*, in about 69 deg. lat. but could not come near the ſhore for ice. So that changing his courſe ſouth weſt, he turn'd round the iſlands on the ſouth part of *Greenland*, and having doubled *Cape Deſolation*, made directly over to the coaſt of *America* in a courſe due weſt; in which courſe they were ſo ſhut in with ice, that they could not ſtir any way; but in a ſhort time, they found a way out, and diſcover'd land, which is now call'd *New Britain*, or *Terra de Labrador*, in 60 deg. lat. and found there a *Streight* running north weſt from the ocean, where he enter'd, inſtead of purſuing *Davis's* courſe; and having great difficulty to keep clear of the ice, he put in at an iſland call'd by *Hudſon*, GOD's *Mercy*; lat. 62 deg. 9 min.

From this iſland ſteering ſouth weſt, he came to 58 deg. 50 min. but being embay'd and peſter'd with ice, he chang'd his courſe, and return'd into the ſtreights again, and kept along the weſt coaſt to 63 deg. and a half, till coming to the north weſt cape of *Labrador*, he paſt, between that point and *Mansfield* iſland, thro' a large bay of above 300 leagues broad, call'd from him *Hudſon's* bay; having given names to the different capes as he paſt, ſuch as cape *Henry*, cape *Charles* and queen *Anne*. Their courſe was now ſouth weſt again till they came in ſight of land, in about 56 deg. and then ſail'd due ſouth to the bottom of the bay; where ſome difference happening between Mr. *Hudſon*, and his mate *Robert Ivet*, and the boatſwain, he put them both out of their poſts, and put two others, *viz. Robert Billet* and *William Wilſon* in their places. This may ſeem a ſlight circumſtance to give it a place here, but conſidering that it occaſion'd the ruin both of the maſter and themſelves, it was thought proper to take notice of it.

Hudſon's *bay.*

It being by this time, towards the end of *October*, and conſequently not practicable to get back that year, the maſter began to think of a proper place to winter in, and ſending the author of this account, Mr. *Pricket*, with the carpenter, to ſearch for a ſecure harbour, they found one upon the firſt of *November*, where they hal'd the ſhip aground: and by the 10 of that month they were frozen in. Then they found it high time to take care of their proviſions, and ſet themſelves to kill fiſh and fowl. But there happened another little incident, which contributed not a little to their deſtruction; which was this.

The gunner dying, after they had taken up their winter quarters, his effects were to be ſold, by auction, at the main maſt, according to cuſtom. Among the reſt of his goods, there was a cloth gown which one *Green* had a mind to have for his money, and Mr. *Hudſon* promis'd he ſhould have it. This *Green* was a *Kentiſh* man, of good parents, but of ſo looſe a life, that they had diſcarded him, and he had been entertain'd in Mr. *Hudſon's* houſe at *London*, and was brought this voyage out of mere favour to him; and when he had quarrel'd with the ſurgeon

A ſmall matter the occaſion of the ruin of many.

of the ſhip, and had beaten him unmercifully, to the great diſguſt of the crew, the maſter ſupported him. But the winter coming on, and *Hudſon* having order'd the carpenter, ſome what too late, to make up a houſe for them on ſhore, he refus'd it as impracticable; and hard words paſſing between them, the maſter turn'd the carpenter out of his cabin, and threaten'd to hang'd him. The day after this quarrel, the carpenter going abroad with his fowling piece, choſe *Green* for his companion, which ſo diſguſted the captain, that he ſold the gown to his mate. This ſo exaſperated *Green* that he join'd with the two, formerly diſoblig'd for being turn'd out; and they three enter'd into a plot againſt him, which ended in the ruin of moſt of the crew, as the reader will ſee by and by.

In the mean time the winter was a very hard one, and their proviſions were ſo very ſcanty, that had it not been for good ſtore of white partriges ſent them by providence, and, when thoſe diſappear'd, that they were ſucceeded by ſwans, geeſe and ducks, the whole crew had dy'd of famine. The hardſhips they endur'd encreas'd the ill diſpoſition of *Wilſon*, *Ivet*, *Green* and ſome others againſt the maſter; they firſt plotted to take away the ſhallop with the fiſhing nets, and to leave the maſter and the reſt of the crew the bark only; but the maſter going on board of it himſelf to make diſcoveries about the head of the bay, they made their cabal ſtronger againſt his return. *Hudſon* coming back from his cruiſe, and finding the ice quite gone from about their bark, had all things fitted up for their departure, and ſet ſail about the beginning of *June*, taking much the ſame courſe he had held the year before, in coming thither. They had not ſail'd 60 leagues to the north weſt, before they came among the ice again; and the captain, to ſatisfy them, diſtributed all the cheeſe he had aboard equally among them.

A plot againſt the capt.

But the conſpiracy being now ripe for execution, *Wilſon* and *Green* came to *Pricket* (the author from whom theſe memoirs were taken) who was lame in his cabin, and told him plainly, they deſign'd to put the maſter and all the ſick people aboard the ſhallop, and to go away with the ſhip. *Pricket* endeavour'd to diſſuade them from their purpoſe, but labour'd in vain. At laſt upon *Monday* the 23d of *June*, as ſoon as *Hudſon* came out of his cabin, two of the conſpirators attack'd him before, whilſt *Green* ty'd his hands with a rope behind. Then they hurry'd him into the ſhallop, with the ſick and lame to the number of eight in all. The carpenter, notwithſtanding his quarrel with the maſter, was no way concern'd in the plot; but threaten'd the conſpirators with proſecuting them to tyburn, if ever he ſhould ſee them in *England*: and when they deſir'd him to be eaſy, promiſing to uſe him well, he told them, he ſcorn'd to ſtay with ſuch a rebellious crew, but would take his hazard with the captain, and thoſe honeſt people whom they had devoted to deſtruction. Then going for his cheſt and other things, when they were put aboard the ſhallop, he went to take his leave of *Pricket*, who had come out of his cabin lame as he was, and beg'd them up his knees to take the maſter into the ſhip again: but not being able to prevail, he preſt the carpenter to ſtay, telling him, that they two together might be able to make a party aboard for the captain. The carpenter ſaid, the captain wanted hands in the ſhallop, moſt of his crew being ſick; and he deſign'd to adviſe him to follow the ſhip being confident they would be glad to take them aboard in a ſhort time, becauſe there was none in the ſhip capable of taking her home.

They force him aboard the ſhallop.

When they had put aboard all they did not like, they cut the rope of the ſhallop, and ſet ſail, ſoon loſing ſight of her, making the beſt of their way towards the north cape of *Terra de Labrador*. But falling in with freſh ice, they were detain'd 14 days; in which time the ſhallop came in ſight again, for the laſt time. The ſhip getting, at laſt, clear of the ice purſu'd their courſe north eaſt towards *Digge*'s iſland, in order to get ſome fowl, of which they had ſeen plenty at their coming into the bay. Here they ſaw and convers'd with ſome of the natives, who invited them aſhore; and five of the chief conſpirators, of which *Green* and *Wilſon* were two, taking *Pricket* along with them in the boat, went aſhore upon the iſland, without arms, where they ſaw the ſavages, likewiſe unarm'd, dancing as they us'd in token of peace. *Pricket*, being lame, ſtaid in the boat, and the other five went aſhore with bells, looking-glaſſes, and other trinkets for bartering. The natives came to the ſhore to meet them. But as they were at a little diſtance from the boat, one of the ſavages came aboard, and *Pricket* riſing from his ſeat, pointed to him to go aſhore, without taking notice of another who had got behind him; and after he had ſate down, he preceiv'd a leg juſt by him; ſo that looking about, he ſaw the ſavage with his arm lifted up, going to plunge a knife in his breaſt. *Pricket* ſav'd the ſtroke from his breſt by receiving it in his right arm, and grappling with the ſavage, after he had receiv'd another wound in the thigh, keeping faſt hold of his knife hand with his own left, he drew

The ſavages ſet upon ſix of the Engliſh on land.

a

a dagger with the other, and thruſt it into the ſavage's body, and then into his throat.

And kill four of them.

Whilſt *Pricket* was thus engag'd in the boat, his companions were attack'd at land; *Wilſon* and *John Thomas*, had their bellies ript up with knives, which they had ſold to the ſavages; *Green* and *Perſe* being mortally wounded tumbled into the boat together; yet getting up, *Green* with the trunchion of a ſpear, which he had for a ſtaff, and *Perſe* with a hatchet, defended the head of the boat, and put off from the ſhore. *Moter* who was the fifth, leaping from a rock into the ſea, ſwim'd to the boat, and was help'd aboard by *Perſe*. Upon their ſetting off the boat, the ſavages ran to their bows, which were hid hard by; and ſhooting at them, diſpatch'd *Green*. *Perſe* and *Moter* row'd the boat, but in a little time, *Perſe* fainted, ſo that there was none to aſſiſt *Moter*, *Pricket* beſides his lameneſs, and the wounds he had receiv'd from the ſavage, having likewiſe an arrow ſticking in his back. *Moter* therefore, ſtood up, making ſigns to the ſhip to advance, which as ſoon as they perceiv'd aboard, made towards the boat, and took in all that were alive, which were only three, *viz.* *Perſe*, *Pricket* and *Moter*; throwing the other three over-board, which was likewiſe the fate of *Perſe* who dy'd of his wounds in two days.

After this diſaſter (a juſt judgment of heaven upon *Green*, and ſome of his accomplices) they ſet ſail from that place, and doubling the north cape with much difficulty, enter'd *Hudſon*'s ſtreights, *Billet* being now maſter. Their proviſions began to decreaſe much, ſo that they were oblig'd to ſtop ſome time in order to provide themſelves in fowls, which they got in great plenty in the ſtreights: and having laid in good ſtore, they made the ocean, and by *Ivet*'s advice ſteer'd towards *Newfoundland*; but the wind coming at ſouth weſt, they chang'd their reſolution, and made for *Ireland*; but were in ſuch want of food, that *Ivet* dy'd of hunger, and the reſt were ſo faint that they could ſcarce work: but at laſt they reach'd *Ireland*, and from thence got home. What ſort of death poor capt. *Hudſon* and his companions dy'd, was never known, but that they periſh'd is without diſpute.

The ſhip returns to England.

Much about the ſame time, the *Muſcovia* company fitted out, from time to time, many ſhips, for the whale fiſhing in the north eaſt ſeas, and ſome ſhips of force were ſent by the order of the government to diſlodge the *Dutch* from that fiſhery, where the *Engliſh* had ſometimes the better, and ſometimes the *Dutch*. But this controverted coaſt being towards the north eaſt, we ſhall ſay nothing of thoſe expeditions in this place.

But the account given by capt. *Thomas James* of his intended diſcovery of the northweſt paſſage in 1631 is ſo full and exact, that we ſhall compendize it here to give the reader a diſtinct notion of the coaſt of *America* about *Hudſon*'s bay, and of the difficulties which muſt be encounter'd by thoſe who undertake ſuch a voyage.

Captain James's *Expedition to* Hudſon's *bay.*

In 1631, the merchant adventurers of the city of *Briſtol*, being very eager to find out the north weſt paſſage to the *Eaſt-Indies*, ſo often attempted to ſo little purpoſe, fitted out the *Henrietta Maria*, a ſmall veſſel of 70 tuns, for that ſervice. The reaſon why they choſe ſo ſmall a ſhip, and but one, was, that capt. *James* whom they pitch'd upon to command in that voyage, adviſ'd them to it, as the fitteſt method to make the diſcovery. There were 22 men aboard, all ſtrangers to one another, but 19 of them were able ſeamen, altho' they had never been in the north weſt ſeas before. Thoſe the captain (who was well acquainted with that courſe himſelf) made choice of, becauſe they were the more likely to give into his opinion, and conſequently to obey his orders: for he was well aware of the trouble which ſeveral able maſters had met with, and the ruin which had attended them, from mutiny and diſobedience.

Harris's Bibl. P. I. *p.* 593.

Having then ſhip'd them aboard, with all things neceſſary for ſuch a voyage, he ſet ſail the 3d of *May*, and after ſome ſtops, by contrary winds, having doubled cape *Clare* in the ſouth of *Ireland*, he bent his courſe north weſt, and made *Greenland* on the 4th of *June*, where they were engag'd with ice, with which they ſtrugled long, getting frequently ſuch ſhocks, as they believ'd would have ſplit the ſhip in two. The ſhallop being in the water, for uſe upon occaſion, was broken to pieces, ſo that launching their boat, they brought the ſhallop aboard to be mended. With much ado, about the 10th of *June* they weather'd cape *Farewel*, where, they had terrible fogs and miſts, and ice not far from them. Being come to cape *Deſolation*, he ſteer'd due weſt over to *Reſolution* iſland, at the mouth of *Hudſon*'s ſtreights; the diſtance being about 140 leagues. In this courſe they were much tormented with ice, many pieces of it being higher than their top maſt (*a moſt unaccountable thing to be believ'd*) their ſails and rigging were all frozen; and the fog was of ſuch a piercing nature, that the needles of their compaſſes did not play freely; for which reaſon, the captain adviſes all who attempt thoſe ſeas, to have their compaſſes cover'd with *Moſcovia* glaſs.

The fog in the bay to the weſtward of Greenland, *hinder'd the compaſs to traverſe.*

Being

Being now at *Hudſon's* ſtreights in the middle of *June*, they found it almoſt ſtopped with ice, ſome of which was a great heighth above the ſurface of the water, other ſhoals of it upon a level with the water; ſo that they could run their boat along the ice, or go upon it themſelves for 40, 50, or 100 yards in a line; and ſometimes they had the courage to ſtep from one piece of ice to another. One advantage they had from the ice was, that when they were in danger of being driven aſhore upon the rocks, they faſten'd grapling irons to a huge piece of ice, and got it between them and the ſhore; ſo that, the mountain of ice being aground firſt, when either wind or tide drove them that way, they were ſhelter'd from the rocks, and by putting planks, or whatever other fence they had aboard, and by watching the turns of the tide, or wind, they made off from the ſhore unhurt, only the ſhocks the ſhip receiv'd from the ice madethem believe they were gone; but,by good providence, they had not ſo great dammage as they apprehended. It is true, they were often in danger of having their boat, with a third part of their company (whom they were oblig'd to ſend out upon occaſion, to clear the way for them) clos'd up between ſhoals of ice, and ſo loſt; and were ſometimes in hazard of having the ſhip ſwallow'd up, or tore in pieces by the breaking of one of thoſe iſlands of ice, which frequently burſt in pieces near them; and with ſuch a noiſe as if an old caſtle had been blown up; but providence was ſo kind to them, that they either had time to retire before the ice broke; or elſe were, before, at ſuch a diſtance, that all the harm they got by it was, the having a ſliver now and then taken off ſome part of the ſhip, which I don't name, becauſe I believe a great many of my readers would underſtand the terms as little as I do.

Great ice in the bay.

Whilſt they were in this diſtreſs, near *Reſolution* iſland, the great piece of ice, which they had for their fence againſt the rocks, gave them the ſlip, and expos'd them to the hazard of running aſhore, but their cable held to the turning of the tide, and then their old bulwark took up its former ſtation. But as this removing of the ice was like to happen every flood, there was no guard againſt it; ſo that once they were thrown upon a rock, and the ſhip ſettled about a yard behind the main maſt, which in the ſea term is *abaft* the maſt, and as the water ebb'd, the ſhip being heavier before the maſt,ſunk forward,ſo that there was no ſtanding upon deck, and they expected every moment ſhe would overſet; but upon the turn of the tide, ſhe got up her head, and the water riſing high brought her clear off the rock, for which, like men of ſenſe, they gave hearty thanks to GOD Almighty; for *free thinking, in the language of the preſent age, was unknown to the* Virtuoſi *of that time.*

The ſhip ſticks upon a rock.

But gets clear.

Having ſpent all the month of *June* in the ſtreights, the captain began to deſpair of finding out a paſſage, to the ſouth ſea, that year. They were ſtill ſo entangled with ice near cape *Charles*, not far from the north weſt point of *Labrador*, towards the turn to the bay call'd *Hudſon's*, that altho' their was a brisk gale of wind, and the ſhip afloat with all their ſails up, ſhe ſtood ſtock ſtill. This made the crew begin to murmur, and the captain excuſes them for it, becauſe they had good reaſon to think that they ſhould never have got out of that difficulty. Howevet, to chear them he propos'd to go upon the ice and there to drink the king's health, which he knew would be acceptable to all loyal hearts, in the greateſt danger.

In the month of *July*, they got out of the ſtreights, and croſſing over as the ice would let them, they ſail'd by the north weſt point of *Digge's* iſland, and from thence to the weſtward 160 leagues to the oppoſite ſhore, and then coaſted along to the ſouthward, almoſt to the place where *Hudſon* had winter'd. In this courſe, they had an unlucky accident with halling in a cable, when they thought the anchor was loſt, becauſe of the ſhip's driving; a ſmall rope having got foul of the cable in the dark, twiſted about the maſter's leg, of which he got clear, but much hurt, the two mates in helping him were bruis'd, one in the head, and the other inthe arm, one of the hand-ſpokes hit another upon the breaſt, and laid him a ſprawling; ſeveral others were hurt, particularly the gunner, who had his foot torn off by the ancle, between the cable and capſton, ſo that he was forced to have his leg cut off at the knee.

Upon the 29th of *Auguſt* they ſaw a ſhip, and, coming up with her, found it was one of the king's ſhips, commanded by capt. *Fox*. They ſaluted and entertain'd each other, as well as their preſent circumſtances could allow, and parted the next day. capt. *James* purſu'd his courſe along the coaſt ſouthward, and gave the name of *Henrietta Maria* to a head land in lat 55. They had frequent ſtorms from the eaſt which put them in danger of being driven upon the rocks, there being no landing place for above 130 leagues; and they felt it as cold the 1ſt of *Sept.* as it is in *Englnad* at any time of the year.

In this bay theycruiz'd, ſometimes ſticking upon rocks, and ſome times ſtop'd by ice all the month of *September* and *October* going aſhore in the boat in ſeveral iſlands,

to

to find a ſafe place to winter in. At laſt the ſhip being very leaky, the men fatigu'd, and the ſails quite uſeleſs with ice, ſo that they could not ply; they were forced to go aſhore upon an iſland, in 52 deg. where they built a wooden houſe, and as the ice would ſuffer them, they brought out all things neceſſary out of the ſhip, which lay at anchor near them. But the winter being ſo hard that they, who by turns, ſtaid aboard, were in danger of being frozen to death, they reſolv'd to bring the ſhip aſhore at all hazards, which they did, running her aground upon the moſt convenient place they could find; but, perceiving that ſhe was in danger of being broken to pieces, by beating againſt the ground, the captain, by the advice of the chief perſons of his company, bor'd holes in her bottom, and ſunk her. Then all the men went aſhore in the boat, and coming to the houſe, comforted one another the beſt they could.

They go aſhore & build a houſe upon an iſland.

They ſink their ſhip.

By the firſt of *December*, they could go over the ice to the ſhip, and with great labour, ſhoveling the ſnow off the deck, they got out of the hold the remaining part of their proviſions, but their beer and other liquors were all frozen, and when they thaw'd the beer in the kettle, it was good for nothing; ſo that being afraid of ſome diſtemper, by conſtant drinking ſnow water, they dug a well, but that was ſoon dry'd up; however by good providence, they found a ſpring at a little diſtance from their houſe, which never froze the whole winter. The captain had choſen the moſt convenient place he could find near the ſhip, to build their houſe in. It was in the middle of a tuft of thick trees under a ſouth bank. They made it about 20 foot ſquare, having a view to cover it a top, with their main ſail. Having driven ſtakes into the ground with great fatigue, by reaſon of the froſt, they wattled between the ſtakes as thick as they could, with boughs, which they beat as cloſe as poſſible, up to the top, only leaving two holes for light, and to let out the ſmoke, and a little low door to go in and out, with a porch to fence the houſe from the cold. The two ſide walls were only ſix foot high, but the ends, where the windows were, higher, between the two ends, they laid a rough tree, with rafters between that and the ſide walls, and over thoſe the main ſail, and lin'd the rafters within with the ſmaller ſails. Round the inſide walls they made bedſteads, one above another. And to keep off the cold, they paliſaded the houſe very cloſe with thick trees, which they cut on purpoſe. and placed them very cloſe quite round. Their hearth was in the middle of the room, round about which they placed boards at a convenient diſtance to perſerve them from the cold and damps of the earth.

Their houſe.

About 20 foot from their manſion houſe, they built another ſmaller, after the ſame manner, and cover'd it with the fore ſail of the ſhip, and in lieu of the paliſades they put their cheſts round the inſide of it. which kept it warm. This was their kitchin, and for recreation in the day time. They likewiſe made a ſtore houſe at ſome ſmall diſtance from the other two, for fear of fire, laying rough trees all along the floor on which they ſet their proviſions, about two foot from the ground. By chriſtmas their ſtore-houſe was quite buried in ſnow, becauſe their was no fire kept in it, but they dug a path to it, which ſerv'd for a gallery to walk in, when it was fair over head.

During this winter, the captain obſerv'd, *January* the 21ſt, that the ſun roſe in an oval ſhape, and was ſometime above the horizon before it recover'd its roundneſs: and on the 30th and 31ſt he ſaw more ſtars than ever he had ſeen before. For inſtance, he obſerv'd the cloud in *Cancer*, full of ſtars, as alſo the *Via Lactea*, and the *Pleiades*. *But this is no news now, ſince the great improvement of* teliſcopes, *and the accurate obſervations of modern* aſtronomers. This month the whole ſea was frozen round them, ſo that they could ſee no water; only at a diſtance they could perceive the ice riſe higher, when the tide was full.

In the month of *February*, it was exceſſively cold, and many of the crew had ſore gums, and looſe teeth, beſides other pains and aches all over their bodies, ſo that they were under the ſurgeons hand, yet they were oblig'd to work, for ſome or other were forced to bring wood in, and they were building a pinnace, being uncertain whether their ſhip would be fit for ſervice, if they ſhould be able to get her afloat. The cold was ſo intenſe that their clock and watches, altho' kept in a cheſt by the fire, were ſo frozen that they ſtop'd; and the kettle ſtanding cloſe by the fire for watering the beef or pork, when the water was hot next to the fire, the other ſide was frozen an inch thick. The ſame cold continu'd all the month of *March*, and many of the men were indiſpos'd.

Exceſſive cold.

But as ſoon as *April* began, they bent their thoughts to recover their ſhip, if poſſible, and therefore were at work to clear the inſide of her of ice and ſnow. They had but indifferent tools to work with; yet with great induſtry, they got acceſs to the hold. Here, to their great comfort, they found a cask of good beer. And finding water in the hold, they ſet about breaking the ice on the outſide to

get ſome of the higheſt holes ſtop'd which they had made to ſink her the year before, which with much labour they effected; and found that the water did not encreaſe within. All this month they wrought at the ſhip, but few of them being capable to undergo much fatigue, a little work went a great way. And yet it is admirable to conſider the ſpirit and courage of the *Engliſh*. One would have thought that the hardſhips they had ſuffer'd, and the uncertainty they were in, of ever getting out of that deſolate iſland, might have baniſh'd all thoughts of mirth and jollity from their hearts; but it was not ſo with this brave captain and his crew, for upon the eve of *May-Day*, after having fatigu'd themſelves aboard with work, they return'd to their houſe, and making a good fire, they choſe their *May-Ladies*, every one putting in his cap the name of her who came to his ſhare. A frolick, which I dare ſay would recommend them to their miſtreſſes at their return, and very juſtly. *If any one is ſo preciſe, as to cenſure this innocent mirth, or me for approving of it, in their circumſtances, they ſhall have my conſent to enter themſelves at* La Trap, *or ſome other place, beſt ſuited to their moroſs tempers. For, ſince they did not neglect the duties of* Religion, *as the captain takes notice of all along in his account of this voyage, their diverting themſelves, and keeping up their ſpirits by ſuch inoffenſive mirth, was far from being a crime.*

A brave ſpirit in the Engliſh.

The iſland where they had winter'd afforded but little ſuſtenance, a few foxes, and (but very ſeldom) a white partridge were all that they could purchaſe for food, except the proviſions they had brought from *England*, which they manag'd to the beſt advantage, yet without ſtarving themſelves. And the captain, who ſeems to have been a man of vertue and good ſenſe, having foreſeen that they would be weakeſt in the ſpring, had wiſely reſerv'd a butt of alicant for their refreſhment; which was of great ſervice, eſpecially to the ſick. But to their great grief, the carpenter, who had been ill for ſome time, altho' he had labour'd hard at building the pinnace, could hold out no longer, but being oblig'd to keep his bed, dy'd upon the 18th of *May*, the pinnace, not being finiſh'd.

Now the ice began to melt at land, and yet the ſea continu'd frozen, and the ſeaſon was uncertain, that one day they could not bear the heat of the ſun, and the next they were like to ſtarve with cold. However the ice going off from the iſland, and from about the ſhip, they had hopes of getting her up again; and therefore they obſerv'd the 29th of *May*, the birth day of the then prince of *Wales*, and afterwards the never-to-be-forgotten day of his *glorious reſtoration*; and in honour of him, they call'd their habitation *Charles Town*, and the iſland is by corruption, call'd *Charleton Iſland*. Going about the iſland, when the ice was gone, they found vetches, which recovered the ſick in a wonderful manner. When they were all pretty well recruited, they went aboard the ſhip, and having got their pumps to anſwer, they pump'd out all the water, and ſtop'd up all the holes they had made: and throwing out all the ballaſt, made her as light as poſſible, and having looſen'd the ſand quite round her, the firſt flood that came, with their united force to ſhove her out a little, ſet her afloat, to their great joy, for which they gave hearty thanks to Almighty GOD.

The iſland gets the name of Charleton.

They get the ſhip afloat.

Upon midſummer-day, they ſet up a great tree, which they had cut and fix'd a piece of another to it in form of a croſs, upon a hill in the iſland where they had bury'd the carpenter and gunner and his mate. Upon this tree they affix'd a plate of lead with the king's titles, adding (to *Britain*, *France* and *Ireland*) *Newfoundland*, and *New Albion to* 80 *deg. of n. latitude*, &c. together with his majeſty's arms, and a ſilver ſhilling and ſix pence of his coin: and under all theſe the arms of *Briſtol*. After this they made haſte to rig out their ſhip, and to carry the proviſions aboard, and carefully mended all the defects they perceiv'd about her.

But the poor captain run the greateſt hazard upon the 25th of *June* that he had ever done in his life. For, being deſirous to know if there were any people in the iſland, or any place near, he went up to a hill, and climing up a tree, order'd one that was with him to ſet fire to ſome of the trees thereabouts, having carry'd a lighted ſtick for that purpoſe. The other unadviſedly kindling ſome low trees to the windward of the tree where the captain was, they took fire like gunpowder, ſo that he being intent upon looking at a diſtance, did not advert till the tree he was in was a fire, and blaz'd ſo fiercely upwards, that he was forced to leap off the tree a great highth. This fire continued to burn all the next day, whilſt they were carrying all aboard; and it was well they did, for the wind changing, brought the fire upon their town, and burnt it to the ground. However they loſt nothing, the ſails being already on the ſhore to be ſhipp'd. And now having no habitation at land, they all went aboard, to wait for a proper time to ſail.

A ſtrange fire.

By this time, the ice was quite gone towards the north. And here the captain has

has an obſervation, which I believe may be true. He ſays it does not freeze naturally above ſix foot thick; but when the heat begins in *May*, the ſhallows near the ſhore thaw firſt, and the tide breaks the ice, and carries it away in pieces, which, by the current, get one upon the other, and ſo by degrees it becomes ſo high as ſome times to run to an incredible heighth.

Before they ſet ſail, they went up to the hill where they had ſet up their croſs, to take their laſt leave of the graves of their dead. This they did with great ſolemnity upon ſunday, marching up with their arms, drum, colours, cook, and kettle, and after reading morning prayer, they din'd there, and having obſerv'd the progreſs of the late fire, they ſaw it had gone quite croſs the iſland; and the reaſon why it had not come near their croſs was, that it was fix'd upon a hill, which was all ſand round the bottom. After evening prayer, the captain, at his laſt farewell to his dead friends, rehears'd ſome verſes by way of *Elegy*, but they are too long to be inſerted here. Whoever has a mind to ſee them may conſult the book laſt quoted upon the margin. Then having gather'd about two buſhels of an herb reſembling ſcurvy graſs, which made an excellent ſupper, boil'd, they retir'd to their ſhip. All that they had ſeen upon this iſland, was ſome deer, of which they kill'd one, but never any more, a great many foxes which they ate ſome dozens of, but they vaniſh'd in *May*; and in their places came ducks and geeſe, of which they kill'd a few, as alſo white partridges, but they had no ſhot left: and not a fiſh to be ſeen in that ſea.

Captain James leaves his winter quarters.

Upon *July* the 2d they ſet ſail from the iſland, thinking that the ice had been quite gone, but they quickly found their miſtake, for they had not ſail'd four days before they found themſelves in their old incumbrance. It were tedious to give his journal thro' this long ſea, and the ſtreights, and would only be a repetition of his voyage to *Charleton Iſland*. We ſhall therefore only add, that they were for ſix weeks together ſtrugling with the ice in this ſea, before they could reach the mouth of the ſtreights, and having by common conſent concluded it impracticable to make any diſcoveries that way, they determin'd to take the ſhorteſt way home. In this mind they enter'd the ſtreights, and had the ſame difficulty to return eaſtward as they had in paſſing them at firſt. But at laſt they got ſafe to *Reſolution Iſland*, and from thence by good providence, in a ſhip which had endur'd more ſhocks than would, in all probability, have ſtav'd a conſiderable fleet, they got, upon the 22d of *October*, into the road of *Briſtol*.

And arrives at Briſtol.

The captain freely gives his opinion of his own attempt, or any other of that kind, *viz.* that it is in vain to purſue it any farther for two moſt ſubſtantial reaſons. 1. That he believ'd there was no ſuch paſſage; and 2. If there could ſuch a one be found, it would be no manner of ſervice to *England* as to the *Eaſt-India* trade. That there is no paſſage (or not a practicable one) to the ſouth ſea by the north weſt, at leaſt not by thoſe ſtreights he preſumes for theſe reaſons. 1. Becauſe of the conſtant tide of ebb and flood, whereas, were there a paſſage to the ſouth ſea, the run would be one way, as in other ſtreights where is the like paſſage. 2. There are no ſmall fiſh, and very few great ones, which is not the caſe where there is a communication between two large ſeas. 3. From the great quantity of ice lying in ſhoals, in lat. 65, he concludes that the ſeas to the weſt and north muſt be ſhallow, for were there any communication between theſe two parts and the ſouth ſea, the ice would have been broken to pieces. 4. The ice always ſeeks its way out towards *Hudſon's* ſtreights, which ſhews that it has no vent weſtward.

His reaſons againſt a paſſage north weſt.

But ſuppoſe there were ſuch a paſſage found, he makes it very plain, that it would be no advantage to *England*, either for expedition or ſafety. For conſidering the time that muſt be ſpent in ſtrugling with the ice, one may ſail as far as the cape of *Good Hope*, or the ſtreights of *Magellan*, to the ſouth, before they can ſail between *Deſolation* iſland, and the ſouth ſea, ſuppoſing there were a paſſage, either by *Davis's*, or *Hudſon's* ſtreights. Beſides that there is but one time of the year, and that only for about 10 weeks, that there is a poſſibility of attempting the north paſſage, were it diſcover'd; ſo that if one, of many accidents ſhould ſtop a ſhip at any other port or iſland, or a ſtorm ſhould blow her back to any part of *America*, farther ſouth, in her voyage outward, ſo that they could not make *Terra Labrador* before the beginning of *Auguſt*, there's an end of her voyage weſtward, for that year; and the ſame inconvenience might often happen, in returning from the *Laſt-Indies* by the northweſt paſſage. But if we add to this, the danger of paſſing thoſe ſtreights, even at the beſt ſeaſon; where the ſea is ſuch, that no frequency of paſſing it can make it eaſier; it is not to be imagin'd that our merchants would conſent, that their ſhips ſhould take that courſe to the eaſt, at ſuch maniſeſt risk of ſhips or mens lives, for any ſuppos'd expedition in the voyage. This is the

ſubſtance

ſubſtance of capt. *James's* reaſoning upon the attempt to find out the north weſt paſſage into the ſouth ſea; which ſeems to me to be ſo juſt, that I wonder there were ſo many attempts made that way.

But notwithſtanding all the hardſhips ſuffer'd by ſuch as had ventur'd into thoſe ſeas before, one *Gillam*, ſail'd thither in 1667, and penetrated *Hudſon's* bay as far as 51 deg. almoſt as far as *Hudſon* and *James* had gone; and going back along the eaſt coaſt of *James's* bay, he found a river on the continent of *Labrador*, to which river he gave prince *Rupert's* name, and built a fort upon it, calling it *Charles's* fort. Upon his coming home, king *Charles* gave a patent, to prince *Rupert*, and the owners of *Gillam's* ſhip, of this bay, which was the foundation of *Hudſon's Bay Company*, who ſending a colony thither in 1670, or ſoon after, they erected ſeveral forts, and traded with the natives for beavers-skins, and other furs, till the *French* ſeiz'd their forts in 1682. But they did not keep poſſeſſion long, the *Engliſh* getting the better of them the next year. In 1686, the *French*, from *Quebeck*, attack'd the *Engliſh* colony near *Rupert* river, and took all the places poſſeſs'd by them, except port *Nelſon*, on the oppoſite ſide of the bay, lat. 57. And thus the forts in that bay were ſometimes in the hands of the *Engliſh*, and ſometimes of the *French*, till the peace of *Utrecht* in 1713, and then they were ſurrender'd to the *Engliſh*.

Eng. Atlas *p.* 238.

Upon the weſt ſide of this large bay from north to ſouth are, *New North Wales*; *Cape Churchil*; *Brigg's Bay*; *Port Nelſon*; *Cape Henrietta Maria*; *New South Wales*; together with the iſles call'd *Briſtol Iſle* and *Charleton*.

Ibid.

Upon the eaſt of *Hudſon's* bay, lies the large continent call'd *Terra de Labrador* by the *Spaniards*, *New Britain* by the *Engliſh*, *Eſtotiland* by the *Danes*, and *North Canada* by the *French*. This country is bounded by *Hudſon's* bay on the weſt. It reaches from ſouth to north 780 miles, *viz.* from 50 degrees to 63. Many fabulous accounts have been given of the firſt diſcovery of this country, and of *Latin* books having been found in it, that they brew'd ale and beer, and traded by ſea to *Greenland*, *Frizeland* and other places, 1500 miles diſtant. But theſe accounts are not very likely, conſidering the manners and cuſtoms of all the other natives of *America* whither north or ſouth.

New Britain.

Ogilvy's America *ch.* 1.

The *Engliſh* claim to this country is founded upon *Cabot's* diſcoveries formerly mention'd: The *Portugueſe* pretended to it from *Corterealis*, from whom it was once call'd, who is ſaid to have diſcover'd it in 1500, but that was later than *Cabot*. And the *French* claim it as a part of *Canada*, and have civilis'd ſome of the inhabitants. But there are but imperfect accounts to be had of it from any of them; ſo that we ſhall proceed to

Nova Scotia, the only part of the continent, (belonging to, or diſcover'd by the *Engliſh*,) left untouch'd; which has been long diſputed between the *Engliſh* and *French*; but having been given up to us, by the treaty of *Utretcht*, I ſhall give ſome account of it as an *Engliſh* plantation.

Nova Scotia *or* Accadie.

There ſeems to be little diſpute about the firſt ſettlement of a colony here; for it is agreed by all, that about the year 1604, the *French* from *Canada* river, took poſſeſſion of *Accadie* as a part of *Canada*, calling both together *New France*. Here they had *Port Royal* in the bay of *Fundi*, where they were attack'd by *Argol*, as has been already mention'd.* In the year 1621 king *James* I. thinking the *French* encroach'd upon his right, by ſettling in *Accadie*, gave a patent to Sir *William Alexander* (afterwards earl of *Stirling*) to plant that part of *America* by the name of *Nova Scotia*, which he kept for two years; but upon prince *Charles's* marriage with *Henrietta Maria*, the *French* king got it reſtor'd to him. In the year 1627 king *Charles* I. being engag'd in a war with *France*, Sir *David Kirke* and his brothers ſent at their own charge, three ſhips, and afterwards nine, with the king's commiſſion, to recover *Nova Scotia* from the *French*. The firſt ſhips which went there that year, took 18 ſhips ſent from *France*, for the relief of *Port Royal* and *Quebec*, under the command of *Rocmand* and *Da la Tour*, father to the governor of *Port Royal*, and brought both ſhips and garriſon to *England*. The year following, the ſame *Kirkes* beat the *French* out of *Quebec*, and took poſſeſſion of the country on the north ſide of the great river *Canada*, of which Sir *Lewis Kirke* was made governor, and that conqueſt was divided between the *Kirkes* and Sir *William Alexander*, he keeping poſſeſſion of *Nova Scotia*, ſouth of *Canada*, and they having *New France*, on the north of the river, granted to them, as they well deſerv'd. And they kept poſſeſſion till the year 1632. When king *Charles*, upon the peace with *France*, gave up all the conqueſts which the *Kirke* family had made, but oblig'd the *French* to reimburſe the charges they had been at. This was punctually perform'd on the part of the *Engliſh*; but the *Kirks* were never paid.

Ogilvy's America b. II. *ch.* 1:

* Univ. Tra. *p.* 239.

Sir David Kirke *beats the* French *out of* Nova Scotia *and* New France.

In 1633, the king, conſidering that the ſubjects of *England* were not to be debar'd

But they are reſtor'd by treaty.

bar'd the trade of *Canada* river, altho', by the treaty, he had given up the forts and caſtles to the *French*; granted letters patents to Sir *Lewis Kirke* and his brother *John*, for the term of 31 years, not only to traffick in the river *Canada*, but to plant colonies and build forts where they ſhould think fit. Accordingly the *February* following they ſet out a ſhip, laden with goods of a conſiderable value, to *Canada*, which, as ſoon as ſhe arriv'd, was ſeiz'd by the *French*, in time of peace, and confiſcated as lawful prize; by which thoſe two brothers loſt to the value of 12,000 pounds. And altho' the lord *Scudamore*, the *Engliſh* ambaſſador at *Paris*, and Mr. *Kirke*, who went thither to ſolicite that affair, repreſented the matter ſtrongly, by his majeſty's orders, to the *French* court; nothing was done; ſo that the *Kirkes* after long attendance loſt both their time and money.

The French are again diſpoſſeſt by Cromwel.

The *French* kept poſſeſſion of *Accadie*, till the year 1654, when the great uſurper, being in full poſſeſſion of the government, made a handle of the *French* not having perform'd articles to the *Kirkes*, and therefore ſent a fleet, under the command of *Sedgwick*, who turn'd the *French* out of all their forts in *Nova Scotia*, and reſtor'd them to the *Engliſh*, who kept them till the reſtoration, notwithſtanding a peace made in 1655, between *Cromwel* and the *French* king. But after the reſtoration (notwithſtanding the juſt claim of the *Kirkes*) the *French* got poſſeſſion of *Accadie* again, and it was reſtor'd to *England* in 1713, as we obſerv'd before.

This country is bounded, on the north and weſt, by the river of *Canada*, call'd by the *French* S. *Laurence*, on the ſouth by *New England*, and part of the *Atlantic* ocean, which likewiſe waſhes the eaſt coaſt of it. It lies between 44 and 50 degrees north latitude. The chief town, in this province, is *Port Royal*, now call'd *Annapolis Royal*. But there are few *Engliſh* as yet in this country; the more ſouthern plantations having engroſs'd all the trade and care of the merchants and planters.

SECT. IX.

The ENGLISH *Iſlands in* AMERICA.

HAVING given ſome account of all the *Engliſh* plantations upon the continent of *America*, we ſhall proceed to the iſlands poſſeſt by the *Engliſh*; and *Newfoundland* being the moſt northerly, we ſhall begin with it.

The next expedition, that I can hear of to this country, after the firſt diſcovery of it by *Cabot*, was by a certain canon of S. *Paul's London*, whoſe name is not known, who went thither in 1527, with two ſhips: one of which being caſt away about the coaſt of *Labrador*, the other landed not far from *Cape Briton*, which was ſuppos'd to be in *Newfoundland*; but return'd home without doing any thing remarkable. Hackluyt Vol. III. *p.* 129.

Mr. Hore's expedition.

In the year 1536 Mr. *Hore* of *London* ſet out with two ſhips, the *Trinity* and the *Minion*, having ſeveral gentlemen aboard, being in all 120. They landed upon the iſland of *Newfoundland* in two months, but found no inhabitants for ſome time, and were in ſuch extremity of famine that they privately knock'd one of their comrades on the head, and ate him by ſtealth: ſeveral of them were miſſing, and it was ſome time before the captain knew what was become of them, till it was diſcover'd by a quarrel that happen'd between two of them for fleſh. At laſt they ſaw ſome ſavages in a canoe, but could not come to ſpeak with them, they were ſo ſhy of them. Being at the utmoſt pitch of want, a *French* ſhip accidently came to the iſland, which they immediately ſeiz'd, and being thus well provided of victuals, ſet ſail for *England* in that ſhip, leaving their own for the *French*: who coming likewiſe ſafe to *England*, made a complaint of the robbery, which coming to king *Henry* VIII's ears, he examin'd the matter, and having found the extremity his ſubjects had been in, would not puniſh them, but out of his own money paid the *French* men all that they demanded, and ſent them home well pleas'd. It ſeems the gentlemen who made this voyage have had ill luck, or were bad fiſhers, that could be reduced to ſuch famine in a country ſo well ſtor'd with ſuch variety of fiſh, as all that coaſt is known to be.

But ſoon after, *viz.* in the reign of king *Edward* VI. the fiſhing of *Newfoundland* ſeems to have been very much frequented, altho' the country was neglected; for there was an act of parliament made in the 2d year of his reign exempting the traders to that iſland for fiſhing, from all duties or taxes exacted for licences to ſail thither to fiſh.

Sir Hum. Gilbert gets a patent.

In 1578, queen *Elizabeth* granted a patent to Sir *Humphrey Gilbert* to ſettle upon any part of *America* not poſſeſt by any other chriſtian prince, at peace with *England*. By virtue of which patent, he took aſſociates with him in the deſign, but ſome of them failing in the performing what they had promis'd, and others were ſo ſlow in their preparations, that he was quite tir'd, and therefore went to ſea with ſuch friends as came heartily and ſeaſonably into his meaſures. But he had bad

ſucceſs, and return'd without doing any thing, having loſt one ſhip, in which was Mr. *Miles Morgan*, a gentleman much lamented.

Sir *Humphrey* had mortgag'd a good part of his eſtate for this undertaking, and now being reſolv'd to go on with it, he was oblig'd to give aſſignments (by vertue of his patent) upon the land not as yet poſſeſs'd. But two years being conſum'd ſince his return home in getting men of ſubſtance to join him, without which it was not in his power to go thro' with it; it was late in the year 1583 before he could be ready to ſet ſail. At laſt having agreed among themſelves to go firſt to *Newfoundland*, and there to winter, in the moſt ſoutherly part of it, they ſet out on the 11th of *June*, with five ſhips and 260 men, among whom were ſhipwrights, maſons, carpenters, ſmiths, and all ſuch other artiſts as they had uſe for. After they had ſail'd two days, the largeſt ſhip they had, call'd the *Rawleigh*, fitted out at Mr. *Walter Rawleigh*'s charge, return'd to *Plymouth*. It was ſaid they had got an infectious diſeaſe among them, which occaſion'd their leaving the fleet.

Sails for Newfoundland.

Upon the 30th of *July* they made land, having for ſometime before had hazy foggy weather, ſo that they could not exactly obſerve the ſun or ſtars, but by their courſe, they gueſs'd they were in 51 deg. n. lat. they found themſelves in a large bay, but not liking the coaſt, they held farther ſouth, and came to *Penguin* iſland, which lies in 49 degrees. This iſland takes it name from the multitude of that ſort of fowl, which are about the bigneſs of geeſe, and very fat, and ſo unwieldly that they cannot fly. The *Europeans* who go to that coaſt a fiſhing, take them in great numbers, and barrel them up; but Sir *Humphrey* made no ſtay here, ſo that keeping his courſe to the ſouth, they came in ſight of S. *John*'s harbour, a place where the ſhips landed, which were upon that coaſt a fiſhing: it lies in 48 deg. Here they found about 36 ſhips, whereof the greateſt part were *Engliſh*. Sir *Humphrey* ſent a boat on board the *Engliſh* ſhips to give them an account of his commiſſion, and deſign; and the maſters coming aboard the admiral, and ſeeing the queen's commiſſion, welcom'd Sir *Humphrey*, and promis'd him all aſſiſtance.

Penguin iſland.

Having landed and ſet up his tents, he ſent for all the maſters of ſhips as well *Engliſh* as foreigners, and his commiſſion having been read, and care aken to tranſlate it for the ſtrangers, he took poſſeſſion, (by wood and turf, after the *Engliſh* manner) in name of *Elizabeth* queen of *England*, and for the uſe of Sir *Humphrey Gilbert* and his heirs, under her majeſty and her ſucceſſors. This done, all the ſhips, by a ſignal from the land, diſcharg'd their guns; and the governor having been well provided of freſh fiſh, and ſuch other things as the fiſhing ſhips had aboard, gave them an entertainment, and told the ſtrangers, that he would protect them againſt all violence, and provide them in proper places for curing their fiſh aſhore, in conſideration of a ſmall acknowledgment, rather as owning the ſovereignty of his miſtreſs, than as a tax. This they ſeem'd to be ſatisfy'd with, eſpecially the *Portugueſes*, who ſent him ſuch preſents as they had.

Sir Hum. takes poſſeſſion of the country in name of q. Eliz.

The governor immediately ſet up the queen's arms, engrav'd in lead, upon a wooden pillar near his tent; and granted out ſeveral parcels of ground near the ſhore to the ſeveral maſters of ſhips, which was a great eaſe to them, for, before, it was, *firſt come firſt ſerv'd*, and they were like to go to logger-heads for place. All the ſhips which they found upon the coaſt contributed towards furniſhing Sir *Humphrey* and his people with proviſions, becauſe he deſign'd to ſettle there.

Having thus adjuſted all matters, he ſent ſeveral parties along the coaſt both ways, to find out the propereſt place to ſettle in; the chief conſideration being to pitch upon the moſt commodious harbour for ſhipping, and, at the ſame time, a country about it able to ſubſiſt the colony. They found many good ports upon this coaſt, and, in the country, good paſture for all ſorts of cattle. Grain of all kinds grew to great perfection; and there was the greateſt plenty of fiſh that can be imagin'd, as ſeveral nations of *Europe* have, ever ſince the firſt diſcovery of this iſland, experienced to their great advantage.

But whilſt the governor, like a careful worthy man, was ſearching the country for the fitteſt place to ſettle in; his people were intent upon other affairs, quite contrary to his thoughts. There were ſome of them, eſpecially the crew belonging to the *Swallow*, who had their heads bent upon buccaneering, and therefore had laid a plot of taking away the beſt ſhip, and making prize of all they met with, whether friends or foes. Others withdrew into the woods, in order to get themſelves aboard ſome of the homeward bound ſhips. Some were ſick of fluxes, and ſeveral dy'd; ſo that the company who had been brought out of *England*, with a deſign to plant *Newfoundland*, was greatly diminiſh'd. The captain of the *Delight*, in which Sir *Humprey* himſelf ſail'd, went for *England*, and capt. *Brown* was remov'd from the *Swallow* to the *Delight*, and brought with him many

Mutinies among the governor's people.

of

of the *Swallow*'s crew, as thinking he ſhould be able to keep them in better command when mix'd with others.

He goes to make diſcoveries farther ſ.

Sir *Humphrey* being vex'd as thoſe miſcarriages, and eager to make diſcoveries farther ſouth, ſet ſail with the *Delight*, the *Hind*, and the *Squirrel*, which laſt the governor would needs go in, contrary to the advice of all his friends; but he perſiſted obſtinately in his purpoſe, as judging her the fitteſt for making diſcoveries, being a frigate of ten tuns, and ſo could run into any creek. He left St. *John*'s harbour the 20th of *Auguſt*, and the next day towards evening came up with cape *Race*, the ſouth point of the iſland, in 45 deg. and a half. Under this cape, they were becalm'd, and went a fiſhing, and, in leſs than two hours, caught a vaſt number of large cod. But having been told by a *Portugueſe* at S. *John*'s, of a certain iſland, not far from cape *Britain*, call'd *Sablon*, where his countrymen had left cows and ſwine to breed (above 30 years before,) and that he had occaſion to put aſhore, and found they had encreas'd very much; the governor determin'd to ſettle ſome where near that iſland, to be in the neighbourhood of ſo ſure a ſupply upon a pinch. So they ſailed from cape *Race* to the ſouthweſt, out of ſight of land for eight days. But a ſtorm ariſing, and with it a fog, they found themſelves among flats, they did not know where, and the *Delight* being fartheſt forward, ſtruck a ground, and was loſt, and with her moſt of their proviſions, Sir *Humphrey*'s papers, and ſomething elſe which he ſeem'd more griev'd for than the papers, which the author of this account ſuppoſes to have been ſome ore which he had got in the north part of *Newfoundland*, which he believ'd to be either gold or ſilver.

The delight caſt away.

The foul weather continuing, and the proviſions being ſcarce, the crew on board the *Squirrel*, preſt Sir *Humphrey* to make for *England*, as the ſureſt way to ſave themſelves, becauſe they were now too ſmall a number to attempt conqueſts upon the continent, having loſt 100 men in the *Delight*, as they thought, and indeed they were loſt to them, altho' ſome of them eſcaped wonderfully, as we ſhall relate by and by. Sir *Humphrey* call'd a conſultation of the captain and maſter of of the *Hind* aboard the frigate, and expreſt his willingneſs to comply with the deſire of his crew, telling them that by the bleſſing of GOD, he would return the next year, and make all their fortunes; upon this aſſurance they concluded to ſail homeward.

Here the author of this account, who was maſter of the *Hind*, tells a ſtrange ſtory, of a creature appearing near their ſhips, in ſhape and colour as like a lion as could be; and gliding along the water with his whole body above the ſurface. The noiſe he made was like the roaring of a lion, and he open'd his mouth wide, and ſhew'd long teeth, and glaring eyes. Some took this for a bad, and others for a good ſign. The reader may think as he pleaſes both of the ſtory and the *omen*.

A ſtrange appearance.

Having determin'd to ſail for *England*, Sir *Humphrey* came aboard the *Hind* once, to have his foot dreſs'd by the ſurgeon, having hurt it upon a nail, and another time to make merry after a ſtorm; but altho' he was preſs'd by the captain and all the officers to ſtay aboard that ſhip, he was poſitive, and went back to the *Squirrel*. They had ſtormy weather moſt of this voyage, and particularly about the *Azores*, where the frigate had like to have been ſwallow'd up; but growing a little calm, the *Hind* ſpoke to the governor, who was ſitting upon deck with a book in his hand. They beg'd of him to come aboard them, but he anſwer'd, *we are as near heaven by ſea as by land.* But that very night, the frigate being a head as ſhe generally was, (the *Hind* obſerving her motion,) all of a ſudden her lights went out; at which the watch called aloud, *the general is loſt:* which prov'd true; for they never heard more of the frigate, altho' they look'd for her all the voyage home, making the ſigns agreed upon between them to all the ſmall ſhips they ſaw in their courſe. The *Hind* arriv'd ſafe at *Falmouth* the 22d of *September*.

The governor caſt away.

But, as I hinted above, ſome of the men of the *Delight* were wonderfully preſerv'd. For ſome that could ſwim, having got into the boat, which, by good providence, was at the ſtern of the ſhip, they took in ſome others, to the number of 16 in all, whereof the maſter was one, who liv'd to give this account. They had but one oar, ſo that they had but little proſpect of prolonging their lives, but as it is natural to put the evil day as far from us as we can, they wrought at the ore by turns to keep the boat's head right before the wind, which they found fair for the iſland of *Newfoundland*, and by the mercy of GOD continu'd ſo for ſeven days, for ſo long they were at ſea. Two of the 16 dy'd, and were caſt over-board: the other 14 arriv'd on the iſland half dead for fatigue, but more for hunger, having ate nothing in all that time, but weeds ſwiming in the ſea. As ſoon as they could crawl out of the boat, they found ſome berries, and when they were a little recruited, and had given thanks to Almighty GOD for their wonderful deliverance, they divided themſelves into three parties, going about to look

A miraculous preſervation of 14 of the crew of the Delight.

look for food. They quickly found good peaſe, and a brook which was very refreſhing. There they ſtaid three days, living upon the peaſe and berries; and then got into the boat again, to coaſt, along the iſland, in hopes of meeting with ſome of the fiſhing ſhips bound for ſome part of *Europe*. Every now and then they put aſhore for berries and peaſe, which they found all along the coaſt. And at laſt, to their great comfort, they ſpyd a ſhip, and making towards her, found ſhe belong'd to the *Spaniards*, who kindly took them aboard, and brought them to the bay of *Biſcay*, and landed them at *Paſſage*, the maſter being ſo kind to conceal that they were *Engliſh*, and from thence they travell'd by land in a few hours to *France*, and ſo got to *England*.

Hackluyt *ubi ſupra.*

In the year 1597, Mr. *Charles Leigh* and *Abraham Van Herwick*, *London*-merchants, fitted out two ſhips, the *Hopewell* and *Chancewell*, for an expedition towards *Newfoundland*; where Mr. *Leigh* being on board arriv'd in *May*, and coaſting along the ſouth part of the iſland, from *Caplin* bay round cape *Race*, on the 5th of *June*, they paſt *Placentia* bay, where they loſt ſight of one another in the fog, very frequent about *Newfoundland*. The *Hopewel*, made over to cape *Britain* on the eaſt of an iſland, to the northward of *Nova Scotia*, call'd the *Gaſpa*: and holding ſtill northward, they took abundance of large cod, at the iſland of *Menego*; and in two iſlands farther north, they found incredible numbers of birds, with great number of *Morſes*, or ſea oxen, ſleeping upon the rocks; the *Hopewell* ſent the boat towards the rocks, but the morſes taking the allarm leap'd into the ſea, and purſu'd the boat with ſuch eagerneſs, that the ſeamen being afraid of them, were glad to make the beſt of their way back to the ſhip. About five leagues north of the bird iſland at *Brian*'s iſland, the cod were in ſuch plenty, that, with four hooks only, they caught 250 in an hour's time. There they found excellent corn and meadow ground, and good wood but not large.

Mr. Leigh's *voyage.*

The 18th of *June* they came to *Ramea* iſland, lat. 47 and a half, being in the middle of S. *Laurence*'s bay, about an equal diſtance from *Nova Scotia* and *Newfoundland*. Here they found four ſhips, two of S. *Malo*, and two of *Sibiburo*, a place near S. *Jean de Luz*. The two laſt they took for *Spaniards*, altho' indeed they were ſubjects of *France*. Mr. *Leigh* ſent to thoſe ſhips to ſend their charter parties to him, that he might ſee to what country they belong'd; and upon affirming that they were *French*, he deſir'd they would deliver their ammunition to him, which he promis'd to reſtore to them, upon his being certify'd that they were what they pretended. But they refuſing to give it up, he ſent a party aboard to ſeize it, but with ſtrict orders to touch nothing nothing elſe. But the two ſhips making reſiſtance, the *Engliſh* boarded them by force, and began to pillage, which Mr. *Leigh* perceiving, went aboard them himſelf and reſtor'd all that his people had taken, only ſending their ammunition on board his own ſhip; but finding upon ſtrict examination that one of the ſhips was certainly *French*, and having no evidence that the other was not, he diſmiſt them both.

They have a ſquable with ſome French ſhips at Ramea iſland.

But the captain of one of the S. *Malo* ſhips, coming aboard Mr. *Leigh*, had like to have ſurpriz'd her, by a correſpondence laid with the other ſhips, which Mr. *Leigh* perceiving, he threaten'd to fire upon one of them which lay next him, if they offer'd to man their boat, which diverted the plot for that time; and finding that he was in danger, by ſtaying there, he ſet ſail, with intention to go towards *Canada* river, but the crew petitioning him to return home for greater force; to be able to withſtand any aſſaults of *French* or *Spaniards*, he was fain to comply with them; and ſo they bent their courſe ſouthward, and came back to cape *Britain*; where they met with eight of the *Chancewell*'s crew in a boat, who gave them an account, that the ſhip having ſtruck upon a rock, and by that ſhock being bulged, they had been oblig'd to run her aſhore in that bay, where the *French* had pillag'd her againſt the maſter of their ſhip's inclination who had us'd the *Engliſh* well.

The Chancewell ſtranded.

Mr. *Leigh* ſail'd by their direction, to the bay where they lay, and ſaw the *French*, ſhip riding at anchor. As ſoon as the *Speedwell* came in ſight, the *French* deſerted their ſhip, and went aſhore, only the maſter ſtaid, and Mr. *Leigh* treated him well taking nothing from him but what they had plunder'd from the *Engliſh*, in recompence of which civility, the maſter gave him two hogsheads of cider, a barrel of peaſe, and 500 fiſh. Departing from thence, they ſail'd towards port *Anglois*, a place near the ſame iſland on the ſouth ſide, where they were told another of the ſhips lay, which had pillag'd the *Chancewell*. Thither Mr. *Leigh* ſail'd, and ſome other *French* ſhips being there, he went aboard the commodore, deſiring reſtitution; but finding that they reſtored only part of what they had taken, and reſolv'd to ſurprize the ſhip to boot, they took what they could get, and left the place.

Mr. *Leigh* deſign'd to have attack'd the ſhip which had committed the robbery, but the wind did not ſerve; ſo that they held

held their courſe towards *Newfoundland*, and in S. *Laurences*'s bay, took a *Spaniſh* ſhip; the maſter of the *Speedwell*, Mr. *Crafton*, and 16 of the crew, having boarded her, in their boats; but as Mr. *Crafton* with three of his men were rowing towards their own ſhip, there fell ſuch a fog, that he was forced to caſt anchor near the ſhore, where he was ſurpriz'd by a ſmall ſhip of S. *John de Luz*, and taken priſoner. When it clear'd up, they carry'd him to the *Spaniſh* prize, threatning to hang him; unleſs the *Engliſh* deſerted the ſhip; which they did, releaſing the *Spaniards* aboard, upon promiſe of doing no harm to the *Engliſh*: but as ſoon as they had poſſeſſion of the ſhip, they ſail'd to a bay, not far from thence, where there were other ſhips from *Spain*, and, contrary to their promiſe, detain'd the maſter and *Steven Van Herwick*, and ſtripping the reſt, ſet them aſhore. This was done whilſt the *Speedwell* was carry'd out of ſight in the fog. Some days after, the men who had been ſtrip'd made a ſhift to get a boat and came aboard; and capt. *Leigh* hearing the treachery of the *Spaniards*, watch'd all opportunities of getting ſome of them in his power, which he ſoon effected, exchanging them for Mr. *Crafton* and *Van Herwick*.

A Spaniſh ſhip taken, & retaken.

After they were come aboard, they ſail'd for cape S. *Mary*, and in that bay took another *Spaniſh* ſhip of 200 tun after ſome reſiſtance: and finding her a good ſtout ſhip, Mr. *Leigh* went aboard her, and ſail'd for *England*, landing in the *Iſle of Wight* on the 5th of *September*.

Another of 200 ton taken, and brought to England.

I find no account of any farther attempt to ſettle in this iſland (altho' the *Engliſh* continu'd fiſhing there) till the year 1610, when Mr. *Guy* of *Briſtol*, having writ a treatiſe the year before concerning the importance of a colony in *Newfoundland*, prompted the earl of *Northampton* to to procure a patent, from king *James*, of this iſland, which being obtain'd, ſign'd *Apr.* 27th 1610, to the ſaid earl, in partnerſhip with many others there nam'd, of which Mr. *Guy* was one; immediately a fleet was ſent thither, and Mr. *Guy* appointed governor.

Harris's Bibl. *p.* 1. B. V. *ch.* 32.

A patent granted for Newfound land. *to the earl of* Northampton &c.

He behav'd there with ſuch prudence, by treating the natives well, that by degrees he brought them to be familiar with the *Engliſh*. For altho' there were no inhabitants in the place where he firſt ſettled, *viz.* in the eaſt and ſouth parts of the iſland; yet Mr. *Guy* having had occaſion to view the other parts of it farther north, and treating the natives with great kindneſs and humanity wherever he found them, they made it their buſineſs to ſearch out the *Engliſh*, and inſtead of laying their goods upon the ground and retiring from them, as they did at firſt, they came to their ſhips or houſes, and traded with them without any reſerve. One reaſon of their confidence in the *Engliſh* was, that the *Engliſh* lighting upon a village of theirs, in one of their progreſſes, and finding no body at home, they put ſome things out of their places, and left ſeveral trinkets behind them to ſhew that they been there; but did not take a pin's worth either of goods or proviſions. This gave them ſo great credit with the natives, that there never was the leaſt quarrel between them.

Mr. Guy's prudent government.

In 1620 Sir *George Calvert*, ſecretary of ſtate, purchas'd a part of this iſland from the proprietors; for which he obtain'd a patent from king *James* in 1623, by which the land he had bought was erected into a province, under the name of *Avalon*, from a place in *Somerſetſhire*, where the chriſtian faith was firſt receiv'd in *England*. This province is in the ſouth eaſt part of *Newfoundland*, from 46 to 47 deg. n. lat. and reaches to the colony of S. *John*'s northward; from whence drawing a line weſtward, it reach-to *Placencia* bay; ſo that it may be ſaid to be about 60 miles ſquare. All the iſlands and inlets upon the coaſt were granted to Sir *George* by his patent, only reſerving full liberty to the *Engliſh* for fiſhing, as well in the ſeas as in all creeks and harbours within his juriſdiction, and likewiſe the priviledge of drying and curing the fiſh on the ſhore of the ſaid province, as they formerly us'd to do, ſo as no injury ſhould be done unto the proprietor.

Ogilvy's America *p.* 307.

Sir Geo. Calvert's *plantation.*

Sir *George* caus'd a handſome houſe to be built in this province, at a place call'd *Firreland*, in the ſouthmoſt part of his purchaſe, and being, at his own deſire, diſmis'd the office of ſecretary, and created lord *Baltimore*, he went over to his new eſtate at *Avalon* in 1627, to ſee his houſe, and plantation; and returning the ſame year, took his whole family there the year following, except his eldeſt ſon. In that expedition he releas'd about 20 *Engliſh* ſhips taken by *Monſieur de la Rade*, (there being war, at that time, between *England* and *France*:) and whilſt he ſtaid at *Ferriland*, he took ſix *French* ſhips fiſhing upon the coaſt, and ſent many priſoners to *England*. After he had ſtaid ſome time, and order'd his colony to the beſt advantage, he return'd with his family, leaving a deputy to take care of the plantation, which went on well as long as he liv'd.

His ſon *Cecil*, ſucceeding him in honour and eſtate in 1632, ſent over capt. *Hill* as his deputy to *Avalon*. But the marquis of *Hamilton*, the earl of *Pembroke*, and others having obtain'd a patent for *Newfoundland* in 1638, in which they had

taken care, that *Avalon* ſhould not be excepted, under pretence that the lord *Baltimore* had neglected it; they diſpoſſeſs'd him of his houſe at *Ferriland* and all the privileges he enjoy'd in the province: and king *Charles* I's troubles coming on ſoon after, they kept poſſeſſion, till the reſtoration of king *Charles* II. and then upon the lord *Baltimore*'s petition, his majeſty refer'd the matter to be examin'd by Sir *Orlando Bridgman*, then lord chief juſtice, and ſome others appointed to aſſiſt him: who, upon a full hearing of council on both ſides, gave their opinion, that the lord *Baltimore*'s patent was ſtill of force, and was not voided by the patent of 1638. Upon this report, the king order'd poſſeſſion to be given to the ſaid lord, which was accordingly done; the other proprietors or their aſſigns kept the reſt of the iſland by vertue of their patent. After the revolution, the *French* took poſſeſſion of ſeveral places on the ſouth of this iſland, their chief colony was *Placentia* in the bay of the ſame name, where they had a town and fortreſs; both which were deliver'd up to the *Engliſh* by the treaty of *Utrecht*.

Engl. Atlas p. 238.

This iſland is divided from *Terra de Labrador*, on the continent of *America* by a channel much of the ſame breadth with that between *Dover* and *Calais*. The iſland lies from 52 degrees to 46, about 360 miles in length, and towards the ſouth much the ſame breadth; ſo that it may be ſaid to be as big as *England*. The northern parts of it are ſeldom frequented by the *Engliſh*, all our colonies having been on the ſouth end of the iſland towards the eaſt, and as far weſt as *Placentia* on the ſouth coaſt; which having had few or no natives, the *Engliſh* had no ſtruggle in planting colonies there, except what diſturbances they met with from *Europeans*, particularly the *French*.

Ogilvy *ubi ſupra.*

All along the coaſt, are many excellent bays, and the moſt commodious harbours in the world. Some of thoſe bays run up into the land twenty leagues. The chief of which on the eaſt coaſt, are the *Trinity* and *Concepton* ſtretching towards the ſouth weſt. *Tor* bay and *Capelin* towards the weſt. On the ſouth coaſt of the iſland, are the bays of *Trepaſſey*, S. *Mary*'s, *Berrel*, and *Placentia*: all which run into the land northwards. The great bay of S. *Peters* on the weſt coaſt, lies overagainſt *Anticoſti* iſland, in the mouth of the river of S. *Laurence* or *Canada*: beſides a great number of others, leſs remarkable, or leſs frequented by the *Engliſh*. The beſt harbours are thoſe of *Trinity* and *Trepaſſey*, the one on the eaſt, the other on the ſouth coaſt, in the bays of the ſame names. *Trinity* harbour lies in 49 deg. and is moſt conveniently ſituated for ſhips to lye in, and to ſail from, either to the eaſt, weſt or ſouth. It has three arms, or rivers, where many hundreds of ſhips may ly ſafe, near a mile from the mouth of the harbour. And by the ſides of thoſe rivers, there is abundance of ground capable to feed a great number of cattle both winter and ſummer. *Trepaſſey* harbour is likewiſe a good one, and has the advantage of a more ſoutherly ſituation; being in 46 deg. (or ſome leſs according to the *Atlas*.) The coaſt near this bay is a very ſafe one, being free from rocks and ſhelves. This harbour is the moſt commodious of any in the iſland for ſhips, which come from *New England*, *Virginia*, *Canada*, or *Bermudas*. The climate on this part, as indeed of all the iſland, is very temperate, and agrees well with *Engliſh* conſtitutions.

The bays and harbours in Newfoundland.

Produce of the iſland.

The ſoil is naturally very fruitful, producing plants, fruits, and grain of ſeveral kinds, without art or pains. The country abounds in bilberries, raſpberries, barberries, cherries, goosberries, ſtrawberries, pears and filberds; as likewiſe in variety of wholeſome herbs, ſuch as parſley, ſorrel, alexander, &c. Wheat, barley, rye, and peaſe were found upon the iſland at the firſt diſcovery of it: the *Engliſh* ſow'd oats and beans, which thrive to admiration. And all garden ſtuffs, of which they carry'd the ſeeds from *England*, proſper'd exceeding well. The country is well ſtor'd with wood, and their firrs are reckon'd as good for maſts as any in *Norway*: and the pine and birch are particularly commended for the ſtatelineſs of them.

Beaſts.

This iſland abounds in deer, hares, foxes, ſquirrels, wolves, bears, otters and beavers, which yield excellent furs. And it is ſaid that the wild beaſts in this country are tamer than the ſame ſort of animals are in *Europe*: of which they tell a remarkable ſtory; and altho' Dr. *Harris* makes himſelf merry with it, in his way, I ſee nothing ridiculous in it, nor repugnant to probability: I ſhall therefore give it in few words. As ſome of the *Engliſh* were a fiſhing, a great number of wolves came out of a wood near them: they having a maſtif dog with them, of approv'd mettle, he advanced towards them; his maſter expecting a very unequal battle. But, to his great ſurprize, inſtead, of ſnarling at one another, the wolves wag'd their tails, and fawn'd upon the maſtif; which he returning in the ſame manner, they fell to playing, as dogs do, when they are in friendſhip with one another. Having thus entertain'd the *Engliſh* for ſome time, with their play, they went off towards the wood, whither the

Harris, *ubi ſup.*

An inſtance of good nature in wolves.

the maſtif bore them company, and did not return for eight or ten days, and then came home without the leaſt ſign of any inhoſpitable treatment. This he repeated twice afterwards, ſtaying a week at a time, and ſtill returning in good condition; from which they concluded (and not without reaſon) that the wolves were not ſo ill natur'd in *Newfoundland*, as in *England*.

Fowl. Thoſe of the feather'd kind, both of land and water, are infinite in number. The land birds are partridges, thruſh, and thruſſets, as alſo filladies, nightingales, and other ſinging birds; likewiſe birds of prey, as hawkes, ravens, gripes, crows, &c. And the country is well ſtock'd with ducks, geeſe, pidgeons, &c. And great plenty of water fowl, ſuch as wild ducks, teal, penguins, &c. The penguins are in ſuch plenty in this iſland, and multiply ſo faſt, that they drive them by hundreds to their boats alive, for their wings are not able to ſupport their bodies in the air, ſo that they are eaſily caught.

But of all the commodities with which this part of the world abounds, the fiſh about this iſland bring the greateſt advantage to *Europe*. Here are to be found whales, porpoiſes, ſeals, and other large ſea fiſh; and in the rivers, ſalmon, trouts, eels, flounders, launce, and ſeveral others. But above all, the infinite number of cod, taken upon this coaſt, has allur'd all *Europe* to ſail thither; and vaſt numbers of ſhips from *England*, *Holland*, *France*, *Spain*, and *Portugal* us'd to lye along the coaſt in the ſeaſon for fiſhing. Near the iſland there is a ſound, call'd the *Bank*, above 300 miles long, where the cod are in ſuch numbers, that they catch them faſter than they can be cur'd by many hands, and ſeamen know without ſounding, when they are upon the *Bank*, by the multitude of gulls and other ſea fowl hovering over the place, waiting for the guts and garbiſh of the fiſh taken there. *Hackluyt.*

It is obſerv'd by Mr. *Ogilvy*, that if this iſland were well fortify'd, as it might eaſily be, we might command all the fiſhing of that important place, and either debar other nations from fiſhing upon that coaſt altogether, or make them pay a conſiderable ſum for liberty to fiſh. I ſhall tranſcribe his own words. "The "trade of fiſhing is of ſo great concern- "ment to *France*, *Spain*, *Portugal*, *the* "*Streights*, and other parts, that they "cannot well be without that yearly "ſupply, in fiſh which comes from that "iſland. Neither can the *Hollanders*, "*Spaniards*, or *Portugueſes*, well ſet any "ſhips to the *Weſt-Indies*, without *New-* "*foundland* fiſh, there being none that "will endure to paſs the line, ſound and "untainted, but the fiſh of that country, "ſalted and dry'd there. And ſo long "as the act continues ſtill in force, that "no fiſh be tranſported from the ſaid "iſland, but in *Engliſh* bottoms, it will "contribute very much to the encreaſe of "our ſhipping there, and by conſequence "of the imployment of mariners; and "the fiſhing of that part of the iſland "will be ſolely appropriated to the *Eng-* "*liſh* nation, to whom of right it be- "longs, which will prove the greateſt "ballance of trade in that part of the "world; and that whereas above 200 "ſail do trade thither yearly to fiſh, if "1000 ſail come, if there be but fiſher- "men enow, they will all have fraugh- "tage there.

"The *French*, if once the iſland be "fortify'd, will be depriv'd of their "nurſery of mariners; this being the on- "ly place, beſides *Canada*, and one or "two adjacent coaſts, where they come for "ſupply of fiſh, with which that nation "cannot be ſupply'd from other parts.

"By well planting, and fortifying "*Newfoundland*, the trading to *Virginia*, "*New England*, and thoſe parts, would "be much encourag'd, *New England* ha- "ving had of late great traffick with "*Newfoundland*, where they vent the "growth of their plantation. Beſides, "*Newfonndland* is a key to the gulf of "*Canada*, which if the *Engliſh* had "again in their poſſeſſion, as they had in "the years 1628 and 1632, they might "give a law to all foreign kings and peo- "ple, intereſted in any of the parts of "*America*, and a protection to all the "*Engliſh* plantations upon that conti- "nent. Whereby great ſecurity, com- "fort and profit would ariſe to the nation "and people of it: whereas on the con- "trary, if the *French*, *Spaniſh* or *Dutch* "ſhould poſſeſs themſelves of the ſaid "plantation, they would not only de- "prive this nation of all the advantages "aforeſaid, but would alſo derive to "themſelves ſo great a power to prejudice "all the plantations upon the coaſt of "*America*, belonging to this nation, "that the inconveniencies thereof are "ſcarce to be imagin'd or expreſs'd." *Ogilvy's America p. 310.*

But this is a matter too high for our TRAVELLER, and therefore I ſhall leave it to the conſideration of the government, *when they come to make* TRADE *and* NAVIGATION *the object of their thoughts.*

The ſecond iſland of any conſideration, under the *Engliſh* government, is *Long Iſland*, which altho' it is annex'd to the province of *New York*, is ſo conſiderable a place as to deſerve to be particularly taken notice of, being 150 miles in length, and 12 in breadth. Whilſt it was in the hands of the *Dutch*, it was call'd *L. Long Iſland.*

call'd *Naſſau*, and they made as good earthen ware in it, as at *Delph*. It has ſeveral fruitful vallies, and produces corn, fruits, herbs, roots, flax, and hemp in great plenty. There is alſo ſtore of black cattle, horſes, hogs, &c. And the ſea about it abounds in whales, grampus's, ſeals, &c. whoſe oil yields good profit to the inhabitants.

This iſland is divided into three counties, *viz. Queen*'s, *Suffolk* and *Richmond*. *Queen*'s county has a fine breed of horſes, and their militia are horſe. It has two churches in it. *Suffolk* county has two ſmall towns inhabited, for the moſt part by independants and quakers. *Richmond* county has one church. This iſland lies from eaſt to weſt under the 41 deg. and a half n. lat.

III. Bermudas *iſles.*

The next iſlands which come under our conſideration are thoſe of the *Bermudas* or *Summers* iſlands. The firſt name they are ſaid to have taken from a *Spaniard Juan Bermudes*, who firſt diſcover'd them; or elſe from certain black hogs, which went aſhore upon thoſe iſlands, (out of a ſhip, caſt away upon that coaſt) and multiply'd there. The other name thoſe iſlands got from Sir *Geo. Summers*, one of the worthy deputy governors of *Virginia*, under the lord *De la Ware*, whoſe landing on thoſe iſland when the ſhip was ready to ſink, and afterwards his death in the ſame iſlands, we mention'd before. *

* Univ. Trav. p. 237.

The firſt who undertook to make a ſettlement here, was *Hernand Camelo* a *Spaniard*, in the reign of *Charles* V. and it ſeem'd to be of conſequence to *Spain* to have a colony there, as being a good place of refreſhment, in their way home from all their plantations in *North America*, eſpecially from *Havana*, and the *Bahama* iſlands. But thoſe who were concern'd in planting the *Bermudas*, being very ſlow and remiſs, and the emperor being engag'd in wars at home, which engroſs'd all his thoughts, at that time, the deſign came to nothing. About 60 years after, the *French* attempted the planting of them, but likewiſe miſcarry'd. And after them the *Engliſh*, ſuch as, *Goſnol*, *Smith*, *Weſt*, *Gates*, *Argol*, and *Wyat*, but without ſucceſs, having been only efforts of private perſons, or chance undertakings. But

In 1612, king *James* I. granted letters patents to a company of *London* merchants to plant the iſlands of *Bermudas*. They ſent, therefore, Mr. *Richard Moore*, who liv'd there three years; in which time, he had been very diligent with the 60 men which he had with him, in building a fort, and fortifying it after a proper manner; but he was much hinder'd in his undertaking by an odd incident, which, had it not been remov'd, would have made a colony there for ever impracticable. The thing was this. A number of rats making their way out of a ſhip caſt away upon the *Bermudas*, (but whether during Mr. *Moore*'s reſidence there, or before, I cannot ſay) multiply'd ſo exceedingly there, that in the laſt year of his being upon the iſland, they devour'd not only all the plants in the field, but ate up the grain as it was ſow'd, ſo that there was no appearance of a crop; and they alſo ate up all the proviſions in the houſes, They us'd all ways they could think of to deſtroy them, but to no purpoſe. This was a great diſcouragement to the colony, but after they had been plagu'd with them for ſome time, providence ſent a diſeaſe among them, which rid the iſland of them like a charm. *A plague of rats.*

Mr. *Moore* being call'd home, Mr. *Tuckard* ſucceed him, and the colony being recruited from time to time, was in a flouriſhing condition in ſeven years, having about 1000 inhabitants men and women. Mr. *Butler* ſucceeded *Tuckard* in 1619, and now they ſet about building a church, and court of juſtice, and the *Engliſh* increas'd 500 in the three laſt years, what by recruits from *England*, and multiplying in the iſland, and they poſſeſt 20 leagues of land in length. This plantation has thriven ſo well, that of late years they were computed to be about 10,000 *Engliſh*. Eng. Atlas *p.* 244.

Theſe iſlands lye in a cluſter together, and are reckon'd above 400 of one ſort or other. They lye in 32 deg. n. lat. near 500 miles eaſtward of the coaſt of *Carolina*. They were reckon'd, for about 80 years after they were diſcover'd, the moſt healthful plantation in *America*, ſo that ſick people went from the ſugar countries to recover their health in *Bermudas*, but in later years, they have in a great meaſure loſt that character. The hurricanes have alter'd the nature of the air, altho' 'tis ſtill temperate and clear. But they are often viſited with dreadful thunder and lightning; and the north and north weſt winds turn ſummer into winter. In one of theſe iſlands, call'd S. *George*'s iſland, the town of the ſame name is built, which lies at the bottom of a bay towards the north weſt, and is defended by ſeveral forts, on which there are 70 pieces of cannon mounted, and ſo diſpos'd that they all bear upon the entry of the harbour. The town conſiſts of 1000 good houſes, with a handſome town houſe for the reſidence of the governor, and for holding the council and aſſembly. There is likewiſe a fine church and a good library.

Theſe iſlands lye in the form of a half moon, encompaſs'd with one long iſland of 20 miles, which is divided into tribes, *viz.*

viz. Southampton, *Warwick*, *Paget*, *Pimbroke*, *Devonſhire*, *Smith*'s and *Hamilton* tribes. All theſe ly in the long iſland on the eaſt ſide, and run from the ſouth weſt to the north eaſt, as this iſland lies. There are two clergymen in this iſland, beſides S. *George*'s town, who have 40*l.* a year each, and a glebe.

Dr. Geo. Berkley *dean of* Derry.

In theſe iſlands, a very ingenious publick ſpirited clergyman * propos'd, ſome years ago, to ſettle a college for the propagation of learning, and the advancement of the chriſtian religion among the people of *America*, and made a voyage to the *Weſt-Indies* with that view. But theſe not being times for encouraging ſo good an undertaking, he was forc'd to drop it, and return home, after he had been at conſiderable charge in the expedition. We ſhall leave the farther account of theſe iſlands to the chapter in which we propoſe to give the natural hiſtory of *America*.

IV. Bahama *iſlands.*

The next iſlands in which the *Engliſh* have any intereſt, are the *Bahama* or *Lucaye* iſlands. They ly ſouth eaſt of the point of *Florida*, and along the north eaſt ſide of *Cuba*. *Bahama*, which gives one common name to all the reſt, altho' not the largeſt, is the neareſt to the continent northward, and gives the name likewiſe to that ſtreight between thoſe iſlands and *Florida*, and has long been the way by which the *Spaniſh* fleet has return'd home from the bay of *Mexico*. This iſland lies between 26 and 27 deg. n. lat. ſo that it is about 60 miles in length but narrow. The current is ſo ſtrong between *Bahama* and the continent, that, unleſs at a certain ſeaſon, there is no paſſing that way againſt the current, let the wind be ever ſo favourable.

The *Spaniards* were acquainted with this paſſage in *Cortez*'s time, as we obſerv'd in the ſailing of his deputies ſent to *Spain*. But all the uſe they made of theſe iſlands, as far as I can find, was to take the inhabitants to ſerve as ſlaves in their other plantations, or to trade with others of them for *Guiacum*, *ſarſaparilla*, *ſaxafras*, *red wood*, and *ambergreaſe*. The *Engliſh* do not appear to have had any intereſt in the iſlands before the reſtoration. And then capt. *Sayle* having been driven thither, by ſtorm, in his paſſage to *Carolina* of which he was governor, gave ſuch an account of thoſe iſlands to the proprietors of *Carolina* that they procur'd a grant of them from king *Charles* II. in 1662, and ſent colonies to *Bahama* and *Providence*, thoſe two, being moſt commodious for ſhipping. They kept poſſeſſion till 1700, and then were diſpoſſeſt by the *French* and *Spaniards*, who took the fort in the iſle of *Providence*, plunder'd and deſtroy'd the plantations, and carry'd off great numbers of the blacks: thoſe who eſcap'd them, retiring into the woods, got afterwards over to *Carolina*. But ſince that time, thoſe iſlands have been, for the moſt part a neſt of pirates. The harbour at *Providence* was capable of holding the royal navy, but the bar was ſuch, that no ſhip above 500 ton could get over it. There is great plenty of fiſh here; and whales have been found dead upon the ſhore worth 100's of pounds a piece, having had their bodies all cover'd with *ſperma cete*. But the greateſt advantage from thoſe iſlands, is that in time of war, a few men of war might ly there very conveniently, for the plate fleet as they come from *Havana*.

Beſides the iſlands of *Bahama* and *Providence*, there are many others call'd by the common name of the *Bahama* or *Lucaye* iſlands. One of which was the firſt land ſeen by *Columbus*, in the latitude of 25 deg. as we obſerv'd before * (where by a miſtake of the preſs it is call'd 15) and was nam'd by him S. *Salvador*; but the true name was *Guanabani*. Alſo there is that, call'd the *Little Iſland*, famous, by tradition, for handſome women; and *Los Martyres*, ſo call'd by the *Spaniards*, becauſe the rocks, near the iſland, look like men bound to ſtakes or impal'd. Theſe are excellent ſea marks, becauſe when you have thoſe rocks to the ſouth eaſt, you are ſure you have enter'd the ſtreights of *Bahama* which lead to the gulf of *Mexico*. The other iſlands hereabouts are of leſs conſideration, and therefore being not poſſeſt by the *Engliſh*, we ſhall not mention them.

* Univ. Tr. *p.* 17.

V. Jamaica.

The next in courſe, tho' of much greater conſequence, is *Jamaica* which as we obſerv'd before, was firſt diſcover'd by *Columbus* in his ſecond voyage to *America*, and as good as conquer'd by him but no ſettlement was made there, till his ſon (who by much ſtruggle, and going to law, had procur'd the grant made to his father of admiral of the *Weſt-Indies*, to be continu'd to him) ſent *Eſquibel* to plant a colony there. But, upon their firſt ſetling, they exercis'd ſuch cruelties towards the natives, that *De las Caſas*, formerly mention'd, (by his repreſentation of the *Spaniards* barbarity, to the emperor *Charles* V. in the new regulations, which had like to have overturn'd the conqueſt of *Peru*,) gives an account, that, in a very ſhort time they reduc'd the *Indians*, (in thoſe places where the new colonies were ſettled) from 5000, to 300. And the ſlaughter they made of thoſe poor people was attended with ſuch circumſtances of inhumanity, that it is ſhocking to mention them.

Ogilvy's Amer. Jamaica.

Hackluyt Vol. III. *p.* 606.

The only disturbance the *Spaniards* met with from *Europeans*, in this island, was from the *English*. For in 1596, Sir *Anthony Shirley* with six ships and 400 men, designing to sail for S. *Thomas*, an island under the line, near the *African* coast, subject to the king of *Portugal*; was detain'd by sickness, and other accidents, so long, that instead of prosecuting his voyage at first propos'd, he changed his course and made over to the *West-Indies*. In this voyage, he took *Praia*, a pretty town in S. *Jago*, one of the *Cape Verd* islands. And afterwards possest himself of the city of S. *Jago*, with a bravery, more commendable, upon the account of the difficulty they had brought themselves into, than from the prudence of the attempt. For, after Sir *Anthony* had, contrary to all appearance taken the town, and kept possession of it two days, having had 80 of his men kill'd or wounded, and 3000 *Portugueses* in arms against him, he was forced to leave it in the night, and having secretly sent orders to his fleet to send all their boats ashore, against such an hour, and, at the same time, to fire upon the fort, to make the *Portugueſe* governor believe he intended to attack it from the town, which he knew to be impracticable, he withdrew his forces as soon as the fire began from the sea, and in good order retreated to his boats, and so aboard the fleet; and meeting with a *Portugueſe* ship laden with wine and cloth, with which he seasonably refresh'd his men, he proceeded towards the *Caribee* islands, and put ashore at *Dominica*, where he staid above a month to recover his men, who found themselves much refresh'd by some hot baths in that island. From thence he touch'd at *Margarita* near the continent of *Terra Firma*, and so coasting along towards the west, he attack'd and took S. *Martha*, in the *Darien* bay, where he kept his *Christmas*, the *Spaniards* being the civilist people in the world, altho' they had 700 men in arms, within a league of the town.

Sir Ant. Skerley's *expedition.*

He takes S. Jago.

And then S. Martha.

Upon new years day, he left the town, not having men enough to leave a garrison in it, and set sail for *Jamaica*, but missing his course, he went round the island, and landed about six miles from their chief town, S. *Jago de la Vega*, now *Spanish Town*; which he likewise made himself master of with little opposition, having march'd those six miles from the bay of *Port Royal*. After which the whole island submitted, and from all places near the town, they brought him provisons of wheat and beeves. The *Spanish* governor came often to Sir *Anthony*, and left him to dispose of every thing as he pleas'd. But he, having his head full of more important discoveries, slighted this island, and being join'd by captain *Parker* of *Plymouth*, they set sail, by concert, for the bay of *Honduras*.

He likewise takes Jamaica.

What happen'd to Sir *Anthony* afterwards is not very material to our present purpose. We shall only add, that having taken port *Cavalos*, a poor place in that bay, and attempted, in vain, to find a passage to the south sea, by the way of *Rio Dolce*; he deserted that coast, and sail'd for *Newfoundland*, to get recruits of men and provisions, intending to make his way to the *East-Indies* thro' the *Magellan* streights. But all his other ships having left him, and his own ship having spent their last allowance just as they came up with the fishers off *Newfoundland*, he was forced to recruit his provisions, and, to his great mortification to return to *England*.

He returns to England.

There was no new attempt made upon *Jamaica* till the year 1654. And then *Oliver Cromwell* sent a fleet under *Venables*, with orders to attack *Hispaniola*: but being disappointed there, and finding the *Spaniards* better prepar'd for them, than they had imagin'd, they were forced, after having attempted it with loss, to take up with smaller game, and therefore landed in *Jamaica*, upon the 10th of *May*, and marching to S. *Jago*, the *Spaniards* deserted it, and fled to the mountains. So that the *English* took possession of the town without opposition. The *Spaniards*, under pretence of a treaty, privately convey'd away their women and goods; but whilst they pretended to treat, they slew the straggling *English* where ever they found them, or else kept them prisoners. But finding the *English* too many for them at open war, they became weary of that clandestine way of living, and therefore they made their way to *Cuba* in such vessels as they had, where the most considerable men among them were permited to stay; but the vice roy of *Cuba* commanded the bulk of them to return to *Jamaica*, promising to send them such supplies as were sufficient to chase the *English* out of the island. This protracted the war there; but the *Spanish* succors coming by halves, they were quite weary of the war, especially having to do with people who were accustom'd to fight *right or wrong:* so that the utmost the governor could bring them to was to march towards the north side of the island, and there to fortify themselves, at a place they call'd *Chereas*. But the *English* pursuing them, kill'd a great number of them, and made many prisoners. This happening before the bulk of their recruits came, made their arrival, at last, to little purpose, for altho' about 30 companies landed from *Cuba* and *Hispaniola* to reinforce the garrison; the forces of the island

Venables *attacks* Jamaica.

And beat the Spaniards in several encounters.

iſland, having been ſo often defeated before, could make them no aſſiſtance; and the negroes having ſeen the *Spaniards* ſo often put to the rout by the *Engliſh*, deſerted their old maſters, and ſet up for themſelves, and chuſing a head out of their own number, they offer'd to ſubmit to the *Engliſh*. The war laſted ſome time in the iſland; but at laſt the *Spaniards* being hard preſt, offer'd to capitulate, but *Venables* would hear of no terms unleſs they would deliver up all thoſe who had kill'd any of the *Engliſh* either during the truce or in time of war after quarters given. *What brave fellows were the* USURPERS *of thoſe days! and what regard had they for* OLD ENGLAND!

The blacks deſert them.

The *Spaniards* being forced to ſubmit to the conquerors, abandon'd the iſland; and whatever efforts they made to recover it again, the *Engliſh* have kept poſſeſſion of it ever ſince. *Venables* ſtaid there about three months after he had taken it, and, upon his leaving it, gave the government of it to *Forteſcue*, one of the principal officers under himſelf. That ſame year, the ſoldiers elected *Doyly* for their preſident, but the uſurpers at home ſent colonel *Brain* over as governor of *Jamaica*, who, ſoon after, gave it back again to *Doyly*, who continu'd in that poſt till the *reſtoration*, and had the honour to have a commiſſion from king *Charles* II. and become *lawful* governor of the iſland under his *rightful* ſovereign.

This iſland lies between the lat. of 17 deg. and a half to 18 deg. 40 min. which makes it above 60 miles in breadth from ſouth to north: and is above 115 miles long from eaſt to weſt. It is of an oval figure, and is reckon'd about 450 *Engliſh* miles in circuit. It lies about 40 miles ſouth of *Cuba*, and 60 miles weſt of *Hiſpaniola*. It is well water'd with rivers and ſprings, and is full of hills and mountains, eſpecially towards the weſt; and it is likewiſe well ſtor'd with wood, and every where abounds with good paſtures. The climate is temperate, conſidering the ſituation, the air being cool'd by breezes, frequent rains, and nightly dews. The eaſtern breezes begin about nine in the morning, and encreaſe as the ſun grows higher, ſo that people may work all the day in the fields. A thing impracticable in *Europe*, much farther remov'd from the ſun. But in the broadeſt part of the iſland, at leaſt at a good diſtance from the two ends, it is the wholeſomeſt, becauſe there, the forreſts are cut down, which they are not at the eaſt and weſt ends, and therefore theſe are more ſubject to ſtorms of wind and rain than the ſouth and north parts are. The ſun being ſo near them all the year, they have little difference of day and night at one time more than another, and all the diſtinction they perceive between winter and ſummer is occaſion'd by violent rains and thunder.

The ſituation of Jamaica.

Eng. Atlas *p.* 244.

The iſland is divided by the *Engliſh* into pariſhes, of which they reckon 16, which, beginning from the weſt, are, 1. S. *Elizabeth*'s pariſh, which takes in the whole weſtern part of the iſland, and abounds with plantations. In this diſtrict there were ſeveral *Spaniſh* towns, now demoliſh'd; and upon the weſt end of the iſland, northward of *Negril* point, there is a commodious bay, with a ſafe harbour, where a fleet may ly to watch the *Havana* flota in time of war. 2. S. *James*'s pariſh, lies on the north weſt part of the iſland, but is not well inhabited. 3. S. *Anne*'s lies eaſt from S. *James*'s on the north ſide of the iſland; it is mountanous, and thinly inhabited. Eaſt of that is, 4. S. *Mary*'s about the broadeſt part of the iſland. On the north coaſt, within this diſtrict, the *Spaniards* from *Cuba* endeavour'd to fortify themſelves againſt *Venables*, upon the *Rio Nuevo*, or *New River*. 5. S. *George*'s pariſh is ſtill farther eaſt on the north ſide of the iſland, but being full of mountains is of little value. 6. S. *Thomas*'s pariſh is on the eaſtmoſt part of the iſland, likewiſe full of mountains: But it has, in it, one of the beſt harbours of the iſland, formerly call'd S. *Antonio*, but now S. *George*'s port. It lies on the north ſide of the iſland. 7. S. *David*'s lies on the ſouth ſide of *Jamaica*, and is ſeparated from S. *Thomas*'s, by the blue mountains. It is well planted, and has a little town at the mouth of the river *Morant*, now call'd S. *Thomas*'s river; as alſo a fort, and and ſalt-work. 8. S. *Andrew*'s lies weſt of the former, and north of *Port Royal*. 9. *Port Royal* pariſh, the chief of the whole iſland, as being the capital city. It lies in a bay that runs a good way north into the country. The city of *Port Royal* before the year 1692 was one of the moſt beautiful in all *America*, well fortify'd, and magnificently built; but having been in a great meaſure deſtroy'd by an earthquake, that year, and afterwards in 1703 by fire, the great trade of the place as alſo the courts of ſtate and juſtice were remov'd to *King*'s *Town*, on the other ſide the bay. 10. S. *Catharine*'s lies weſt from *Port Royal*, along the ſouth coaſt. In this diſtrict is a little town of about 200 houſes with a fort call'd *Paſſage* fort, which commands the river, and is five miles north weſt of *Port Royal*. 11. *Spaniſh Town* (the capital of *Jamaica*, during the *Spaniſh* government, and call'd S. *Jago de la Vega*) is ſtill the ſeat of the governor, ſince *Port Royal* was deſtroy'd, and lies pleaſantly

The diviſion of Jamaica *into pariſhes.*

on

on a large river. It conſiſts of about 5 or 600 houſes. The people here live in pomp and magnificence, and retire in the evenings to a pleaſant *ſavannah*, or meadows which ſerve for a ring to the inhabitants. 12. S. *John*'s pariſh lies north of *Spaniſh Town*, and is one of the pleaſanteſt, moſt fruitful and beſt inhabited diſtrict in the whole iſland. 13. S. *Dorothy*'s pariſh is weſt from S. *Catharine*'s, and has a large bay with ſeveral big iſlands in it, which running up into the country, make what is call'd the *Old Harbour*, capable of containing 500 ſhips, and lies convenient for *Spaniſh Town* and *Port Royal*, being not above ten miles from the firſt, and much the ſame diſtance from the weſt ſide of *Port Royal* bay. 14. *Vere* pariſh lies weſt from S. *Dorothy*, and has in it a village call'd *Carlile* upon the coaſt. 15. *Clarendon* pariſh, is weſt of that. But I do not know the name of the 16th pariſh, it being neither mark'd in the maps nor nam'd in the explanation: only we may believe it lies on the ſouth ſide between *Clarendon* and S. *Elizabeth*. Each of thoſe pariſhes ſend two repreſentatives to the aſſembly, and *Port Royal*, *Spaniſh Town* and S. *Catherine*'s ſend each of them three. This ſhall ſuffice, at preſent, for the iſland of *Jamica*.

VI. Caribee *iſlands.*

The next iſlands belonging to the *Engliſh*, are ſome of the *Caribee* iſlands, which are a ſtring or ridge of iſlands, in the figure of a bow, reaching from the coaſt of *Paria* as far as *Porto Ricco*. They are likewiſe call'd the *Leſſer Antilles*, and run from 10 deg. n. lat. to near 19. They are reckon'd 28 in nnmber, whereof ſeven are in poſſeſſion of the *Engliſh*, without any partnerſhip; and two others in partnerſhip with the *French* or *Dutch*.

1. Anguilla.

The firſt of the *Engliſh Caribee* iſles is *Anguilla* in 18 deg. 20 min. lat. about 10 leagues long. It is level and woody, and produces good tobacco, and abounds with tame cattle; but is a place of no great conſequence.

2. St. Chriſtophers.

The next in courſe, ſubject to *England* as having been given up by the *French* at the treaty of *Utrecht*, is S. *Chriſtophers*; ſo call'd from the great *Columbus*, the firſt diſcoverer. It lies in 17 deg. 25 min. and is about 25 miles in length, and ſeven broad, in the broadeſt part of it. This iſland was firſt planted by the *Engliſh* and *French* together. For, in the year 1625, capt. *Warner*, and monſieur *Deſnambuc* landing upon this iſland, and finding the Caribeans up in arms, they join'd their forces together, beat the natives, and kept poſſeſſion of it for ſome time: and thoſe two commanders going home to their ſeveral countries, by conſent, repreſented the place in ſuch a light to their maſters, that the king's of *England* and *France* ſent ſupplies of men to keep the poſſeſſion they had got; and to prevent all quarrels between the nations in that new conqueſt, they divided the iſland between them, making boundaries to their different plantations: only they agreed that harbours, fiſhing, hunting, timber for building, and all mines which ſhould be diſcover'd, were to remain in common; and each nation was to aſſiſt the other.

Poſſeſs'd by Engliſh and French.

Ogilvy's America *ch.* 28.

The *Engliſh* plantation encreas'd a pace, by the conſtant ſupplies ſent them by the company at *London*, and when both were in a flouriſhing way, the *French* were attack'd by a *Spaniſh* fleet, under the command of *Toledo*; and forced to quit their new plantation after a ſtout reſiſtance. *Deſnambuc*, finding that he was not able to maſter the *Spaniards*, ſet ſail from S. *Chriſtophers*; but the *Engliſh*, thinking that the peace between *England* and *Spain* was ſufficient ſecurity for them did not ſtir, nor make any reſiſtance; but ſent to *Toledo* to put him in mind of the peace between their maſters, who ſent them word that, by the pope's bull, that iſland belong'd to *Spain*, and therefore he order'd them to remove, allowing them ſix *Engliſh* ſhips, out of nine which he had taken at *Nevis*, to carry them home. However, the *Spaniards* thinking they had done enough, in making themſelves maſters of the *French* fort did not enter farther into the iſland, but *Toledo* having ſent about 2000 *Engliſh* aboard the ſix ſhips, and put 600 aboard his own fleet, he left the reſt upon the iſland, and ſail for the *Havana*.

They are attack'd by the Spaniards.

This fleet was no ſooner out of ſight, but the *Engliſh* who were left, ſet about reparing their ruin'd works, tilling the ground; and *Deſnambuc*, who had cruis'd among the other *Caribee* iſles, to find a convenient place to ſettle in, being inform'd, by a ſhip, that the *Spaniards* were gone towards *Cuba*, return'd back to S. *Chriſtophers*, and having been recruited with cloaths and proviſions by ſome *Dutch* veſſels which ſtop'd there; both the *Engliſh* and *French* in a ſhort time brought their colonies to bear, and made a good hand of their tobacco, ſugar, ginger and indigo.

But continue their ſettlement.

In that manner, the two nations liv'd in the iſland, till the *Dutch* war; and then the *French*, taking the advantage of that juncture, endeavour'd to deſtroy the *Engliſh* plantation, and to make themſelves maſters of the whole iſland: but Sir *Charles Wheeler* being ſent thither by king *Charles* II. about the year 1670, matters were adjuſted again. After the revolution, during the two late wars with *France*, the *Engliſh* there ſuffer'd great hardſhips from the *French*, who had got poſſeſſion

poſſeſſion of the greateſt part of the iſland; but it was entirely given up to us by the treaty of *Utrecht*.

3 Nevis. South eaſt of S. *Chriſtophers* lies the iſland of *Nevis* or *Mavis*, which was planted by the *Engliſh* from S. *Chriſtophers*, about, or ſoon after the year 1628. It is about ſix leagues only in circuit, and maintains 4000 men in the ſugar trade. It ſuffer'd much in 1667 by an earthquake, and in 1689 by a great mortality, and afterwards by a hurricane in 1707, beſides a great many hardſhips from the *French* during the late wars. There is a mountain, in the middle of this iſland, to which the plantations on all ſides riſe gradually from the ſea near the top of the mountain, which is cover'd with tall trees; and the fields are water-ed with ſprings flowing from the moun-tain.

Eng. Atlas p. 245.

This iſland is very ſubject to violent rains and ſtorms of wind at a certain ſea-ſon of the year: but, for all that, it is very fruitful, and ſo much ſugar was made in it as was ſufficient to lade 50 or 60 ſhips every year. There are hot baths in *Nevis* of the ſame nature with thoſe in *Somerſetſhire* and *Bourbon*; and the firſt planters being oblig'd to cut down the woods to make way for their other plant-ing, and being tormented with a ſcalding dew from the trees, were cur'd by bath-ing in ſome of their waters. Of their fiſh and fowl and other animals we ſhall have occaſion to treat hereafter.

4 Barbu-da. We have little to ſay of *Barbuda*, but that it lies towards the eaſt of *Mevis*, and is about 30 miles long and 15 broad, and probably was planted by the *Engliſh* from ſome other colony near it; but which of the iſlands it was planted from is not very material. It produces indigo, tobac-co, citrons, pomegranates, raiſins, co-coa-nuts, *&c.* and is the property of Mr. *Codrington*.

5 Antego. The next *Caribee* iſland in poſſeſſion of the *Engliſh* is *Antego*, which lies 12 miles ſouth weſt of *Barbuda*. It is about 17 miles long, and 12 broad. It was grant-ed by patent to lord *Francis Willoughby* in 1663, but ſince that is fallen to the crown. It is difficult of acceſs by reaſon of the rocks that ly near it, and was long neg-lected becauſe it wanted ſprings, and now they are obliged to ſupply that de-fect by preſerving the rain water in ciſt-erns. It is divided into five pariſhes, of which S. *John*'s, *Falmouth*, and *Bridge Town* are the chief. Its product is much the ſame with that of the other iſlands.

6 Monſerrat. Almoſt in the ſame latitude with *Antego* is *Monſerrat*, which lies to the weſt-ward of it, a ſmall iſland of nine miles long and near as broad. It was firſt diſ-cover'd by *Columbus*, and had its name from the reſemblance the *Spaniards* fanci-ed it had to *Monſerrat* near *Barcelona*.

The firſt planting of it by *Europeans*, was in 1632, when Sir *Thomas Warner*, the firſt governor of it, carry'd a colony from *England*, of which the greater num-ber were *Iriſh*. After that it was under the governor of S. *Chriſtophers*. The growth of the iſland is much the ſame with the adjacent iſlands, only that this abounds more with cedars than the others. The ſugar made here is better than that of *Antego*, but inferiour to that at *Barbadoes*.

There was a fine church built there, lin'd with cedar, about the end of king *Charles* I's reign, and there were of *Scotch*, *Engliſh* and *Iriſh* above 4000, but they encreas'd much afterwards, and another church was built. In the reigns of king *Charles* II. and king *James* II. ſeveral *Iriſh* adventurers traded to this iſland, and made themſelves fortunes. In the year 1667 it had an *Iriſh* governor, and be-ing attack'd by the *French*, commanded by monſieur *De la Barre*, who made himſelf maſter of it by the treachery of the natives. Having made above 300 *Engliſh* priſoners, he left the *Iriſh* there with their families, having oblig'd them to ſwear obedience to the conqueror: but it was afterwards reſtor'd to the *Engliſh*; and ſuffer'd much by the late wars with *France*, for which the *French* king pro-mis'd to make reparation by the treaty of *Utrecht*.

7 Barba-does. But the moſt conſiderable of all the *Engliſh* colonies in the *Caribee* iſlands, is *Barbadoes*. It lies in between 13 and 14 deg. n. lat. and is about 20 miles in length from north to ſouth, and, at the ſouth end of it, 14 miles broad; but much narrower towards the north. There being a very plain and full deſcription of this iſland, and the planting of it, in the *Engliſh Atlas*, that book being too vo-luminous to be in many hands, I ſhall, without any alteration, tranſcribe what is there ſaid of it.

Eng. Atlas p. 246.

"The firſt *Engliſh* planters were Sir "*William Curten* and Mr. *John Powel*, "who left his ſon here as governor. "*William* earl of *Pembroke* was the chief "adventurer. Firſt they ſow'd potatoes, "plantanes, *Indian* corn, and tobacco, "*&c.* but the latter would not turn to "account: and ſupplies from *England* "not coming duly, they were often driven "to extremity. The earl of *Carlile* ob-"tain'd a grant of this iſland from king "*Charles* I. and it being pleaſant ſoon "grew populous. The firſt ſettlement "was made about the bay of *Bridge* "*Town*" [which lies on the ſouth weſt part of the iſland, between *Bagnol*'s point, and *Nedham*'s, call'd *Carlile* bay,

and the town is call'd S. *Michael* or *Bridge town.*] "The colony proſper'd, "and great quantities of indigo, cotton, "wool, ginger, and tobacco were ſent "to *London*; from whence there came "more ſhips with neceſſaries: and in 1646 "it became a flouriſhing colony. The "firſt planters of note were gentle- "men from the weſt of *England*; ſome "of whom retir'd thither, during the "*civil war.** The royaliſts and parlia- "mentarians liv'd peaceably here for "many years, till the *death* † of king "*Charles* I. when the former proclaim- "ing king *Charles* II. who made lord "*Willoughby* of *Parham* governor, the "[rump] parliament ſent Sir *George Ayſ-* "*cough*, who reduc'd them, and was "join'd by the moſt leading men of the "iſland againſt lord *Willoughby*. But a "treaty was ſoon concluded on honourable "articles for that lord, who had an in- "demnity for his perſon and eſtate, and "return'd. The government was ſettled "about this time, in a governor and 10 "councellors. The iſland was divided in- "to 4 circuits and 11 pariſhes, who were "each to ſend repreſentatives to the aſ- "ſembly. Miniſters were ſettled, church- "es built, and the inhabitants drove a "great trade, and grew rich.

"They had ſugar plants from *Brazil*, "which mutiply'd ſo faſt, that they ſet "up a mill, and learn'd to work their ſugar "by direction from ſome *Dutch* or *Portu-* "*gueſe*, who had been there. Of 60,000 "or 70,000 negroes, ſuppos'd to be in "this iſland, 40,000 are natives, and very "well affected; tho' formerly they were "ſo exaſperated by the ſeverity of the "*Engliſh*, that they laid plots, eſpecially "in 1649 and 1687, when they appoint- "ed a day to cut their maſters throats; "and in 1707, when they deſign'd to burn "the *Bridge Town*, and ſeize the forts. "But they were all three timely diſcover- "ed, the conſpirators were ſecur'd, and the "chief of them put to death. King "*Charles* II. purchas'd this iſland of the "earl of *Carliſle*'s heir for 1000 *l.* a year, "and reſtor'd lord *Willoughby* to the go- "vernment. About 1685 it became a "cuſtom here to make preſents to the "governors, which, added to their ſalary "and perquiſits, made the place worth "4 or 5000 *l.* a year. But in 1703 a ſtop "was put to this, by orders from *Eng-* "*land*, for the eaſe of the country: and "to compenſate the governor, his ſalary "was encreas'd from 1200 *l.* to 2000 *l.* "a year, and there are ſome lawful per- "quiſites beſides, which make his go- "vernment worth near as much again; "and 500 *l.* a year is paid by the publick "for his houſe rent. His title is *captain* "*general, and chief governor of the* "*iſlands of* Barbadoes, *St.* Lucia, *St.* "Vincents, Dominica, *and the reſt of* "*his majeſty's iſlands, colonies and plan-* "*tations in* America, *known by the name* "*of* the Caribee iſlands, *lying and being* "*to windward of* Guardaloup. The "neareſt part of the continent to this "iſland is *Surinam*, which is but a day "and half's ſailing from it." [Here the authors of the atlas ſeem to be miſtaken; for, by their own maps, *Surinam* lies in 6 deg. and *Barbadoes* in 13; ſo that the diſtance is 420 miles, in a ſtreight courſe, whereas that part of the *Terra Firma*, which lies north weſt of *Oroonoko river*, lying in 10 deg. is not above 180 miles from it.]

"The ground [in *Barbadoes*] is, in "general, a gradual riſing, with ſome "high hills, which are always verdant. "There are ſeveral vaſt caves here, to "which the negroes often fly from their "maſters, and hide themſelves for weeks "together. The churches here in gene- "ral are handſome ſtone buildings, and the "pews and pulpits of cedar. The pri- "vate buildings are not very lofty, al- "tho' the planters are rich: for, after the "great ſtorm, which threw down ſo many "in 1676, many for fear of another, "lower'd their houſes. Yet there are "ſome of three or four ſtories high, with "lofty rooms: but the walls are too damp "for hangings. The planters houſes are "more for conveniency than ſplendor, co- "ver'd with pan-tiles, and their out-houſ- "es and negroe's hutts with ſhingles.

"'Tis computed, that every acre, "planted with ſugar, yields one year "with another, 10 *s.* a year profit to the "national ſtock of *England*; beſides "what the planter gets, and the thouſands "that are maintain'd out of it. The "trees, plants, and fields are always "green, and ſome or other of its produce "always in bloſſom and fruit. The in- "habitants are conſtantly planting or "ſowing, but eſpecially in *May* and "*Nov.* which are the ſeaſons for *Indian* "corn, potatoes, yams, *&c.* Sugar "canes formerly thriv'd here in all ſeaſons, "but the ground is ſo much worn out, "that now the only time of planting is "from *Auguſt* to the end of *Jan.* Here "is variety of trees, plants, fruits and "herbs, which we have not room to men- "tion, but the orange, lemons and citron "trees are moſt noted; and as plenty here "as lime and elm trees with us. Here's "ginger, two ſorts of red pepper, and "plenty of all ſorts of excellent "pulſe: but apples, pears, cherries, "gooſeberries, currents, and others of "our ſhurb fruits do not thrive here. "The planters never ſow any *Engliſh* "wheat, and the poor plant moſt of their "ground

* The rebellion.

† Murder.

" ground with *Indian* or *Guinea* corn;
" which they ſell, to the richer, from
" half a crown to 10 *s.* a buſhel: The
" dearneſs of which forced them to ſend
" for it to the northern colonies. Thoſe
" parts of the iſland call'd the *Champion*
" and the *Thickets* are intirely planted
" with corn; but many 1000 acres ly un-
" cultivated for want of hands. This
" iſland is ſaid to produce above 200
" ſhip loads of ſugar, indigo, cotton and
" ginger in one year.

" The heats here would be intolerable
" for eight months, were it not for freſh
" breezes from the eaſt or north eaſt, which
" riſe and fall with the ſun: yet it is ſo
" moiſt here, that iron will ſoon ruſt
" without conſtant uſe. The ſun riſes
" and ſets at ſix o'clock, all the year
" round, except in *October* when there
" is a little variation," [why this variati-
on ſhould happen in *October*, I am not
aſtronomer enough to find out.] " And
" it is dark three quarters of an hour af-
" ter ſun ſet.

" Their land and ſea animals are com-
" mon to thoſe parts, ſo that we ſhall not
" inſiſt on them, but proceed to give a
" brief account of its inhabitants, go-
" vernment, trade and revenues.

" This was the ſooneſt peopl'd of all
" our colonies, becauſe of the wealth ac-
" quir,d by the firſt planters: and more
" inhabitants of this iſland have been
" knighted, by our kings, than of all our
" other *American* plantations. In 20
" years after the firſt ſettlement, the mi-
" litia here was more numerous than that
" of *Virginia* is now, tho' the place is
" not a fifth part ſo big. There were
" then muſter'd 11,000 horſe and foot, as
" brave men as any in the world,
" and the number ſo encreas'd, that in
" 1676, when the iſland was in its beſt
" eſtate, there were 70,000 *Europeans* by
" birth and deſcent, and 80,000 negroes:
" ſo that the iſland was then reckon'd far
" more populous than *England* in propor-
" tion. But in 1691, the iſland was ſo
" depopulated by a fatal ſickneſs, that it
" had not above 7000 fighting men, and
" 25,000 *Engliſh*, nor above 70,000 ne-
" groes. But in 1708, the colony grew
" healthier, and daily encreas'd. Every
" freeholder, and white ſervant able to
" bear arms, is liſted in the militia, which
" conſiſts of 3,500 foot, and 1200 horſe.
[I ſuppoſe this computation is of ſuch as
do duty ordinarily.] " Beſides which the
" governor can ſoon arm 10,000 ſtout ne-
" groes.

" Thoſe born here of *Engliſh* parents
" are call'd *Creoleans*. The maſters,
" merchants, and planters live like petty
" ſovereigns, have variety of dainties,
" keep their coaches, pleaſure boats, &c.
" and have more attendants than any of
" our nobility in *England*; ſome of them
" having no leſs than 7 or 800 negroes
" a piece, who, with their poſterity, are
" perpetual ſlaves. Their drink is chief-
" ly water and *Madera* wine, lemonade,
" and punch. They have all other wines,
" malt liquor, and cider from *England*.
" The white men ſervants are ſold here for
" about 20 *l.* a piece, but for much more
" if they are mechanicks; and handſome
" women for 10 *l.* They are not only
" better treated than the blacks during
" their ſervice, but, when their time is
" out, are their own maſters; and, if
" *Britiſh* ſervants, have 5 *l.* if others,
" but 40 *s.* female ſervants they have
" none, beſides the natives of the country,
" and ſuch as are hir'd for houſehold ſer-
" vice. There's great care taken of the
" negroes, tho' they are perpetual ſlaves,
" becauſe, if one dies, the owner loſes 40
" or 50 *l.* whereas by the death of a
" white man, he only loſes two or three
" years wages to another. A ſlave, that
" is a good mechanick, is worth 150 or
" 200 *l.* and 400 *l.* has been bid for a
" boiler of ſugar. The ſlaves are pur-
" chas'd, by lots, out of the *Guinea* ſhips,
" are all view'd ſtark naked, and are al-
" low'd two or three wives, that they
" may encreaſe the planter's ſtock. The
" women are very conſtant to him that
" paſſes for their husband, and both ſexes,
" tho' groſs idolaters, reckon adultery the
" worſt of crimes.

" Their chief fare is boil'd or roaſted
" plantanes, and twice or thrice a week,
" they are allow'd ſalt fiſh, mackarel, or
" ſalted pork. Every family of negroes
" has a cabin built with ſticks, &c. round
" the planter's houſe, with a garden,
" where they plant potatoes, yams, caſ-
" ſovie roots, &c. and they have a ſort of
" food call'd loblolly, made of maiz.
" Both the white and negroe ſervants
" make caſſovy and potatoe bread, but
" the maſters eat white bread of *Engliſh*
" flower. The ſervants drink a water
" brew'd of potatoes and ſugar, or mo-
" loſſes, water and ginger; and another
" of caſſovy roots which the old women
" chew and ſpit into water. The negroes
" when at work, ſupport themſelves
" with rum, and a pipe of tobacco.
" They are rung up at ſix, every morning,
" and ſent into the field, return from work
" at elven, and, after dinner, are rung
" at one, and work till ſix. Both ſexes
" wear *Monmouth* caps. On ſundays
" they generally divert themſelves with
" dancing and barbarous muſick; yet ſome
" work, that day, for themſelves, by
" making ropes of the rinds of trees, which
" they exchange with other ſervants for
" neceſſaries; and the maſter allows them

" ground

" ground, in which they ſow roots and " plants, and breed goats, hogs, and " fowls for their own eating, or for ſale: " ſo that ſome of the induſtrious ones " come to be worth money, which they " are ſo cunning as to hide from their " maſters. They are ſuch lovers of car- " rion, that the planters are forced to hide " their dead cattle from them, leſt their " eating it ſhould breed an infection.

" Tho' the negroes out-number the " whites here, yet the *Engliſh* are maſters " of the forts: and the ſlaves hate one " another ſo mortally, that ſome had ra- " ther die by the hands of the *Engliſh*, " than join with their countrymen in a " mutiny. Beſides, none of them muſt " touch arms, without the maſter's com- " mand, except the *Creoleans*, who all " ſpeak *Engliſh*, and can exerciſe very " well. The *Engliſh* merchants ſend per- " petuana's, guns, powder, flint, tallow, " and ſpirits, in exchange for the negroes. " Some planters have 20,000 *l.* worth of " ſlaves: and many are undone, in time " of mortality, for want of money to " renew their ſtock, which muſt be fill'd " up every year, becauſe a fourth part die " in ſeaſoning. They recruit every 4 or " 500 acres, once a year, with 20 or 30 " negroes. Every infant negro is com- " monly valu'd at 6 *l.* Every plantation " has a chief over-ſeer, with 100 or 150 *l.* " a year for maintenance. The coun- " try being not fit for hunting and hawk- " ing, they are oblig'd to ſuch ſedenta- " ry diverſions at home, as cards, dice, " tables, *&c.* Thoſe that drink abun- " dance of *Madera* wine here, find " ſweating their beſt relief. That wine, " contrary to its nature elſewhere, will " not keep in a cool cellar here.

" The revenues are rais'd by impoſts " upon goods ſent out, and brought in, " and amount to about 39,600 *l.* a year, " of which the crown has 10,000 *l.* and " the reſt is appropriated to the defence " of the iſland, as maintaining the forts, " ſtores, *&c.*

" All church affairs are under the direc- " tion of a ſurrogate appointed by the " biſhop of *London*, who is the ordina- " ry of all the *Engliſh* colonies in *Ameri- " ca.* There are 11 pariſhes here, whoſe " miniſters have 150 or 200 *l.* a year, and " he of *Bridge Town* 6 or 700 *l.* There's " a chappel of eaſe in S. *Peter's* pariſh.

" *Barbadoes* trades with *England* for " moſt of its ſubſiſtence and cloathing: " with *New England* and *Carolina* for " proviſions: with *New York* and *Vir- " ginia*, for bread, pork, floner, *Indian* " corn, and tobacco: with *Guinea* for " negroes: with *Madera* for wine: with " *Terceras* and *Fial* for wine and brandy; " with the iſles of *May* and *Curaſaw* for " ſalt; and with *Ireland* for beef and " pork. Before the laſt war, it loaded " 400 ſail of ſhips a year for *England*, " and 250 during the war, which is more " than all the other ſugar iſlands together. " They export great quantities of ginger, " cotton ſhrubs, lignum vitæ, ſuccats, cit- " tron water, moloſſes, rum, and lime " juice for *England*. The goods which " they receive from *Great Britain* or " *Ireland* are, *Ozenbrigs* for the ſervants " or ſlaves, linnen of all ſorts for the " maſters and families; broad cloth and " kerſeys for the planters, and their over- " ſeers: ſilks and ſtuffs for the ladies, and " houſehold ſervants; red caps for the " ſlaves; ſtockings and ſhoes for both ma- " ſters and ſervants: gloves and hats, " millinary ware and periwigs: laces of " all ſorts; beef, pork and other proviſi- " ons: and ſaws and other inſtruments for " the ſugar works and agriculture; all " ſorts of braſs ware, lead ware, powder " and ſhot. All ſorts of *Indian* goods, " toys, coals, pan-tiles, hearth-ſtones, " hoops, and every thing proper for an " *Engliſh* market, will ſell here. The " voyage hither is generally five or ſix " weeks from *England*, and ſix or ſeven " homewards, but the packets commonly " make it in a month.

" Places of note are,

" 1. *Bridge Town*, the capital, for- " merly call'd S. *Michael's*, from its " church. It lies on the ſouth weſt cor- " ner of the iſland on *Carlile* bay. It has " 1200 handſome ſtone houſes. The ſtreets " are broad; and the houſes in *Cheap- " ſide* here, almoſt as high rented as " thoſe in *Cheapſide* in *London*; and the " ſtore-houſes and ſhops as well furniſh'd. " The wharfs and keys are very neat " and convenient. The bay is capable of " 500 ſhips, and the harbour ſafe againſt " all winds but the ſouth and weſt. The " winds here generally blow eaſt, which " is therefore call'd the windward, and " the weſt the leeward. The harbour is " defended by two forts oppoſite to one " another, and a plateform between them " which commands the road, and defends " the town. The coaſt of *Carlile* bay is " fortify'd by three batteries, and a line " which runs ſouth eaſt to *Nedham's* " point, about a mile and a half, and " there's a fort mounted with 20 guns. " From thence there are lines which run " along the coaſt as far as *Chriſt's Church*, " which is four miles. And on the weſt " ſide of *Bridge Town*, and all along the " weſt ſide of the iſland, as far as *Macock's* " bay, which is about 13 miles, there " are lines and forts, which defend the " iſland, where 'tis acceſſible; and the " other parts are ſo fortify'd by rocks, " that it is the ſtrongeſt iſland belonging

" to

" to *England*, and is a great defence to " our other iſlands and plantations in the " neighbourhood. Sir *Bevile Greenville* " when governor, began a cittadel call'd " S. *Ann*'s fort, about a mile and a half " ſouth eaſt from the town, which if " finiſh'd would be the ſtrongeſt in the " iſland.

" To return to the town. Here's a " large church with a fine organ, and a " good ring of bells, and a curious clock; " a fine council houſe, large taverns, and " a poſt houſe. On the eaſt of the town " is a magazine, built with ſtone, where " the powder and ſtores for the iſland are " kept, under a ſtrict guard. And about " a mile north weſt from the town there " is a ſtately houſe built for the gover- " nor.

" 2. The *Hole* or *James*'s *Town*, in S. " *James*'s pariſh, about ſix miles north " from *Bridge Town*, has 100 houſes. It " is a pretty town, with ſeveral ſtreets : " and in S. *Thomas*'s pariſh, which lies " a little north from it, there's a good " port defended by a fort with 28 guns, " ſeveral breaſt works, and a battery of " eight guns at *Church* point. Here's a " handſome church, and the monthly " ſeſſions, for S. *James*'s precinct, is held " in this town. From hence a line and a " parapet are carry'd on to *Macock*'s bay, " about ſix miles along the weſt coaſt; in " which diſtance there are five forts, " which together are mounted with 48 " guns.

" 3. *Speight*'s *Town* lies on the weſt " coaſt, four miles north of *James*'s town, " and conſiſts of four ſtreets and 300 " houſes. It is much frequented by " *Briſtol* merchants, and upon that ac- " count call'd *Little Briſtol*. The plan- " ters in *Scotland* precinct us'd to ſhip " off their goods here for *England*, " which occaſion'd the building of ſtore " houſes, and made the town flouriſh: " but the trade has been ſince remov'd " to *Bridge town*. Here's a handſome " church, which has a fine chappel " of eaſe at *All Saints*, two miles and " a half up the country to the north " eaſt. The town is the place of the " quarterly ſeſſions for S. *Peter*'s pre- " cinct; and is defended by two forts " with 39 guns, (beſides that to the ſouth, " on *Heathcoat*'s bay;) one of which " ſtands in the middle of the town, and " is mounted with 11 guns, and the other " at the north end with 28.

" 4. *Chriſt*'s *Church* at *Oſtin*'s town " and bay, otherwiſe call'd *Charles Town*, " about five miles eaſt from *Bridge Town*. " The bay is flank'd by a good fort on " the ſea ſide, and another on the land " ſide, which have a communication by a " platform. They are a ſtrong defence to " the town, which has one long ſtreet, a " lane in the middle; and has a monthly " ſeſſions for the precinct, a good weekly " market, and ſtorehouſes."

Other English Caribee iſlands of little conſequence.

The other iſlands of the *Caribees* in the poſſeſſion of the *Engliſh*, either alone or in conjunction with *French* or *Dutch*, ſuch as *Dominica*, S. *Vincent* and *Tobago*, are not of great conſequence, nor well planted, and therefore we ſhall not inſiſt upon them.

Having thus treated of all the diſcoveries made by *Engliſh* men, and the dominions, belonging to the crown of *England*, in *America*, whether upon the continent, or in the iſlands, we ſhall now, according to promiſe, range them in the order they lye in, as they are in the map. To begin then from the north we have

1. *Baffin*'s bay, the fartheſt north of which, as yet diſcov'd, is Sir *Thomas Smith*'s bay in latitude 79. 2. *Davis*'s ſtreights, in the ſouth part of *Baffin*'s bay in lat. 67. 3. *Hudſon*'s bay, from lat. 66 to 52. 4. *Hudſon*'s ſtreights from 65 to 60 deg. 5. *Terra de Labrador* between 63 and 50. 6. *Newfoundland* from 52 to 45. 7. *Gaſp* iſland in 47 deg. 8. *Nova Scotia* from 50 to 44. 9. *New England* from 46 to 41. 10. *New York* from 44 to 41. 11. *Long Iſland* in 41. 12. *The Jerſeys* from 42 to 38. 13. *Penſilvania* from 44 to 40. 14. *Mary Land* from 40 to 83. 15. *Virginia* from 40 to 36 and a half. 16. *Corolina* from 36 and a half to 31. 17. The *Bermudas* iſlands in 32 deg. 18. The *Bahama* in lat. 26. 19. *Jamaica* from 19 to 17 and a half. And 20. The *Caribee* iſlands from 18 to 10 deg. n. lat. Theſe are properly ſpeaking all the *Engliſh* intereſt in *America*. Had they purſu'd the title which Sir *Francis Drake* had to *California*, or ſuffer'd the *Scotch*, in later days, to have ſettled at *Darien*, they might have had better footing in the ſouth ſea, than they are likely to have in our days.

CHAP. VII.

FRENCH *and* DUTCH *Diſcoveries and Plantations in* AMERICA.

The only remaining parts of *America*, known to *Europeans*, not as yet taken notice of in this work, are ſuch as were diſcover'd or planted by the *French* or *Dutch*; which we chuſe to put into one chapter, becauſe the places poſſeſt by the *Dutch* are but ſmall in compariſon with the plantations of the *Engliſh*, *Spaniards*, *Portugueſes* and *French*, and ſo not worth a diſtinct chapter. We ſhall begin with

SECT. I.

The FRENCH *Diſcoveries.*

THE firſt account of any *French* diſcoveries in *North America*, are thoſe ſaid to have been made by *Verazzano* a *Florentine*, in the ſervice of the queen regent, during the minority of *Francis* I. her ſon, in 1524, who having diſcover'd, as thoſe of the *French* nation pretend, from lat. 28 to 50, call'd all the country between the point of *Florida* and the river of *Canada*, by the name of *New France*, and therefore they claim all that part of the continent within thoſe degrees, from the north to the ſouth ſeas, as the dominion of *France*. But leaving them to make good their title to it, when they can; we ſhall now give an account how and when they took poſſeſſion of what they now have.

Monſieur Cartier's *expedition to* Canada.

In the year 1534 *Melleray* vice-admiral of *France*, by orders from the court, fitted out two ſhips of 60 tons a piece, under the command of *Jaques Cartier*, on board each of thoſe ſhips were 60 men, and all things neceſſary for ſuch an expedition. They ſet ſail in *April*, from S. *Malos*, that year, and made *Newfoundland* by the 10th of *May*; and coaſting along the eaſt ſide of the iſland came up with *Buona viſta* in 48 deg. and a half, where by reaſon of the ice, they return'd ſouthward about five leagues to S. *Katherine*'s harbour, with an intention to wait for fair weather. From thence they ſail'd northward to *Penguin* iſland, formerly mention'd, in our account of *Newfoundland*. Here they obſerv'd that the white bears ſwim over from *Newfoundland*, to this iſland, which our author ſays is 14 leagues off, to feed upon thoſe fowls; and that the *French* kill'd one of them in paſſing thither; this bear was as big as a cow, and white as a ſwan, and they found the fleſh of it as good as an heifer of two years old. Beyond this they mention ſeveral capes and iſlands, not mark'd in our maps; and indeed the progreſs of this voyage, is ſo confounded with names common to both ſides of *Newfoundland*, that it is not an eaſy matter to know whether they were on the eaſt of that iſland, or in the gulf of S. *Laurence* on the weſt coaſt of it.

Hackluyt America, *p.* 202.

But as there is little material in their touching at ſeveral unknown iſlands, and paſſing capes, to which they gave names, now loſt; we ſhall not trace them wandering about *Newfoundland*, but take them up again in S. *Laurence*'s bay, where we find them towards the end of *June*, at cape *Royal*, which is in the entry to that bay, lat. 41 and a half; from whence they ſail'd to the *Iſland of Birds*, and from thence to S. *John*'s iſland, to the northward of *New Acadia*. From thence they ſail'd towards the weſt, and ſo northwards along the *Acadie* coaſt, and gave names to all the capes they found; of all which none is mention'd in our maps, till we come to the *Cape of Good Hope*, upon the ſouth ſide of the bay *de Chaleur*, or *of heat*, falſely call'd *Chalenor* bay in our maps. Here they ſaw about forty canoes full of natives, with ſome of whom, ſoon after, they began to trade, and found them a tractable good natur'd people; eſpecially in *Chaleur* bay, where a few of the *French* truſted themſelves to go aſhore with 300 of the natives who came about their ſhips in their canoes, and gave them ſome trifles, and receiv'd others from them.

Having diſcover'd that this bay went into the continent but a certain diſtance from the ocean, which may perhaps be about 40 leagues, they ſail'd back again, trading with the *Indians*, and being furniſh'd

with good mackerel by them. Thoſe poor people had no other habitation than their boats, and only ſtaid there to fiſh. When they were out of *Chaleur* bay, they coaſted along till they found a ſtrong tide running weſtward, but they had ſcarce doubled the northmoſt cape of that part of the continent, when the tide turning, they found themſelves driven much more forceably towards the eaſt, ſo that neither wind nor oars were ſufficient to drive them towards the weſt. Having therefore gone aſhore in their boats, they ſaw the great river of *Canada*, and call'd that place S. *Peter*'s ſtreights, becauſe they enter'd them upon S. *Peter*'s day. Here they ſtaid ſome time, and having enter'd the river in their boats, as the tide drove in, and found it a pleaſant country, they came back to their ſhips, and return'd towards *Newfoundland*, and ſo home, bringing two *Indian* boys with them, by conſent of the captain of the fiſhers, whoſe children they were.

Cartier's 2d expedition.

The year following, *viz.* 1525, the ſame *Cartier* ſet out with three ſhips from S. *Malos*, making the iſland of *Newfoundland* in 49 days, having met with a ſtorm which ſeparated them. They had ſight of the iſland the 7th of *July*, and ſo ſail'd into S. *Laurence*'s bay, where they ſtop'd at the iſland call'd *Des Oyſeaux* or the bird iſland, not far from the *Ramea* iſland formerly mention'd, lat. 47 and a half, where *Cartier* waited till the other two ſhips came up, this being the place appointed for a rendevouz in caſe of being parted. Having ſolemniz'd their meeting with mutual joy, they kept on their courſe towards *Canada* river, which they had enter'd the year before; and now diſcover'd *Natiſcoſtic* iſland, call'd (in the Atlas) *Anticoſti*. To this river they gave the name of S. *Laurent*; and were told by their two *Indians*, who, in the year that they had been with them, had learn'd to ſpeak tolerable good *French*, that this river led to their country, which was call'd *Canada*, and that from that iſland, in the north ſide was the kingdom of *Saguenay*. *Cartier* gave *Natiscoſtic* iſland the name of *the Aſſumption*.

Canada or S. Laurence river.

Having by the advice of their young *Indians*, watch'd the tide, the wind being fair, they got thro' the ſtreights, and found the river a vaſt breadth, after they had left the iſland to the eaſtward of them. They ſail'd as far ſouth weſt, in this great river, as where the river *Saguenay* or *Tadaſcu* runs into *Canada* river, above 300 miles. in which courſe they met with a multitude of iſlands; and a ſort of fiſh call'd *Adhothuis*, which is found only in that river, about the bigneſs of a porpoiſe, but well proportion'd in the body, and the head like that of a grey hound, and as white as ſnow. Beyond the river *Saguenay* they ſail'd a conſiderable way up the *Canada* and gave names to ſeveral iſlands ſuch as *Des Lievres* or *of Hares* to one; that of *Orleans* to another; *De Coudriers* or *Haſles* to a third. Here the country of proper *Canada* begins. Upon the iſland of *Orleans* (which is very near the place where *Quebec* now ſtands) the *French* landed, taking their two *Indians* with them. As ſoon as they went aſhore, the natives fled, but the *Indians* calling after them, in their own language, that they were *Tagnoagny*, and *Domogaia*, they ſtop'd, and the two youths having made themſelves known to their countrymen, they danced for joy, and came without fear to the *French*, bringing them proviſions ſuch as they had, and were regal'd by them with ſmall trifles.

The lord of Canada *comes to viſit the* French *commodore.*

The next day the lord, or *Agouhanna* of *Canada*, came to their ſhips with 12 canoes, and ſending away 10 of them, approach'd with the other two, having 16 men in them; and having made a ſpeech of welcome, and heard, from the young men, the grandeur of *France*, and the civil uſage they had met with there, he deſir'd the commodore's hand to kiſs; and having been well entertain'd by *Cartier*, he went aſhore. This lord's name was *Donnacona*. As ſoon as he was gone, *Cartier* proceeded farther up the river, and, about 10 leagues higher, found a moſt convenient harbour for his ſhips near the town where *Donnocona*, kept his court: the town is call'd *Stadacona*. Hither they brought their ſhips, and call'd the place S. *Croix* or *Holy Croſs*.

The French *bring their ſhips to harbour at* S. Croix.

As ſoon as they brought their ſhips to this harbour, *Donnocona*, with about 25 canoes full of the natives, came to the ſhips ſhewing all the marks of joy. But *Cartier* obſerv'd a change in the behaviour of *Tagnoagny* and *Domogaia*, who, at their own deſire, had been allow'd to ſtay with their countrymen, whilſt the *French* were cruiſing for a convenient harbour. This gave ſome umbrage to the commodore. He ask'd them whether they would go with him to *Hochelaga*, a place they themſelves had often ſpoken of, whilſt they were aboard the ſhips. They anſwer'd they deſign'd it; but when they were deſir'd to come aboard, they excus'd themſelves, and went off with *Donnacona*. The next day they appear'd upon the ſhore, of which *Cartier* having notice, he landed, upon the point where they were, having taken a party of men with him. As ſoon as the uſual civilities had paſt between them, *Tagnoagny* told the captain, that *Donnocona* and his people were concern'd to ſee the *French* always in arms, when his people were not. *Cartier* reply'd, that it was his buſineſs to make

make them eaſy as to that point, ſince he knew it was the cuſtom in *France*, and that he could not diſarm his men without affronting them. But this ſpeech of *Tagnoagny* was a contrivance of his own; for *Donnacona* had taken no umbrage at their arms, but confirm'd his former profeſſions of friendſhip, and made a ſtrict league with the commodore.

Tagnoagny, *one of the interpreters proves falſe to the* French.

Having brought their ſhips aſhore, they kept the pinnace in the road, the captain intending to ſail, in it, to *Hachelaga*. One day that *Donnacona* and the two interpreters were aboard, and made much of; *Tagnoagny* told the captain, that the lord was griev'd at his intended expedition, and had forbidden either of them to go with him; and therefore he deſir'd to be excus'd for not keeping his word to him, ſince he could not diſobey his lord. *Cartier* ſaid he was ſorry he ſhould be worſe than his promiſe; but if he would not go with him, that ſhould not hinder him from proſecuting the voyage. Soon after, *Donnacona* brought a preſent of a young girl of 10 years old, and a boy younger, to the captain, which he accepted, and gave him thanks; but *Tagnoagny* told him, that the deſign of his lord's making him that preſent of his own brother and neice, was to divert him from the *Hochelaga* expedition. But the captain anſwer'd, that if it was ſo, he might take his preſent back again, becauſe he had his king's orders to diſcover as far in that country as he could, and he was reſolv'd to obey that command at any risk. *Domogaia* interpoſing, aſſur'd *Cartier*, that the other impos'd upon him, for that *Donnacona* was ſo far from being averſe to the *Hochelaga* voyage, that he deſign'd to accompany him in it. This bred a difference between the two interpreters, but *Cartier* was, from that time, upon his guard with *Tagnoagny*.

A trick to divert Cartier *from going to* Hochelaga.

This man contriv'd a trick to perſuade *Donnacona* to oppoſe the voyage to *Hochelaga*. He dreſt up three of the natives like devils, with black faces, and horns upon their heads, and putting them in a canoe, made them ſhew themſelves before the ſhips, and then ſuddenly going a ſhore, they enter'd a wood hard by, and were follow'd by *Donnacona*, *Tagnoagny* and *Domogaia*, with a great number of others; where having ſtaid a while, the two interpreters came running towards the ſhips, with all the ſigns of fear in their faces and behaviour. *Cartier* hearing them calling out JESU! *Maria!* ask'd what was the matter? they anſwer'd, that their GOD *Cudruaigny* had ſent the three meſſengers whom they had ſeen, to tell them, that the way to *Hochelaga* was all ice, and that if any of them attempted to go thither, they ſhould never return. The captain told them *Cudruaigny* was a noddy, and did not know what he ſaid: That their JESUS was the only GOD, who was above that impoſter, or his lying meſſengers, and if they would venture along with them, they ſhould ſee the contrary of what the pretended meſſengers had ſaid. But finding that they could not prevail with them to go; the captain man'd his pinnace, and two of his boats, and having taken all things neceſſary, and left a ſufficient guard for the ſhips, he ſet out for *Hachelaga* on the 19th of *Sept.*

As they ſail'd up the river from S. *Croix* they ſaw a fine country on both ſides of them, with houſes all along, the inhabitants of which came very familarly out to them, and preſented them with fiſh and ſuch other proviſions as they had, and receiv'd trinkets for them, to their great ſatisfaction. About 25 leagues above S. *Croix*, the river began to be narrow, and the current ſtrong. Here one of the lords of the country came aboard, and preſented the captain with two of his own children; he took the daughter, who was about eight years of age, but gave back the ſon as being too young, for he was not quite four. Going ſtill upwards, with ſome difficulty againſt the ſtream, they came to a lake call'd in our map, S. *Peter's* lake; but by our author, lake *Angoleſme*; which was about five or ſix leagues broad, and 12 in length; but having left the pinnace at anchor, and ſail'd round the lake in their boats, they found all the outlets from it ſhallow and the currents rapid; ſo that finding their pinnace could not ſafely paſs, the captain took out of it all that they found neceſſary for himſelf and four or five gentlemen, and 28 private men, and kept the great river, ſouth of the lake, for 45 leagues, and upon the 2d of *October* arriv'd near *Hochelaga*, having during the whole voyage, traded with the natives, who, as well as they could be underſtood by ſigns, had directed them in their paſſage.

S. Peter's *lake.*

Hochelaga was ſix miles from the river; ſo that leaving eight of his people to guard the boats, *Cartier* with the gentlemen of his following, dreſſing themſelves in their richeſt clothes, and taking 20 men along with them, march'd towards the town under the conduct of ſome of the natives, who had ſent a meſſenger to acquaint their lord of the arrival of the ſtrangers. The road as they march'd ſhew'd all along a fine country, full of trees, and fruitful ground, the high way beaten and well frequented. Within little more than a mile of the town, they were met by one of the nobles, accompany'd with a great number of other people, who ſtop'd them ſome time with a congratula-

tory

tory ſpeech, and preſents, which the captain repaid, and ſo went on to the town.

They go to Hochelaga.

This town was cloſe by a great mountain, which the *French* call'd *Mont Royal*, and on the other ſide had a large plain; it conſiſted of about 50 houſes, in length 50 paces, and 15 in breadth, the walls of them of wood, and cover'd, a top, with barks of trees artfully join'd together. They have different apartments in every houſe, and a large court in the middle, where they made a fire, which ſerves all that live in the houſe, who live moſt of the time together, when they are within doors in the day time, and then retire to ſleep in their different chambers. They have garrets for their corn, which they beat into powder with mallets of wood, in troughs of the ſame, and ſo make it into paſte, which they lay upon a hot ſtone, and cover it with another, and ſo bake it into cakes. This corn is maiz, very common in moſt parts of *America*, before the *Europeans* went thither. They had likewiſe peaſe and beans, and ſeveral ſorts of fruit, and great plenty of melons and cucumbers, &c. They have a ſort of tuns hollow'd out for keeping their fiſh, after they are dry'd in the ſun: This they preſerv'd for their winter proviſions. They never made uſe of ſalt.

When the *French* were arriv'd at the city, they were conducted into the middle of it, where there was a large area, where the women ſpread ſquare mats for them to ſit down upon; and in a ſhort time the *Agouhanna* or king was brought in upon mens ſhoulders, and ſet down upon a ſtag's skin, his habit was the ſame with that of the others, which was the skins of beaſts; only he had upon his head a ſort of wreath, by way of a crown, made of the skin of a hedge-hog. He was about 50, but afflicted with the palſy to a great degree. He ſeem'd pleas'd with the coming of the ſtrangers, and, as they believed by his geſtures, welcom'd the captain to his dominions. After he had made a ſpeech, of which the *French* underſtood nothing, he made ſigns to *Cartier* to touch his legs and hands, of which he had not the uſe, his diſtemper was come to ſuch a heighth. The captain ſtrok'd them all over, and rub'd and chaf'd them with his hands. By and by, they brought in many diſeas'd people, and laid them down before him to be touch'd; which the captain did, reciting, over them, the beginning of the goſpel of S. *John*, and praying that GOD would have compaſſion upon thoſe poor people, and heal their infirmities, and bring them to the knowledge of the truth. *But ſuch is the modeſty of the author from whom theſe memoirs were taken, that there is no account of any miracle wrought; altho, for what appears,* Cartier *was as fit to be an apoſtle, as ſome of the* Spaniſh *conquerors of* Mexico *and* Peru.

After they had been as well entertain'd at *Hochelaga*, as the manner of thoſe people would allow, they gave them ſuch triffles as they had brought with them, and took their leave of the king with great ſigns of friendſhip on both ſides. The women convey'd them out of the town, and ſeem'd very ſorry for their ſo ſudden departure; and pointing to the mountain, which the *French* call'd *Mont Royal*, they conducted them to the top of it, and both men and women ſhew'd all the marks of kindneſs and good nature that could be. When they were upon the top of the hill, they ſaw a fine country round them, and hills at a diſtance towards the north; and the river ſouth weſt of them as far as their ſight could reach. But I wonder they take no notice of the river to the north weſt, which in our maps, ſeems larger than S. *Laurence* river is at that place, and runs in at *Mont Royal*. For when the people of the country told them of a river weſtward, they ſeem'd not to have ſeen it, but took it for the river *Saguenay*, which is 130 leagues farther north eaſt than the mount. Nor do they ſay any thing of the three branches of the river of S. *Laurence*, at the place where they left their boats; if the *Mont Royal* in the Atlas be the *Mont Royal* mention'd by the *French*.

Having taken a view of the country all round from that hill, they went to their boats, and going down the river, with much more eaſe than they had come up, they arriv'd at the place where they had left their pinnace, and ſo ſetting ſail, in a few days more return'd to S. *Croix*, upon the 11th of *October*; where they found their men had not been idle, for they had made a ſort of a ſconce, round their ſhips to the land ſide, of timber nail'd to piles driven into the ground, and had planted ſome of their guns there for a defence in caſe of any attack from the natives.

They return to S. Croix.

As ſoon as they were arriv'd, they were viſited by *Donnacona* and the two interpreters: and altho' *Cartier* was angry that they had not gone with him in his late expedition, (as indeed it was a great loſs, for he could not underſtand the natives of *Hochelaga*) yet he had no mind to break with them without farther provocation, and therefore entertain'd them civilly. In a ſhort time, by familiar converſation with them, they brought them to have a bad opinion of their idol *Cudruaigny*, the captain having repreſented to them how he had deceiv'd them about the *Hochelaga* oracle, and ſeveral

other matters, as he had it from themſelves, they began to reliſh the belief of the true GOD; and ſoon after deſir'd baptiſm. But *Cartier* who judg'd right of the converting and baptiſing of infidels, refus'd to let that people partake of that ſacrament, till they ſhould be thoroughly inſtructed in the chriſtian religion, and that there were lawful miniſters of baptiſm to receive them into the church; but he promis'd to provide himſelf with prieſts for both thoſe purpoſes, which ſatisfy'd the *Indians* for that time. And in this I cannot but applaud the conduct of this *French* captain, who would not take upon him to exerciſe the office of a clergyman *without ordination*, nor make a falſe merit of making people pretended chriſtians, before they knew what the principles of chriſtianity were. A practice too common among the *Spaniards* in *America*, who either out of a miſtaken zeal, or too often for oſtentation, receiv'd multitudes to baptiſm, without any previous qualification; nay forc'd them to deſire it, that they might be hang'd inſtead of being burnt. What reward ſuch apoſtles might expect in this world I ſhall not enquire into, but I dare be bold to affirm it will not be any merit in the next.

Cartier refuſes to baptiſe the natives, for a good reaſon.

The *French* ſtaid the whole winter at S. *Croix*, but the natives being ſeiz'd with an odd ſort of a diſtemper, which made their legs ſwell, and their ſinews ſhrink, ſo that they could not ſtand, their gums ſwell'd, and rotted away, ſo that their teeth fell out, with other odd ſymptoms, which carry'd off numbers of them, the *French*, altho' they took all the care they could to keep them at a diſtance, yet in the month of *February*, they were infected with the ſame diſeaſe, of which 25 of them dy'd. But, by good providence, *Domogaia* having found a remedy for himſelf, diſcover'd it to *Cartier*, by which he cur'd all his people in a week's time. It was a decoction of the leaves and bark of a certain tree, which they call'd *Ameda* (and which our author ſays, was thought to be *Saxafras*) which the patient was to drink. This they try'd, and by the bleſſing of GOD it had the deſir'd effect.

An infectious diſtemper at S. Croix.

During the winter, many of the natives who eſcap'd the diſtemper, brought to the *French*, deer, ſtags, fiſh and other proviſions; but *Donnacona* went away with *Tagnoagny* and others of his people, under pretence of hunting; and ſtaying away two months, at laſt return'd with a number of ſtrangers. On the 21ſt of *April*, *Domogaia* came to the ſhips, and told them of *Donnacona*'s return, and of his having brought a new ſet of people with him, which put the captain upon his guard. *Donnacona* having been many days at home, without coming or ſending any meſſage to the captain, *Cartier* ſent one *Poulet*, who was in great favour with the *Indians*, to enquire about him, and withal, to bring him a true account of the ſtate of affairs about *Stadacona*, the place of the king's reſidence, about a league from their ſhips. Upon intelligence of his arrival, *Donnacona* went to bed, pretending to be ſick, ſo that *Poulet* did not ſee him, but he found the town ſo full of ſtrange faces, that there did not ſeem to be room to contain them all. Being diſappointed of ſeeing the king he went to *Tagnoagny*'s houſe. He receiv'd him civilly, but would not ſuffer him to go into any other houſe in the town, but entertain'd him with diſcourſe till he brought him half way to the ſhips; and then, at parting, deſir'd he would ſpeak to the captain, to ſeize a certain lord of the country whoſe name was *Agonna*, who had diſoblig'd him, and that he would carry him to *France*. *Poulet* promis'd to do it, and to ſend him the captain's anſwer next day.

Donnacona *brings a number of ſtrangers to* Stadacona.

At *Poulet*'s return, he gave an account of all that he had obſerv'd, and likewiſe of *Tagnoagney*'s requeſt. The captain order'd his people to keep ſtrict watch and not to ſtir out of their barricade without orders; and the next day, he ſent a ſervant to deſire *Tagnoagny* to come to him, that he might concert meaſures concerning the execution of what he deſir'd him to do; who ſaid he would be with him the day following together with *Donnacona*, and *Agonna*; but for two days after, no body appear'd from *Stadacona*, which gave great umbrage to *Cartier*. At laſt *Donnacona* appear'd on the ſide of a ſmall river which was between *Stadacona* and S. *Croix*, with a great multitude of people, but would not paſs to the *French* ſide. At laſt *Tagnoagny* paſt in a skiff, and went into their wooden fort. *Cartier* diſembling his ſuſpicion, told him, that he was forbidden, by the king of *France*, to carry any of the natives of *Canada* home with him, but that to do him a pleaſure, he would ſeize *Agonna*, and leave him upon ſome iſland near *Newfoundland*. *Tagnoagny* was extremely pleas'd with this anſwer, which at once, eas'd him of the fear of being himſelf carry'd back to *France*, and ſoothed him with thoughts of being reveng'd upon his enemy; he therefore return'd to the other ſide, and having no pretence of getting *Agonna* to go over, unleſs *Donnacona* went likewiſe, he prevail'd with him to go the next day, which was the 3d of *May*.

Cartier *counterplots* Tagnoagny.

In honour of the invention of the croſs, and upon the account of the name they had given to their fort, the captain caus'd a large

a large croſs to be made of 35 foot high, which he erected that morning before their fort, with a ſhield upon it, with the arms of *France*, and over the arms, theſe words in roman letters, *Franciſcus D. G. Francorum rex regnat.* About noon, the people flock'd out of *Stadacona* to ſee the croſs, and two hours after, *Donnacona* appear'd with the two interpreters, and a great company. The captain having given private orders to his people to ſeize the king, and the interpreters, with two more whom he deſcrib'd to them, when he ſhould give the ſignal, went out of the fort to receive *Donnacona*; but he, having been warn'd by *Tagnoagny* not to enter the barricade, a fire was made in the open field before it; and they ſate down there. The captain having been inform'd by *Damogoa* of the caution given by the other, was reſolv'd to execute his deſign in the place where they were: ſo that making the ſignal, all his men came with their piſtols in their hands, and having ſeiz'd the perſons appointed, they carry'd them into the fort, without any reſiſtance, the *Canadans* all running away upon their lord's being taken.

They ſeize the king.

Having thus gotten the king in their power, they ſet all hands at work to fit out two of their ſhips, (having determin'd to leave the third, upon the death of their men formerly mention'd) and by the 6th of *May*, they were ready. During the time they ſtaid, the people came howling about their fort, and calling out *Agouhanna! Agouhanna!* the captain let them ſee him, and bade *Damogoa* tell them that he was well us'd, and ſhould return in 10 or 11 months, after he had ſeen the king of *France*. Then ſome women came with ſeveral canoes of proviſions for the *Agouhanna* during the voyage, and preſents for the captain to perſuade him to uſe him well.

Upon the 6th of *May*, they weigh'd anchor from S. *Croix*, and ſail'd down the river to the iſland of *Orleans*; and ſtoping at ſeveral iſlands in the river, as the wind and weather oblig'd them, they at laſt doubled the cape over-againſt the aſſumption, going out the ſame way they got in; and thinking to go the neareſt way northward of the *Iſland of Birds*, they were blown by ſtorm ſouthward to S. *John's* or *Brion's* iſland, about the 26th of *May*, whereabouts they cruis'd till the firſt of *June*; and then ſailing north eaſt they paſt about the north capes of the *Gaſp* iſland, and made over to the iſlands, on the ſouth eaſt of *Placentia* bay, in *Newfoundland*, and ſailing along the ſouth coaſt of that great iſland, they water'd near cape *Race*, and from thence to S. *Malo's*, where they arriv'd the ſixth of *July* 1536.

And arrive at S. Malo's.

Monſ. *Cartier* was kept in *France* till 1540, during which time *Donnacona*, and all the other *Indians* he had brought with him dy'd, after having been converted to chriſtianity, and baptis'd. This *Agouhanna* had given ſuch an account of the gold and ſilver of *Saguenay* to the *French* court, that the king order'd *Cartier* to ſail to *Canada*, as admiral; and appointed the chevalier *la Roche* lord of *Roberval*, lord lieut. of *Canada*, but *la Roche* not getting ready for above a year after the orders came to *Cartier* to ſail, he deſir'd the admiral to purſue the voyage, and gave him authority to act as deputy governor till he ſhould arrive. Upon the 23d of *May* 1540, *Cartier* ſet ſail with five ſhips, and meeting with croſs winds and ſtormy weather, and having ſtaid ſome time about *Newfoundland*, to get his fleet together which had been diſpers'd in the ſtorm, he did not arrive at S. *Croix* till the 23d of *Auguſt*; where they found *Agonna* (the ſame whom *Tagnoagny* would have had him carry to *France*, four years before) governor of *Canada*, in the abſence of the king: but whether he was ſo by the command of *Donnacona* before his departure, or by proximity of blood, or by the election of the people I ſhall not pretend to determine.

Cartier's third voyage.

Soon after *Cartier's* arrival at his old winter quarters, *Agonna* came to pay him a viſit, and enquire what was become of the *Agouhanna*, the admiral told him he was dead; but that the others, whom he had carry'd to *France*, lik'd that country ſo well, that they would not leave it (for he was unwilling to tell him they were all dead, leſt the jealouſy of their having been murder'd, ſhould have put him upon revenge.) *Agonna* was not diſpleas'd at the death of *Donnacona*, becauſe by that he was in peaceable poſſeſſion of a very large dominion; which he reſolv'd (as it appear'd afterwards) it ſhould not be in *Cartier's* power to take from him. At preſent he ſhew'd all the marks of friendſhip to him that could be expected: for he took his enſign of royalty from his own head, and put it upon the admiral's; who return it to him with great civility. He afterwards made him preſents, and received trifles from him, according to cuſtom, and ſo return'd to *Stadacona*.

He arrives at S. Croix.

After *Cartier* had ſtaid ſome days at S. *Croix*, he went in his boats up the river about four leagues, where he had obſerved there was a pleaſant river more commodious for his ſhips than S. *Croix*. Having view'd it now this ſecond time, he brought all his ſhips to that new harbour; and having taken the ammunition and proviſions neceſſary for his garriſon out of the ſhips, he ſent two of them back to *France*, with letters to the king, ſignifying

He changes his harbour.

ſignifying his change of the place for a colony, and *La Roche*'s not being arriv'd. He then ſet about building a fort upon this river, where he had all the conveniencies for a plantation that could be deſir'd. The river itſelf was about 50 paces broad, where ſhips drawing three fathoms water, might enter at high water, and when the tide was out, they were almoſt dry at the ſides of the river, and lay upon good ground. The country, on both ſides, was very pleaſant, abounding with all ſorts of trees, as oaks, cedars, &c. but the moſt valu'd tree they ſaw there was the *Ameda* or *Hanneda* formerly mentioned, for its medicinal vertue. It grew there in great plenty, and ſome of the trees of that kind were three fathoms about. This river was on the north ſide of the great river, and the ground about it where the trees did not cover it, was very fit for tillage; ſo that having ſet 20 men at work, they ſoon prepared an acre of ground for receiving ſeed, and having ſow'd it with turnip ſeed, and ſome other garden ſeeds which they had brought from *France*, the turnips appear'd above ground in eight days.

And builds a fort call'd Charlesburg *or* Charleville.

Near the mouth of the river, where he built his fort, they found a fine fountain of freſh water, running out of a cliff, and not far from it, ſtones, which they believ'd to be diamonds. On the other ſide of that cliff, towards the great river, there was a mine of iron ore, which reached to their fort, and was exceeding good; and on the ſides of the ſmall river they gather'd ſome leaves of gold as thick as one's nail, all behind which was meadow and vines, and here and there moſt excellent hemp growing wild, which, upon trial, was found to be as ſtrong as any in *Europe*, and near the meadow, there was a riſing ground of black ſlate with ſtreakes thro' it like gold and ſilver.

And called it Charles's Bay.

Having begun his fort with all theſe advantages of the place, he took ſome gentlemen along with him, in two of his boats, well man'd, and leaving the viſcount *Beauprè* to take care of the building of the fort, he ſet out for *Hochelaga* on the 7th of *Sept.* He ſaw his old friend, by the way, whoſe daughter had been made a preſent of to him, in his laſt expedition to *Hochelaga*. He receiv'd him with a great deal of joy, and preſents paſt between them. Sailing farther up the river than he had done before, he was obliged to leave his boats, and travel by land to the falls of the water, which the natives who were friendly to him, ſhew'd him by ſigns, were three in number. He ſaw two of them, but being weary of the journey, and willing to return to his new fort, he came back to his boats, and ſo down the river. But in his return, he miſs'd the Lord, whoſe daughter he had carried to *France*; and ſoon after his arrival at *Charlsburg*, he found that the Lord had been with *Agonna*, to concert matters for the deſtruction of the *French*. And that they came to hoſtilities afterwards, is very evident (altho' we have no further account of the parriculars of *Cartier*'s expedition) from the reaſon he gave for leaving *Canada*, at his return to *France* in 1542; which was, that he was not able, with ſuch a ſmall force, to ſupport himſelf againſt the natives, who had riſen againſt him.

He goes to the falls of the river.

But the Indians *riſing againſt him, he returns to* France.

De la Roche had been hinder'd by ſome affair, not mention'd, ſo that he did not leave *France* till 1542. And as he was ready to ſail with three ſhips, *Cartier* return'd, giving him the account juſt now mention'd of his coming home. *La Roche* order'd him to get ready to ſail back again with his fleet, but the admiral ſtole away in the night, and *La Roche* ſet ſail for *Canada*. It is probable that this general ſail'd along the eaſt coaſt of *Newfoundland*, and enter'd St. *Laurence*'s bay on the north part of that iſland, by the ſtreights of *Belles Iſles*; becauſe his chief pilot gives a particular deſcription of that paſſage which lies in 52 deg. lat. altho' he does not ſay that they went that way. However this be, that general arriv'd at the iſland of *Orleans* in the river of *Canada* towards the end of *July* 1542. But all the farther account we have of this expedition is, that he built a fort near that iſland, on the north ſide of the great river, and is probably what was ſince call'd *Quebeck*, and having winter'd there, ſet out to diſcover farther up towards the falls; but many of his people leaving him, there was little done, ſo that he return'd to *Fraace* in 1543. And indeed the *French* ſeem to have had little or no footing in *Canada* properly ſo call'd, during that century; for the expedition of *Ribault* and *Laudonniers* formerly mention'd * was upon the eaſt coaſt, a great way ſouth of St. *Laurence*'s bay, and ſo is not to be reckon'd in *Canada*. It is true, the *French* call'd all the continent, between *Belles Iſles* ſtreights and the point of *Florida*, to the ſouth ſea inclusive (except *New Spain*) by the name of *New France*, and claim'd all that country as their own; and had they been as careful to preſerve it as they ought to have been, I don't ſee but their title was as good to that, as the king of *Spain*'s to *Mexico* and *Peru*, or any other nations to any part of that new world; but ſince they ſeem'd to neglect it, or rather, by graſping at too much, loſt all for a conſiderable time; they have no reaſon to blame others for taking poſſeſſion of a country aboandon'd by them, ſuch as the coaſt

De la Roche's expedition to Canada.

* Univ. Tr. ch. vi. Sect. VII.

coaſt of *America* generally was about the time that it was planted by the *Engliſh* in many places with the conſent of the natives, which was the only thing that could give them a juſt title to poſſeſſion; for I look upon the pretence of *Cabot*'s taking poſſeſſion in the name of *Henry* VII. to be of no more force than if a *French* privateer ſhould land in *England*, and, not being underſtood by the people, ſhould take poſſeſſion of the kingdom, in the name of *Louis* XV.

Harris's Bibl. *Vol.* I. B. V. *ch.* 32.

Champlain's *expedition to* Canada.

The next *French* expedition taken notice of by our collectors of voyages, is that written by *Champlain*, and perform'd in the year 1603. When the *French* arriv'd at *Tadouſac* or *Saguenay* river, which runs into that of *Canada*, not far to the north eaſt of the *Iſland of Hares*, formerly mention'd, they were kindly receiv'd by the king of the place, having been recommended to him by two *Canada Indians*, whom they had aboard, and who had been kindly treated in *France*. They ſtaid at the town of *Tadouſac* ſome time, and from thence, ſome of them went up *Saguenay* river about 12 leagues, but finding the country, that way not ſo pleaſant, by reaſon of the mountains and rocks, as that upon the *Canada* river was repreſented to be, they gave over the farther diſcovery of *Saguenay*, and coming back to *Tadouſac*, purſu'd their voyage as far as *Quebec*: and from thence ſtricking over to the ſouth ſide of the river, becauſe the north coaſt is rocky, they continu'd their voyage in the pinnace, leaving their ſhip either at *Quebec*, or ſome other harbour thereabouts, they arriv'd at S. *Peter's Lake*, formerly mention'd, at the ſouth weſt end of which, is the river of the *Iroqueze*, which runs thro' a great part of *New England*, and a part of *New York*: but the current of that river was ſo ſtrong, that it was impracticable to ſail up, ſo that they went on towards the fall of the great river, of which they give a very imperfect account, having depended, for the moſt part, upon what the natives told them: only they ſay that the firſt fall of the river is in 45 deg. which in the Atlas falls in the lake *Ontario*, which they do not ſo much as mention; altho' they had that lake to ſail thro' (and a conſiderable one it is,) before they came to the fall. However it would ſeem that they had gone farther than any of their nation had done before. But finding the river in many places ſo ſhallow, and full of rocks, that no boats, much leſs the pinnace, could paſs, they return'd to *Tadouſac*; from whence they ſail'd to the bay of S. *Laurence*, and ſo along the coaſt of *Nova Scotia*, and then return'd to *France*.

He returns to France.

The year following, *Champlain* went over with Monſ. *Mont* to *Acadie*; but having *Canada* more at heart, ſome time after he went to *Quebec*, and to engratiate himſelf with the *Canadans*, he went two expeditions with them againſt the *Iroqueze*, where the *Indians* about *Quebec*, being aſſiſted by the *French* with their fire arms, routed their old enemies, and return'd in triumph. After which *Champlian* went as far as the lake *Ontario*, which he found 100 miles long. On the ſide of this lake he found a fine country; but the people ſuch bold fighters, that he was much put to it to defend himſelf with all the guns they had. Their villages well peopled, and their houſes barricaded with pales, and both women and men fought to defend them. *Champlain* intended to find a paſſage to the ſouth ſea by the rivers in that country; but, like others who engag'd in the ſame deſign, he fail'd in his aim.

He goes again to Canada.

Sails to the lake Ontario.

After this, the *French* were chas'd from all their plantations upon the eaſtern coaſt of *America*, and the *Engliſh* took poſſeſſion of *Nova Scotia*, (call'd *Acadie* by the *French*) *New England*, *New York*, *Penſilvania*, *Mary Land*, *Virginia* and *Carolina*; ſome of which they had before, and others they took from the *French*, as we have already obſerv'd, in treating of thoſe places. But *Canada* continued ſtill in their hands, and their colonies there were very numerous, inſomuch that about the year 1680, the baron *La Hontan* ſaid they amounted to 180,000 ſouls.

About the year 1676 father *Louis Hennipin*, a franciſcan fryar, being ſent a miſſionary for *Canada*, arriv'd at *Quebec*, and from thence was ſent to *Fort Frontinac*, 100 leagues up the river of *Canada* on the north ſide of the lake *Ontario*. There he ſtaid two years, and learn'd the language of the *Iroqueze*, who were the moſt troubleſome neighbours the *French* had; and during his ſtay there, he and his companion, father *Luke Buiſſet*, tranſlated the creed, the lord's prayer and litany into the language of the country. Having ſtaid there, the time appointed them by their ſuperior, they return'd to *Quebec*. In *November* 1678 *Hennipin* was ſent back again, to *Frontinac* in a ſmall canoe, where he embark'd, on board a brigantine (which had been built there) with the *Sieur de la Motte* for diſcoveries farther weſt. They ſail'd to the ſouth weſt end of the lake and on the 6th of *January* enter'd the river *Niagara*, which is the great fall of the *Canada* river, ſaid in the Atlas to be 600 foot high.* Here they built a fort, but, not to irritate the *Iroqueze*, they pretended it was

Harris's Bibl. *Vol.* II. B. IV. *ch.* 14.

De la Motte *goes to* Niagara.

* *See* Miſſiſippi *map.*

only *a ſtore houſe to keep goods to traffick with them.* And to remove all ſuſpicion from them, *La Motte* went with ſeven of his men to one of their towns; and in five days he arriv'd at the place, and being carry'd to the cabin of the chief man of the place, he made one of his people tell him, "That they were come "to pay him a viſit, and to ſmoak out of "his pipe. That they deſign'd to build a "great canoe (meaning a ſhip) above the "fall of *Niagara* to bring *European* "commodities by a more convenient paſ-"ſage than by S. *Laurence*'s river, by "which he and his people might be ſerv-"ed cheaper than by the *Engliſh* at *Boſ-"ton*, or the *Dutch* at *New York*. And "farther, that they would furniſh his "people with a black-ſmith, and gun-"ſmith to put their arms in order, and to "make axes, *&c.*"

This offer of goods at a cheaper rate was a plauſible pretence to make them break with the *Engliſh* and *Dutch*, and the allowing them arms and gun-ſmiths to keep them in order, was a good way to enable them to cut off the rivals of the *French* in the countries lying towards the ſea to which they pretended a right; and to make their propoſals go down the better, they made preſents to the lord, of axes, knives, a collar of white and blue porcelain, and ſome gowns. They ſeem'd to reliſh the propoſals, but *La Motte* finding by their behaviour that they lik'd the *Engliſh* and *Dutch* better than the *French*, and being diſguſted at ſome inſtances of their cruelty towards their priſoners, took his leave of them, and went back to *Niagara*, and ſoon after to *Canada*, leaving moſt of his men at work in building the fort.

And builds a fort there.

In *January* 1679 Monſ. *De la Salle* arriv'd at *Niagara*, from fort *Frontinac*, of which he was governor, with a great bark full of proviſions for the garriſon of *Niagara*, and tackling and other neceſſaries for the brigantine which they were to build on the ſouth ſide of the fall of the river, at the mouth of the lake *Erie*. But that bark being caſt away after he came aſhore, he was forced to go back a foot to his garriſon, leaving one *Tonti* an *Italian* his lieutenant at *Niagara*.

De la Salle *ſupplies the garriſon of* Niagara.

It happen'd luckily for the *French*, that the greateſt part of the *Iroqueze* were abroad, having been engag'd, (whilſt the *French* were building their fort and brigantine) in a war with ſome of the nations on the other ſide of the lake *Erie*. The *French*, taking occaſion of their abſence, made what haſte they could, with the few hands they had to get their ſhip finiſh'd, leſt thoſe *Iroqueze* ſhould return, or that they who were left at home, might burn their ſhip before they could get her lauch'd, to prevent which they launch'd her before ſhe was quite finiſh'd, and mounted five ſmall guns upon her, and gave her the name of the *Griffin*.

In the mean time, father *Hennipin*, with two other fryers from *Frontinac*, went to view the great caſcade at *Niagara*. That river is navigable from *Frontinac* by large barks, till within two leagues of the fall, and then they were oblig'd to land, and carry their goods two leagues below the caſcade ſouthward, before they could attempt putting them aboard: for, towards the rock which cauſes the fall of water, the river is divided into two branches, by an iſland; on each ſide of which, it runs with ſuch rapidity, that if any beaſt enters it, to paſs to the iſland, the ſtream hurries it down to the caſcade, where the two falls of water, one on each ſide of the iſland, are reckon'd 600 foot high; the water tumbling down with ſuch a noiſe that it is more dreadful than thunder, and boils up at the bottom, or bed into which it falls in a moſt aſtoniſhing manner, as any one may ſuppoſe a great river falling from a rock 600 foot high muſt do: and being thus united at the bottom into one river, it runs with ſuch a torrent for two leagues from the fall, that it dazzles one's eyes to look upon it from the bank on either ſide the river, from whence the highth is enough to turn an ordinary head, that will venture to look down ſuch a terrible precipice.

The caſcade of Niagara.

All things being now ready for their intended expedition, Monſ. *De la Salle*, who would conduct it in perſon, arriv'd at the fort; and going aboard the *Griffin*, (which was between 40 and 50 tuns) with 33 men, of which number were the three friars, they ſet ſail the 7th of *Auguſt*, and paſt thro' the lake *Erie*, at the weſt end of which they enter'd a ſtreight, which, in a north eaſt courſe, brought them to the lake S. *Clare*, which they ſail'd thro', and were carry'd by another river, ſtill northward, to the lake of *Huron*, which they enter'd the 23d of the ſame month: and met with ſuch a ſtorm, the 26th that they gave themſelves up for loſt, and all, except the pilot, went to prayers, whilſt he ſpent his time in curſing the governor for having brought him to be drown'd in a ſtinking lake, after having acquir'd ſuch honour by his skill in ſailing upon the ocean. But the wind abating, they arriv'd at *Miſſilimakinak* in the north weſt end of the lake in 45 degrees. From thence having croſs'd the lake *Michigan*, they landed upon an iſland at the mouth of the bay of *Puans*, where being well receiv'd by the natives, he traded with them for furrs and skins, with which he loaded the ſhip, and ſent her under the direction

Monſ. de la Salle *ſets out upon new diſcoveries, from* Niagara.

direction of the pilot back to *Niagara*, with orders to return with all expedition. They ſail'd the 18th of *September*, but were never heard of more.

Their ſhip is caſt away.

Having ſtaid ſome time in this iſland, *De la Salle* went aboard four canoes, with his 14 men, and coaſted *Michigan* lake upon the weſt ſide, where having row'd 11 days, a ſtorm blowing, they were oblig'd to make towards the ſhoar, and there being ſhallow water and a ſtrong eaſterly wind, they were oblig'd to wade out and carry their canoes with them for fear of their being daſh'd in pieces by the waves. But not knowing what ſort of people the inhabitants of that country were, they ſtood upon their guard at their landing, and poſſeſt themſelves of the riſing ground near a village at ſome ſmall diſtance from the lake, and ſent three of their number, with the *Calumet of peace*, (which they had gotten from the natives of the iſland from whence they came laſt) to the village to buy proviſions.

The Calumet of peace.

This *Calumet* of peace, is a tobacco pipe of marble, white, red or black, finely poliſh'd: the ſtalk of it is made of a ſtrong reed about two foot and a half long, adorn'd with feathers of different colours, according to the birds or fowls of the ſeveral places where the pipe comes from. This *Calumet* is a ſafe conduct thro' all the nations in alliance with thoſe who gave it; and in all embaſſies the pipe ſo adorn'd is carry'd as a ſymbol of peace; and is religiouſly regarded by the ſavages, becauſe they believe that ſome misfortune would happen to him who ſhould violate the publick faith of the *Calumet*. When they have concluded any treaty, or other great affair with any other nation, they fill the *Calumet* with their beſt tobacco, and the contracting parties ſmoke out of it by turns.

The ſight of the *Calumet* made the ſavages dance for joy, and they furniſh'd the *French* with proviſions, and took axes and knives in return. When the ſtorm abated, they put their canoes in the water again, and with difficulty, and often with hungry bellies, they coaſted along the weſt and ſouth coaſts of the lake, till they came to the river of *Miamis* on the ſouth of the lake in the latitude of 43 deg. and a half, where they ſpent the whole month of *November* in building a fort, of 40 foot by 80, made of ſquare pieces of timber. When they had finiſh'd the fort they ſail'd up the river *Miamis*, with a deſign to croſs over the country to the *Ilinois* river, which they were told run into that of *Miſſiſippi*. They had ſome of the natives of the country along with them to ſhew them the way, where having only a league and a half to carry their canoes from the *Miamis* to the *Ilinois*, they ſail'd down this laſt, moſt part of the month of *December*; and towards the end of the year came to a village about 130 leagues from fort *Miamis*: but finding no inhabitants they were forced to take of the corn, which they found laid up for ſeed, *De la Salle* intending to pay the value of it when he found any people to receive it.

Having gone down the *Ilinois* to the lat. of 43 (call'd, by miſtake in our author, 33.) They fell in among the natives, who were encamp'd on both ſides the river. The *Indians* ſhew'd their *Calumet*, and the *French* produced theirs, and in a ſhort time a peace was concluded between them. After ſome days, their lord being abſent, his brother *Nikanape* invited *De la Salle* to an entertainment, at which he ſo repreſented the danger of going to ſea by the river *Miſſiſippi*, that ſome of the *French* being frighten'd at the very thoughts of it, ſix of them deſerted that very night; by which they expos'd themſelves to greater hazard than that which they ſought to avoid. However the governor with the few he had left, proceeded, and about the latitude of 40, built a fort which he call'd *Crevecœur* or *Breakheart*, becauſe of the deſertion of his men, and other difficulties they labour'd under. This fort was near finiſh'd by the firſt of *March*.

Fort Crevecœur built.

Monſ. *De la Salle* finding that the *Griffin* did not come back, as he had given direction, concluded it was loſt, and therefore having occaſion for ſeveral things from fort *Frontinac*, he undertook the journey by land, taking only three men along with him, and leaving the reſt with *Tonti* to command the fort. But before he went away, he ſent father *Hennipin* towards *Miſſiſippi* with only two men to guide the canoe: whoſe diſcoveries we ſhall purſue for ſome time, and then return to Monſ. *De la Salle*.

Father *Hennipin* ſet out with his two companions, from the new fort, upon the 29th of *Feb.* and rowing down the river, which runs ſouth weſt, at laſt came to that of *Miſſiſippi*, which the fryer reckons between 35 and 36 deg. of lat. but our Atlas make the joining of thoſe rivers in 38 deg. The *Miſſiſippi*, at this place is a league and a half broad, and, at the narroweſt, a league all the way to the ſea. Here they were ſtop'd ſome days by ice, which came down the river; but afterwards they ſet out with the courſe of the ſtream, which runs ſouthwards, and in ſome days, meeting with ſome of the natives, they could not underſtand one word of their language, but having exchang'd *Calumets*, they went aſhore with them, and got a recruit of proviſions, and proceeded

Hennipin goes down Miſſiſippi river with two companions.

proceeded in their canoe down the river, and were kindly receiv'd by the people of *Taensa*, *Coroa* and *Quiniquissa*; and finding the great river divide into three branches, they took the middle, as being the deepest, and by that course came to the sea, in the gulf of *Mexico*, in 28 deg. n. lat.

They arrive at the gulf of Mexico.

Along the course of this river, they saw trees of different sorts in great plenty, cedars, cotton trees, of 100 foot long, of which the natives make their canoes and piragua's, having hollowed them with fire; and another tree, which our author gives no name to, but says the gum that came out of it, was the finest perfume he had ever smelt, and the corn which was but just springing, as they went down the river, was almost fit to be cut down as they return'd; and they were told that they had four crops of it every year.

Having staid upon the coast some days, and slept under their canoe, which they set upon props with its bottom up, the fryar's companions, being afraid of meeting with some *Spaniards* upon that coast, desir'd him to go up the river, which he consented to; and so put the canoe in the water again, which not drawing above three inches water, they went along the side of the river to be free of the current, as the tide went out. Their provisions when they saw no houses, nor natives, (which happen some times for several days together,) were fish or fowls which they caught or shot. But one day, as they were ashore, making broth of a buzzard they had shot, about 50 canoes came down the river with all the speed possible for them to make. The *French* left their broth, and getting aboard as fast as they could, went towards them, calling out in the *Iroqueze* language, *we are men of wooden canoes*; which is the term the *Indians* have for those who sail in ships. But the savages not understanding them, let fly their arrows at them, till one of them observ'd the *Calumet* which the friar held out to them, made them give over hostilities, and come towards them. They all went ashore together, and the friar, finding they were in search of some *Miamis* and *Ilinois* who were their enemies, made signs to them that their enemies had past the river. But those savages being disappointed of their revenge upon the *Miamis*, resolv'd to take it of the friar and his two companions. The first bad sign they gave of their ill intentions, was, their refusing to smoak out of their *Calumet* of peace; and their next was that three or four of the eldest of them laid their hands upon the friar's head, and began to howl, and weep bitterly, and 100 of the chief people coming up to the poor *Frenchmen*, made signs to them that they must die. *Hennipin* made haste to take out some of the best tobacco he had, and about 15 knives which he presented to those who were next him, and pointing to the canoe where a bundel of hatchets lay ty'd up, gave them amongst them, and, bending his head, signify'd to them that he submitted to their mercy; which soften'd the minds of some of the principal men amongst them, that they gave them some beaver's flesh to eat, blowing upon the three first bits, and then putting them into the mouths of the three prisoners, and setting the rest in a wooden platter before them, that they might eat after their own manner.

They return up the river.

Are in danger from a company of natives.

In this uncertain state they continu'd all night at land, the two who row'd the friar's canoe being resolv'd to sell their lives as dear as they could. But the next morning one of the principal men of the savages took the *Calumet* from the friar, and filling it with tobacco, made his companions smoake out of it, to the great joy of the *French*, who, by that, were assur'd of their lives. However, they made signs that they must go with them, and so getting aboard their canoes, they made the best of their way up the river, the *French* men rowing along with them 19 days successively; and passing by the *Ilinois* river, held the course of the *Missisippi*. During that voyage, they went often ashore, and kill'd game of several kinds, which they fed upon, and danced after they had eaten plentifully.

Who take them along with them above 200 leagues up the great river.

By this time they were got up almost to the fall of the river, which the *French* afterwards call'd *the fall of* S. *Anthony*; which is in 45 deg. having seen a great number of rivers falling into the great one, all the way as they past. Here they held a consultation what to do with the *French*, and at last, they gave them to three of their chiefs who had lost, each of them a son in the war. So that having hid their canoes among some trees by the river side, they took their journey by land, and march'd about 60 leagues to the great fatigue of the *French*, who were not us'd to make such long marches, for they commonly travell'd from break of day, till ten at night, swiming all the rivers that came in their way, and never ate but once in 24 hours.

At last they arriv'd at their habitations, which were among morasses inaccessible to their enemies. Here *Aquipaguetin*, the chief man among them, adopted *Hennipin* for his son, and presented him as such to six or seven of his wives, who were to give him the title and shew him the civility due to it. The other two were adopted by others of the chief captains, but it was a great mortification to them

them to be ſeparated; but they thought *it was well it was no worſe.* All the months of *May* and *June*, the friar was ſet to dig in an iſland, whither he was ſent with the wives and children of his new father, who was much pleas'd with the produce of ſome *European* ſeeds which the friar had ſow'd.

In the month of *July*, the *Sieur de Luth* arriv'd in the camp of thoſe ſavages, (for they live in a ſort of tents) having come from *Canada* to manage ſome negotiation with the *Iſſati*, who live towards the ſource of *Miſſiſippi*, and were near neighbours to the friar's ſavages. *De Luth* got leave for *Hennipin* and his two canoe men to go with him under pretence of their underſtanding the language. They ſpent the month of *Auguſt* in that expedition, and having done their buſineſs they return'd to the ſavage camp, and *De Luth* repreſenting to their chiefs, that it was much for their intereſt that the three adopted ſons ſhould go to *Canada* to manage a trade for iron and other commodities of which they had need; and that a certain time ſhould be fix'd, and a central place agreed upon, where the *Indians* ſhould bring their furs, and the *French* their *European* goods, to be exchang'd. *Aquepaguetin* conſulted this propoſal, and the other chiefs agreeing to it, the three adopted ſons, with great joy gave up their new kindred, and getting into two canoes with *De Luth* and his attendants, being in all eight perſons, they fell down the river S. *Francis* to the *Miſſiſippi*, and down the *Miſſiſippi* as far as *Ouiſconſin* river, into which they turn'd, by directions taken upon paper from the chief of the ſavages where the friar was priſoner. This river brought them 100 leagues eaſt from *Miſſiſippi*, and carrying their canoes half a league over land, they came to *Renard*'s river, which brought them to the bay of *Puans*, where they found many *Canadans* come thither for trade. From thence they went to *Miſſilimakinak* where they winter'd, and ſetting out in eaſter week 1681, going the ſame way that they had come the year before, they arriv'd at *Frontinac*, and ſo to *Quebec*.

They are ſet at liberty.

And arrive at Quebec.

Whilſt father *Hennipin* was making diſcoveries up and down the river *Miſſiſippi*, Monſ. *De la Salle* went to *Frontinac*, as we obſerv'd before, and having ſet all affairs in order there return'd again to *Crevecœur* and ſo proceeded to make diſcoveries about the great lakes, and to build forts at convenient places, and then went to *Miſſiſippi*, whoſe courſe he follow'd to the ſea; having built a fort by the ſide of the river towards the eaſt, in 36 degrees, which he call'd *Prudehomme*. And at the mouth of the *Miſſiſippi*, which he call'd S. *Louis*, he ſet up a croſs with the arms of *France*, cut in wood and fix'd to it. In thus viewing the country, treating with the different nations, and going to and from fort *Frontinac*, *De la Salle* ſpent the years 1679, 1680, 1681 and 1682, and the year following went to *France*, where he was well receiv'd by the king, and had all proper encouragement to proſecute his diſcoveries.

De la Salle's diſcoveries.

In the year 1684 *Auguſt* the 5th *De la Salle* ſet out for the bay of *Mexico* with four ſhips, one of which was a man of war of 56 guns, on board this fleet were 150 land men who were under *la Salle*'s direction, and to ſtay in *New France* with him. One of their ſmall ſhips being ſeparated from the reſt in a ſtorm, fell into the hands of the *Spaniards*. The other three arriv'd in the bay of *Mexico*, and coming to the bay now call'd the bay of S. *Louis* which he miſtook at firſt for *Miſſiſippi*, being in the ſame latitude with it, but ſeven deg. farther weſt; Monſ. *De la Salle* ſounded the entry, which he found deep but narrow, and therefore he gave orders that none of the ſhips ſhould attempt to land, without having on board the pilot of the frigate, who had ſounded the entry to the bay, and had carry'd him aſhore in the pinnace. But the capt. of the fly-boat, not regarding thoſe orders, nor minding the poles which *De la Salle* had ſtuck into the ſand all along for a direction, run his ſhip againſt a ſand bank where ſhe ſtuck, but the men were all ſav'd, as alſo the goods, which, they took out by degrees before the ſhip was beaten to pieces by the waves.

The fly-boat loſt.

Soon after the whole 150 were landed, the ſavages to the number of 120 came to attack them, but the noiſe of the drums, and the appearance of the men frighten'd them, ſo that they made off; but *De la Salle* following them, preſented his *Calumet* of peace, which they accepted, and came back with him to his camp, and they continued friends till the indiſcretion of a *Subaltern* officer put them out of humour, by threatning to kill ſome of them if they did not reſtore a pack of blankets, which having fallen into the ſea, as they were unlading the fly-boat, had been driven aſhore, and taken up as lawful prize by the ſavages. This affront ſtuck in their minds, and they were reſolved to take the firſt opportunity to revenge it.

Monſ. *Beaujeau*, the captain of the man of war, ſeeing all things go on proſperouſly, and a new fort begun, which they call'd fort *Louis*, took leave of Monſ. *De la Salle* and return'd to *France*, leaving the frigate for the uſe of the colony. But that happen'd to be of little ſervice to them; for, by the negligence of thoſe aboard, the frigate ran aground, and was daſh'd to pieces, and all the crew drown'd

De la Salle builds fort Louis.

The frigate loſt.

drown'd, except one gentleman, the the captain and four ſeamen; and what was an irreparable loſs at that juncture, the linnen and cloth for the uſe of the colony, and moſt of their *French* proviſions, and their tools and inſtruments were loſt with the ſhip.

This diſaſter, altho' it vex'd the governor, did not diſcourage him, but he went on vigorouſly in building his fort, in a very commodious place, and planted 12 pieces of cannon upon it; and took up his winter quarters there. But in the month of *March* 1685, the natives getting together in the night, and the centinel being careleſs, they attack'd the garriſon at a place not, at that time, finiſh'd, and with their arrows kill'd four gentlemen voluntiers, and wounded Mr. *Moranger*, the governor's nephew. But the allarm being given, the garriſon got to their arms, and at the firſt fire the ſavages fled, altho' none of them was hurt. After that three of the *French* going a ſhooting, the ſavages getting together upon the noiſe of their guns, came in a great multitude upon the three men; but one of them levelling his piece, luckily ſhot their leader, at whoſe fall, they all took to their heels, notwithſtanding the inequality of their numbers.

The governor finding that they were not to be brought to any laſting amity by fair means, took a party of 60 men, and march'd into their country, where he found them encamp'd, and having provided his men with wooden breaſt-plates againſt the *Indian* arrows, he fell upon them, and made a conſiderable ſlaughter among them in ſeveral encounters, and return'd to the fort with a great number of priſoners. But his men not being ſo obedient to his order as they ought, threw away their own lives very fooliſhly upon ſeveral occaſions; for going out, contrary to his orders, in ſmall parties, being charm'd with the pleaſantneſs of the country, ſix of his beſt men with an officer ſuffer'd themſelves to be overtaken with ſleep in a meadow, and were all murder'd by the ſavages.

Monſ. *De la Salle* having ſtaid another winter at fort *Louis*, and endeavour'd to reduce the nations about him to a friendly correſpondence, found himſelf under a neceſſity of a communication with *Canada*, becauſe, after the loſs of his two ſhips, he could ſend no advices to *France*, nor to any of the *French* colonies in the *Caribees*; he therefore reſolv'd upon an expedition to *Canada* by the *Ilinois* river. *The governor attempts a journey to* Canada. He took 20 men with him, in *April* 1686 and ſet out, a foot, towards the north, thro' the fineſt country in the world. In this march, they ſaw many of the natives a horſe back, with boots and ſpurs, ſaddles and bridles; from which they concluded that they were not far from the *Spaniſh* colonies. They likewiſe met with droves of wild oxen, ſome of which they kill'd, and broil'd the fleſh for their ſubſiſtance upon the road.

Having march'd for many days, without any other inconvenience than the fatigue of walking, they came to the country of the *Cenis*, where they ſaw villages and hamlets ſo near one another, that, for 20 leagues together, it ſeem'd one continu'd town. *Is well receiv'd at* Cenis. The inhabitants preſented *La Salle* with their *Calumet* of peace, and with great ceremony ſmoak'd out of his. They had ſeveral *European* utenſils in their houſes, ſuch as ſilver ſpoons, &c. as alſo laced cloths, and horſes; and, by them, the governor was inform'd, that they were within eight days march of the *Spaniſh* dominions. This country of the *Cenis* was in 33 deg. n. lat. Here they ſtaid many days, and from thence mov'd eaſtward, in order to get to the *Miſſiſippi*, to eaſe them of the labour of walking too much. They had not march'd far, when *De la Salle* and *Moranger* his nephew were ſeiz'd with a violent fever which detain'd them among the people of *Naſſonis* for ſeveral weeks: for after the fever was over, they continu'd ſo weak, that it was too whole months before they could undertake a journey. This was the begining of his misfortunes; for ſome of his men deſerted, others began to grumble and mutiny; and their powder was almoſt ſpent. For theſe reaſons he thought it convenient to return to fort *Louis*, which was done without any remarkable accident, except one man's being ſwallow'd by a crocodile in paſſing a river. *Returns to fort* Louis.

As ſoon as he came back, and was receiv'd with great joy, he ſet about entrenching a large encloſure for the uſe of the colony, that they might have all that belong'd to them under the cannon of the fort, and took all the pains imaginable to put every thing in good condition. But being ſtill under the ſame neceſſity as before, of going to *Canada*, he ſet out a ſecond time with 20 men about the beginning of the year 1687, his brother and two nephews being of the number. *Sets out a ſecond time.* Having croſs'd the *Sablonniere* river, which runs into S. *Louis*'s bay, and ſome other rivers farther eaſt, they came into a country not far from that of *Cenis*, where he let his men divert themſelves with hunting for ſome days, and ſent his nephew *Moranger* with eight men to a place where an *Indian* call'd *Nica* (who had been long with the governor, and was moſt faithful to him) had laid up a ſtore of wild beaſts fleſh which he had kill'd in hunting. *Moranger* and his eight men, were to ſmoke and dry this fleſh for carriage. But he little knew that he had ſent his nephew

to

to be murder'd by thoſe villains, whom he had ſent with him. But ſo it was, that they now executed a plot they had laid before; and having *Moranger* now in their power, they took their opportunity and ſtruck him on the head with a hatchet, of which he dy'd in two hours; they likewiſe ſlew poor *Nica* for his fidelity to his maſter, and another ſervant belonging to *La Salle*.

Theſe wretches having thus murder'd the nephew, reſolv'd to make ſure of the uncle too, leſt he ſhould (as was very juſt) revenge the baſe villany. *De la Salle* was about two leagues off, and wondering that he heard nothing from *Moranger* in three or four days; being afraid of his having been ſurpriz'd by the ſavages, went himſelf accompany'd by father *Anaſtaſius*, and two *Indians*, to enquire about him. When he came near the place, he ſaw the murderers on the river ſide, and going up to them, ask'd where his nephew was. They pointing to a place hard by, *la Salle* went thither, where two of the rogues lay conceal'd; and at his coming up to them, they both ſnap'd their pieces at him, the one miſſed fire, but the other lodg'd a bullet in his head, of which he dy'd in a hour. As ſoon as he fell, the friar run to him, and took him up in his arms, and wept bitterly; but *la Salle*, having his ſenſes about him made a ſhort confeſſion, and like a good man deſir'd abſolution, which he receiv'd and dy'd immediately after.

De la Salle, and Monſ. Moranger murder'd by their own people.

Thus was this worthy gentleman baſely murder'd in the vigour of his age, by his own people; who had he liv'd would have done great ſervice to his country; for he was a man of great courage, good judgment, and indefatigable induſtry; and had been long acquainted with the manner of the *Indians*. He was kill'd upon the 19th of *March* 1687, and was bury'd by the friar, who put a croſs up in the place. After which he went to look for father *Cavalier*, the brother of *la Salle*, to whom he told the melancholy ſtory; and in the mean time, the villains coming into the cabin where they were, the poor old father, and a nephew of his, who was but a youth, believing that they came with a deſign to murder them for their relation to the governor, began to prepare themſelves for death. But they were ſo confounded at the ſight of the venerable old man, and ſo ſtruck with the horror of their own guilt, that they continu'd along time irreſolute; and at laſt were prevail'd with to ſpare them. They choſe the murderer of *la Salle* for their captain, and determin'd to go and ſettle among the *Cenis*, and began their march, making the two *Cavaliers*, the uncle and nephew, ſerve them as lacqueys upon the road.

But as all the company had not been engag'd in this conſpiracy, they fell out, during the march, and one part of them adhering to *Hans* a *German* by birth, he taking his opportunity, ſhot the murderer thro' the heart, with a piſtol bullet; and which was very remarkable, another of *Hans*'s party firing his piſtol at him who had kill'd *Moranger*, there being no ball in the piſtol, the powder ſet his hair on fire, which in a moment catch'd his ſhirt and clothes with ſuch violence that in ſpite of all he could do, he was burnt to death.

The murderers cut off by the reſt of la Salle's *people.*

The death of the governor being thus, in ſome meaſure, reveng'd, *Hans* became the captain of this wretched crew; who purſuing their route to *Cenis*, found thoſe people ready to take the field againſt ſome of their neighbour nations. *Hans* and as many as he could perſuade to ſtand by him, offer'd their ſervice to the *Cenis* people, and were accepted; but the two *Cavaliers*, father *Anaſtaſius*, the ſieur *Joutel* and ſome few more, having bought horſes (which they purchas'd for a hatchet a piece) and procur'd guides from the natives, and proviſions for their journey, ſet out from the *Cenis*, and having made a long march thro' a fine country, at laſt they enter the *Miſſiſippi* about the lat. of 33 deg. and a half; and ſo providing themſelves of canoes inſtead of their horſes, they arriv'd at the mouth of the *Ilinois* river on the 5th of *September*; and purſuing their courſe up that river, arriv'd at *Crevecœur* the 14th; and being well receiv'd there, by Monſ. *Belle Fontaine* the governor, they ſtaid there all winter, and in ſpring 1688 ſet out for *Frontinac* and ſo to *Quebec*, where they arriv'd the 27th of *July*; and the month after ſail'd for *France*.

Father *Hennipin*, from whom this relation is taken, gives an odd account of their ſuperſtitious notion of their original, believ'd by the ſavages of *New France*. They ſay, "That a woman came down "from heaven, and hover'd in the air for "ſome time, becauſe there was no land to "reſt her foot upon. That the fiſh of "the ſea taking compaſſion of her, con"ſulted which of them ſhould receive her, "and it fell to the lot of the tortoiſe, which "accordingly preſented its back, upon "which ſhe fixt herſelf; and, in proceſs "of time, the ſlime and filth of the ſea "gathering about the back of the tortoiſe "(which had never ſtir'd after the woman "had reſted upon it) by degrees came to "form that vaſt extent of land call'd "*America*. But the woman being un"eaſy for living ſolitary, a ſpirit deſcended "when ſhe was aſleep, and, unperceiv'd "by her, made her the mother of two "ſons, who came out of her ſide; but

The Indians *notion of the creation.*

"when

" when they grew up, they were conſtant-
" ly at variance with one another. One
" of them was a better hunter than the
" other; but their animoſity grew to that
" heighth, that the beſt of them being no
" longer able to bear with the other's rude
" behaviour, flew up to heaven; from
" whence to ſhew his reſentment, he rat-
" tles his thunder from time to time over
" the heads of his brother's poſterity.
" That after the brother was gone to
" heaven, the ſpirit deſcended a ſecond
" time, and left the woman with child of
" a daughter, who, by her brother, peo-
" pled all *America*."

This, the author thinks, has a good deal of truth mix'd with the fable. He makes the woman's ſleep and the birth of the two ſons, to be *Adam*'s ſleep, and the woman's being form'd out of his ſide. The diſagreement of the children, he ſays, alludes to *Cain* and *Abel*; and the retreat of the one ſon is the death of *Abel*, and the thunder, ſignifies the curſe pronounced againſt *Cain*. I leave this to the reader without any remarks, for I would not ſeem to oppoſe univerſal tradition for truth, altho' it may be clouded with fable.

This ſame year 1687 the marquis *Denonville*, then governor of *Canada*, march'd with a party of his own militia from *Quebec* and *Frontinac*, as alſo a conſiderable number of the natives of the country both about *Canada* and the great lakes, to chaſtiſe the *Iroqueze* who liv'd to the eaſtward of the lakes *Ontario* and *Erie*; and the *French* marching too ſecurely were attack'd by ſome of thoſe ſavages who lay in ambuſcade for them, and loſt 100 of their men and 10 *Indians*; but their allies, the *Ilinois*, *Oumamies*, *Hurons*, and *Outaovas* falling upon the *Iroqueze*, they ſoon diſpers'd them, and brought the heads of 80 of them to *Denonville*, preſſing him to purſue the victory; but finding him not ſo forward as they wiſh'd, they retir'd to their ſeveral countries not very well ſatisfy'd with the conduct of that governor.

The following year the baron *la Hontan* made diſcoveries farther up the *Miſſiſippi* than the *French* had gone before, and was civilly entertain'd by the *Eſſanapes*, and ſome other nations higher up the river, but that expedition being of little conſequence, we ſhall not inſiſt upon it.

But the revolution happening in *England*, and war breaking out between *England* and *France*, put the plantation of *Canada* in ſome danger. For Monſ. *De Frontenac* ſucceeding *Denonville* in 1689, in the government of *New France*, had intelligence in the month of *October*, that 34 ſail of *Engliſh* had been ſeen off *Tadouſac*. *De Frontenac* had this account at *Montreal*, where he then was, and immediately ſet out to fortify and defend *Quebec*: and upon his arrival, put all things in order, whilſt the *Engliſh* fleet lay within two leagues of that city *catching of flies*, as our author expreſſes it. At laſt the admiral ſent a ſloop to *Quebec*, which, having a *French* flag, made towards the town; but was met by another from the governor. As ſoon as they came up ſides with one another, the *French* officer ask'd, *what they wanted?* to which an *Engliſh* major anſwer'd, *That he had a letter to the governor, which he deſir'd he might deliver to him out of his own hand.* Upon this, the *French* officer took him on board his ſloop, and, having hoodwink'd him, brought him before *Frontenac*, to whom the major, having his face uncover'd, deliver'd his letter, of which the ſubſtance was this:

Harris's Bibl. *Vol.* II. *p.* 921.

The Engliſh *fleet arrives before* Quebec.

I *Sir* Will. Phipps, *general of the forces of* New England, *by ſea and land, to count* Frontenac *governor general of* Quebec, *by order from, and in the name of* William *and* Mary *the third, king and queen of* England, *am come to make myſelf maſter of this country. But in regard that I have nothing ſo much at heart, as the preventing effuſion of blood, I require you to ſurrender at diſcretion, your cities, caſtles, forts, and towns, as your perſons: aſſuring you, at the ſame time, that you ſhall meet with all manner of good uſage, civility and humanity. If you do not accept of this propoſal, without any reſtriction, I will endeavour, by the aſſiſtance of heaven, on which I rely, and the force of my arms, to make a conqueſt of them. I expect a poſitive anſwer in writing, in the ſpace of an hour; and in the mean time, give you notice, that after the commencement of hoſtilities, I ſhall not entertain any thoughts of accommodation.*

The admiral's letter to the governor.

Sign'd

William Phipps.

This letter having been tranſlated to the governor, he immediately gave orders to have a gibbet ſet up before the fort, to hang the major, who was like to ſwoon away at the orders; and he had certainly been ſtrung up, but for the interceſſion of the biſhop and the intendant who were preſent. Monſ. *De Frontinac* pretended that the fleet was a neſt of pirates, or perſons without commiſſion, for that the king of *England* was then in *France*; *for he knew no king of* England *but* JAMES II. *and that his rebellious ſubjects were pirates, and he neither dreaded their force, nor regarded their threats:* Having ſaid thus, he threw *Phipps*'s letter in

His anſwer.

in the major's face, and turn'd away; and when the major (taking a little courage) desir'd an answer in writing, the governor told him, with a great deal of contempt, *That his admiral deserv'd no other answer but what flew from the mouth of cannons.* Thus the major being again blind-folded, was carry'd to his sloop.

The English *land.* The next day, about 3000 men landed out of the fleet, and march'd in good order towards the town, which was about 4 miles from the place where they landed. But upon their first manning their boats, the governor had sent to some of the *Indians* who were in arms for him, to take their station in a copse of brambles, near which the *English* must pass, and to disperse themselves thro' the whole copse, above a mile broad; where letting the *English* enter sufficiently, they attack'd them from several places at once, both with arrows and fire-locks, which unexpected assault so allarm'd them, that *La Hontan* says they fled crying out *Indians! Indians!* 300 were slain upon the spot; the *French* losing only 10 forrest rangers and four officers. The next day the *English* landed four pieces of brass cannon, but being again engag'd, altho' they behav'd with great courage, were a second time repuls'd, the same copse being the field of battle, where the *French* and *Indians* had the advantage of the ground; and our author says, that the admiral behav'd as if he had been hir'd by the *French* to stand *with his hands in his pocket.* About the same number fell that day as the former, and the *French* pursu'd them to their camp, intending to beat up their quarters as soon as day appear'd; but the *English* sav'd them the labour, for they embark'd at midnight, but in such a hurry and confusion, that they did not so much as secure their retreat, so that the *French* kill'd above 50 of them as they were getting into their boats.

But are repuls'd.

The next morning they brought the *English* tents and brass cannon to *Quebec*, and the savages strip'd the dead in the copse, and at the water side. And our author, who makes himself very merry with Sir *William Phipps*'s military skill, says, that he weigh'd anchors, and came within musket shot of the lower part of the city, where the *French* had only one battery of six or eight pounders. There he cannonaded so handsomely, that the fire of the great guns equall'd that of the small arms, and the damage they did to the roofs of the houses amounted to five or six pistoles. But having, by chance, got Mons. *Joliet*, with his wife, his mother, and some seamen into his hands, as they were coming by water to *Quebec*, he sent to the governor to exchange them for some of the *English*, which being granted, and the prisoners on both sides releas'd, the *English* fleet weigh'd anchor, and departed. The baron *De Hontan*, who gave the account of this attempt upon *Quebec*, was dispatch'd to *France* with the news.

They sail homewards.

As this relation is entirely *French*, there may be some doubt of the truth of it, as to particulars. But however Sir *William Phipps* behav'd, the *French* found, to their cost, that there were other *English* knights, with the character of admirals, who knew so well how to attack both ships and towns, that a great number of Louis-d'or's did not pay the damage. But so far is certainly true, that the attempt upon *Quebec* prov'd abortive.

During the two last wars with *France* there were several attempts made by the *English* upon the *French* plantations here and in other places of *America*, but as we do not design the history of that country, we shall pursue that subject no farther.

This country of *New France* is of vast extent, lying all along the river of S. *Laurence* or *Canada* from north east to south west for above 2000 miles to the *Mississippi* river, so that the *French* surround all our plantations upon the continent; and had the *French* king come into the baron *De Hontan*'s measures, and built forts at the entry into all the lakes in *New France*, he might have disturb'd the *English* plantations on the east side of the river of *Canada*, or made their commerce with the several nations of the *Indians* impracticable; and had the *English* done the same, they had undone the *French*.

The whole country as, at present, possest by the *French*, is divided into two parts, *Canada*, and *Louisiana*, or east and west *Canada*.

Canada, as distinguish'd from *Louisiana*, begins at the mouth of S. *Laurence*'s river, and reaches as far as the lakes of *Huron*, and *Erie*, otherwise call'd *Isle du Chat*, or the *Cat Island*. The *French* pretend a right to both sides of the river, but we reckon only the north side of it to be comprehended in *Canada*. The chief settlements belonging to the *French* in this country are

Engl. Atlas *p.* 248.

Settlements in Canada.

I. *Quebec*, the capital of *Canada*, about 300 miles from the mouth of the river. This town is divided into the upper and lower towns. In the upper, there is a strong citadel, where is the residence of the governor, and of the intendant, and there likewise all the courts are kept. Near the governor's house in the citadel, is the magazine for ammunition and provisions: and in this upper town is the chap-

1 Quebec.

ter-houſe, a noble building, where 12 prebendaries are conveniently lodg'd: There is likewiſe a fine church belonging to the jeſuits, joining to which is their convent, and a college for 50 ſcholars, with convenient apartments and large gardens. Beſides the jeſuits church, there are ſix others in the upper town: the aſcent from the lower town to the upper is pretty broad but ſteep. The merchants live, for the moſt part in the lower town, for the ſake of the harbour, and have good ſtone houſes, three ſtories high: And there are two villages near the town inhabited by 500 *Indian* converts.

II. *Iſland of* Orleans.

II. The iſland of *Orleans*, in the river, about four miles north eaſt from *Quebec*, is ſeven leagues long, and three broad; it produces corn of all ſorts, and pays 1000 crowns a year rent. The canal, on the ſouth ſide of it, is navigable for ſhips, but that on the north only for boats.

III. Trois Rivieres.

III. *Trois Rivieres*, or the three rivers, is a ſmall city 30 leagues ſouth weſt from *Quebec*, at the mouth of the lake of S. *Peter*. This colony is rich, and the town abounds in ſtately houſes; and has its own governor. Their trade, is for beavers with the neighbouring *Indians*. The river here is full of ſhelves, and the great quantity of eels taken here is of great uſe to them.

IV. *St. Peter's Lake.*

IV. S. *Peter's* lake, ſouth weſt from *Trois Rivieres*, is not properly one plantation, but a collection of ſeveral colonies which conſiſt of many houſes built at the mouths of ſeveral rivers, which loſe themſelves in the lake. The lake itſelf is of a conſiderable compaſs, and by our maps ſeems to be of an oval ſhape; but it is either very ill repreſented in the map, or elſe it is not the fifth part ſo big as they call it. The rivers, which run into it, are well ſtor'd with ſeveral kinds of fiſh.

V. Sorell.

V. *Sorell*, on the weſt end of this lake, is the only colony, of the *French* upon the ſouth ſide of the great river, (except *Chambli*, of which hereafter.) It is a canton four leagues in front, and the country about it, eſpecially along the river, well peopled.

VI. Montreal.

VI. *Montreal* or *Mont Royal*, on an iſland of the ſame name, 120 miles ſouth-weſt from *Quebec*, is the ſeat of a governor accountable to the governor of *Quebec*, who has 1000 crowns a year ſalary, which he improves by trading, with the *Indians* about the great lakes, for furs, which they exchange for arms, axes, knives, cattle of *European* breed, &c. by which traffic the *French* commonly clear 200 *per cent*. The merchants of *Montreal* are generally factors to thoſe of *Quebec*; this ſort of trading is free to every one, ſo that this is a good place to get an eſtate in. The governor general goes thither once a year, to ſhare the perquiſites with the governor of *Montreal*, and to get preſents from the *Indians* thereabouts. There are a ſort of pedlars who frequent this iſland, and are known by the name of *Coureurs de Bois*, who trade in canoes amoug the natives round the lakes, or upon the rivers, and ſtay abroad ſometimes a year and a half upon one voyage, and ſo return well fraught with furrs, of which they make 150 *per cent*. which (like our ſeamen, when a man of war is paid off) they ſpend upon their miſtreſs and the bottle, and then aboard the canoe again. Thoſe pedlars have the management of two licenc'd canoes belonging to the merchants of *Montreal*, on each of which they load goods to the value of 1000 crowns, which bring home a ſurprizing profit. This is the fartheſt that the river of S. *Laurence* is navigable, which is occaſion'd by cataracts, and a ſort of falls, of which there are three or four between this iſland and *Frontinac*; but theſe are not ſo high, but the pedlars can drag their empty canoes againſt the ſtream, and having carried their cargo's, by land, paſt the catatacts, load their canoes on the other ſide, and ſo proceed to the lake *Ontario*.

VII. Cham bli.

VII. *Chambli* lies upon the ſame river, which runs into that of S. *Laurence* at *Sorell*, being about half way between fort *Sorell*, and *Champlain Lake*, from which there is a river, that takes its riſe within two leagues of *Hudſon's* river: ſo that by carrying canoes over that carrying place, one may paſs down *Hudſon's* river to *New York*. This fort made good *La Hontan's* ſcheme to *Louis* XIV. for, after it was built, the natives left that part of the country, and retir'd towards the *Engliſh* plantations, and probably would have done the ſame about the other lakes, had forts been built, as the baron propos'd.

Upon the entry to *Champlain Lake*, fort *De la Motte* is mark'd in our maps, but probably it is now demoliſh'd, or neglected, becauſe it is not taken notice of as a *French* colony.

VIII. Fronti nac.

VIII. Fort *Frontinac* lies on the north ſide of the lake *Ontario*, the communication to which is by S. *Laurence* river, and is about 150 miles ſouth weſt from *Montreal*. This fort is very commodious for the *French*, becauſe of the conveniency of tranſporting goods to their colonies both in *Canada* and *Louiſiana*, by water carriage, which one would think, ſhould make them give the natives better prices than the *Engliſh* of *New York*; and yet it appears, that the *Indians* chuſe to carry their furrs to *New York*, moſtly by land, and find their account in doing ſo, rather than let the *French* have them nearer home.

This

This fort lies too near the formidable cantons of the *Iroqueze*, who were dangerous enemies to the *French*, as having been long in amity with the *Engliſh*. Thoſe people inhabit the ſouth part of *Ontario* lake, and are divided into five cantons within 30 leagues of one another; each canton reckon'd to conſiſt of 14,000 people, of which 1500 bore arms. It was to thoſe that father *Hennipin* was ſent, as we obſerv'd before, but they could not be prevail'd upon to deſert the *Engliſh* intereſt, which was the chief deſign of the miſſion. Their country is fruitful and pleaſant, and their chief buſineſs is hunting of beavers, and fiſhing in the lakes and rivers. Theſe eight colonies mention'd are the moſt conſiderable which the *French* have in *Canada*.

Louiſiana. *Louiſiana* or *Weſt Canada*, is that part of *New France*, which, by the *Spaniards* was known by the common name of *Florida*. The diſcovery of this country by the *Spaniards*, and their ill ſucceſs, we have treated elſe where; * and of the later diſcoveries by Monſ. *De la Salle* and father *Hennipin*, we have ſpoken in this chapter: ſo that we ſhall only add, that in 1712 *Louis* XIV. gave a grant of it to Monſ. *Crozat*, under the name of *Louiſiana*, and chang'd the name of *Miſſiſippi* river to that of S. *Louis*. But ſince the death of that monarch, it is the property of the united eaſt and weſt *India* companies: and under the old name of *Miſſiſippi*, during the regency of the late duke of *Orleans* in 1719 made ſuch a noiſe in *Europe* as will not be ſoon forgot, and can be equall'd by nothing, but our own *South Sea*, the year after; in both which, ſo many families were ruin'd, whilſt others made eſtates, upon an imaginary fund, which vaniſh'd as ſoon as *ſome people had made their beſt of it*; and ſome few others, not privy to the cheat, had luckily, rather than wiſely, drawn out their ſtock with unaccountable profit.

* Univ. Tr. *ch.* v.

The extent of *Louiſiana* is very uncertain, moſt part of what the *French* claim as their property, being as yet in the hands of the *Indians*, who own no obedience to them. It is reckon'd to begin from the great lakes of *Huron* and *Erie*, and takes in the whole length of *Miſſiſippi* river on both ſides; ſo that it is bounded by the *Engliſh* plantations of *Carolina*, *Virginia*, &c. on the eaſt; by the gulf of *Mexico* on the ſouth; by the *Spaniſh* conqueſts, or rather by the ſavage *Indians* on the weſt; and by countries not as yet diſcover'd on the north.

The chief ſettlements of the *French* in this vaſt country are but very inconſiderable; ſuch as, 1. *Fort Louis* in the bay of that name, which we mention'd to have been erected by *De la Salle* in 1685. 2. Another *Fort Louis*, to the eaſt of *Miſſiſippi* river, in the *Bay of Mobile*, lat. 31 deg. 3. *Penſacola*, about 20 leagues eaſtward of the bay of *Mobile*, which they took from the *Spaniards* in 1719. Other forts near the lakes in the north parts of *Louiſiana* are either mention'd before, or ſo inconſiderable as not to deſerve any notice.

American iſlands ſubject to the French.

What other dominions the *French* have in *America*, are in the iſlands. We do not mention *Placentia* in *Newfoundland*, becauſe the whole iſland was given up to us, by the treaty of *Utrecht*. The *French* iſlands are,

I. *Part of* Hiſpaniola.

I. The weſtern part of *Hiſpaniola*, but indeed the places ſubject to the *French*, ſuch as the greater and leſſer *Guavus* are, for the moſt part inhabited by buccaniers, and free booters, who are generally *French*.

II. Tortuga.

II. *Tortuga*, over-againſt the north weſt end of *Hiſpaniola*; it is about 60 leagues in compaſs, full of tall trees; it produces yellow ſaunders, guiacum, gum, elemi, *China*-roots, alloes, and moſt other roots and fruits that grow in the neighbouring iſlands. There are likewiſe, in this iſland, palm trees, wild boars, and wild pidgeons in great plenty; it alſo produces ſome tobacco. There is in it but one harbour capable of large ſhips, with a little town and fort.

III. *St.* Croix.

III. S. *Croix* or *Santa Cruz* ſouth eaſt from *Porto Ricco*, lat. 18 deg. It is about 10 leagues long, and two broad. The product of it much the ſame with the other adjacent iſlands. There they find good timber for building, and dyers wood, and a peculiar ſort of tree, call'd *Mamoa*, becauſe of the ſhape of the fruit, reſembling a woman's breaſt, which this tree produces once a month, and is very pleaſant to the taſte. Here is a good harbour on the north ſide of the iſland, and a little town, with a handſome houſe for the governor.

IV. *St.* Bartholomy.

IV. S. *Bartholomy*, ſouth eaſt from S. *Croix*, little different in latitude. It is five leagues in compaſs, ſurrounded with rocks, and is well wooded; it produces tobacco and caſſovie, and a particular tree call'd *Canopia* which yields a pleaſant fruit. There is likewiſe ſtore of good gum, us'd as an opening medicine in phyſick. This iſland abounds in wild hogs, it has a good harbour, and well fortify'd.

V. *St.* Martin.

V. S. *Martin*'s lies north weſt of the former; it is ſeven leagues long, and five broad, and has famous ſalt mines. It has a town with a ſtrong fort and a good caſtle, where the governor has a fine palace; and there are ſeveral good churches and convents. The *Dutch* have ſome footing in this iſland.

VI. *Guadaloup*,

VI. Guadaloup. VI. *Guadaloup*, ſouth from *Antego* and ſouth eaſt from *Montſerrat*, latitude eighteen, about 60 leagues in compaſs, and divided in two by a narrow channel. It abounds with rice, maiz, mandioca, potatoes, pine apples, ſugar canes, and plantanes. The *French* here make excellent ſugar, indigo, and tobacco. There is a ſort of yellow plumb which fattens hogs. In this iſland, there are ſeveral towns, and forts; the chief of which is in the low country, and is a well built town, has many ſtore houſes, and a caſtle with four bulwarks, beſides a fort with a garriſon on a neighbouring mountain. And here is a bath ſo hot as to boil meat.

VII. Deſſeada. VII. *La Deſſeada* 15 miles eaſt from *Guadaloup*, is a ſmall iſland but fruitful, well cultivated, and abounds with fowls.

VIII. Marigalante. VIII. *Marigalante*, ſouth from *Guadaloup*, produces abundance of tobacco, and cinamon trees which are always green. It is about five leagues and a half long, and four broad; has many large and deep grotto's, ſome of which have ſprings, and in one of them is a ſmall river. The rocks abound with tropic birds.

IX. Martinico. IX. *Martinico*, the chief of all the *French* plantations in the *Caribees*, and the reſidence of the governor, is in 17 deg. of lat. It abounds with ſugar, tobacco, mandioca, caſſia, *Indian* figs, &c. The *French* here are reckon'd 15,000 beſides negroes and natives. The iſland is 45 leagues in circuit, has one handſome town with an hoſpital, as alſo a ſtrong fort and caſtle.

X. S. Lucia. X. S. *Lucia*, ſouth from *Martinico*, conſiſts of two mountains with pleaſant valleys, abounding with large trees; and well water'd; the air healthful, and the ſoil fruitful.

XI. Granada. XI. *Granada* in 12 deg. lat. is 24 leagues in compaſs, produces excellent tobacco, and is capable of producing all neceſſaries for life. The eaſt coaſt is ſafe, and navigable cloſe to the ſhore. The harbour lies in the middle of a great bay, and is defended by a ſtrong fort.

Theſe are the *French* plantations of any conſideration; ſome of which they conquer'd from the natives, others from *Spaniards*, and ſome from the *Engliſh* and *Dutch*, but at different times.

SECT. II.

The DUTCH *Diſcoveries and Plantaions in* AMERICA.

The expeditions of Mahu. THERE being little or nothing new in the voyages of *Mahu*, or *Oliver van Noord*, who only ſtop'd at ſome places of *Brazile* or *La Plata*, in their way to the ſouth ſea, and their little skirmiſhes with the *Spaniards* and *Portugueſe*, we ſhall not detain the reader, but only to ſay, that *Mahu* dying, about the the iſlands of *Cape Verd*, *Benninghen* aſſum'd his poſt of commodore over the five ſhips, with which *Mahu* had left *Rotterdam* in the year 1598. Sailing from *Cape Verd* to *Guinea*, and from thence to the coaſt of *La Plata*, they attempted the *Magellan* ſtreights, and having been almoſt ſtarv'd with cold and hunger, and juſt had it to ſay, that they enter'd the ſouth ſea; being diſpers'd, they ſought their way home again, having only 36 men left of 105. *Van Noord* taking much the ſame courſe, paſt from the ſtraits of *Magellan* thro' the ſouth ſea, and ſo to the *Eaſt Indies*, having perform'd the circumnavigation of the globe in three years. *Of* Van Noord.

Nor is there much of entertainment in the expedition of *Spilbergen* in 1614, only that, in the ſouth ſea, he burn'd ſome *Spaniſh* villages near S. *Maria* in *Chili*, afterwards, he fought a *Spaniſh* fleet commanded by *Mendoza*, and puting them to flight, ſunk moſt of them; and ſailing round by the *Philippin* iſlands return'd home, richly laden in the year 1617. *And* Spilbergen,

But *Corneliſzon Schouten* of *Hoorn* and *Jacob le Maire* having taken a new route to the ſouth ſea, we ſhall be more particular in it. Schouten *and* le Maire's *voyage*.

The ſtates-general having prohibited all others to paſs the cape of *Good Hope* eaſtward, or the *Magellan* ſtreights weſtward, except ſuch as were ſent by the *Eaſt-India* company; ſome merchants in *Amſterdam* thought to bite the company by finding a new way to the *Molucca* iſlands; and therefore fitted out two ſhips, under the direction of *Corneliſzon Schouten* of *Hoorn* and *Jacob le Maire*, who ſet ſail for *La Plata* in 1615. Hatris's Bibl. *Vol.* I. B. 1. *ch.* 8.

Having paſt the line, in the open ſea, about 4 deg. ſ. lat. they were ſurpriz'd with a ſudden ſhock given *Schouten*'s ſhip in the under part, and whilſt they were wondering what it could proceed from, there being no rock in their way; the ſea about them began to turn red, which was as ſurpriſing as the ſtroke: nor did they know the cauſe of either, till they came aſhore at *Port Deſſeado*, where having turn'd up the under part of the ſhip, they found a large horn, like an elephant's tooth, ſticking faſt in the bottom of her, of a ſolid ſubſtance quite throughout. It had pierced thro' three ſtout planks, and was above half a foot deep in timber, and as much appear'd on the outſide, where it was broken ſhort off; ſo that they perceiv'd ſome ſea monſter had puſh'd againſt the ſhip with that horn, and not being able

able to draw it out again, it had broken off, and occaſion'd the effuſion of blood that had colour'd the water. As they came along the coaſt of *Magellan land*, they had like to have loſt both their ſhips, near *Penguin* iſland, but by providence the next tide brought them off the rocks, upon which they had ſtuck for ſome hours; but ſoon after, the *Catch*, one of the two, taking fire upon being new tallow'd, was burn'd to aſhes; ſo that both the captains were aboard one ſhip; in which they ſet ſail from *Port Deſſeado* on the coaſt of *Magellanic Land*, and concealing their deſign, paſt the mouth of the ſtraits, and found themſelves in lat. 54, where they ſaw ſuch vaſt numbers of whales, that they were fain to trip to and again to keep clear of them. Seeing ſeveral iſlands thereabouts, they gave them new names, having no knowledge of the old ones. Thus they call'd a large iſland to the eaſtward of the ſouth eaſt cape of *Terra del Fuogo*, the *States Iſland*, another farther weſt, *Maurice of Naſſau*; and a cluſter of iſles thereabouts, the *Barneveld's Iſles*, and the ſouthmoſt point of the *Terra del Fuogo* they nam'd cape *Hoorn*.

Le Maire's Streights.

They ſail'd between the main land and the *States Iſland*, and that paſſage has been call'd ever ſince *Le Maire*'s ſtreights, and ſailing round the cape *Hoorn*, they found themſelves in the ſouth ſea in 59 deg. which is ſeven deg. difference from the entry to it at the ſtreights of *Magellan*. They gave names likewiſe to the iſlands about cape *Hoorn*, calling one the *Iſland of Dogs*, becauſe there were many ſuch upon it, but they never bark'd; to another they gave the name of the *Bottomleſs Iſland*, becauſe they could find no anchoring ground there; other two iſlands they call'd *Water Iſland* and *Flies Iſland*, for the abundance of water in the one, and ſwarms of flies in the other.

Upon one of theſe iſlands, *Le Maire* and one *Claeſzoon* went aſhore, and were receiv'd by the king, with all the abject ſubmiſſion imaginable, proſtrating himſelf before them, and putting the *Dutchmen*'s feet upon his neck, and giving them his crown curiouſly wrought of different colour'd feathers.

The entertainment in this iſland was ſomewhat odd. The women were not ſo modeſt as they ſhould have been, and the drink made after ſuch a manner, that if it were not for the honour of drinking with a king, I ſhould chuſe to drink water by myſelf rather than to taſte of his cup. The way of making the liquor was this; a great number of natives come into the king's preſence, having a green herb call'd *Cava*, ty'd about their middle; which (having made their honours to his majeſty) they all begin at once to chew, throwing the herb, after they have chew'd it, into a wooden trough; and putting water to it, they work it with their hands, and ſo bring it to the king upon their heads, preſenting it to him upon the knee.

Sailing from theſe iſlands, they purſu'd their voyage to the *Eaſt Indies*, where for a recompence of having found an eaſier paſſage to the ſouth ſea, than that thro' the *Magellan* ſtreights, their ſhip was confiſcated by their own countrymen belonging to the *Eaſt India* company, and themſelves ſent home aboard other ſhips.

They loſe their ſhip & cargo, being confiſcated by their own countrymen.

L'Heremite *and* Scapenham *ſent by the* Dutch *to take* Spaniſh *ſhips.*

Jacque L'Heremite and *Scapenham* were ſent out by the *Dutch* in 1623 to cruize upon the ſouth ſea, and make prize of all the *Spaniſh* ſhips that came in their way. Theſe two, with 10 ſhips and 1600 men, held that ſame courſe, their countrymen had done of late, and took ſeveral ſhips before they arriv'd in the ſouth ſea. After they had doubled cape *Hoorn*, they coaſted along *Chili*, and *Peru*, taking and burning many rich ſhips belonging to *Spain*. But thoſe two admirals dying one after the other, the fleet made the tour of the globe, and ſo return'd.

Brewer's *expedition.*

The laſt *Dutch* expedition we ſhall take notice of to *South America* is that of capt. *Henry Brewer* in 1643, who having paſt *Le Maire*'s ſtreights, came to a fair bay on the ſouth coaſt of *Chili*, not far from *Caſtro*, where they landed, and gave the name of *Brewer*'s *Haven* to that bay. The night following, two great guns were fir'd from a hill near them; lieutenant *Ter-Bergen* being ſent to the top of the hill, with a party, found a village behind it, where the inhabitants had taken the allarm; ſo that as he approach'd, they fir'd upon him, and attack'd him with horſe and foot; but he behav'd ſo well, that he ſoon put them to flight, after they had loſt ſeveral men and horſes. *Ter-Bergen* purſu'd them to the woods, and had the good luck to ſhoot the *Spaniſh* commander *Iſſavera*, which ſo diſcourag'd the *Spaniards*, that they made little reſiſtance. He got a conſiderable treaſure hidden in the wood, the inhabitants having, upon the firſt ſight of the *Dutch* ſhips, carry'd their moſt portable riches thither; and having kill'd all the horſes he met with, and burn'd the village, he retir'd to his companions below the hill.

Setting ſail from *Brewer*'s *Haven*, they landed at *Caſtro* in lat. 44 and burnt the town, which was ſituated on a mountain ſurrounded with flowry meadows and pleaſant orchards. But making no ſtay there,

there, he coaſted along towards *Baldivia*; near *Oſorno* he took a *Spaniſh* ſhip, and was inform'd by the crew, that there was much gold in thoſe two places. But having taken ſome *Indian* priſoners, he found by them, that they mortally hated the *Spaniards* for the cruelties they had exercis'd towards them. *Brewer* entertained all the native *Chileſes*, whom he could perſuade to come to him, and they ſoon came to have a great liking for the *Dutch*. But *Brewer* dying before any thing could be made of this alliance, *Herkman* ſucceeded to his command, and made ſo much of the *Chileſes*, that they told him that they had, ſome time before that, demoliſh'd the colony at *Baldivia*, which conſiſted of 550 houſes well built, with fine churches and large ſtreets: that they had put the garriſon to the ſword, and had pour'd melted gold down the governor's throat, and had made a drinking cup of his skull, and trumpets of his ſhin bones.

Herkman making advantage of this account, made the greateſt invectives againſt the *Spaniards*, and told the *Chileſes*, that his countrymen had ſerv'd them after the ſame manner for their cruelty, and had thrown off their government; and that he and all his people were ready to join with them againſt the *Spaniards*; but withal he ſaid, it was neceſſary to build a ſtrong fort in *Baldivia* to enable them to withſtand the *Spaniards*, who might come from the other *Spaniſh* colonies in *Chili*, as alſo to make ſtore-houſes, and to fill them with proviſions of all kinds, in caſe of a ſiege. To all theſe the natives agreed, and immediately ſent great plenty of proviſions to their ſhips, and told them they might come aſhore when they would and they would conduct them to *Baldivia*, and aſſiſt them in every thing they wanted. But *Herkman* unluckily inquiring about gold, the natives ſeem'd thunder ſtruck, and from that moment alter'd their behaviour, and by degrees withdrew their favours, and at laſt would not come near the *Dutch*, nor give them any proviſions; ſo that *Herkman* not being able to reconcile them to him, nor in a condition to force them to obedience, left the coaſt of *Chili*, and in a ſhort time return'd home.

Whether the *Dutch* plantations, in *America*, are of ſo little conſideration (being only in the ſmall iſlands call'd the *Antilles*) that writers have not thought it worth their while, to give any particular hiſtory of their getting poſſeſſion of them, I cannot ſay; but I have not met with any who gives an account of their conqueſts or planting thoſe iſlands, unleſs any thing comes in occaſionally in ſome other voyages, and that very ſeldom; I ſhall therefore only touch upon their colonies, and give the ſituation of them as they lie in the map, with ſuch an account of the product of them, as I can find authority for. They are theſe following. Dutch colonies.

I. *Saba*, a ſmall iſland lying between *Porto Ricco* and S. *Chriſtopher's* in 18 deg. n. lat. at firſt planted by the *Dutch*, but for ſome time poſſeſt by the *Danes*, but afterwards recover'd by the firſt planters. It is like a rock in the ſea at a diſtance, but is fruitful and pleaſant. The ſea is ſo clear near this iſland, that one can ſee a ſtone at the bottom of it; and it abounds with the fiſh call'd *Bonito*. I. Saba. Ogilvy's America. Caribee Iſlands.

II. S. *Euſtace*, lies ſoutheaſt from *Saba*, in 17 deg. and a half. It is not above five leagues in compaſs, and yet has a colony of 1600 *Dutch*. Altho' it is naturally ſo ſtrong that a few people may be able to defend it againſt a great number, yet the *Dutch* built a ſtrong fort which commands the harbour. This colony makes great advantage of their tobacco, fowls, hogs and goats, which they ſell to neighbouring iſlands. In the middle of the iſland there is a mountain which is ſeen a good way at ſea, on the top of which the trees grow to a point like a piramid. It has a pleaſant vale all round it, but they are in great want of freſh water, ſo that they are forced to uſe rain water, which they preſerve in ciſterns. The air of this iſland is wholeſome, and the ſoil fruitful; but it is very ſubject to earthquakes, and terrible hurricanes, which are more frequent now than formerly. Theſe daſh ſhips to pieces in the road and harbour, throw down houſes, tear up trees by the roots, rend mountains, plunge great pieces of rocks into the ſea. But they have, generally, warning of them before they happen; for the ſea is for the moſt part calmer than ordinary before they come, the birds fly from the mountains in flocks, and ly flat upon the ground in the valleys; and there falls a rain of ſalt and bitter water. This iſland was ſeveral times taken, ſometimes by the *French* and ſometimes by the *Engliſh*, but it was reſtor'd to the *Dutch* by the peace of *Reſwick*. II. St. Euſtace.

III. S. *Vincent*, weſt from *Barbadoes*, is eight leagues long and ſix broad. It got this name from the *Spaniards* for having diſcover'd it upon the anniverſary of that ſaint. This iſland was well peopled by the *Caribeans* before the *Spaniards* poſſeſt it. It is a fruitful ſoil, and abounds with ſugar canes, &c. There are *Engliſh* in the iſland, but the greateſt part of it is poſſeſs'd by the *Dutch*. The *Momen* here is much eſteem'd, it grows like an apple tree, and the fruit is like a green cucumber, but of a delicate taſte. III. St. Vincent.

IV.

IV. Bon-air.

IV. The next iſland in the *Dutch* poſſeſſion is *Bon-air* iſland, eaſtward of cape *Roman*, in the great bay of *Terra Firma*, lat. 12 deg. About the middle of this iſland, on the ſouth ſide, is a good harbour; and the *Dutch* have a good garriſon in the iſland, and there are ſeveral villages, where the natives live very peaceably. Here is abundance of cotton trees, guiacum, maiz, and guinea corn, and a good ſalt pond. The iſland is about 17 leagues in compaſs.

V. Curaſſaw.

V. Weſt of *Bon-air* is *Curaſſaw*, the chief place of trade of all the *Dutch* colonies in *America*. It is about 13 leagues round, a good ſoil, and the country plain. Here they have large black cattle, and make good cheeſe for their own uſe, and to export. There are many plantations of ſugar; a hanſome town, with a citadel, and good harbour. The merchants are rich, and the *Dutch* allowing liberty of conſcience, the town is made up of all nations, and all religions, who drive a vaſt trade all over the *Weſt Indies*, particularly with *Terra Firma* for negroes and *Dutch* manufactures, which they ſell for pearls, jewels, indigo, cocoa, cochenile and tobacco. This is the ſeat of their governor, and court of juſtice.

VI. Aruba.

VI. The laſt iſland ſubject to the *Dutch* is *Aruba* or *Oruba* juſt before cape *Roman*, and weſt of *Curaſſaw* about 20 miles. The product of this iſland is ſheep, goats, and ſome ſugar.

These are all the *Dutch* plantations in *America*, and indeed it is ſtrange that ſuch a trading country as *Holland*, have not got more footing in the *Weſt Indies*, but I ſuppoſe, it was very much owing to their having been intent upon worming the *Engliſh*, and *Portugueſe* out of a good part of the trade, in the *Eaſt Indies*, which hinder'd them from minding that of the *Weſt*: but of that we ſhall have occaſion to ſpeak elſewhere.

Thus we have gone thro' all the parts of *America* both ſouth and north, as far as they have been as yet diſcover'd by *Europeans*, with any certainty; and as far as we could have authors of credit for vouchers, have given an account of their firſt diſcoveries, and of the difficulty the ſeveral *Europeans* found in planting them. If we have ſeem'd to have dwelt too long upon ſome conqueſts, and to curtail'd others, it was becauſe thoſe adventures in which we have inſiſted longeſt, ſuch as *Mexico* and *Peru*, were not only the firſt atchievements of the *Spaniards* who were the firſt diſcoverers of *America*; but they were likewiſe of the greateſt importance, as being the conqueſt of two vaſt monarchies; whereas the others, were but the ſubduing of petty provinces in reſpect of them. Beſides, that after having related all that was neceſſary to be ſaid in the conqueſt of thoſe great empires, a great deal of what we found in other wars with the *Indians*, was but a kind of repetition of adventures very like thoſe related before. And therefore, as we made it our ſtudy, according to the beſt of our skill, and materials and time allow'd us, to make this work both diverting and uſeful to the reader, we judg'd it proper to cut off a great many ſuperfluities, which have ſwell'd other books upon this ſubject, altho' we hope there is nothing worthy of being inſerted, that is left out, as far as it came to our knowledge.

All that now remains with regard to *America* is to give the *Natural* and *Moral* hiſtory of it; which we have reſerv'd to a diſtinct chapter, both to avoid repetions, and to give our readers a clearer idea of what is moſt worthy to be taken notice of, in the vaſt country hitherto deſcrib'd.

CHAP.

CHAP. VIII.

The NATURAL *and* MORAL Hiſtory *of* AMERICA.

In treating this ſubject, we ſhall chiefly follow *Acoſta* as being the author of greateſt credit, as having liv'd a long time in different parts of *America*, and one who writes with good judgment and modeſty, and therefore with him we ſhall divide this chapter into two diſtinct parts, *viz.* I. The *Natural* Hiſtory, and II. The *Moral*: but inſtead of the breaks he makes, by books and chapters, we ſhall content ourſelves with putting the different heads upon the margin.

SECT. I.

The Natural Hiſtory of AMERICA.

THE ancients, conſidering that the nearer the ſun approach'd to the different countries where they reſided, the greater the heat was in thoſe countries; and, on the contrary, that as the ſun remov'd farther ſouth, the cold weather increas'd; and finding, that in ſome parts of the world which they knew, (ſuch as *Greece*, *Italy* and *Spain*, and on the other ſide of the *Mediterranean*, *Barbary* and *Egypt*; or farther eaſt, in all that part of *Aſia* which lies northward of the tropic of *Cancer*) the heats were very exceſſive during the ſummer months, and the colds proportionable in the winter: This experience made them conclude, that, in thoſe parts of the globe, to which the ſun is, for the moſt part, perpendicular, there could be no living for fear of being burnt up; whereas, on the other hand, in the places near the poles, they thought it impracticable for any creatures to ſubſiſt for cold. For both reaſon and experience taught them, that the more direct or perpendicular the ſun-beams are to any place, they heat it the more; therefore if the weather was ſo hot during the ſummer in *Greece*, *Italy* or *Spain*, which are 17 deg. from the tropic of *Cancer*, the *ne plus ultra* of the ſun northward, what could they imagine muſt happen in thoſe countries lying between that tropic, and the line, and as far ſouth on the other ſide of the line? therefore *Ariſtole*, as quoted by *Acoſta*, * was of opinion that the torrid zone was not inhabited. To this *Ovid* alludes †

The torrid zone believ'd uninhabitable by the ancients.

* Nat. Hiſt. *of the* Indians *p.* 28. Eng. Ed. 1604.

† Met. lib 1.

Quarum quæ media eſt, non eſt habitabilis æſtu;
Nix tegit alta duas.——

The middle Zone thro' heat unpeopl'd lies;
Two more are hid in ſnow.——

And *Virgil* was of the ſame opinion ‖.

‖ Geo. l. 1.

Quinque tenent cœlum Zonæ: quarum una coruſco
Semper ſole rubens, & torrida ſemper ab igni:
Quam circum extremæ, dextra levaque, trahuntur,
Cerulea glacie concretæ, atque imbribus atris.
Has inter, mediamque, duæ mortalibus ægris
Munere conceſſæ Divum.

——Five Zones divide
The Heavens: of which one red with ſolar fire,
For ever burns: two, (one on either hand,
And on the globe's extremes,) round this are drawn,
Stiff with green ice, and black with low'ring clouds.
'Twixt thoſe and that which fills the middle ſpace,
Two, by th' indulgence of the Gods, were given
To weary mortals.——

Dr. TRAPP.

But the ground of this error in the ancients was a miſtake in fact. For they were of opinion that drought and heat were the neceſſary conſequences of the ſun's being near a country, (and indeed, for the moſt part it is ſo without the tropicks) yet experience ſhews the contrary in the torrid Zone, that is, 23 degrees from the equinoctial line both ſouth and north; for the countries north of the line, within the tropic of *Cancer*, have the cleareſt

The ground of this error.

cleareſt and faireſt weather, when the ſun is fartheſt ſouth, and ſo remov'd at the greateſt diſtance from them; and, on the contrary, they have the greateſt rain, ſnow and miſts, when the ſun is directly over their heads. Thus in *New Spain*, and in the iſlands of *Cuba*, &c. between the line and the tropic of *Cancer*, when the ſun moves towards the oppoſite tropic, the air is clear and calm, they have neither rain nor ſnow, the rivers fall, and ſome of them are quite dry; but as the ſun comes back again, and paſſes the line towards them, the rain and ſnow fall, the rivers ſwell and overflow their banks. The very ſame thing is known in *Peru*, which lies in the oppoſite part of the *torrid zone* towards the tropic of *Capricorn*; their faireſt weather is in the months of *June* and *July*, when the ſun is at the greateſt diſtance from them, being near the tropic of *Cancer*; and in *November* and *December*, when they have the ſun vertical to them, their rains and ſnows fall, and their lakes and rivers ſwell.

In the torrid zone it is faireſt weather in winter.

This is found by experience, in all the continent and iſles of *America* between the two tropicks, to be the common rule of heats and dry weather. But there are other parts of the earth where there are exceptions to this rule, particularly in *Africa*; the reaſon of which may be, either from the nature of the ſoil, or from accidental winds which drive the clouds to other places; but this we ſhall take notice of in its proper place.

But the caſe is quite different without the tropicks, both in *Europe* and *America:* cold and moiſture go together, as alſo heat and drought generally ſpeaking, in the places without the tropic of *Cancer*. Our rain and ſnow are in winter, and our dry weather in ſummer. The very ſame happens without the tropic of *Capricorn*, as in *Chili* and *Magellanic Land*, always remembring that our ſummer is their winter.

And indeed the difference is ſo viſible between *Chili* and *Peru* as to the rains, that our author ſays, * the *Spaniards* in *Peru* reckon the three ſummer months of *Nov. Dec.* and *Jan.* their winter, becauſe, altho' the ſun is directly over their heads, ſo that they have no ſhadow at noon, yet then is their ſeaſon for rain, and the overflowing of the rivers. Nor is there any country in the world, without the tropicks, that has more plenty of water, in lakes, rivers, and marſhes, than thoſe parts of *America* which ly within the *torrid zone*; which makes travelling in ſummer very difficult, and the rivers overflow their banks ſo frequently, about that time of the year, that thoſe who live near the river of *Plate*, forſeeing its overflowing, abandon their houſes, and taking proviſions for three months, live in canoes, or retire to places not overflow'd, till the river ſubſides. Altho' this river falls into the ſea beyond the tropic of *Capricorn*, near *Buenos Ayres* in 36 deg. ſ. lat.; yet it takes its riſe (as well as that of the *Amazons*, otherwiſe call'd *Maranon*, and the river *Magdalena*, or *Rio Grande*) between the equinoctial line, and the ſouth tropic: and every one of theſe rivers is greater than any that were ever known in *Europe*, *Aſia* or *Africa:* that of *la Plata* being larger than the *Nile*, *Ganges* and *Euphrates* put together; and one branch of it takes its riſe in *Peru*. The river of *Amazons*, or *Maranon*, likewiſe flows from *Peru*, and is, like the other, ſo encreas'd by a number of ſmall rivers falling into it, that one may ſail in the middle of it without ſeeing land on either ſide. It croſſes the whole large country of the *Amazons*, and falls into the ocean at the line. The *Rio Grande* falls into the ocean in the north part of *Terra Firma*, and enters it with ſuch force, that for 10 leagues together, it does not mix with the water of the ſea.

* Acoſta l. II. *ch.* 5.

Beſides theſe and other conſiderable rivers, between the tropics, there are ſeveral lakes in the *torrid zone*, ſuch as, *Parime*, under the line, *Caſipa* in 5 deg. n. lat. beſides many others; particularly one very remarkable in *Peru*, call'd *Titicaca*, in the province of *Callao*, 5. lat. 15 deg. which is 35 leagues long, and 15 broad, and is ſupply'd by ten large rivers falling into it. The water of this lake is neither ſalt nor brackiſh, but yet is not fit to be drank. They have ſeveral floating villages or iſlands, upon this lake artificially made, of a ſort of reeds which the *Indians* call *Tortora*, which ſerve them for abundance of uſes. There are a ſort of brutiſh people call'd *Uros*, who making boats of this *Tortora*, tie them together, and ſo faſtening them to ſome rock in the lake, a parcel of them live together in thoſe floating habitations, and, at their pleaſure, ſhift places, and remove their iſland to a more convenient corner. This lake is well ſtor'd with fiſh and fowl, the great ſubſiſtance of thoſe wild people who inhabit the lake, and of thoſe more civilized, who live near it.

Lake Titicaca.

Altho' *Titicaca* is ſupply'd with ſo many rivers, it has but one ſmall vent out, which runs with great force for about 50 leagues, and then forms another lake. The depth of the water in this outlet, and the violence of the current, will not allow a bridge to be made over it; ſo that the *Indians* not only paſs themſelves but carry over goods, and men, who are not ſo expert at ſwiming as they are, in two or three different manners; ſometimes they

put the perſon or quantity of goods in a basket, to which they tie a rope, and ſwiming over firſt themſelves, draw the basket after them to the other bank. At other times, they make a wadd of ſtraw, or ſome light ſtuff, and getting a ſtride upon it, take the party, who wants to paſs, behind them, and then paddle themſelves over with a ſhort board. Or elſe they make a kind of float of gourds or pumpions ty'd together, upon which they place a number of perſons, or a quantity of goods, and, a parcel of them getting hold of ſome ropes, and ſwiming croſs, tow the float after them, whilſt others ſwim behind, and puſh it forward.

Many lakes, and great rivers in the torrid zone.

There are many other rivers and lakes in *America* between the two tropicks, as may be ſeen in our maps, on both ſides of the line, that is, thro' all *Peru*, the *Amazon* country, and *Brazil*, on the ſouth ſide; and in *Popayan*, *New Granada*, and all the *Terra Firma* on the north; and thoſe rivers the largeſt of any in the world; which ſhows ſufficiently the error of the antients in believing that the *torrid zone* was a parch'd up deſert, without water, and conſequently uninhabited.

The reaſon of the rain falling moſt in ſummer near the line.

I don't know whether there is any other philoſophical reaſon to be aſſign'd for the frequent rains in this part of the globe, in ſummer, than that which our author has given for it, *viz.* that the perpendicular, or vertical ſun has ſo great a force, that it exhales the vapours in ſuch quantities, that the clouds are not able to hold them, but they muſt neceſſarily fall down almoſt as ſoon as exhal'd. This he proves, by one obſervation, which indeed ſeems to be of ſome weight. That the greateſt rains fall there in the afternoon, when the ſun is in its utmoſt ſtrength. And therefore he ſays, that travellers in that country, begin their journey early in the morning, and travel till an hour after mid-day, and then reſt to be free from the rains, which generally fall after that hour. And he illuſtrates this obſervation by the known experiment of a candle, which, if the wike or cotton is too large, melts the wax or tallow, ſo that it runs down the ſides of the candle without being evapourated by the heat; whereas, if the cotton be in a juſt proportion, the flame conſumes the wax or tallow by degrees without its running down by too ſtrong heat.

Nor is this burning *zone*, as the ancients call'd it, ſo exceeding hot as they imagin'd it muſt be, from the conſtant nearneſs of the ſun. Our author ſays * that when he paſt the line, being in the month of *March*, when the ſun was directly over their heads, he was afraid, from the accounts he had read in ancient authors, that he ſhould have been roaſted: but he found himſelf agreeably diſappointed, and found it ſo cold that he went and ſate in the ſun to warm himſelf, and laugh at *Ariſtotle*.

* Acoſta B. II. *ch.* 9.

Under the line it is not exceſſively hot.

The reaſons of this temperature of the air, as he obſerves are chiefly theſe two, I. The frequent rains, formerly mention'd which cool the air; and II. The equal diviſion of day and night. For, altho' the direct rays of the ſun are undoubtedly very ſtrong in the regions between the tropicks, yet this influence laſts but a ſhort while, and then the earth has as long to cool in the night, as it had to be heated in the day. For experience ſhews that a ſmall fire long continued, heats more, than a greater which laſts but a ſhort time; thus the climate without the tropicks, on both ſides the mediterranean, for inſtance, or farther north: altho' the ſun has not ſo great force in his oblique darting of his rays, as in thoſe places to which he is vertical; yet conſidering that he warms much longer in the day time, and is a much ſhorter while abſent in the night without the tropicks than within, the length of the days, and the more quick returns of day, make up the leſs degree of heat, by the oblique falling of the ſun's rays.

Reaſons of the torrid zone's being temperate.

But this temperature is not the ſame thro' all the *torrid zone*, and it cannot be deny'd, the heats in the regions of *Africa* within the tropicks, are much more inſupportable than thoſe under the ſame parallels in *America*; and even in *America* itſelf, there is a great difference between two countries of the ſame lat. Thus there is a difference between the heat along the 10th deg. of lat. in *Africa*, and the parts of *Terra Firma* in the ſame lat. in *America*: in the *African* ſide, the heats are more intolerable, and the natives all black; whereas, in the other, it is very comfortable living, and the natives of a better colour. Thus again, there is a difference between *Brazile* and *Peru* on the ſame continent, and in the ſame lat. many parts of *Brazil* being uncomfortably hot, and thoſe in *Peru* very temperate. Conſidering then theſe, and many other exceptions, to the preceding obſervations, of the temperature of the *torrid zone*, there muſt be ſome other cauſes aſſign'd for this difference.

Exceptions from the general rule.

The reaſons given by our author for the variety mention'd, are, the neighbourhood of ſome places to the ſea; the ſituation of the places with regard to their horizontal height; and the nature and property of the different winds. I. Thoſe places near the ocean are cooller than places of the ſame latitude at a diſtance from it; becauſe the very nature of water is to cool the air; and it is obſervable that it is always colder at ſea than at land;

The reaſons of the difference.

I. The neighbourhood of the ocean.

land; ſo that thoſe places in the burning zone in *America*, being between the north and ſouth ſeas, the laſt of which is much larger than the eaſt ſea, on the other ſide of *Africa*, that may make the difference between them. But as this is not an univerſal rule, but there are exceptions to it, particularly thoſe two countries above mention'd, *Peru* and *Brazil*, our author gives a

II. *The Horizontal heighth.*

IId Reaſon for the difference of heat and cold, in diſtinct places in the ſame lat. *viz.* their horizontal heighth. It is a moſt univerſal obſervation, in all climates, that the tops of high hills are colder than the valleys and lower grounds. Thus there is ſnow upon the alpes, and other mountains in *Europe*, long after it comes to be temperate in the lower countries. And this proceeds not only from the leſs reverberation of the rays of the ſun on the mountains, as having leſs plain to reflect them; but there is this additional reaſon for it, that the region of the air is naturally colder, the greater diſtance it is from the ground; ſo that what is call'd the middle region of the air is colder than the lower region.

We ſhall not enter into a philoſophical diviſion of the air into three regions; nor enquire whether the third region is warmer than the ſecond: it is ſufficient for our purpoſe that it is allow'd by all, nor can it be contradicted, without philoſophizing away common ſenſe and experience, that the loweſt ground is the warmeſt, unleſs there be ſome other accidental cauſe which alters the caſe. So that the reaſon why ſome parts of *America* in the ſame lat. are cold, and others hot, proceeds many times from the one's being horizontally higher than the others: and altho' the high mountains ſuch as the *Cordilleras* in *Peru* and *Chili*, and the other great hills throughout this new world, are too high to make living upon them practicable; yet the riſing ground from the coaſt is ſo temperate in moſt places of the *torrid zone*, that there is very comfortable living in it, unleſs ſome accidental quality of the earth itſelf make it otherwiſe.

IIId. *The different winds.*

But the IIId reaſon aſſign'd by our author for the coldneſs of ſome parts of the globe, in this *zone*, above others is, the breezes, or the different qualities of the winds which blow in ſome places above others. Thus he obſerves that in *Brazile*, *Ethiopia* and *Paraguen* it is inſupportably hot, for want of thoſe cooling breezes, which refreſh the air, in places of the ſame latitude with thoſe, on both ſides of the line. And he affirms, that in *Peru*, the nights are not ſo hot as in *Spain*. Thus in the province of *Callao*, the leaſt ſhade defends from the heat, and you are as cool out of the ſun, as in places 20 deg. farther from the line. Nor is it only at certain times that you have ſuch cool breezes; for, as this author ſays, theſe winds reign there the whole ſummer, and hinder the groſs vapours from gathering together which, in *Europe*, occaſion thoſe heavy and troubleſome heats which laſt the whole night, and make the air as if it came from a furnace. Hence it comes, that the mornings are the only tolerable hours for refreſhment, in other places, but in *America*, where thoſe breezes predominate, it is comfortable even in the hotteſt time of the day, and all the night over.

But let people philoſophize as much as they will, I own myſelf ſo unfaſhionable, as to attribute the temperature of the air in different regions to the wiſdom and goodneſs of the ALMIGHTY CREATOR, who at the beginning provided for every climate, what he ſaw moſt convenient for ſuch as he deſign'd ſhould inhabit the different parts of the earth. And altho' GOD works by ſecond cauſes, and that many natural reaſons of things which appear very odd, have been diſcover'd by many, who, in different ages, have given into the ſearch of nature; yet I am firmly perſuaded, that PROVIDENCE muſt be the *Dernier Reſort* for many *Phænomina* not to be diſcover'd by philoſophy; and, without queſtion, they who are truly philoſophers will be of my opinion, and, with the royal pſalmiſt thankfully ſay, *O* LORD! *How manifold are thy works? in wiſdom haſt thou made them all*, &c. This our author was ſo ſenſible of, that he reſolves all into the great efficient cauſe, after he had taken ſome pains to account for the different ſorts of winds, and of the different effects they have, upon the places where they blow; and after he had ſhewed that the eaſt wind, which is commonly hot and troubleſome in *Spain*, is the wholeſomeſt and cooleſt in *Murria*; and this could not proceed from the different regions of the heavens by which they are call'd, and ſo take their qualities from thence, becauſe, as he well obſerves, a wind from the north in one part muſt blow the ſame way, in all other places north of that, if it came from that part of the heavens; which is contrary to common experience; for there are north winds in *Africa* for inſtance, at the ſame time that it blows ſouth or eaſt in ſeveral places in the ſame longitude on the *Mediterranean*, or on this ſide of it. Nor is it agreeable to fact, that the winds take their qualities (without exception) from the ſoil thro' which they blow, becauſe we find, in the ſame region, where the vapours and exhalations are of one ſort, and quality, there are winds which produce quite different and contrary effects.

Therefore

Therefore our author goes to the true fountain, to lodge the cauſe of them, which he does not know; and aſcribes the reaſon of ſuch different effects to HIM, *who brings the winds out of his treaſures*, and he owns, that *the wind bloweth where it liſteth, thou heareſt the ſound thereof, but canſt not tell whence it cometh nor whither it goeth.*

In the torrid zone the eaſterly winds reign the whole year.

But there is one general obſervation made by this author, and confirm'd by the practice of all that ſail to the *Weſt-Indies*; which is, that, in the *torrid zone*, the winds are eaſterly thro' the whole year: and therefore they who go to thoſe parts of *America*, do not return home by the ſame way that they go thither, altho' it is the neareſt, and moſt ſecure, if the wind would ſerve them. So that, as he ſays, in going from *Spain* to the *Weſt-Indies*, they find it difficult to paſs the *Canaries* becauſe of the different winds that blow near thoſe iſlands, but having paſt them, they ſail, with a weſterly wind till they get beyond the tropic; and as ſoon as they enter the burning zone, they are ſure of an eaſterly wind; inſomuch that they need not touch their ſails, the whole voyage after, if they are bound for any port between the tropicks. When any fleets come to the *Caribee* iſlands, with this eaſterly wind, then they ſeparate according to the places they are bound for, to accompliſh which, the ſame wind ſerves them all, whether they ſail ſouth, weſt, or north. But when they return to *Spain*, or to any other part of *Europe*, they avoid all that ſea, which leads to the *Canaries*, and ſail to the *Havana*, where the current helps them out, beyond the tropic of *Cancer*, thro' the *Bahama* iſlands, where they meet with the weſterly winds, to carry them to the *Azores*; which makes the navigation home, longer and more uncertain. Thus in going to the *Eaſt Indies*, after they paſs the *Canaries*, they are oblig'd to ſail with an eaſterly wind, croſs the line, and ſo, in a ſouth courſe, till they come to about 27 deg. ſouth latitude; and do not attempt to make for the cape of *Good Hope* till they be without the *torrid zone*, and ſo have the benefit of weſterly winds, which they have not within it. And this makes the difference between the navigation to the *Eaſt* and *Weſt Indies*. To the *Weſt Indies*, it is eaſier to go than to return, becauſe from the *Canaries*, you can eaſily reach the tropic, and then your courſe is weſterly; but you muſt coaſt along, in returning, till you get out of the *burning zone*, which is a long paſſage, and takes more time to perform it. Whereas it is juſt the reverſe in going to the *Eaſt Indies*. Your paſſage thither is tedious, being oblig'd, upon the account of the eaſterly winds, to make a right angle, inſtead of a ſtraight line, between the tropic of *Cancer*, and the cape of *Good Hope*; but in returning, the eaſterly wind carries you in a ſtraight line to *Cape Verd* from *Good Hope*, ſo that you run the diagonal of the courſe you had from the tropic of *Cancer* to that cape in the voyage to the *Indies*. The ſame advantage of the wind, they have who ſail from the *American* coaſt of the ſouth ſea to the *Eaſt Indies*; whereas in coming back to *New Spain* or *Peru* from *China*, they are oblig'd to run up as high as *Japan*, to catch the weſt wind, and ſo ſteer their couſe to *Calephornia*.

Acoſta b. III. c. 4.

But altho' the eaſt wind reigns, as our author terms it, in the *torrid zone*, it is not to be underſtood, as if no other wind was ever to be known there; or that the eaſterly winds are always due eaſt; for there are ſometimes ſouth and north winds but rarely; and thoſe they call eaſterly are ſuch as partake of the eaſt, excluſive of the weſt but may decline from preciſe eaſt to either ſouth or north. So that the wind at ſoutheaſt or northeaſt, or ſome points farther ſouth or north do not contradict the general propoſition.

The reaſon of eaſterly winds between the tropicks.

In giving the reaſon why the eaſterly wind predominates in this *zone*, his argument is this. That the diurnal motion (no matter whether of the earth, or the celeſtial bodies) is the cauſe, why the elements likewiſe move. This motion, for inſtance, of the air, is quicker near the line than it is at a greater diſtance from it; as the motion of a wheel near the center, is quicker than at or near the circumference; and thus the air moving with greater force towards the weſt near the line, than at a diſtance from it, occaſions the wind to blow from the eaſt unleſs ſome other accident give it a turn.

But whatever reputation *Acoſta* may have, we ſhall not be afraid of doing him wrong, by naming another author, and inſerting his account of the winds being eaſterly, for the moſt part between the tropicks. This author is Dr. *Varenius*, in his *Compleat Syſtem of General Geography, improv'd and illuſtrated by* Sir *Iſaac Newton* and Dr. *Jurin*, tranſlated by Mr. *Dugdale* and publiſh'd this year. He ſays, * "The principal and general cauſe "(of the wind,) is the ſun itſelf, which, "by its firery beams, rarifies and attenu- "ates the air, eſpecially that which is "juſt under it; and the air rarify'd takes "more room: and hence it is that the air "thruſts forward the air next to it; and "the ſun going round from eaſt to weſt, "the preſſure is made weſtward, as ap- "pears in moſt places of the *torrid zone*, "and every where there, on the ſea, a "continual eaſt wind blows: and the air "rarify'd

1732.

* Varen. Compl. Syſt. *Vol.* I. *p.* 474.

" rarify'd preſſes weſtward within the " tropicks. There is a preſſure indeed all " round, but the air is not admitted to " other points, the preſſure not being ſo " great as toward the weſt, becauſe the " ſun moves that way: but in our cli- " mate, 'tis ſo only, for the moſt part, be- " fore and after ſun riſing, where there are " no other winds that blow ſtronger and " overcome it. And ſome places, or other " points, are more diſpos'd to receive " this force than others, and therefore " when the air is thruſt moſt to the north, " the wind is ſaid to blow from the ſouth, " and ſo of other winds. And 'tis to be " obſerved, that when this is to any " point between the four cardinals" [*viz.* eaſt, ſouth, weſt and north] " then the " wind ſeems different to different coun- " tries. For tho' the point, in reſpect of " the place the ſun is vertical to, be but " one, yet it is different in reſpect of other " places. And thus one and the ſame " cauſe makes a wind that has different " names in different places."

The ſame author, ſpeaking of *general* and *particular* winds, ſays * " Theſe ge- " neral winds are found only between the " tropicks round the earth, except in ſome " places, where they are ſeven deg. be- " yond the tropicks; and they are ever " from the eaſt, or from collateral points, " as ſouth eaſt and north eaſt the whole " year round, yet not always with the ſame " degree of force in all thoſe places but " they are hinder'd in ſome places more, " in others leſs. They are moſt conſtant " in the *Pacific Sea*, *viz.* that part of it " which lies between the tropicks; ſo " that the ſhips which come from the " *Aquapulco*, a port in *New Spain* in " *America*, to the *Philippine Iſlands*, " that is from eaſt to weſt, often ſail " three months, without ever changing " or ſhifting their ſails; having a conſtant " eaſt or north eaſt wind: nor did any " ſhip ever yet periſh in that vaſt voy- " age of 1650 miles. And therefore the " ſailors think they may ſleep there " ſecurely. ——— And thus 'tis alſo in " ſailing from the cape of *Good Hope* to " *Brazil* in *America*; in the middle of " which voyage lies the iſle of St. *Helena* " (to which they commonly go, as they " return from *India* to *Europe*, and lies " about 350 miles from the ſaid cape:) " which is run oftentimes in 16 days, and " ſometimes in 12, as the general winds " are more or leſs ſtrong; and the ſeamen " are as ſecure when they come to the " ſame parallel of lat. with St. *Helena* " (for the cape is beyond the ſouth tro- " pic;) their chiefeſt care is to obſerve, " that they do not paſs by the iſland, as " 'tis very ſmall, for if they paſs it but " the eighth part of a mile, they can " not return to it for the eaſterly wind."

* Ibid. p. 484.

But both this author and *Acoſta* tell us that there are exceptions to this general rule, for upon the coaſt either of *Africa* or *America*, different cauſes may produce different winds; but at ſea this is the common obſervation, unleſs ſome accident make a change.

Acoſta likewiſe mentions ſtrange effects of the wind in ſeveral parts of the *Indies*, particularly at *Pariacaca* in *Peru*, which is a high mountain, one of the *Andes*, where all that aſcend are ſuddenly taken with ſuch a ſickneſs as thoſe are affected with who are ſick at ſea. And the only remedy is to ſtop their mouths, noſes, and ears, as much as poſſible till they get over a certain place from whence this air or wind flows; and our author believes it is becauſe it is too fine and ſubtil, proceeding from the heighth of the mountain. In other places of the ſame *Andes* the wind kill'd people without any violence, but by the very quality of it; and then preſerv'd their bodies without being corrupted, as happen'd to thoſe who dy'd in *Almagro*'s expedition to *Chili*.

Having thus ſaid what is neceſſary of the air or wind, with reſpect to the *torrid zone*, and ſhew'd that the places in that climate are not ſo intolerable for heat as might be imagin'd upon account of their nearneſs to the ſun; we ſhall only ſay in general of the reſt of *America*, that the air is more or leſs temperate according to the nature of the ſoil, or their horizontal heighth. Thus that part of *New Spain* or *Mexico*, which lies without the tropic, as likewiſe *New Mexico*, which is farther north, are temperate climates; only that the latter is ſometimes ſubject to hurricanes, which are occaſion'd by the cavities of the earth containing ſuch particles of matter as getting vent with ſome reſiſtance produce a ſtorm or hurricane, but if they meet with a ſtrong reſiſtance cauſe an earthquake.

Cauſes of wind in general.

But not to be too tedious on this ſubject, we ſhall from *Varenius*, give the different cauſes of winds in general, which will account for all the ſorts of them not only in *America*, but thro' the whole globe. Of theſe he reckons theſe ſeven cauſes.* I. " The ſun, " as we have already quoted him upon another account. " 2. The exhalations from ſea " and land, that are rais'd plentifully, " and with ſome force; but they do not " cauſe a wind, till they begin to rarify. " 3. The rarefaction and attenuation of " the clouds, great or ſmall, made by the " ſun and other ſtars, or by the ſulphu- " reous particles of fire enclos'd in a place. " 4. The melting of ſnow and ice, eſpeci- " ally

* *Vol.* I. *p.* 474.

"ally that which lies on high places: for "they are not all melted. 5. The riſing "and various ſituation of the moon and "ſtars. 6. The condenſation or rarefac-"tion of the air and vapours by heat and "cold. 7. The deſcending of clouds "that thereby preſs the air below."

And, as he adds, "The conſideration "of the *Æolipile*" [that is a machine of braſs or copper or other mettal in the ſhape of a bottle, with a long ſmall neck turn'd at the top like the head of a crane, with a ſmall hole in it] "is of "uſe for underſtanding the cauſes of the "wind; for, the water inclos'd in it, be-"ing heated with fire, ſends out of the "ſmall hole of it, a ſtrong ſteam of va-"pours, like a wind blowing, which con-"tinues till the water is all exhal'd. The "groſſer air that ſurrounds ſerves inſtead "of the ſmall hole [in that machine;] "and ſometimes it is ſtrengthen'd by "other vapours and little clouds behind "it, and ſometimes it is condenſed, and "ſo makes way for the air to move to "that point."

From all which it follows, that as the different parts of *America* have more or leſs ſun; more or fewer exhalations; greater or leſs rarefaction of the clouds; a greater or leſs quantity of ice or ſnow; the moon or ſtars differently ſituated; the air and vapours more or leſs condens'd by heat and cold; or finally the air below more or leſs preſt by the deſcending clouds, the winds are either, higher or lower, more or leſs frequent, and more or leſs refreſhing or boiſtrous. And thus much of the air.

Of the element of water.

The next thing to be conſider'd in the natural hiſtory is the water, which, with *Acoſta*, we ſhall divide into theſe following. 1. The ſea. 2. Lakes. 3. Springs and Fountains, and 4. Rivers.

Varen. Geo. *Vol.* I. *p.* 178. 181, *&c.*

It has been demonſtrated by philoſophers, particularly by *Archimedes*, that the ſuperficies of all liquid bodies is ſpherical; and conſequently that the ſea is not higher than the land, which *Varenius* proves from experience.

Of the ſea.

1. Becauſe if the land were lower than the ſea, there would always be a flux towards the land, it being natural for water to deſcend; but we ſee the contrary, in fair weather, upon the coaſt, where there is no flux toward the land, but what is occaſion'd by the tide. 2. If the ſea, at a diſtance from the ſhore, were higher than the land, it would be ſeen at a greater diſtance than if it were ſpherical; but experience ſhews, that when we come from the inland parts nearer the ſhore, we diſcover by little and little the more remote parts of the ſea, and the nearer we approach the ſhore, the farther we can ſee on the ocean; therefore the remote parts of the ocean are not elevated above the ſea coaſt, but upon a level with it, and the land. 3. Altho' by ſuch accurate inſtruments as are now us'd, it is an eaſy matter to find the altitude of a mountain or tower, above the places where the obſervations are taken, yet no ſailors ever could make out the altitude of the main ocean, above the ſea coaſt. 4. The ſea not being higher than the iſlands, many of which are in the main ocean, is a demonſtration that the ſea has the ſame center with the land. 5. The waves on the ocean naturally diffuſe themſelves into a ſmooth ſurface, which ſhews that the water cannot ſtand in a heap. 6. If the ſea were higher than the land, there would be a conſtant flux from the ocean into the rivers (which are for the moſt part lower than the land) whereas we find the rivers flow into the ſea, except at the turn of tide, which has no relation to the heighth of the ſea.

From theſe experiments, which are obvious to the meaneſt capacity, it appears that our fancying the ſea, at a diſtance, to be higher than at the ſhore, is a deception of the ſight; and the very ſame appearance a row of pillars, or trees upon a horizontal plain of any length, will make to the eye; the fartheſt ſeeming higher altho' in reality upon a level.

This agrees exactly with what *Acoſta* ſays of the ſtreights of *Magellan*, where the north and ſouth ſeas, (which are the two that are known to flow on both ſides of *America*, and perhaps meet in the north as they have been found to do in the ſouth at *Magellan* and *Le Maire*'s ſtreights,) flow equally into the ſtreights the one from eaſt to weſt, and the other from weſt to eaſt, and meet in the ſtreights, only with this difference; that the ſouth ſea water has run but 30 leagues, and that of the north, or rather eaſt ſea, is 70 leagues from the entry, when the two waters meet, which may be occaſion'd from the greater breadth of the entry on the eaſt ſide, and conſequently the greater quantity of water continually flowing in. Acoſta *p.* 159.

We have already ſpoken of the conſtant eaſterly wind between the tropicks; but *Varenius* obſerves * that the whole ocean continually moves from eaſt to weſt. And thus, he makes the *Flux* of the ſea, to be only the ſtronger preſſure of the water towards the weſt, and what is call'd the *Reflux* to be the leſſer preſſure. So that, according to him, the *Flowing* and *Ebbing* of the ſea is ſtill agreeable to the general motion of it to the weſt; and therefore he thinks it were more properly call'd the *Swelling* and *Swaging* of the ſea. For he ſays, † "The ſea perpetual-"ly flows from eaſt to weſt, and only "*ſeems* to flow back again, when its more "violent

* Varen. Geo. *Vol.* I. *p.* 230.

Of the Flux and Reflux of the ſea.

† Ib. *p.* 237.

" violent force is ſlacken'd and waſted, " which a little before, was quicken'd and " augmented. But this is call'd the *Re-* " *flux*, becauſe the ſea ſeems on ſhores and " in bays, to approach and retire by fits: " which is not owing to the quality of " the motion itſelf, but to the ſituation " of the ſhores and bays, which requires " that the water ſhould fall back to " the contrary point: but the ſettling of " the ſea in general, does not proceed from " the ſituation of the ſhores, but from " the quality of the motion of the " water."

And that the ſea moves from eaſt to weſt both in *flowing* and *ebbing*, or, as he chuſes to call it, in *ſwelling* and *ſwaging*, he endeavours to prove from theſe two following obſervations. I. " In the main " ocean, between the tropicks, there is no " other motion perceiv'd than this, from " eaſt to weſt. II. In ſtreights that join " the parts of the ocean, and run directly " eaſt and weſt, as the ſtreights of *Ma-* " *gellan*, &c. the ſea riſes and ſettles in " 12 hours time; *but in ſettling, it does* " *not flow back out of the ſtreights to the* " *eaſtward; but is carry'd by other paſ-* " *ſages, ſtill to the weſtward:* which is " a plain ſign, that this ebbing and flow- " ing are not two contrary motions, but a " modification of the general motion from " eaſt to weſt," But then he gives this caution. " It is to be underſtood, that " when we ſay this motion from eaſt to " weſt, we do not mean punctually, the " cardinal points, but include all their p. 239. " collaterals, even to the north and ſouth " poles, towards which, however, the " motion is weaker."

But as the flux and reflux of the ſea, and the variety of it according to the different places, and concurring circumſtances, have difficulties in them, which I ſhall not pretend to explain, I ſhall leave the reader who is curious to be inform'd of thoſe phænomena to Sir *Iſaac Newton*, (1) Dr. *Gregory*, (2) and Mr. *Halley* (3) in the places mark'd on the Margin. It is agreed upon by all, that the moon is the occaſion of this extraordinary event, and therefore all tides are calculated from the moons age; but that other things concurring alter the tides in different places is undoubtedly certain. Thus in ſome places there are perpetual currents, which have great influence upon the tides: and not to go from *America*, in the *South Sea*, the ſea flows from ſouth to north along the ſhores of *Peru*, which is occaſion'd by the ſouth winds which blow there, altho' far out at ſea, they have neither thoſe winds nor a north tide. The ſame courſe is obſerv'd along the coaſt of *Brazil*; which is occaſion'd by the reſiſtance made by the coaſt againſt the general motion weſtward, formerly mention'd; ſo that it runs north, as finding a more open chanel that way. Some ſay the tide ſets eaſterly at *Le Maire*'s ſtreights but that is not certain.

(1) Prin. Math. B. 3. Prop. 24. (2) Phys. Geom. Aſtron. B. 4. Pro. 64. 65. (3) Diſſert *in* Ph. Tran. N° 226.

Having had occaſion to ſpeak of ſeveral ſorts of fiſh in the *Indian* ſeas, when we mention'd the different parts of *America*, we ſhall not take up much time with them here. There are whales in ſeveral parts of the *American* ſeas; particularly where there are ſtreights, as at *Le Maire*'s, *Magellan*'s thoſe of *Florida*, and in the north ſeas about *Hudſon*'s ſtreights. Not to ſay any thing of the manner of the *Europeans* fiſhing for whales, ſo commonly known, *Acoſta* gives an account of the *Indians* catching them, which is ſurprizing. An *Indian* goes in his canoe, upon the coaſt of *Florida*, where there is great plenty of them; when he ſpies one, he comes up along the ſide of it, and leaping upon its neck, ſits there aſtride, having his canoe faſt by a ſtring, then watching his opportunity, he thruſts a ſharp ſtake into the whale's noſtril, which he drives in with another ſtake, which he has ready at hand. The Pain of this, makes the monſter bound, and beat the ſea in a furious manner, and ſometimes he dives with great force, but immediately riſes again, the *Indian* ſtill keeping his hold. Then he fixes the other ſtake in the oppoſite noſtril, and gets into his canoe, having firſt ty'd his cord to the ſtake, and ſo goes aſhore, leaving the whale to rage and bounce, till being weary, and no longer able to endure the water, he comes aſhore of his own accord, and then a great number of *Indians* get about him, and cut his fleſh in pieces, which they dry, and beat into powder, and uſe it for meat, I ſhall not mention the cod-fiſh of which the *Europeans* make ſuch profit out of the *Indian* ſeas, and of which ſome of them might make much more, if it were not their own faults.

Of fiſh.

Indian *manner of killing whales.*

At the entry into the bay of *Mexico*, and among the *Barlovente* iſlands, *Cuba*, *Hiſpaniola*, &c. There is a fiſh which they call *Manati*, that has teats, and nouriſhes her young ones with milk, and eats graſs, but lives in the water; and the fleſh of it taſtes and looks like veal, ſo that our author ſcrupled to eat of it upon a friday.

Manati.

They have likewiſe large *Sharks*, which they call *Tiburons*, ſo ravenous, that our author ſays he ſaw a butcher's great knife, a great iron hook, and a piece of a cows head, with one whole horn, drawn out of the gullet of a ſhark, which was taken at port S. *Dominic*. And he tells a piece of diverſion they had there, of hanging a quarter of a horſe upon a ſtake driven

Tiburons.

driven into the water, ſo that the carrion did not reach the water by many hands breadths; but the ſmell gather'd a multitude of ſharks to the place, and leaping above the water, cut the bones of the horſe's leg with their teeth, as if it had been the ſtalk of a lettuce.

Rambos. There are ſmall fiſhes call'd *Rambos*, which follow the *Tiburons*, and live of their off-falls, nor can they drive them away.

The flying Fiſh. The flying fiſh are common in thoſe ſeas, which are ſupported in the air by two fins in the ſhape of wings, almoſt like the wing of a batt, and are ſaid to fly, when purſued by their enemy the *Ducade* fiſh, till their wings grow dry, and then they fall into the ſea again, and ſometimes into ſhips or boats, if they come in their way. But this flight may be better call'd a ſpring in the air, for they generally do it with the one motion with which they come out of the water.

Croco-dile. In the north parts of the ſouth ſea they have *Lezards* or *Caymans*, which our author ſays are *Crocodiles*, and are found at the mouths of hot rivers. They come aſhore for prey; and what they take alive, they carry into the water to drown it; but cannot eat it there, becauſe of the figure of their throat, which would quickly choak them if they ſhould ſwallow water. Theſe creatures, as our author ſays, have frequent battles with tygers, the tail of the former threſhing the tyger, whom he endeavours to puſh by force into the water, whilſt the other makes uſe of his paws to drive the *Cayman* from the ſhore; and ſometimes one prevails, and ſometimes the other. He likewiſe tells a ſtory of an *Indian*'s getting the better of one of them, which ſhew'd a great deal of courage, and natural affection. The *Cayman* had carry'd away a young child belonging to an *Indian*, and plunged into the water with it, in ſight of the father; the father, having a knife in his hand, threw himſelf after the monſter, and diving under it, ript up its belly with the knife, for there is no piercing its back, the ſcales of it being proof againſt a bullet. Thus the *Indian* got the better of the *Cayman*, altho' the poor child loſt its life during the combat.

Of lakes. Vareni. Geog. vol. I. p. 175. The next remarkable effect of water to be conſider'd is in forming itſelf into Lakes, of which the country of *America* has a great many. It would be too tedious to name them all; and ſome have been already mention'd in the diſcoveries of the ſeveral countries where they are. They who treat of the nature of lakes, divide them into theſe four different ſorts. 1. Such as neither receive nor ſend forth any rivers. 2. Such as have no rivers running into them, but ſend rivers out of them. 3. Such as receive an augmentation of their water from rivers which empty themſelves into them, but have no viſible evacuation by ſending out any ſtream from them. 4. Such as have rivers running in, and others out of them.

Thoſe of the firſt ſort, are either always full of water, or ſometimes full, and, at other times are quite dry. Thoſe that are ſometimes dry, ſhew plainly that they are only compos'd of rain water, which is exhal'd in dry weather. And of ſuch lakes, ſome are made on purpoſe for preſerving the rain, in places deſtitute of ſprings; others have been accidental, occaſion'd by inundations of the ſea or rivers, which having fill'd thoſe cavities, afterwards retir'd from them. Such of them as are very large, are not dry at any time; becauſe they are ſupply'd with ſuch a quantity of water by long continued rains, that the ſun has not time to exhale it, before a new rain gives it a freſh recruit; or perhaps (as indeed is the caſe in many lakes) there are ſources and ſprings at the bottom, which are unſeen, and ſupply them with water in as great quantity as is exhal'd.

The lake Parime. Of this is the great lake of *Parime*, directly under the line in that part of the *Terra firma* which borders upon *Brazil*. This is one of the greateſt lakes in the world, being reckon'd 105 *German* miles long, from eaſt to weſt, and much the ſame in breadth; but is not known either to receive or emit rivers.

Of the ſecond ſort, which emit rivers, but receive none, it muſt be concluded that they are fed either by ſprings at the bottom, or by rivers having a ſubterraneous paſſage into them; elſe it would be impoſſible they ſhould ſtill keep full, notwithſtanding the conſtant evacuation made in them by a river or rivers emitted, and the daily exhalations cauſed by the ſun. Of this kind is the lake *Nicaragua*, in *New Spain*, being 117 leagues round. *Herrera* ſays, it ebbs and flows like the ſea, and altho' it is within four leagues of the ſouth ſea, yet it ſends a river 100 leagues the other way, and empties it ſelf in the north ſea. *Verenius* likewiſe reckons *Titicaca* in *Peru* among the lakes of this kind. But I believe he muſt be miſtaken, becauſe *Acoſta*, who has the character of a moſt accurate writer, poſitively affirms, that there are no leſs than ten or twelve great rivers that run into it. So that it cannot be number'd in this ſecond claſs of rivers, unleſs we ſuppoſe this grave author to have been ill inform'd as to that country, (in which he liv'd ſo many years, and had begun to write the natural hiſtory of it whilſt he liv'd in *Peru*,) which I can by no means think; I ſhall therefore alter nothing of what

Nicaragua. Acoſta, b. 3. c. 16.

was

* Un. Tr. p. 305.

was formerly ſaid * of this lake from *Acoſta*, nor is there occaſion to add any thing in this place to what has been already ſaid of it in the place quoted. Of this ſort alſo are ſome of the lakes in *Canada*, from whence S. *Laurence*'s river is fed.

And to this ſort belongs the hot lake near *Potoſi*, which we may call *Tarapaya*, as being in that valley. It is ſo round, that it ſeems to be made with a compaſs. The ſpring that feeds it, boils up in the middle like a pot, and is ſo hot that people can only bath at the ſides of the lake. Before the mines of *Potoſi* were diſcover'd, it had no evacuation but what was imperceptible, but now they have drawn a river out of it, to work their engines for the mines, and yet it is not emptier than it was before.

As to the third ſort of lakes, (ſuch as receive rivers, but ſend out none,) there is no difficulty how they are ſupply'd; and indeed there ſeems to be as little as to the evacuation; for without doubt they are empty'd in proportion to their being fed, by ſubterraneous paſſages, or the pores of their natural bed. Of this ſort is the lake *Paria*, which is fed by a river running from *Titicaca*.

Paria.

Thoſe lakes which both receive and emit rivers, do ſo in different proportions. If they ſend out more than flows into them by rivers (as ſome do,) then it is evident that they muſt be fed ſome other way, by ſubterraneous paſſages or hidden ſprings. If the rivers flowing into them be viſibly greater than what they emit, ſtill allowing for exhalations, then it is plain that there are under-ground aqueducts for conveying away the water, ſo that there ſeems to be no difficulty about the phænomena of ſuch lakes. Of this ſort are moſt of the lakes in *Weſt Canada*, which paſs from one to another, by rivers running out of the one into the other. Thus you paſs from S. *Peter*'s lake, by a large track of the great river, to the lake *Ontario*; from thence, by the river *Niagara* to lake *Erie*; ſo northwards to that of *Hurons*; and ſo to *Ilinoveck* or *Michigan*, from whence there is a communication (all except two leagues) to the river *Miſſiſippi*.

The lake of Mexico.

The lake of *Mexico*, upon which that famous city is built, like *Venice* upon the ſea, ſeems to have ſomething extraordinary in it, beyond the others in *America*. It is divided into two parts, altho' it ſeems to be but one lake; but indeed, from the difference of the water, it appears to come from different ſprings. The upper lake is freſh, and has great ſtore of ſmall fiſhes in it; but the lower is ſalt and brackiſh, altho' there is a communication to it from the freſh lake, which has a conſtant flux into it at ſix or ſeven large gaps in the great cawſey, (over which there are wooden bridges,) yet without changing the taſte of its water. The ſalt lake ebbs and flows, but that is obſerv'd to be occaſioned by the wind, and not as the ſea does. The extent of theſe two lakes taken together is about 100 miles in circuit; thro' which, almoſt in the middle, this cawſay, famous by the retreat of *Cortez*, after *Montezuma*'s death, ſeems to have been artificially made; ſo that both lakes are much of a bigneſs,

The reaſon of the taſte of the ſalt lake, ſome attribute to the nature of the ground at the bottom of it; and indeed there is abundance of ſalt made there, and is no contemptible part of the trade of the place, there being conſiderable quantities of it ſold to other parts of *America*, and even to the *Philippine* iſlands. Others pretend, that this lake is fed by two different ſprings, one ſouth weſt of the city which runs into the freſh lake, from a mountain not far from it; and another running under ground from a mountain towards the north weſt, which having ſome ſulphurous particles in it, occaſions the ſaltneſs of the water. Others again imagine that the ſalt water comes from the north ſea, by ſubterraneous paſſages, which being join'd with minerals by the way, keeps its taſte, nothwithſtanding the track of earth, thro' which it muſt paſs to enter the lake.

This lake often overflow'd to that degree, that it deſtroy'd ſeveral towns built on the ſide of it, and in 1634, it threaten'd the ruin of *Mexico*, and people went in canoes in thoſe ſtreets where there were no canals: for which they labour'd hard to turn the water into another channel, which they did; but loſt 30 towns and villages by the change. This lake was ſo frequented by people from all quarters coming and going to, and from *Mexico*, both before and after the conqueſt of it by the *Spaniards*, that there were above 100,000 canoes and piragua's belonging to it; by means of which there was a vaſt trade carry'd on, and merchandiſe exported and imported thro' all the parts about the lake, and ſo convey'd to other places. Upon this lake are ſeveral artificial floating gardens of herbs and flowers, ſupported by floats of timber; and ſo are mov'd from one part of the lake to another. And thus, having mention'd the moſt conſiderable lakes in *America*; we ſhall proceed to,

See Gage's *ſurvey of the* Weſt Indies. Fol. p. 44.

Springs and fountains of ſeveral kinds.

The ſprings and fountains; which are very curious in ſeveral parts of *America*. In that part of *Peru* call'd *Guancavelica* where the mines of quickſilver are, there is a ſpring, which ſends out hot water, which as it runs along turns into ſtone, and ſerves the neighbourhood for building their

Acoſta. b. III. *ch.* 17.

their houſes. At the *Inca*'s baths, there are waters cloſe by one another, the one hot, and the other cold. And in the province of *Los Carcas*, there are many of thoſe hot ſprings, in which one cannot hold their hand for two minutes. Upon the coaſt of *Peru*, and in ſeveral other parts of the *Weſt Indies*, there are ſprings of *Coppey*, which ſerves for pitch, and is ſo ſtrong that they ſmell it ſome leagues from the ſhore. Other waters are ſaid to be good for venereal diſeaſes, from the great quantity of *Saſſaparilla* found near the line on that coaſt.

The reaſon which naturaliſts give for thoſe different ſorts of ſprings, and the wonderful effects of them, is their being impregnated with the different particles of matter, whoſe nature it is to produce ſuch effects. For, no water is pure, and what they call elementary; that is to ſay, all water is compos'd, or is mix'd, with other particles beſides the pure element of water; for even the very air itſelf which covers the water, and ſo the earth which it runs thro' are impregnated with many different ſorts of particles; ſo that according to the nature of thoſe particles which the water draws from the earth or air, and according to the quantity of ſuch particles, with which the water is mix'd, the ſprings have very different qualities. Thus ſome waters carry'd under ground with a rapid force, among metalline and mineral earth, which is eaſily looſen'd, waſh particles from it, and carry with them grains of that metal or mineral. Or if the minerals are imperfect, and not ſo cloſely join'd, as vitriol, ſulphur, *&c.* or even ſalt, with which the water eaſily mixes, the water which runs thro' beds of theſe, when it breaks out at the ſpring, has ſmall particles of theſe minerals mix'd with it. But, as all metals, before they be form'd in the bowels of the earth, ſend out vapours and ſteams, which are condens'd, and ſtick about the corners of the rocks where they are form'd; the water, which runs thro' thoſe places where the vapours are in motion, is impregnated with them.

Varen. V. I. *p.* 352.

Hence it is that water may be impregnated with gold, ſilver, *&c.* which is call'd metallic water: or with common ſalt, nitre, vitriol, allum, *&c.* commonly call'd ſalt waters. Or with ſulphur, antimony, coal, ambergreaſe, *&c.* which are call'd by the different names of the bitumen they are mix'd with: or with quickſilver, *&c.* call'd mercurial waters.

Cauſes of hot ſprings.

The cauſes then and generation of hot baths are, * 1. a mixture of ſulphureous particles, which are glean'd by the water as it paſſes thro' the ſubterraneous paſſages, or rather as it gleets thro' the ſulphur mines, to the receptacles about the fountains. 2. Fumes, vapours and exhalations in the bowels of the earth, where there is pure or impure ſulphur, foſſil-coals, amber, *&c.* for theſe conſtantly emit hot ſmoke, which warms the water as it paſſes ſuch places. But there is a marginal note upon *Varenius* in this place, which ſays, "They beſt account "for the heat of theſe fountains, who "ſuppoſe that two ſtreams having run "thro', and imbib'd certain ſorts of diſ-"ferent minerals, meet at laſt, and min-"gle their liquors, from which commix-"ture ariſes a great fermentation that "cauſes heat, as we ſee in vitriol and "tartar, which when mingled cauſes an "intenſe heat and ebullition".

* Ibid. *p.* 367.

Thus ſome ſprings are *acid*, from a mixture of vitriol, ſalt and allum. Others are bitter from a mixture of impure ſulphur, bitumen, nitre, copperas, copper. Some are oyly or pitchy, from ambergreaſe, amber, oyl of petrol, pitch, *&c.* Others are cold, from a mixture of nitre and allum, alſo of mercury and iron, *&c.* to which laſt muſt be added the great depth from whence ſuch ſprings flow, ſo that they want the rays of the ſun, and the ſulphureous heat under ground.

As to the petrifying quality of ſprings, by which they are ſaid to turn wood into ſtone, it is ſaid, 1. That they do not change the nature of the wood, but only give it an outſide cruſt of ſtone. 2. That they only give the wood a hardneſs equal to that of ſtone. Or if they really change it into ſtone, it is ſuppos'd to be effected thus "The water gleeting down the ſides "of the ſoft ſtone, corrodes the minuteſt "of its particles, and is impregnated with "them: which are again ſeparated from "the water, by putting ſticks of wood "into it (by the power of attraction) as "we ſee ſome kinds of ſalt ſeparated from "the water by the like means, and other "bodies ſeparated from thoſe that are "compounded with them, by ſuch as are "found by experience to attract their par-"ticles. Now when theſe particles are ſo "minute and ſubtile, as to intrude, with "with the water, into the pores of the "wood, in proceſs of time, when it is "throughly ſoak'd, the interſteces will "be quite fill'd with ſtrong particles: and "if any thing ligneous remain, it is ſo "well guarded and incruſted by theſe par-"ticles, that it is not perceptible, nor to "be acted upon by fire. But if the par-"ticles are not ſo minute, as to penetrate "the pores of the wood, they only ſtick "cloſe to the outſide of it, and parget it "over, as it were by degrees to a conſi-"derable thickneſs." * Ibid. *p.* 375.

* *See note* (h) *on* Var. *ubi ſupra.*

Having thus ſaid as much as we judg'd neceſſary upon the ſubject of ſprings and fountains, we ſhall proceed to

The

Of rivers. The rivers in *America*. And having had occaſion to name moſt of them already, when we treated of the countries thro' which they paſs, or where they enter the ſea, there will be no neceſſity to repeat them here, except it be for ſome remarkable thing taken notice of in them. What we propoſe to do here is, to give ſome account of the riſe and progreſs of the rivers; why they are broader in one part than in others; why they overflow at certain ſeaſons; and ſuch other phænomena known to agree to many of the rivers of *America*.

The origin of rivers. Var. V. I. p. 295. As rivers are deriv'd from ſprings, for the moſt part, the ſame cauſe which produces the one is alſo the origin of the other. But the opinions of naturaliſts are different as to the riſe of ſprings, and conſequently of rivers. 1. Some held that all rivers and ſprings receive their water from rain or melted ſnow; this they would prove from the ſwelling of rivers after the ſnow begins to melt, or the rains to fall, and their falling or growing dry when the ſnow is gone, or when it does not rain for ſome time. But this only ſhews that rain's falling, or ſnow's melting encreaſes rivers, but not that they are the only cauſe of them: for, there are rivers (tho' not ſo many) in places where it ſeldom or never rains or ſnows. Beſides the rain does not penetrate the ground beyond ten foot depth, whereas fountains often ſpring from a greater depth.

2. Others conten'd that the water of ſprings is generated from air contain'd in the bowels of the earth. 1. Becauſe there is the ſame reaſon for turning the ſubterraneous air into water, as the air in the atmoſphere, *viz.* cold. 2. Becauſe we find, by experience, that great drops gather from ſmall ones under ground; and therefore the heads of rivers are only a number of ſprings gather'd into one place. 3. Becauſe, moſt fountains, eſpecially of great rivers, are found to ſpring from mountainous places, which ſhews, that their waters proceed from condens'd air or vapours, which naturally tend towards high plaees; and mountains are as it were ſpunges lying upon planes.

3. Others think that the water of fountains proceeds from little drains, or guts, where the condens'd vapours are collected, both above and under ground, which being augmented by rain or melted ſnow become rivers: which they prove from the mountains being full of moiſture, and the rivers ſwelling, in the morning, near their ſprings.

4. Some fancy'd that the rain water is hoarded up in the internal caverns of the earth, as in a great promptuary, from whence all the rivers in the earth are ſupply'd; ſo that no water is diſpers'd over the globe, but what is thus collected in the winter.

5. Another opinion which was held by ſeveral antients as well as moderns, is, that the earth ſucks in as much water from the ſea, as it ſends to it by rivers. And that the ſea water becomes freſh by draining thro' the hidden receſſes of the earth, and by being ſtrain'd thro' the fiſſures, and the interſtices of ſand and gravel. This appears from ſeveral conſiderations. 1. Becauſe there are ſeveral large rivers (of which there are a vaſt number in the earth,) which pour more water into the ſea in one year than the whole bulk of the earth; ſo that unleſs the ſea refunded thoſe waters back again to the earth, the ocean muſt ſwell to an immenſe bulk, and ſprings ceaſe to flow; becauſe the rain returns the vapours which are exhal'd from the ſea. 2. This is prov'd from the ſaltneſs or brackiſhneſs of ſprings near the ſea, as we have frequent experience of. 3. It appears from finding water by digging ſo deep in the earth, (as is often done in mines;) and this water cannot proceed either from air or rain. But an inſuperable objection againſt this is, the heighth of ſome ſprings above the ſurface of the ſea, it being unnatural for water to flow higher than its fountain. And therefore,

6. Dr. *Halley* having ſhew'd * by a reaſonable calculation, that the vapours, exhal'd from the ſea, exceed the quantity of water diſcharg'd into it by rivers almoſt in a triple proportion; the reaſon of water being found to ſupply the higheſt ſprings is eaſily accounted for. Becauſe theſe vapours being carry'd every way by the wind, neceſſarily meet with high ridges of mountains, diſpers'd over various tracts of the earth, each of which ſurpaſſes the uſual heigh to which the aqueous vapours of themſelves aſcend; and on the tops of which, the air is ſo cold and rarify'd, as to retain but a ſmall part of thoſe vapours that ſhall be brought thither by the winds. The vapours, meeting with thoſe ridges of mountains are compell'd by the ſtream of the air, to mount up with it to their tops, where meeting with more rarifi'd air, they naturally fall down in drops, pervading the cranies and fiſſures of the earth, and gleeting into the caverns of the hills; the waters thereof gather into the baſons of ſtone or clay, which being once fill'd, all the overplus of water runs over, and where it can find a paſſage breaks out at the ſides of the hills, and forms fountains, from whence come rivers, &c.

* Ph. Trans. N° 189 p. 366.

Var. V. I. p. 293 note (a).

From all that has been ſaid upon this head, we conclude, that rivers proceed from fountains generated from the vapours exhal'd out of the ſea or lakes; that they

are

are augmented by the addition of rain and ſnow water, which penetrating the fiſſures of the earth, mingle with the waters of the ſpring; and finally they may be likewiſe encreas'd by water from the ſea, percolating thro' the ſand.

Rivers are broader is ſome places than in others, from the highth of their banks; from the hardneſs or mouldring of the ground on the ſides; from the depth or ſhelvineſs of the chanel; or from the evenneſs or fall of the water. And for ſome of theſe reaſons, ſome rivers are much more rapid then others, adding to theſe, the heighth of their fountains, and the narrowneſs of the bed they run in. And for the moſt part, rivers are broadeſt where they enter the ſea; becauſe they are encreas'd by other rivers or brooks falling into them; and that the chanel near the mouth of a river has leſs declivity; or that the ſea breezes or ſea water enter the mouths of rivers.

The reaſon of rivers overflowing at certain times, as we have elſewhere obſerv'd ſome rivers in *America* do, proceeds from the great quantity of rain or the melting of ſnow; as in the *Miſſiſippi* and the *River of Plate*.

We have already taken notice of the falls of the rivers in *Canada*; and the ſame happen in ſeveral other rivers of *America*, particularly in the *Marannon* or *Amazon* river, where *Acoſta* ſays, a whole army paſs'd one of the caſcades, of a great heighth, where their canoes and they came topſy turvy down the fall, and were plung'd in the foaming water below, and yet very few of them were loſt. But he does not tell us when, nor to whom they belong'd; altho' we may gueſs they were *Spaniards*.

The greateſt rivers, known in *America*, are, the *Plata*, the *Amazon*, the *Madalena*, *Miſſiſippi*, and *Canada*, as paſſing thro' moſt land, andhaving moſt rivers running into them. There are many others, but they have been mention'd already, or are ſmall and inconſiderable in reſpect of theſe.

Having now treated of the air and water in *America*, we ſhall follow *Acoſta*'s method, and give ſome account of the land of that country. This he divides into three different claſſes, *viz*, the low land, the high, and the middle between high and low.

The land of America.

The low land is that next to the coaſt, and is (in thoſe countries ſituated within the *torrid zone*) for the moſt part, hot and moiſt, which makes it not ſo healthful. Add that is the reaſon why many places near the ſea in *Peru*, are deſerted. The ſoil thereabouts, being either ſandy or elſe mariſh and bog, occaſion'd by the water which flows from the mountains, and not having certain and fix'd chanels, ſpreads over the low flat country, and makes it unprofitable. Of this ſort are ſeveral places of the north coaſt of *Peru*, as alſo *Panama* and ſome on the ſouth ſea, and ſome others near *Darien* on the north, where the *Spaniards* would not have remain'd but for the conveniency of the communication between the two ſeas. Yet there are many exceptions from this general obſervation, as in ſome parts towards the ſouth coaſt of *Peru*, and in *New Spain*, both on the ſouth and north ſeas; and likewiſe in many of the iſlands. In the other parts without the tropicks, the ſea coaſt is very healthy, and where they are planted by *Europeans*, they are well inhabited. And if ſome places are unwholeſome, it proceeds from ſome cauſe peculiar to the places themſelves, and ſo cannot be comprehended under any general rule.

1. The low land.

The ſecond ſort of land in *America* is, that of the high land, which is quite oppoſite in quality from the coaſt all over the continent as well as in the iſlands without any exception of climate, this land being cold and dry, and for the moſt part very healthy, and therefore well inhabited, eſpecially by the natives; and abounds in cattle, which they truck for grain, and wine. But the mines which many of theſe high lands abound with, make thoſe places, where they are, to be frequented by the *Spaniards*, who have the poſſeſſion of them. This is the reaſon why the country about *Potoſi*, and *Guancavelica* is ſo well inhabited, altho' they are oblig'd to have their corn and ſeveral other neceſſaries from the lower countries about them. In the mines of *Potoſi* alone, they employ above 20,000 men at work, to dig the oar and to bring it up about 400 ſteps of a lader from the mine. The other high lands of *America*, eſpecially in the *Engliſh* and *Portugueſe* plantations, are, for the moſt part, poſſeſs'd by the natives, partly becauſe they find them more healthy, but more eſpecially to ſhelter themſelves from the *Europeans*, whom they look upon (and not without reaſon) to be the unjuſt uſurpers of their country; or elſe from their *Indian* neighbours, with whom they have been at war, time out of mind: and if they could have been ſo wiſe as to have made up their hereditary or occaſional quarrels among themſelves, and had united againſt the common enemy, their gold and ſilver might have lain undiſturb'd to this day, in the high hills, and neither *Spain* nor any other country in *Europe* had got poſſeſſion of thoſe rich hills, eſpecially in the continent.

2. The high land.

But the beſt land, and moſt agreeable to live in is, in the middle between the high and low; which altho' it cannot be ſup-

3. The middle land.

ſuppos'd to be of a like heighth every where; yet generally ſpeaking thro' all *America* you find long ridges of mountains, at a good diſtance from the ſea, along the ſides of which is the high land before ſpoken of; and between that, and the ſea coaſt is this middle land of which we now treat. Thus from the line to the ſtreights of *Magellan*, there is one ridge of hills, call'd the *Andes* or *Cordilleras*; far up, upon the ſides of theſe, is that high land on both ſides; between which and the ſea on each ſide, is that middle land, which, from what has been fully diſcover'd of it, as the greateſt part of *Peru*, and a good part of *Chili* has, may well be call'd the garden of the world; unleſs it be rival'd by that of *New Spain*, which our author ſays, aſcends more gradually from both the ſeas, and the diſtance between the north and ſouth ſeas, not being ſo great at *Mexico* as in *Peru*, the former has all the advantages of both ſeas, and therefore *Acoſta* ſays, in a kind of rapture, that *New Spain* is, without doubt, the beſt province the ſun does circle.

But, as *Acoſta* obſerves, there are ſeveral particularities in *Peru* different from other places of the *Weſt Indies*. The ſouth and ſouth weſt winds, which are the moſt unwholeſome in other parts, are the pleaſanteſt and healthieſt there; nor does it rain, ſnow, or thunder upon that coaſt, altho' it does all three frequently within 10 or 12 leagues of it, on the higher ground, ſo that in the compaſs of 50 leagues in breadth, there are three different ſeaſons in the ſame lat. almoſt the whole length of *Peru*.

In that which they call *Lanos*, on the ſea coaſt, it ſeldom or never rains from the line to *Chili*, which is owing to the dryneſs of the coaſt, which does not yield matter for vapours; or elſe it is occaſion'd by the high land all along the country almoſt at a equal diſtance from it, which keeps off the land wind from it, and, as it were, ſhadows the *Lanos*, ſo that the ſea winds meeting no oppoſition, all the exhalations fall down in miſts, which altho' it does not rain there, keep the coaſt conſtantly moiſt. But in *Guayaquil* where they have eaſterly winds, (the hills being ſomewhat lower there) it rains. In the *Andes*, which is the higheſt ground, it rains or ſnows for the greateſt part of the year. And in the *Sierra*, or middle land, it is ſuch weather as we have in *Europe*, ſometimes fair and ſometimes rain, only, as has been obſerv'd before, that their rain is greateſt in their ſummer, or when the ſun is vertical to them. There is leſs variety in *Mexico*, becauſe the mountains there are not continu'd to ſuch a length; nor do they obſtruct the wind ſo much from either ſea.

As to the nature of the land in other parts of *America*, not ſubject to *Spain*, as far as has been diſcover'd by the ſeveral nations who have colonies there, it differs according to the climates in which the different plantations are. But the inland countries have not been ſufficiently ſearched into by any other nation, unleſs we may except the *French* in *Canada*, who have been at much pains to diſcover a vaſt track of ground, of which however they can give but a ſuperficial account in reſpect to what the *Spaniards* have given of *Mexico* and *Peru*. But one curioſity we have from their diſcoveries, is a large ridge of mountains (beginning between lake *Hurons*, and *Michigan*, and running by the back-ſide of *Carolina*,) on the top of which, for above 200 miles from the north end, there is a broad plain like a terrace. If as much pains were taken to diſcover towards the north of *California*, as was once to find the north weſt paſſage, perhaps, we might find an eaſier way to account for the peopling of *America*, and, perhaps, there would be found a very ſmall track of ſea, if any, between *America* and *Jeſſo* to the northward of *Japan*. But this muſt be left to time.

But there are ſome mountains in *America* which muſt not be paſt over in ſilence; and thoſe are, the *Vulcano's*, or hills which ſend out ſmoke and fire. There are ſeveral ſuch in the *Cordilleras* in *Peru*, but chiefly in *Arequipa*. But the moſt famous burning mountains in *America* are *Popacatepec* near *Mexico*; (the Place from whence *Cortez* got the Sulphur to make Powder, as we obſerv'd before*) and thoſe of *Guatimala*. That of *Popacatepec* had been viſited by *De Ordas* in 1519, before *Cortez* went firſt to *Mexico*, and it was from his report that the general afterwards ſent to get the ſulphur from it; and therefore we ſhall give a more full relation of that expedition in this place, becauſe it will give a better idea of the nature of the *Vulcano's*.

Vulcano's *or hills of fire.*

* Un. Tr. *p.* 82.

Cortez being in great want of powder, when he lay at *Segura della Frontiera*, ſent his maſter gunner, one *Meſa*, together with *Penaloſa*, *Larios* and *Montano*, with ſome *Indians*, to go to this burning mountain. This expedition was ſo new to the *Indians*, that above 40000 of them aſſembled near the foot of the mountain to ſee what would be the iſſue of this raſh adventure, where they built huts to wait the return, or the deſtruction of the *Spaniards*. The *Spaniards* began to aſcend the mountain in the afternoon, carrying with them two long ropes, ſacks made of cloth, and lin'd

Herrera *dec.* ii. b. X. *ch.* 5.

The burning mountain of Popacatepec.

with deers skins, and two heavy blankets. Night coming upon them before they had made a fourth part of the way, they found it ſo exceſſively cold, that they made a pit in the mountain about two ſpans deep to ly in, and reſolv'd to cover themſelves with the blankets. After having dug, in ſand, ſo far, they found rock, which was ſo hot, and ſuch a ſcent of ſulphur iſſued from it, that in a ſhort time they were not able to bear their new habitation; ſo that they were forced to hold on their way. As they went in the dark, the froſt was ſo hard on the ſurface of the hill that they could ſcarce keep their feet; and one of them fell about eight fathom into a cavity cover'd at the bottom with ice, and it was well for him it was, for our author ſays, he had gone 1000 fathoms lower, but for that ſtop. His comrades let down a rope with a ſlip knot to him, which he put over his ſhoulders and under his arms, and altho' he was much hurt by his fall, by their aſſiſtance, and uſing his hands and feet as well as he could, he got out of the hole; and ſtaid near that place till day, which appear'd very ſoon or elſe they had all periſh'd with cold.

At ſun riſing they proceeded towards the top, whence they ſaw a great ſmoke and ſome flaſhes of fire iſſue forth, together with a burning ſtone as big as a pint pot, which rolled down the hill, to the place where they were, which they ſtopt with their blankets, and warm'd themſelves with it. The man that had fallen in the night, not being able to walk farther, they left him with one of the blankets to keep him warm, and the reſt got to the mouth of the *Vulcano* by ten of the clock; looking into it they perceiv'd the fire, and as far as they could judge by the eye, it ſeem'd to be about 150 fathoms below the mouth of the hill where they were. They went round the orifice, which was about a quarter of a league in compaſs, but found the ſame difficulty of going down all round. But they were reſolv'd to die rather than go back without their errand; they caſt lots, therefore, who ſhould venture down firſt, and the lot fell upon *Montano*, who being put into one of the ſacks made of hemp, was let down 14 fathoms. At his firſt going down, he brought out the bag (which was ty'd to the ſack) almoſt full of brimſtone, and then going down again ſix times more, he brought out, in all, about 200 weight. He being reliev'd by another, who went in ſix times, that perſon brought out 100 weight, with which being ſatisfy'd, they went down the hill, and having found their companion, they went in a ſpiral way, finding it impracticable to go in a ſtraight line, as they had come up.

As ſoon as they came to the foot of the mountain, the *Indians* look'd upon them as ſomething above human, and having refreſh'd them with victuals and drink, took them upon their ſhoulders in biers, as they us'd to do their caciques, and ſo carry'd them to the camp. Theſe *Spaniards* affirm'd that the fire below, which they ſaw very plainly from above, was juſt like the furnace of a glaſs-houſe.

Near a kin to theſe vulcanos are earthquakes, very common in the *Weſt Indies*, which proceeding from the ſame cauſe, as the vulcanos, we ſhall account for them both together. But it is obſervable, that the latter are for the moſt part in places near the ſea, and a great way from the burning mountains. But they ſometimes reach a vaſt way. *Acoſta* ſays, an earthquake has been felt from *Qitu* to *Chili*, along the whole coaſt of *Peru*, which is 1200 miles. Nor are the other parts of *America*, either upon the continent or in the iſlands, free from earthquakes; ſo that we need not give a hiſtory of things which happen in that country almoſt every year, in ſome place or other. *Earthquakes.*

The reaſon of vulcanos and earthquakes is this "Thoſe countries which "yield great ſtore of ſulphur and nitre, "or where ſulphur is ſublim'd from the "*Pyrites* (which is a ſort of ſulphur, that "naturally takes fire of itſelf;) are the "moſt ſubject to earthquakes: For where "there are ſuch mines, they muſt ſend "up exhalations, which meeting with ſubterraneous caverns they muſt ſtick to the "arches of them, as ſoot does to the ſides "of our chimneys, where they mix themſelves with the nitre or ſalt peter, which "comes out of theſe arches, in like manner as we ſee it come out of the inſide "of the arch of a bridge, and ſo makes "a kind of cruſt, which will eaſily take "fire ſeveral ways, as, 1. By an inflammable breath of the *Pyrites*. 2. By a "fermentation of vapours to a degree of "heat equal to that of fire or flame. 3. By "the falling of ſome great ſtone, which "is undermin'd by water, and ſtricking "upon another produces ſome ſparks, "which ſet fire to the combuſtible matter "that is near: which being a kind of natural gun powder, at the appulſe of the "fire, goes off (if I may ſo ſay) with a "ſudden blaſt or violent exploſion, rumbling in the bowels of the earth, and "lifting up the ground above it; ſo as "ſometimes to make miſerable havock and "deſtruction, till it gets vent, or a diſcharge. Burning mountains or vulcanoes are only ſo many ſpiracles, or "breathing places, ſerving for the diſ- *The reaſon of vulcanos and of earthquakes.*

"charge

"charge of this ſubterraneous fire, when "it is thus perternaturally aſſembled. "And where there happens to be ſuch a "ſtructure and conformation of the interi- "or parts of the earth, that the fire may "paſs freely, or without impediment from "the caverns therein, it aſſembles into "theſe ſpiracles, and then eaſily and rea- "dily gets out, from time to time, with- "out ſhaking or diſturbing the earth. "But where ſuch communication is want- "ing, or the paſſages not ſufficiently large "and open, ſo that it cannot come at the "ſaid ſpiracles, without firſt forcing and "removing all obſtacles; it heaves up, "and ſhocks the earth till it has made "its way to the mouth of the vulcano; "where it ruſhes forth, ſometimes in "mighty flames, with great velocity, and "a terrible bellowing noiſe."

See Var. p. 152. note (c.)

But, to compenſate for thoſe noxious particles contain'd in the bowels of the earth, particularly in *America*, the WISE CREATOR has ordain'd, that in the ſame earth, ſhould be found many things for the uſe of man: and if the perverſneſs of human nature has made a bad uſe of them, the fault is in thoſe who corrupted them, not in the things themſelves.

Of this ſort are metals deſign'd by infinite wiſdom for the benefit and advantage of mankind: ſome for phyſic and curing diſeaſes; others for defence againſt enemies; ſome for ornament and beauty, and others, neceſſary inſtruments to work the reſt. And the induſtry of man has found out one uſe of the beſt metals, ſuch as gold and ſilver, which has been of great ſervice to trade, and to keep up a correſpondence between people of different nations; *viz.* the coining of gold and ſilver into money, which altho' the natives of the *Weſt Indies* knew nothing of, and was the occaſion of grievous miſchiefs to them, by the covetouſneſs of their firſt conquerors; yet now they come to be better acquainted with it; and know the value of coin as well as the *Europeans*.

Of the different mines in the Weſt Indies.

Altho' there are ſeveral ſorts of mines in *America* of other metals beſides gold and ſilver, yet they have ſo much work in digging for theſe, that they have neither time nor hands for digging the others, except as much quickſilver as is neceſſary for refining the ſilver.

Gold.

Of all metals, gold has always been the moſt eſteem'd, and is in its own nature more excellent than the others; being more durable than any, and not to be conſum'd either by time or fire. The oftener it paſſes the fire it is ſtill the purer, nor does it loſe any thing of its value by uſe, as other metals do: and of all metals it is the moſt ductile and pliable, and therefore the eaſieſt to be wrought.

There were great quantities of this metal found in many places of the *Weſt Indies*, by the firſt diſcoverers, as we obſerv'd in the account already given of *Columbus*, *Cortez*, *Pizarro*, &c. And it is very evident by the temples and palaces, eſpecially in *Peru* and *Mexico*, that the *Indians* put a great value upon that metal, by their making uſe of it to adorn the temples of their gods, and the palaces of their kings with it. And it is as evident that they had it in great plenty, when they could not only make the ſtatues of their idols of it, but they cover'd ſome of their temples on the out ſide, as well as within, with gold: and made not only their veſſels for the king's table, but the thrones on which they ſat, and the chairs in which they were carry'd, of maſſive gold. It is true indeed that they did not put that value upon it, that the *Spaniards* did, nor had covetouſneſs got poſſeſſion of their minds. They were contented with the neceſſaries of life, and for thoſe, they traded with their neighbours, giving them ſuch things as they wanted for ſuch others as they had occaſion for themſelves; and for the ornaments of their houſes and perſons, they dealt more in feathers and ſhells, than they did in other riches: and when they found out the uſe of iron for working tools, (which neceſſity taught them to make of flint or copper before,) then they would purchaſe knives, hatches, &c. by a conſiderable quantity of gold; ſo that the *Spaniards* very often receiv'd in barter the value of many 1000 of ducats for what did not coſt five in their own country. And ſuch plenty of gold and ſilver they found in *America*, that they ſhod their horſes with it, when they wanted iron, and *Acoſta* ſays, the value of 300 crowns has been given for one bottle of wine in *Peru*.

In great plenty.

Different ſorts of it.

There are three ways of finding gold in *America*, *viz.* in grains, in ſtone, and in powder. The grain gold is found in ſmall pieces, almoſt like apple ſeeds, and therefore are call'd *Pippins*. This ſort of gold was pure and unmix'd, and there was no occaſion to melt it for refining: and ſometimes they found large pieces of the ſame kind of gold. But this grain gold is not in ſuch plenty as the others. The ſtone gold is ſuch as grows in veins within ſtone or flint, ſome are half gold half ſtone. The grain gold is found in rivers, but this is found in mines, and muſt be dug out, with ſtrength and labour. But the moſt common, and that which is found in greateſt plenty is the powder gold, which they get in ſtreams and other places where water has paſs'd. Of this there is good ſtore in the rivers of the large iſlands within the Tropics, but

but they bring little of it to *Spain*, becauſe they have deſtroy'd the natives, in thoſe iſlands, who us'd to be very expert in getting it for them. There is abundance of it in *Chili*, in *Quito* and *Granada*. But the beſt gold in *America* is reckon'd that which is found at *Caranava* in *Peru*, and at *Baldivia* in *Chili*. This gold is 23 carats and an half fine, and ſometimes more.

Gold is, for the moſt part, found mix'd with ſilver or copper; but that which is mix'd with copper is the finer gold. When they get a quantity of this powder gold, they put it in baſins, and waſh it in ſeveral waters, till they clear it of ſand, and then they refine it, as we ſhall ſhew by and by; and when it is melted, they make it into ſmall bars or lingots, and ſo ſend it to *Spain*. We need not talk of the vaſt quantities of gold ſent from *America* to *Spain*; *Acoſta* ſays, that in the fleet that carry'd him to *Spain*, there were (for the king's ſhare only) 12 cheſts of gold of 100 *l.* weight each, beſides 1056 bars or lingots, but he does not tell their weight, beſides a vaſt deal of ſilver. So that we may ſafely ſay, of the riches of this country, that they make good *De Foe*'s obſervation.

Wealth which would, in wiſe hands, the world undo.

But it is generally in the moſt barren and unfruitful parts of *America* where they have any gold mines; altho' the gold duſt is found in rivers which water the beſt ſoil: but the gold is not bred there, but waſh'd down by the ſprings from the barren places where it is engender'd.

Silver As to ſilver mines, they abound moſt in *New Spain* and *Peru*, altho', like the gold, there are of them in many places; but thoſe of *Peru* are reckon'd the beſt; and particularly thoſe of *Potoſi*, of the diſcovery of which we gave the hiſtory before.* This mine lies on the eaſt ſide of the mountain of *Potoſi*, and branches out in a very irregular form, and makes as it were, different mines. They were at firſt eaſily dug, becauſe they were equal with the ſurface; but by the huge quantities drain'd out of them, they are now of a vaſt depth, *viz.* 200 ſtades, according to their reckoning, every ſtade being a man's heighth. But to avoid that inconvenience, they have made openings upon the ſide of the hill, and run paſſages a-croſs the great one horizontally; theſe croſs paſſages they call *Soccobones*, they are made eight foot broad and the heighth of a man, and have doors to ſhut them in when they pleaſe. Theſe *Soccobones* belong to different proprietors, who, having made them as a vaſt charge, have ſpecial privileges granted them, particularly, they have the 5th part of all the bullion taken out by their reſpective doors. But the poor miners are ſlaves in the worſt ſenſe: they work day and night, without knowing any diſtinction between the one and the other: they are ſubject to the groſs unwholeſom air, and breath the fumes and vapours of the metal, and are expos'd to all the damps that riſe, which ſometimes ſtrike them dead, or occaſion ſuch diſtempers as they never recover. Beſides the danger they are in of pieces of the rock falling upon them or with them, or their own falling off the ladders of ropes, like ſhrowds of a ſhip, by which they go down and mount up with burdens upon their backs 500 foot: only that, at ſuch diſtances, they have platforms of wood, with ſeats for the poor labourers to reſt, and take their breath. As they go up and down, they have a lighted candle ty'd to one of their thumbs, becauſe they are oblig'd to hold the ladder with both hands. They that work below, make uſe of great ſledges, or hammers of a vaſt weight, as our people who dig in quarries; and they divide day and night by ſand-glaſſes, and relieve each other by watches as they do at ſea.

*Un.Tr. f. 191.

This mine is ſo rich, that our author ſays, that from its firſt diſcovery to the year 1585, about 40 years, there were enter'd in the cuſtom-houſe of *Potoſi* an hundred thouſand millions of pieces, every piece valu'd at thirteen rials and an half: and he ſays, that in the two fleets of *Peru* and *Mexico*, the year that he return'd to *Spain*, which was in 1587, there were eleven millions of pieces, of which almoſt one half was the king's, and above two thirds of that treaſure was brought from *Peru*. And according to him the half of the ſilver of *Potoſi* was never enter'd in the cuſtom-houſe books.

Quick-ſilver. Before we ſpeak of the manner of refining this metal, it will not be improper to ſpeak of the mines of Quickſilver, which they likewiſe have in *America*, and particularly in *Peru*, and to ſhew how they were diſcover'd here. There is no doubt but the *Indians* knew of them long before the *Spaniards* went amongſt them, for they dug often in thoſe mines for *Vermilian*, with which they painted themſelves; but they did not know the uſe of quickſilver, and therefore neglected it. But after the *Spaniards* had been ſome years in *Peru*, a certain *Portugueſe* being at *Guamangua*, a city near the mountains of *Guancavelica*, in the province of *Coſco*, finding by the vermilian, which the natives made uſe of under the name of *Limpi*, that there was quickſilver in that country, for they are found in the

the ſame mines, he went to ſearch in the mountains from whence they had their *Limpi*, and diſcover'd as rich a mine of Mercury as the hill of *Potoſi* was for ſilver. But they firſt began at *Mexico* to refine the ſilver with it.

The way of drawing the quickſilver out of the ſtone, is to beat the ſtone as ſmall as poſſible, and then to ſet it in earthen pots cloſe ſhut, upon a fire, which ſeparates the mercury, by drawing it up in fumes to the top of the veſſel, from whence it falls down congealed after it grows cold.

Having found out this rich mine of quickſilver ſo near *Potoſi*, and being afterwards inſtructed from *Mexico* how to refine their ſilver with it, they us'd it to great advantage there. For before that time they were at a vaſt expence of time and fire in refining their ſilver; being obliged to melt the ore in furnaces built on purpoſe all about the hill, to the number of 600, with a vaſt conſumption of wood, till one found a way to do it with a ſort of ſtraw, which the *Indians* call'd ycho, of which there is great plenty near thoſe mines. But there was one thing very remarkable, when they refin'd their ſilver with fire; *viz.* that in the mines at *Porco*, ſix leagues diſtance from *Potoſi*, they us'd bellows to blow their fires, and ſo melted their ſilver ore; but that at *Potoſi* would not melt by this artificial blowing, but only by the natural air from the mountains without the force of bellows.

The way of refining ſilver.

But a great deal of this trouble was ſav'd after they got the way of uſing quickſilver. And the way of uſing it is thus. They beat the ſilver ore to powder, and ſearch it thro' a fine ſieve; this powder they put into veſſels over the fire, mixing a good quantity of ſalt with it, the proportion of ſalt to the ore is as 5 is to 50. Then they ſtrain the quickſilver into the veſſel, ſtirring all together that it may incorporate. The force of the fire helping them to incorporate in five or ſix days, whereas without fire it took a month to mix. To ſeparate the mercury from the ſilver, the whole mixture muſt be pour'd into water, ſtiring it well till the ſilver and mercury being the two heavier bodies ſubſide, and ſo they pour off all the dregs; and this operation they repeat often, till the ſilver and mercury begin to be bright; and then putting both together into a cloth they ſtrain it hard, ſo that the mercury, which is liquid, goes thro' in ſmall globes, leaving the ſilver behind. And becauſe, in the ſeveral waſhings, ſome of the metal may have been thrown off, with the droſs and particles of earth, they keep thoſe waſhings, as they call them, and waſh them over again, and ſo ſtrain them as before, to get out all the remainder. This leaves the ſilver ſo fine that they are forced to put ſome alloy to it to make it ſtandart.

The quickſilver being taken out of the mines, and ſeparated by the force of fire in earthen pots, as was obſerv'd before, after it is quite cold, they uncover the veſſels, and find all the vapours congeal'd and fallen to the bottom, which they put in skins to be ſent to *Potoſi* or *Mexico*, as they have occaſion.

This mountain of *Potoſi*, with the ground about it, is one of the moſt barren places in all *Peru*, yielding neither graſs nor corn; and yet, ſuch is the mighty force of ſilver, that it is the beſt inhabited place of the whole empire, and every thing neceſſary or convenient for life is brought thither from other parts in great adundance.

The mills for fining the ſilver.

All round this mountain, they have their mills for pounding the metal, as it comes out of the mine. Some of the mills go with horſes, and others with water, which coming from the clouds is kept in large ciſterns made in the ground for that purpoſe, and let out by ſluices to the mills: and at *Tarapaya* there is a river, brought from the lake, which ſerves 22 mills made there for the ſame uſe. In thoſe mills they grind their oar to powder in order to make it incorporate with the mercury as aboveſaid.

The trial of ſilver at Potoſi.

When the ſilver is made into bars, they carry it to the eſſay-maſter, who cutting a ſmall piece off every bar, weighs it by itſelf with the utmoſt exactneſs, and puts every ſuch piece into a crucible, and melts it in a ſtrong fire; the particles of lead vaniſh in ſmoak, and thoſe of tin or copper likewiſe diſſolve: and upon weighing each portion a ſecond time, he knows by the deficiency of the weight what alloy to give it.

Emeralds.

Having thus given an account of the gold and ſilver in the *Weſt Indies*, we ſhall ſay ſomething of emeralds and pearls. Of the firſt of theſe there is great plenty in that country, but the greateſt ſtore of them was found in the places near the line, particularly in *New Granada*. Our author ſays that near *Port Viejo* there is a country call'd the *Land of Emeraids*, for the great abundance of them: but in his time, the *Spaniards* were not maſters of it. Thoſe jewels grew in ſtones like criſtal; but there is great difference in them; ſome are white; others half white, half green; but others of a beautiful green; and thoſe that are ſo, are, in my opinion, the fineſt ſtone that can be ſeen, green being the moſt agreeable colour, to the eye, of any that we ſee. Some authors relate wonders of the bigneſs of emeralds, but our author does not affirm that he ſaw any bigger than a large nut. How-

ever they were in ſuch plenty in *Peru* and other parts of the *Weſt Indies*, as to diminiſh the value of them in *Europe*.

Pearls. As to pearls, they are ſo common in the *Weſt Indies*, as not to be much minded, the negroes and meaner ſort of people wearing them in great quantities. But indeed one reaſon why they may not be ſo valuable there, is, that they are not generally ſo bright as thoſe which are found in the *Eaſt Indies*, which are, from the country, call'd *Orient Pearls*. The places where moſt of them were found, were what the firſt diſcoverers call'd the *Iſland of Pearls*, on the ſouth ſea, not far from *Panama*, and in the north ſea about *La Hacha* near *Carthagena*, on the north of *Terra Firma*, and in ſome of the iſlands adjacent. It was a great fatigue for the natives to fiſh for pearls, the beſt of them lying in water 9, 10, ſome 12 fathoms deep. They are different in colour, ſize, ſhape, and are more or leſs valuable, as they are clear or dark, big or little. And if two pearls happen (which is rare) to be of one ſhape and ſize, if they be of a tollerable bigneſs, their being ſo matth'd enhances the price very much, becauſe they ſerve for ear-rings. And this ſhall ſuffice to have been ſaid of the internal produce of the earth in *America*.

Plants. We now proceed to what is produced above ground, ſuch as plants, and animals. And of theſe other nation have their ſhare in the different colonies of *America*, whereas the *Spaniards* engroſs the treaſure (at leaſt the rich mines) to themſelves.

Maiz. As bread is juſtly reckon'd, with us, *the ſtaff of life*, we ſhall begin with *Maiz*, which ſerves a great part of the *Weſt Indies* for bread, and drink too: and is not much inferior to our wheat, in ſtrength and ſubſtance; only it is hotter, and apt to breed groſs humours, as oat meal is obſerv'd to do. It grows upon reeds or canes, and ſhoots up in two or more branches from each root, on the top of which is the grain ſticking cloſe together, 6 or 700 upon one ſtalk. It is planted by the hand, one by one, not too near one another, and requires a hot moiſt ſoil. It is eaten in ſeveral manners, as boil'd in the grain hot; roaſted before the fire; or ground and made into bread; and ſometimes they make biskets of it, mixing the flower with ſugar. When they make drink of it, they uſe it as we do malt, ſteeping the grain in water till it burſts, and this infuſion they boil, and make very ſtrong drink of it, which intoxicates ſooner than wine. They call it *Acua*, *Chicha*, or *Sora* in different places. Another way of making *Chicha* is by waſhing the maiz, and making it into leven, and then infuſing it. But the beſt way is to roaſt the maiz, and then infuſe it. It is very wholeſome, moderately taken, being excellent for the rheins, ſo that it is taken for the gravel. The buds of this grain ſerve inſtead of butter and oyl.

Papas & Cacavi. But becauſe as we obſerv'd, this grain requires a warm and moiſt ſoil, it does not grow in cold or dry countries; thoſe have, in place of it, *Papas* and *Cacavi*. The *Papas* is a ſmall root, which caſts out many leaves; they dry it in the ſun, and then make a ſort of a paſte of it: or elſe they boil or roaſt it like maiz. The *Cacavi* is made of a root call'd *Yuca*, which is a large root, and when it is ſcraped or grated, they put it in a preſs and ſqueeze all the juice from it, and then dry it for bread. It has no taſte, but is wholeſome. They find it very good in ſoup, for it ſwells much, and takes a reliſh, from the broth, which it wants to make it palatable. But in moſt of the plantations they have *European* wheat, and rice.

Roots. As to roots, our author obſerves, that not only all thoſe that have been carry'd to *America* from *Europe*, ſuch as turnips, onions, garlick, &c. have wonderfully improv'd there, and become much better by being tranſplanted; but they had great variety of their own; ſuch as, *ocas*, *yanococas*, *camores*, *vatas*, *xiquimas*, *cochucha*, *cavi*, *totora*, *mani*, and many more too tedious to be mention'd. The firſt *Spaniards* who went to *America*, as they gave names of their own to the ſeveral iſlands and countries, ſo they did to the plants, trees and fruit which they found there, from ſome reſemblance they ſeem'd to have to the plants, &c. in *Spain*, altho' they were very different. Thus what they call the pine apple in *America* *Pine.* has nothing in common with the pine in *Spain*, but only the form of it; for whereas thoſe in *Spain*, have ſcales, and but little meat, thoſe in *America* have no ſcales and are all pulp, and may be eaten like a mellon when the skin is pair'd off. So the cucumber is ſomthing like ours in *Cucumber.* ſhape, but they are ſmooth without, the skin of them is white, and the inſide yellow or violet, and have a ſweet tart taſte, and very delicate.

The little fruit of Chili. What is call'd the Little fruit of *Chili*, taſtes like our beſt cherry, but looks like an unripe mulberry, but bigger. The ſhrub on which it grows is a creeper, and is found in many parts all over *Chili*. The fruit they call prunes are not unlike our *Prunes.* plumb, and are (like them) of different ſorts. Thoſe of *Nicaragua* have a delicate taſte, but have little pulp, and are good to create an appetite.

Capallos. The capallos are a ſort of calibaſh, and grow in various ſhapes, and ſome ſo big that

that they make large baskets of them, cut in two in the middle; others of them make genteel drinking cups.

Axi. There is a ſort of pepper which the *Indians* call axi, which was greatly eſteem'd by the natives. It is of different colours, as red, yellow, green, and fire colour; ſome of it is very ſharp and biting; but other ſorts of it ſweet and pleaſant; and is the common ſauce for meat.

There are many ſorts of pulſe in this country, but our author ſays they came originally from *Europe*, there being very few of them when the *Spaniards* went firſt thither.

Different ſorts of trees. Of trees they have great variety, many of them peculiar to the *Weſt Indies*. The plane tree, ſo call'd by the *Spaniards* for ſome reſemblance to the platanus, in the broadneſs of the leaf, is a quite different tree from that: for the great value of the *Indian* plane is owing to a good fruit which it bears, whereas the *European* plane bears none. *The plane.* Beſides the plane in other places is a large ſpreading tree with a big body, but the *Indian* is ſmall, and does not ſpread. Indeed the leaves of the *American* tree are much larger than the other, for they are able to cover a man from head to foot. It ſhoots from the root in ſprigs or branches, all ſeparate from one another, every one making a ſmall tree apart. When thoſe ſprigs grow to about eight foot, it puts forth only one bough with fruit, 300, ſome more, ſome leſs, on a bough two or three inches thick, which have a kernel, within a rind, tender and good to eat, if ſuffer'd to ripen upon the tree. The taſte of them is like an apple; and they laſt the whole year round. It grows in warm ſoil where there is a good deal of moiſture. They flouriſh moſt in *Mexico*, *Terra Firma*, and in ſome of the iſlands within the tropicks. The leaves of this tree have been writ upon.

Cocoa. But as profitable as the plane is, the cocoa is moſt eſteem'd, ſo that in *Acoſta*'s time it was one of the moſt valuable and current commodities of *New Spain*, and he ſays that whole ſhip loads of it were frequently carry'd from *Guatimala*. And altho' this author ſpeaks ſlightly of it, and ſays that the *Spaniards* made great account of the drink made of cocoa *fooliſhly, and without reaſon*, this may be excus'd in him, becauſe, perhaps, chocolate was not come to that perfection, nor ſo univerſally us'd as it has been ſince; but it ſeems very odd that Dr. *Harris*, a modern writer, ſhould be ſo little acquainted with the reputation of chocolate, as to out-do even *Acoſta* in his rediculing this fruit, and had ſuch a weak ſtomach as to take the frothing of a diſh of chocolate for a vomit. But neither of their opinions will put the world out of conceit with it, and indeed it is a pity they ſhould.

The tree that bears this fruit, or nut as it is call'd, is much about the ſize of our plumb trees, with leaves not unlike the orange tree, and flowers of the colour of ſafron, but the tree muſt be preſerv'd from the ſcorching heat of the ſun by being ſhelter'd by ſome other tree planted near it. The fruit is inclos'd in a husk, almoſt like a cheſnut, and is of ſeveral ſizes, from the bigneſs of a crab apple, to that of the middle ſort of musk-mellon. As they ripen, the husk changes from green to rediſh or pink colour, eſpecially on the ſide towards the ſun; there are two ſeaſons of the year for them, *viz. January* and *May*. When this rind is cut, you have the kernel or fruit, in ſome more, in others fewer, almoſt like almonds, but not ſo flat; before they are ripe the kernel is whitiſh, but as it ripens becomes almoſt of the colour of a bullock's kidney. Thoſe kernels being dry'd in the ſun are afterwards beaten in a mortar, and made up in a kind of paſte, of which the chocolate is compos'd.* But the making of chocolate is ſo well known in *England*, that we need ſay nothing of it. There are abundance of theſe trees in *New Spain*, from whence the *Spaniards* tranſplanted them to *Jamaica* and other places where there is great plenty of them.

* *See* Hughes's Amer. Phyſician *p.* 102 *& ſeq.*

Another tree in great reputation, chiefly in *New Spain*, is the magueny, which *Acoſta* ſays, yields water, wine, oyl, vinegar, honey, ſyrop, needles and thread. For the leaves of it may be drawn out in long threads very ſtrong, and at the end of the leaf there a ſort of thorn which ſerves for needles. By cutting the body of the tree they get a good quantity of water, very freſh and pleaſant; which when it is boil'd is a ſort of wine, and that in time turns to vinegar; if it be boil'd but half it is ſyrop, and if over-boil'd it becomes like honey; but our author forgot the oyl. *Maguey.*

Tunnal breeds cochinile. The tunal tree might be paſt over, for any good that is in itſelf, if it were not for little inſects, which breed in the leaves of it, and being dry'd are the ſo much eſteem'd cochinile, with which they dye in grain. Of this cochinile, our author ſays there was brought to *Spain* in 1587 the value of 283,750 pieces of eight, in one fleet, and as much comes every year: ſo that it is no matter whether the tunal tree be handſome or ugly, ſince it breeds thoſe valuable inſects. This tree is very common in *New Spain*. There are alſo of them in *Peru* (ſince *Acoſta*'s time) and in the iſlands of *Hiſpaniola* and *Bermudas*.*

* Gord. Geo. gra.

The

Cotton tree.

The cotton tree ſerves for excellent uſe in the *Weſt Indies*. It grows to the bulk of apple trees; the leaves of it ſmall and pointed; and after the flower falls, there is form'd a green button about the bigneſs of a tennis ball, having a thin cruſty ſhell, which becomes black when it is ripe, within which the cotton is incloſs'd, and would be loſt if not gather'd in time. There are likewiſe ſhrubs where cotton grows, but only with this difference, that the buttons, produced by the ſhurb, are ſhap'd like bean cods; but in all other reſpects they are the ſame with that upon the tree. This cotton is the product of *Peru*, *Mexico*, S. *Cruz* in *Sierra*, *Paraguay*, *Carolina*, *Jamaica*, *Barbadoes* and *Brazil*. And *Acoſta* ſays, that, in the year before nam'd, there were ſent from S. *Dominica* to *Spain* 64,000 arobes of cotton, which amounts to 1,590,000 lb. weight; beſides vaſt quantities of it wrought in the *Weſt Indies* for their own uſe.

It would be an endleſs task to enumerate all the different trees and plants which grow in the *Weſt Indies*. They have fruits and trees of all kinds, either found in the country before the conqueſt, or brought into it from the ſeveral countries of *Europe*, to which the conquerors belong'd. Of the firſt ſort were thoſe already mention'd, to which we may add the capote, chicapote and blankmanger, which eat like marmalade, or compounded fruit rather than ſimple; the mameys, guiavos and paltos, reſembling peaches, apples and pears. Of the other ſort there is an infinite number carry'd thither by the *Spaniards*, *Portugueſes*, *Engliſh* and *French*; moſt of the *European* ſeeds thriving and improving in many parts of the *Weſt Indies*, as having, in moſt places a ſoil agreeable to their nature, and a happier influence of the ſun to ripen them; ſuch as quinces, pomgranates, vines of different kinds, both from *Spain* and *France*. But altho' they have good grapes for eating in *Mexico*, and other *Spaniſh* plantations, yet the wine does not anſwer there, and therefore they bring wine from *Spain*, and the *Canaries*, to all the places north of the line. But in *Peru* and *Chili* they have good wine of their own growth. The reaſon they give for it is, the rains which fall in the ſummer in *New Spain*, and its neighbouring countries, which at that time of the year ſpoils the wine.

But there is one thing very extraordinary, which I ſhould not venture to relate after any man; of whoſe veracity I have a leſs opinion, than of *Acoſta*'s. That is, there are trees in *Peru*, which are of ſuch a nature that one part of a tree bears fruit for one half of the year, and the other part of it for the other half. And he gives an inſtance in a fig tree, (in *Malta* within 13 leagues of the city of *Lima*,) whereof the one half, towards the ſouth, is green, and bears fruit, when it is ſummer in *Chili*, and the other moitie of the tree is green, and bears fruit, when it is ſummer towards the north. If this is true, I ſhall leave the *Phenomenon* of it to the royal ſociety, for I own it is too deep for me.

A ſtrange inſtance of a fig-tree in Peru.

Having thus reckon'd the moſt uſeful fruit trees, we ſhall in a few words ſpeak of the foreſts trees. Many places of *America* were, at their firſt diſcovery, ſo full of foreſts, that there was no travelling thro' ſeveral countries, till they were cut down, and, without doubt, that is the caſe of a great part of it to this day. But as good an opinion as I have of *Acoſta*'s veracity, I cannot believe the ſtory told him by one of the brothers of his order; *viz.* that he travel'd 15 days upon the tops of buſhes, without touching ground; and was oblig'd to get up to the tops of high trees to make obſervations. *This brother may paſs for a traveller any where.*

Foreſt trees.

Among the foreſt trees of *America*, cedars are there in great plenty, ſome white and ſome red, and ſerve both for houſes and ſhiping. As alſo bay trees, palms, and ceivas, of which the natives us'd to make their canoes. In the iſlands, particularly *Cuba*, they have good ſtore of ebony, cedar, grenadille, caovana, and others which are large and fit for uſe; as other places of the continent and the iſlands abound in pines, oaks and firs, of which laſt they make excellent maſts for ſhips. But of all the trees, there ſeems to be the greateſt plenty of *Brazil*. The *Indians* call the tree which yields the *Brazil* wood, *Ibripitanga*. It is tall and ſpreading, its bark is of a dark colour, and full of ſhort prickles; the leaf is green and not unlike that of box tree; the boughs ſhoot forth a yellow ſweet ſmelling flower, which falling off is ſucceeded by a long flat cod full of little red pulſe. The lower part of the tree is only good for dying, and is brought to the ſea, at a great charge, becauſe it grows upon high hills and ſome of them a good way up in the country. There are of thoſe trees in ſeveral parts of the *Weſt Indies*, but *Brazil*, ſo call'd from that wood, is the moſt famous for them. There are many other ſorts of trees both on the continent and in the iſlands, but I ſhall only mention the *Manchenile* tree, of which there is a good number in the iſland *Dominico*, which bears long leaves, and the fruits of it ſmells ſweetly, it is full of red ſtreaks, and taſtes like a hazle nut, but cauſes a deadly ſleep to thoſe who eat of it. And there

Brazil wood.

Ogilvy's Amer. p. 481.

Manchenile tree poiſonous

there is a poiſonous juice comes from the tree, in which the *Caribeans* dip their arrows. But nature has provided a remedy againſt this poyſon, which is an oyl drawn from a ſort of ſnails, which creep into the claws of dead crabs for ſhelter from the weather, which being laid before the fire, come out of their lurking places, and being ſqueez'd, they yield an oily ſubſtance that cures the poiſon of the manchenile.

How cured.

Ogil. *p.* 375.

Before we finiſh this branch of the natural hiſtory, it will be proper to ſay ſomething of thoſe trees or plants which yield gums, drugs, or other ingredients for phyſick. All plants are more or leſs medicinal, when well apply'd: but ſome are more eſpecially ſo. Among thoſe, balm is juſtly eſteem'd excellent; and altho', perhaps, it may not come up to the ſcripture account of the balm of *Gilead*, not being of the ſame kind; yet it has many qualities attributed to that; *viz.* its fine delicate ſmell, the variety of colours in it, and the effect in curing wounds. It is drawn, in the *Weſt Indies*, from a tree about the bigneſs of the pomegranate, which being larger than that of *Engaddi*, has conſequently a greater quantity of juice. And it is not improbable, but that the great plenty of it in *America* has leſſen'd the eſteem of it, as was the caſe of emeralds and pearls. The *Terra Firma* abounds with it, eſpecially *Tolu* near *Carthagena*. A great deal of it is conſum'd in religious ceremonies by the *Spaniards*, the pope having granted a diſpenſation for uſing it inſtead of cream in thoſe rities where unction is requir'd.

Balm.

Gums and Drugs.

There are ſeveral other gums and drugs, of uſe both for phyſic and painting. Such as *amber*, *gum animi*, *copal*, *tacamahaca*, *caranna*, *oyl of aſpic*, *caſſia fiſtula*, *ſarſaparilla*, &c.

We ſhall ſhut up this part of our natural hiſtory which relate to plants and trees, with a ſhort account of ſugar and tobacco, of which there is ſuch a vaſt trade carry'd on to all parts of *Europe*.

Sugar.

Sugar is not originally the product of *America*, but was carry'd thither from *Sicily*, or from the *Maderas*, who had their ſugar canes from *Sicily*. The ſugar cane is a kind of reed, which grows to the highth of ſix or ſeven foot, and is of different joints; the leaves come out of each joint on both ſides of the ſtalk, of a bluiſh green colour. The cane is not hollow, but of a porous ſubſtance, moiſt, and ſweet to the taſte. The young ſuccors that ſpring from the root, they cut off, and plant in other places. At the proper ſeaſon for cutting thoſe canes, which the planters know, as we do when corn is ripe, they cut them at the firſt joint above ground, and lay them along the earth, and having cut off all the leaves or branches, they bind the canes in bundles, and carry them to the mill, which muſt be done very ſoon after cutting, or elſe they ſuffer much. The mill is made in ſuch a manner, as ſqueezes out all the juice out of the canes, which are remov'd to make way for others, and the juice ſo ſqueez'd, runs into a ciſtern, from whence it is convey'd into a copper, where it is boil'd with a ſlow fire. The firſt ſcum that riſes is good for nothing, but when that is taken off, they preſerve the other ſcums, which is what are call'd moloſſes, of which the rum is made; a liquor ſo well known in *Europe*, but eſpecially in the *Britiſh* dominions. After the juice has been boil'd in the firſt copper, then it is put into others, where they uſe ſtrong fire, and keep it there till it grows thicker, and ſo paſſing from one copper to another five or ſix times, they bring it to the due conſiſtence, and then put it into wooden boxes, of the ſhape of ſugar loaves, which are ſet in rows, with the broad end uppermoſt, adding a ſort of white earth to it for making it white. This manufacture is made in ſeveral parts of *America*, particularly in the iſlands, and more eſpecially in *Jamaica*. The *Portugueſes* likewiſe make a great trade of it in *Brazil*.

See Hughes's Am. Ph. *p.* 27 & *ſeq.*

Tobacco is properly an *American* plant, and was not known in *Europe* before this new world was diſcover'd. It takes its name from the iſland of *Tobago*, where either it was firſt found, or was in greateſt plenty. The manner of planting it is this. They ſow it in beds of 12 foot ſquare, cover'd with palm leaves, to keep off the ſun: and when it does not rain, they water it, till the tobacco comes to be about the bigneſs of young lettuce, and then they tranſplant them, ſetting them in rows, at three foot diſtant from one another, in the months of *February* and *March*, weeding it with great care. When it comes to be 18 inches high, they cut off the tops, and when it is full grown, take it up, and lay it upon poles and rafters, in a place made for the purpoſe, to dry, and when it is ſufficiently dry'd, they pull off the leaves and roll them up. This plant is of ſuch univerſal uſe thro' all parts of the habitable world, that there needs no more be ſaid of it, and is ſuch a branch of the *Britiſh* trade, that many of our plantations ſtand by it.

Tobacco.

Harris's Bibl. *Vol.* II. p. 819.

Having thus done with the vegetables of the *Weſt Indies*, we ſhall proceed to the animals of that country. This we ſhall, with *Acoſta*, (whom Dr. *Harris* likewiſe follows,) divide into three ſorts. 1. Such as the *Spaniards* carry'd from *Europe* to *America*. 2. Such as are of the ſame kind with the animals in the

Animals.

other parts of the world, but were found in *America* upon the firſt diſcovery. And 3. Such as are peculiar to the *Weſt Indies* and were not known to the *Europeans* before the *Weſt Indies* were diſcover'd. Of the firſt ſort are, the *European* ſheep, cows, goats, ſwine, horſes, aſſes, dogs, cats, &c. The ſheep have multiply'd exceedingly, and if they had gotten into the way of ſending their wooll into *Europe*, it might have been a conſiderable branch of their trade. For the paſture in many places of the continent is in ſuch abundance, that ſome people had 70, ſome 80, and others 100,000 ſheep; and great flocks of them in *Peru*, belonging to different people, went a grazing in the country, without having their walks appropriated to the different owners. And the wooll of them was for ſome time uſeleſs, till at laſt ſome, more frugal than the reſt, began to husband it, and made cloth and blankets of it for their own uſe, and they got clothiers from *Spain*; and altho' the cloth was not ſo fine as what came from *Europe*, yet it was of great advantage to the country.

Sheep ſent from Europe.

Cows.

They have great herds of black cattle both tame and wild. Of the firſt they make great advantage by their fleſh, by butter, milk, calves, and oxen for labour; and all the uſe they make of the other, is by hunting them in the woods, and when they have kill'd them, they take off their skins, neglecting the fleſh, as having no occaſion for it. And every one that pleaſes kills thoſe beaſts, none claming any property in them. Thoſe hides they ſend to *Spain*, and *Acoſta* ſays that from *Hiſpaniola* and *New Spain* in 1587, there were 99794 hides ſent over in the fleet that he went in.

Horſes, dogs, goats, &c.

The horſes have likewiſe multiply'd exceedingly in the *Weſt Indies*: as alſo dogs, which have increas'd in ſome places to that degree going wild in troops, that they became a nuſance, and a reward was propos'd in *Hiſpaniola* for killing a dog, as in *Europe* for a wolf. They have great plenty of goats, whoſe greaſe ſerves them for making candles. They have ſome camels, but not in great abundance, theſe the *Spaniards* brought from the *Canaries*.

Wild beaſts in common with thoſe of other parts.

Of ſuch animals as they had in the *Weſt Indies* before the *Europeans* ſettled there, ſome were of the ſame kind with thoſe in the other parts of the globe, and others peculiar to that country. Of the

Mooſes.

firſt were lions, tygers, bears, boars, foxes, ſtags and deer. Of the ſecond they have many, ſuch as, the mooſe, ſhap'd like a ſtag, but as big as an ox, a ſlow creature, good to be eaten, and would ſerve for the yoke if they were tam'd. The females bring three at a time, ſo that they multiply faſt. There is plenty of them in *New England*.

Ogilvy's Amer. p. 146.

Rackoons Ibid 147.

The *Rackoon* is a deep furr'd beaſt, not unlike a badger in ſhape, with a tail like a fox, and the fleſh taſts like lamb. They ſleep in the woods, in hollow trees, all the day, and in the night go to the ſhore to ſearch for ſcollops or other fiſh, and ſo are hunted by the inhabitants.

Muskaſh Ibid.

The muskaſh ſhap'd like a beaver, but not ſo big; the male's teſticles ſmell ſtrong of musk, and if they are kill'd in winter, never loſe that ſmell. They are little bigger than a rabit, and yet their skin ſells for a crown.

Beavers.

The beaver (altho' it cannot be ſaid to be peculiar to the *Weſt Indies*) yet being in great plenty in *Canada* and the countries adjacent, eſpecially *New York*, and in other parts of *America*, deſerves to be mention'd. They are a ſort of amphi- Ibid p. 174. bious creature, and Mr. *Ogilvy* tells of their building their neſts in a very curious manner. For, he ſays they gather all the looſe wood along the banks of the rivers where they live; and if they have not enough, they bite off the barks of ſtanding trees, and ſo gnaw the tree itſelf till it falls; and then cutting of ſuch parts of it as are for their purpoſe, they make their neſt ſix ſtories high, and cover them on the top with clay to keep out rain. They leave a paſſage to the river about the middle, and putting one as a centinel, as ſoon as the allarm is given of any danger near, the whole family makes to the water. They give their young ones, of which they have four at a time, ſuck like puppies. The teats of the female are between her fore legs, are only two, ſo that ſhe ſuckles her young ones by turns, two at a time, and is very tender of them. The fore legs of this creature, with the feet, reſemble thoſe of a dog, but the hind legs and feet are like thoſe of a gooſe. The right *Caſtoreum* is a bladder in ſhape of a pear within the body of the female beaver.

Sainos:

The ſainos are the likeſt to a wild hog, of any creature we know, they are ſmall but extreamly fierce, and aſſault men who hunt them, ſo that they are often forced to take ſhelter in the trees from them, which makes the ſainos bite the Acoſta's Nat. Hiſ. trees for rage, and then they kill them from the trees, by ſhooting bullets or arrows at them. They are remarkable for having their navel upon the ridge of their backs.

But there are two creatures very common in the *Weſt Indies* which the *Spaniards* call ſheep and goats, only for their reſembling thoſe creatures: but are indeed peculiar to *America*. For there is this mark by which we may know the creatures carry'd thither by the *Europeans*, from ſuch as were there before. *viz.* the names they go by among the natives.

The

The creatures which were there at the firſt diſcovery of the country have their diſtinct names, but thoſe that were carry'd thither, and which the *Indians* had not ſeen before, paſs, to this day, by the *European* names, altho' corrupted by the *Indian* pronunciation.

Pacos & guanacos.

The creature call'd, by the firſt *Spaniards*, *India* ſheep is different from our ſheep in *Europe*, and has a diſtinct Name given to it in the different countries where it is found. There are two diſtinct ſpecies of them in *Peru*, one is call'd pacos, and the other guanacos. The pacos bear wool, but the others are bare. They are both eatable; but the greateſt uſe of them was to carry burdens, and the greateſt part of the ſilver of *Potoſi*, and the quickſilver of *Guamanga* was carry'd from thoſe mines upon the backs of thoſe creatures; each of them being able to carry 114 lb. for 70 leagues at four leagues a day, and ſometimes 400,000 ducats worth in ſilver bars are carry'd by a drove of thoſe ſheep, and only guarded by a few *Indians* and perhaps three or four *Spaniards*. But they are obſerv'd to have odd qualities attending them. Sometimes they will ſtop all of a ſudden, and raiſing their long necks like a crane, they ſtare in the faces of ſuch as attend them. At other times they will ly down under their burdens, and no beating can force them to riſe till they pleaſe, and they will ſuffer themſelves to be cut to pieces rather than take to their feet, whilſt that humour laſts. The only remedy in that caſe is patience and making much of the ſullen creature.

The bezoar ſtone found in the belly of ſeveral animals.

Thoſe ſheep as well as other animals of *Peru* are ſaid to have the *Bezoar* ſtone in them, which is found ſometimes in the maw, ſometimes in the belly of them, and often two or three of thoſe ſtones in one creature. Thoſe ſtones are of different colours and ſizes. Some are black, ſome white, ſome dark green, and others as if they were gilded. Some again are of the ſize of a hazzle nut, others as big as eggs, and *Acoſta* ſays there are of them as big as an orange. I ſhall not be ſo ſqueamiſh as Dr. *Harris* was, nor refuſe to give my readers, from *Acoſta*, the *Indian* tradition of the generation of this ſtone, which is this. They ſay, that in *Peru*, and eſpecially in *Xaura*, there are many herbs and creatures, which poiſons the water and paſture of that country: and therefore nature has wiſely provided that there ſhould be one herb, that is an antidote or counter poiſon to preſerve the creatures which get their food there. This herb the ſheep and goots of that country know by inſtinct, and eat of it in good quantity for a preſervative, and that the herb ſo eaten produces this ſtone. Now altho' I will not vouch for the truth of this origin of it, I do not ſee ſuch extravagance in it as to make one afraid to mention it. Nature, or to ſay better, the AUTHOR of nature, has been kind even to brutes, as to teach them by inſtinct to avoid ſeveral inconveniencies, which man with all his reaſon has not been able to diſcover: And I ſee no reaſon why a ſtone may not be engender'd in the ſtomach of a beaſt for its advantage, and the good of others, as in the kidney or bladder of a man for his deſtruction. But if the reader does not believe this account of it, I ſhall not go about to perſuade him to it.

This ſtone is excellent againſt poiſon, and ſeveral other infectious diſeaſes; and ſuch account was made of it, that the *Indians* thought it worth their while to counterfeit them, and paſs the falſe upon the *Europeans* for true, which perhaps may have brought them into diſrepute. But to return to the animals.

Vicugnes.

The vicugnes are call'd by the *Spaniards* in *Peru*, goats, altho' they are a quite different ſpecies; they are larger than goats, and have no horns. They live upon the mountains, and ſeem to delight in froſt and ſnow. The *Peruvians* made ſeveral ſorts of coverings of their fleeces or hair, which they keep in its natural colour which it ſtill retains, being that of dry'd roſes. One thing is very remarkable of the fleſh of this creature, that it is apply'd with good ſucceſs to ſome diſeaſes of the eyes. And *Acoſta* tells of having had his own eyes cur'd by applying a piece of it newly kill'd and bloody, by the advice of an old *Indian* woman.

Tarugues.

The tarugues, are a creature not much different from the vicugnes, but nimbler, and not ſo ſociable as they; for they are ſeldom ſeen but alone. Theſe tarugues yield the beſt and largeſt *Bezoar* ſtones.

They have likewiſe dantes, armadills, yguanas, chinchilles, cuyes, and viſchachas, ſome remarkable for the hardneſs of their skin, and the ſtrong ſcales like armour, as the two firſt; and other for other qualities not very material.

Monkeys.

But the ſtories our author tells of the micos or monkeys, eſpecially about *Carthagena* are very extraordinary. He ſays they uſe, when they have a great leap to make, one of them to fix its tail about a branch with the head down, and ſo another twiſts his tail about the hands of that one, till there be five or ſix hanging by one another, capable of reaching to the place they wou'd be at, and ſo beginning to ſwing, they go backwards and forwards, till they acquire ſuch force, by the long ſwinging, that the undermoſt catches hold of the place intended, and then the firſt diſengaging his tail from the tree, they can one after the other reach the deſir'd place

He

He tells one ſtory of a monkey at the governor's houſe in *Carthagena*, which would go to the tavern with money in one hand and a pot in the other, and would not part with the money till he got his pot fill'd with wine, which he would carry home, and if he was inſulted by the way, as it ſometimes happen'd, he would ſet down his pot, and battle his aggreſſors with ſtones, and ſo go home with his cargo: and which was more extraordinary, altho' he was a good bottle companion, he would not taſte the wine by the way, nor afterwards, till his maſter gave it him.

Birds. Nor is there leſs variety of fowls and birds in the *Weſt Indies*, than of beaſts. Of thoſe likewiſe ſome are common with *Europe*, and others peculiar to *America*. Of the firſt ſort are partridges, pigeons, turtles, ſtockdoves, quails, hawks, herons, eagles, parrots, hens, *&c.* The parrots fly about the mountains in *Peru* in great flocks, as other fowls do with us. Of thoſe birds and fowls, which are found in *America*, and no where elſe, there is great variety. Some are ſo ſmall that *Acoſta* took them for butterflies in the air, till he was convinced by a nearer inſpection that they were birds. Such were the tomineros in *Peru*, and others of ſeveral kinds, eſpecially in *New Spain* famous for the beauty, and great diverſity of colours in their feathers, of which the *Indians* made the moſt ſurpriſing works for the ornament of their temples, and of their kings and nobles. And their dexterity in diſpoſing of thoſe different colours of feathers to repreſent any thing they ſaw or imagin'd, was, perhaps, a more refin'd art than our painting. If this art is out of uſe among thoſe poor people now, it is no wonder, when they have been ſo long ſlaves, to the *Europeans*, who are more intent upon ſetting them to work in the bowels of the earth, in order to glut their avarice, than in giving encouragement for ingenuity.

Tomineros.

Ingenious pictures made of feathers.

Of the larger ſort of fowls they had likewiſe great plenty, ſuch as the condores, a bird of ſuch ſtrength, that they would attack ſheep and calves, and devour a whole one at a time, The auras and paulazes (a ſort of ravens) which rooſted upon trees or rock and in the day hover'd about towns to watch their prey. Theſe were eſteem'd for their eating up all the carrion they found, and ſo ridding the cities and towns of the ſtench of it. The *Guacamayoc* are bigger than parrots, but have a pleaſing variety in their feathers. Others again are far from being pleaſant to look upon, but ſerve for good manure, and fatten the land with their dung. Our author ſays, that in ſome iſlands near *Peru*, the hills are cover'd to an incredible heighth with their dung, ſo that they ſeem at a diſtance, all cover'd with ſnow; this they bring in boats to the main land, and it proves of great uſe to their ground. There is particularly one valley in *Peru*, call'd *Limoguano*, from this very dung, which they call'd guano in their language. In a word, the *Americans* are the beſt ſtor'd with fowl of any people in the world; for they not only eat their fleſh, are delighted with their muſick, and have their eyes feaſted with the beauty of their feathers, but even their moſt deform'd birds of which they make no uſe, any of theſe three ways, help to make their land fruitful; for it is obſerv'd that, in this valley of *Limoguano*, there is the fineſt fruit of any in *Peru*, ſaid to proceed from this manure.

Condores.

Auras.

Guacamayoc.

Thus we have given a ſhort ſketch of the natural hiſtory of the *Weſt Indies*. To dwell longer upon it, would have been foreign to our deſign, and had ſwell'd our work to an undue bulk. What we have ſaid of it has been taken from approv'd authors, and we hope we have ſaid nothing on this ſubject, but what was proper, and ſupported by ſufficient authority. And therefore we ſhall proceed, according to our propos'd method, to

SECT. II.

The Moral Hiſtory of AMERICA.

AS we have follow'd *Acoſta*'s Method in the laſt Section, there appears no Reaſon for deſerting him in this, and therefore, without farther Preface, we ſhall obſerve, with him, that the pride and malice of the devil have been two great cauſes of idolatry in the world.

His pride to be equal with his maker, made him ſet up himſelf as the object of worſhip in all nations whom he could lead blindly into that ſnare; and his malice to mankind, for ſeeing them more in favour with their CREATOR, than he himſelf was, made him uſe all the ways he could invent, to keep them in ſubjection to him, that he might the more eaſily accompliſh their ruin.

As a due reverence for Almighty GOD, is the foundation of all religion, ſo the placing that regard, which is commonly call'd worſhip, upon wrong objects, is the fountain of all vice and immorality. And this is what we call idolatry; that is *paying that adoration and reverence to creatures which is due to GOD alone.* Idolatry is center'd either in real objects, or imaginary ones: the one addreſs'd to natural things, and ſuch as really exiſt; the other to chimæra's and creatures of fancy and imagination only. In both theſe

Idolatry defin'd.

theſe kinds, the devil found leſs difficulty, from the univerſal tradition deriv'd thro' all ages, of the being of one ſupreme creator, whom all mankind was bound to worſhip. And therefore, according as any nation was more or leſs ignorant, he adapted his ſchemes to entrap them; repreſenting to ſome that there was one *ſupreme being*, the father of all things, but then he added that he had ſome inferior Gods under him, who were to be worſhip'd: and becauſe men are moſt forcibly led by what ſtrikes their ſenſes, the hoſt of heaven, as they are call'd in ſcripture, came in for a ſhare in the worſhip of moſt nations; the ſun and moon being under different names, the objects of worſhip in moſt heathen countries. But as I do not deſign any general hiſtory of idolatry, I ſhall confine myſelf to *America*.

A ſupreme lord believ'd by the Indians.

It is certain that at the firſt diſcovery of this new world, the firſt conquerors (as ſoon as they came to underſtand their language, and to be well acquainted with their ſentiments) found among the more ſenſible among the *Indians* a notion of one ſupreme lord of all, whom they call'd *Viracocha*, *Pacacamac*, *Pacayachachic.* or *Uſapu*; all which are names of great excellence in their language.

But they worſhip'd creatures too.

But, altho', in common reaſon, the belief of one ſupreme lord of all things muſt exclude all other Gods, yet it is a hard matter to perſuade ignorant people, long bred up in the practice of idolotry, that there can be but one infinite being *to whom* ALONE *worſhip is due.* Thoſe *Indians* therefore, together with *Viracho-ca* or *Pacacamac* offer'd ſacrifice to others, particularly to the ſun; the moon; thunder; ſtars, under ſeveral names, according to the different bleſſings they expected from them; the earth; the ſea; thus the *Mexicans* call'd *Cortez the ſon of the ſun*; and thoſe of *Peru* call'd the *Spaniards the off-ſpring of Heaven* or *Virachoca*, as long as they continu'd to have a tolerable opinion of them.

Nor was their idolatry confin'd to thoſe creatures which ſeem'd to have ſome inherent excellency in themſelves, but even their worſhip was addreſt to the moſt baſe and abject things, as hills, rivers, ſtones, metals, nay even roots: in ſhort any thing that was any way extraordinary in its kind. And the *Spaniards* found them much inclin'd to worſhip them for their ſtrange appearance, till they, by their cruelty and ill uſuage, gave them ſuch an idea of them, that if they were inclin'd to worſhip them afterwards, it was as they ſacrificed to their evil Gods, for fear of being murder'd by them.

As their deities were, ſo their worſhip and ſacrifices were different. To ſome they made their devotions with open hand, and looking towards them, or putting their hands to the ground, and then to their mouth; which, it appears, was not peculiar to the idolaters of *America*, for *Job* aludes to this as a cuſtom in his country us'd by idolaters. *If I beheld the ſun when it ſhined; or the moon walking in brightneſs, and my heart has been ſecretly enticed, or my mouth hath kiſſed my hand. This alſo were an iniquity —— for I ſhould have deny'd the* G O D *that is above.** To other inferior Gods, they us'd to offer old ſhoes, feathers, and chew'd cocoa, and when they had nothing elſe, they offer'd ſtones: and ſometimes they pull'd out their eye brows to offer to their Gods.

* Job xxxi. 26, 27, 28.

A homely argument of a Spaniſh *captain.*

But here it would be an injuſtice to conceal a familiar argument us'd by a *Spaniſh* captain to an *Indian* king or cacique, to prove that the ſun was not a God as he alledg'd. The captain pretended to have a letter to ſend, and deſir'd the cacique to find him a meſſenger, who being come by the king's order, the captain ask'd the cacique, *Which was greater, the meſſenger who was to carry his letter, or he, by whoſe order he was to do it?* the cacique readily anſwer'd, *that he himſelf was undoubtedly greater, becauſe he had commanded the* Indian *to carry the captain's letter. Even ſo*, ſaid the captain, *the ſun goes like a poſt, at the command of the great* CREATOR, *and is as much a ſervant to* HIM, *as this* Indian *is to you.* This, altho' it may ſeem a poor argument to our *learned* and *wiſe* age, was a very good one, *ad hominem*, and, by the grace of GOD had a good effect.

The Mexican *idol* Vitzili-putzle.

Another ſpecies of idolatry, which they us'd, was in their imaginary idols, who never had a being but in their brain. Such was the famous *Mezican* idol *Vitziliput-zli*, to whom they erected a temple, the moſt glorious of any they had. This idol was of no finer ſtuff than wood, but it was adorn'd finely with gold, jewels, and feathers. It was in ſhape of a man, with his forehead painted azure, and a band of the ſame colour between his mouth and noſe, which reach'd from ear to ear; upon his head was a rich plume of feathers ending in a point like the beak of a bird, and cover'd on the top with burniſh'd gold; he heldin his left hand a white target, upon which were the figures of five pine apples wrought in feathers, ſet in a croſs; out of the top of the ſhield iſſued a creſt of gold; in his right hand he had a ſtaff colour'd azure cut in the faſhion of a waving ſerpent; at his ſides were four darts. This idol was ſet upon a ſtool, in a ſort of a litter, and placed upon the great altar, with a rich curtain drawn before

before it to add the greater reverence to it for being ſeldom ſeen.

Nor was this the only idol kept in this temple. There was another, held in great eſteem among them, call'd *Tlalec*, whoſe chappel was next to that of *Vitziliputzli*. Abundance of others they worſhipp'd, and adorn'd, according to the affairs over which they thought they preſided. And not only in the city of *Mexico*, but in the provinces adjacent they had their ſeveral deities, and temples, too tedious to deſcribe.

But here I ſhall drop my author in one favourite notion of his, *viz.* that the devil had taken great pains to mimick the chriſtian worſhip in the idolatry of the *Indians*, and inſtances in ſeveral particulars, ſuch as temples, prieſts, monaſteries of men and women, the trinity, ſacraments, confeſſion and ſuch like. I ſhall not make myſelf ſo merry with *Acoſta*'s religion as a late author does, upon this account. But I think there is more charg'd upon the devil, by the *Spaniſh* writers, than he has the honour to have any title to. If ſacrifices were at firſt appointed, as a part of religion, as they certainly were, which appears from the holy ſcripture, it is no wonder that the practice was handed down to the whole poſterity of *Adam*, or rather of *Noah*; it being the univerſal tradition of mankind that *without ſhedding of blood there was no remiſſion.* If then, by the command of ALMIGHTY GOD, people were to offer ſacrifice, and thoſe who, from time to time, went off the great ſtock, to ſettle in different parts of the earth, carry'd with them this part of religion, then I think ſome part of what our author charges upon the devil, was the reſult of experience by what the firſt who came off from the family had ſeen practis'd by their fathers. And as to temples, and prieſts they ſeem to be neceſſary in common ſenſe, without the devil's having any finger in them. For ſome place muſt be allow'd for ſacrifice, and ſome perſons to perform the office. And what our author calls mimicking the euchariſt, was a part of the commanded religion of ſacrifice, where they were to conſume that which was offer'd in honour of GOD. So that altho' I do not deny but the devil had a great hand in corrupting the religion of the heathens, I cannot think the corruptions he introduced conſiſted in apeing the divine inſtitutions, but rather in departing from them. And as to the chriſtian religon, I cannot allow that the ſuperſtitions of the *Americans* had any relation to it, becauſe there was very little new in their worſhip, but the very ſame things were practis'd, by the old heathens, far enough from *America* before the devil knew what the chriſtians inſtitutions would be. I therefore believe that the worſhip of the heathen, as far as it had any reſemblace of the true worſhip, was owing to the univerſal tradition deriv'd from *Noah* and his family; and the extravagances and corruptions of of it took their riſe from the different defects and failings of human nature, and were ſtill farther improv'd by ignorance and ſuperſtition, which generally go together; nor ſhall I deny the devil his ſhare in promoting thoſe corruptions and deviations. And it ſeems to me as reaſonable to alledge, that the devil taught them that truth and native ſincerity, that diſintereſted plainneſs of living, and ſeveral other good qualities (by which they came nearer to the goſpel ſpirit than many of the baptis'd heathens who conquer'd them, and taught them chriſtianity backwards,) as that the parts of their worſhip reſembling the divine inſtitutions, were the ſuperinducements of that rival of divine power.

Having given this caution, which I hope will not be thought an impertinent digreſſion, I ſhall proceed to treat of their temples and worſhip. In diſcourſing upon this ſubject what is related by the *Spaniſh* authors of *Peru* and *Mexico* and the other *Spaniſh* colonies, may for the moſt part agree to the whole *Weſt Indies*, as far as we have accounts of them from others, only with this difference, that *Peru* and *Mexico* having been govern'd by two powerful monarchs, and reduced to great empires under their two emperors, were more magnificent in their temples, and had their worſhip perform'd with more ſolemnity than the other nations which were govern'd by petty caciques, or divided into clans; to which we may add, that the politeneſs of the two empires mention'd being more remarkable than in the other nations of *America*, theſe laſt, as was obſervable among the rudeſt, and moſt ignorant people, had goſſer notions of religion in ſome inſtances, than the others had: altho' GOD knows! it was bad enough among the beſt of them, *ſo neceſſary is* REVELATION *to direct even the wiſeſt nations as to* RELIGION. And I cannot help thinking that if our preſent free-thinkers were to be left to themſelves, to draw up a ſcheme of religious worſhip, (for ſome religion they muſt have, from the old maxim of keeping the leſs inlighten'd multitude in aw, which they boldly aſſert to have been the firſt riſe of religion) their ſyſtem would be as ridiculous, and have leſs foundation of truth, than any that ever was us'd in a heathen country. But this only by the bye. To return therefore to our ſubject.

The

The *Americans* had temples to their idols almoſt in all the great towns, eſpecily where thoſe towns were ſubject to one cacique, independent of any other; and thoſe temples were generally as well adorn'd, and as magnificently built as any of the palaces of their kings, and very often ſurpaſt them: common reaſon teaching them, that the ſupreme being ought to be regarded above any of their fellow creatures, even kings. But as it were impoſſible to give any account of the 10th part of their temples, and, if we could, it would be foreign to our deſign, we ſhall ſay ſomething of the great temple of *Mexico*, and let that ſerve to give an idea of thoſe of *Peru*, and the others thro' all the nations, only with this caution, that thoſe of *Peru*, and *Mexico* were infinitly more rich and magnificent than any elſewhere.

The temple of Mexico.

The temple of *Vitziliputzli*, in *Mexico*, was built upon a hill, to which they aſcended by ſteps. It was built of ſtones cut in the ſhape of ſnakes ty'd together, taking in a vaſt compaſs of ground, called, by the *Indians*, *Coatepantli*, or *the circuit of ſnakes*. The court, within this encloſure, was capable of containing abhve 8000 people, who aſſembled to dance upon ſeveral of their feſtivals. Within this court, were the appartments for the prieſts, and other religious, as alſo the oratories of their idols; upon the top of each of which, was placed a pillar, made of ſmall ſtones black as jet, and upon the capitel of the pillars, were battlements ſupported by two ſtatues of *Indians*, holding candleſticks in their hands. To this ſtructure there were four entries, faceing the four cardinal points, and from each gate a cawſey of about three leagues long quite thro' the lake, and at the beginning of the cawſey, a ſtatue of an idol fronting the cawſey. Before the great court of the temple, there was a riſing of 30 ſteps, and above thoſe a wall of 30 foot broad made of earth with high trees planted upon it, at ſix foot diſtance from each other, and rods reaching from tree to tree, all the way from top to bottom, which were full of the skulls of humane ſacrifices offer'd from time to time to their idols. Above this wall they aſcended 120 ſteps, where there were two ſtone chappels appropriated to *Vitziliputzli* and his brother idol *Tlalec*. Before theſe chappels there was a court of 40 foot ſquare, in the middle of which was a high ſtone of about 20 inches broad ſet up like a pyramid, where the victim was fix'd to have the heart pull'd out.

Prieſts.

In this temple adorn'd with gold, emeralds, and other precious ſtones to an infinite value, many prieſts and religious men and likewiſe women had their reſidence. The prieſts belonging to this temple were hereditary, but thoſe of the inferior deities (to whom were dedicated many other temples in *Mexico*) were elective. The high prieſt, whom they called *Topilzin*, appear'd in a red robe which had taſſels beneath, wearing a crown of the fineſt feathers, and pendents in his ears. The others wore a white habit wrought with black, with their hair ty'd up with fillets, and a circle of paper, (ſuch as they us'd for their hierogliphicks) painted with different colours, round their temples. The offices of theſe prieſts were to burn incenſe before the idols, four times a day, *viz.* at break of day, at noon, at ſun ſet, and at midnight. The laſt of theſe was perform'd with great ſolemnity with trumpets, flutes and other inſtruments of muſick, ſuch as they us'd; after which they all retir'd to the chappel to perform an odd ſort of penance; which was to thruſt a ſort of bodkins thro' the calves of their legs, and to beſmear their faces with the blood, which they expos'd in view of the people, and then waſh themſelves clean in a pool of water, which ſtood within the encloſure. And before any ſolemn feſtival, they faſted very rigourouſly. But their chief buſineſs was to perform the ſacrifices, the moſt ſolemn of which were the human victims, of theſe I ſhall, without any heſitation, allow the devil to have been the author.

Human ſacrifices.

It is not without horror that any body can think, or write of the inhuman barbarities common thro' all *America* of this kind. Not only *Spaniards*, but other nations who went thither ſaw many inſtances of it, and felt the effects of it too, as often as they had the misfortune to fall alive into the hands of the natives. And altho' the *Indians* of *Peru* ſeem to have out done the other *Americans* in offering up their own blood and thoſe of their neareſt relations to their idols, yet the *Mexicans* were more laviſh of human blood than any other people. It is true they did not ſacrifice any but the priſoners taken in war; but then they made war with no other intent but to get victims: and whilſt other princes went to war to enlarge their dominions, or to revenge injuries, they went to the field with no other view, but to make the altars of their idols ſmoak with human gore, for which reaſon they kill'd as few enemies as they could, but endeavour'd to make many priſoners. And the reaſon which *Montezuma* is ſaid to have given, to *Cortez* why, being ſo powerful as he was, he had not ſubdu'd *Tlaſcala*, was, that he could do it when he would, but that he reſerv'd them for a recruit of ſacrifices to his Gods, which he could not make uſe of them for, unleſs they continu'd his enemies.

In

The manner of them.

In this helliſh piece of religious worſhip, they obſerv'd great ſolemnity. There was generally a good number of them together, deſtin'd for this bloody triumph. Theſe were brought within the court of ſkuls already mention'd, whither came the *Topilzin*, or high prieſt, in his robes, from the top of the temple, with a ſtatue of the idol made of paſte, compos'd of maiz and honey, in his arms, and going to the high ſtone, which we mention'd to be placed in the middle of the court, he deſcended from it by a ſtair on the oppoſite ſide to that by which he went up. Then going to the place where the wretches to be ſacrificed were kept under a guard, he ſhew'd the idol to them one by one. After this ſhew, they went in diſmal proceſſion to the place of execution, where being, in their turns, fix'd to the ſtone, two prieſts held their legs, and and as many their arms, and a fifth their head, whilſt the *Topilzin* open'd their breaſt with a flint, and taking out the heart, threw it ſmoking in the face of the idol, whoſe chappel was juſt fronting the ſtone. After this, they tumbled the dead body down the temple ſtairs, which rolling to the very bottom, with its own weight beſmear'd the ſteps with blood. This inhuman butchery they renew'd with great dexterity, as long as there were any left of thoſe appointed for ſacrifice. And as they came to the bottom of the ſteps, thoſe who had made them priſoners, were there ready to take them away for their dinner. The feweſt that they ever ſacrificed at a time were 40, but very often a much greater number.

But in ſome of their ſacrifices in other temples, they ſometimes gave a victim a fair chance for his life; for they furniſh'd him with a *Macana* or wooden ſword, and target, and gave him leave to fight the perſon who deſign'd to ſacrifice him, upon equal terms, and if he came off victor, they not only give him his life, but ſhewed great regard for him as a brave man.

But ſometimes they took a fancy to call one of thoſe, who had been appointed for a victim, the image and repreſentative of the idol, and therefore having waſh'd him with many ceremonies, they put upon him all the ornaments proper to the duty he repreſented, and kept him in the beſt appartment of the temple for a whole year, ſhewing him in all publick places, and carrying him thro' the ſtreets at ſtated times in proceſſion, the women bringing out their children to be touch'd by him; and then he had his heart taken out with the ſolemnity above deſcrib'd. But if he made his eſcape during the year, the captain of his guard took his place, and was treated as the repreſentative of the idol, for the remaining part of the year, and was ſacrificed in his ſtead, at the expiration of the time.

The prieſts were in high eſteem with the people thro' all the *Weſt Indies*, and eſpecially with their kings, and often prompted them to undertake wars to ſupply their idols with food, threatning deſtruction to them unleſs they brought ſuch a number of human ſacrifices to their altars. And ſuch was the ſuperſtition of thoſe deluded wretches, that they went with as much devotion to make war for food for their Gods, as if they had been going to ſave their country from foreign invaſion.

One great feſtival in honour of *Vitziliputzli* was held in the month of *May*; but before we give an account of that feaſt, it is neceſſary to ſpeak of the other religious who liv'd in the temple, diſtinct from the prieſts. We hinted before, that there were cloiſters in the temple both for men and women. The men lived by themſelves in the lower parts of the building, within the great incloſure, and were about 18 or 20 years old, to whom were added ſome boys to aſſiſt them. Their buſineſs was to miniſter to the prieſts, and to cleanſe the temple. In another part of the ſame incloſure there was a manſion for young women, under the direction and government of ſome old ones whom they call'd *momacomas*. Both theſe ſocieties men and women, were oblig'd to the moſt ſtrict chaſtity; and the leaſt infringment of it in any of them, was death without mercy. But one rule of thoſe religious ſocieties was very commendable, *viz.* that altho' they were oblig'd to the ſtricteſt chaſtity, whilſt they continu'd there, yet they were not confin'd for life, but were choſen out for wives, for the kings and great men, according to the cuſtoms of the country. So that this convent was only a place for education, only that whilſt they were in it, they were oblig'd to a ſtrictneſs worthy of a more reaſonable religion: and if ſuch an education (under proper regulations) were in uſe all *Europe* over, I cannot help thinking that a world of inconveniencies might be prevented. But this by the bye.

Cloiſters for men, and others for women.

The ſolemn feaſt of the idol, approaching, theſe religious virgins, two days before it, were employ'd in making an image of maiz, and beet ſeed mix'd with honey; this image was made in imitation of that of *Vitziliputzli*; and upon the feaſt day, they brought it in proceſſion, upon a ſort of litter, out of their cloiſter into the great court, where the young men dedicated to the ſervice of the temple, (and whoſe ſervice there, and rules altho' very ſtrict, laſted only a year) receiv'd this idol from the virgins, and putting it upon their ſhoulders, carry'd it in proceſſion

The May feaſt of Vitzilliputzle.

proceſſion thro' the city, and to ſeveral villages near *Mexico*, attended by vaſt crowds of people, and at their return, the prieſts proceeded to the human ſacrifices, which were more numerons at that feaſt than at other times, inſomuch that our author ſays, They ſacrifice 4000 and ſometimes more upon thoſe occaſions. The virgins are all dreſt in white, with garlands of maiz upon their heads, their cheeks painted with vermilian; and their arms from the elbow to the wriſt covered with parrots feathers of the ſame colour. The men, who take the burden from them are all clad in red, with garlands upon their heads.

After the ſacrifices are over, the people have cakes of paſte of the ſame kind with the idol deliver'd to them, and *Acoſta* ſays, they break the idol and diſtribute it among them. If this be true, I ſhall not, with him, reſemble it to ſo ſacred a rite as the bleſſed ſacrament; but it puts me in mind of the black torch which the pope toſſes out of the window of St. *Peter's* church, upon maundy Thurſday, after he has excommunicated all the world; the pieces of which, broken by the fall, are very eagerly gather'd up by all that can come at them.

There were ſeveral other feaſts, to the God of repentance; to the idol of the merchants, in *Mexico*, and ſeveral others ſuch like in *Peru*, where the temples were no leſs magnificent than in *New Spain*, and ſome of them much richer in gold and ſilver. But the deſcriptions of them, by the *Spaniards*, from whom alone we have any accounts of thoſe two empires, are ſo extravagant that I ſhall not inſiſt any more upon this part of their religion. Let it ſuffice, that altho' they ſacrificed all ſorts of creatures in ſome part or other of *America* to their numberleſs deities; yet we find human ſacrifices a common abomination in that country at the ſeveral diſcoveries of the different parts of it: which is horrible enough to relate without dwelling upon the more deteſtable manner of them. We ſhall only add to what has been ſaid, that in *Peru* they were more barbarous than at *Mexico* in ſacrificing innocent children to their idols, and thoſe not only of enemies but their own.

But if we may believe the *Inca Garcilaſſo*, the *Peruvians* ſeem to have had a more diſtinct notion of a ſupreme being, than the *Mexicans* had. Their *Pacacamac*, was the *quickener* or *ſpirit* of the univerſe; and they never pronounced his name but with reverence. And, believing him to be inviſible, and unknown, they offer'd no ſacrifice to him, but paid him an internal worſhip. But yet we are told, they had a temple dedicated to him and call'd by his name.

The ſun had the greateſt ſhare of their external worſhip, and the moſt magnificent temples were built to him, and their *Inca's* deriv'd, in their own opinion, their origine from the ſun, to raiſe themſelves above the level of their ſubjects. And this author (who, as we obſerv'd before,* was a native of *Peru*, and of the blood royal) ſays that *Acoſta* and the other *Spaniards* were led into ſeveral miſtakes, concerning the opinions of the *Indians*, by not being ſufficiently maſters of their language, of which he gives ſeveral inſtances; which is not unlikely. But, (as we obſerv'd, in the hiſtory of the diſcovery and conqueſt of that country,) the ſafeſt way to come at the truth, is not to follow blindly, either *Garcilaſſo* (who was byaſs'd by his love to his country) or *Acoſta*, *Herrera*, *&c.* (who ſtretch'd as far, perhaps by miſtake of the language, and ſometimes to juſtify the *Spaniards* in ſome of their unwarrantable proceedings, out of a miſtaken zeal for religion;) we have therefore, all along endeavour'd to take the mean between thoſe authors, who are, to this day eſteem'd the beſt who writ of the *Indian* affairs.

* Un. Tr. *in the conqueſt of* Peru *by* Pizarro.

That the *Peruvians* were idolaters, *Garcelaſſo* does not deny, but he ſays they were not ſo bad as the *Mexicans*, and that may be true. And to ſhew that they had a truer notion of the ſupreme being, he relates a converſation of *Guyana Capac*, the father of *Atahualpa*, or as ſome call him, *Atabaliba* (who was murder'd by *Pizarro*) with the high prieſt. It ſeems the prieſt had reprov'd him for looking at the ſun, as being too familiar with that deity, the *Inca* ask'd him, *whether any of them durſt bid him, their ſovereign, undertake any journey, which he had no mind to?* the prieſt anſwering, that *none would be ſo preſumtuous*; the Inca reply'd, *But if I command the greateſt of you to go to* Chili, *would you not obey?* to which the high prieſt readily aſſenting; the Inca added, *then I conclude that our father the* Sun *muſt have a mighty lord for his ſuperior, by whoſe command he takes ſo long a journey every day; for if he were lord himſelf, he would reſt ſometimes.* Whether this author took this ſtory from the *Spaniſh* captain formerly mention'd, or the captain from him, we ſhall leave to the judgment of the reader.

The temple of the ſun at Coſco.

The temples built for the worſhip of the ſun were magnificent, particularly at *Coſco*. The moſt glorious part of it was the chappel or throne of the ſun. The chappel was ſquare, built of poliſh'd ſtone; the walls cover'd with maſſie gold, beaten

beaten into plates, and towards the eaſt was an emblem of the ſun, as we uſe to draw him, with a man's face ſurrounded with rays. It was of one plate of gold, ſo large that the rays reach'd from top to bottom, and from wall to wall. At the rifling of this temple, this image fell to the ſhare of one *Spaniſh* officer, who loſt it at play in one night, which gave occaſion to a *Spaniſh* proverb, *Jugar el ſol, antes de ſalir*, which in *Engliſh* ſignifies, *To play away the ſun before his riſing.*

On both ſides of this chappel were the bodies of their Inca's ſet on ſeats of gold, fronting the doors; only that of *Guayna Capac* fronted the ſun, as having been eſteem'd his favourite ſon. Thoſe bodies were ſo well preſerv'd that they ſeem'd to be alive. The *Indians* took care, when they ſaw their empire going to ruin, to hide moſt of thoſe bodies, together with a great part of their treaſure, ſo as the *Spaniards* could never come at them, altho' they rack'd and burn'd ſeveral of the poor natives to make them diſcover them: only by chance three bodies of their emperors, and two of the empreſſes were found and brought to *Lima*.

Near this temple of the ſun, there were other buildings, in one of which was an emblem of the moon in ſilver, as that of the ſun was in gold; and the bodies of the empreſſes were there repoſited as the emperors were in the other. In all their temples of this city, the utenſils were of thoſe rich metals, and in the gardens belonging to them, there were ſtatues of men and women; and figures of birds, beaſts and reptiles of the ſame metal in prodigious number.

Their prieſts at *Coſco* were always of the blood royal, and the high prieſt either brother or uncle to the reigning Inca. Their ſacrifices were ſolemn and magnificent, but defil'd with human blood, upon ſome occaſions; but in the ordinary ſervices, there were only rich offerings, firſt by the Inca and his family, and then by the nobility and inferior people. For inſtance; in one of their feaſts, after a three days abſtinence, both from food and women, the Inca us'd to go barefooted into the ſtreet near the temple, before ſun-riſing, the nobility attending in another ſtreet. As ſoon as the ſun began to appear, they all fell down and worſhip'd. Then the Inca took two large veſſels of gold full of liquor, one in each hand: that in his right, he pour'd into a gold pipe which carried it into the temple of the ſun; and after that offering, he drank part of the liquor which was in the other cup, and ſo gave it about among the royal family. The nobility in the other ſtreet perform'd the ſame ceremony. After this they all join'd, and went in proceſſion to the temple, the Inca and his family enter'd the chappel, where with great devotion the emperor preſented his two cups to the ſun, with his own hands; but the other Incas gave theirs (for no perſon appear'd empty) to the prieſts to be preſented in their names. The nobility did not enter the great gate, but the prieſts went to receive their offerings. After all this was done follow'd the ſacrifices, which were of different kinds according to the feſtival.

The Indians believ'd the ſoul immortal.

With all the ignorance and ſuperſtition, with which thoſe poor people were blinded, there were ſome rays of truth in their notions. For inſtance, there was an univerſal belief of the immortality of the ſoul ſpread over the whole new world: and whatever miſtakes or errors it was clouded with, yet when ever the *Europeans* came to underſtand their language, they ſaw this doctrine clearly evinced, from ſeveral cuſtoms among them. They were in many, I may ſay all, places of the *Weſt Indies* ſo perſuaded of the ſouls living after death, that when any of their king's dy'd, they kill'd many of their wives and ſervants in order to have them well attended in the world to which they believ'd he was gone, as we find in all the hiſtories extant of the new world. And ſome of our authors tell of an ingenious thought of a *Portugueſe* to ſave his life upon ſuch an occaſion. Having been made a priſoner, he was ſervant to one of their great lords, and, his maſter dying, he was condemn'd to accompany him, that he might perform the ſame office in the ſeparate ſtate. But the *Portugueſe* having no inclination to that imployment, very gravely, but artfully repreſented to the directors, that it would diſcredit his lord in the other world to have a ſervant who was blind of an eye ſent after him, as if he was ſo deſtitute of ſervants that there were not a ſufficient number, of ſound ones to be diſpatch'd for that purpoſe. The relations of the deceas'd were ſatisfy'd with the excuſe, and the poor *Portugueſe* eſcap'd to tell this inſtance of his wit. I am not accountable for the inconſtancy of their notions with one another, nor with the anſwer which they might have return'd to ivalidate his objection. It is ſufficient that their practice of ſending people after their lords and kings ſhews their belief that they liv'd after death. In conſequence of this belief, they ſaid there were three worlds, this that we ſee, the world above where good men went after death, and were rewarded for their virtue; and the world below the earth where people were puniſh'd for their wickedneſs.

One may ſee, by this acconnt, that if the chriſtians had behav'd with that juſtice

tice and humanity towards thoſe people as their religion teaches them to do towards all men, they might have prevail'd upon them from ſome of their own principles to have had a better opinion of chriſtianity than they had reaſon to entertain, when they ſaw neither juſtice nor mercy in the profeſſors of it.

Of their burying. But the ceremonies of burying were different in ſeveral parts of *America*. Thus in *Peru* they embalm'd and preſerved them, if of any condition, as we have ſaid. But in *Mexico*, they bury'd ſome in their houſes and gardens, and others they burn'd and put their aſhes in urns which they repoſited in their temples, according to the cuſtoms of the ancient *Europeans*, in the times of heatheniſm. But both in one and the other, they put to death many of their ſervants to perform the offices in the other world which they were accuſtom'd to do in this. And that they might want for nothing, they buried great ſtore of wealth with them. The like cuſtom was practis'd in all other parts of the *Weſt Indies*; and in thoſe places where they did not know what riches were, but got their living by hunting, they bury'd their bows and arrows with them, as we have had occaſion to take notice of more than once. But where they had gold or jewels, they gave good ſtore to the dead, as we have ſaid of *Peru* and *Mexico*; and we obſerv'd before,* that the maiden lady of *Cofachiqui* gave *Soto* leave to take a great quantity of pearls out of the burying place of her family.

* p. 160.

Their marriages. Altho' in ſeveral parts of *America* they allow'd concubines, or rather poligamy, yet in moſt places, they ſhew'd a ſacred regard to marriage, which was perform'd with a certain ſolemnity every where, tho' not always the ſame. Thus, in *Mexico*, they came before the prieſts with the friends of both parties; and the prieſt having ask'd their mutual conſent to be man and wife, he ty'd the corner of the woman's vail to the skirt of the man's robe, and ſo they went to the bridegroom's houſe, where a fire was kindled on purpoſe, and the prieſt led the bride ſeven times round the fire which compleated the ceremony. But as they had no cloaths in many places, ſo they had other rites in marriage. The bridegroom went to the bride's houſe, and putting an *ottoya* (that is a certain kind of ſhoe) upon her foot, led her home to his houſe. If ſhe was a maid the ottoya was of wool, but if a widow, it was of reeds.

When a woman was once ſolemnly married by theſe or any other ceremony in uſe among them, ſhe was acknowledg'd as miſtreſs of the houſe, and all the other wives and concubines who had not paſt that ceremony, (which only one could have have the privilege of) were obedient to her; and if ſhe prov'd falſe to her huſband's bed, ſhe was puniſh'd with death, whereas the others were only turn'd off. Of the cuſtom of the Inca's of *Peru* marrying their own ſiſters we have already ſaid as much as is neceſſary.

Divorces. If a marriage did not prove comfortable, they had a liberty to part with mutual conſent, and then they divided the goods according to what each had at their marriage; and the ſons ſtaid with the father, but the daughters follow'd the mother. And each party might marry again, but never to one another. Thoſe marriages which prov'd happy were ſolemniz'd with great feaſting, the husband entertaining his wife's friends in token of gratitude.

At the birth of their children, their prieſts perform'd ſome ſolemn rites, ſuch as waſhing them in water, and putting into their hands proper emblems of their future calling and profeſſion. Thus the ſon of a king or nobleman had a ſword and target put into his hands; and thoſe of the inferior rank had the inſtruments of their father's trade put into theirs; and the daughters, thoſe of ſpinning, &c. proper for their ſex. Theſe rites continu'd for four days and were perform'd in preſence of their idols.

Education of youth. When the children are fit to be put to ſchool, they ſent them to ſchools and ſeminaries, kept in their temples, where they were inſtructed in ſinging, leaping, wreſtling, and other exerciſes in uſe among them: as alſo in learning the hiſtory of their country, expreſt in verſes which they handed down to poſterity by word of mouth. And according to the different ſtates of life that they were deſign'd for, they made them apply to the different ſtudies of politicks or arms, in which they were inſtructed by word of mouth, and trials of skill. And altho' the two great empires of *Peru* and *Mexico* were beſt fitted for ſuch ſchools, yet the other parts of *America* were not wanting in that ſort of education, which fitted them for that ſort of knowledge in uſe in their country: and there were found, in ſeveral parts of the *Weſt Indies*, men, who conſidering their want of letters, were wonderfully qualify'd both for the cabinet and camp.

Exercise of the body. To qualify them for war, in which they were often engag'd among themſelves, they took great care to cultivate a natural agility they ſeem to have been born with, by all the exerciſes which they thought proper to improve it; and this they began from the time that they had any ſtrength, and one may ſay from their cradle. I ſhall not pretend to tell what arts they us'd to teach them to ſwim and dive, but it is certain, that, thro'

thro' all *America* both the men and women were ſo dexterous at thoſe exerciſes, that they appear'd to be no leſs in their proper element when they were in the water, than at land, and they would keep under water a much longer time than any other people were known to be able to do, before the *Europeans* invented machines for diving, which enable people to breath in the water. And they could ſwim from the continent to iſlands, at a much greater diſtance than an *European* would have attempted to have done.

Dancing. To the ſubject of exerciſe of the body belong their dances ſo common in that country, and practis'd upon different occaſions; ſometimes upon a religious account; ſometimes to expreſs peace and alliance; at other times, and in a different manner, to bid defiance, and to declare war; and ſometimes only for diverſion and pleaſure. The *Mexicans* had, of all others, the greateſt variety of them. But the moſt famous kind of dances, in that empire, was that call'd the *Mittote*, in which the emperors themſelves ſometimes had their part.

Montezuma was particularly fond of muſick and dancing, and therefore had thoſe entertainments often in his palace, and gardens. For muſick they had a ſort of inſtrument made of wood hollow'd, and cover'd with a deer's skin dreſs'd like parchment, which was ſtretch'd, and beaten with ſticks or men's hands, and tho' not ſhap'd like kettle-drums, were in ſtead of them. And to the ſound of thoſe inſtruments the ſingers tun'd their voices. They had likewiſe a ſort of flutes and cornets; which altho', perhaps, not ſo agreeable to *European* ears, made tolerable muſick in that country. When the emperor was going to dinner, eight or ten ſounded the wind inſtruments, and beat thoſe drums, at which the dancers, who were all noble, prepar'd themſelves againſt dinner was ended. They were richly dreſs'd in coſtly mantles of different colours. They held in their hands noſegays of roſes, or fans of feathers, or feathers mix'd with gold. And ſome, to make them look fierce, had the skins of the heads of tygers, lions, or crocodiles put upon their heads. Of thoſe there were above 1000 who danced at one time. The muſick was in the middle, and the chief dancers in a circle about the muſicians, and taking hands in ſeveral circles one without another, all danced at the ſame time, keeping time to the muſick. Two or three of the beſt dancers led the dance, ſinging along with the inſtruments, as did all the reſt; and when any of them was tir'd he retir'd out of the dance to refreſh himſelf, and then return'd. The ſongs they ſung, upon thoſe occaſions, were different, and their muſick of conſequence was of different kinds: thoſe which were made in praiſe of their emperors and the hiſtories of the country were ſolemn and grave, and therefore the movement of the dance was accordingly ſlow, like the *Spaniſh* Sarabands; but when their ſongs were upon merry ſubjects, the muſick was *Allegro*, and the dance light and quick. But when that prince had his women to dance before him, it was always in his gardens, and then no men were allow'd to be preſent, but ſuch favourites as he thought fit to call to attend him. And when the dance had any thing of devotion in it, it was grave and ſlow, and always in the temple. Herrera *dec.* II. B. V. *ch.* 2.

But the *Indians* were not only very expert and clever at bodily exerciſes, but they were likewiſe dexterous in ſome things which one would think requir'd letters, or at leaſt figures, which they had not. Thus they had a mechanical invention for arithmetic, by which *Acoſta* ſays, they perform'd multiplication and diviſion in a wonderful manner, and with great certainty; and had a ſort of regiſters, which they call'd *Quippos*, made of bows with ſeveral knots, and ſtrings of different colours, which ſometimes ſerv'd for numbers, and ſometimes for things, and they us'd them not only in arithmetic but in hiſtory: and people of all ſorts and conditions had thoſe things, which were of the ſame uſe as ſcores in publick houſes here, with marks for the difference of ſums. *Computation.*

Their manner of reckoning time, was ingenious enough. They divided the year into 18 months of 20 days apiece, which made up 360 days; and the five days over and above that number, they reckon'd by themſelves, under the title of *the days of nothing*, and to make them ſo in good earneſt, they gave over all manner of buſineſs, and even the worſhip of their gods, whilſt thoſe five days laſted, which were in the month of *February*, when the leaves began to grow green; the 26th of that month being the firſt day of their year. *Acoſta* ſays he had the *Mexican* Almanack, where the different months were mark'd by different pictures or hierogliphicks; and by particular marks they knew what feſtivals were in every month, and upon what days they were to be held: ſo that I believe we do them wrong when we ſay they had no letters. For their chronology, they had a wheel painted, which ſtood for 52 years; this they divided into four parts, and diſtinguiſh'd them by four different figures, as a houſe, a rabit, a reed, and a flint: each of which contain'd 13 years; and when they told any thing remarkable, they ſaid it happen'd in ſuch a year *Of time.*

of

of the houſe, or rabit, or reed, or flint of ſuch a wheel. And from the center of the wheel, they draw lines to the circumference dividing the circle into four parts as before, and marking thoſe diviſions by different colours, as green, blue, red and yellow: and at the out ſide of the wheel they repreſented, in painting, any remarkable event. Thus, our author ſays, they had repreſented, in his almanack, the year in which the *Spaniards* enter'd *Mexico* by a man with a beard clad in red. And thus they did other occurrences.

When the laſt day of the wheel came, that is the laſt of 52 years, they broke all their veſſels, and put out their fire; becauſe they believ'd that the world was to end at the expiration of one of thoſe ages, and for ought they knew, it might be then, and therefore they ſat all night, in great fear, waiting to ſee whether the ſun would riſe again, and upon his firſt appearing, there was a great rejoicing, all their muſick play'd, and they went to their temples, and after paying their devotions, took new fire from the prieſts, and bought new veſſels for dreſſing their meat. And then they made a new wheel for the new age. But the *Peruvians* computaion of the year by months according to the moon, was nearer to ours.

After this manner of painting, the *Americans* repreſented the hiſtory of their country, and as we obſerv'd in the conqueſt of *Mexico*, they ſent diſpatches to *Montezuma* in painting, ſignifying the landing and progreſs of the *Spaniards*. And they were ſo ingenious in this art, that whoever believes the accounts given of their pictures of that kind (and indeed I ſee no reaſon for diſputing the truth of them) muſt conclude that the *Indians* were far from being fools.

Govern-ment.

As to government, there was great variety in the *Weſt Indies*. Some parts of them being under emperors, as *Peru* and *Mexico*; others under their ſeveral caciques and kings, whereof ſome had large dominions, and ſome ſmall; and others were in clans, or under captains, who were choſen to lead their armies, and govern'd abſolutely whilſt they continu'd. Of theſe two laſt, *viz.* The kings or caciques, and the clans, we have had ſeveral inſtances in the preceding ſheets; all therefore that we ſhall further ſay of them is, that the caciques or kings were hereditary and abſolute, thro' all *America*; and that was generally ſpeaking, the government eſtabliſh'd in that country; as it undoubtedly was in all other parts of the world at firſt; which is, to me, an unanſwerable argument for *hereditary Monarchy* being the firſt government inſtituted by the ALMIGHTY GOVERNOR. The clans were a ſort of vagabonds, for the moſt part, who had no fix'd habitation, or if they had, it was but of ſhort ſtanding. But becauſe the empires of *Mexico* and *Peru* were the moſt conſiderable, and the moſt powerful, and of the greateſt extent of any in the new world, we ſhall be more particular in giving an account of their government.

Mexico is repreſented as an empire gover'd by an emperor choſen by the ſuffrages of the people, and then of the nobility. But to have the better notion of their government, it will not be amiſs to give a ſhort account of the origine of the people who inhabited *Mexico* when the *Spaniards* invaded it.

The Origine of the people of Mexico.

It is agreed upon by all thoſe who have ſtudy'd the old traditions of *New Spain*, that the *Mexicans* were not the ancient inhabitants of it. The old poſſeſſors were *Chichimecans*, a barbarous ſavage people, who are ſaid to have liv'd without order or government, like ſo many wild beaſts, eating raw fleſh and fiſh, or more unnatural food. But about the year 720 according to the chriſtian *Æra* (if the *Spaniards* who write of thoſe things did not miſtake the *Mexican* chronology) the *Navatalcas*, people living far north of *Mexico*, who conſiſted of ſeveral tribes, (all of them polite people, compar'd with the *Chichimecans*,) came by degrees farther ſouth, either prompted by ſome outrages receiv'd by the barbarians, or to ſeek a better country than their own, or for ſome other reaſon; thoſe *Navatalcas* chas'd the old inhabitants from about the lake of *Mexico*, then only call'd the great lake, and after they had gotten poſſeſſion, encourag'd another tribe from their own country to do the ſame in the places near the lake: ſo that in the ſpace of 300 years *Mexico*, *Tezeuco*, and all the places thereabouts as far as *Tlaſcala* were inhabited by the *Navatalcas*. Six tribes of them were now come to what was ſince call'd *New Spain*, and all liv'd in great friendſhip, uniting againſt the *Chichimecans*, who having retir'd to the mountains, often fell upon them.

In this condition they liv'd till about our year 1000, that the laſt tribe of the *Navatalcas* came towards the lake under the conduct of *Mexi* their king or captain. We ſhall not amuſe our readers with the ridiculous ſtories of their making this expedition at the command of their idol *Vitziliputzli*, and of his having deſcrib'd the part of the lake where they were to build their city, from finding an eagle upon a tunal tree, growing out of a ſtone. There is no impoſſibility in their having ſeen that fowl upon ſuch a tree, and that either to encourage his people, by ſhewing them that bird devouring his

prey, or out of ſuperſtition; *Mexi* took that for a part of his coat of arms, as it remain'd to the city of *Mexico*, which took its name from him, altho' they call'd it likewiſe *Tenoxtitlan*, which ſignifies *a Tunal upon a ſtone.*

But altho' the *Mexicans* were originally the ſame people with the other ſix tribes, yet they were look'd upon with an evil eye, by thoſe who had been many years there before, which occaſion'd them much trouble, and they were oblig'd to make good their poſſeſſion by force, and policy: and therefore they agreed among themſelves to chuſe *Acamapitzli* the ſon of a neighbouring prince, but of their own lineage by one of his parents, for their king. This brought them ſo powerful an alliance that during his life, they liv'd in profound peace; altho' they were oblig'd to endure great hardſhips, and pay an odd kind of tribute for that peace, to the king of *Tepeaca*. But the *Mexican* king dying, after he had beautify'd the city by many fair buildings, his ſon *Vitzilovitzli* being pitch'd upon to ſucceed him in the government, ſoon after marry'd the daughter of the king of *Tepeaca*, by which he redeem'd the *Mexicans* from their grievous ſlavery, the kind of *Tepeaca* remitting the unreaſonable tribute before exacted of them. But both the king and queen of *Mexico* dying ſoon after, the *Mexicans* choſe their ſon, altho' a child of 10 years old, for their king that they might ſtill keep the favour of his grand-father. But perſuming too much upon the friendſhip of the king of *Tepeaca*, grandfather to the young king *Chimalpopoca*, they not only deſir'd liberty of bringing water to *Mexico* from *Chapulpcepec*, which was granted, but deſir'd him, (with ſome circumſtances of diſreſpect) to ſend them ſtones and timber to make an aqueduct, and likewiſe workmen to build it. Which ſo diſoblig'd the people of *Tepeaca*, that in ſpite of their king, they murder'd young *Chimalpopoca*, and by that action broke their own king's heart, for he dy'd ſoon after. The *Mexicans* reſolving to revenge his death, ſent to the two caciques of *Tezeuco* and *Culuachan* to be preſent at their choice of a king.

Acamapitzli *1ſt king of* Mexico.

Vitzilovitzli *2d king of* Mexico.

The two caciques conſented to ſtand neuters in the quarrel between them and their enemies, ſeeing the juſtice of the cauſe to be on the *Mexicans* ſide, and coming to aſſiſt at the new election of a king, promis'd them freedom of commerce with their cities. The nobility being aſſembled, in preſence of the two caciques, made choice of *Izcoalt*, the ſon of their firſt king by a ſlave, but a man of reſolution and courage, who as ſoon as he was advanced to the regal dignity gave orders for preparing his army. He was very acceptable to the king of *Tezeuco*, for he had married *Izcoalt*'s ſiſter.

Izcoalt *the 4th king of* Mexico.

But the orders for war were no ſooner given, but the commons aſſembled in a tumultuous manner, and coming to their new king, beg'd of him to ſubmit himſelf and his people to the king of *Tepeaca*, becauſe his power was ſo much ſuperior to theirs, that there was no probability of ſucceſs in the war with them. Their king was much troubled at the cowardice of his ſubjects; but as they were engaging the prieſts to join with them, to preſs this baſe ſubmiſſion to their enemies, *Tlacallec*, a young man of a brave ſpirit, advanced before the multitude, and after having upbraided them with their cowardice, he turn'd to the king, and with a reſolute ſpeech, adviſ'd him to proceed in his firſt deſign without liſtning to thoſe cowards who ſought to enſlave their country. *Izcoalt* encourag'd by the aſſurance with which this young man ſpoke, who was his nephew, ask'd the nobility preſent, which of them would carry a defiance to the *Tepeacans*, they looked upon one another without ſtirring from their place, which *Tlacallec* perceiving ſtept out, and offer'd to be the meſſenger, and accordingly went to *Azcapuzalco*, the capital of *Tepeaca*, and having perſuaded the guards to let him go to their king upon a meſſage of peace, they made way for him. He propos'd peace to him upon honourable terms, which that king promis'd to propoſe to his council, deſiring he would return the next day: which he did, and finding, by the anſwer, that the *Tepeacans* rejected his propoſals, he boldly bid them defiance in the name of the king of *Mexico*. The king of *Tepeaca*, who it ſeems had a reſpect for a brave enemy, adviſ'd *Tlacallec* not to return by the ſame way he had come, but by a poſtern gate which he told him of; ſo that, by taking his advice, he got home, and avoided the ambuſh that was laid for him.

He ſends defiance to Tepeaca.

As ſoon as this was made known at *Mexico*, the people murmur'd a-new; and going in a body to *Izcoalt*, preſt him to ſubmit to the king of *Tepeaca*. The king endeavour'd to inſpire them with courage, but in vain, they ſtill demanded what muſt be done if they ſhould be overcome? To which the king anſwer'd, *if we be overcome, I myſelf and all the nobility who have agreed to this war, are contented to give ourſelves into your hands to be kill'd and eaten by you, which will put it in your power to make what ſubmiſſion you pleaſe to your enemies.* The commons agreed to this propoſal, and in return, engag'd themſelves by oath, to become vaſſals and ſervants to the king and the nobles, in caſe they got the victory over the *Tepeacans*. This

A ſtrange contract between the king and people of Mexico.

This contract being made, the king inveſted *Tlacallec* with the office of general, and having muſter'd his army, march'd undauntedly againſt the enemy, who came out of their city to oppoſe them, with a force ſuperior to that of *Mexico*. But *Izcoalt* having given the ſignal with a little drum which he carry'd himſelf, fell in with the enemy crying out aloud *Mexico*, *Mexico*; and charg'd them ſo briskly that, nothwithſtanding their numbers, he forced them to retire; when *Tlacallec* advancing, with a cry of *victory*, *victory*, they put them to a downright flight, and enter'd their city, where they put all to the ſword, without diſtinction of age or ſex. A great number of the inhabitants had fled to the mountains, whither *Tlacallec* purſu'd them, where he pent them up ſo cloſe, that they threw down their arms, and offer'd to ſerve the *Mexicans* in all things as ſervants, if they would ſpare their lives. *Tlacallec* receiv'd their ſubmiſſion upon thoſe terms, and retir'd to the vanquiſh'd city: and *Izcoalt* return'd to *Mexico* the next day with the rich ſpoils of their new conqueſt.

Izcoalt attacks Azcapuzalco.

And takes it.

Having call'd the people together he claim'd their promiſe, which they promis'd to ſtand to, and from that time made good. Thus the *Mexican* king not only got the better of his enemies, but became abſolute over his own ſubjects (if this account of the occaſion of it be true.) His next care was to divide the lands of the *Tepeacans* among his army; the greateſt part remain'd to him, and next to him *Tlacallec* had the beſt ſhare, and ſo the nobility, and ſoldiers who had behav'd well in the battle: nay even the commons had a ſhare, in the ſpoils, nor did they forget the prieſts and temples; and this manner of dividing the ſpoils became a cuſtom among the *Mexicans* for ever after as long as their monarchy ſtood.

But the whole kingdom of *Tepeaca* was not as yet ſubdu'd; *Tacuba* and *Cuyoacin* were cities under the dominion of the king of *Tepeaca*; the *Mexicans* therefore march'd their now victorious army againſt thoſe places, and by the conduct of *Tlacallec* ſubdu'd them, and divided their ſpoils.

This making them formidable to all their neighbours, the *Suchimilcans*, the firſt tribe of *Navatalcas* who had come into that country, became jealous of them, and therefore made war upon them; but *Tlacallec* with his uſual conduct and ſucceſs defeated them, enter'd their city, and reduced them to the ſame ſtate of ſubjection he had done the *Tepeacans*. After this the king of *Mexico* imploy'd the *Suchimilcans* to make the cawſey between *Mexico* and *Suchimilcho*, as he had put the *Tepeacans* upon building his aqueduct of lime and ſtone to bring the water to *Mexico*, as was taken notice of in *Cortez*'s ſtory.

Tlacallec defeats the Suchimilcans.

The ſate of *Suchimilco* allarm'd *Quitlavaca*, a city likewiſe upon the lake, ſo that they prepar'd their canoes to attack *Mexico* by water. *Tlacallec* had ſuch a mean opinion of their force, that he diſdain'd to make uſe of the armies he had led upon other occaſions, and liſted an army of boys between 10 and 18, to go againſt them, and, with thoſe, he forced them to ſubmit: ſo formidable had his valour and conſtant good ſucceſs made him to all the enemies of *Mexico*.

Quitlavaca *ſubdu'd by an army of boys.*

The king of *Tezeuco* ſeeing ſuch wonderful progreſs made all round him by this great general, call'd a council to deliberate what was to be done; where it was unanimouſly agreed to ſend ambaſſadors to *Izcoalt*, with offers of ſubmiſſion; which being done, the peace was concluded, and *Tezeuco* enjoy'd its own king, but as a vaſſal of *Mexico*, and *Izcoalt* made him for the future a perpetual privy counſellor to the *Mexican* kings. But that they might have the pretence of conqueſt, by *Tlacallec*'s advice, they oblig'd the king of *Tezeuco* to march his army into the field, and engage with the *Mexicans*, and then to yield without bloodſhed.

Tezeuco *ſubmits.*

Izcoalt having had a glorious reign of 12 years, by his own good goverment and the bravery and conduct of his nephew, dy'd much regretted, and having no children, the election fell upon *Montezuma*, a nephew of *Tlacallec*, he himſelf having refus'd the throne. He proved a valiant prince, and enlarg'd the dominions of *Mexico* by ſeveral conqueſts. It was this *Montezuma* who brought up the cuſtom of taking the field after being elected king, to procure a number of priſoners to ſolemmize his coronation by ſacrificing them to their idol *Vitziliputzli*. In order to which he attack'd *Chalco*, on the way between *Mexico* and the north ſea; and altho' he did not intirely ſubdue that province at that time, he brought away a great number of victims to grace his coronation; which was the moſt glorious of any ſolemnity before his time, and perform'd in the beſt order; eſpecially they brought the tribute from the ſeveral cities and nations which had been ſubdu'd, by his predeceſſors, according to the order of time in which they were ſubdued, in proceſſion, by the ſeveral officers appointed to gather it in gold, ſilver, rich feathers, garments of all ſorts, cotton, fruits, fiſh, veniſon, &c. beſides magnificent preſents made the new king.

Monte-zuma I. *5th king of* Mexico.

Attacks Chalco.

Is crowned.

After this ceremony was over, he advanced with his army, to *Chalco* a ſecond time, by the advice of his uncle and general

neral the famous *Tlacallec*. In one of the battles he had with thoſe people, *Montezuma*'s brother was taken priſoner, and the *Chalcans* liking him ſo well that they preſt him to be their king, he refus'd it, and finding they would force him to it, he deſir'd them to erect a high ſcaffold and get a ladder to mount it, that he might ſpeak to the people; which being done, he told them he could not accept their crown without betraying his country, and therefore exhorted ſome other *Mexicans* who were priſoners with him, rather to die than be guilty of that treaſon, and then threw himſelf down upon the ſtones with great violence, he was kill'd by the fall, which the *Chalcans* reſenting, they murder'd all the *Mexican* priſoners. But *Montezuma* ſoon revenged the deaths both of the one and of the others: for falling upon them with all his power, he ſubdu'd them and made them a province as ſeveral others were. From thence he march'd as far as the north ſea, bringing all that country ſouth eaſt to the gulf under his dominion, except *Tlaſcala* which *Tlacallec* advis'd him to leave, (as it was independent) both for exerciſing the *Mexicans*, and uſing them to arms, and likewiſe for a conſtant ſupply of victims for the alters of their Gods.

Subdues Chalco.

Good government of Montezuma.

Having thus made conſiderable conqueſts eaſtward, he turn'd his arms towards the other ſide, and made the provinces between *Mexico* and the ſouth ſea his tributaries. Nor did he, at the ſame time, neglect the arts of peace, for he beautify'd the city, and made conſiderable additions to his palace, and ſettled ſuch order in his courts of judicature, that they were as well regulated as thoſe in more polite parts of the world. And to his own court he added many officers, and ſettled his authority upon ſuch a foundation, that it ſeem'd to be as likely to continue as any of the great monarchies in the other ſide of the globe.

He built the temple of *Vitziliputzli* formerly mention'd, and ſettled revenues for the mantenance of the prieſts and religious who liv'd in it; and when it was finiſh'd he dedicated it with great ſolemnity, and offer'd many human ſacrifices to that idol. And thus having reign'd in great ſplendor 28 years, he dy'd, and left *Mexico* in a moſt flouriſhing condition.

His death

As ſoon as the electors met to chuſe a new king, and were join'd by the caciques of *Tezeuco* and *Tacuba*, they unanimouſly pitch'd upon *Tlacallec*; but he as ſteadily refus'd it, telling them, he would be as faithful a ſervant to the ſtate under another king, as he could be if he were advanced to the throne. When they could not prevail with him to accept the crown, they left the choice to him, and he named *Ticocic* the ſon of *Montezuma*, but very unlike the father in every thing requiſite for a king. He going, after the example of his father, to procure captives to grace his coronation, by his cowardice and ill conduct loſt more men than he either kill'd or made priſoners; and after his coronation behav'd himſelf ſo that the *Mexicans* began to deſpiſe him, and, (*as contempt of a* SOVEREIGN *is a certain forerunner of his* DESTRUCTION,) he liv'd but about four years, making the pooreſt figure upon the *Mexican throne* of any that ever fill'd it, if it could be ſaid to be full whilſt he was in it, and dy'd, as was thought, by poiſon, leaving the kingdom to be put into the hands of a more worthy ſucceſſor.

Ticocic 6th king of Mexico.

The great general, aſham'd, no doubt of the unworthy choice he had made before, was now reſolv'd to make his country amends for that miſtake; and therefore influenced the electors to chuſe *Axayaca* another ſon of *Montezuma*, and the inheritor of all his virtues. But *Tlacallec*, now worn out with age and fatigue, did not out live his coronation. The new king was much afflicted at his ſickneſs, and going to viſit him, call'd him his father, and the father of his country. He liſten'd attentively to many good advices which the general gave him, and promis'd to follow them; and that he might ſhew his affection and regard for him altho' he ſaw him dying, he gave the enſigns of captain general to *Tlacallec*'s eldeſt ſon, in his preſence, which made the old gentleman die contented, as he had liv'd the moſt glorious of any ſubject that ever *America* ſaw of her own natives. He was bury'd with great pomp, fit for a king; and *Axayaca* to allay the general grief, undertook the expedition neceſſary for his coronation. He led his army to *Tecoantepec* 200 leagues from *Mexico*, towards the ſouth ſea, where having engag'd the enemies army firſt in perſon, he pretended to fly, and thereby drew them into an ambuſcade he had laid for them, where rallying his men, and the *Mexicans* from the ambuſh appearing, he routed the enemy, and purſuing his victory, enter'd their city, and raz'd it to the ground. Then, without making any ſtay there, he march'd to *Guatulco*, upon the ſouth ſea coaſt; and having taken rich ſpoils, and many priſoners, he return'd to be crown'd, which was done with great pomp. This prince was very ſucceſsful in his wars, and reduced ſeveral revolted provinces. Notwithſtanding all which the provinces of *Mecoachan*, *Tlaſcala* and *Tlatelulco* (all formerly mention'd in the conqueſt of *Mexico* by *Cortez*) ſtill remain'd unſubdu'd, nor did the firſt two ever ſubmit to the empire of *Mexico*, till that

Axayaca the 7th king of Mexico.

Tlacallec dies.

that empire was tranſer'd from the *Indians* to the kings of *Spain*.

A ſingle combat between two kings.

The king of *Tlatelulco* challeng'd *Axayaca* to fight with him ſingle hands, and that he might make ſure of the *Mexicans*, he made a great number of his people conceal themſelves by the ſide of the lake, the reſt being drawn up in ſight of the *Mexican* army. When the two kings drew near each other, he of *Mexico* advanced before his army, and offer'd to anſwer to the challenge of the other, who likewiſe entering the liſts, they order'd their men to ſtand ſtill and ſee the iſſue of the combat. They fought a conſiderable time with great bravery, but at laſt the king of *Tlatelulco* perceiving that *Axayaca* was like to get the better of him, he turn'd his back, and fled towards the city, but the *Mexicans* purſu'd him his men making little or no reſiſtance; ſo that *Axayaca* enter'd the temple with him, and following him cloſe at the heels up to the battlement, he, there ſeiz'd him, and throwing him headlong from thence daſhed out his brains.

In the mean time the *Mexican* general having had intelligence of the ambuſcade at the lake, purſu'd thoſe who were hid there, and having taken them out of their holes, where ravens, frogs and other creatures us'd to frequent, he told them that ſince they had taken up the quarters of thoſe animals, the only condition by which they could redeem their forfeited lives was to mimick the cries of ſuch they had perſonated, which they did; and *Acoſta* ſays it was ſtill the greateſt affront to any of the natives of *Tlatelulco* to croak like a frog or a raven before them. This prince reign'd eleven years, and then made way by his death to another ſucceſſor.

Autzol the 8th king of Mexico.

The next who mounted the throne was *Autzol* one of the electors, who prov'd a moſt excellent prince, being both wiſe and valiant. The inhabitants of *Quaxatatlan* having fallen upon his officers, and ſeiz'd the tribute as they were carrying it to *Mexico*, he march'd againſt them, and having ſubdu'd them he carry'd his conqueſts as far as *Guatimala* which is above 300 leagues from *Mexico*.

Nor was he leſs generous and magnificent than valiant and prudent: for, when his tribute came in, he diſtributed a large ſhare among his nobles, and likewiſe to all that wanted: and finding the city ſtill ſcarce of water he determin'd to let the water of *Curoacan* into it; and to that end, ſent for one of the chief men of that city, to conſult him about his deſign. This man had the reputation of being a great ſorcerer, (I ſuppoſe becauſe he had more underſtanding than his neighbours) and having ask'd his advice about bringing the water, he told him, it would drown *Mexico*, and indeed the execution of the deſign had in ſome meaſure the effect which he foreſaw it would, for it overflow'd a part of the city, and had drown'd the whole, if the king had not made a drein to bring it into the ſalt lake. *Autzol* reign'd eleven years, and by his death made way for a new election.

Montezuma II. 9th king of Mexico.

The choice fell upon *Montezuma* II. who in effect was the laſt of their kings; for, altho' they ſet up two after him, they were little better then nominal; becauſe the *Spaniards* had, by that time, overturn'd that great monarchy. *Montezuma* had acquir'd a great reputation before he was elected, by his piety, or affectation of it, for he retir'd often to the temple and pretended frequent converſations with *Vitziliputzli*, and he was ſo grave and ſerious in all his behaviour, that he was eſteem'd a very wiſe man; for which cauſe they unanimouſly choſe him for their king; but upon the report of it, he hid himſelf in the temple, making ſhow of great unwillingneſs to aſcend the throne. However he ſuffer'd himſelf to be prevail'd with to receive the enſigns of royalty, and to have his noſe bor'd to hang the royal emerald to it, which was one of the *Regalia*; and when the cacique of *Tezeuco* complimented him after his election, in terms full of commendation, he anſwer'd with great humility.

But he was no ſooner ſeated upon the throne, than he ſhew'd a moſt aſpiring mind. He took for his ſervants none but noblemen, nor would he ſuffer a plebeian to have any office in his palace. And where ever he went, he made the greateſt lords give him water to waſh, and do other offices of ſervants about his perſon. Having ſettled his houſe, he drew out his army to provide victims for his coronation according to cuſtom, and a great province towards the north ſea having revolted, he march'd his army againſt it; and being a man of great courage as well as prudence, he defeated their armies, and reduced them to obedience, but carry'd a great number of priſoners, taken in the field, to ſacrifice at his coronation.

The fame of his great wiſdom and magnificence brought great numbers of ſtrangers to ſee the ſolemnity; among whom were many from *Tlaſcala*, *Mechoacan*, and *Tepeaca* who had not ſubmitted to *Mexico*. *Montezuma* having intellegence of their being in the city, order'd them to be lodg'd and ſerv'd with great pomp, and had ſcaffolds built a purpoſe for them to ſee his coronation.

His wiſe government.

After this ſolemnity was over, he ſet himſelf to make good laws, and was careful to ſee them put in execution: and to try the integrity of his judges, he cauſed them to be offer'd bribes to give ſentence

tence againſt juſtice, and if they took them, he never miſs'd hanging them for a terror to others. He likewiſe diſguis'd himſelf often to find out the behaviour of his officers of all ſorts: but when he appear'd as king, it was death for a plebeian to look him in the face; and he never ſet his foot upon the ground, but was carry'd in a chair of ſtate by the nobility, and when he had occaſion to ſtop any where, there was a rich carpet laid for him to ſtand or ſit upon. He never wore the ſame garment, nor ate or drank out of the ſame veſſel twice.

This prince had reign'd in great ſplendor 14 years, when the *Spaniards* arriv'd to diſturb his government. But having, in the III. chapter of this book given a particular account of what happen'd to this empire afterwards, we ſhall not ſay any more in this place, but proceed to give a ſhort account of the government of *Peru* before the conqueſt of it.

We have already obſerv'd, in this ſection, that the *Indians* of *Peru* believ'd one ſupreme being, whom they call'd *Pacacamac*, and that they held the immortality of the ſoul; we have likewiſe given an account of their ſacrifices in common with thoſe of the *Mexicans*, together with a deſcription of the temples of the ſun and moon; and the feaſts kept in honour of them. We ſhall therefore now ſpeak more particularly of their civil government.

The monarchy of Peru.

The monarchy of *Peru* was hereditary from its firſt eſtabliſhment; nor was there ever an inſtance of any ſuch thing as electing a king or emperor among them. And indeed if the account given of their monarchy by the Inca *Garcilaſſo della Vega* is true, (as he had the beſt opportunity of knowing it of any perſon whatſoever, and ſeems to have been a man worthy of credit,) the kings of *Peru* have been inferior to none in the more polite and knowing parts of the world for policy and government, which will appear by a ſhort hiſtory of their ſucceſſion.

Manco Capac, who liv'd near the lake *Titicaca*, and appears to have been a man of the firſt rate underſtanding, being of an aſpiring genius, left his place of abode, and going about 80 leagues farther north, came to the valley of *Cozco*, together with his coya or wife, (but whether ſhe was really his ſiſter is not ſo clear.) This man had fram'd a ſtory, and brought his wife for a voucher, that they two had come down from the ſun, and were both children of that deity, and were ſent, in compaſſion of the ignorance, and barbarity of the then inhabitants, to poliſh and civilize them: that they were at firſt ſet down by the lake of *Titicaca*, with inſtructions to travel northward, till a bar of gold which their father the ſun had given them, ſhould melt by one ſtroke upon the ground: he told the inhabitants, that they had try'd the experiment of melting the bar at all places where they had halted by the way, but that it continu'd firm, till they came to *Cozco*; and then having try'd as uſual, it had melted by the firſt ſtroke againſt the ground: and therefore he knew, that was the place where the ſun had appointed them to ſettle, and if the inhabitants had the grace to be inſtructed by them, it would redound to their happineſs. He told them that his father had given him a ſyſtem of excellent laws to be the rule of their government, which were ſo temper'd with juſtice and mercy, as would be beneficial to all degrees of people: for, as the ſun himſelf took vaſt labour to do good to all, ſo he had given them his children, a ſtrict charge to imitate him in his extenſive charity and compaſſion.

Manco Capac 1ſt king of Cozco.

This ſtory being artfully compos'd, and meeting with an ignorant (and conſequently a ſuperſtitious), people; and *Manco Capac* and his coya being extraordinary perſons, ſoon brought the people to do homage to them as if they really had deſcended from that deity, which before that, they worſhipped, with a religion common to all the heathen world, ſo that in a ſhort time, they had a vaſt number of people who ſubmitted to them, and *Manco* us'd them with ſo much good nature and civility, that they not only thought themſelves, but really were, happy in their obedience to him. He gave them inſtructions about tilling their ground and making gardens, having invented inſtruments for that purpoſe which they had till then been ſtrangers to. Among the other improvements he made, the building the city of *Cozco* was one; he laid out the ſtreets himſelf, and taught them how to build houſes; and how to dreſs their meat, and to live with a decency they had never been us'd to. And what he practis'd among the men, his coya, *Mama Oclo Auaca* did among thoſe of her own ſex, teaching them to work cotton, and to make garments for themſelves and families. If any one ſhall ask how theſe two extraordinary perſons had acquir'd this politeneſs? I confeſs I cannot tell; nor can I reſolve it into any thing, but the force of ſtrong natural ſenſe, and vertuous inclinations. But however this be, our hiſtorian ſays that in a very few years, this part of *Peru* came to be in a very flouriſhing condition; ſo that this inca or king *Manco Capac* found himſelf at the head of a powerful nation; and able to force his neighbours to obey his laws, which he call'd the laws of his father the ſun.

This

This is ſaid to have happen'd about 400 years before the *Spaniards* invaded *Peru*, and is not much different in time, from the ſettling the monarchy of *Mexico*.

Manco Inca gave, from time to time, many excellent laws; he puniſh'd murder, adultry, and robbery with death. He regulated the laws of marriage, allowing none to enter in that ſtate, but ſuch as were come to the years of diſcretion; and then he order'd that they ſhould marry in their own tribe. He likewiſe appointed diſtinctions of dreſs. He himſelf wore a party-colour'd ribbon round his temples, almoſt like a turbant, which was not lawful for any one elſe to uſe; but the chief of his nobility, to whom he ſhew'd great regard, had leave to wear a ribbon of one colour, by way of turbant, to diſtinguiſh them from others. He introduced the cuſtom of polling the hair, which they did with ſharp flints; and would have given all the gold of their country for ſciſſers and knives, had the *Spaniards* treated them civilly.

Nor did this wiſe king neglect the worſhip of his pretended father; for he built temples to the ſun, not only in *Cozco*, where his chief reſidence was, but likewiſe in other towns and cities, and eſtabliſh'd prieſts for the ſervice of them. And thus, he liv'd to eſtabiſh a flouriſhing kingdom, in which were above two cities and towns. And to bind the chief of his ſubjects the more in their obedience to his family, he adopted them likewiſe into the family of the ſun, and gave them the title of *Inca*, but in ſubordination to the royal family, which was but ſmall at that time. Having given his ſon inſtructions about his future government, he gave the new Inca's, whom he had adopted, a ſtrict charge to obſerve the laws he had given them, and likewiſe to obey ſuch new commands as his ſucceſſors, of the true lineage of the ſun, ſhould from time to time injoin them; and then telling them, that he was ſoon to return to his father, but ſhould always aſſiſt them upon all occaſions, if they follow'd the precepts he had left them, they all promis'd an inviolable loyalty to the royal family; and after his death, which happen'd in a ſhort time, his ſon ſucceeded him.

Chinchi Rocca 2d Inca of Peru.

This ſecond Inca call'd *Chinchi Rocca*, who, after the example of his father, married his own ſiſter, that the brood might be kept pure in the offspring of the ſun. Before he was crown'd, he perform'd his father's obſequies, and in his after life follow'd his ſteps ſo well, that he became maſter of the affections of his people, and enlarg'd his dominions partly by the reputation of his wiſdom and good government, and, where that fail'd, by his valour and the force of arms: the bringing all his neighbours to the true worſhip of their father the ſun, being ſufficient ground of quarrel againſt them. *Thus has* RELIGION *been, many a time, the* PRETENCE *for ambitious* USURPERS *invading dominions they had no right to.* However, to do him juſtice, he took all the pains imaginable to make his people happy; and perceiving that the land about *Cozco* was barren, he had a great deal of earth brought from the *Andes* which made it a fruitful ſoil; he likewiſe fill'd up the ſquare of *Cozco*, which was a quagmire before, and made it firm ground. This prince made himſelf be reſpected far and near, and made conſiderable alliances, and *Herrera* ſays, he departed from the cuſtom of marrying his ſon to his ſiſter, obliging his daughter to devote herſelf to a religious life, and took to wife, for his ſon, the daughter of a very powerful neighbour, and the marriage was ſolemniz'd with great pomp. *Chinchi Rocca* reign'd 30 years, and enlarg'd his dominions conſiderably on all ſides, ſo that the monarchy of *Cozco* became the greateſt of any in ſouth *America*.

Herrera *dec.* III. B. IX. *ch.* 2.

Lloqui Yupangui *the* 3d *Inca of* Peru.

This Inca dying, left the kingdom to his ſon *Lloqui Yupangui*, who ſucceeded his anceſtors not only in their dominions, but in their vertues and good fortune. He enlarg'd his territories, and conquer'd many other nations or clans. He built many ſtately houſes, and gave the weſtern ſide of *Cozco* to his father-in-law, with whom he liv'd in great friendſhip. But he had no child by his wife, according to *Garcilaſſo*, tho' *Herrera* ſays he had a ſon in his old age, and at his death, order'd the enſigns peculiar to the Inca, to be depoſited in the temple of the ſun, till his ſon ſhould be of age, and appointed two of the boy's uncles to be his guardians till that time.

Maita Capac *the* 4th *Inca of* Peru.

The fourth Inca was *Maita Capac*, the ſon of *Yupangui* according to *Herrera*. He having no ſiſter, marry'd *Manaca Guapatac*, daughter to a petty lord near *Cozco*. He affected the name of *Viracocha*, which ſignifies *God* in their language, and to excuſe himſelf from impious pride in taking that title, he pretended that he did it by *Viracocha*'s command. This Inca carry'd on the ſtately buildings, nor did he neglect the making conqueſts; for he brought ſeveral nations under his dominion, particularly the *Tiahuanacans*, who had been troubleſome neighbours before his time, but were by him ſubdu'd.

Capac Yupangui *the* 5th *Inca of* Peru.

To him ſucceeded his ſon *Capac Yupangui*, which names ſeem to have been given to the Inca's of *Peru*, as the title of *Auguſtus*

Auguſtus was to the *Roman* emperors, for ſome excellency real or ſuppos'd to be in them: and theſe two names of honour were probably given to this prince, becauſe he acquir'd ſingular glory in his wars, for he enlarg'd his conqueſts as far as *Chili* ſouthwards, and above 70 leagues from *Cozco* towards *Lima* on the ſouth ſea, and eighty leagues northward, beſides forty leagues ſouth eaſt. He is ſaid to have made an extraordinary bridge of bulruſhes over a broad river, by twiſting them into thick ropes which reach'd from one ſide of the river to the other at ſmall diſtances from one another, upon thoſe ropes he laid bundles of bulruſhes quite croſs, and new ropes ſtretched tite, and faſten'd to ſtakes driven into the ground on each bank; and thus by rows of ropes and bundles, alternatly placed above one another, he paſt his army. This bridge was 14 paces broad and 150 in length. He left behind him about 80 children; ſo that we may ſuppoſe he had ſeveral ladies beſides the coya.

Inca Rocha II. *the 6th Inca.*

After his death, ſucceeded Inca *Roca* II. he is ſaid to have been the firſt who inſtituted ſchools in *Cozco* and *Herrera* tells a ſtory of him that in a retirement, occaſion'd by the pain in boring his ears, he pray'd that he might find ſome means to ſupply *Cozco* with water; and that a clap of thunder having ſurpriz'd him, he lay flat upon the earth, upon the ſide of a hill, where he heard the ruſhing of water under him, ſo that giving orders to open a paſſage in that place, he found water ſufficient, which he brought to the city. He made war upon the *Condeſuyans*, north eaſt of the lake of *Titicaca*, and obtain'd a great victory over them at *Pomotambo*, in their own province; but us'd his good fortune with ſo much moderation, that they willingly ſubmitted to him, and paid him tribute. He had many ſons but no daughter, ſo that he marry'd his ſon to a daughter of one of his vaſſals.

Herr. *ubi ſupra.*

Yahuar Huacao *the 7th Inca.*

This Inca dying, his ſon *Yahuar Huacao* ſucceeded him, which name our author *Garcilaſſo* ſays was given him for having wept tears of blood at his birth, which was look'd upon as a bad omen. However, he began his reign proſperouſly, and after the example of his predeceſſors enlarg'd the bounds of his empire with great courage, and ſucceſs. But after a while, he grew jealous of his eldeſt ſon, and for that reaſon ſent him to keep the cattle of the ſun in *Chita* with a ſtrict charge not to appear at *Cozco* without a ſpecial licence. The prince liv'd 3 or 4 years in that ſort of life; but afterwards came to court, contrary to orders under pretence of a viſion, and refuſing to depart till he ſhould have deliver'd his meſſage to his father, he was admitted to his preſence; and told him that *Viracbocha* had reveal'd to him that there was a conſpiracy againſt the ſtate, and the city of *Cozco* was in danger of being ſurpriz'd.

The Inca was angry with his ſon for coming to him with ſuch a ſtory, which he did not believe; and therefore order'd him back to his former occupation; but two or three months after the plot broke out, a great many provinces rebell'd. Whether the prince fomented the inſurrection under hand, to make himſelf neceſſary at home, or whether his natural ſagacity made him apprehend a rebellion, perhaps from his ſeeing bad meaſures taken at *Cozco*, is not ſo certain. The thing was ſo unuſual in that kingdom, that the Inca had not reſolution enough to ſtand it, and therefore deſerted his capital, and fled for refuge to ſome other place. But the people of *Cozco*, either being in concert with the prince, or having a good opinion of his conduct and courage, invited him home.

The firſt ſtep he took was to follow his father, and to preſs his return, by repreſenting to him the weakneſs of abandoning his kingdom to the rebels; and when he could not prevail with him to make head againſt them, he invited all that were lovers of their country to join with him for its preſervation. This behaviour prevail'd with a conſiderable number of thoſe who had fled with the Inca; ſo that the young prince ſoon muſter'd up an army againſt the rebels, and having march'd againſt them with a courage becoming his birth, he defeated them after an obſtinate reſiſtance.

After this battle, in which he ſtruck at the root of the rebellion, he us'd the rebels with ſo much mildneſs, that they threw down their arms every where, and begg'd pardon; but the people of *Cozco* were ſo fond of him, that they offer'd him the crown. However, he was either ſo good a ſon, or ſo wiſe a politician, that he would not accept of it till he ſhould ſee his father; and therefore going to him, he had an interview with him by himſelf; after which, coming out to thoſe who had gone along with him, he told them that the Inca had declared that he would never return to *Cozco*, nor meddle any more with the government, which they believing, and perhaps being fond (as is natural for a warlike nation) of a prince who had ſhew'd ſo much ſpirit, preſs'd him to accept of the crown, and upon account of his pretended viſion gave him the name of *Veracocha*.

Upon his return to *Cozco*, he took upon him the title of Inca, and under the name of *Veracocha* was crown'd the

8th

Viracocha *the 8th Inca of* Peru.

8th Inca of *Peru*. The viſion he pretended to have had of his name ſake had been of ſuch uſe to him, that he built a temple to him, like an amphitheatre, without a roof, becauſe, he ſaid, he had appear'd to him in the open air. And altho' this Inca, as well as his anceſtors, ſtill claim'd the honour of being the offſpring of the ſun, yet he ſet *Viracocha* above the ſun, as a deity, and order'd him to be principally regarded, but would have no ſacrifices offer'd to him, ſaying that he ſtood in need of nothing from mortals, but was to be honour'd only with internal worſhip.

This prince having obſerv'd the miſtakes of his father's government, apply'd himſelf to ſettle the kingdom in ſuch a manner, as not only to prevent all troubles at home, but to ſecure himſelf from enemies abroad; and having acquir'd a great reputation for courage and prudence in the firſt appearance, and entry upon government, he was courted by all the great lords round about the kingdom, and had ambaſſadors ſent to him from ſome at a great diſtance. Thoſe he receiv'd graciouſly, and ſent them back with preſents and kind words. Nor did he give over the uſe of arms, but brought all ſuch as refus'd to pay homage to him, to ſubmit themſelves to his dominion by the force of his arms, in which he ſtill had good ſucceſs, and return'd from all his expeditions of that kind crown'd with victory. He pierced farther eaſt than any of the Incas had done; ſo that he brought the empire to its utmoſt extent of what is to this day call'd *Peru*, towards the eaſt, ſouth and weſt.

But, in one reſpect, this Inca far ſurpaſt his predeceſſors, *viz.* the aqueducts, and canals of water which he made, ſome of which *Garcilaſſo* ſays were 150 leagues in length and 12 foot broad. And indeed it was a wonderful thing to ſee ſuch works carry'd thro' rocks and clifts by a people who neither knew the uſe of gun-powder to blow them up, nor of iron tools to break them down.

Pachacutec *the 9th Inca of* Peru.

After a long and proſperous reign of near 50 years, this Inca dy'd, and left the throne to his ſon *Pachacutec*, who was the 9th Inca of *Cozco*. He turn'd his arms northward, where he found many warlike nations, and had wars frequently with them, and brought many of them to be his vaſſals, under pretence of bringing them over to the true religion. And when he had ſpent a good deal of time in his conquetts northward, he aſſembled moſt of the different provinces, eſpecially the lateſt conquer'd, obliging them to grace his ſolemn triumph at *Cozco*, as the ancient *Romans* us'd to do, but only with this difference, that his conquer'd people appear'd, at his triumph, as his ſubjects and ſoldiers in the different habits and arms belonging to their ſeveral countries, without any mark of ſlavery; whereas the greateſt kings, nay princeſſes and children, conquer'd by the *Romans*, were oblig'd to grace the victor's triumph with all the badges of ſlavery that inſolent pride could make them put upon thoſe miſerable people.

In one of this Inca's expeditions northward, towards the coaſt of the ſouth ſea, he found a temple dedicated to *Pachacamac* and by inquiry, he was inform'd that they offer'd human ſacrifices to this deity, whom they own'd for the creator of all things. *Pachacutec*, ſent to the king of the place, demanding homage to the ſun, and that he ſhould ſubmit his kingdom to him as being the offſpring of the ſun. *Cuyſmancu*, the king of that city, and of a large territory lying along the coaſt northward, ſent him word, that his God *Pachacamac* was the maker of the ſun, and for that reaſon, more worthy to be worſhip'd, and that he himſelf was ſovereign of that country, and would neither change the object of his worſhip, nor give up his kingdom. To this the Inca reply'd that he had greater reſpect for *Pachacamac* than *Cuyſmancu* had, becauſe he own'd him not only for the creator of all things, but was even afraid to pronounce his name, whereas they had made an image of him who was inviſible, and worſhip'd him with ſacrifices which they were not ſure he was pleas'd with. He therefore inſiſted upon their laying aſide human ſacrifices and worſhiping the ſun in ſubordination to *Pachacamac*, and likewiſe, (not to give up his kingdom to him, but) to acknowledge him for their ſovereign, and to obey the laws of the ſun. Upon thoſe terms he offer'd peace, but if they refus'd any of them, he bad them prepare for war.

The fame of *Pachacutec* was ſuch, that *Cuyſmanca* was unwilling to try his ſtrength, and therefore came into his meaſures, and having done homage to the Inca, the peace was concluded. But his neighbour of *Truxillo* was not ſo lucky; for the Inca having made the ſame propoſal to him; that lord ſent him a ſurly meſſage, and refus'd to make any change either in religion or government. The Inca upon this meſſage, march'd againſt him, and in one deciſive battle, defeated his army, and took himſelf priſoner, and impos'd what conditions he thought fit upon the ſubjects. Thus, for a long track of years, this prince govern'd *Cozco* with great ſucceſs, enlarging the dominions abroad, and at the ſame time not neglecting the adminiſtration at home. He founded ſeveral cities and towns; he built

temples, ſchools, granaries, and other publick works: and having reign'd much about the ſame time that his father had done, he dy'd, and was ſucceeded by his ſon.

Yupanqui *the* 10*th Inca of* Peru.

This Inca was call'd *Yupanqui*, and was the 10th king of *Cozco*, who turn'd his arms beyond the mountains eaſtward, and ſubdu'd ſome barbarous nations, exacting tribute from them of monkeys, popinjays, wax, and honey; and going farther ſouth than any of his predeceſſors had done, he ſent a general who paſt the deſart of *Atacama* formerly mention'd, * and enter'd *Chili* with 10,000 men; and the Inca recruiting that army from time to time, with the like number, had good ſucceſs at firſt, ſo that the Inca's forces to the number of 50,000 men were in *Chili* ſix years; but in the mean made no great progreſs being ſometimes repuls'd by the bravery of the natives. In this reign was begun the famous fortreſs of *Cozco*, but it was never finiſh'd.

* Un. Tr. *p.* 114.

Tupac Yupanqui *the* 11*th Inca of* Peru.

After the death of *Yupanqui*, his ſon *Tupac Yupanqui* ſucceeded; and by the example of his predeceſſors, after the ceremonies of his own coronation, and the obſequies of his father were ſolemniz'd, ſet himſelf firſt to ſettle the government of *Cozco*, and then to proſecute the conqueſts already begun, or to proceed to new ones. The firſt attempt he made was northwards upon the *Chiacapoias*, a warlike people not as yet ſubdu'd, between *Cozco* and *Quitu*, and as he had learn'd the art from his anceſtors, the offspring of the ſun, to palliate his ambition with the cloak of religion, he gain'd the *Chiacapoias*, mingling ſharp arrows and hard *Macanas* with his ſmooth arguments, to bring them to his terms; ſo that, after ſeveral ſtruggles, he got the better of them, and join'd that province, which was 50 leagues long, and 20 broad, to the dominions of *Cozco*. Purſuing his conqueſts he fell upon *Huancapampa* a large country conſiſting of different people, whoſe quarrels among themſelves made them an eaſy prey to the Inca. Thoſe people had almoſt as many Gods as there were men among them, for every one worſhip'd what he thought fit; ſo that every beaſt, bird, plant or herb, was a God to ſome one or other. But they were as remarkable for the reaſon of their making war upon one another, for they neither fought for glory, for revenge, for riches nor for dominion, but, like ſo many knight errants, for women. The Inca having ſubdu'd them, left ſome of his own people among them to teach them husbandry, and the other arts practis'd at *Cozco* and in his other dominions, and they were ſo tractable that in a ſhort time, that province became one of the moſt flouriſhing in his dominions. From thence he proceeded to other provinces with the ſame good ſucceſs. But he conquer'd the people of *Quillacu* (a province towards the equinox) out of mere charity to them; for their country was naturally ſo barren that it was not worth taking, and the people were ſuch naſty brutes, that the Inca laid a ſwinging tribute of lice upon them to oblige them to keep themſelves in ſome ſort of cleanlineſs. *An odd tax.*

Having ſpent a good deal of time in thoſe northern provinces about the line, he march'd with an army of 40,000 men to invade *Quitu*, a rich and flouriſhing kingdom on both ſides of the equinox. But the people of *Quitu* were ſo brave, that the Inca made little or no progreſs in two years time, and therefore being under a neceſſity of going back to *Cozco* to ſettle ſome affairs, he left his army under the command of his ſon *Guayanacapa*. This new general battled them for three years more, nor had he, perhaps, ſubdu'd them then, but for the death of their king, which happen'd luckily for *Guayanacapa*; for then they began to capitulate and ſoon after ſubmitted. This young prince having taken poſſeſſion of the capital of *Quitu*, and ſettled all matters in that new kingdom, ſubdu'd many provinces to the eaſtward of it, and then return'd to *Cozco* in triumph.

In the mean time, the Inca *Yupanqui* having had good ſucceſs in his wars, and ſeeing his ſon ſo fit to command armies, gave over the thoughts of taking the field any more, but apply'd himſelf to beautifying *Cozco* and ſome other cities where there were royal palaces, particularly he imploy'd 20,000 men conſtantly in the fortreſs of *Cozco*. And finding himſelf near his death, he call'd his family and chief nobility about him, as was uſual for the Incas to do, and made them a ſpeech, which ſerv'd as his latter will and teſtament. He gave good inſtructions to his ſon, and recommended loyalty to his nobles, and intimated (according to cuſtom) that he was call'd away by his father the ſun, to attend him in the bright region above, from whence he would not fail to aſſiſt his poſterity the Incas, and their loyal ſubjects as occaſion ſhould offer.

Guayanacapa *the* 12*th Inca.*

After his death *Guayanacapa* ſucceeded to the throne, who was eſteem'd the glory of the kingdom or empire of *Peru*. He had in his father's life time, marry'd one of his ſiſters, but ſhe not proving with child, he marry'd another of them, and by a particular law of the Inca, they were both reputed coya's. By the ſecond coya, he had a ſon named *Guaſcar* or *Huaſcar*, who was Inca when the *Spaniards* firſt invaded *Peru*. At the birth of *Guaſcar*, he made great rejoicings, and to ſolemnize

ſolemnize it with ſomthing very memorable, he made a chain of gold of 700 foot long, every link of which was as big as a man's wriſt. The uſe of it was to guide the ſolemn dance us'd upon ſuch occaſions, for whereas formerly 300 of them danced in a circle holding one another by the hand, this chain being ſet up in form of a ring, the dancers taking hold of the chain kept their places, without taking hands. There was diligent inquiry made by the *Spaniards* for this chain, but it could never be found.

About two years after the birth of this ſon, *Guayancapa* march'd to *Quitu* with an army of 40,000 men to look after his late conqueſts, and to make more. Here he marry'd the daughter of the late king of *Quitu*, by whom he had ſeveral children, and among others, *Atahualpa* or as others call'd him, *Atabaliba*, the unfortunate uſurper, that was murder'd by *Pizarro*, as we have related in the IV chapter of this book. In this country he reduced ſeveral nations under his obedience, and enlarg'd his dominions conſiderably, inſomuch that his kingdom became in his days, the greateſt monarchy in the world.

But whilſt he was thus imploy'd in the north, ſome of the provinces on the coaſt near *Puna* iſland, revolted, and had murder'd all the inſtructors ſent to them by the Inca *Yupanqui*. *Guaynacapa* march'd againſt them, and having made them ſubmit, they expected nothing leſs than to have all the chiefs of the revolt tortur'd; but the Inca unexpectedly pardon'd them all except one, for an example, and he choſen by lot: as for the reſt, he made four fore teeth to be drawn from every one of them, two above and as many below, as a mark of their treachery. Another inſurrection having happen'd upon the ſame coaſt, he march'd againſt the rebels, who being afraid of his power, but more of his ſucceſs, ſent a lady, (who had been miſtreſs to his father, and a fine woman in the opinion of the country) accompany'd with a great train of her own ſex, who falling at his feet ſoon obtain'd the pardon they beg'd of him; ſo that riſing from his ſeat, he took up the lady who had made a moving ſpeech, and bad her tell the rebels, that ſhe alone had diſarmed him; but that they ſhould do well not to abuſe his reſpect for ſuch fair advocates as ſhe was.

This Inca having ſpent ſome time in new conqueſts, and in reducing ſome revolters to obedience; and having left nothing worth conquering near him, retir'd to the heart of his kingdom to govern what he had ſo gloriouſly acquir'd; and to employ his people in ſome work either uſeful or beautiful. He built or enlarg'd ſeveral temples in different places, made new palaces and royal houſes of pleaſure. But the moſt ſtupendous of all his works were two cawſeys the whole length of *Peru*, from *Quitu* to *Chili*, each of thoſe cawſeys or highways was 500 leagues long: the one was by the ſea, and the other by the ſide of the *Andes*, in which laſt he fill'd up valleys of 20 or 30 fathoms deep, and in other places levell'd prodigious high ground, ſo that he made both thoſe roads eaſily paſſable, which were impracticable before. A work which ſurpaſs'd by much the fam'd *Appian* and *Flaminian* ways of old *Rome*.

We have already related * how *Guayanacapa* gave the kingdom of *Quitu* to his ſon *Atahualpa* by the daughter of their late king; as alſo a part of what happen'd between him and the Inca *Guaſcar* after the death of the father. All therefore that we ſhall add of the hiſtory of the Incas is, that whilſt *Guayanacapa* enjoy'd a profound peace, and had acquired a vaſt reputation for equal abilities both for war and peace, the tranquility of his mind was at once eclips'd, and he foreſaw the deſtruction of that empire which the pretended offspring of the ſun had been for twelve generations together raiſing with ſo much fatigue.

* Un. Tr. B. I. ch. 4.

This happen'd in the year 1515, when *Nunez de Balboa*'s fleet appear'd in the ſouth ſea to make diſcoveries; upon the news of thoſe ſhips having been ſeen upon the coaſt, *Guayanacapa* was thunderſtruck, and altho' he liv'd 8 years after, it was obſerv'd that he never attempted to make any new conqueſt. *Garcilaſſo* ſays, that this conſternation was occaſioned by an ancient prophecy which they had, by tradition, among them, that after the 12th Inca, their empire ſhould be invaded and overturn'd by ſtrangers, and the line of the ſun ſhould be extinguiſh'd. Beſides, they talk of prodigies in that country at the time of the *Spaniards* appearing among them, as we obſerv'd in the account of the conqueſt of *Mexico*, was likewiſe related of that empire. Whether thoſe ſtories were the reſult of the ſuperſtition of thoſe times, or were invented to excuſe the *Indians* weak defence of their country, by laying the blame upon fate and the decree of heaven, I ſhall not determine. But if the firſt chriſtians who conquer'd them, had been as good men as the firſt planters of chriſtianity in *Aſia* and *Europe*, I ſhould have had as little difficulty of believing the laſt dying words of the idols of *America*; as the wiſeſt of the fathers had in giving credit to the farewel ſpeeches of the oracles among the *Gentiles* of thoſe other parts of the world.

Guayana-

Guayanacapa made a progreſs to *Quitu*, where he fix'd *Atahualpa* upon the throne of that kingdom, with the conſent of *Guaſcar*; and being there ſeiz'd with the ſmall-pox, he died, in good time to prevent his being a witneſs of the miſeries of his country, which indeed were greater than any man of a generous mind could have ſuſpected, or any that had common humanity, not to ſay chriſtianity, could have inflicted upon their fellow creatures. *Garcilaſſo* aſſerts, that this Inca, upon his death-bed, abſolutely forbad any reſiſtance of thoſe ſtrangers, whoſe ſhips had been ſeen at ſea, and by his account of *Atahualpa*'s behaviour to *Pizarro*, already related, one would be apt to believe it; altho' it ſeems very odd that a people, ſo much enur'd to war, ſhould let their government be deſtroy'd, themſelves made ſlaves, and ſubmit to be hang'd and burnt by a handful of men, whom, as dreadful as they might appear to them at firſt, they ſoon found to be mortal; and had they been authoriz'd by the religion they profeſs'd, to act thoſe cruelties which they practis'd upon the poor *Indians*, thoſe miſerable people might have honeſtly and truly told them, that their own religion was better than theirs: and that *Pacacamac* and their father the ſun (who were good and merciful) were more worthy of being the objects of worſhip than a deity who taught ſuch murdering practices for no other reaſon but avarice and thirſt of gold. Nor is this my obſervation only; the *Spaniſh* Authors themſelves have without any reſerve ſaid a great deal more, and particularly *Las Caſas*, who was a biſhop in that country, and by his reſenting the cruelty of his countrymen, procur'd ſtrict orders from the emperor *Charles* V. to have the *Indians* better treated: and whatever miſchief flow'd from the execution of thoſe orders, was owing rather to the wickedneſs of the chriſtians, than to any other cauſe. What happen'd after the death of *Guayanacapa* has been already related as fully as is conſiſtent with our deſign.

Altho' the accounts we have of the two great empires of *Mexico* and *Peru* are the fulleſt, as having been more intirely conquer'd, and more conſtantly poſſeſs'd by the *Spaniards* than the other parts of the continent of *America*, by any other *Europeans*; yet the country of *Brazil* being of ſo large an extent, and ſo particularly deſcrib'd by Dr. *Harris* from the accounts given of it by *Leri* and another, who liv'd there a conſiderable time, we ſhall take, from him, what we find proper for our preſent ſubject.

Brazil.

The *Indians* of *Brazil* were not without religion, altho' it was, like themſelves a little unpoliſh'd. They held *Tupan* to be the author of thunder and lightning; but they were ſo much afraid of him, that they worſhip'd him out of fear only. They had a general notion of a flood which drown'd all the world except ſome of their anceſtors, who eſcap'd by climbing up ſome high trees. Their notions of vertue and vice, tho' they are not juſt, ſhew that they believ'd a future ſtate. Vertue to them was, to love their country, and to defend it againſt all enemies whatſoever, (*ſo far they were right*,) but they carry'd it farther reckoning it heroic and vertuous to murder their enemies in hot or cold blood, and to eat them without remorſe, and they beliv'd that they who dy'd ſo, went after death, to a far country where their anceſtors lived in pleaſant gardens, and enjoy'd all that they could deſire, and where thoſe who were ſo qualify'd became their companions in that ſweet place. But the wicked (that is, cowards, who faint in defending their country) were carry'd away by *Agnan*, and ſhould be cruelly us'd by him.

Their religion.

But notwithſtanding their groſs notions of things, they were not unwilling to liſten to reaſon, nor were they impatient of contradiction in their opinions, but were curious to know what the *Frenchman* and his companion the *Portugueſe* believ'd and practis'd. An inſtance of which is given in an intertainment of theirs where the *Indians*, out of reſpect, let the *Europeans* ſit by themſelves, and obſerving that they all pull'd off their hats before dinner, whilſt one of the company ſaid grace (*a cuſtom which now begins to wear out, in our polite age*) the *Indians* deſir'd to know the meaning of it, which gave *Leri* an opportunity to diſcourſe of ſeveral points of the chriſtian religion, to which they liſten'd with great attention; and afterwards join'd with them in ſeveral parts of devotion. But they were ſo ſuperſtitiouſly fond of their old cuſtoms that they thought it a point of honour not to change their religion: which puts me in mind of a worthy friend of mine, who told me of an acquaintance of his, that us'd to ſay, that *if he had had the grace to be born and bred a* Mahometan, *he would have thought it diſhonourable to have chang'd.* I wiſh they who have had the grace to be bred in a true religion would have the ſame averſion to change, and that faſhion and intereſt were not too much the motive in people's declaring themſelves of this or that ſect, *ſo that if it ſhould ever happen that a* TINDAL'S *or other ſuch infidel's head ſhould be ſet up for an* IDOL, *there would not want wretches abject enough to* WORSHIP *it out of complaiſance.*

It

It is indeed ſaid that there were a ſet of *witches* in *Brazil*, who led the people aſtray by their pretended enchantments, and having once cheated them into a belief of their power and knowledge, they made them follow them blindfold, and give into the groſſeſt and moſt ridiculous ſuperſtitions they could invent. They make them believe that they can inſpire them with courage and fortitude, and to that purpoſe ſtrole about the country, as our gypſies do, in cluſters, and are well receiv'd and feaſted wherever they go. They have the name of *Caraibes*.

But it is obſervable that their entertainments, as well as their lamentations for the dead are accompany'd with moſt dreadful noiſes and doleful howlings, enough to frighten a well compos'd mind unacquainted with their manner. Thus *Leri* declares, that at an entertainment given their caraibes, at which he was preſent, the men, women, and children, from ſeperate appartments, made ſuch a helliſh noiſe, that he almoſt loſt his courage, but that was ſucceeded by a more harmonious muſick than he expected to have heard in that part of the world.

Lamentation for the dead. As to their lamentations for the dead they are very diſagreeable. The moment any one dies, the women ſet up ſuch a skreetch-owl note as is intolerable, and continue it the whole night, and if the deceas'd was a perſon of diſtinction, the whole female *poſſe* of the town join in that pleaſant ditty; and yelling out alternate ſpeeches in praiſe of the deceas'd, recounting his proweſs in war, particularly his exploits againſt the *Portugueſe* and *French*; which others reply to, by extolling his dexterity in hunting or fiſhing; and every verſe ends with a ſort of chorus, importing that *he is dead whom they lament, nor ſhall they ſee him more, till they come to dance all together beyond the mountains.* When this lamentation is over, they waſh the corps, and paint it all over; then *Manner of burying.* wrapping it in cotton, they ſet it upright, in a deep veſſel placed under ground, putting, along with it, ſuch things as the perſon made uſe of whilſt he was alive, as alſo great ſtore of proviſion to hinder *Agnan*, the bad angel, from devouring the body; and this is renew'd as oft as they think proper, till they believe that the corps is conſum'd; and as often as the proviſions are renew'd, they are remov'd by the *Caraibes*, inſtead of the *Agnan:* but they would not be perſuaded of the cheat altho' plainly made appear by *Leri*. After the corps is bury'd, they continue their lamentations for a moon, but in a manner more moderate than at firſt: and after that time is expir'd, they drown their ſorrow in a nights drinking.

But if they are exorbitant in the lamentations for the dead they are as barbarous towards the ſick. For, having try'd their phyſicians art, which is only ſucking the part affected; if this does not do, they lay the patient down in his bed, and dance and ſing about him, without giving him any thing to eat or drink, unleſs he earneſtly deſires it, till he either gets the better of his deſtemper by the ſtrength of nature, or is ſtarv'd to death.

In the affair of marriage, they obſerve *Of marriage.* no rules except, to prohibit that of parents with their children, and brothers with their own ſiſters. But ſuch notions they have of friendſhip, that they reckon it as great inceſt for a man to marry the daughter or ſiſter of his intimate friend (whom they call his *Atouraſſap*) as his own daughter or ſiſter. And one comical notion the *Brazilians* had according to this author, *viz.* that when a young couple were put in a hammoc together, their children were in danger of having tails like monkeys, to prevent which, the bride's father, as ſoon as they were put to bed, fell a chopping a ſtake of wood, to cut off, by this ceremony, the tailes of his future grandchildren. After marriage they are initiated in drinking, which was deny'd them before: and then drinking a good quantity without being ſick is a ſign of courage among them.

At the birth of their children, the father receives the child firſt, and ſo far performs the midwife's part, that he cuts the navel ſtring, and waſhes the child: which done, he paints it, and flattens the noſe, which is a mark of beauty with them. Then they lay them ſtark naked upon a cotten bed, where the mother gives them ſuck, till ſhe is able to go abroad, and then ſhe puts them in a net and carries them, ſlung at her back, without binding or ſwadling; and yet if any child in *Brazil* is crooked it is owing to ſome accident, which ſeldom happens: ſo falſe is that notion which obtains in *Europe*, *that children are preſerv'd from being crooked by being arm'd with ſwathing bands and whale bone.*

The men take as many wives as their inclination and circumſtances prompt them to, and all the wives live in friendſhip together in the ſame houſe, without the leaſt ſign of jealouſy. If any of them is falſe to the husband's bed, it is in his choice whether he will put her to death, or turn her off, which is the higheſt diſgrace. But the ſingle women may make as free of their fleſh as they pleaſe, without any danger of ſpoiling their marriage, for it is no reproach to grant favours of that kind, among the *Brazilians*.

They go naked for the moſt part, only in ſome places, the *Portugueſes* oblige them

to wear clothes, but it is purely out of complaiſance to their maſters, and not out of modeſty. For they will ſometimes appear abroad with a ſhort jerkin, reaching only to the navel, and all the reſt of their body as they were born.

Houſes and furniture.

Their houſes were made of timber, and cover'd with palm leaves, they had ſeveral rooms, but open from one to another, ſo that when you enter'd the ſtreet doors, of which every houſe had two or three, you might paſs thro' all the houſe, which contain'd perhaps 200 perſons of different families; but all under one roof were govern'd by ſome one agreed upon to be ſuperintendant of the whole. And theſe houſes were furniſh'd with earthen jars, baskets, baſons, platters, and cups, ſome of wood, others of gourds, with panniers of ruſhes or graſs curiouſly wrought. But the moſt curious piece of furniture was their hammock, or hanging beds, ſome wrought in the manner of nets, and others like ſolid cloth about ſix foot long, and an ell broad, with cotton loops at each end, faſten'd to the beams of the houſe above. And when their beds are dirty with the conſtant ſmoak of their fires, the women go to the woods, and gather a certain fruit, not unlike a gourd, which being cut in pieces and put with water into an earthen veſſel, by long ſtirring caſts a froth, which has all the effect of ſoap.

Both men and women, in this country are very induſtrious, working at ſuch things as are ſuitable to their different ſexes.

Their diet.

The men go a hunting and fiſhing, and ſo ſupply the family, from hand to mouth, with fowl and fiſh; and if that fails, the fruit and herbs or roots are ſtill at hand to ſupply their wants, and as they are not delicate or nice in their taſte, they are ſeldom or never at a loſs for a dinner. Nor have they fix'd or ſtated times of eating, but as their appetite requires, whether by day nor night whilſt there is any thing in the cupboard.

They ſeldom drink at meals, altho' they are fond of ſtrong drink. They reſerve their drinking, till all buſineſs be over, ſo that they can ſit to it; and when any one has got a ſtock of it in his houſe, he ſends ſome of his family to invite his neighbours, which is done by ſinging at their doors. When they aſſemble, they eat firſt, and then fall to drinking and dancing by turns as long as they can ſtand, and this laſts perhaps two or three days. And as other drunken revels often produce broken noſes, the *Brazilians*, not being wiſer in their cups, than their more polite neighbours the *Europeans*, they ſometimes fall out, and broken heads enſue. But when a quarrel happens upon thoſe or any other occaſion, if the aggreſſor is found, they are the ſtricteſt obſervers of *Lex Talionis* of any people in the world, paying him, in a literal ſenſe, the ſame meaſure he gave, the friends of the injur'd party wounding him in the ſame part of his body, and in the ſame manner that he wounded the other.

There being no ſuch thing as money among thoſe people, they live free from trouble and care, and have no other traffick among them but of one neceſſary of life for another. If they deſire the aſſiſtance of their neighbours in making an houſe, or tilling a piece of ground, they lay in, before-hand, ſtore of poviſions and plenty of good drink, by which they reward the ſervice of others more to their ſatisfaction than if they gave them hire of a leſs uſeful nature. And here I ſhall make no difficulty to tranſcribe a dialogue, which *Leri* ſays he had with a *Braſilian*, upon the ſubject of trade, and laying up for their families. The *Indian* ask'd him, "What is the meaning that you "*Mairs* and *Pero's* (that is, *French* and "*Portugueſes*) come ſo far as our coun- "try to fetch wood? Have you no fuel "for the fire in your own country?" *Leri* anſwer'd, "They had wood enough "to burn, but that the *Brazil* was bet- "ter for dying, which was the uſe they "had for it. But why, ſaid the *Indian*, "do you take ſuch vaſt quantities of it? "Becauſe, reply'd *Leri*, one merchant, "in our country, has as much ſcarlet "cloth, as many looking-glaſſes, knives "and Beads, in his houſe, as would buy "many ſhips loading of *Brazil* wood. "But, ſaid the *Braſilian*, Does that rich "man never die? and if he does, what "becomes of all his cloth, &c.? *Leri* "anſwer'd, that his children or next re- "lations inherited his riches. If that is "the caſe, ſaid the *Indian*, you *Mairs* "are great fools, to tire and turmoil "yourſelves in ſailing over the ocean, "where you tell us you endure great "hardſhips, and run great hazard of your "lives, to get a vaſt heap of ſtuff for "your children, and living kindred. *Sim- "ple men! is not the ſame earth that "nouriſhes you, able likewiſe to main- "tain them?* We have children and re- "lations as well as you, and you ſee we "love them dearly; but we reſt content- "ed in this full perſuaſion, that when we "die, and go beyond the mountains, the "ſame earth that ſuſtain'd us, will like- "wiſe nouriſh them."

With all their poverty, they are generous and hoſpitable, willing to give a ſhare of any thing they have to thoſe who want; and altho' their manner of accoſting ſtrangers is a little odd at firſt, there is nothing of unkindneſs deſign'd by it. *Leri* ſays, that he was ſurpriz'd at their manner of treating him upon his firſt

firſt appearance among them, and he concluded they deſign'd to ſend him a journey beyond the mountains againſt his will: for they came crowding about him, jabbering out all together, *Marape dererе*, that is, *What is your name?* and, without waiting for an anſwer, one took off his hat, and put it upon his own head; another took his ſword and belt, and hung the belt over his naked ſhoulders; a third took off his coat, and put it over his own naked body; and thus they ſtrutted a little while in *Leri*'s ſpoils to his great terror; and then coming to him, with great civility they deliver'd every thing back to him: and if he had not been afterwards worſe frighten'd at their offering him a piece of a man's leg roaſted, he declares, that in all other reſpects they were moſt hoſpitable; and even that was in token of his being welcome, but a piece of courteſy which ſeems to have been owing more to barbarous cuſtom than to the cruelty of their temper.

All that we can ſay of their government is, that it was, as moſt other parts of *America* were, (except *Mexico* and *Peru*) that is, divided into little kingdoms, or into clanſhips, of which the government was as capricious as the humours of the different people according to their ſeveral climates. And the ſame may be ſaid of the other known parts of the *Weſt Indies* not particularly mention'd in this chapter.

Thus we have given, as fully as was conſiſtent with our deſign, the Natural and Moral Hiſtory of the *Weſt Indies* in general; any who have a mind to know the particular curioſities of every ſingle kingdom or province muſt conſult thoſe who have writ profeſſedly of that province or kingdom, for it would have ſwell'd this firſt Book to an unweildy bulk to have writ the natural and moral hiſtory of every place. If our readers are ſatisfy'd with this treatiſe of *America*, we ſhall endeavour to make our accounts of the other three parts of the world as uſeful and entertaining as our time and vouchers will allow: and thus we take leave of *America*, and finiſh the Firſt BOOK of the UNIVERSAL TRAVELLER.

APPENDIX

APPENDIX

To the First BOOK.

AFTER I had ſent the laſt ſheets of the firſt book to the preſs, the following report to the board of trade in the year 1718, came accidentally into my hands; and having the honour to know the worthy gentleman who made it, I obtain'd (with ſome difficulty) leave to publiſh it here, without mentioning the author's name.

The exactneſs of the relation, on a ſubject hitherto very little known, will, no doubt, agreeably entertain the curious reader; and the judicious, as well as pertinent, reflections it contains, on the ſtate of our *American* plantations, in that vaſt continent, will not only apologize for putting this appendix in our Traveller, but cannot miſs to raiſe ſome regret in all generous and publick ſpirited minds, that a perſon ſo well qualify'd for the ſervice of his country, has not been more regarded and ſuitably employ'd, according to the juſt character he has always ſuſtain'd.

The eſteem I have for him, would have made me ſay a great deal more, but the condition of his conſenting to the publication of the following report, having been, that I ſhould not ſay any thing by way of introduction to it, which might offend his modeſty, I ſhall give it to the reader, without any alteration, as I had it from himſelf.

To the Right Honourable the LORDS COMMISSIONERS *for* TRADE *and* PLANTATIONS.

The Report of ------ Governor of the Province of —— in NORTH AMERICA.

RIGHT HONOURABLE,

IN obedience to your lordſhips commands, ſignify'd to me, by your letter dated at *Whitehall* the 19th of *March* 1717-18, which I receiv'd the 20th of *Oct.* following, I have made what inquiry I could, relating to the progreſs which the *French* nation have made, in finding out, and ſecuring a paſſage from their ſettlement on St. *Lawrence* river, or *Canada*, to that on * *Mechaſippi*: and as I have my information chiefly from the *Indian* traders, I ſhall not pretend to vouch any thing from my own knowledge, but ſimply lay the whole before your lordſhips, in the plaineſt manner that it could be collected from their verbal relations.

* Miſſiſippi.

Yet, firſt, I would entreat your lordſhips will pleaſe to obſerve, that, from an article in the treaty of *Reſwick* between the *Britiſh* and *French* crowns, by which *all lands on any rivers in* America, *the mouths or outlets whereof were then in poſſeſſion of either nation, are conceded to that nation, as high as the firſt ſources of thoſe rivers*; the *French* by vertue of the *Sieur de la Salle*'s expedition and diſcoveries, do now claim all the lands to the northward and weſtward of the *Britiſh* colonies, from *Canada* along the lakes, unto the mouth of the river *Mechaſippi*. But as it is hard to imagine that ſuch a conceſſion was ever intended by the foreſaid Article; becauſe it is not only inconſiſtent with the antient grant from the crown to the proprietors of *Carolina*, but alſo with the ſecurity of all his Majeſty's colonies on this continent of *America*; I only ſubmit it to your lordſhips view, and ſhall proceed to the narrative, as follows.

From the time that the *French* firſt diſcover'd the river *Mechaſippi*, they have with great care endeavour'd, and, at length, have actually ſettled a communication between *Canada* and the ſouthern countries on the ſaid river.

Firſt, they ſail in canoes from *Mount Real*, about three leagues, to the fall of St. *Louis*, where they have a portage or carrying place by land, about half a league;

The French endeavours to keep a communication between Canada and Miſſiſippi.

league; then they reimbark, and row up the ſtream, about 60 leagues to *Fort Frontenac*, on the north ſide, at the beginning of the lake *Ontario*. In this fort is a ſmall garriſon, conſiſting of one or two companies in the king's pay. From thence they proceed on the lake *Ontario*, generally reputed to be about 80 leagues in length, to thoſe dreadful falls of *Niagara*, which oblige them to land: (the portage is about three leagues:) after which they reimbark, and go up the ſtrait, about ſix leagues into lake *Erie*, reputed to be 130 leagues in length. And from this lake they have three different routes to the river *Mechaſippi*.

The firſt, and ſhorteſt paſſage, by water, is to go up the river *Miamis*, or *Ouamis*, (that enters the lake *Erie*, on the ſouth weſt) about 150 leagues; then they come to a carrying place of about three leagues, where is the higheſt land; and from hence the waters divide their deſcent between *Mechaſippi* and that lake. Here they embark on a ſmall ſhallow river, call'd *La Riviere de Portage*, down which they row 40 leagues to the river *Wabaſh*, or *Ouabache*; and on that river, as the traders reckon, 120 leagues to the river *Ohio*, into which the other falls; then 80 leagues, down *Ohio* to *Mechaſippi*, and thence 350 leagues to the bay of *Mexico*. Some call both theſe rivers by the ſame name, and generally *Wabaſh*, but they ought to be diſtinguiſh'd, becauſe the head of the *Ohio* comes more eaſterly towards *Virginia* or *Carolina*, and among diverſe other large ſtreams, it receives the river *Pereſipi* on the ſouth ſide, not far from the mouth of *Wabaſh*; which river *Pereſipi* is ſaid to riſe from the mountains of *Virginia* or *Carolina*.

The other two paſſages are both prickt down in *Hennepin*'s map, and, according to the accounts given, are thus:

From the north eaſt of lake *Erie*, they ſail 8 leagues to a fort, on the lake St. *Claire*, call'd *Pont Chartrian*, where there is a ſettlement of the *French*; and often 400 traders meet here. Then along the lake, 7 leagues, and thence to the great lake *Huron*, about 10 leagues. On this lake they proceed to the ſtraits of *Miſſilimakina* 120 leagues. Here is a garriſon of about 30 *French*, and a vaſt concourſe of traders, ſometimes not leſs than 1000, beſides *Indians*, this being a common place of rendezvouz. At, or near this place, are the *Outawas* ſettled.

From the lake *Huron*, they paſs by the ſtrait *Miſſilimakina*, 4 leagues, being two in breadth, and of a great depth, to the lake *Ilinois*; thence 150 leagues on the lake to fort *Miami*, ſituated on the mouth of the river *Chigagou*; this fort is not regularly garriſon'd. From hence came thoſe *Indians* of the ſame name, *viz. Miami's*, who are ſettled on the foremention'd river that runs into *Erie*.

Up the river *Chigagou* they ſail but 3 leagues to a portage of a quarter of a league; then they enter a ſmall lake of about a mile, and have another very ſmall portage, and again another, of two miles to the river *Ilinois*; thence down the ſame 130 leagues to *Mechaſippi*.

The third is, from *Miſſilimakina* on the lake *Ilinois* to the lake *Des Puans*, 90 leagues thence to the river *Puans*, 80 leagues up the ſame to a portage about 4 miles over to the river *Ouiſcouſing*, and thence 40 leagues to *Mechaſippi*.

From the mouth of *Ouiſconſing* to the mouth of the river *Ilinois*, is reputed 150 leagues on *Mechaſippi*, and from thence to the mouth of *Ohio*, 70 leagues: ſo that, from the mouth of *Ouiſconſing* to the bay, is about 500 leagues.

Theſe diſtances are, as the traders reckon them; but they appear generally to be much over-done, which may be owing to thoſe people's coaſting along the ſhores of the lakes, and taking in all the windings of the rivers.

They have another much ſhorter paſſage, from *Mount Real* to lake *Huron*, by the *French* river on the north of St. *Lawrence*; which anſwers the two later routes; but it abounds with falls, and, not anſwering trade ſo well, is not ſo much us'd. They have alſo, by this river, a much ſhorter paſſage to the upper lake or *Lac Superieur*. But of all the Paſſages, that by *Ouabache* is the ſhorteſt and eaſieſt.

Having, above, given your lordſhips the moſt full and perfect account, that I could poſſibly diſcover, of the ſeveral routes which the *French* take from St. *Lawrence* to *Mechaſippi*, I ſhall, in the next place, proceed to lay before you, the ſtate of the ſeveral *Indian* nations, with reſpect both to the *Engliſh* and *French*, according to the beſt information I could get from the ſame perſons.

It has ever been the policy of the *French* in thoſe parts, in time of war, as well as peace, to uſe their utmoſt endeavours by all manner of means, to bring over any ſort, or all kinds of *Indians* into their intereſt: But as it is in vain to perſuade an *Indian* to think otherwiſe, than that thoſe are his beſt friends, who can help him to the beſt bargain, the *Iroqueſe*, or five nations have hitherto been preſerv'd by the *Dutch* and *Engliſh* at *New York*, chiefly on account of finding better markets there than with the *French*. Nevertheleſs, by the artifices of their jeſuit miſſionaries, they daily continue to debauch them from the *Engliſh* Intereſt; inſomuch that, of the whole number of

Iroqueſe now remaining, which does not exceed 2000 fighting men, the *French* have drawn over 700 to inhabit among them, *viz.* 400 ſeated at the fall of St. *Louis*, on the ſouth ſide of St. *Lawrence*, and 300 on the north ſide.

The reſt of them are planted chiefly along the lake *Ontario*, at ſome diſtance from it: I am told there are no *Indians* in the *French* intereſt on this ſide of St. *Lawrence*, nearer than the *Miamis* or *Twoittois*, as the *Iroqueſe* call them: they are, in number about 2000, ſeated chiefly on the foremention'd river *Miamis*, flowing into lake *Erie*, and on or near the branches of the river *Ouabache*.

The gaining of this one Nation, would be of great importance, to the *Engliſh* intereſt; and, as I am inform'd, it might be eaſily done at this time, if any offer were made of trading with them, and of building a fort upon lake *Erie*, where the *French* as yet have no ſettlements; tho', probably, they will ſoon go about to have one, upon the account of thoſe people, as well as to render their paſſage thro' that lake more eaſy and ſafe.

The *Ilinois* are about 3000 men, on, or near the river of that name. The *Miſſilimakinaes* or *Outawaes* were formerly 3000, but now are ſcarce 500. The *Nokes* 100. The *Felleſavoins* 200. The *Sakes* 200. The *Puans* 600. All theſe join'd the *French* againſt the *Iroqueſe* in the laſt war; and all of them, except the *Miamis*, are ſeated about, or near the lake *Ilinois*, (which is now commonly call'd by them *Mechegan*) and on the rivers that run into it, and on the lake *Puans*, and the river *Ilinois*.

There are alſo diverſe other nations between *Mechegan* and *Mechaſippi*, as the *Renards* or *Foxes*, *Maſſekotins*, *Kikapous*; but theſe being farther off, did not join the *French* againſt the *Iroqueſe*.

Upon *Mechaſippi*, and the branches of it, there are many great nations, eſpecially to the weſt, as the *Miſſouris*, *Ozages*, *Acanſias*, who are different from thoſe of *Acanſa* on the eaſt, with many more, not leſs, as is affirm'd, than 60000 men; with all whom, it is ſaid, the *French* have peace, and ſome alliance.

On the other hand, all the *Engliſh*, to the northward of *Carolina*, have not 1500 men in their intereſt, except the *Iroqueſe*. In *New England* and *Connecticut*, they have very few. In *New York*, only the river *Indians*, beſides the *Iroqueſe*. In *Jerſey* and *Penſilvania*, their own, or home *Indians*, call'd *Delawares*, are exceedingly decreas'd; and, being in ſubjection to the *Iroqueſe*, take their rules from them. In *Maryland* and *Virginia*, there are few, excepting thoſe towards the ſouth weſt, whom Col. *Spotſwood*, with great induſtry, has lately gain'd by treaties and hoſtages.

Thoſe of *Carolina*, and the nations lately in friendſhip with them, have been very numerous; but the *Iroqueſe*, whether prompted by the *French*, or by what other motive is unknown, have, of late years, made great inroads upon them, and cannot as yet, by any endeavours of the *Engliſh*, be diverted from it. But of thoſe nations to the ſouthward, and of their ſtrength and intereſt, the beſt accounts will naturally come from *Virginia* and *Carolina*.

I come now, in obedience to the laſt part of your lordſhips commands, on this ſubject, humbly to offer my ſentiments of the methods which may be taken, in order to prevent the inconveniencies, unto which his majeſty's plantations, on the continent of *America*, and the trade of *Great Britain*, may be ſubjected by ſuch a communication between the *French* ſettlements.

Tho' it may be juſtly ſaid that we exceed the *French* in the improv'd value of our ſettlements, upon this continent; yet from the above account it is plain, that we come far ſhort of the induſtry which they uſe in cultivating a neceſſary correſpondence and friendſhip with the natives, without which our farther progreſs to the weſtward will ſoon be circumſcrib'd; and we ſhall likewiſe be under daily apprehenſions of loſing what we already poſſeſs. But ſince this friendſhip and correſpondence is, by experience, no otherwiſe to be acquir'd than by trade, it will neceſſarily follow that this trade ought by all means to be encourag'd and extended with our utmoſt care and diligence. And that this may be done to the publick advantage, as well as to that of particulars, it will be proper to conſider the nature of this trade with reſpect to *Great Britain*, to the colonies where it muſt be carry'd on, and to the *French*, who are our rivals in it.

The advantage of trading with the natives.

The trade itſelf conſiſts in the exchange of a very few ſimple commodities, *viz.* they take from us the woollen manufactures of *Britain*, gun-powder, ſhot, fire-arms, and trinkets; for which, we receive, in barter, furs and skins, and this being almoſt a total exchange of *Britiſh* produce or manufacture, thro' the hands, and by the navigation and labour of *Britiſh* ſubjects in thoſe colonies, ſuppoſe it only for an equal quantity, in value of goods, which are either wanted at home, or may be juſtly placed to *Great Britain*'s credit upon the balance of trade with foreign countries, it will unavoidably follow, that *Britain* muſt gain in proportion to the magnitude or extent of the trade in general; and therefore we may conclude,

To Britain in general.

clude, that it ought not only to be encouraged, but eſtabliſh'd upon an equal foot, throughout all theſe colonies, as they are inhabited by *Britiſh* ſubjects, carrying on one *Britiſh* intereſt, without any diſtinction made, or regard had to their particular ſettlements or ſocieties, as ſeparate governments.

To the colonies in particular.

With reſpect to the colonies, this trade will enrich particulars in proportion to the quantity they deal in, and the profit it brings, which of late years, has been ſo conſiderable, that it has tempted the trading intereſt of ſome colonies, to purſue that gain, with an unreaſonable deſire of cruſhing their neighbours: But this practice is by all means to be diſcourag'd from *Great Britain*, as highly deſtructive of the publick intereſt, both with reſpect to trade, and the advancement, as well as ſecurity of the *Britiſh* dominion on this continent.

Laſtly, If this trade could be carry'd on, with a publick ſpirit, and juſt regard to a national intereſt, as appears to be abſolutely neceſſary, for maintaining what we have already got, the *French*, who cannot furniſh theſe commodities, compar'd with us, either in quantity or value, could have no more hopes of diverting the *Indians* from trading with us, and conſequently depending firmly upon us. We ſhould not, then, have the traders of *New York* jealous of, and uneaſy at the profits gain'd by the traders of *Virginia*; nor theſe again of the improvements which may poſſibly be made in *Carolina*: But every colony would find a ſolid and certain advantage by an union among them, according to their ſituation, power, and ability to advance their trading ſettlements, weſtward upon the lakes and adjacent rivers; where thoſe vaſt nations of *Indians* would ſoon perceive, by our united intereſt, power, and traffick, that we were far preferable to our rivals the *French*, and every way much fitter to be choſen for their friends and allies. And in order to carry on this great deſign, I humbly conceive it will be proper, that a complete body of inſtructions be carefully compos'd, to be ſent to all the governors on this continent; where, amongſt other things, it may be directed, *viz.*

Rules offer'd for trading with the natives.

I. That, in order to prevent the *Indians* being impos'd upon, and abus'd by looſe and over covetous Perſons, trading promiſcuouſly amongſt them, which was the chief unhappy cauſe of the late deſtructive war in *South Carolina*; the governor ſhall uſe his utmoſt endeavours, with the advice of the council and aſſembly, to put the *Indian* trade, carry'd on by the inhabitants, under ſuch wholeſome and juſt regulations, as that the traders may not have it in their power to cheat and impoſe upon the *Indians* in any ſort, without being made accountable for it, under high penalties. Provided always, that no reſtriction ſhall be made to prohibit or interrupt any of his majeſty's ſubjects, in other of his colonies, from trading as freely with any foreign *Indians*, as the inhabitants of that colony can or may do themſelves. And in caſe they ſhall diſcover any abuſe to have been committed upon any *Indian* whatſoever, by any perſon or perſons, inhabitants in, or belonging unto any other of his majeſty's colonies, complaint ſhall be forthwith made to the governor of that colony, whereunto the offender belongs, and he ſhall cauſe reſtitution to be made, and juſtice to be done according to the nature of the offence.

II. That all poſſible encouragement be given towards carrying on a fair trade with the *Indian* nations, ſo that it may be extended as far weſtward upon the lakes and rivers behind the great mountains, as the ſituation and ability of the colony will permit: And when any proper place ſhall be diſcover'd for the building of a fort, and ſettling a garriſon, in order to protect the trade, a report thereof ſhall be made to your lordſhips, with the circumſtances and reaſons for ſo doing.

III. That the governor ſhall, with all his induſtry and might, endeavour to make treaties and alliances of ſtrict friendſhip with as many *Indian* nations as he poſſibly can: always taking ſpecial care to ſtipulate and ſecure peace, not only between them and the colonies under his direction, but alſo between them and all the *Engliſh* colonies, and likewiſe with all the *Indians* under any league of friendſhip with any of the ſaid colonies. And that this may be the more effectually done, his majeſty may pleaſe to direct and order, in a more eſpecial manner, by publick proclamation, or otherwiſe, as ſhall ſeem meet, that all perſons travelling from the ſettlements of any of his majeſty's colonies, into the woods, in order to diſcover and trade with any *Indian* nation, or nations whatſoever; if ſuch perſon ſhall happan accidentally to meet or encounter with any other his majeſty's ſubjects, travelling from any other of his colonies or ſettlements, upon the ſame deſign of trade, or diſcovery, then, and in that caſe, ſuch perſons ſhall be obliged, and are ſtrictly commanded, under the higheſt pain of his royal diſpleaſure, to treat one another with civil humanity, and kindly aſſiſtance, without giving one the other, upon either part, the leaſt interruption or hindrance in their ſaid reſpective deſigns of friendly intercourſe, and traffick with the *Indians*; but, on the contrary, by their open and free behaviour, as well as diſcourſe,

courſe, to convince the *Indians*, as much as in them lies, that all the *Engliſh* ſubjects upon this continent, howſoever diſtinguiſh'd into governments, yet are but one people, under one great king, who has commanded them, his ſubjects, to take all opportunities to ſhew his love and affection to all the *Indian* nations; and that which ſoever of them will make any league of friendſhip, with any one of his governments in theſe parts, are thereby entitled to his majeſty's protection, and to the friendſhip, as well as aſſiſtance of all the other governments, and of the *Indian* nations in alliance with any of them.

IV. That, if any *Indian* nation, in league of friendſhip with any of his majeſty's colonies, ſhall, in breach thereof, preſume to make war upon, plunder, or in any other ſort moleſt any other *Indian* nation, who at the ſame time ſhall be in friendſhip with, and under the protection of any other of his majeſty's colonies; then that colony, unto which ſuch offenſive *Indians* are bound by treaty, ſhall uſe their utmoſt endeavours, by threatnings as well as promiſes, to oblige the ſaid *Indians* to make reaſonable ſatisfaction for their breach of faith, to the contentment of the party aggriev'd: And in caſe of meeting with any difficulty in bringing ſuch *Indians* to reaſon, the governor ſhall repreſent the ſame to his majeſty forthwith, in order to receive farther direction therein.

V. To the end that all the governors of his majeſty's plantations on the continent, be each of them, for their better direction, particularly acquainted with the ſtate of every other government relating to the *Indians*, let every governor be order'd, upon his making any alliance or treaty with any *Indian* nation whatſoever, immediately to communicate the nature, import, and date of ſuch treaty unto all his fellow governors upon the continent.

Such a correſpondence and harmony being once eſtabliſh'd, the trade might be eaſily ſecur'd and protected, by erecting four ſmall forts, *viz.* the firſt upon lake *Erie*, near to the above-nam'd *Indians* the *Miamis*: the ſecond on the lake *Ontario*, near to the *Iroqueſe*: the third on the head or higheſt fountain of *Potowmack* river, which divides the colonies of *Virginia* and *Maryland*: and the fourth towards the head of *Suſquehannah* river, which runs thro' *Penſilvania* into the bay of *Cheſeapeak*.

The two firſt of theſe forts would not only ſecure all the *Indians* on this ſide *Carolina* to *Canada*, which are ſettled to the eaſtward of the lakes, but alſo open a trade with the above-mention'd great and numerous nations to the weſtward, whoſe communication by water would render the traffick eaſy. And becauſe the diſtance between the *Engliſh* ſettlements in theſe colonies, and the lakes, is too great, without the refreſhment as well as ſecurity of a middle ſtage or reſting place, the other two ſorts would effectually anſwer that end to all the traders belonging to any of the colonies northward of *Carolina*.

I humbly conceive, that each fort will require a company, or garriſon of 50 men in the king's pay, to be under the direction and command of the governors, his majeſty's commanders in chief, in the reſpective colonies, *viz.* that upon lake *Erie* to be under *Virginia*; that upon lake *Ontario* under *New York*; that upon *Potowmack* under *Maryland*; and that upon *Suſquehannah* under *Penſilvania*.

To conclude, I cannot foreſee any thing, which would interrupt the execution of this ſcheme, but the emulation in trade, that is kept up among the *Engliſh* colonies. For which reaſon, it ſeems neceſſary, that ſome method be projected, whereby each colony ſhall be obliged to bear its proportionable ſhare, of the expence which the crown of *Great Britain* will be at, in building forts weſtward among the *Indians*, and ſubſiſting garriſons. For, if this were done at the publick charge, equally for the protection of all, none would have any pretence to be diſtinguiſh'd particularly in their claim to this trade. And if *Great Britain* do not imitate the *French*, in making their correſpondence with the *Indians* a national concern, whereby the government and maintenance of all forts and garriſons ſhall remain in the hands of the crown, the ſucceſs is very much to be doubted, from the variety of interruptions, which we may continually expect to meet with from amongſt ourſelves, as well as from the *French*, who have but one intereſt principally in view, and ſteadily purſue it with great application.

But, from the little knowledge and experience which I have of the *Engliſh American* colonies, I do not expect that this project, however juſt in itſelf, will generally pleaſe; wherefore I ſhall not preſume to inſiſt farther, or to put any other value upon it, than that I have, according to my duty, without prejudice or partiality, faithfully endeavour'd to obey your lordſhip's commands: And it is with great ſubmiſſion, that I beg leave to ſubſcribe my ſelf,

Rt. Hon.

Your lordſhips moſt humble

Feb. 16. 1718-19. *And moſt obedient Servant.*

P. S.

P. S. Leſt it ſhould, at any time, be repreſented to your lordſhips, that, in imitation of the *French*, a ſociety may be incorporated, and a company erected for carrying on the trade upon this continent, with the *Indians*; I muſt beg leave to obſerve, that ſuch a privilege or immunity would certainly become a very heavy burden upon, and a great diſcouragement to the planting, as well as trading intereſt of every one, and of all theſe colonies, who, from the taſte they have of *Engliſh* liberty, are naturally averſe to all monopolies, and will hardly ever be reſtrain'd by the maxims or examples of a *French* government. Beſides, any reſtriction upon the inhabitants of theſe colonies, wou'd altogether deſtroy the intent and deſign of the above ſcheme, which is founded upon reaſoning after this manner, *viz.*

That under a good regulation of government, the relative advantages which ſubſiſt between any ſtate and its colonies abroad are reciprocal. For,

As the ſtate has, unqueſtionably, a right, and moſt certainly ought to regulate the trade of its colonies, for publick advantage; ſo the colonies have at leaſt an equal, if not a preferable claim to the ſubſiſtence and ſmaller profits which ariſe from that trade, to thoſe who muſt be employ'd in carrying it on.

That, where any publick intereſt will be moſt effectually carry'd on, by the united ſtrength of many adjacent colonies, ſuch an union ought carefully to be eſtabliſh'd with equality among them; and every thing tending to weaken or obſtruct this union, is to be conſider'd as prejudicial to the publick.

That the *Indian* nations, upon this continent, are not to be gain'd otherwiſe than by trade; and this trade cannot be manag'd to any purpoſe, without the mutual aſſiſtance and concurrence of all the *Engliſh* colonies. But, from the different conſtitutions, and particular intereſts of thoſe colonies, ſuch a regulation is not to be obtain'd without the authority of *Great Britain*. Wherefore the above ſcheme, in obedience to your lordſhips commands, is humbly offer'd by,

Right Honourable, &c.

Having inſerted this appendix for the ſake of the report, I ſhall only detain the Reader a little longer out of reſpect to my friends the *Jeſuits*, by giving a ſhort account of their ſettlement in *Paraguay*, which was omitted in our firſt diſcoveries of that country. What we are to ſay, upon this ſubject, is taken from a ſmall treatiſe in the end of Monſieur *Frezier's Voyage to the South Sea*, tranſlated from the *French* and printed in *London*, 1717; which altho' it does not appear to belong to that author, at leaſt it is not in the *Paris* edition of his book, yet we have ſufficient reaſon (from other accounts, by perſons of undoubted credit) to believe the report given of that ſettlement in this ſupplment to *Frezier's* Book, which is as follows.

Some account of the SETTLEMENT *of the* JESUITS *in the* Spaniſh Indies.

OF all the ſettlements that have been made in the *Indies*, ſince the conqueſt of that vaſt country by the *Spaniards*, there neither has been, nor [probably] ever will be any ſo conſiderable, as that which the jeſuits have form'd there. The firſt beginning of this ſettlement was only of 50 families of wandring *Indians*, whom the jeſuits were at the pains of collecting together, and fixing upon the banks of the river *Japſur*, in the heart of the country; but it has increas'd in ſuch a manner, that it contains, at preſent, above 300000 families, poſſeſs'd of the fineſt part of all the continent, ſituated 200 leagues ſouth from the *Portugueſe Pauliſts*, and ſeparated from them by the river *Loruguay*, which falls into the great *Parava* and *Japſur*, and theſe again diſcharge themſelves into the river of *Paraguay*. This laſt takes its courſe, according to the diſcoveries of the jeſuits, in 1702 and 1703 (which are the beſt that ever were made) from the foot of the mountains of *Potoſi*. The air there is temperate, the land fertile, the *Indian* inhabitants laborious and tractable; and there muſt undoubtedly be plenty of gold and ſilver mines. Thoſe *Indians* might be brought with eaſe to ſubmit themſelves, could a method be found to improve and cultivate them. The jeſuits have not been able to extend their miſſion that way, for want of fathers; otherwiſe they would receive an augmentation of more than 60000 families, and 300 leagues of ground.

The ſituation of the jeſuits colony.

To reſume the thread of our account, and the ſituation of the jeſuits country; It is, as above obſerv'd, 200 leagues ſouth of the *Pauliſts*, 200 north of the province of *Buenos Ayres*, 180 from that of *Tucuman*, and 100 from *Paraguay*: theſe three provinces are ſeparated from the kingdoms of *Chili* and *Peru* by the chain of mountains call'd the *Cordilleras*, and were of themſelves a kingdom before the conqueſt of the *Indies*.

The country of the miſſion is fruitful, being water'd with a great number of rivers, which form iſlands in many places. They have plenty of timber and fruit trees; excellent *pulſe*, *bread corn*, *flax*, *indigo*, *hemp*, *cotton*, *ſugar*, *piemento*, *hypicacuana*, *galapa*, *machecacuana*, a root

root call'd *Iautrabanda*, and many other ſimples of great uſe in pharmacy; particularly the herb *Paraguay*. The *Savannas* or meadow lands are full of horſes, mules, cows, bulls and flocks of ſheep; and more than all theſe, their gold and ſilver mines are very conſiderable. 'Tis true, the good fathers will not own it; but there are too many proofs of it, to leave any room to doubt.

The people are good-natur'd and quiet, hardy and laborious, and are brought up to all ſorts of Trades. They are at preſent divided into 42 pariſhes from one to ten leagues apart: and in every pariſh there is a jeſuit, who has the ſupreme command, and is obey'd with the exacteſt regard and awe. He puniſhes the leaſt fault, if he pleaſes, with the utmoſt ſeverity.

The ſubmiſſion of the Indians.

The ordinary chaſtiſement there, is a certain number of laſhes with a whip, in proportion to the nature of the crime. The caciques and others who are in the beſt poſts of the government, whether civil or military, are not exempted from it; but, which is very particular, he that has been ſeverely whip'd, comes and kiſſes the father's ſleeve, acknowledges his fault, and thanks him for the correction he has receiv'd. Thus does one ſingle man command 10000 families, more or leſs: and 'tis certain, there never was known a more ſubmiſſive people, or a more perfect ſubjection.

The ſame method of governing has been introduced into all the pariſhes of the miſſion. But that is not all: this intire ſubmiſſion is attended with ſuch a contentment of mind, (which the jeſuits have taken care to preſs upon the *Indians*, in conſideration of another life, whereof they pretend to give them ſhares in this) that the *Indians* are very happy with bare food and raiment, and do not repine at the good fathers reaping all the benefit of their labours: for which purpoſe, they have large ware-houſes in every pariſh, whither the *Indians* are oblig'd to carry proviſions, ſtuffs, and generally every thing, without exception, they not having the liberty ſo much as to eat a chick of their own brood; ſo that all thoſe *Indians* may juſtly be reckon'd as ſo many ſlaves to the jeſuits for their bread: and that verſe of *Virgil* cannot be more properly apply'd than to them,

Sic vos non vobis, fertis aratra, boves.

Let it be conſider'd, at the ſame time, what vaſt advantage thoſe ſovereign fathers muſt needs make of the labour of ſo many hands, and what a trade they drive to all parts of the *Indies*, with the above-mention'd commodities, particularly with the herb *Paraguay*, of which they vend an immenſe quantity; there being none but what comes from the jeſuits country, or from the province of *Paraguay*. That herb is drank almoſt like tea, the *Spaniards* and *Indians*, as well maſters as ſlaves, uſing it morning and evening. It is computed that the ſale of that herb, at firſt hand, comes to above a million of crowns a year, and the jeſuits have the beſt part of it; which, with the other commodities they vend at equal advantage, and with the gold duſt which the *Indians* go and gather up in the waſhes where the water has been, after the rivers have ſunk below their banks again, brings in to the jeſuits the revenue of a ſovereign. For the forming a truer idea of this matter, be it ſuppos'd, that each family of the *Indians* does not produce to the jeſuits above 50 livres a year, all expences born; why, even at this rate the general produce of 300000 families will appear to amount to five millions of crowns; but this hint is ſufficient to convince any one, that they get a great deal more. However, if you will believe thoſe good fathers, their miſſion coſts them a great deal of pains, and brings them but little profit: but this muſt be taken in the ſenſe they generally ſpeak, the interpretation of which is, *nunquam ſatis*.

The jeſuits veſt income.

The gold and ſilver, coin'd and uncoin'd, which the jeſuits ſend by every opportunity into *Europe*, the magnificence of their churches, where maſſy gold and ſilver are glittering on every ſide; and their conſiderable commerce, which is known to all the *Spaniards*, oblige men to form a different judgment.

It may not be amiſs here to give a deſcription of the church and apartment of the father of one of the pariſhes, from the mouths of two *Frenchmen* belonging to the ſhip of Monſieur *de la Solliette d'Eſcaſeau* of *Nantes*.

An adventure of two Frenchmen.

That ſhip being in the port of *Maldonades*, weigh'd anchor, and ſet ſail, when the ſaid two *Frenchmen*, one a captain of arms on board, and the other a ſerjeant, happen'd to be on ſhore, and at ſo great a diſtance, that they came too late for the boat, which was gone off. Not knowing what to do, in this caſe, all the coaſt being deſart, they reſolv'd to advance into the country, tho' they had no ſubſiſtence but what their ſuſees brought them. Having march'd three days, they met *Indians* with beads about their necks, who receiv'd them very kindly, and made a thouſand ſigns of friendſhip to them; for they naturally love the *French*, and diſtinguiſh them from all other nations. They even conducted them to one of the pariſhes belonging to the miſſion, above 200 leagues from the place where they firſt

firſt met, and liv'd by the way upon wild cows, which the *Indians* take at pleaſure, with incredible dexterity, by throwing a nooſe over their heads, at four or five yards diſtance; after which they hamſtring them, and ſtick them in the throat. Our two *Frenchmen* being arriv'd at the miſſion, were well receiv'd by the jeſuit, at whoſe houſe they tarry'd four months, without ever going abroad, and then return'd to *Buenos Ayres* with a detachment of *Indians* which the governor demanded. The account they give is this:

Jeſuits churches. The pariſh Church there is long, and proportionably broad; the principal entry to it is a portico, and an aſcent of ſeveral ſteps, at the top of which are eight ſtone pillars, wrought with a good ſhew of art, which help to ſupport the front of the portico. Over the entrance of the church is a very ſpacious lobby for the muſick in divine ſervice, which conſiſts of 60 perſons, voices and inſtruments. There is alſo a particular place for the women, ſet round with a baluſtrade. The reſt of the church is full of ſeats, where the men place themſelves according to their poſts and ages. The great altar is ſhut in by a baluſtrade of *Indian* wood, curiouſly wrought. On the left of the altar, is a ſeat for the cacique and civil officers; on the right, another for the military. But all in general are placed agreeably to their rank.

The facing of the altar is very ſumptuous. In the firſt place are three large pictures in frames of maſſy gold and ſilver. Above them are carv'd works and baſs relieves in gold; and higher yet, quite up to the roof, is a ſculpture of wood enriched with gold. On the two ſides of the altar are two pedeſtals of wood cover'd with plates of gold engraven, on which ſtand two ſaints of maſſy ſilver. The tabernacle is of gold; the pyx, wherein the holy ſacrament is kept, is made of gold, and ſet round with emeralds and other precious ſtones. The foot and ſides of the altar are adorn'd with cloth of gold laced. In ſhort, the candleſticks and other veſſels of gold and ſilver, with which the altar is ſet off, at ſuch times as the ſervice is perform'd with a great number of wax candles, make a ſhew almoſt beyond imagination. There are two other altars, on the right and left, adorn'd and enrich'd in proportion to the great one; and in the body of the church toward the baluſtrade is a ſilver candleſtick of 30 branches enrich'd with gold, with a great ſilver chain which reaches quite to the roof. By this deſcription, one may form ſome judgment of the riches of the miſſion, if all the 42 pariſhes are upon the ſame foot, as is reaſonable to believe.

And houſes. The presbytery, or father's houſe, conſiſts of ſeveral ſpacious halls adorn'd with a great many pictures and images, in thoſe halls the *Indians* wait, till the father comes out of his apartment to give audience. There are moreover large Warehouſes, to which the *Indians* bring all the fruit of their labours. The reſt of the building contain walks, gardens, and diverſe lodgings for the domeſtick *Indians*; the whole, with the church, making a wall'd incloſure of about 6000 perches ſquare.

The 42 jeſuits, who have each their pariſh to govern, are independent one of another, and are anſwerable to none but the principal of the convent of *Cordoua* in the province of *Tucuman*, who makes a progreſs once a year to viſit the miſſion, guarded by a great number of *Indians*. Upon his arrival, the *Indians* ſhew all poſſible demonſtrations of joy and reſpect. The principal of them do not approach him without trembling, and hanging down the head; and the common ſort are upon their knees with their hands croſs'd, as he paſſes along. During his ſtay, he makes the jeſuit of every pariſh give him an account of all that has been brought into the ſtore-houſes, and of the conſumption thereof ſince his laſt viſit.

Their trade. All the merchandizes mention'd toward the beginning of this relation, are carry'd by water, from the miſſion to *Santa Fe*, which being the ſtaple for them, the order has an attorney general there; and from *Santa Fe* they are carry'd to *Buenos Ayres* by land, where they have likewiſe an attorney. From thoſe two places, they diſtribute their goods into the three provinces of *Tucuman*, *Paraguay*, and *Buenos Ayres*, and into the kingdoms of *Chili* and *Peru*. And we may ſafely affirm, that the miſſion of the jeſuits alone drives a greater trade than all the three provinces together.

The chief buſineſs of the caciques, or civil magiſtrates, is to learn the number of families; to make known to all of them the orders and intentions of the father; to viſit houſes; to examine every one's work according to his abilities, and to promiſe, as a reward, to him who does the moſt and the beſt, that he ſhall kiſs the father's ſleeve, which is held in great veneration by thoſe *Indians*, as being the firſt ſtep towards obtaining the beatitude of the next life.

There are other inſpectors for the country, to whom the *Indians* are oblig'd to declare every thing they get, even to a ſingle egg, which they muſt not diſpoſe of; being to carry all into the magazines upon very ſevere penalties. There are alſo diſtributors, who give out ſubſiſtence to every

very family, according to its number, twice a week. This is done in wonderful order, and in the jeſuit's preſence, to whoſe praiſe be it ſaid, that their labours are endleſs, ſince they are vigilant, in the laſt degree, to prevent their *Indians* from running into any diſorder: for which they are made ample amends by the vaſt profit of the work of ſo many hands.

There were formerly two jeſuits in every pariſh; but ſince their great acceſſions, there can be but one, till they get ſome more over from *Spain*.

The *Indians* do not drink any wine, or other hot liquors: herein the good fathers copy after the law of *Mahomet*, who forbad them to his followers, leſt being inflam'd they ſhould be apt to raiſe commotions, give diſturbance to his deſpotic government, and perhaps ſhake off the yoke he had laid upon their necks.

They marry the *Indians* young for the ſake of procreation: and the firſt catechiſm they teach their children is, the fear of God, and of the jeſuit, the contempt of temporal goods, and a plain and humble life. Theſe, it muſt be own'd, are pious diſpoſitions: but then it is no leſs certain, that the good fathers find their account in ſuch polite inſtructions.

Their forces. The military government is as well eſtabliſh'd there as the civil. Every pariſh is oblig'd to maintain a number of diſciplin'd troops by regiments of horſe and foot, in proportion to its ſtrength: each regiment conſiſts of ſix companies, of 50 men each, a colonel, ſix captains, ſix lieutenants, and a major, who exerciſes them every *Sunday* after veſpers. Thoſe officers, who are bred up to arms from father to ſon, are very expert in diſciplining their men, and in leading them when they march in detachments. It is upon no other occaſion that the pariſhes have a communication, but only to form an army, which the ſenior general officer commands under the direction of a jeſuit who is generaliſſimo. The arms of thoſe *Indians* are fuſees, ſwords, bayonets, and ſlings, with which they throw ſtones to five pound weight, and with great dexterity.

The miſſion together can aſſemble ſixty thouſand men in eight days time. Their pretence for maintaining ſo great a number is, becauſe the *Portugueſe Pauliſts* make incurſions into their country, to take away their *Indians*; but this does not go down with the more knowing *Spaniards*, who are convinc'd that the jeſuits keep ſo many troops on foot, for no other end than to hinder all the world, without exception, from having any communication with their miſſion.

Their precaution in not teaching the *Indians* the *Spaniſh* tongue, and in making it a caſe of conſcience for them not to converſe with the *Spaniards*, when they go to work in the towns for the king's ſervice, is declarative enough of the true deſign of the father jeſuits. The foreigners who are driven by any accident into their miſſions, as the *Frenchmen* above-mention'd, nay the *Spaniards* themſelves (who are oblig'd ſometimes to touch upon them in paſſing to and fro upon the river of *Paraguay*) [whilſt they continue within the bounds of the miſſion] do not ſtir without the walls of the presbytery: or if the *Spaniards* intreat for leave to take a walk in the town, be ſure the jeſuit is always at their ſide; and the *Indians*, being forewarn'd, ſhut their doors, and are never ſeen in the ſtreets upon ſuch occaſions. Whence it is plain, the jeſuits have very good reaſons for uſing ſo much circumſpection with regard even to their own countrymen. They have moreover the precaution to make detachments of 5 or 6000 men, by battallions of 4 or 500, to ſcour the country along the coaſt from St. *Gabriel*'s iſles to the mountains of *Maldonades* and the river they call *Rio de los Patos*, to cut off all communication betwixt thoſe lands and the *Europeans*, or the people of the country, for the ſake of the gold and ſilver mines which are there in abundance. *The caution of the jeſuits to conceal the riches.*

Depredations committed by the Indians of the miſſion. We will here give ſome inſtances of the excurſions of thoſe *Indians* along the coaſt. The ſhip *Falmouth* of St. *Malo* being caſt away near the iſles of *Flores* [lat. 35 deg.] in the year 1706, the *Indians* plunder'd a part of her cargo, which the governor of *Buenos Ayres* oblig'd them to reſtore, and it is actually in the fort. The *Atlas*, which periſh'd in the *Caſtiles* [on the ſame coaſt] in *December* 1708. Her officers, having ſav'd ſome of their goods, and ſails to make tents, were ſtript of all, by the *Indians*, in their march over land to the *Maldonades*, in order to come back by ſea, and take up their ſilver which they happily buried, to the value of 200000 crowns.

There are conſiderable mines at the foot of the mountains of *Maldonades*, twenty-four leagues from the port, and fourteen from *Montevide*, which were diſcover'd by *Pacheco*, an inhabitant of *Buenos Ayres*, and an old miner of *Potoſi*; he gave advice thereof to *Don Alonzo Valdes Inelau*, governor of *Buenos Ayres*, who made a detachment of 15 men under the command of *Don Joſeph de Vermude*, captain of foot and ingineer. Theſe embark'd with *Pacheco*, and croſſing the river [of *Plate*] march'd to the head of the mountains of *Maldonades*, where they ſearch'd the earth and return'd with ſtones from the mines containing gold and ſilver. But the governor, being gain'd by the jeſuits, gave

The jeſuits conceal the mines.

gave out that he had made a proof, and found they would not anſwer the labour. However, *Don Pacheco*, who had reſerved his own, was convinc'd that this was a meer fetch of the jeſuits to prevent a ſettlement on the ſide of their miſſion.

Some pieces taken out of thoſe mines have been brought to *France*, where they may have been try'd to know their value; but they were taken from the very ſurface of the earth by pickaxes only. The aforeſaid *Pacheco*, who is celebrated for the moſt experienced miner that has been in *Peru* theſe many years, affirms, that there is no better earth in the world to ſearch, than that round the *Maldonades*, and the rivers thereabouts, in which he doubts not but gold duſt might as eaſily be found as by the *Portugueſe Pauliſts*, and in as good quantities. The *Indians* of St. *Dominic de Suvillant* have ſeveral times brought ſuch gold to *Buenos Ayres* which they found in the territories of the miſſion. Whence we may conclude, that there is a great deal of it, becauſe this gold was taken by ſtealth by the young *Indians*, who were not ſo ſcrupulous as the others.

In the year 1706 the *Sieur de la Solliette d'Eſcaſeau* of *Nantes*, having caſt anchor in the port of *Maldonade*, was accoſted by the *Indians* of a detachment, who came under a chief upon that coaſt to get cows together to drive them to the miſſion. Monſ. *d'Eſcaſeau* having made them a preſent, they propos'd to him, in return, that if he would advance ſo far into the country, to a place they pointed to him, he ſhould find ſilver mines eaſy to be come at: which proves that thoſe mines do not lie deep in the earth, and alſo that they are plenty.

The jeſuits have always been apprehenſive of the diſcovery of thoſe mines by the *Spaniards*, and will do all that is in their power to prevent the working them, becauſe the making a ſettlement upon that coaſt would prejudice the good fathers, who would be oblig'd to furniſh *Indians* to labour in them. They have even deſtroy'd all the horſes on that ſide to make it the more incommodious for people to ſettle there.

It remains now to make a juſt application of the conduct of the jeſuits in the particulars above recited, and to ſhew that their ambition of ſovereign power, and their inſatiable deſire of heaping up immenſe riches are the only objects they purſue. The method they take in educating and governing their *Indians*, from whom they ſqueeze all the fruit of their labours, leaving them nothing but the neceſſaries of frugal life; the care they take to hinder their communication with the *Spaniards*, their circumſpection when, at any time, either *Spaniards* or foreigners are driven by accident into their miſſion; the number of arm'd men they continually keep a foot; their perpetual ſcouring the coaſt by detachments to prevent people's ſettlement on it; all theſe are plain proofs, that they aim at making themſelves independent, and not only conceal the advantages of the country they are poſſeſs'd of, but even of what they have not in poſſeſſion. Nevertheleſs, that country belongs without all diſpute to the king of *Spain*, as lord and ſovereign of the *Indies*. Nor ought ſuch a number of people to be reduced under any other obedience than his: [eſpecially by his own ſubjects] they ought to be free to have lands, and the diſpoſal of their crops and labour. By this means they would become a colony in form; every man would improve his talent with the gold and ſilver mines of the country; money would be coin'd, and all together would cauſe a circulation of trade there, as well as in other colonies; the king's authority would be acknowledged and his dominion preſerv'd. But nothing of all this. The jeſuits have made themſelves abſolute lords and Maſters over all the reduc'd *Indians*, together with the country they poſſeſs, their fruits and labour; and extend themſelves farther and farther every day without title or permiſſion. The *Indians* have nothing of their own; the jeſuits have all; and thoſe poor people who have a right to be free, having voluntarily ſubjected themſelves, are treated like true ſlaves: and, in ſhort, 300000 families and more, work for 40 jeſuits, and own and obey none but them.

One circumſtance which makes good this aſſertion, is, that when the governor of *Buenos Ayres* receiv'd orders to lay ſiege to St. *Gabriel*, in which a detachment of 4000 *Indian* horſe aſſiſted, with a jeſuit at their head; the governor commanded the ſerjeant major to make an attack at four o'clock in the morning; but the *Indians* refus'd to obey becauſe they had not the jeſuit's orders, and were even upon the point of revolting, when the jeſuit (being ſent for) arriv'd, under whom they ranged themſelves, and executed the order from his mouth. Hence you may judge how jealous thoſe fathers are of their authority with regard to the *Indians*, even to the forbidding them to obey the king's officers, when it is plainly for his majeſty's ſervice.

The capitation tax of a crown a head, which the jeſuits ought to pay the king yearly for every *Indian*, is not only exhauſted by the payment of the *Indians* employ'd in his majeſty's works, but there is hardly a year that the king is not made debtor, for three reaſons equally fallacious.

The firſt is, that the jeſuits do not give in an account of half their *Indians* for the capitation. The ſecond is, that the governor of *Buenos Ayres* who ought once, in the five years of his government, to viſit the miſſions, and take an account of the *Indians*, is prevented by the jeſuits, who making him a preſent of a round ſum of money, the end of his viſit is loſt, and he contents himſelf with the jeſuits own liſt of their families. The third reaſon is, that when a detachment of 500 *Indians* is employ'd in the king's work, they ſet them down 1500, and ſo many his majeſty pays.

Thus is his catholic majeſty ſerv'd in the *Indies*, where his revenue is conſum'd in feign'd employments, fraud, and plunder. Theſe abuſes do, however, deſerve the moſt ſerious attention; ſeeing the king's revenues, which ought to amount at leaſt to 30 millions of livres, (were his majeſty faithfully ſerv'd) are brought to nothing, or to very little, becauſe the governors and treaſurers have a good underſtanding, and only contend who ſhall plunder moſt.

What remains therefore (to anſwer the end of this relation) but to find means of reducing the jeſuits to their duty, to bridle their abſolute power, and to turn ſome part of the profits, which accrue to them from the labour of ſo many hands, to the king's advantage. Nothing can excuſe the jeſuits from ſubmitting to it, unleſs they will give marks of their diſobedience and wicked intent. Tho' after all, we are perſuaded that they will raiſe obſtacles enow, and alledge ſeveral ſpecious pretexts (but eaſy to be anſwer'd) and not ſurrender till the laſt extremity.

I ſhall make no obſervations or remarks upon this narrative. The induſtry of the jeſuits is ſufficiently known to make this account of their great pains ſeem probable, and they are too wiſe a body, and too cloſely link'd to the ſociety, to neglect ſo fair an opportunity of propagating their religion, and at the ſame time encreaſing their common ſtock.

THE

THE UNIVERSAL TRAVELLER.

BOOK II.

ASIA.

INTRODUCTION.

WHATEVER difficulties are found about peopling *America*, there ſeems to be no room left for diſputing that of *Aſia*. And altho' the books of *Moſes* were not allow'd by the heathen world to have been divinely inſpir'd, it is undoubtedly true that they are the moſt ancient of any hiſtory in the world, and that they were admir'd by all people of learning and ſenſe who, in all ages, have been acquainted with them, and all the hiſtories that ever were written, have copied more or leſs from his account of the creation, and manner of peopling the earth.

It is plain, not only from the ancient poets, but from the graver writings of hiſtorians, that they allow'd mankind to have been derived from firſt parents, who were not born after the common way of generation, but created by GOD. It is likewiſe more than probable that the world began about the time that *Moſes* aſſigns to the creation, from the firſt introduction of arts and ſciences. For, had the earth been peopled many ages before our account of the creation, it is not to be imagin'd that letters ſhould not have been invented ſooner than we find they were. And if they had been, is it poſſible that no hiſtories of any part of the world ſhould ever have been ſo much as alledg'd to have been written before the time that we ſay *Moſes* wrote his? Is there in any part of the earth extant any book, or is it pretended that there was any book before the time which *Moſes* aſſigns for the flood? Or is there mention made of any writing for many years after the *Iſraelites* departure from *Egypt*. In this caſe the reaſoning of *Lucretius* will always hold.

Præterea, ſi nulla fuit genitalis Origo, &c. Lucret. L. V.

Thus engliſh'd by Mr. *Creech*.

But grant the world eternal; grant it knew
No infancy; and grant it never new;
Why then no wars our poets ſongs employ,
Before the ſiege of *Thebes* or that of *Troy?*
Why former heroes fell without a name?
Why not their battles told by laſting fame?

But it is not my buſineſs, as a Traveller, to enter into a diſſertation concerning the authority of ancient writings, nor to defend their account of the peopling the earth, and particularly *Aſia*. However, I hope the *Deiſts* and all others who deny the

the authority of *Moſes*, as an inſpir'd author, will allow me to believe his ſyſtem, till they can ſhew me a better. And as all that we have to ſay upon any part of the world, happen'd long after the firſt peopling of it, we ſhall wave all diſputes, and proceed to give ſuch accounts as we can collect from the beſt authors who have travell'd to the ſeveral parts of *Aſia*, either by ſea or land. And becauſe we find Mr. *Purchas*'s method ſo much eſteem'd as to be follow'd by others, eſpecially by Dr. *Harris* in his *Bibliotheca*, we ſhall purſue the ſame track, only leaving out ſuch things as are trifling or ſuperfluous, and avoiding as much as we can the frequent breaks, or diſtinguiſhing the matter into chapters, where there is not a neceſſity for it.

In the courſe therefore of this ſecond Book, we propoſe to give a ſhort account of all ſuch voyages or travels as we can meet with in the order of time as near as we can keep them, without any conſideration of the geography of *Aſia*, but as far as is requiſite to point out the places we treat of; and then we ſhall give a general view of that part of the world, and its diviſion into kingdoms and empires, with as much of the hiſtory of each of them as is conſiſtent with our deſign And therefore, without farther preface, we ſhall proceed to

CHAP. I.

Of the ENGLISH *Voyages to the* EAST INDIES *before the forming a regular Company for that Commerce.*

IN the laſt book we gave an account of ſome voyages to ſeveral parts of the *Indies*; but thoſe were but ſlightly touch'd, as having been taken notice of only as an introduction to the finding out of *America*, or as occaſional voyages from that part of the world after the diſcovery of the paſſage to the ſouth ſea. But being now about to treat of *Aſia* more particularly, we ſhall begin with the *Engliſh* voyages and travels thither, and of the occurrences which happen'd to them, and their obſervations in the different countries where they ſojourn'd, and through which they travell'd. And altho' we are told of *Sighelmus* biſhop of *Shireborne*'s going, by command of king *Alfred* in the year 883, to viſit the ſepulchre of St. *Thomas* in *India*, who, at his return, gave the *Engliſh* a taſte of thoſe riches, and famous ſpices ſo much talk'd of by the ancients, and ſo well known ſince; yet there being no particular account of his travels thither, (which, to be ſure muſt have been from the *Levant*, croſs the continent of *Aſia* eaſtward of the red ſea, thro' *Arabia* or *Perſia*; becauſe, as we have obſerv'd, in the preceeding book, the paſſage by ſea, round *Africa*, was not found out for ſome ages after that) nor any journal extant of his route, or any remains of his obſervations, we ſhall leave him, after the example of *Purchas* and *Harris*, to *William* of *Malmsbury*,* without pretending to know any more than that he was there. Nor ſhall we ſay more of a nameleſs *Engliſhman* in 1243, who accompany'd the *Tartars*, in their expeditions thro' *Aſia*:* nor of others of our countrymen, who during the *holy war*, may have made ſeveral progreſſes into ſeveral parts of *Aſia*. Latter times furniſh us with ſufficient and authentic accounts of that country, a part of which has been ſo famous ſince the very beginning of time, and the knowledge of hiſtory. We ſhall therefore begin at Queen *Elizabeth*'s time, when the way by the cape of *Good Hope* was well known to the *Engliſh*. So that without reſuming any of the voyages mention'd before, we ſhall come to the latter part of her reign.

* De Geſtis Reg. Angl.

* Math. Paris.

SECT. I.

An unlucky Voyage of Mr. Benj. Wood.

IN the year 1596 Sir *Robert Dudly* fitted out three ſhips for the *Eaſt Indies*, and procur'd the queen's letter of recommendation to the king of *China*. In the preamble of which, ſhe ſtil'd herſelf *The invincible defender of the true chriſtian faith, againſt all who falſly profeſs the name of* CHRIST, and gave that king the title of *The moſt high, and moſt ſerene prince, the moſt powerful ruler of the great kingdom of* China, *great emperor of all thoſe parts of* Aſia, *and of the adjacent iſles; and great monarch of the eaſtern regions.*

The letter itſelf recommended to his protection and favour her loving ſubjects *Richard Allot* and *Thomas Bromfield*, merchants

merchants of *London*, and offer'd to contract a friendſhip and alliance with his majeſty, deſiring free trade and commerce with his dominions, &c. But this letter was never deliver'd, nor did the bearers ever arrive at their deſign'd port: Nor indeed was there ever any account of them or any of their ſhips, but by an intercepted letter, ſome time after, from the licentiate *Alcaſar di Villa Senor*, auditor of St. *Domingo*, dated from *Porto Ricco* in the *Weſt Indies*, *October* 2. 1601, addreſt to the king of *Spain*.

By this letter it appear'd, that three *Engliſh* ſhips, bound for the *Eaſt Indies*, had taken three *Portugal* ſhips, in which they had found a conſiderable treaſure, and particularly a large jewel deſign'd as a preſent for the king of *Spain*; (but, whether by ſtreſs of weather, or by what other accident, is not mention'd) they came upon the *American* coaſt, and of all the *Engliſh* on board, there remain'd alive only four, (the reſt dying, as the letter ſays, of ſickneſs) and they not being to manage their ſhips, put the moſt valuable riches on board their boat, and landed on the iſland of *Utias*, three leagues from *Porto Ricco*; and going to that iſland for water, *George* (one of the *Engliſh*) ſtaid there, and the reſt return'd to *Utias*. This *George* (for we have only an account of their chriſtian names) was found by *Don Rodrigo di Fuentes*, with five more *Spaniards*, to whom he diſcover'd his condition, with that of his companions, and writ a letter to his comrades to deliver themſelves and their effects into the hands of *Don Rodrigo*.

With this letter from *George*, the ſix *Spaniards* went to the iſland of *Utias*, and putting out a white flag, the other three *Engliſh* came to them, and upon *George*'s letter, and the *Spaniards* promiſe of faith and friendſhip, they deliver'd themſelves and their treaſure into their hands. They ſtaid in that iſland ſome time, careſſing the *Engliſh*, and making much of them, having brought proviſions along with them from *Porto Ricco*. But no ſooner had they gotten poſſeſſion of their arms, but they fell upon them, and kill'd *Richard* and *Daniel*; but *Thomas* made his eſcape to the mountains. After this execution, they divided the ſpoil among them, and return'd to *Porto Ricco*, where they poiſon'd *George*, to prevent his diſcovering them. Having now no evidence of their villany to trouble them, but *Thomas*, they ſent back to *Utias* to kill him; but he had made his eſcape out of the iſland, and by a wonderful providence had, by the help of the tide, and his own labour, landed ſafely in *Porto Ricco* upon a piece of timber.

Finding that they were diſappointed in their deſign of making ſure of him, they thought it adviſable to give the government an account of their having gotten a prize in the iſland of *Utias*; and ſo having hidden the large jewel, and the moſt valuable part of the ſpoil, *Don Rodrigo* went to tthe governor, telling him that he had found a ſmall quantity of goods in *Utias*, and ſhew'd ſome ſilks, and a ſmall quantity of ſilver; adding, that he and his companions had been oblig'd to kill three *Engliſhmen* who obſtinately withſtood their taking poſſeſſion of them. This ſtory was vouch'd by his companions, in the moſt ſolemn manner.

But *Thomas* having got ſafe to *Porto Ricco*, as we have ſaid, was brought before the governor, and told the ſtory as above related: Upon which, *Rodrigo* and his accomplices were arreſted, and put in chains. But he being a man of intereſt in the city, made his eſcape out of priſon; and the others having been taught by him, deny'd all that the *Engliſhman* alledg'd, but after ſome ſeperate examinations, they differ'd in ſome circumſtances of their evidence, and croſs queſtions diſconcerted them, ſo that they own'd a great deal more than they had done at firſt, but ſtill pretended that the riches were loſt, one part of the jewels having by negligence fallen into the ſea, and moſt of the treaſure having been ſtol'n. But they all deny'd to have ſeen the large jewel, which *Thomas* ſaid was worth all the reſt; and was enclos'd in a woodden box, which in the ſearch of *Rodrigo*'s houſe had been found empty, and anſwer'd to the deſcription *Thomas* gave of it.

This letter contains a long tedious detail of the particulars of the proceſs againſt them, and of their prevarications, and confeſſions, not worth reciting. In ſhort, this is all the account that ever was heard in *England* of that unfortunate voyage of Mr. *Wood* and the two *London* merchants, their three ſhips having, in all probability, been either founder'd at ſea, or caſt away among the *Antilles*-iſlands, and poor *Thomas*, the only ſurvivor, either died, or was murder'd by the *Spaniards*, as a pirate, altho' there was at that time, open war between *England* and *Spain*, of which *Portugal* was then a province.

SECT. II.

Capt. John Davis's *firſt voyage to the* East Indies.

ALtho' this voyage may ſeem to be ill plac'd amonſt the *Engliſh* voyages, ſince the author, altho' an *Engliſhman*, perform'd it on board of a *Dutch* ſhip;

ſhip; yet ſince it appears by his letter to the earl of *Eſſex*, publiſh'd by *Purchas*, that he undertook that voyage by his lordſhip's order and direction, and for the ſervice of his queen and country, I ſhall not ſcruple to follow the ſame *Purchas* in giving it a place amongſt the other *Engliſh* adventures, eſpecially conſidering, that the account hereafter given of it, was written by captain *Davis*.

In the year 1598, Mr. *Davis* ſet out from *Fluſhing* as chief pilot on board the *Lion*, accompany'd by the *Lioneſs*, *Cornelius Hootman* commodore. They ſet ſail the 15th of *March*, and about the 9th of *June* fell in with the coaſt of *Brazil*, the ſtrong eaſterly winds driving them nearer that coaſt than they intended. They anchor'd near the iſland *Fernando Loranha* in 4 deg. ſ. lat. and were detain'd along that coaſt, from place to place, all the months of *July*, *Auguſt*, *September*, and *October*. Upon the 11th of *November* they arriv'd in the bay of *Saldania*, in 34 deg. about 10 leagues ſhort of the cape of *Good Hope*. In this place they traded with the natives for oxen and ſheep, getting the beſt of them for as much old iron as would give a penny *Engliſh* at home.

The people of this country are ſubject to the king of *Monomotapa*. Here the *Dutch* having diſoblig'd the natives, they fell upon a party of them who were aſhore, and *Davis* gives but a ſcurvy account of the courage of his, then, maſters and companions. However they eſcap'd, and doubled the cape of *Good Hope* on the 27th of *November*. Upon the 6th of *January*, they came up with *Madagaſcar*, and anchor'd in St. *Auguſtin*'s bay, but the natives would not come near them, which, our author ſays, was owing to a piece of cruelty committed by their captain in a former voyage; ſo that they ſuffer'd much for want of proviſions, and ſetting ſail on the 14th they arriv'd the 20th at *Comoro* iſlands, between *Madagaſcar* and the *African* coaſt, in about 12 deg. ſ. lat. Theſe are reckon'd, in this account, five in number, *Mayotta*, *Auſuame*, *Magliaglie*, St. *Chriſtopher* and *Spirito Santo*; but they are not mark'd in our *Atlas*, or at leaſt not by thoſe names; only we have *Comoro* mark'd there.

At their anchoring at *Mayotta*, the people flock'd about them, bringing proviſions aboard, and ſoon after came a meſſage from the king of the iſland, deſiring the captain to go to him; which he did, and was kindly entertain'd, and recommended by him to the queen ſovereign of *Auſuame*, where they were accordingly well treated, but did not ſee the queen.

Having ſpent four months, from their firſt coming to *Madagaſcar*, among theſe iſlands, they proceeded on their voyage, and about the 20th of *May* fell in with the *Maldivia* iſlands, which are ſaid to be 11000 in number, from the equinoctial line northwards. Here they got an old man for their pilot, who ſpoke broken *Portugueſe*; and indeed they had need of one, who was expert in the navigation of thoſe ſeas, where there was ſuch a multitude of iſlands. Nor did it appear that they were well piloted, for they went a great way about, coaſting by cape *Camorin* to ſail to *Sumatra*, which they might have ſail'd in a ſtrait courſe eaſtward on either ſide of the line.

On the 13th of *June* they came upon the iſland of *Sumatra*, in 5 deg. n. lat. and the 20th of the ſame month they came to an anchor in the bay of *Achen*; where that king's officers came aboard, and meaſur'd the length and breadth of their ſhips, and took the number of their guns and men. After they had done, the captain ſent, by two of his men, who went aſhore with them, a preſent to their king, of a looking-glaſs, a drinking glaſs, and a bracelet of coral. Thoſe meſſengers return'd the ſame day, cloth'd after the manner of the country, by the king's order, in white callicoe, bringing the acceptable news of peace and welcome, and what was moſt pleaſing to the *Dutch*, an account of great plenty of rich ſpices. In the ſame bay, there were ſeveral ſhips riding, ſome from *Arabia*, and *Pegu*, lading with pepper; and four *Portugueſe* veſſels from *Malacca*, whoſe buſineſs was to prevent the *Dutch* traffick with *Achen*, as they afterwards found out.

Two days afterwards, the king ſent a nobleman aboard the *Lion* as an hoſtage for the captain, whom he requir'd to go aſhore; which he did, and was kindly treated, and dreſs'd after the *Indian* manner, and the king gave him a *Cryſe* of honour, which was a ſort of dagger, the handle of which was made of a metal, eſteem'd in that country more than gold, and ſet with rubies. It was death to wear this badge, unleſs by the king's gift, and ſuch a privilege it is to have it, that the perſon ſo dignify'd commands every thing. The captain boaſted ſtrange things of the king's civility towards him; but withal he ſaid, that his majeſty had ask'd him ſeveral queſtions about *England*, to which it appear'd he had anſwer'd not much to the honour of it (as it might be expected from our good allies:) and when the king ask'd, *If they were Engliſh*; he anſwer'd, *No, but of Flanders*. But he had the mortification to hear the king ſay, That he had heard often of *England*, but

but had never heard of *Flanders* in his life.

Soon after the captain carry'd their merchandiſe aſhore, and had a ware-houſe aſſign'd them for it; but he order'd the author Mr. *Davis*, and another *Engliſhman* to keep aboard, and by no means to appear to any of the people of *Achen*. But thoſe officers, who had been aboard at firſt, and had ſeen thoſe two, (whoſe habit and manner were different from the *Dutch*) had made report of it to the king, and therefore the next time the captain had an audience, he was ask'd whether thoſe two were *Engliſh*; which the captain own'd they were, but ſaid they had been bred in *Flanders*. However the king deſir'd to ſee them. He likewiſe made a contract with the captain, to ſerve him with his ſhips in a war with the king of *Jor*, (on the ſouth part of *Molacca*) promiſing him, for that ſervice, a lading of ſpice, to which he agreed.

About the middle of *Auguſt*, the king chang'd his countenance, with regard to the captain, and told him, he believ'd he would give him the ſlip, as ſoon as he had laded his ſhips; and the captain aſſuring him he had no ſuch deſign, the king ask'd, why he had not brought the *Engliſh* aſhore? the captain, upon this, ſent for *Davis*, and his countryman *Tomkins*. The next day Mr. *Davis* had a long conference with the king, and gave him an account of the affairs of *England*, of the wars which the queen had maintain'd, with ſuch glorious ſucceſs, againſt the king of *Spain*, much to the aſtoniſhment of the king of *Achen*, who having had no account of *Europe*, but from the *Portugueſes*, then ſubjects of *Spain*, had been made to believe that the monarch of *Spain* was king of all *Europe*. He ſeem'd to be pleas'd with the account *Davis* gave him, and order'd him to be dreſs'd in his preſence in a rich oriental habit, ſome part of it white wrought with gold, and a tunick of red ſilk, with a turbant; and then he ſate down with his majeſty and drank *aquavitæ* with him for ſome hours.

The king ſent for *Davis* afterwards, and he was carry'd to court upon an elephant, and had ſeveral honours ſhew'd him, to the great mortification of his *Dutch* captain. But our author, having contracted a friendſhip with a *Chineſe* merchant at *Achen*, gave great umbrage to the *Dutchman*, who therefore commanded him aboard.

But upon the 1ſt of *September*, there was a great alteration in their affairs. The king, under colour of getting his forces ready for the *Jor* expedition, had mann'd many barks and gallies, which caſt anchor near the *Dutch* ſhips, and after a while, many of the king's chief officers came aboard the *Lion*, and an equal number aboard the *Lioneſs*, accompany'd with a party of ſoldiers, and proviſions of ſeveral kinds, in ſhew of making merry with the *Dutch* before they ſhould get their ſailing orders. The *Dutch* ſeeing ſuch a number of arm'd boats making towards their ſhips, prepar'd themſelves to fight, but the *Achens* pretending the greateſt friendſhip, were ſuffer'd to board them, and they ſate down to eat and drink together; which having done for ſome time, the *Europeans* began to gape and ſtare upon one another like ideots, ſo that ſome few of them who had not taken ſo large a quantity as their companions had done, perceiv'd that there had been foul play us'd, and that their victuals and drink had been poiſon'd, and that in effect all who had taken a large doſe of it, were unman'd, and could not help themſelves; ſo that when, upon a ſignal given, the *Indians* fell upon them (as had been agreed before) there were but very few in either ſhip, capable of reſiſting them. However, thoſe few got to their arms in the *Lion*, and made ſuch a brave ſtand, that after having kill'd many of the infidels, they drove them out of their ſhip, and purſu'd them towards the ſhore, their gallies, dreading the artillery, cut their cables and quitted the road; ſo that the *Lion* ſail'd up to the other ſhip, which by that time was made prize of. But the *Lion* plying the *Indians* with their ſhot, and with ſtones from the round-tops, forced them likewiſe out of the other ſhip, and after a terrible ſlaughter, remain'd conquerors, altho' they loſt 68 of their number, what by the fight at ſea, and the murder of all who were aſhore, except eight perſons, whom the king made ſlaves: the occaſion of the murder aſhore was the indignation the king had for the ill ſucceſs of his enterpriſe, and eſpecially for the death of one of his near kinſmen, and one of his chief officers, of which he had an account by ſome who had ſwim'd aſhore from one of the ſhips.

After this baſe treatment, the *Dutch* did not think it convenient to ſtay longer there, but weigh'd anchor, and went immediately to *Pidor*, on the north eaſt of the iſland; and they had not been there two days when eleven gallies full of *Portugueſes* came up with them, who coming, as they imagin'd, with a deſign to take their ſhips, the *Dutch* fir'd upon them, and ſunk one of them, and put the reſt to flight. And the ſame afternoon, a *Frenchman*, one *La Fort*, (whoſe father liv'd in *London*) being one of the eight taken at *Achen*, came aboard with a meſſage from the king of *Achen*, requiring their beſt ſhip for ſatisfaction, and reproaching them for having murder'd his

ſubjects

ſubjects in their drunken revels. But the *Dutch* ſlighted the meſſage, and thought fit to leave the iſland; ſailing over towards the coaſt of *Malacca*, they water'd at the iſlands of *Pulo Botum*, in about ſix degrees of latitude.

By their precipitate leaving of *Achen*, they had loſt all their merchandiſe, except ſome pepper which they had taken on board. The pepper is in great plenty in *Sumatra*, there being gardens of it a mile ſquare, growing like hops, from a planted root and winding about a ſtake fix'd in the ground to ſupport it, and the pepper hangs in cluſters of about 40 pepper corns in each cluſter. The iſland abounds with elephants, horſes, oxen, buſalo's, goats and wild hogs. There are likewiſe gold and copper mines, with ſtore of gums and drugs of different kinds, and good indigo, and plenty of rubies, ſaphirs and garnets.

The houſes are built upon poles about eight foot from the ground, ſo that one might paſs from ſtreet to ſtreet under the houſes thro' the city of *Achen*. The king, whoſe name was *Aladin*, was ſaid to be 100 years old, but was a vigorous man, tho' very fat. He had in his youth been a fiſherman, but for his dexterity in managing the royal galley in which the then king was, being engag'd in war with ſome of his neighbours, he had rais'd him to the office of admiral, and continuing his favour to him, gave him a near kinſwoman of his own in marriage. That king had only one daughter, whom he marry'd to the king of *Jor*, who had a ſon by her. This child was ſent to *Achen* to be bred under his grand-father, being heir to his kingdom. That king dying ſuddenly, *Aladin*, who was then general both by ſea and land, undertook the charge of tutor to the young prince, but having been oppos'd in it by the nobility, he made good his claim by force of arms, and cut off above 1000 of the chief men of *Achen*, and the young prince too having periſh'd in the quarrel, *Aladin* made himſelf be proclaim'd king in right of his wife, and carry'd his point partly by conſent and partly by force. This was the ground of the quarrel between him and the king of *Jor*, which had laſted above 20 years.

We ſhall not trouble the reader with the account of this king's gormondizing, it being ſcarce poſſible to continue ſuch a conſtant courſe of eating as our author ſays *Aladin* did, and yet was in good health at 100 years of age. But there was one thing very remarkable in his military government, which was, that he would not truſt any man with his fleet, (which conſiſted of a good number of galleys, ſome of which had on board 400 men, and all of them row'd with oars of four foot long without reſting on the galley) but made a woman his admiral; as his chief counſellors were likewiſe women. He had a great number of cannon, but they were fir'd lying upon the ground, without any carriages. *A woman admiral.*

The people of *Achen* boaſt their deſcent from *Hagar* and *Iſhmael*, and are well acquainted with the genealogy of the old teſtament. Their religion is that of *Mahomet*, and they have their prieſts, and one prophet much reſpected by the king. The people of that place are much given to trade, and there are among them artiſts of all kinds. Their commerce is with the people of *China*, *Bengal*, *Pegu*, *Java*, *Coromandel*, *Guzarat*, *Arabia*, and *Rumos*, which laſt is in the *Red Sea*. Our author ſaw two pieces only of their coin; the one of gold, call'd *Mas*, as big as a penny, and very common; the other of lead, call'd *Caxas*, 1600 of which make their *Mas*, which he reckons near the value of 10 pence *Engliſh*. *Trade of* Achen.

We are told that the king of *Achen* makes a ſolemn proceſſion once a year to the great church, to ſee whether the meſſiah be come, he and his nobles riding upon elephants, and one elephant, richly capariſon'd, is led for the meſſiah to mount; but not finding him in the church, the king rides home upon the elephant deſign'd for the meſſiah, and the day ends in feaſting.

Upon the death of their captain, the *Dutch* open'd the firſt of their ſeal'd orders mark'd A. which appointed *Quymans* to ſucceed *Hootman* in the command of the ſhips; but he having been kill'd at *Achen*, they open'd the ſecond ſign'd B. by which *La Fort*, who had eſcap'd by having been ſent the meſſage, formerly mention'd, was appointed commodore, ſailing the other two, and accordingly he took his poſt. Having ſtaid ſome time at *Pulo Botum*, they return'd to *Achen*, to ſee if they could recover their companions, but finding ten galleys ſent out armed againſt them, after having diſpers'd them, they quitted that bay, and made towards the iſlands of *Nicobar*, between *Sumatra* and the gulf of *Bengal*. Here they traded with the natives, giving them linnen cloth for hens, fruit, and ſome ambergreaſe. Having furniſh'd themſelves with ſuch proviſions as they could get, they proceeded towards the iſland of *Ceylan*, and, in that courſe, they took a ſhip of *Coromandel*, bound for *Achen* with rice; but after having taken what rice they had occaſion for, and the captain had paid a reaſonable price for it, they diſmiſs'd the prize, and not being able to agree about their manner of ſtaying in the *Indies*, they ſet ſail for *Europe*, and paſſing by the cape of *Good Hope* in *March* *The Dutch arrive at* Nicobar.

March 1600, they anchor'd the 13th of *April* at St. *Helena*, where they fought a caravel, but were glad to get off from her, altho' ſhe had but ſix guns mounted. Afterwards they ſail'd to the iſle of *Aſcenſion*, and ſo home, arriving at *Middleburg* the 29th of *July*, having been out two years and four months.

SECT. III.

MILDENHALL's *travels to the* Eaſt Indies, *with an account of ſome things which paſs'd in* Perſia *and the* Mogul's *country.*

MR. *Mildenhall*, of the city of *London*, merchant, ſet out in *February* 1599, on board the *Hector* of *London*, which carry'd a preſent for the *Grand Signor*. Having ſail'd to the *Levant*, and being arriv'd at *Zante*, an iſland in the *Ionian* ſea, he there quitted the *Hector*, and hir'd a ſettee for *Chio*, and ſo to *Smyrna* and *Conſtantinople*, at which laſt place Mr. *Mildenhall* ſtaid from *October* 1599, till *May* 1600, from which he went to *Scanderoon*, and from thence to *Aleppo*. From *Aleppo* he went with a caravan, or ſociety of different nations to the number of about 600, there being no *Engliſh* with him, but one Mr. *Cartwright*, whom he calls a preacher, from thence our traveller went by many days journey to *Bir*, an ancient city in *Arabia Deſerta*, on the *Euphrates*, and to ſeveral other cities in *Aſia*, of which he tells nothing remarkable except how many days he was in travelling between *Bir* and *Candahar*, a city of *Perſia*, the right to which was long diſputed by the *Mogul* and the king of *Perſia*. But having no farther account of his travels in that country, but only a letter from him written from *Caſbin* in *Perſia* in *October* 1606, we can know nothing of what he did for about three years, for, except that ſhort journal already given from *Aleppo*, which took him up 22 weeks from the 7th of *July* 1600, there is no account of what became of him till 1603, that he gives the relation of his expedition to the *Mogul*'s court, and is in ſubſtance as follows.

Having diſpatch'd letters from *Lahora* to the great king of *Mogor* and *Cambaia*, deſiring leave to come to his court about ſome buſineſs of importance from the court of *England*, he had a favourable return, and that prince ſent orders to the governor of *Lahora* to treat him civilly, and to ſend a guard of horſe and foot along with him to *Agra*, where the court was kept. Having perform'd that journey in 21 days, he arriv'd at *Agra*, where there was a houſe appointed for him. On the third day after his arrival, he had an audience of the *Mogul*, and preſented him with 23 fine horſes, which he had bought at a great charge, ſome of them having coſt him 60*l.* a-piece. He alſo gave his majeſty jewels, rings, and ear-rings, with which he ſeem'd well pleas'd, and Mr. *Mildenhall* was diſmiſs'd, for that time, with great civility. About three days after he was call'd before the council, and deſir'd to give an account of his Buſineſs. He told his majeſty, by his interpreter, that he was come from the queen of *England*, upon the fame of his majeſty's great kindneſs to chriſtians; that his miſtreſs deſir'd his friendſhip and alliance, and that her ſubjects might have free trade and commerce with his dominions, as the *Portugueſes* and other nations had. But becauſe there had been war which was ſtill kept up between the nations of *England* and *Portugal*, his ſovereign deſir'd that her ſubjects might be permitted to treat the *Portugueſes* as enemies, in any of his majeſty's ports or towns where they ſhould happen to meet them; and that his majeſty would not take it amiſs if they made prize of any of their ſhips or goods, in his dominions, for the uſe of the queen.

Mr. Mildenhall comes to the court of the gr. mogul.

His propoſals to the Mogul.

After Mr. *Mildenhall* had thus delivered his embaſſy, the particulars of which the ſecretary had taken in writing by the king's order, he had leave to withdraw to his houſe, the king telling him, that he would conſider his demands, and in a ſhort time give his anſwer. In eight or ten day, the king ſent him in money to the value of 500*l.* But the king having conſulted with two jeſuits who liv'd in *Agra* in great credit, theſe, upon ſeeing Mr. *Mildenhall*'s demands, told the king that the *Engliſh* were a ſet of thieves, who practis'd the ſea only for piracy; that if his majeſty gave them encouragement, they would ſoon poſſeſs themſelves of his beſt ports, and do him ſubſtantial miſchief. They ſaid they were ſorry to give him ſuch a bad account of chriſtians, but their ſtrict regard to truth, and the obligations they were under to his majeſty, put them under a neceſſity of adviſing them to be upon their guard with the *Engliſh*, and to grant them no favours.

The Jeſuites *give the* Mogul *a bad impreſſion of them.*

Theſe fathers manag'd their affairs ſo with the chief officers about the king, by conſiderable bribes, which in a long acquaintance in *Agra* they knew well how to beſtow, that the face of affairs were quite alter'd with regard to our ambaſſador; but they were cunning enough not to let him into all the ſecret; but gave him good words, and after ſome time, the king order'd ſome articles to be drawn in favour of the *Engliſh* nation, granting them a free trade with his ſubjects, and ſuch privileges as were uſual upon ſuch occaſions; but the main point which Mr. *Milden-*

Mildenhall had inſiſted upon, *viz. Liberty to proſecute the war with the Portugueſes*, was paſs'd over in ſilence. This made the ambaſſador go to court frequently to ſolicit that article, but he was ſtill put off with good words, and was at laſt privately inform'd (by ſome few friends he had gain'd, by his generoſity, among the courtiers,) who they were that obſtructed his diſpatch. But the jeſuits were ſtill too cunning for him, and had by their addreſs, and by *Portugal* gold block'd up his way to the king's ear, or at leaſt to a favourable hearing; for altho' the king ſent for him, and chid him for not coming more frequently to him, he could obtain nothing but fair words, and empty promiſes. At laſt the jeſuits brib'd his interpreter, ſo that he pick'd a quarrel with him, and deſerted him. This accident troubled him not a little, becauſe he was out of a capacity of managing his affairs either with the king or his miniſters: but being a man of good underſtanding, and ſpirit, and having been ſufficiently inform'd before, of the ill offices the jeſuits had done him, he reſolv'd to exert himſelf to be in a condition to counterplot them if it were poſſible. In order to this, he took a maſter for the *Perſian* tongue, and apply'd himſelf ſo cloſe to the ſtudy of it, that in ſix months time, he not only underſtood all that he read or heard, but, by conſtant practice with his maſter, whom he kept in his houſe, he could expreſs himſelf tolerably well.

The jeſuits decoy his interpreter away.

Having attain'd this accompliſhment, he went to court, and having obtain'd an audience of his majeſty, he complain'd of the injuſtice had been done him by the miſrepreſentations of the jeſuits, telling him, with a becoming aſſurance, but with a decent reſpect to the king, that his majeſty had been impos'd upon by thoſe people, whom he could eaſily confute in his majeſty's preſence; and he inſiſted upon his being confronted with them before him, or elſe that he might have leave to depart to his own country to complain to his ſovereign of the injuries they had been the occaſion of to him.

Mr. *Mildenhall* preſs'd this matter in ſuch a decent manner, that the king was touch'd with it, and promis'd to give him an opportunity of arguing the matter with the fathers in his preſence the *Sunday* following; and he was as good as his word; for, upon the day preſix'd, the jeſuits were call'd to court, and, upon the ambaſſador's appearing, he charg'd them with having repreſented the *Engliſh* nation as thieves and robbers, and gave ſuch an account of his own country, which the fathers could not contradict, that it was evident to the king and all the council, that they had been impos'd upon by the jeſuits. Then Mr. *Mildenhall* ſhew'd the advantage which might accrue to the *Mogul* by an alliance with *England*, and boldly ask'd the jeſuits what preſents they had made to his majeſty in the twelve years that they had been there, telling the king, that if he anſwer'd the end of his embaſſy, every perſon who came from *England* by order from the queen his miſtreſs, would bring a conſiderable preſent to the king; beſides great advantage to his ſubjects by taking off ſuch goods as the country produc'd, for which they would bring equivalent commodities; and he aſſur'd his majeſty that he ſhould find the *Engliſh* as fair traders as any *Europeans* he had had occaſion to trade with. And as a proof of what he aſſerted, he deſir'd his majeſty to inform himſelf whether there was not an *Engliſh* miniſter conſtantly reſiding at the *Ottoman Port*, who was receiv'd there with as much honour as any ambaſſador whatſoever, and who brought as many preſents to the *Grand Signor* as any other reſident.

He gets the better of them.

This repreſentation had ſuch influence upon the king, and upon his ſon, who openly declar'd for Mr. *Mildenhall*, that the jeſuits having nothing to object againſt it, and their friends among the miniſtry not daring to interpoſe, the *Mogul* ordered his ſecretary forthwith to draw out an order, comprehending all the articles contain'd in the firſt memorial given in by the *Engliſh* ambaſſador. And thus was the trade open'd to the *Mogul*'s country, by the addreſs and ſteady behaviour of this one LONDON MERCHANT: *and may all ſuch always have ſucceſs, when they ſtick up for the* HONOUR *and* INTEREST *of* THEIR COUNTRY, *againſt the* PROJECTS *of all ſets of people, without exception, who oppoſe the* LIBERTY *and* COMMERCE *of* BRITAIN, *and who* (*like the jeſuits at* Agra) *endeavour, by* BRIBERY *and* CORRUPTION, *to make the honeſt endeavours of publick ſpirited* Britons *uſeleſs to their country.*

The jeſuits being thus expos'd by this honeſt *ſturdy* fellow, loſt their intereſt; and Mr. *Mildenhall*, who had nothing at heart, but the encouragement of *Trade* and *Navigation*, (which every man who conſiders the true intereſt of *Britain* will ſteadily purſue,) as ſoon as he had obtain'd what he had labour'd with ſuch aſſiduity, and thro' ſo many difficulties, took his leave of the court, after having receiv'd his articles ſign'd and ſeal'd to his own ſatisfaction: and if the trade of that country was not purſu'd as it ought, and might have been afterwards, it was not his fault.

It is not to be wonder'd at, that Mr. *Mildenhall* had not had an account of queen *Elizabeth*'s death, and the acceſ-

ſion

ſion of king *James* to the throne, becauſe there was ſo little communication between *Europe* and the *Mogul*'s country, except by the *Portugueſes*, that he might either not know it, or not think it prudent to take notice of it, if he did. After he had diſpatch'd his buſineſs, he retir'd to *Perſia*, from whence he writ the letter, of which the account above given is the ſubſtance.

SECT. IV.

Mr. WILLIAM ADAMS's *voyage to* Japan.

WE chuſe to follow *Purchas*, as Dr. *Harris* likewiſe does, in inſerting this voyage among the *Engliſh* voyages, (altho' it was perform'd in a *Dutch* bottom) for the ſame reaſon that we gave for that of Mr. *Davis*. The account of it, written by Mr. *Adams* in two letters, is in ſubſtance as follows.

The *Dutch* having fitted out five ſhips in the year 1598, took Mr. *Adams* for pilot of their admiral ſhip, in order to ſail to the *E. Indies*. What paſs'd in their voyage upon the coaſt of *Brazil*, in the *Magellanic* ſtraits, and upon the *Chili* coaſt, we ſhall not much inſiſt upon, being unwilling to bring our readers back again to *America*, without having ſomething to entertain them with, which would make amends for their trouble. We ſhall therefore only ſay, that after having trifled away many months upon the coaſt of *Brazil* and *Paraguay*, ſo that the winter came upon them before they enter'd the ſtraits, the ſouth winds, together with the ſnow which fell about the beginning of *April*, detain'd them in the ſtraits the whole winter, where they ſuffer'd much by cold and hunger, inſomuch that many of their men died. Towards the end of *September*, when the weather became more mild, they got into the ſouth ſea, but their fleet was ſo diſpers'd that the admiral ſhip was left alone, and (as they had agreed in caſe of being parted) ſtay'd upon the coaſt of *Chili*, in 46 deg. ſ. lat. 28 days to wait for the reſt, trading with the natives, (whom they found a good-natur'd people,) for proviſions in exchange for knives, bells, *&c.*

But ſeeing no appearance of any of their companions, they ſail'd from thence to the iſlands of St. *Maria* in 37 degrees; but notwithſtanding all their endeavours to bring the inhabitants to peace, they unexpectedly fell upon 30 of their men (who had gone aſhore to trade with them in a friendly manner) and kill'd them every man. But here they found another of their ſhips, who had arriv'd before them, and had ſhar'd the ſame fate with the others, having met with ſuch a reception aſhore on the *Mocha* iſland that many of their crew had been ſlain by the natives, and the captain with many others were wounded with darts and arrows. Theſe two ſhips having conſulted what was fit to be done, concluded that both the crews ſhould go aboard one of the ſhips, and that the other ſhould be burnt; but becauſe they could not agree among themſelves which of the two ſhould be preſerv'd, their firſt conſultation came to nothing, and each kept his own ſhip, altho' they had ſcarcely men enow in a condition to work one.

Having a good deal of cloth aboard, they determin'd to ſail for *Japan*; for altho' they might have ſold it to good advantage in *Chili* and *Peru*, the fear of having their ſhips made prizes by the *Spaniards*, made them think of quitting that coaſt. In this courſe, after they had paſt the line about *Chriſtmas*, they proceeded to the latitude of 28 degrees; and the 23d of *February* they had a moſt violent ſtorm, which ſeparated the two ſhips ſo that they did not meet again.

But here I muſt take notice of an inconſiſtency, which both *Purchas*, and *Harris* from him, have fallen into, without any apology for it. At the beginning of this account, they make Mr. *Adams* chief pilot of the fleet, and the former * ſays expreſly, that he was aboard the admiral ſhip; and yet they bring him in, telling of his meeting with the admiral which they had loſt in the ſtraits of *Magellan*; and here again, that in this ſtorm, they loſt the admiral ſhip, and ſaw her no more. Whether they had chang'd pilots in the voyage, or that there is ſome other miſtake in the account, I do not know, but I thought proper to take notice of it, altho' it is not material as to the account of the voyage, whether Mr. *Adams* perform'd it in this ſhip or that. But to return to our ſubject.

* Pur. Pil. Vol. I. B. III. c. 1. § 5.

The ſhip wherein our author was, arriv'd at 32 degrees of north lat. where they had ſight of land upon the 19th of *April*, 1600; this was the iſland of *Bongo*, on the ſouth of *Japan*. When they caſt anchor there, they were ſo weak, that there were not above ſeven able to ſtand upon deck; ſo that the natives coming about them, they could not hinder them from boarding them. By good luck for the *Dutch*, thoſe iſlanders were good-natur'd people, and they convers'd by ſigns, for they did not underſtand one another's language. But ſome days after their arrival, a jeſuit came aboard them from *Langaſack*, the place where the trade of *Macao* in *Japan* was carry'd on, and, according to the uſual civility of thoſe of that ſociety, he offer'd his ſervice to them as their interpreter; for which they were much bound

bound to him, for doing them all the miſchief in his power. But the king of *Bongo* (who was tributary to the emperor of *Japan*) treated them kindly.

The emperor having heard of them, ſent five galleys to carry them to *Japan*. They ſet ſail from *Sakai*, eighty leagues from *Bongo*, where being arriv'd, Mr. *Adams*, who was beſt able to travel, went to *Oſaca*. At his firſt audience, the emperor ask'd him very pertinent queſtions about his country, and the ſtate of *Europe*, and particularly concerning the war between *England* and the *Portugueſes*. Mr. *Adams* anſwer'd diſtinctly to all the particulars; letting him know that the king of *Spain*, to whom *Portugal* was ſubject, had been the aggreſſor, and that his ſovereign, queen *Elizabeth* had defended herſelf againſt all the force of *Spain* and *Portugal*, and had defeated the great *Armada* ſent againſt her, and maintain'd the war for many years with good ſucceſs. This account which *Adams* gave, in the beſt manner he could, ſeem'd to pleaſe the emperor; and when he was ask'd the reaſon of his coming ſo far from his own country; he made anſwer, that the *Engliſh* ſought the good-will and friendſhip of all nations; and as their country produced manufactures and commodities fit for foreigners, they deſir'd only liberty of trade, and of exchanging the goods of their nation for thoſe of the kingdoms they had commerce with.

They go to Japan.

Mr. Adams *has an audience of the emperor.*

Tho' the emperor ſeem'd to reliſh his converſation, yet he was ſent to priſon, but very well us'd; nor could he hear any news of the ſhip, and was under ſome apprehenſions of being fix'd to the croſs, which was as common in that country as the gallows in *England*. But there was no inſult offer'd him, except his confinement, in which he remain'd ſix weeks.

The Portugueſe *miſrepreſent the* Engliſh.

In the mean time the Jeſuites and other *Portugueſe* who were in the city endeavour'd to give the emperor and his miniſters the worſt impreſſion they could of the *Dutch* and *Engliſh*, telling them that they liv'd by rapine, and that if his majeſty ſhould allow them to ſettle in his dominions, they would hinder all other ſtrangers from trading with his ſubjects, and therefore they adviſ'd him to put them to death, that their countrymen might be deterr'd from troubling his ports any more. But the emperor, it ſeems, had more of the ſpirit of chriſtianity, without profeſſing it, than thoſe who were profeſſors, and ought to have been teachers of chriſtianity; he told them it was contrary to reaſon and juſtice, for him to put people to death, who had done no crime in his country; that whatever wars there might be between their country and *Portugal*, that did not concern him, and ſince the people of the different nations laid the fault upon their enemies, it was not an eaſy matter for him to determine which of them was in the wrong; nor indeed was it his buſineſs, ſince he was not choſen umpire of the diſpute between them: he therefore utterly refus'd to put the ſtrangers to death.

but fail in their deſign.

This diſcouraged the *Portugueſe*, who were jealous of other nations getting footing in *Japan*. But the emperor was fix'd in his reſolution, and ſending for Mr. *Adams*, after a long converſation with him, he releas'd him; and he return'd to his ſhip, where his companions received him with all the joy which their preſent bad condition would allow, having heard that he was put to death ſome weeks before. For, notwithſtanding the emperor's juſtice, their ſhip had been plunder'd, and every thing that was valuable, even to our pilate's mathematical inſtruments, had been taken from them. But all this had been done by the inſtigation of their enemies the *Portugueſe*, unknown to his majeſty, and he was no ſooner appriz'd of it, but he order'd all to be reſtor'd to them; and becauſe the goods had been ſo diſpers'd that they could not be all recover'd, the emperor order'd 50,000 Rials, in ready money, to be deliver'd to them, in lieu of what they had loſt. And his majeſty being to remove from that part of the iſland towards *Quanto*, which is on the eaſt coaſt of it, Mr. *Adams* receiv'd orders to ſail thither, which was 120 leagues from *Sackey* near *Ozaca*, where the emperor had his court when Mr. *Adams* had his former audience. But having been delay'd by contrary winds, the emperor got thither by land before their ſhip arriv'd; this place was not far from *Edo*, or, as it is call'd in the Atlas, *Yendo*, another royal city, where the emperor had his court when their ſhip arriv'd at *Quanto*.

The Ship removes to Quanto.

Soon after they arriv'd here, which in our maps, lies in the 36th degree n. lat. Mr. *Adams* was ſent for to court, and was deſir'd by the emperor, to build him a ſhip after the model of theirs, and altho' he declar'd, that he had no skill in that art, his majeſty inſiſted upon his trying the experiment; ſo that he was obliged to exert himſelf, and by giving his inſtructions to ſuch workmen as were appointed to follow his direction, in a ſhort time he had a ſhip ready to be launch'd, of about 80 tuns, to the great ſatisfaction of the emperor, who being very fond of improving himſelf, and very curious in asking queſtions how they had come to that country from *Europe*, Mr. *Adams* ſhew'd him his chart, and pointed out the progreſs of his voyage; where ſeeing that they had (as he thought) ſail'd thro' dry

land

land to paſs the *Magellan* ſtreights, *Adams* ſhew'd him that it was no more ſtrange than ſailing between *Japan* and *Bongo*, only allowing the greater breadth.

This converſation gave the emperor a great deſire to know more of navigation, and having a great inclination for the mathematicks, Mr. *Adams*, to ingratiate himſelf with him, and thereby to procure liberty to return to his own country, offer'd to be his preceptor; but he was out in his politicks; for, altho' he became indeed a prime favourite, the liking the emperor took to him, made his return impracticable; the emperor being determin'd not to ſuffer him to leave *Japan*. His majeſty had made the *Dutch* captain and all his crew come aſhore, and diſpos'd of them in different places, allowing every one of them ſuch penſions as they could ſubſiſt upon. And Mr. *Adams* had ſuch intereſt with him, that he obtain'd leave, after having ſtaid there ſeveral years, to let the captain depart with a paſs to another part of the iſland, where they heard there were ſome *Dutch* ſhips arriv'd. But Mr. *Adams* remain'd there ſtill, and built another ſhip of 120 or 130 tuns: nor was there any news heard of him in *England*, till he got leave to ſend the letter out of which this account was compil'd by *Purchas*, and was dated at *Japan* in *October* 1611, and addreſs'd thus: *To my unknown Friends and Countrymen, deſiring this letter, by your means, may come to the hands of one or many of my acquaintance in* Limehouſe, *or elſewhere in* Kent, *in* Gilkingham *by* Rocheſter. This was the firſt *Engliſhman*, who was known to have been at *Japan*, and therefore his account of the voyage deſerves a place in our *Traveller*, altho' he does not give ſuch a deſcription of the country, as might have been expected from him if he had return'd to *England*, after having ſtaid there ſo many years. All that is known more of him is, that he dy'd in that country ſome little time before the year 1621, as was told ſome *Engliſh* who went thither that year. His letter ſays little more than that *Japan* lies between the degrees of 35 and 48 n. lat. but in the *Engliſh* Atlas it is between 34 and 40, and by *Varenius* between 31 and 38. But we ſhall have occaſion to ſay more of this matter hereafter, when we ſpeak of the diviſion of *Aſia*.

SECT. V.

The ſecond voyage of captain Davis *with Sir* Edward Michelburn.

AS we induſtriouſly avoid repetitions as much as poſſible, we ſhall not give any Journal of the voyage of Sir *Edward Michelburn* and capt. *Davis*, therefore we ſhall only ſay, they ſail the 5th of *December* 1604, from the *Iſle of Wight* on board the *Tyger* and the *Tyger*'s Whelp, the one a ſhip of 240 tuns, and the other a pinnace, bound for the *Eaſt Indies*. They took their courſe towards the cape of *Good Hope*, finding nothing extraordinary except a ſtrange glittering on the ſea in the night-time, about the middle of *February*, in ſouth lat. of 7 deg. ſo that after the moon was ſet, they ſaw to read with the light which proceeded from the flames that the ſea caſt forth.

About the 7th of *May* they found themſelves to the ſouthward of the cape, about 10 leagues, and ſo they directed their courſe eaſtward till they were clear of the ſouth point of *Africa*, and then north eaſt; paſſing by *Madagaſcar* on the ſouth ſide, they came to the iſland of *Diego Roiz* in 19 deg. 40 min. ſ. lat. and 98 of longitude according to our author, but by the *Atlas* (which takes the longitude from *London*) 63 degrees, and from thence to that of *Diego Grazioſo* in 7 deg. 30 min. ſ. lat. and upon the 11th of *July* 1605 they paſs'd the line, and the 19th made the land of *Sumatra*, and came to an anchor at an iſland he calls *Bata*. They had loſt ſight of the pinnace at the cape of *Good Hope*, and ſeeing a ſmall bark riding by the ſide of this iſland, they were in hopes it might be the ſame, but not being ſo near as to diſtinguiſh, they ſent a boat next day, who ſaw three barks lying in the road, when they hail'd them, there being ſome on board the ſhips, who ſpoke *Portugueſe*, they deſir'd the *Engliſh* to come aboard, telling them they had hens aboard. But they would not truſt them ſo far, but told them they would go back to their ſhip for money, and come for their hens next day. Accordingly, the next morning, they arm'd themſelves and man'd the long boat; but before they came to the place, the three ſhips were gone.

Departing from this iſland, they made the bay of *Preaman* in the iſland of *Sumatra* almoſt under the line, where, to their great joy, they found the pinnace riding at anchor. As ſoon as they had ſaluted one another, and receiv'd the mutual careſſes of the captain and other officers who came aboard Sir *Edward*'s ſhip, and that he likewiſe was come to an anchor, Sir *Edward* ſent captain *Davis* aſhore with a preſent to the governor of *Preaman*, and to diſcover the rate of pepper. But the captain found all things in confuſion at land, occaſion'd by a war commenced between the two ſons of the king of *Achen*, and the occaſion of which was this: * *See Davis's firſt Voyage.*

The old king of *Achen* formerly mention'd *, having two ſons, had made the

youngeſt of them king of *Pedir*, which his brother reſenting, conſpir'd againſt the old gentleman, and under colour of his father's dotage, uſurp'd the government, and made war upon his brother. This made trading in his dominions very precarious, ſo that the *Engliſh* weigh'd anchor, and going thro' the *Sunda* ſtreets, ſtood in for *Bantam* on north eaſt of the *Java* iſland. In this courſe they took a ſmall veſſel of 40 tuns, loaden with ſalt, rice, and *China* ware, but finding that ſhe belong'd to *Bantam*, where there was a ſmall *Engliſh* factory, they let her go without taking any thing from them.

In paſſing the ſtreights of *Sunda*, they ſtop'd at *Marrah*, where they water'd, and took in freſh proviſions. Upon the 28th of *October*, they came to an anchor within three leagues of *Bantam*, and the next day the *Engliſh* merchants there came aboard, and told them that the *Engliſh* fleet had ſail'd about three weeks before; and that the *Dutch*, who were endeavouring to engroſs the trade of that iſland, had given a moſt ſcandalous character of the *Engliſh* to the king of *Bantam*, both in reſpect to their honeſty and courage, telling him that as an inſtance of their cowardice, the *Engliſh* durſt not come ſo near the city as their ſhips did, for fear of them, but ſtaid three leagues off. Upon this intelligence Sir *Edward* weigh'd anchor, ſending his boat with a cavalier meſſage to the *Dutch*, telling them, *That he was coming to lie by their ſides, and if they offer'd to fire one ſingle ſhot at him, or to ſhew the leaſt ſign of an affront either to him or his nation, he would ſink every ſhip they had, or ſink himſelf in the attempt.* They made no anſwer to this menace; and altho' they had five ſhips, and one of them above 400 tuns, Sir *Edward* lay by them very peaceably, and whilſt he ſtaid at *Bantam*, there were few of the *Dutch* that car'd to go aſhore, altho' they had boaſted great things of their courage before his arrival.
